MARCH 22, 2005

## Producer Price Indexes -- February 2005

The Producer Price Index for Finished Goods rose 0.4 percent in February, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This increase followed a 0.3-percent gain in January and a 0.3-percent decline in December. At the earlier stages of processing, the intermediate goods index advanced 0.7 percent, after moving up 0.4 percent in the previous month, and prices for crude goods fell 1.6 percent, following a 2.0-percent decrease in January. (See table A.)

**Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted**

Month	Finished goods					Change in finished goods from 12 months ago (unadj.)	Intermediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy

r=Revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for October 2004 have been revised to reflect the availability of late reports and corrections by respondents.

Among finished goods in February, the indexes for energy goods, consumer foods, and consumer goods other than foods and energy rose 1.4, 0.8, and 0.2 percent, respectively. By contrast, capital equipment prices fell 0.2 percent. Excluding prices for foods and energy, the finished goods index edged up 0.1 percent in February, compared with a 0.8-percent increase in January.

Before seasonal adjustment, the Producer Price Index for Finished Goods advanced 0.5 percent in February to 152.2 (December 1982=100). From February 2004 to February 2005, prices for finished goods rose 4.7 percent. Over the same period, the index for finished energy goods increased 11.8 percent, prices for finished goods other than foods and energy moved up 2.8 percent, and the finished consumer foods index climbed 4.9 percent. For the 12 months ended February 2005, prices for intermediate goods increased 8.4 percent, and the crude goods index rose 8.1 percent.

### Finished goods

The finished energy goods index rose 1.4 percent in February, after falling 1.0 percent in the preceding month. Leading this upturn, gasoline prices increased 5.2 percent, following a 4.2-percent decline in January. The liquefied petroleum gas index also turned up, after decreasing in the prior month, while prices for residential natural gas fell less in February than they did in the previous month. Alternatively, the residential electric power index moved down 0.3 percent in February, compared with a 1.2-percent gain a month earlier. Home heating oil prices rose less than they did in January. (See table 2.)

**Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted**

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy (unadj.)	Except foods and energy	Change in crude goods from 12 months ago (unadj.)

Feb.	-6	1.5	.5	8.4	-3.2	.2	-3.0	8.1

r=revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for October 2004 have been revised to reflect the availability of late reports and corrections by respondents.

The index for finished consumer foods advanced 0.8 percent in February, following a 0.2-percent decline in the previous month. Prices for fresh and dry vegetables jumped 18.7 percent, after dropping 12.0 percent in January. The indexes for eggs for fresh use, finfish and shellfish, soft drinks, and processed young chickens also turned up in February, following decreases a month earlier. Prices for beef and veal and for bakery products rose more than they did in the preceding month. By contrast, the dairy products index fell 2.5 percent in February, after advancing 0.9 percent in the prior month. Prices for roasted coffee and processed turkeys also turned down, following gains in January, while the index for confectionery end products showed no change in February, after rising in the previous month. The indexes for pork and fresh fruits and melons posted greater declines in February than they did a month earlier.

The rate of increase in the index for finished consumer goods excluding foods and energy slowed from 0.9 percent in January to 0.2 percent in February. Prices for cigarettes moved up 0.6 percent in February, following a 3.4-percent gain in the preceding month. The indexes for alcoholic beverages, newspaper circulation, and household furniture also rose less in February than they did in January. Prices for light motor trucks; passenger cars; pharmaceutical preparations; women's, girls', and infants' apparel; and sporting and athletic goods turned down in February. Conversely, the index for cosmetics and other toilet preparations rose 1.1 percent, after falling 0.2 percent in January. Prices for pet food and floor coverings also increased, following decreases in January, while the household appliance index rose more than it did in the prior month.

Subsequent to a 0.6-percent gain in January, the index for capital equipment decreased 0.2 percent in February. The index for light motor trucks fell 2.8 percent, after posting a 0.9-percent rise in January. Prices for passenger cars and for communication and related equipment also turned down in February. The indexes for heavy motor trucks, civilian aircraft, construction machinery and equipment, and commercial furniture advanced less than they did in the prior month. By contrast, prices for electronic computers turned up 0.4 percent in February, following a 6.1-percent decrease in the preceding month. The indexes for office and store machines and equipment and for welding machines and equipment also went up, after declining a month earlier. Prices for pumps, compressors, and equipment increased at a faster pace than they did in January, and the metal forming machine tools index rose in February, following no change in the previous month.

### **Intermediate goods**

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 0.7 percent in February, after registering a 0.4-percent gain in the previous month. This faster rate of increase was due to prices for intermediate energy goods, which turned up after falling in January. By contrast, the indexes for durable manufacturing materials, nondurable manufacturing materials, and construction materials increased less in February than they did in the prior month. Intermediate foods and feeds prices turned down, after rising a month earlier. Excluding food and energy prices, the index for intermediate goods went up 0.5 percent, following a 0.8-percent gain in January. (See table B.)

Prices for intermediate energy goods advanced 1.5 percent in February, after declining 1.3 percent in January. Prices for jet fuel, gasoline, liquefied petroleum gas, and residual fuel turned up in February, following declines a month earlier. (Reporting errors were identified in the jet fuel index for November, December, and January, and will be corrected in accordance with normal revision procedures. The index level for February is believed to be correct, and should be comparable to figures prior to November.) The indexes for industrial natural gas, commercial natural gas, and natural gas to electric utilities decreased less in February than they did in January. Alternatively, prices for industrial electric power declined 1.5 percent in February, compared with a 1.9-percent gain in the prior month. The index for commercial electric power also turned down, after rising in January, while home heating oil prices increased less in February than they did in the preceding month. (See table 2.)

Prices for materials for durable manufacturing moved up 0.9 percent in February, compared with a 1.8-percent gain in the preceding month. In February, rising prices for primary nonferrous metals, cold rolled steel sheet and strip, building paper and board, prepared paint, and cement outweighed price declines for cold finished steel bars, aluminum mill shapes, hardwood lumber, and adhesives and sealants.

The index for materials for nondurable manufacturing rose 0.2 percent in February, after climbing 0.6 percent in the prior month. Prices for plastic resins and materials went up 0.3 percent in February, after posting a 2.3-percent advance in January. The indexes for inedible fats and oils and paperboard turned down, following increases in January. Prices for gray fabrics and synthetic rubber advanced less in February than they did in January. By contrast, the index for liquid refinery gases rose 7.4 percent, after falling 5.1 percent in the previous month. Prices for intermediate basic organic chemicals, paper, and paint materials also turned up in February, following declines a month earlier. The rate of increase in the index for alkalies and chlorine quickened from January to February.

Prices for intermediate foods and feeds fell 0.6 percent in February, after advancing 0.9 percent in the prior month. The index for fluid milk products declined 4.5 percent, following a 4.2-percent gain in January. Prices for prepared animal feeds, dry milk products, and refined sugar and byproducts also turned down, after rising in the previous month. The indexes for pork and for shortening and cooking oils fell more in February than they did a month earlier. Conversely, beef and veal prices advanced 3.0 percent in February, following a 1.8-percent rise in the preceding month. The index for confectionery materials also increased more than it did in January. The indexes for natural, processed, and imitation cheese and liquid milk products fell less than they did in January. Processed young chicken prices turned up in February.

Prices for materials and components for construction moved up 0.9 percent in February, following a 1.0-percent advance in the prior month. Price increases were registered in February for softwood lumber, concrete products, plastic construction products, air conditioning and refrigeration equipment, and asphalt felts and coatings. These increases were partially offset by declining prices for steel mill products, hardwood lumber, millwork, and paving mixtures and blocks.

### **Crude goods**

The Producer Price Index for Crude Materials for Further Processing declined 1.6 percent in February, following a 2.0-percent fall in January. Prices for crude foodstuffs and feedstuffs turned down in February, while the index for crude materials other than food and energy fell more than it did in the prior month. By contrast, the crude energy materials index posted a gain in February, after declining in January. (See table B.)

The crude foodstuffs and feedstuffs index declined 3.2 percent in February, after advancing 1.9-percent in January. February prices for slaughter cattle fell 1.9 percent, following a 6.5-percent rise in January. Similarly, prices for slaughter broilers and fryers, corn, wheat, and raw cane sugar and byproducts decreased, following increases in the previous month. The indexes for rough rice and slaughter hogs fell more in February than they did in January. Conversely, prices for fresh vegetables, except potatoes, jumped 25.3 percent in February, after decreasing 15.1 percent in the prior month. The unprocessed finfish index also increased, compared with a decline in January. (See table 2.)

Prices for basic industrial materials dropped 3.0 percent in February, after falling 2.5 percent in January. The copper ore index decreased 9.9 percent in February, following a 0.6-percent decrease in the prior month. The indexes for iron ore; softwood logs, bolts, and timber; and raw cotton declined, after registering gains in January. Prices for wastepaper remained unchanged, following increases in January. Iron and steel scrap prices declined more than they did in the preceding month. By contrast, the copper base scrap index moved up 4.8 percent in February, after declining 0.2 percent in January. Prices for gold ores, leaf tobacco, and aluminum base scrap fell less than they did in the previous month.

The crude energy materials index rose 0.2 percent in February, subsequent to a 4.5-percent decline in January. In February, the crude petroleum and coal indexes gained 3.3 and 1.4 percent, respectively. Conversely, the natural gas index fell 1.9 percent.

### **Net output price indexes for mining, manufacturing, and services industries**

**Mining.** The Producer Price Index for the Net Output of Total Mining Industries advanced 1.3 percent in February, following a 3.6-percent decline in January. (Net output price indexes are not seasonally adjusted.) Leading this upturn, prices received by the crude petroleum and natural gas extraction industry rose 1.5 percent, compared with a 4.7-percent decrease in the prior month. The industry indexes for potash, soda, and borate minerals mining and bituminous coal and lignite surface mining also went up in February, after falling a month earlier. Prices received by the industries for natural gas liquid extraction and gold ore mining declined less than they did in January, while the industry indexes for oil and gas well drilling and for oil and gas operations support activities increased more in February than they did in the previous month. By contrast, prices received by the copper and nickel ore mining industry fell 9.7 percent, following a 0.6-percent decline in January. The index for the iron ore mining industry edged down, after moving up in the preceding month, while prices received by the crushed and broken granite mining and quarrying industry rose less in February than they did a month earlier. In February, the Producer Price Index for Total Mining Industries was 165.9 (December 1984=100), 18.2 percent above its year-ago level.

**Manufacturing.** The Producer Price Index for the Net Output of Total Manufacturing Industries advanced 0.7 percent in February, following a 1.0-percent gain in January. Prices received by the chemical manufacturing industry group increased 0.5 percent, compared with a 1.6-percent rise in the prior month. The industry group indexes for beverages and tobacco, machinery, primary metals, electrical equipment and appliances, nonmetallic mineral products, and foods manufacturing also rose less in February than they did in the prior month. Prices received by transportation equipment manufacturers, as well as producers of medical equipment and supplies, moved down, after advancing in January. Alternatively, the industry group index for petroleum and coal products manufacturing jumped 6.5 percent in February, following a 3.4-percent increase a month earlier. Prices received by producers of wood products also rose more than they did in the previous month. In February, the Producer Price Index for Total Manufacturing Industries was 147.2 (December 1984=100), 5.7 percent above its year-ago level.

**Services.** Among services industries in February, prices received by commercial bankers fell 3.3 percent, after rising 4.9 percent in January. The industry indexes for lawyers, savings institutions, cellular and other wireless carriers, and courier services also turned down, following increases in the preceding month. Prices received by real estate agents and brokers were unchanged, after advancing in January. The industry indexes for direct health and medical insurance carriers, scheduled passenger air transportation, portfolio managers, and hotels (except casino hotels) and motels went up less in February than they did a month earlier. By contrast, prices received by the investment banking and securities dealing industry climbed 6.5 percent, following a 2.9-percent gain in January. The industry indexes for passenger car rental and radio stations turned up in February, after decreasing in the prior month, while prices received by the scheduled freight air transportation industry declined less than they did in January.

\*\*\*\*\*

Producer Price Index data for March 2005 are scheduled to be released on Tuesday, April 19, 2005, at 8:30 a.m. (EDT).

## Technical Note

### Brief Explanation of Producer Prices Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

#### Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

#### Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

#### Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

### Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

<i>Title</i>	<i>Code</i>	<i>PPI Detailed Report Issue</i>
	<i>SIC</i>	
Wireless telecommunications	4812	July 1999
Telephone communications, except radio telephone	4813	July 1995
Television broadcasting	4833	July 2002
Grocery stores	5411	July 2000
Meat and fish (seafood) markets	5421	July 2000
Fruit and vegetable markets	5431	July 2000
Candy, nut, and confectionery stores	5441	July 2000
Retail bakeries	5461	July 2000
Miscellaneous food stores	5499	July 2000
New car dealers	5511	July 2000
Gasoline service stations	5541	January 2002
Boat dealers	5551	January 2002
Recreational vehicle dealers	5561	January 2002
Miscellaneous retail	59	January 2001
Security brokers, dealers, and investment bankers	6211	January 2001
Investment advice	6282	January 2003
Life insurance carriers	6311	January 1999
Property and casualty insurance	6331	July 1998
Insurance agencies and brokerages	6412	January 2003
Operators and lessors of nonresidential buildings	6512	January 1996
Real estate agents and managers	6531	January 1996
Prepackaged software	7372	January 1998
Data processing services	7374	January 2002
Home health care services	8082	January 1997
Legal services	8111	January 1997
Engineering design, analysis, and consulting services	8711	January 1997
Architectural design, analysis, and consulting services	8712	January 1997
Premiums for property and casualty insurance	9331	July 1998
	<i>NAICS</i>	
Furniture and home furnishings stores	442	January 2004
Electronics and appliance stores	443	January 2004
Building material and garden equipment and supplies dealers	444	January 2004
Clothing and clothing accessories stores	448	January 2004
Sporting goods, hobby, book, and music stores	451	January 2004
General merchandise stores	452	January 2004
Miscellaneous store retailers	453	January 2004
Commercial banking	522110	January 2005

<i>Title</i>	<i>Code</i>	<i>PPI Detailed Report Issue</i>
Savings institutions	522120	January 2005
Direct health and medical insurance carriers	524114	July 2004
Construction, mining, and forestry machinery and equipment rental and leasing	532412	January 2005

### Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

### Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at ([http://www.bls.gov/opub/hom/homch14\\_etc.htm](http://www.bls.gov/opub/hom/homch14_etc.htm)), and reprints are available on request.

### Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: Prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

<i>Index point change</i>	
Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5
<i>Index percent change</i>	
Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from the BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*.

## Producer Price Index Data Via the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.

## Retrieving PPI data from the PPI Website

PPI data can be obtained from the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the “Get Detailed Statistics” header reveals the following 5 methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, nonJava-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

<b>Commodity code</b>	<b>Will provide data for:</b>
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpu063803	Pharmaceutical preparations, cardiovascular system
wpusop3000	Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix “pcu” followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the six-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as place holders for higher-level industry group codes.

<b>Industry-product code, Current NAICS series</b>	<b>Will provide data for:</b>
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) *In all cases, no spaces are permitted.*

<b>Industry-product code, Discontinued SIC series</b>	<b>Will provide data for:</b>
pdu28_#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

- **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

	Directory:
• NAICS Current Series	<b>/pub/time.series/pc</b>
• SIC Discontinued Series	<b>/pub/time.series/pd</b>
• Commodity Series	<b>/pub/time.series/wp</b>
• Special Requests	<b>/pub/special.requests/ppi</b>
• Latest News Release	<b>/pub/news.release/ppi.txt</b>

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (which appear in tables 4, 5, and 9 of the monthly PPI report and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files are also maintained within each of the five directories listed above.)

### Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the “Get Detailed Statistics” link at the top of the homepage a chart appears listing all of the available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page including: Economic news releases, series report, and economy at a glance.

### **Additional information**

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or [ppi-info@bls.gov](mailto:ppi-info@bls.gov). Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.

Table 1. Producer price indexes and percent changes by stage of processing (1982=100)

Grouping	Relative importance	Unadjusted index			Unadjusted percent change to Feb. 2005 from:		Seasonally adjusted percent change from:			
		Dec.	Oct.	Jan.	Feb.	Feb.	Jan.	Nov. to Dec.	Dec. to Jan.	Jan. to Feb.
		2004 1/	2004 2/	2005 2/	2005 2/	2004	2005	Dec.	Jan.	Feb.
Finished goods.....	100.000	152.0	151.5	152.2	4.7	0.5	-0.3	0.3	0.4

1/ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available.  
2/ The indexes for October 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.  
3/ Includes crude petroleum.

4/ Excludes crude petroleum.  
5/ Percent of total finished goods.  
6/ Percent of total intermediate materials.  
7/ Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."  
8/ Percent of total crude materials.

Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing (1982=100 unless otherwise indicated)

Commodity code	Grouping	Unadjusted index			Unadjusted percent change to Feb. 2005 from:		Seasonally adjusted percent change from:		
		Oct. 2004 1/	Jan. 2005 1/	Feb. 2005 1/	Feb. 2004	Jan. 2005	Nov. to Dec.	Dec. to Jan.	Jan. to Feb.
	FINISHED GOODS.....	152.0	151.5	152.2	4.7	0.5	-0.3	0.3	0.4

- 1/ Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.
- 2/ The indexes for October 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.
- 3/ Not available.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004.

Table 5. Producer price indexes by stage of processing, seasonally adjusted  
(1982=100)

Grouping	Index 1/					
	Sep. 2004	Oct. 2004	Nov. 2004	Dec. 2004	Jan. 2005	Feb. 2005
Finished goods.....	148.9	151.1	152.0	151.5	151.9	152.5
