## WORK AND WAGES OF MEN, WOMEN, AND CHILDREN.

The Eleventh Annual Report of the Commissioner of Labor, entitled Work and Wages of Men, Women, and Children, comprehends the results of an investigation relative to the comparative employment of men, women, and children at two periods of time, and is made in accordance with a joint resolution of Congress approved August 1, 1894, as follows:
Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Commissioner of Labor be, and he is hereby, authorized and directed" to inrestigate and make report upon the conditions attending the employment of women and children; their wages, earnings, sanitary surroundings, and cost of living; the effect of various employments upon their health and longevity; what measures are taken to protect their physical condition and to protect them from accidents; the rates of wages paid them in comparison with the rates paid men; and the effect, if any, their employment has had upon the wages and employment of men : Provided, That the investigation hereby authorized shall be carried out under the regular appropriations made for the Department of Labor."

Under the proviso that the above investigation should be carried nut under the regular appropriations for the Department of Labor, the officers of the Department were obliged to leave out some of the features authorized. The Fourth Annual Report of the Commissioner of Labor dealt with the sanitary surroundings and cost of living of women, and to some extent with the measures taken to protect their physical condition. It did not seem wise, therefore, to spend money at the present time in collecting further information upon such topics. So the investigation undertaken, the results of which are shown in the Eleventh Annual Report, covers more specifically the employment and wages of women and children in comparison with the employment and wages of men in like occupations, how far women and children are superseding men, and the relative efficiency of men, women, and children when employed in doing like work.

Tlie difficulties surrounding the collection of information where such comparisons as those indicated are to be made are very great, and of course it was impossible to cover the whole country-that is, to collect information from all industrial establishments; yet the attempt was made, with fair success, to secure data from a sufficiently large number of representative establishments and persons and from nearly all the States in which mechanical industries are prominent. The agents of the Department secured information, through the schedule method, from 1,067 establishments of various kinds, located in 30 different States. A total of 42,090 males and 51,539 females, or an aggregate of 94,529 persons in all, were found employed in these establishments during the former period; and 68,380 males and 79,987 females, or an aggregate of 148,367 persons, during the present period. By "present period" in this report is meant some week in the period during which the canvass was wade-that is, the years 1895 and 1896; and by "former period" is meant some week antedating by at least ten years the week selected in 1895 or 1890. To present this class of information seven general tables were necessary. These tables aro taken up separately and their chief points explained.

Table I.-Occupations and carnings of women and children, and of men, by industries and States.-The different establishments from whose pay rolls and officials information was secured in this investigation aro given in this table, classified according to industries and States. For each establishment are given the occupations in detail, with extended information as to the sex, age, and weekly earnings of the employees: First, for what has been designated as the "former period," and second, for what has been designated as the "present period." Unless otherwise stated, the facts given comprise in each case information as to all the employees of the establishment, and so far as wages are concerned the information was taken directly from pay rolls, while the data relating to the age and efficiency of employees were secured from the proprietor himself, or from a foreman, bookkeeper, or some other responsible employee designated by the proprietor. The data for each occupation in each establishment comprise information as to the number of employees, male and female, classified as to age, as "18 jears or over" or "under 18 years," whether working by time or piece, and their highest, lowest, and average earnings for the selected week at different periods, which periods, it should be borne in mind, have been termed, for brevity's sake, the "former period" and the "present period," each covering one week's pay roll, the former period being at least ten years prior to the present period. The facts for each of these periods are placed in juxtaposition in the tables and afford a ready comparison as to the conditions at the two periods.

Considerable difficulty was experienced by the agents of the Departmont in securing accurate information as to the earuings for a full week, owing to the fact that many cmployees were not working full
time, although no note of it was to be found on the pay rolls. This was especially true of pieceworkers, of whose time no record was kept. Every effort was made, however, to secure earnings for a full weok, and it is beliered that this has been done quite generally in the case of time workers. In the case of pieceworkers the same cffort was made, and although the assurance of full weekly earuings-that is, carnings for a full week's work-was had in most cases, still there is some reason to cloubt the absolute accuracy of this assurance because of the fact that no record of time was usually kept in such cases, but merely the quantity of work performed and the earnings for the same. In every case of doubt the establishment was entirely dropped from consideration, and does not, therefore, appear in the report.

The following tables show a comparison of the persons employed at the two periods, subdivided as to sex and as to whether 18 years of age or over or under 18 years of age:

- PERSONS EMPLOYED AT THE TWO PERIODS, BY STATES.
[Cne hundred and thirty-sis ostablishmonts from whieh complete data could not bo secured have been excluded from consideration in this table.]

From this table have been excluded, necessarily, all establishments for which complete information as to age was not given. The number of establishments included in the table is 931 , situated in 27 different States. The table shows that in the 931 establishments furnishing complete information 26,479 males 18 years of age or over were employed in the former period as against 43,195 in the present period;

4,175 males under 18 years of age were employed in the former, 7,540 being employed in the present period. So far as females are concerned, those 18 years of age or over numbered 27,163 in the former as against 45,162 in the present period, and those under 18 years of age numbered 6,743 in the former as against 12,751 in the present period. Similar details for the establishments located in each of the 27 States are shown by this table.

This table is similar in form to the preceding one, and includes the facts for the same establishments arranged by industries. For the sake of brevity the specific industry headings as given in Table I of the report are here so grouped as to bring together establishments engaged in a similar class of work.

In order that these facts may be more clearly brought out, and the comparison be made more easy, the following tables have been drawn from the two preceding ones, showing the increase and per cent of increase of persons employed at the two periods.

## INCREASE AND PER CENT OF INCREASE OF PERSONS EMPLOYED AT THE TWO PERIODS, BY STATES.

[Ono hundred and thirty-six establishments from which complete dain could not be secured hare been excluded from consideration in this table.]

$a$ Decrease. $b$ No employees in this class in former period, bence percentage can not be compated.

Taking up the totals for these tables, which represent the increase and per cent of increase of persons in the 931 establishments over the former period, we see that the male employees 18 years of age or over increased 16,716 , or 63.1 per cent, while the female employees 18 years of age or over increased 17,999 , or 66.3 per cent. The male employees under 18 years of age increased 3,365 , or 80.6 per cent, and the female employees under 18 years of age increased 6,008 , or 89.1 per cent.

The two following tables show the conjugal condition of the female employees of the establishments included in this investigation:

| Total | 32,801 | 1,357 | 498 | 4 | 16,879 | 51,539 | 70,921 | 6,775 | 2, 011 | 36 | 244 | 79,987 |

This table, as the heading indicates, deals with the conjugal condition of female employees, showing, by States, the number of single, married, widowed, and divorced women at each of the two periods, and the number whose conjugal condition was reported as unknown. The total shows that for the present period, out of an aggregate of 79,987 women, 70,921 , or 88.7 per cent, were single; 6,775 , or 8.5 per cent, married; 2,011 , or 2.5 per cent, widowed; 36, or less than one-tenth of 1 per cent, divorced; and 244, or 0.3 per cent, unknown. For the former period, out of a total of 51,539 women, 32,801 , or 63.6 per cent, were single; 1,357 , or 2.6 per cent, married; 498, or 1 per cent, widowed; 4 , or less than one-tenth of 1 per cent, divorced; and 16,879 , or 32.8 per cent, unknown. The large per cent of unknown detracts considerably from the value of the figures for the former period for comparative purposes. It is not surprising, however, that information as to the conjugal condition of employees ten or more years ago was not obtainable.

CONJUGAL CONDITION OF FEMALE EMPLOYEES, BY INDUSTRIES.

This table is similar in form to the preceding one, the data which in that table was given by States being here arranged by industry groups.
Summarizing these figures, so far as the present period is concerned, by general industry heads, we have the following table, slowing the number and per cent of persons of each conjugal condition under each general industry head:

CONJUGAL CONDITION OF FEMALE EMPLOYEES AT PRESENT PERIOD, BY GENERAL INDUSTRY HEADS.

| General industry heads. | Single. | Married. | Widowed. | Disorced. | $\begin{gathered} \text { Un. } \\ \text { known. } \end{gathered}$ | Total. |

The foregoing analysis of Table I of the Eleventh Annual Report and Table I itself comprehend, it must be remembered, the facts for the establishments from which information was obtained under this special investigation and the number of people only who were employed in those establishments. While they are fairly representative of general conditions, one studying them must not make the mistake of assuming that they relate to all the persons employed in the whole
country. In order that the student of this report may have the facts as to occupation, sex, etc., for the whole country, some special tables have been constructed from the results of the Eleventh Census and are brought into this report for general comparative purposes. The two short tables following show the number and percentage of males and females, 10 years of age or over, in the United States engaged in each class of occupations, not only at the census of 1890 , bat at the censuses of 1870 and 1880 :

NUMBER OF MALES AND FEMALES 10 TEARS OF AGE OR OVER IN THE UNTEED STATES AT THE CENSUSES OF 1870, 1880, AND 1890, BY CLASSES OF OCCUPATIONS.

| Classes of oceupations. | 1870. |  | 1880. |  | 1820. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Males. | Females. | Males. | Females. | Males. | Females. |
| Agriculture, fisherios, and mining ...... | 5, 744, 314 | 397, 049 | 7,409, 970 | 594, 654 | 8,333, 813 | 679,523 |
| Professional service ....................... | 278,841 | 92, 257 | 425, 917 | 177, 255 | 632, 646 | 311,687 |
| Domestic and personal service. | 1,338, 683 | 973, 157 | 2, 321, 937 | 1,181,506 | 2,602,879 | 1, 667, 698 |
| Trade and transportation................ | 1, 209,571 | 10,828 | 1,803, 629 | 62, 852 | 3, 097, 701 | 228,421 |
| Manufacturing and mechanical indastries | 2,098,216 | 353, 997 | 2,783, 459 | 630, 890 | 4,064,051 | 1,027, 242 |
| All occupations. | 10, 669, 635 | 1,836, 288, | 14,744,942 | 2, 647, 157 | 18,821, 090 | 3, 914,571 |

PERCENTAGE OT MALES AND FEMALES 10 FEARS OF AGE OR OVER IN THE UNITED STATES AT THE CENSUSES OF 1870, 1830, AND 1890, BY CLASSES OF OCCOPATYONS.

| Classes of occupations. | 1870. |  | 1880. |  | 1890. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Males. | Temalcs. | Males. | Females. | Males. | Females. |
| A griculture, fisheries, and mining ...... | 93.53 | 6.47 | 92.57 | 7.43 | 92.46 | 7. 54 |
| Professional service...................... | 75. 14 | 24.86 | 70.61 | 29.39 | 66.99 | 33.01 |
| Domestic and personal service | 57.91 | 42.09 | 66.28 | 33.72 | 61.70 | 38.24 |
| Trade nud transportation..... | 98. 39 | 3. 61 | 96. 63 | 3.37 | 83.13 | 6. 87 |
| Manufacturing and mechanical industries $\qquad$ | 85.56 | 14. 44 | 81.53 | 18. 48 | 79.82 | 20.18 |
| All occupations. | 85.32 | 14.68 | 81.78 | 15.29 | 82.78 | 17.22 |

From these tables it will be seen that the proportion of females 10 years of :age or over employed in all occupations in the United States rose in its relation to the whole number employed from 14.68 per cent in 1870 to 17.22 per cent in 1890 , while the males decreased in proportion from 85.32 per cent in 1870 to 82.78 per cent in 1890 , fully corroborating the facts obtained in the present investigation that the females are to some extent entering into places at the expense of the males. The canses for this state of affairs will be referred to later on under the appropriate table.
Looking at particular classes of occupations, wo find that the proportion of females engaged in agriculture, fisheries, and mining rose from 6.47 per cent in 1870 to 7.54 per cent in 1890; in professional service, from 24.86 per cent to 33.01 per cent; but in domestic and personal service there was a drop from 42.09 per cent in 1870 to 38.24 per cent in 1890 , and a corresponding gain in the proportion of males to the whole number employed from 57.91 per cent in 1870 to 61.76 per cent in 1890. In trade and transportation the females show the largest gain, it being from 1.61 per cent in 1870 to 6.87 per cent in 1890 . This is due to the entry of women into employment as clerks in the trade and transportation departments of business. There has also been a very large gain
in the proportion of females engaged in manufacturing and mechanical industries, the percentage being 14.44 in 1870 and 20.18 in 1890. The males, on the other hand, have dropped in proportion from 85.56 per cent in the former year to 79.82 per cent in the latter. The fact is absolutely demonstrated, therefore, that the proportion of females, taking all the occupations in the country into consideration, is gradually increasing. The two tables following give the numbers and percentages for principal occupations, taking those in which large numbers only are employed. The tables should be used in the same way as the two preceding ones.

NUMBER OF MALES AND FEMALES 10 YEARS OF AGE OR OVER IN THE UNITED STATES AT I'HE CENSUSES OF 1870, 1880, AND 1890, IN PRINCIPAL OCCUPATIONS.

That the conjugal condition of females 10 years of age or over engaged in cach great class of occupations may be ascertained, the following table has been drawn from census results:

NUMBER AND PERCENTAGE OF FEMALES 10 TEARS OF AGE OR OVER IN THE UNITED STATES AT THE CENSUS OF 1890, BY CLASSES OF OCCUPATIONS AND CONJUGAL CONDITION.

| Classes of occurations. | Single and unknown. |  | Married. |  | Widowed. |  | Divorced. |  | Total. |

There is much disenssion as to the number and percentage of married women employed in industrial pursaits. The foregoing table gives the facts. It is found that the married women constitute 13.16 per cent of all the women engaged in the occupations of the country. The largest percentage in any one class of occupations is found in agriculture, fisheries, and mining, where it is 22.51 . This is due largely to the fact that in agriculture there are a great many colored women employed. The smallest percentage of married women, 6.94, is to be found in professional service, while in manufacturing and mechanical industries 10.68 per cent are married. This percentage corroborates the observations of many investigators of the subject. It has rarely been given as over $\mathbf{1 0}$.
That the number and percentage of females by conjugal condition may be known for principal occupations at the census of 1890 , the following table is inserted:

NUMBER AND PEROENTAGE OF FEMALES 10 YEARS OF AGE OR OVER TAT THE UNITED STATES ENGAGED IN PRINCIPAL OCCUPATIONS AT THE CENAUS OF 1890, BF CONJUGAL CONDITLON.

| Occupations. | Single and unknown. |  | Married. |  | Widowed. |  | Divorced. |  | Total. |

## NUMDER AND PERCENTAGE OF FEMALES 10 YEARS OF AGE OR OVER IN THE UNITED STATES ENGAGED IN PRINCIPAL OCCUPA'TIONS, ETC,-Conciuded.

The following table, compiled from the censuses of 1870, 1880, and 1800 , is given in order that a comparison may be made of the proportion of children at work at the three census years:
number and per cent of children at work at tge thpee census yeats $1870,1880, \Delta N D 1890$.

| Census years and classification of ages. | Males. | Femalcs. | Total. |
| :---: | :---: | :---: | :---: |
| 1880. |  |  |  |
| Total children 10 to 15 years of age, inclusire | 2,840, 200 | 2, 764,169 | 5, 604, 369 |
| Number of above at work................... | 548,004 | 191, 100 | 739, 164 |
| Per cent of abore at work. | 19,30 | 6.91 | 13.19 |
| 1880. |  |  |  |
| Total children 10 to 15 Jears of age, inclusive | 3,376, 114 | 3, 273,369 | 6, 649,483 |
| Number of above at work......... | 825,187 | 293, 169 | J, 118, 356 |
| Per cont of above at work. | 24.44 | 8.96 | 16.82 |
| 1890. |  |  |  |
| Total children 10 to 14 years of age, inclusire | 3, 574,787 | 3, 458, 722 | 7, 033, 509 |
| Number of above at work. | 400,586 | 202,427 | 603, 013 |
| Per cent of abovo at work. | 11.21 | 5.85 | 8. 57 |

This table shows that at the census of $1870,13.19$ per cent of children from 10 to 15 years of age were at work. At the census of 1880 the proportion of children from 10 to 15 years of age at work was consider. ably larger, being 16.82 per cent. It is impossible to carry this comparison to the census of 1890 , owing to the different age groups used there, the group under consideration including only those children from 10 to 14 years of age. The total children from 10 to 15 years of age at the census of 1870 was $5,604,369$; the number at the census of 1880 was $6,649,48^{\circ}$, an increase of 18.65 per cent. If the number of children had increased in the same proportion between the censuses of 1880 and 1890 , there would have been $7,889,612$ children from 10 to 15 years of age at the census of 1 s 90 . The number given in the table as being from 10 to 14 years of age is $7,033,509$. If the assumption is correct that the increase in the total number of children between 1870 and 1880 was maintained between 1880 and 1890, we see that the number of children 15 years of age, which were included in 1870 and 1880, but excluded in 1890 , would be 856,103 , and of an age that would show a larger proportion at work than at any of the other five years included in the age group. If, further, of all the children 10 to 15 years of age the same per cent were at work in 1890 as in 1880 , the number at work -in 1890 would be $1,327,033$, and as it is known that 603,013 of those 10 to 14 years of age were at work, the conclusion would be that out of 856,103 children 15 years of age 724,020 , or 84.57 per cent, were at work. The probability that a very much smaller per cent of the children 15 years of age were at work leads to the conclusion that the per cent of all children at work decreased materially between 1880 and 1890.

Table II.-Relative efficiency of women and eliildren and of men engaged in the same occupations, by establishments.-In 436 of the establishments canvassed the agents of the Department were able to secure data as to the relative efficiency of women and children and of men working at the same occupations. These data are confined wholly to the present period and represent the best judgment of the best-informed officials or foremen of each establishment. In many cases, however, in which the same occupation admits of two grades of work, there is no doubt that women and children perform the lighter while the men perform the heavier grades. Where such difference has been specified by the proprietor or foreman, the distinction has been made by attaching the words "heavy work" and "light work" to the occupation name, but there is reason to believe that such differences exist in cases where no note was made.

Table III.-Comparison of rates of pay of women and children and of men of the same grade of efficiency.-This table is drawn from Table II, and includes only those instances in which men and women are indicated as having the same degree of efficiency. It therefore furnishes a more ready comparison as to the compensation of women and children and of men of the same occupation and of the same grade of efficiency.

The following table, including the instances shown in 'iable III in which men and women or men and children, of the same grade of efficiency and working at the same occupation, are brought in comparison, classifies and summarizes these instances by industries, showing the number of instances in which women earn more than men, the number in which men earn more than women, the number in which men and women earn the same wages, the number in which children earn more than men, the number in which men earn more than children, and the number in which men and children earn the same wages. In addition to the number of instances there is also shown, in the form of a per cent, how much more is earned in each instance or number of instances reported. The table follows:

COMPARISON OF AVERAGE EARNINGS OF PERSONS OF THE SAME OCCUPATION AND GRADE OF EFFICIENCY.

| Industrics. | Women earn more than men. |  | Men carn more than women. |  | In-stancesinwhichmenandwomenearnthesanewages. | Children carn more than men. |  | Mea earn moro than children. |  | In-stancesinwhichmenandchildrenearnthesamewages. |

| Insurance ... |  |  | 2 | 29.2 |  |  |  |  |  |  |
| Sowing machines |  |  | 1 | 68.7 |  |  |  |  |  |  |
| ILiscellaneous .................. |  |  | 2 | 51.6 |  |  |  |  |  | 1 |
| Total | 120 | 10.3 | 595 | 50.1 | 58 | 24 | 8.0 | 182 | 57.7 | 22 |

Looking at the table, it is seen that under the head of "Domestic and personal service" the laundry industry is given. In this industry men and wowen of the same degree of efiriency worked at the same occupation in four instances, in each of which the men were paid more than the women, carning an average of 23 per cent more in the four instances. Men were found working with children of the same grade of efficiency and at the same occupation in one instance, in which case the men received nearly 93 per cent more pay than the children. In both of these comparisons it must be remembered that notmithstanding the greater pay received by the men they were engaged at identically the same work as the women and children, and were considered by the proprietors or foremen of the establishments involved as possessing no greater degree of fitness or efficiency.
Taking up the totals shown, we see that out of 782 instances in which men and women work at the same occupation and perform their work with the same degree of efficiency men receive greater pay in 595 , or 76.1 per cent, of the instances, and women receive greater pay in 120 , or 16.5 per cent, while in 58 instances, or 7.4 per cent, they receive the same pay for the same work. The men receive 50.1 per cent greater pay than the women in the 595 instances in which they are given greater pay, while the women receive but 10.3 per cent greater pay in the 120 instances in which they are paid higher rages. Out of the 228 instances in which men and children (persons under 18 years of age) work at the same occupation with a like degree of efficiency, men receive greater pay in 182, or 70.8 per cent, of the instances, and children receive greater pay in 24 , or 10.5 per cent, while in 22 instances, or 9.7 per cent, they receive the
same pay for the same work performed with the same degree of effciency. The men receive 57.7 per cent greater pay than the children in the 182 instances in which they are paid more, while the children receive but 8.6 per cent greater pay in the 24 instances in which they are paid ligher wages.

Table IV.-Reasons for the employment of women and girls.-This table, arranged by States and industries, shows the reasons given by the proprietors of the various establishments why they employ women and girls in preference to men. In one column of this table is stated their opiniou as to whether or not the employment of women and girls is increasing in the industry in which their establishment is engaged.
The reasons for the preference for women are variously given, the most common being their greater adaptability for the work for which they are employed. It is also stated that they are more reliable, more easily controlled, cheaper, more temperate, more easily procurable, neater, more rapid, more industrious, more careful, more polite, less liable to strike, learn more rapidly, etc. One of these reasons, or two or more combined, is given for each establishment.

It would naturally be supposed that where it was stated in one column of the table that women were preferable to men because better adapted, cheaper, or by virtue of any of the other reasons given, the answer as to the increasing tendency toward the employment of women in that industry would be in the affirmative; for if women are better adapted, etc., why would there not bo an increasing tendency to their cmployment? The following reasons have been given by proprietors to the agents of the Department why a negative answer is not inconsistent in such cases: Machinery is gradually displacing them in many industries, as more automatic work is done ly machines than formerly; very often women who are better adapted and cheaper are unreliable; their physical strength is inadequate for heary work; females have always been employed in certain occupations, men not being fitted for them and never engaging in them; women can be employed only in certain occupations; very scarce, and hard to find suitable women; men do better work than women, and if they were fitted for and understood certain work they would be preferred; women in many instances can not be depended upon; some industries largely employing women are gradually being forced out of business by the changes in fashion, notably the fancy plush box trade is being superseded by celluloid boxes; the Cigar Makers' Union opposes the employment of women.

Table V.-First cmployment of women and occupations in which em-ployed.-This table, arranged by States and industries, shows for each establishment the date at which women were first employed there and the occupations in which they were employed.

Table VI.-Hours per week worked in cstablishments reporting, by States.-Complete data as to the hours per week worked in the different establishments could not be obtained, quite a number of establish-
ments failing to report. This table, furnishing the data as to hours per week worked at the former period and at the present period by the establishments reporting as to this question is chiefly valuable for its relation to Table I, enabling the reader to consider hours per week worked in connection with the occupations, wages, and other information furnished there. It has, therefore, been tabulated in the order followed there for convenience in reference.

Table VII.—Occupations followed by women and girls, by industries.This table, if it may be so called, is given chiefly to enable the reader to refer readily to the varied occupations in which women and girls are engaged. While, of course, not complete in the sense of embracing every occupation at which women and girls are employed, it furnishes the results so far as this investigation is concerned. As will be seen by a stuady of Table I, most of the industrial States were covered and the number of industries represented is quite large, embracing almost all at which women and girls are employed to any great extent.

## CONDITION OF THE NEGRO IN VARIOUS CITIES.

## INTRODUCTION.

The present investigation is one of a series which the Department of Labor has in contemplation in relation to the social and economic condition of the negro. The data from which the following tables were compiled were gathered exclusively by representative colored men and women under the direction of Mr. George G. Bradford, of Boston, Mass., one of the trustees of Atlanta University, Atlanta, Ga., who invited the Department of Labor to cooperate with him in the work and undertake the tabulation and publication of the data thus secured.

The investigation was begun in February, 1896, by three colored men, graduates of Atlanta University; one, Joseph E. Smith, a minister in Chattanooga, Tenn.; another, R. R. Wright, a college president in Savanuah, Ga., and the third, Butler R. Wilson, a lawyer in Boston, Mass., and was styled by its authors the Atlanta University City Problem Investigation.

The purpose of the investigation was originally to determine the causes of the excessive mortality among negroes in the above cities, and also to discover whether the mortality was on the increase or decrease, and if certain measures of reform which had been introduced had been effective or not.

In May, 1896, a conference on the subject of "Negro mortality in cities" was held at Atlanta University, being the first of a series of anuual conferences to be held there for the "Study of city problems" as affecting the negro. The facts brought out at that conference were so suggestive that it was voted to continue the investigation for another year on the same subject.

A committee was appointed, consisting of three of the graduates, one of the teachers, and one of the board of trustees, the latter a Northern man. The university undertook the general direction of the investigation, but it was decided that the work of gathering the data should be left exclusively to colored men and be wholly voluntary.

These two restrictions added very much to the difficulty of prosecuting the investigation, but increased its effectiveness, as it secured the attention and interest of the leading colored men of the country, upon whom would depend the success of any practical measures of reform that might be suggested by the results of the investigation.

There were invited to take part in the investigation about 50 graduates of Atlanta University, 30 of Fisk University, and 15 of the colored graduates of Berea, besides the prominent colored doctors, ministers, lawyers, and teachers of the States of Georgia, South Carolina, Alabama, and Tennessee, including representatives from all the more
prominent institutions for the higher education of the negro. In all, something orer 300 were invited, of whom about 100 volunteered, aud of the latter 50 were able to complete their part of the investigation within the time allowed them, which, unfortunately, was very short.

The investigation was carried to completion in 18 cities, all except one of which are located in the Southern States. The effort to secure schedules for several groups of colored people in each of the smaller cities and for a larger number of groups in cities of greater size and importance was quite successful, as the following tables show. Great care was taken in the selection of groups and in securing data in Atlanta, Ga., Nashville, Tenn., and in Cambridge, Mass., and it is to the tabulation for these cities that we must look for the most representative and accurate showing of the condition of the negro so fir as this investigation is concerned. The tabulation of the data for 32 groups in the other cities canvassed is presented mainly for the value it may have in corroborating the facts presented for the 16 groups in Atlanta, the 10 groups in Nashville, and the single group in Cambridge. The data for the 32 groups in other cities have doubtless been gathered with quite as much care in most cases, but the same care could not be exercised in the selection of the 32 groups to be investigated as in the cities for which a separate statement is made.

Allusion has been made to "groups" in some of the previons statements, and an explanation is probably necessary in order that the reader may have an accurate knowlelge of just what is meant by the term in this connection. It was not possible to secure data from any large portion of the population or for any large section of the cities involved in the investigation owing to the fact that in no instance was there any remmeration given to investigators for the work performed, it being purely voluntary and usually performed by ${ }^{\circ}$ persons with so many other interests that but a part of their time could be devoted to this work. For this reason it was decided to select one or more groups of from 10 to 20 houses standing together in the portions of the city which were thonght to be representative of the various conditions of the negro in that locality. Each of these collections of houses has been termed a group. The following table shows in detail the number of groups and of families and individuals for each city represented in the tabulations:

NUMDER OF GROUPS, FAMILIES, AND INDIVIDDALS CANYASSED.

| City. | Groups. | Fami. lies. | Indi. | City. | Groups. | Families. | Individuals. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Atlanta, Ga | 10 | 324 | 1,292 | Orangeburg, S.C........ | 2 | 22 | 109 |
| Nashville, Tenn | 10 | 246 | 1,090 | Sanford, Fla .............. | 1 | 24 | 116 |
| Cambridge, Mass | 1 | 08 | 366 | Athens, Ga.... | 1 | 16 | 73 |
| Savannah, Ga.. | 5 | 96 | 380 | Cartersvillo, Ga | 1 | 10 | 53 |
| Washington, D. | 4 | 66 | 293 | Louisville, KJ. | 1 | 15 | 70 |
| Macon, Ga....... | 4 | 30 | 90 | Macon, Miss... | 1 | 17 | 64 |
| Jacksonville, Fla | 3 | 77 | 327 | Chattanocga, Tena...... | 1 | 21 | 89 |
| Oolumbia, S. ${ }^{\text {C }}$ | 3 | 15 | 81 | Jackson, Tenn............ | 1 | 22 | 67 |
| Birmingham, Ala. | 2 | 17 | 63 |  |  |  |  |
| Tuskegee, Ala.... | 2 | 21 | 119 | Total............. | 59 | 1,137 | 4,742 |

Great credit is due to the investigators for their work in the investigation, for through them its success has been possible. As previously stated, they are all representative colored persons. The following statement shows in detail the name of each person engaged in the work of securing the data, the groups investigated by each, and the location of each group:

INVESTIGATORS AND LOCATION OF GROEPS.

\begin{tabular}{|c|c|c|}

| Dr, W. Bruce Evans.................. | 23 | Parts of Cleveland avenue, Fourth, Pomeroy, and Wilson streets, and Howard row northwest, Howardtown, suburbs. |
| C. L. Frankiin........................ | 29 | Parts of Eighth street extended northwest, "Cowtown" (local). |

## ANALYSIS OF TABLES.

In the tabular presentations which follow this analysis the cities embraced in the investigation have been arranged in four divisions in each summary table, and the same order is followed in the tables which give more detailed information, as follows: Sixteen groups in Atlanta, Ga.; 10 groups in Nashville, Tenn.; 1 group in Oambridge, Mass.; and 32 groups in other cities. Under each of these divisions the groups have been arranged according to their condition and the character of their surroundings, whether good, fair, or bad. In the first division, comprising the 16 groups for Atlanta, Ga., groups 1, 2, 3, 4, and 5 may be classed as good; groups 6, 7, 8,9, 10, and 11 as fair; and groups 12, 13, 14,15 , and 16 as bad. In the second division, comprising 10 gromps in Nashville, Tenn., group 1 may be classed as good; groups 2, 3, 4, 5, 6, 7, 8, and 9 as fair; and group 10 as bad. In the third division, the single group in Cambridge, Mass., may be classed as fair. In the fourth division, groups 1 to 14 are classed as good; groups 15 to 23 as fair; and groups 24 to 29 as bad; the condition of groups 30, 31, and 32 not being reported. The groups in this fourth division are located as follows: Group 1 in Birmingham, Ala.; group 2 in Cartersville, Ga.; group 3 in Jackson, Tenn.; groups 4 and 5 in Jacksonville, Fla.; group 6 in Louisville, Ky.; group 7 in Macon, Ga.; group 8 in Macon, Miss.; groups 9 and 10 in Orangeburg, S. C.; group 11 in Sanford, Fla.; group 12 in Savannah, Ga.; group 13 in Tuskegee, Ala.; group 14 in Wash. ington, D. C.; group 15 in Athens, Ga.; group 16 in Birmingham, Ala.; group 17 in Chattanooga, Tenn.; groups 18, 19, and 20 in Columbia, S. C.; group 21 in Savannah, Ga.; groups 22 and 23 in Washington, D. C.; group 24 in Jacksonville, Fla.; groups 25, 26, and 27 in Savannah, Ga.; group 28 in Tuskegee, Ala.; group 29 in Washington, D. O.; and groups 30, 31, and 32 in Macon, Ga.

The tables are considered in the order in which they appear.
Table I.-Relationship to heads of families, by groups, pp. 287, 288.Under the four heads or divisions to which allusion has been made, viz, 16 groups in Atlanta, Ga., 10 groups in Nashville, Tenn., 1 group in Cambridge, Mass., and 32 groups in other cities, the persons embraced in each separate group have in this table been classified as to their relationship to the head of the family in which they live, the distinction as to sex being preserved. This classification includes heads of families themselves and the seven principal relationships found, as children, parents, brothers and sisters, grandchildren, nephews and nieces, boarders, and lodgers, the remaining relationships, composing a very small proportion, being tabulated under the term " other relationships," with footnotes indicating the exact relationship to the head of the family. Taking up the total of the 16 groups in Atlanta, Ga., it is seen that out of 1,292 persons embraced in these groups, 537 , or 41.57 per
cent, were heads of families, most of them being husbands or wives, 232 being males and 305 females; 609, or 47.14 per cent, wero children, 201 being males and 318 females; the remaining 146, or 11.29 per cent, were divided among the other relationships. As in Atlanta, Ga., so in Nashville, Tenn., Cambridge, Mass., and in the 32 groups in other cities the heads of families themselves, together with their children, composed the greater portion of the members of the families investigated, a rery small proportion of persons bearing other relationships having been found. The following table, drawn from Table I, presents these figures briefly:
fumber and per cent of persons of each relationship.

| Relationship to head of family. | Atlanta, Ga., 16 groups. |  | Nashville, Tenn., 10 groups. |  | Cambridge, Mase., 1 group. |  | Other cities, 32 groups. |  | All gronps. |  |

Table II.—Sizes of families, by groups, p. 289.-This table shows for each group the number of families of 1 person, 2 persons, 3 persons, etc. The following table summarizes these data for each of the four divisions of the table:

NUMDFR AND PER CENT OE FAMILIES OF EACH SPECIFIED SIZE.

| Size of families. | Atlanta, Ga., 16 groups. |  | Nashrille, Tenn., 10 groups. |  | Cambridge, Mass., 1 group. |  | Other cities, 32 groups. |  | All groups |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Num. ber. | Per cent. | Num. ber. | Per cent. | Num. ber. | Per cent. | Number. | Per cent. | Number. | Per cont. |
| 1 person | 22 | 6.79 | 5 | 2.04 | 5 | 5.10 | 22 | 4. 69 | 54 | 4.75 |
| 2 persons | 65 | 20.06 | 44 | 17.89 | 25 | 25.51 | 84 | 17.91 | 218 | 19.17 |
| 3 persons | 76 | 23.46 | 38 | 15.45 | 23 | 23.47 | 103 | 21.96 | 240 | 21.11 |
| 4 persons | 48 | 14. 82 | 46 | 18. 67 | 18 | 18.37 | 86 | 18.34 | 198 | 17.41 |
| 5 persons | 42 | 12.96 | 53 | 21.55 | 14 | 14. 29 | 57 | 12.15 | 106 | 14.60 |
| 6 persons | 27 | 8.33 | 21 | 8. 54 | 2 | 2.04 | 36 | 7.68 | 86 | 7.56 |
| 7 persons | 22 | 6.79 | 18 | 7.32 | 4 | 4.08 | 38 | 8.10 | 82 | 7.21 |
| 8 persons | 9 | 2.78 | 12 | 4.88 | 5 | 5.10 | 17 | 3.63 | 43 | 3.78 |
| 9 persons | 8 | 2.47 | 5 | 2.03 |  |  | 13 | 2.77 | 26 | 2.29 |
| 10 persons | 5 | 1. 54 | 3 | 1.22 | 2 | 2.04 | 12 | 2.56 | 22 | 1.94 |
| Orer 10 persons.. |  |  | 1 | . 41 |  |  | 1 | . 21 | 2 | . 18 |
| Total | 324 | 100.00 | 246 | 100.00 | 98 | 100.00 | 469 | 100.00 | 1,137 | 100.00 |

In Atlanta, Ga., the largest number of families consisted of 3 persous, the per cent being 23.46, while the next largest number consisted of 2 persons, the per cent being 20.06. In Nashville, Tenn., the largest number, constituting 21.55 per cent, consisted of 5 persons, followed by 18.67 per cent consisting of 4 persons. In Cambridge, Mass.,
25.51 per cent of all families consisted of 2 persons, and 23.47 per cent of 3 persons, while in the 32 groupsin other cities 21.36 per cent of the families consisted of 3 persons, and 18.34 per cent of 4 persons. Taking all groups in all cities, the largest number, comprising 21.11 per cent of all families, consisted of 3 persons, followed by 19.17 per cent consisting of 2 persons, 17.41 per cent of 4 persons, and 14.60 per cent of 5 persons.

The average size of family in the various cities is shown in the following brief table:

AVERAGE SIZE OF FAMILY, BY CITIES.

| Cities. | Total families. | Total persons. | Average size of family. |
| :---: | :---: | :---: | :---: |
| Atlanta, Ga. | 324 | 1,292 | 3.99 |
| Nashville, Tenn | 216 | 1,030 | 4.43 |
| Cambridge, Mass. | 98 | , 366 | 3. 73 |
| Other citles....... | 409 | 1, 094 | 4.25 |
| Total | 1,137 | 4,742 | 4.17 |

It will be seen from the above table that for all the families investigated the average number of persons per family in Atlanta, Ga., was found to be 3.99; in Nashville, Tenn., 4.43; in Cambridge, Mass., 3.73 ; in the other cities 4.25, and in all the cities covered by the investigation, 4.17. Comparison with the retarns of the ceusus of 1890 in the cases of the first three cities, returns for all the others not being given, shows that for the entire population of these cities the average size of family was considerably larger, viz, for Atlanta 4.91, Nashville 4.92, and Cambridge 4.95.

Table III.-Ages, by groups, p. 290.-This table deals with the ages of the persons embraced in this investigation, classified by periods of years as follows: Under 10, 10 to 19, 20 to 29,30 to 39,40 to 49, 50 to 59,60 or over, and age unknown. The following table shows briefly the number and per cent of persons under each age period for Atlanta, Ga., Nashville, Tenn., Cambridge, Mass., and the 32 groups in other cities:

NUMBER AND PER CENT OF PERSONS UNDER EACH AGE PERIOD.

| Age periods. | Atlanta, Ga., 16 groups. |  | Nashville, Tenu., 10 groups. |  | $\begin{aligned} & \text { Cambridge, } \\ & \text { Mass., } \\ & 1 \text { group. } \end{aligned}$ |  | Other cities, 32 groups. |  | A.ll groups. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Num- ber. | Per cent. | $\begin{aligned} & \text { Num- } \\ & \text { ler. } \end{aligned}$ | Per cent. | Number. | Per cont. | Number. | Per cent. | Number. | Per cent. |
| Under 10 years | 290 | 22.44 | 212 | 19. 45 | 00 | 24.59 | 419 | 21.01 | 1,011 | 21.32 |
| 10 to 19 rears.. | 315 | 24.28 | 274 | 25. 14 | 67 | 18.31 | 452 | 22.67 | 1, 108 | 23.37 |
| 20 to 29 years. | 235 | 18.19 | 190 | 17.43 | 91 | 24. 86 | 404 | 20.26 | 920 | 19. 40 |
| 30 to 39 years. | 209 | 16.18 | 141 | 12.94 | 64 | 17.49 | 280 | 14. 04 | 694 | 14.64 |
| 40 to 49 Jears. | 112 | 8.67 | 115 | 10.55 | 32 | 8.74 | 222 | 11. 13 | 481 | 10.14 |
| 50 to 59 years. | 70 | 5.42 | 91 | 8.35 | 18 | 4.92 | 119 | 5.97 | 298 | 6.28 |
| 60 years or over | 56 | 4.33 | 60 | 6.05 | 3 | . 82 | 72 | 3.61 | 197 | 4.15 |
| Age unknowh... | 5 | . 39 | 1 | . 09 | 1 | . 27 | 26 | 1.31 | 33 | . 70 |
| Total | 1,292 | 100.00 | 1,090 | 100.00 | 366 | 100.00 | 1,994 | 100.00 | 4,742 | 100.00 |

The largest uumber of persons, as shown by this table, were between the ages of 10 and 19 in each of the divisions, except that for the group of Cambridge, Mass., where the largest number were between 20 and 29. In the 16 groups in Atlanta, Ga., 65.01 per cent of the persons canvassed were under 30 years of age, and 81.19 per cent under 40; in the 10 groups in Nashville, Tenn., 62.02 per cent were under 30 and 74.96 per cent under 40 years of age; in the single group for Cambridge, Mass., 67.76 per cent were under 30 and 85.25 per cent under 40 years of age; in the 32 groups in other cities 63.94 per cent were under 30 and 77.98 per cent under 40 years of age; and the figures for all groups in all cities show 64.09 per cent of persons to have been under 30 and 78.73 per cent under 40 years of age.

Table IV.-Household conditions, by families, pp. 291-302.-This table deals with the condition of the families involved in the investigation as regards rent and the number of rooms occupied for sleeping and other purposes. Each family is taken up in detail and for each is shown the monthly rent paid, and the number of rooms occupied subdivided as to their use for sleeping and other purposes.

Table V.-Household conditions, by groups, pp. 303, 304.-This table summarizes the data shown in the preceding one, by groups. Considering the totals for the first division of the table, consisting of the 16 groups in Atlanta, Ga., it is seen that 1,292 persons occupied 581 rooms for sleeping purposes and 306 for other purposes, an average of 2.22 persons to each sleeping room and 2.54 persons to each other room. In many instances the same room or rooms were used by the family for both sleeping and other purposes. In such cases the rooms have been classified as sleeping rooms and, of course, omitted from consideration as other rooms. In the 10 groups in Nashville, Tenn., an average of 2.44 persons was found to each sleeping room and 2.87 persons to each other room, while in the group in Cambridge, Mass., the average persons to each sleeping room was 1.96 and to each other room 1.62. In the 32 groups located in other cities is shown an average of 2.05 persons to each sleeping room and 2.14 persons to each other room. It does not appear from these figures that any great overcrowding exists, on the whole, although for certain individual families and groups the averages are somewhat larger. The use of the same room or rooms for cooking, eating, living, and sleeping purposes is noticeable and in some groups is quite common. Group 4 of Atlanta, with 15 families, had but 4 rooms ased for other purposes, showing that at least 11 of the 15 families used the same room for all purposes of the family. Groups 6, 8, 10, $12,13,14,15$, and 16 of Atlanta showed similar conditions. This condition is, however, not so noticeable in the groups in Nashville, Tenn., while in the group in Cambridge, Mass., the 96 families reporting as to the number of rooms occupied had the use of 209 rooms for other than sleeping purposes. In the 32 groups in other cities this condition was found to exist, although not so noticeably as in Atlanta.

This table shows, also, that of the 324 families in Atlanta, Ga., 73, or 22.53 per cent, owned the houses in which the members lived, while 249 families, or 76.85 per cent, paid an average rent of $\$ 4.25$ per month, the amounts ranging from an average of $\$ 2.55$ per month in group 14 to $\$ 7.49$ in group 1, varying according to the size, condition, and location of the houses occupied. Of the 246 families in the groups for Nashville, Tenn., 116 , or 47.15 per cent, owned their houses, while 123 , or 50 per cent, paid an average rent of $\$ 4.68$ per month. The range of rentals for the groups in Nashville was not so great, being from $\$ 3.81$ per month in group 10 to $\$ 5.89$ in group 5. A very small proportion of the 98 families in the group in Cambridge, Mass., owned their houses. Three families, or 3.06 per cent, owned their houses, while 94 , or 95.92 per cent, paid an average rent of $\$ 8.91$ per month, more than double that paid in Atlanta, Ga., and almost double that paid in Nashville, Tenn. In the 32 groups located in other cities, of the 469 families embraced therein, 157, or 33.48 per cent, owned the houses in which they lived, while 284 , or 60.55 per cent, paid an average rent of $\$ 5.51$ per month, ranging in the individual groups from $\$ 2.50$ to $\$ 9.63$ per month. Of the 37 families tabulated in this table as not reporting as to rent, it will be seen from the footnotes that 8 were paying for houses on the installment plan.

The following short table, drawn from Table IV, classifies the families included in the investigation as to the number of sleeping rooms occupied by each :

AVERAGE PERSONS PER SLEEPING ROOM.

| Cities. | Families having to each sleeping room an average of - |  |  |  |  |  | Total families. | $\begin{array}{\|c} \text { A ver- } \\ \text { age } \\ \text { persons } \\ \text { to a } \\ \text { sleep- } \\ \text { ing } \\ \text { room. } \end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Under 1 person. | 1 or under 2 persons. | 2 or under 3 persons. | 3 or under 4 persons. | 4 or under 5 persons. | 5 persons or over. |  |  |
| Atlanta, Ga. | 6 | 94 | 119 | 65 | 26 | 14 | 324 | 2.22 |
| Nashville, Tenn | 1 | 54 | 114 | 35 | 21 | 21 | 246 | 2.44 |
| Cambridge, Mass. (a) |  | 34 | 49 | 11 | 1 | 1 | 96 | 1.96 |
| Other cities ( $\alpha$ ) ....... | 14 | 147 | 177 | 81 | 31 | 17 | 467 | 2.05 |
| Total (b) | 21 | 329 | 459 | 192 | 79 | 53 | 1,133 | 2.17 |

a Not including 2 families not reporting sleeping rooms.
$b$ Not including 4 families not reporting sleeping rooms.
In each of the three cities, and in the 32 groups in other cities, the largest number of families had an average of 2 or under 3 persons to a sleeping room, while quite a large proportion of the families had an average of 1 or under 2 persons to each room used for sleeping purposes. Of all the families reporting, 1.85 per cent had an average of less than 1 person to a sleeping room; 29.04 per cent, 1 or under 2 persons; 40.51 per cent, 2 or under 3 persons; 16.95 per cent, 3 or under 4 persons; 6.97 per cent, 4 or under 5 persons, and 4.68 per cent, 5 persons or over.

$$

| Other cities...... | 45 | 98 | 72 | 117 | 63 | 33 | 18 | 9 | 5 | 6 | 3 | 469 |
| Total...... | 117 | 276 | 308 | 197 | 112 | 61 | 29 | 17 | 7 | 8 | 5 | 1,137 |

a Including one family having an additional half room.
Of the 1,137 families involved, this table shows that 117 , or 10.29 per cent, had but 1 room for their use for all purposes; 276 , or 24.27 per cent, had 2 rooms; 308, or 27.09 per cent, had 3 rooms; 197, or 17.33 per cent, had 4 rooms; 112, or 9.85 per cent, had 5 rooms; 61, or 5.36 per cent, had 6 rooms; 29, or 2.55 per cent, had 7 rooms; 17, or 1.50 per cent, had 8 rooms; 7 , or 0.62 per cent, had 9 rooms; 8 , or 0.70 per cent, had 10 rooms and over, while a very small number of families did not report as to the number of rooms occupied by them.

Table VI.-Occupations and carnings, by families, pp.301-332.-Each line in this table presents the data for a family, showing the occupation of the head (generally the father), the number of weeks he was employed daring the year, his average weekly earnings, and his means of subsistence when unemployed; also, the number of members acting as housewives, the number at work, the number at work and at school, the number at school, and the number at home. In addition to these facts is shown the total earnings for the year of these other members of the family. Taking up group 1, Atlanta, Ga., of this table, we note that the family numbered 4 consisted of two persons, that the head of the family was occupied as a drayman, was employed 50 weeks during the year, and earned $\$ 5$ per week, lived on his savings daring the 2 weeks not employed, and that the other member of the family was the housewife. In family numbered 19, of the same group and city, the head of the family was a restaurant proprietor for 12 weeks, and his earnings were $\$ 17$ per week. The footnote to these items shows that he was employed as a bank porter at $\$ 10$ per week for 40 weeks, making a full year's work of 52 weeks. The remainder of the family consisted of a housewife, 1 person at work (which a footnote shows was the mother of the head of the family), 2 children at school, and 2 persons at home. The earnings of the person at work are shown to have been $\$ 364$ for the year. In a similar manner the facts for each family may be analyzed.

In connection with Table VI the following short table has been prepared showing the means of support of the families embraced in the investigation:

NUMBER OF TAMILIES AND MEANS OF SUPPORT.

| By whom supported. | Atlanta, Ga., 16 gronps. | $\begin{gathered} \text { Nash- } \\ \text { ville, } \\ \text { Tenn., } 10 \\ \text { groups. } \end{gathered}$ | Cambridge, Mass., 1 group. | Other cities, 22 groups. | Total families. |

| Others, female .............................................. | 6 | 6 |  | 8 | 20 |
| Total | 324 | 246 | 98 | 463 | 1,137 |

Examining the figures for Atlanta, Ga., we note that out of a total of 324 families 73 , or 22.53 per cent, were supported wholly by a male head of family, 31 , or 9.57 per cent, wholly by a female head, and 84 , or 25.93 per cent, wholly by both a male and a female head of family. It should be remembered in using the terms "male head" and "female head," that in almost every case they denote, respectively, the father and mother of the family. It is thus seen that in 324 families in Atlanta, Ga., 31, or 9.57 per cent, were wholly supported by the mother; 205 , or 63.27 per cent, were wholly or in part supported by the mother, and 47 , or 14.51 per cent, were wholly supported by females, while 84, or 25.93 per cent, were wholly supported by males. The figures for the 10 groups in Nashville, Tenn., the single group in Cambridge, Mass., and the 32 groups in other cities may be analyzed in the same manner. The total number of families embraced in the investigation for all groups in all cities was 1,137 . Of this number 304, or 26.74 per cent of families, were supported wholly by a male head, 89 , or 7.83 per cent, by a female head, while 255 , or 22.43 per cent, were supported by both male and female heads; 650, or 57.17 per cent of these families, were supported wholly or in part by a female head, 140 , or 12.31 per cent, were supported wholly by females, while 360 , or 31,66 per cent, were supported wholly by males.
Table VII.—Sickness during the year, pp. 332-344.—This table shows in detail the age and sex of each person embraced in the investigation who was sick during the year, together with the name of the ailment from which he suffered and the number of days sick.

Tuble VIII.-Summary of sickness during the year, by sex and age periods, $p p .345-351$.-This table is a summary of the preceding one,
and shows by sex and age periods the number of cases of sickness under certain classified groups of ailments, the remaining diseases or ailments following in alphabetical order. The following short table shows the number and per cent of persons sick during the year with each of the selected ailments and with all other ailments:

NUMBER AND PERCENTAGE OF PERSONS SICK DURING THE YEAR.

| Name of ailment. | Atlanta, Ga., 16 groups. |  | Nashrille, Tenn. 10 groups. |  | Cambridge, Mass. 1 groap. |  | Other cities, 32 groups. |  | Total. |  |

| Other ailments | 353 | 79.86 | 371 | 79.27 | 92 | 85.98 | 427 | 65.90 | 1,243 | 74.66 |
| Grand total. | 442 | 100.00 | 468 | 100.00 | 107 | 100.00 | 648 | 100.00 | 1,665 | 100.00 |

According to the figures given in the above table, malarial fever was the most common malady. Reference to Table VIII, where all ailments are given in detail, shows that rheumatism also was quite common among the people included in the investigation. Both of these diseases may, to a great extent, be kept in abeyance by the observance of hygienic rules. Pneumonia also was one of the most common diseases found, which, with typhoid fever, may often be avoided by proper care of the health, these diseases generally attacking those enfeebled by age or neglectful of their health. The absence of such diseases as rickets and other developmental lesions in these families shows that the children have a fair heritage of good constitutions to start life with.

Table IX.-Defective, maimed, and deformed, pp. 352-354.-This table, similar in form to Table VII, shows age, sex, and name of defect, etc., for each defective, maimed, or deformed person included in the investigation.

Table X.—Summary of defective, maimed, and deformed, by sex and age periods, pp. 3 3"4-356.-This table summarizes the data shown in the preceding table, by sex and age periods. In the 16 groups in Atlanta,

Ga., embracing 1,292 individuals, 68 , or 5.26 per cent, were found defective, maimed, or deformed; in the 10 groups in Nashville, Tenn., with 1,090 individuals, 137 , or 12.57 per cent, were found; in the single group in Oambridge, Mass., with 366 individuals, 28 , or 7.65 per cent, were found; and in the 32 groups in other cities, with 1,' 94 individuals, 89 , or 4.46 per cent, were found. Reference to the table shows that defects in sight and hearing formed a large proportion of the cases reported.

Table XI.—Deaths during past five years, pp. 356-361.-This table shows in detail the sex, age at death, and cause of death of all persons who have died during the past five years in the families included in the investigation.

Table XII.—Summary of deaths during past five years, by sex and age periods, $p$ p. 361-365.-Table XII summarizes the facts shown in Table XI by sex and age periods, grouping the deaths under four selected classes of causes, the other causes of death following these classes in detail and in alphabetical order. The accompanying short table drawn from Table XII shows the number and per cent of deaths during the past five years by groups of canses:

NUMBER AND PER CENT OF DEATHS DURING PAST FIVE YEARS, BY CAUSES.

| Causes. | Atlanta, Ga., 16 groups. |  | Nashville, Tenn., 10 groups. |  | Cambridge, Mass., 1 group. |  | Other cities, 32 groups. |  | Total deaths. |  |

| Other causes. | 111 | 60.99 | 71 | 53.38 | 18 | 34.62 | 169 | 61.68 | 369 | 57.57 |
| Grand total | 182 | 100.00 | 133 | 100.00 | 52 | 100.00 | 274 | 100. 00 | 641 | 100.00 |

In the 16 groups for Atlanta, Ga., 21.98 per cent of the deaths that occurred in the families embraced in the investigation were from consumption and pneumonia, 9.34 per cent being from consumption and 12.64 per cent from pneumonia; 7.69 per cent were from cholera infantum, convulsions, and stillbirth; 7.69 per cent were from typhoid and
malarial fevers and diarrhea and diphtheria; 1.65 per cent were from scrofula, while 60.99 per cent were from other causes. In the 10 groups in Nashville, Tenn., the per cent of deaths from consumption and pneumonia was $29.32,24.06$ per cent being from consumption and 5.26 per cent from pneumonia. The proportion of deaths from consumption in Nashville was larger than in any of the other cities, the per cent for Atlanta being 9.34, that for Cambridge being 15.38 per cent, and that for the 32 groups in other cities 12.77 per cent. Cambridge, Mass., shows a very large proportion of deaths, 26.92 per cent, from infantile diseases, the majority of which, 19.23 per cent out of the 26.92 per cent, being stillbirths. The preceding statements and figures apply only to the 641 deaths which occurred in the families cmbraced in the investigation. It should be remembered that the number of cases of death is not a large one, and that for this reason the figures given may not reflect conditions for the whole colored population. A compilation of data from the health reports of various cities, made by Mr. L. M. Hershaw, of Washington, D. C., an alumnus of Atlanta University, follows, and it is believed that they afford very accurate information concerning the deaths, etc., in the cities for which the necessary official reports were available.

The accompanying tabular statements, presenting vital statistics of the cities of Atlanta, Ga., Baltimore, Md., Charleston, S. O., Memphis, Tenn., and Richmond, Va., aro designed to show the physical condition of the colored population of those cities and to compare the same with the physical condition of the whites. The number of births and the number of deaths, upon which the birth and death rates are based, were abstracted from the reports of the health departments of the cities in question. For decennial years the population is given as returned by the United States census, while for intercensal years it is estimated.

The first group of statements relates to the vital statistics of the city of Atlanta, Ga., and covers the fourteen years from 1882 to 1895 . The figures upon which the death rates are based are taken from the annual reports of the board of health of the city of Atlanta. The table immediately following shows, for each of the fourteen years 1882 to 1895, the population, total deaths, and deatlss per 1,000 of both white and colored, with excess and per cent of excess of deaths per 1,000 of colored; also averages for the three periods 1882 to 1885,1886 to 1890, and 1891 to 1895:

POPULATION, DEATHS, AND DEATH RATE PER 1,000, ATLANTA, GA., 1883 TO 1895.

| Year. | Population. |  | Total deaths. |  | Deaths per 1,000 . |  |  |  |

| 1895.............. | 49,835 | 36,857 | $88 \pm$ | 1,120 | 17.74 | 30.53 | 12.81 | 72.21 |
|  | 41,583 | 33, 163 | 804 | 1,086 | 18.03 | 32.76 | 14.73 | 81.65 |

It is seen from the table that the death rate of the colored population, though greatly in excess of that of the white, has constantly decreased, the average death rate per 1,000 for the first period being 37.96, for the second period 33.41, and for the third period 32.76. Relatively, as compared with the whites, the death rate of the colored population shows much improvement. Though the percentage of excess of colored for the third period is greater than that for the second, the percentages for both of these periods show a marked decrease from that of the first period.

The table next following shows for the years 1882 to 189 on the total deaths and the deaths per 1,000 of total population of both white and colored children under 5 years of age, with excess and per cent of excess of colored death rato:

DEATES AND DEATH RATE PER 1,000 OF TOTAL POPULATION OF CHILDREN UNDER 5 YEARS OF AGE, ATLANTA, GA., 1882 TO 1895.

The deaths per 1,000 and the percentages of excess of colored death rate show a decrease during the three periods, the colored rate for the first period being 15.81, for the second period 13.77, and for the third period 11.65, while the percentages of excess' of colored for the three periods are $137.74,105.22$, and 102.26 , respectively.

The two succeeding statements show for the three periods 1882 to 1885,1886 to 1890 , and 1891 to 1895 , the average annual deaths and death rates per 10,000 , with distinction of color and number and per cent of excess of colored, by specified causes:

AVERAGE ANNUAL DEATHS, ATLANTA, GA., FOR THE PERIODS 1882 TO 1885, 1886 TO 1890, AND 1891 TO 1895, BY CAUSES.

[^1]Referring to the table immediately preceding, it is seen that aeaths from consumption and pneumonia among the colored population show an annual rate per 10,000 for the first period of 76.89 , a rate of 72.14 for the second period, and a rate of 75.75 for the third period. Among the whites from these causes the annual death rate for the first period is 27.43 per 10,000 , for the second period 30.13 , and for the third period 28.48. The percentages of excess of colored for the three periods are $180.31,139.43$, and 165.98 , respectively.

The total deaths for the second group of causes show a decrease in the rate for both white and colored, though the percentage of excess of colored has increased, or, in other words, the colored death rate has not decreased as rapidly as the white death rate. In the total for the third group of causes it is seen that the death rate of colored has decreased both actually and relatively. The rate per 10,000 shows an excess of whites in the three periods in the deaths resulting from scarlet fever and diphtheria.

The second group of statements relates to the vital statistics of the city of Baltimore, Md. The figures upon which the death and birth rates are based are taken from the annual reports of the health department of the city of Baltimore. Returns of deaths cover a period of fifteen years, from 1880 to 1894; those of births a period of ten years, from 1884 to 1893.

The table immediately following shows, for each of the fifteen years, 1880 to 1894, the population, total deaths, and deaths per 1,000 of both white and colored, with excess and per cent of excess of deaths per 1,000 of colored; also averages for the five-year periods 1880 to 1884 , 1885 to 1889 , and 1890 to 1894 :

POPULATION, DEATHS, AND DEATH RATE PER 1,000, BALTIMORE, MD., 1880 TO 1894.

It is seen from the table that the two five-year periods 1885 to 1889 and 1890 to 1894 show smaller average death rates, for both white and colored, than the five-year period 1880 to 1884, although the rates for the period 1890 to 1894 are slightly in excess of those for the preceding period. A similar showing is observed with respect to the excess and per cent of excess of death rate of colored, the excess for the first period being 13.55, for the second period 11.06, and for the third period 11.46, while the percentages of excess are $59.92,56.87$, and 57.24 , respectively.

The following statements show for the four years 1886, 1887, 1891, and 1892 the deaths and death rates per 10,000 of both white and colored, with excess and per cent of excess of death rate of colored, by specified causes:

Reference to the four groups of specified canses shows that the death rate of colored was generally lower for the three years 1887, 1891, and 1892 than for 1880, although in the total for all canses the rate for the other years was greater than that for 1886.
In all these groups the colored death rate was in excess of the white except in the third groap, where for scarlet fever and diphtheria,
diseases from which the colored people seem to have been largely exempt, the white death rate was in excess. The greatest excesses of the colored death rate over the white appear in the first and fourth groups of canses.
The table following shows for each of the ten years from 1884 to 1893 the total and the illegitimate births and the birth rate per 1,000 of total population of both white and colored; also the average births and birth rates per 1,000 for the two five-year periods 1884 to 1888 and 1889 to 1893:

TOTAL AND ILLEGITIMATE BIRTHS AND BIRTH RATE PER 1,000 OF TOTAL POPULATION, BALITMORE, MD, 1884 TO 1893.

| 1893. | 7,914 | 1,221 | 19.84 | 17.00 | 2.84 | 16. 71 | 224 | 387 | . 56 | 5. 39 | $4.83{ }^{\prime}$ | 862.5 |
| Average. | 8,113 | 1,221 | 21.48 | 17.76 | 3.72 | 20.93 | 209 | 285 | . 55 | 4.15 | 3. 60 | 650.4 |

Of total births, the excess of births per 1,000 of population is seen to be in favor of the whites. For the first five-year period this excess is 2.14 , the percentage of excess being 11.09; for the second five-year period the excess is 3.72 , the percentage of excess being 20.93 .
The illegitimate births for the colored population show a very large excess over the illegitimate births for the white. While there is an increase in the excess of colored birth rate from 2.68 in the first fiveyear period to 3.60 in the second, the per cent of excess shows a decrease from 714.6 in the first period to 650.4 in the second.

The following comparative statement shows the average annual death rates and birth rates per 1,000 of both white and colored population for the two five-year periods, 1885 to 1889 and 1890 to 1894:
average annual death and birth rates per 1,000 compared, baltmmore, MD., 1885 TO 1889 AND 1890 TO 1894.

|  | 1885 to 1889. |  | 1890 to 1894. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | White. | Colored. | White. | Colored. |
| Average death rate per 1.000 | 19. 46 | 30.52 | 20.01 | 31.47 |
| Average birth rate per 1,000. | 21.58 | 10.28 | 20.87 | 17.63 |
| Excess of death rate. | $a 2.12$ | 11.24 | a. 86 | 13.84 |

While the white death rate is slightly less than the birth rate, the colored death rate is greatly in excess of the birth rate. The following extract from the Annual Report of the Health Department of the City of Baltimore for 1888 indicates that the returns relating to births are perhaps not complete:

I feel ashamed of the record which shows that apparently the births in the city of Baltimore have been less than the deaths, and my shame arises, not from the fact, for it is well known that the birth rate of the city is equal to that of any other, but that the physicians of Baltimore should be so dull to comprehend the value of vital statistics, and so indifferent to the feelings of the public, who are obliged to see in the record that the deaths in Baltimore have exceeded the births, and that those who attend upon such cases are so disregardful of the law and the obligation it imposes upon all who call themselves good citizens.

The third group of tabular statements presents vital statistics relating to the city of Charleston, S. C., and covers the period of fourteen years, from 1881 to 1894 . The figures upon which the death rates are based are taken from the annual reports of the board of health of Charleston. The table following shows for each of the fourteen years 1881 to 1894 the population, total deaths, and deaths per 1,000 of both white and colored, with excess and per cent of excess of deaths per 1,000 of colored; also averages for the three periods, 1881 to 1884, 1885 to 1889 , and 1890 to 1894 :

POPULATION, DEATHS, AND DEATH RATE PER 1,000, OHARLESTON, S. C., 1881 TO 1894.

An inspection of the average death rates per 1,000 for the three periods shows a gradual decrease for the white population, being 25.40 for the first period, 22.30 for the second, and 21.88 for the third. The colored death rates for the three periods are considerably in excess of the white, the first period showing a rate of 44.08 , the second a rate of
46.74, and the third a rate of 41.43 . The per cent of excess of colored death rate is smaller for the first period than for either of the other two periods, being for the first 73.52, while for the other two it is 109.63 and 89.39.

The table immediately following shows, for the years 1885 to 1894, the total deaths and deaths per 1,000 of total population of both white and colored children under 5 years of age, with excess and per cent of excess of colored death rate:

DEATHS AND DEATH RATE PER 1,000 OF TOTAL POPULATION OF CHILDREN UNDER 5 YEARS OF AGE, CHARLESTON, S. C., 1885 TO 1894.

| Year. | Total deaths. |  | Deaths per 1,000. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | White. | Colored. | White. | Colored. | Excess of colored. |  |
|  |  |  |  |  | Number. | Per cent. |
| 1885. | 123 | 468 | 5.28 | 16.10 | 10.82 | 204.92 |
|  | 173 | 640 | 7.39 | 21.74 | 14.35 | 194.18 |
| 1887. | 152 | 504 | 6.46 | 16.91 | 10.45 | 161.76 |
| 1888. | 133 | 586 | 5.62 | 19.41 | 13. 79 | 245.37 |
| 1889. | 158 | 592 | 6.64 | 19.36 | 12.72 | 191.57 |
| Arcrage. | 148 | 558 | 6.28 | 18.71 | 12.43 | 198.14 |
| 1890.. | 148 | 517 | 6.19 | 16.69 | 10.50 | 169.63 |
| 1891. | 159 | 553 | 6.61 | 17.63 | 11.02 | 106. 72 |
| 1892. | 143 | 551 | 5.92 | 17. 35 | 11. 43 | 193.07 |
| 1893. | 140 | 441 | 5.78 | 13.71 | 7.95 | 138.02 |
| 1894. | 116 | 527 | 4.75 | 16.17 | 11.42 | 210.42 |
| Average.. | 141 | 518 | 5.84 | 10.30 | 10.46 | 178.96 |

The average death rates per 1,000 for the second period show a decrease from the rates for the first period for both white and colored children, the white rates for the two periods being 6.28 and 5.84 and the colored rates 18.71 and 16.30 . Although the per cents of excess of colored death rates are large, the second period shows a smaller per cent than the first, the per cent for the second period being 178.96 as compared with 198.14 for the first.
The two tables following show for the three periods 1881 to 1884, 1885 to 1889, and 1890 to 1894 the average annual deaths and death rates per 10,000 , with distinction of color and excess and per cent of excess of colored, by specified causes.

AVERAGE ANNUAL DEATHS, CHARLESTON, S. C., FOR THE PERIODS 1881 TO 1834, 1885 TO 1889, AND 1890 TO 1894, BY CAUSES.

[^2]The death rates per $\mathbf{1 0 , 0 0 0}$ for the first group of causes, consumption and pneumonia, show a constant decrease, for both white and colored, during the three periods, the white rates being $35.70,28.37$, and 24.49 , respectively, and the colored rates $91.20,86.59$, and 74.72. The decrease in the colored death rate, however, has not been as rapid as in the white, this being brought out in the percentages of excess of colored, where the percentages for the second and third period are seen to exceed the percentage of excess for the first period.
The second groap, canses of infant mortality, shows, for the period 1890 to 1894, an improved condition, both actual and relative, for colored children when compared with the preceding period, 1885 to 1889. The third group of canses shows the smallest percentages of excess of colored death rate. In deaths resulting from diphtheria, the white death rate is seen to be in excess of the colored for the three periods. The fourth group of causes shows, for all the periods, large percentages of excess of colored death rate.

The fourth groap of tabular statements presents vital statistics relating to Memphis, Tenn., and covers the period of fourteen years from 1882 to 1895 . The death rates are based upon figures taken from the annual reports of the board of health of Memphis. For each of the fourteen years 1882 to 1895 the succeeding table shows the population, total deaths, and deaths per 1,000 of both white and colored, with excess and per cent of excess of death rate of colored; also averages for the three periods 1882 to 1885, 1886 to 1890, and 1891 to 1895 :

POPULATION, DEATHS, AND DEATH RATE PER 1,000, M.EMPHIS, TENN., 1882 TO 1895.

For both white and colored the table shows that the death rate has Jecreased during the three periods, the white death rates for the periods being $26.08,21.49$, and 14.17 , respectively, while those of the colored are 43.01, 29.35, and 21.11. The percentages of excess of colored are 34.95 for the first period, 36.59 for the second, and 48.95 for the third. While the percentage of excess of colored for the third period is greater than that for the second, the percentages for the two periods are considerably less than that for the first.

The foilowing table shows, for the years 1886 to 1895, the total deaths ind deaths per 1,000 of total population of both white and colored shildren under 5 years of age, with excess and per cent of excess of solored death rate:

DEATHS AND DEATH RATE PER 1,000 OF TOTAL POPULATION OF CHILDREN UNDER 5 YEARS OE AGE, MEMPHIS, TENN., 1886 TO. 1895.

| Year. | Total deaths. |  | Deaths per 1,000. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | White. | Colored. | White. | Colored. | Excess of colored. |  |
|  |  |  |  |  | Number. | Per cent. |
| . 886. | 201 | 299 | 7.29 | 13.54 | 6. 25 | 85.73 |
| . 887. | 194 | 289 | 6.59 | 12. 26 | 5.67 | 86.04 |
| . 888. | 202 | 261 | 6.43 | 10.37 | 3.94 | 61.28 |
| . 889 | 144 | 224 | 4. 30 | 8.33 | 4.03 | 93.72 |
| . 890. | 157 | 244 | 4.39 | 8.50 | 4.11 | 93.64 |
| Average. | 180 | 263 | 5.69 | 10.42 | 4.73 | 82.95 |
| 891. | 178 | 267 | 4.66 | 8.71 | 4.05 | 86.91 |
| 892. | 148 | 215 | 3.63 | 6.57 | 2.94 | 80.93 |
| . 893. | 120 | 209 | 2.76 | 5.98 | 3.22 | 116. 67 |
| . 894. | 149 | 245 | 3. 21 | 6.56 | 3.35 | 104. 36 |
| . 895. | 128 | 222 | 2.59 | 5.57 | 2.98 | 115.06 |
| A verage..... | 145 | 232 | 3.31 | 6. 60 | 3.29 | 99.15 |

From an inspection of the averages for the two five-year periods it is seen that the death rates per 1,000 of both white and colored children show a decrease in the second period from the averages for the first jeriod. For whites the rate for the tirst period is 5.69 and for the secnd 3.31, while the colored rates for the two periods are 10.42 and 6.60 , :espectively. The per cent of excess of colored, however, is greater in ;he second than in the first period, being 99.15 for the second and 82.95 or the first, showing that the colored death rate has not decreased as :apidly as the white.
The two statements following show for the three periods 1882 to 1885, 1886 to 1890 , and 1891 to 1895 , the average annual deaths and death sates per 10,000 , with distinction of color and excess and per cent of 3xcess of colored, by specified causes.
179-No. 10-4

In the first group of causes, viz, consumption and pneumonia, there is a coustant decrease in the death rate for both the white and colored population. The death rates per $\mathbf{1 0 , 0 0 0}$ for whites for the three periods
are $51.18,35.70$, and 24.29 , respectively, while the colored death rates for the same periods are 100.21, 73.16, and 56.24. The percentages of excess of colored death rate, however, show an increase for the three periods, being 95.80 for the first, 104.93 for the second, and 131.54 for the third, demonstrating that the decrease in the colored death rate las not lept pace with the decrease in the white.
The second group, canses of infant mortality, shows a decrease in the per cent of excess of colored for the third period when compared with the first, but an increase when compared with the second. The third group of canses shows the smallest percentages of excess of colored, being 28.64 for the first period, 20.31 for the second, and 50.49 for the third. As in the three preceding cities, in deaths resulting from diphtheria the rate per 10,000 is greater for whites in all three periods. The fourth group of causes shows large percentages of excess of colored leath rate.
The final group of tabular statements relates to the vital statistics of the city of Richmond, Va. The figures upon which the rates are based are taken from the annual reports of the board of health of Richmond, the returns covering a period of fifteen years, namely, from 1881 to 1895.

The table immediately following shows, for each of the fifteen years, 1881 to 1895 , the population, total deaths, and deaths per 1,000 of both white and colored, with excess and per cent of excess of deaths per 1,000 of colored; also averages for the five-year periods 1881 to 1885 , 1886 to 1890, and 1891 to 1895:

POPULATION, DEATHS, AND DEATH RATE PER 1,000, RICHMOND, VA., $188 i$ TO 1895.

| Year. | Population. |  | Total deatles. |  | Deaths per 1,000. |  |  |  |

| Average..... | 53, 947 | 33, 682 | 994 | 1,176 | 18.42 | 34.91 | 16. 49 | 89.54 |

An inspection of the averages for the three five-year periods shows a decrease in the death rate of the colored population as well as in the death rate of the white, the average colored death rate per 1,000 for the first period being 40.34 , for the second 38.83 , and for the third 34.91 . Relatively, as compared with the whites, there has been an increase. In other words, the colored death rate has not decreased as rapidly as the white death rate. For the first five-year period the excess of the colored death rate was 79.98 per cent, for the second period 81.74 per cent, and for the third period 89.54 per cent.
The following statements show for the three five-year periods, 1881 to 1885,1886 to 1890 , and 1891 to 1895, the average annual deaths and death rates per 10,000 , with distinction of color and excess and per cent of excess of colored, by specified causes:

With the exception of the second group of causes, namely, causes of infant mortality, there has been for the groups of specified causes a constant decrease in the colored death rates. For the first group, consumption and pneumonia, the colored death rates are seen to be 75.56 for the first period, 62.57 for the second, and 59.14 for the third, the percentages of excess of colored death rate being 113.57, 99.33, and 108.24. In the group of causes of infant mortality the death rate has increased both actually and relatively. For the first five-year period the death rate is 66.62 and the excess of the colored death rate 132.37 per cent, while for the third ive-year period the death rate is 75.95 and the excess of the colored death rate 230.36 per cent. In the third group, typhoid fever in the second and third periods and diph. theria in the first and third show the white death rate to be in excess of the colored. The fourth group shows the largest percentages of excess of colored death rate.

The following table drawn from preceding statements summarizes for the five cities of Atlanta, Baltimore, Charleston, Memphis, and Richmond the average annual death rates per 1,000 of both white and colored, with excess and per cent of excess of deaths per 1,000 of colored, for three periods of years. The three periods are embraced within the years 1880 to 1895. Although the years covered in any one period are not absolutely the same for all the cities, they are sufficiently identical for comparative purposes, as may be seen by examining the separate statements from which the summary was made.
average annual dedth rate per 1,000 and excess and per cent of excess OF COLORED FOR THREE PERIODS OF YEARS, BY CITIES.

Table XIII.-Sickness, by sanitary condition of houses, pp. 306, 367.In this table the total persons embraced in the investigation, as well as the number of persons sick during the year, are clafsified by the sanitary condition of the houses in which they lived; first, as to light and air, whether good, fair, or bad; second, as to ventilation, whether good, fair, or bad; third, as to cleanliness, whether good, fair, or bad; and, fourth, as to outside sanitary condition, whether good, fair, or bad. Taking up the part of the table relating to the 16 groups in Atlanta, Ga., it is seen that, so far as regards light and air, 577 persons are reported as living in honses where it was good, and of these persons 163, or 28.25 per cent, were sick during the year, the average days of sickness of those reporting being 45.46; 348 persons lived in houses in which the light and air was fair, and of these 36.21 per cent were sick during the year, the average days of sickness of those reporting being 60.27 , and 367 persons lived in houses in which light and air was bad, 32.70 per cent of whom were sick during the year, the average days of sickuess of those reporting being 42.75. So far as ventilation was concerned, the largest per cent of sick persons (36.07) was found among those living in houses where ventilation was bad, while 31.10 per cent was fonnd where it was fair, and but 28.49 per cent where ventilation was good. As regards cleanliness, 28.64 per cent of the persons living in houses where it was reported as good were sick during the year, 33.59 per cent where it was fair, and 32.45 per cent where it was bad. The effect of the outside sanitary condition of the houses in Atlanta on the health of their occupants was quite marked. Of persons surrounded by bad sanitary conditions 35.14 per cent were sick during the year, 30.30 per cent of those surrounded by fair sanitary conditions were sick, while of those enjoying good sanitary surroundings but 27.79 per cent suffered from sickness during the year. The parts of the table relating to the 10 groups in Nashville, Tenn., the single group in Cambridge, Mass., and the 32 groups in other cities may be examined in a similar manner and the sanitary condition of houses and the health of their occupants be seen. While bad conditions of light and air, ventilation, cleanliness, and outside sanitation do not invariably show the
largest per cent of sickness, there is reason to believe that as a rule bad conditions lead to a greater per cent of sickness among those so surrounded.

Ailments which are not influenced or caused by sanitary conditions, such as accidents, childbirth, etc., have been omitted from consideration in making up this table.

Table XIV.—Sanitary condition of houses, pp. 367, 368.-This table classifies the houses in each group as to their sanitary condition, whether good, fair, or bad. Of the 10 groups in Atlanta, Ga., the light and air were reported as good in 120 houses, fair in 80 , and bad in 82 ; ventilation was good in 112 houses, fair in 73, and bad in 97 ; cleanliness was good in 98, fair in 105, and bad in 79; and the outside sanitary condition was good in 96 houses, fair in 50, and bad in 130. The reader is referred to the table itself for the conditious as found in the other groups and cities.

Table XV.-General description of houses, pp. 368, 369.-Table XV deals with the general character of the houses composing each group and the character of the neighborhood in which each group is located. It also shows the number of houses in each group, together with the number of bathrooms, water-closets, and privies pertaining thereto. Bathrooms were found in but 11 of the groups embraced in the canvass, the total number of houses having bathrooms being only 43. Water-closets were, likewise, found in comparatively few groups, privies being the rule.

## BUILDING AND LOAN ASSOCIATIONS.

The Ninth Annual Report of the Commissioner of Labor relating to building and loan associations embracel practically all active associations in the United States which were a year old or over, and gave very complete data concerning the various phases of their business for their respective fiscal years ending nearest to January 1, 1893. An effort has now been made to secure the most important facts regarding such associations for a more recent date, in order that a comparison with the report of four years ago might be made. Data lave been secured from 14 States whose lars require returns from building and loan associations to be made to some State official. The effort to secure similar data from other States did not meet with success. In some of these latter cases their firstreports were just being compiled; in others, reports were made to the proper State official bnt the data were either very incomplete or related only to associations located ontside of the State doing lousiness in the State, no report being required by law from associations located in the State; in others, no provision had been made by the State for compiling and printing the reports of individual associations received; and in still others, there were no legal requirements whatever as to reports from building and loan associations.

Tables 1, 2, and 3, following, embrace the data secured from the recent reports of the 14 States from which comparatively complete data were obtainable, and it seems fair to assume that these States are properly representative of the conditions for the whole country, inasmuch as they contain over 76 per cent of all the building and loan associations of the United States existing January 1, 1893, the facts for which were embodied in the Ninth Annual Report of the Department:

| Cash on hand |  |  |  |
|  | c $489,650,734$ |  |  |
| Total |  | 403,475, 395 | 125, 377, 490 |
| Liabilities: <br> Installment dues paid in and prepaid and paid. <br> up stock <br> Profits. <br> all other. |  | $\begin{array}{r} 308,705,487 \\ 61,765,802 \\ 33,004,106 \end{array}$ | $\begin{aligned} & 95,073,357 \\ & 18,898,314 \\ & 11,405,819 \end{aligned}$ |
|  | $\begin{array}{r} 383,590,588 \\ 66,952,460 \\ 40,016,686 \end{array}$ |  |  |
|  |  |  |  |
|  |  |  |  |
| Total.. | 489, 659, 734 | 403, 475, 395 | 125, 377, 490 |

[^15]It is seen, by reference to this recapitulation, that in the 14 States embraced in the statement for $1895-96$ were located at the date of the Ninth Annual Report 76.1 per cent of the active associations of the country a year old or over, representing 71.7 per cent of the outstanding shares and 76.5 per cent of the sum of the installment dues paid in, paid-up and prepaid stock, and profits of all associations of the United States.

Comparing the figures for 14 States for the period covered by the Ninth Annual Report of the Commissioner of Labor, the fiscal year of the associations ending nearest to January 1, 1893, with the figures for those 14 States as shown by recent State reports for 1895-96, a growth is noticed in every item. The total number of associations, including associations not a year old and which had therefore made no annual. report, and also those in process of liquidation from which no report was obtainable, at the former period was 4,499, while in 1895-96 there were 4,617 , an increase of 2.6 per cent; the number of associations reporting, which represents, practically, all active associations a year old or over, had increased from 4,443 to 4,531 , or 2 per cent; the shares outstanding lad increased from $9,500,755$ to $9,985,999$, or 5.1 per cent, and the installment dues paid in, plus paid-up and prepaid stock and profits, had increased from $\$ 370,471,289$ to $\$ 449,643,048$, or 21.4 per cent. In this period of about three years the total assets of the associations in these 14 States had grown from $\$ 403,475,395$ to $\$ 489,659,734$, an increase of $\$ 86,184,339$, or 21.4 per cent.
The following table shows, in parallel columns, the shares outstanding and assets for the two dates in each of the 14 States:

SHARES OUTSTANDING AND ASSETS OF ASSOCIATTONSTN 14 STATES, JANUARY 1 , 1803, AND 1895-96.

| State. | Shares outstanding. |  | Assets. |  |
| :---: | :---: | :---: | :---: | :---: |

## RECENT REPORTS OF STATE BUREAUS OF LABOR STATISTICS.

## COLORADO.

Fifth Biennial Report of the Bureau of Labor Statistics of the State of Colorado. 1895, 1896. A. B. McGaffey, Commissioner; William H. Klett, Deputy Commissioner. VIII, 89 pp.

Following are the more important subjects treated in this report: Review of industrial conditions, 18 pages; industrial statistics, 20 pages; labor organizations, 11 pages; cost of living, 2 pages; strikes and lockouts, 34 pages.

Industrial Conditions.-Under this caption is given a brief review of the mining and manufactaring industries, the building trades, railway employment, the results of the eight-hour law, employment agencies, accidents and fatalities, labor organizations, female labor, the unemployed, sanitary condition of workshops, etc., farming and stockraising industry, convict labor, the Chinese labor question, and labor difficulties. As regards the general industrial condition, the commissioner reports that "the past two years (1895 and 1896) have witnessed a gradual yet steady improvement along the lines of returning prosperity. The demand for the employment of labor is the most reliable of all industrial barometers, and, judged from this standpoint, Colorado has every reason for congratulation upon present and encouragement for future conditions." The eight-hour law for labor upon public works is very generally disregarded, especially by contractors, and the constitutionality of the law is being tested in the courts. The number of accidents and fatalities among laboring men in Colorado was below the average. In the metalliferous mines, employing a total of $15,916 \mathrm{men}$, there were 292 accidents, resulting in 145 deaths and 147 injuries. In the coal mines, employing 7,454 men, there were 231 accidents, resulting in 84 deaths and 147 injuries.

Industrial Statistics.-This portion of the report consists of tables showing the number of employees, average wages, average hours of labor per day, and average number of days employed per month in the mining, smelting, railroad, and manufacturing industries of the State. It also includes statistics of accidents in the mining industry, and of capital invested by certain manufacturing industries, the value of their products, etc.

Lador Organizations.-There are about 75 labor organizations in the State. The following table shows the average membership for 1895
and 1896 and the average hours of labor, daily wages, and days of employment per month, as reported by various labor organizations:

## AVERAGE MEMBERSHIP, HOURS OF LABOR, WAGES, AND DAYS OF EMPLOYMENT PER MONTH REPORTED BY LABOR ORGANIZATIONS.

Cost of Living.-Under this heading is given a table showing the prices of articles of food, clothing, fuel, etc., and rent rates in the five principal cities in the State; also a statement showing prices in 1888
and 1892. A comparison shows that in nearly every item there has been a material reduction in cost, especially in those of rent, coal, flour, and potatoes.

Strikes and Lockou's.-This chapter is devoted to a review of the Tenth Annual Report of the United States Department of Labor on Strikes and Lockouts. No summary of strikes for 1895 and 1896 is given for Colorado. The report contains detailed accounts of the Louisville and Leadville mining strikes, and brief descriptions of eleven other strikes which occurred during the two-year period. All but two of these were mining strikes.

## MISSOURI.

Eighteenth Annual Report of the Bureau of Labor Statistics of Missouri. 1896. Lee Meriwether, Commissioner. 460 pp.

This report consists of three parts: Part I relates to street-railway franchises, 82 pages, and taxation of real estate, 47 pages; Part II gives an account of the resources and advantages of Missouri, 234 pages; Part III treats of the fellow-servant question, 30 pages, farm mortgages, 57 pages, and factory inspection, 2 pages.

Street-Railwat Franchises.-This subject was taken up for investigation in order to show to what extent the holders of street-railway franchises in St. Louis, Kansas City, and St. Joseph have compensated the public for the use of these privileges. Among the topics covered were the assessed value of street-railway property, the capital stock and bonded debt of street-car lines, the actual value of real and personal property owned by the companies, street-railway mileage, number of cars in use, street-car licenses, franchise rents paid, trips made, and passengers carried, etc., and a comparison of conditions in St. Louis, Kansas City, and St. Joseph and cities in other States and abroad.

Following are some of the facts reported as a result of the bureau's investigation :

The capital stock of all the street-railway companies in St. Louis in 1895 was $\$ 22,837,000$ and the bonded debt $\$ 15,600,000$, making a total capitalization of $\$ 38,437,000$. The estimated amount invested in building and equipping the street railways was $\$ 8,415,360$. The total assessed value of all this property was but $\$ 4,246,190$. During the same year the net earnings of all street railways in St. Louis were $\$ 1,962,468$. This latter amount would represent a dividend of $5+$ per cent on a capital of $\$ 37,987,000$-the value of the system as stated by the railway officials themselves. The commissioner of the bureau considers that if from this amount the actual cost of construction, $\$ 8,415,360$, be deducted, the remainder represents the value of the franchises which the city has granted to these corporations, namely, $\$ 29,571,640$. In return for these grants the city receives but $\$ 47,500$. By a similar method of calculation the value of street-railway franchises in Kansas

City was reported to be $\$ 6,014,580$. The city receives nothing in return for these privileges. According to the above estimate of the value of street-railway property in St. Louis, namely, $\$ 37,987,000$, the assessed value is only 11.18 per cent of the real value. The average assessed value of private property in St. Louis is 50.40 per cent of the real value. In Kansas City the real value of street-railway property is estimated at $\$ 12,855,000$, while the assessed value is only $\$ 729,830$.

In 1895 the St. Louis street-railway companies paid a license of $\$ 25$ per car on 714 cars. At the same time the assessor found and assessed 1,480 cars. During the year 1895 the gross receipts of the street-railtay companies in St. Louis were $\$ 5,149,888.60$. The cars made 5,795,309 trips, and carried $102,997,772$ passengers. The number of miles of railway tracks as reported to the city assessor was 216.45 .

The conditions in other cities, both at home and abroad, are discnssed at considerable length to show that much greater compensation may be paid the municipality for franchises, rents, taxes, etc., and that the companies may still éarn fair dividends.

Taxation and Real Estate.-This subject is presented in a manner similar to the preceding. The object is to point out the nudervaluation of property for assessment purposes and the injustice resulting from unequal valuation. This is done by comparing the prices paid for property sold with the assessed value of the same immediately after. The report shows the proportion that assessed values bear to real values in each county, in the cities of St. Lonis, Kansas City, St. Joseph, and Hannibal, and in the State as a whole apart from St. Louis and Kansas City. Individual illustrations showing unequally assessed values are also given.

The parchase price paid in 5,812 real estate sales was ascertained, of which 3,897 were sales of farms and 1,915 sales of town and city lots. By an examination of the records it was found that real estate in towns was assessed at 46.47 per cent of its true value, while farms were assessed at but 35.01 per cent. In St. Louis the assessed value averaged 50.40 per cent, while in Kansas City it was only 29.63 per cent of its true value. The proportion that assessed value bears to real value in each county varies from 21.85 per cent in Chariton County to 80.86 per cent in Reynolds County. As an illustration of the unequal assessment of property, the following instance is cited: In 11 cases of residence property sold in St. Louis, the assessed value varied from 66 to 88 per cent of its true value, but in 14 cases of basiness property the assessed value varied only from 24 to 42 per cent of its true value.

Resources and advantages of Missouri.-This part of the report is designed to answer inquiries received by the bureau from persons seeking information regarding business openings and social conditions in the State, and points out the principal industries, the leading farm products, the taxable wealth, population, public debt, and such other matters as tend to show the advantages of the State for home
seekers. The information is given for eacle county and for the cities of St. Louis and Kansas City.
The Fellow-Servant Question.-This presentation consists of a discussion of the origin and present application of the fellow-servant doctrine. It is presented for the purpose of securing legislation defining the relations between railroad corporations and their employees and fixing the legal liability between such corporations and their employees for injuries suffered by one employee as a result of the culpable negligence of auother employee while engaged in the service of the same corporation. The discussion consists of a letter by the governor of the State to the legislature, remarks by the commissioner of the labor bureau, illustrations of the injustice of the present application of the doctrine, and instances of remedial legislation in other States and countries.
Farar Mortgages.-This investigation was undertaken in order to ascertain whether there is an increasing or a decreasing tendency in the mortgaging of farms. The work was conducted by special agents of the labor bureau, who examined the records of each county in the State and noted the facts concerning mortgages placed upon farms in the four years ending December 31, 1805. The information is presented in text and tables showing the number of mortgages, amount borrowed on the same, number of acres mortgaged, etc. The facts are grouped in twoyear periods, the one covering 1892 and 1893, the other 1894 and 1895. A comparison is made with facts collected and presented in a previous report for 1890 and 1891.
The investigation shows that the total anount of monoy borrowed by Missouri farmers and secured by mortgages on their farms, and that remained unpaid at the end of the two year periods, was $\$ 40,063,144$ in $1890-1801, \$ 46,776,621$ in 1892-1893, and $\$ 46,860,446$ in $1894-1895$. The per capita farm mortgage indebtedness was greater in the last period than in the first in 82 counties and less in 32 counties. The total uumber of acres mortgaged and not released before the close of the two. year periods was $4,524,082$ in 1890-1891, $5,135,882$ in 1892-1893, and $5,515,162$ in 1894-1895.
Factory Inspection.-The report concludes with an announcement that the subject of factory inspection will be taken up in a special report to be made after the winter inspection has been completed.

## NEBRASKA.

Fifth Biennial Report of the Bureau of Labor and Industrial Statistics of Nebraska for the years 1895 and 1896. J. H. Powers, Deputy Commissioner. 352 pp .

The following subjects are treated in this report: Resources of Nebraska, 8 pages; description of counties, 232 pages; mortgage indebteduess, 6 pages; farm and industrial statistics, 40 pages; miscellaneous, 59 pages.

Resources.-This chapter gives a brief account of the natural advantages of the State, its climate, etc., and suggestions as to how these advantages can be utilized.
Desoription of Counties.-A description is given of the natural features of each county by townships, showing the quality of the soil, the water supply, etc.; also a map of each county with surface description of each township.
Mortaage Indebtedness.-This is a tabular presentation of the nu nber and amount of farm, city, and chattel mortgages filed, the namber released, and the number of deeds of foreclosure for each county in the State during the year ending May 31, 1895. It also contains a general statement of the increase or decrease, respectively, of these various items during the year.

Farm and Industrial Statistios.-In this chapter are treated the subjects of irrigation, the beet-sugar industry, the uses of alfalfa, creameries and cheese factories, and statistics of farms, occupations, wages, hours of labor, manufactures, live stock, and crops.
Miscellaneous.-This chapter contains information, gathered from various sources, relating to industrial cooperation in the United States, condition of laborers in the United States, labor unions and kindred organizations, and relations of governments to the railroads of the world. It also contains proposed amendments to the law establishing the present bureau of labor.

## RECENT FOREIGN STATISTICAL PUBLICATIONS.

Die Arbeitseinstellungen und Aussperrungen im Gewerbebetriebe in Österreich wölhrend des Jahres 1895. Herausgegeben vom Statistischen Departement im k. k. Handelsministerium. 300 pp .

This report on strikes and lockouts during the year 1895, published by the bureau of statistics of the board of trade of Austria, constitutes the fifth annoal presentation of official strike statistics for that country. Those for the preceding years were reviewed in Bulletins Nos. 1 and 3. The facts are presented in a series of five tables containing (1) a description of each individual strike, (2) a presentation according to provinces, districts, and principal towns, (3) strikes according to branches of industry, (4) a general summary of strikes, and (5) comparative figures for 1894 and 1895. The report presents, for the first time, a chapter on lockouts.
Strikes.-A comparison of the strike statistics of this with the preceding year shows a considerable increase in the number of strikes. This is not necessarily indicative of an actual increase, but is due very largely to a more exhanstive investigation of the subject than was possible the year before. While there is an increased number of strikes reported, there is a decided decrease since 1894 in the number of establishments involved, the number of strikers, and the number of working days lost on account of strikes. This is shown in the following statement of the number of strikes, strikers, establishments, etc., for the years 1891 to 1895:

STRIKES BY TEARS, 1891 TO 1895.

| Year. | Strikes. | Estab. lishments involved. | Strikers. | Per cent of strikers of total em. ployees. | Days lost. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1891. | 104 | 1,917 | 14, 025 | 34.64 | 247,086 |
| 1892. | 101 | 1,519 | 14, 123 | 57.36 | 150,992 |
| 1893. | 172 | 1,207 | 28, 120 | 61. 75 | 518,511 |
| 1894. | 159 | 2,468 | 44, 075 | 72. 59 | 566, 463 |
| 1895........ | 205 | 869 | 28,026 | 60.88 | 297, 845 |

The number of strikes, establishments involved, strikers, ctc., in 1895 is shown, by indnstries, in the following table:

STRIKES IN 1893, BY INDUSTRIES.

| Industries. | Strikes. | Estab-lishments. | $\left[\begin{array}{c} \text { Total } \\ \text { elo } \\ \text { ployees. } \end{array}\right]$ | Strikers. |  | Others thrown employ. ment. | Strikers reemployed. | New emplojees after strikes. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Number. | Per cent of total emplojees. |  |  |  |

| Wearing apparel and millinery | 14 | 67 | 1,743 | 976 | 56.00 | 94 | 866 | 17 |
| Paper........................... | 8 | 8 | 1,159 | 377 | 32.53 | 22 | 162 | 197 |
| Food preparations | 7 | 82 | ${ }^{674}$ | 514 | $7{ }^{76} 20$ | 2 | 476 | 28 |
| Trilding trades....... | 24 | 158 | 10,069 | 5,361 | 53.24 | 184 | 5,109 | 79 |
| Printing and publishing..... | $\stackrel{3}{1}$ | 4 | 389 | 147 | 37.79 |  | 141 | 3 |
| Commerce......e.t......... | 1 | 1 | 45 | 20 | 44.44 |  | 18 |  |
| Total | 205 | 869 | 46,036 | 28,026 | 60.88 | 2,005 | 25,685 | 1,061 |

The group of stone, glass, china, and earthen ware industries has the greatest number of strikers, namely, 35.48 per cent of all, although the greatest number of strikes is found in the wooden and caoutchoue goods industries. Next in order with respect to the number of strikers are the building trades, 19.13 per cent; the textile industries, 14.58 per cent; metal and metal-work industries, 13.18 per cent, and wooden and caoutchoue goods, 8.34 per cent. All other industries taken together furnish bat 9.29 per cent of the strikers.
The following statement shors the percentage of strikers and of days lost in the various groups of industries during the years 1894 and 1895:

PERCENTAGE OF STRIKERS AND OF DAYS LOST, BY INDUSTRIES, 1894 AND 1805.

| Industries. | Per ceǹt of strikers. |  | Per cont of days lost. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1894. | 1893. | 1804. | 1895. |
| Stone, glass, china, and earthen wa | 14. 55 | 35.48 | 5.48 | 31. 18 |
| Metal and metallie goods .......... | 6.24 | 13.18 | 6.69 | 18.35 |

| 'l'extiles .................... | 14.33 | 14. 58 | 8.05 | 11.36 |
| Building trades. | 33.98 | 19.13 | 23.14 | 9.58 |
| Other industries | 8.69 | 9.29 | 6.79 | 11.29 |
| Total. | 100.00 | 100.00 | 100.00 | 100.09 |

The average duration of strikes in 1895 was 13.10 days, which was 1.42 days longer than the average duration for the preceding year. The longest strike lasted 122 days. The following table shows the duration of strikes, by industries:

DURATION OF STRIEES IN 1895, BY INDUSTRIFS.

In the following table the cause and not the strike is made the unit, and the table, therefore, shows the number of times that each cause figured as an incentive to a strike, regardless of the actual number of strikes:

CAUSES OF STRIKES IN 1895, BP INDUSTRIES.

| Causes. | Stone, glass, china, and earthen waro. | Metal and metallie goods. | Ma. chin. ery and instruments | Wooden and caontchoue goods. |  | Textiles. |  | Pa per. | Food prep-arations. |  | $\begin{aligned} & \text { Other } \\ & \text { in } \\ & \text { dus- } \\ & \text { tries. } \end{aligned}$ | $\begin{aligned} & \text { To- } \\ & \text { tal. } \end{aligned}$ |

Lockouts.-During the year 1895 lockonts were reported in 17 establishments, employing 4,521 persons, of whom 2,317 were locked out. The prevailing cause of lockouts was the observance of Labor Day, May 1, by employees. Of the 2,317 employees locked out, 2,183 were reemployed and 134 were dismissed.

## Neuvième Rapport Annuel du Oomité Directeur de la Fédération Ouvrière Suisse et du Secretariat Ouvrier Suisse pour l'année 1895. 183 pp.

This publication includes the ninth annual report of the managing committee of the Swiss federation of labor and of the labor secretary, the proceedings of the sessions of the central committee and of the Swiss labor congress at Winterthur on April 6, 1896, together with an account in detail of the wage demands, strikes, and lockouts during the year 1895.

The returns show that there were 94 cases of strikes, wage demands, and lockouts during the year. Of these 55 were wage demands, 17 were offensive strikes, 16 defensive strikes, and 6 were lockouts. Of the wage demands 30 were successful, 13 were partly successful, and 12 were failures. Of the strikes 15 succeeded, 5 succeeded partly, 12 failed, and the result of 1 was unknown. The lockouts all resulted unfavorably to the employees.

The following table shows the demands, strikes, and lockouts by occupations:

STIIKES, LOCKOUTS, AND WAGE DEMANDS, BY OCCUPATIONS, AND RESULTS TO EMPLOYEES, 1895.

a Result unknown.

## DECISIONS OF COURTS AFFECTING LABOR.

[This subject, begun in Bulletin No. 2, will be continued in successive issues, dealing with the decisions as ther occur. All material parts of the decisions are reproduced in the words of the courts, indicated when short by quotation marks and when long by being printed solid. In order to save space, immaterial matter, needed eimply by way of explanation, is given in the words of the editorial reviser.]

## DECISIONS UNDER STATUTORY LAW.

Chinese Laborers-Deportation-Uuited States v. Mark Iing, 76 Federal Reporter, page 450.-A motion and information was made in the United States district court for the district of Vermont for an order of deportation against Mark Ying, as an unregistered Ohinese laborer. The court rendered its decision November 2,1896, and denied the order asked for.

The opinion in the case, delivered by District Judge Wheeler, reads as follows:

The respondent, a Chinese person, is brought in on a motion and information for an order of deportation, as an unregistered laborer, under the acts of May 5, 1892 (27 Stat., c. 60), and of November 3, 1893 ( 28 Stat., c. 14). The former act, in this respect (section 6), applied exclusively to Chinese laborers, without further designation or description. The latter act defines them thus:
"Secrion 2. The words 'laborer' or 'laborers,' whenever used in this ast, or in the act to which this act is an amendment, shall be construed to mean both skilled and unskilled manual laborers, including Chinese employed in mining, fishing, huckstering, peddling, laundrymen, or those engaged in taking, drying, or otherwise preserving shell or other fish for home consumption or exportation."

Each speaks from its own date, and the latter applies to persons who were Chinese laborers, as defined by it, on November 3, 1893. The respondent had, according to what is shown, been a peddler for two or three years next before "the first part of July, 1893," when he became a member of the trading firm of Quang Lun Wah and Co., at 32 Mott Street, New York, and has so remained, having an interest therein of $\$ 1,000$. If the act of 1892 had included peddlers with laborers, or he had continued peddling after the act of 1893 , he would have been required to register, and be liable to deportation for want of doing so; lut neither happened. The act of 1893 also defines "merchants," and he is said not to be a merchant, within the definition. But the act does not declare all not merchants to be laborers, nor otherwise require reg. istration of them. The question is not whether the respondent is a merchant, but whether he is a laborer, and so liable to deportation for want of registration. He does not appear to be a laborer, within either common understanding or the statutory definition of the term. Motion denied and respondent discharged.

Chinese Laborers-Deportation-United States v. Sun, 76 Federal Reporter, page 450.-Application was made in the United States district court for the district of Vermont for an order of deportation against Suey Sun, as an unregistered Chinese laborer. The court rendered its decision Noviember 2, 1896, and denied the order asked for.

The opinion of said court was delivered by District Judge Wheeler, and reads as follows:

The question here is whether the respondent is a Chinese laborer, within the meaning of the registration and deportation acts of 1892 and 1893 (27 Stat., 25; 28 Stat., 7). According to what is shown here, he was and is a member of the trading firm of Lung Kee and Oo., consisting of thirteen partners, at 24 Pell Street, New York, in which he has an interest of $\$ 1,000$, and of whom nine, including the respondent, live at the store, and he does the housework for them, and in spare time packs goods for shipment. He is argued to be a laborer on account of these household services. In the Standard Dictionary the definition of "laborer" excludes domestic service. These services for the household of partners seem to be essentially domestic in their nature, and not for the hire that is associated with the occupation of laborers as such. Order of deportation denied, and respondent discharged.

Constitutionality of Statute-Eight-Hour Law-Holden v. Hardy, sheriff, 46 Pacific Reporter, page 756.-The plaintiff, Holden, was found guilty of a misdemeanor by a justice of the peace, who assessed a fine against him, and upon his refusal to pay the same committed him to jail. To obtain his liberty he petitioned the supreme court of Utah for a writ of habeas corpus. Said court, after a bearing, rendered its decision October 29, 1896, refused the writ asked for, and remanded the plaintiff to the custody of the sheriff.

Chief Justice Zane delivered the opinion of the court, and the following language, containing a statement of the facts in the case, was used by him in the course of the same:

The offense charged consisted of employing one William Hooley in underground mining more than eight hours per day, in violation of a law entitled "An act regulating the hours of employment in underground mines, and in smelting and ore reduction works," as follows:
"SECTION 1. The period of employment of workingmen in all uuderground miues or workings shall be eight (8) hours per day, except in cases of emergency where life or property is in imminent danger.
"SEC. 2. The period of employment of workingmen in smelters and all other institutions for the reduction or refining of ores or metals shall be eight ( 8 ) hours per day, except in cases of emergency where life or property is in imminent danger.
"SEC. 3. Any person, body corporate, agent, manager or employer, who shall violate any of the provisions of sections 1 and 2 of this act shall be deemed guilty of a misdemeanor."

The question for our consideration and decision is, had the legislature
the power to enact this law? Article 16 of the constitution of this State is as follows:
"Sedrion 1. The rights of labor shall have just protection through the laws calculated to promote the industrial welfare of the State.
"SEC. 6. Eight hours shall constitute a day's work on all works or undertakings carried on or aided by the State, county or municipal governments; and the legislature shall pass laws to provide for the health and safety of employees in factories, smelters and mines.
"Sec. 7. The legislature, by appropriate legislation, shall provide for the enforcement of the provisions of this article."

The first section of the act [article] makes it the duty of the legislature to protect the rights of laboring men by the enactment of just laws calculated to promote the industrial welfare of the people,-such laws as will be just to all classes. The command is to the lawmaking department of the State, and the only express limitations upon the power are that such laws shall be just, and calculated to promote the welfare of the industrial classes.

The legislature must decide whether the law is just and adapted to the purpose named; and unless the law is so palpably unjust, or so clearly not calculated to promote the purposes mentioned in the constitution, as to remove every reasonable doubt that it is unjust, or that it is not calculated to promote the purpose expressed in the constitntion, the court should not hold it without the scope of the authority mentioned in that instrument.

The first clause of section 6 declares that "eight hours shall constitute a day's work on all works or undertakings carried on or aided by the State, county or municipal government." We presume the object of this provision was to protect the laboring man from the injurious consequences of prolonged physical effort, and to give him the remainder of the 24 hours for his own personal affairs, and for the cultivation of his mental and moral powers, the acquisition of useful knowledge, and for rest and sleep. The second clause of the section commands the legislature to pass laws "for the health and safety of employees in factories, smelters and mines." This provision must be regarded as an expression of the will of the people of the State with respect to the subjects and objects of legislation named in it; and they possessed all the power to enact laws with respect to such subjects that the people of the United States had not conferred in the national Constitution exclusively on that government. Any law adapted to the preservation of the health or safety of employees in factories, smelters, or mines is within the scope of this provision. The law must be connected with some of the objects named and calculated to effect that purpose. If it is not so connected and adapted, the court has the right to hold that it is not within the scope of the provision. But, if there is a reasonable doubt as to the connection and adaptation, the advisability must be held by the court to have been with the lawmaking power. The court must be able to see clearly that the law was not so counected before holding it void for that reason. If the power to pass the law is conceded, the court can not set it aside because it may deem its enactment unnecessary or injudicious, or because the court may think that experience has proven it so, or because the court may think itself more sagacions than the legislature, and can therefore see more clearly that the law will retard rather than promote progress and prosperity, and will be a detriment to the common good when actually applied to human affairs amid the conditions of the future.

This brings us to the question: Is the first section of the statute limiting the period of employment of laboring men in underground mines to eight hours per day, except in cases of emergency, where life or property is in imminent danger, calculated to protect the health of such laboring men? The effort necessary to successful mining, if performed upon the surface of the earth, in pure air, and in the sunlight, prolonged beyond eight hours, might not be injurious, nor affect the health of able-bodied men. When so extended beneath the surface, in atmosphere laden with gas, and sometimes with smoke, away from the sunlight, it might injuriously affect the health of such persons. It is necessary to use artificial means to supply pure air to men laboring in any considerable distance from the surface. That being so, it is reasonable to assume that air introduced, when mixed with the impure air beneath the surface, is not as healthful as the free air upon the surface. The fact must be conceded that the breathing of pure air is wholesome, and the breathing of impure air is unwholesome. We can not say that this law, limiting the period of labor in underground mines to eight hours each day, is not calculated to promote health; that it is not adapted to the protection of the health of the class of men who work in underground mines.

It is claimed that the enactment of the statute in question was forbidden by section 7 of article 1 of the constitution of the State, which is that "no person shall be deprived of life, liberty or property without due process of law." The petitioner insists that his trial was not, and that his imprisonment is not, according to "the law of the land," because the statute fixing the period of labor of a laboring man in underground mines was, as he claims, forbidden by the constitution, and therefore void. If the legislature had power to pass the law, there was no valid objection to his trial, fine, and imprisonment. If the law was valid, the usual and ordinary process was adopted. If it was not valid, the defendant was deprived of his liberty without due process of law. It is also insisted that the provisions of the State law were forbidden by section 1 of amendment 14 of the Constitation of the United States. This section declares: (1) That all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. They are made citizens of two distinct governments. (2) It declares that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." The enactment of State laws depriving or abridging the privileges or immunities of citizens of the State is left to the State legislature so far as this provision goes. It secures to citizens of the United States, in any State, privileges and immunities of citizens of that State. Expounding the provision now under consideration, the Supreme Court of the United States said:
"The constitutional provision there alluded to did not create those rights which it called 'privileges' and 'immunities' of citizens of the State. It threw around them in that clause no security for the citizen of the State in which they were claimed and exercised; nor did it profess to control the power of the State goverument over the rights of its own citizens. Its sole purpose was to declare to the several States that 'whatever those rights, as you grant or establish them to your own citizens, or as you limit or qualify or impose restrictions on their exercise, the same, neither more nor less, shall be the measure of the rights of citizens of other States within your jurisdiction.'" As the plaintiff is a citizen of this State, the second clause of the first section last
above quoted has no bearing upon his case, as his privileges and immunities must be ascertained from the constitution of the State and its laws. The third clause of the section declares that no State shall "deprive any person of life, liberty or property without due process of law." This, in effect, is the same as section 7 of article 1, of the State constitution, and means process authorized by the law of the land. And, as we have seen, if the State law which the plaintiff was charged with violating was valid-if the legislature had power to pass it-there was no substantial objection to the process. Itwas suitable and proper to the nature of the case, and sanctioned by the established usages of the courts.

The last clause of section 1 of amendment 14 of the Federal Constitution declares that no State shall " deny to any person within its jurisdiction the equal protection of the laws." This amendment is general, and forbids the denial to any class of persons the equal protection of the laws, by any State; and we have no doubt that class legislation is forbidden. But some pursuits are attended with peculiar hazards and perils, the injurious consequences from which may be largely prevented by precautionary means, and laws may be passed calculated to protect the classes of people engaged in such pursuits. It is not necessary to extend the protection to persons engaged in other pursuits not attended with similar dangers. To them the law would be inappropriate and idle. So, if undergromd mining is attended with dangers peculiar to it, laws adapted to the protection of such miners from such danger should be confined to that class of mining, and should not include other employments not subject to them. And if men engaged in underground mining are liable to be injured in their health, or otherwise, by too many hours' labor each day, a law to protect them should be aimed at that peculiar wrong. In this way, various classes of business are regulated, and the people protected, by appropriate laws, from dangers and evils that beset them; safety is secured, health preserved, and the happiness and welfare of humanity promoted. All persons engaged in business that may be attended with peculiar injury to health or otherwise, if not regulated and controlled, should be subject to the same law; otherwise, the law should be adapted to the special circumstances. The purpose of sach laws is not advantage to any person or any class of persons, or disadvantage to any other person or class of persons. Necessary and just protection is the sole object.

In the case of Ritchie $v$. People, 155 Ill. 98,40 N. E. 454, the court said that the police power of the State enables it to promote the health, comfort, safety, and welfare of society, and that it was very broad and far reaching, but that it was not withont its limitations; that "legislative acts passed in pursuance of it must not be in conflict with the constitution, and must have some relation to the ends sought to be accomplished; that is to say, to the comfort, welfare, or safety of society." And, further on, the court also said: "But the police power of the State can only be permitted to limit or abridge such a fundamental right, as the right to make contracts, when the exercise of such power is necessary to promote the health, welfare, and safety of society or the public."

The legislature may enact laws adapted to the promotion of the health and safety of men working in underground mines. Whatever difference of opinion may exist as to the extent and boundaries of the police power, and however difficult it may be to render a satisfactory definition of it, there seems to be no doubt that it does exist to the protection of the lives, health, and property of the citizens, and to
the preservation of good order and tho public good. The legislature can not, by any contract, divest itself of the power to provide for these objects. They belong emphatically to that class of objects which demand the application of the maxim, "Salus populi suprema lex" [the safety of the people is the supreme law]; and they are to be attained and provided for by such appropriate means as the legislative discretion may devise. That discretion can no more be bargained away than the power itself.

The section of the statute whose constitutionality is involved in this case includes all employees and employers engaged in working underground mines. None are omitted who may be subject to the peculiar conditions that attend such mining. The provision of the State constitution quoted makes it the duty of the legislature to "pass laws to provide for the health and cafety of employees in factories, smelters and mines." And we are not authorized to hold that the law in question is not calculated and adapted in any degree to promote the health and safety of persons working in mines and smelters. Were we to do so, and declase it void, we would usurp the powers intrusted by the constitution to the lawmaking power. The discharge of the petitioner is denied, and he is remanded to the custody of the sheriff named, until discharged according to law.

## RECENT GOVERNMENT CONTRACTS.

[The Secretaries of the Treasury, War, and Navy Departments have consented to furnish statements of all contracts for constructions and repairs entered into by them. These, as received, will appear from time to time in the Bulletin.]

The following contracts have been made by the office of the Supervising Architect of the Treasury:

St. Albans, Vt.-March 8, 1897. Oontract with Richardson \& Burgess, Washington, D. C., for rebuilding and completion of customhouse and post-office, except heating apparatus, $\$ 43,713.75$. Work to be completed within ten months.
Littie Rock, Ark.-March 19, 1897. Oontract with Bailey, Koerner \& Co., Louisville, Ky., for construction and completion of courthouse and post-office, except heating apparatus and elevator car, $\$ 68,023$. Work to be completed within eight months.
Rock Island, Ill.-March 27, 1897. Contract with Heidemann \& Schroeder for completion of interior finish of attic or third story of postoffice, $\$ 2,633.70$. Work to be completed within ninety days.

Washington, D. U.-March 29, 1897. Contract with Philadelphia Steam Heating Oompany, Philadelphia, Pa., for boiler plant, low. pressure and exhaust steam-heating and ventilating apparatus, hot and cold water supply, fire-protection system, and water-filtering plant for post-office, $\$ 111,373$. Work to be completed within two hundred and fifty days.

Sapelo Sound, Georgia.-March 29, 1897. Contract with James A. Bryan, Savannah, Ga., for construction of wharf, gangway, spur, and boathouse at quarantine station, Blackbeards Island, Sapelo Sound, $\$ 13,788$. Work to be completed within one hundred and twenty days.

Kansas City, Mo.-March 30, 1897. Contract with the HaughNoelke Iron Works and the Jeffersonville, Madison and Indianapolis Railroad, Indianapolis, Ind., for steel and iron construction, cast-iron finish, and stairs above fifth floor of dome of post-office and court-house, $\$ 17,676$. Work to be completed within four months.

Kansas Orty, Mo.-April 5, 1897. Contract with the Willis Manufacturing Oompany, Galesburg, Ill., for roof covering, skylights, down pipes, etc., of post-office and court-house, $\mathbf{\$ 9 , 9 8 0}$. Work to be completed within four months.

Detroit, Mich.-April 9, 1897. Oontract with the Central Iron Works, Quincy, Ill., for two hydraulic passenger elevators in post-office, court-house, etc., $\$ 6,950$. Work to be completed within one hundred and twenty days.
