Producer Price Indexes -- January 2006

The Producer Price Index for Finished Goods rose 0.3 percent in January, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This increase followed a 0.6-percent advance in December and a 0.4-percent decline in November. At the earlier stages of processing, prices for intermediate goods moved up 1.2 percent, compared with a 0.1-percent rise in the prior month. The crude goods index decreased 0.5 percent, after falling 2.3 percent in December. (See table A.)

Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted

Month	Finished goods					Inter- mediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)		
2005							
Jan.	0.1	-0.3	-0.8	0.6	4.1	0.5	-1.7
Feb.	.5	.6	1.9	.1	4.7	.6	-.7

2006							
Jan.	.3	.2	0	.4	5.7	1.2	-.5

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2005. In addition, indexes for September 2005 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Among finished goods, prices for energy goods were unchanged in January, following a 2.0-percent rise in the prior month. The rate of increase in the finished consumer foods index slowed from 0.8 percent in December to 0.2 percent in January. By contrast, prices for finished goods other than foods and energy went up 0.4 percent, after edging up 0.1 percent in the preceding month.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.8 percent in January to 160.0 (1982 = 100). From January 2005 to January 2006, prices for finished goods rose 5.7 percent. Over the same period, the index for finished energy goods jumped 25.0 percent, prices for finished goods other than foods and energy moved up 1.5 percent, and the finished consumer foods index advanced 1.9 percent. For the 12 months ended January 2006, intermediate goods prices increased 9.3 percent, while the index for crude goods rose 23.6 percent.

Finished goods

Finished energy goods prices were unchanged in January, following a 2.0-percent advance in December. The gasoline index turned down 3.5 percent, following a 7.2-percent gain in the previous month. Prices for liquefied petroleum gas, home heating oil, and diesel fuel also declined, after rising in December. Alternatively, the residential electric power index increased 3.0 percent in January, following a 0.2-percent rise a month earlier. Prices for residential natural gas turned up, after declining in the preceding month. (See table 2.)

Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy (unadj.)	Except foods and energy	Change in crude goods from 12 months ago (unadj.)
2005								
Jan.	0.9	-0.5	0.7	8.7	2.0	-4.6	-1.5	10.3
Feb.	-.4	1.2	.5	8.4	-2.8	1.5	-2.1	8.3
Mar.	1.0	3.4	.4	8.7	4.7	7.0	-.5	11.4

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2005. In addition, indexes for September 2005 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

The index for finished consumer foods increased 0.2 percent in January, following a 0.8-percent gain in the previous month. Leading this deceleration, the fresh and dry vegetables index rose 5.9 percent, after surging 21.7 percent in December. Prices for beef and veal also advanced less than they had in the preceding month. The indexes for fresh fruits and melons, finfish and shellfish, dairy products, and processed turkeys turned down in January, while prices for processed young chickens fell more than they had in the prior month. By contrast, the soft drinks index went up 1.0 percent in January, compared with a 0.2-percent decline in the preceding month. Prices for shortening and cooking oils also turned up, and the processed fruits and vegetables index rose more than it had in December.

Prices for finished consumer goods other than foods and energy advanced 0.4 percent in January, after rising 0.2 percent in the previous month. The light motor trucks index went up 0.7 percent, following a 0.7-percent drop in the prior month. Prices for passenger cars, sanitary papers and health products, sporting and athletic goods, and alcoholic beverages also turned up in January, while the book publishing index increased more than it had a month earlier. Alternatively, newspaper circulation prices declined 0.3 percent, after rising 1.4 percent in December. The indexes for tires and for women's, girls', and infants' apparel also turned down in January, and prices for cigarettes decreased, following no change in the preceding month.

The index for capital equipment rose 0.3 percent in January, after edging up 0.1 percent in the prior month. Prices for passenger cars climbed 1.1 percent, compared with a 0.1-percent decline in December. The indexes for light motor trucks and for tools, dies, jigs, fixtures, and industrial molds also increased, after falling in the previous month. Prices for civilian aircraft, construction machinery and equipment, and commercial furniture advanced at quicker rates than they had in the preceding month. By contrast, communication and related equipment prices inched down 0.1 percent in January, following a 0.6-percent increase in the previous month. The indexes for integrating and measuring instruments and for industrial material handling equipment also fell, after rising in December.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components increased 1.2 percent in January, following a 0.1-percent gain in December. Prices for intermediate energy goods rose in January, after falling in the prior month. The materials for nondurable manufacturing index moved up, following no change in December, while prices for materials and components for construction increased more in January than they had a month earlier. The index for intermediate foods and feeds turned up, after declining in the previous month. By contrast, prices for materials for durable manufacturing rose less in January than in the preceding month. The index for intermediate goods other than foods and energy climbed 1.0 percent, following a 0.3-percent advance in December. (See table B.)

The index for intermediate energy goods increased 1.9 percent in January, after decreasing 0.5 percent in December. Prices for industrial natural gas jumped 5.7 percent, following a 4.1-percent drop in the prior month. The indexes for industrial electric power, jet fuel, and commercial natural gas also turned up in January, after declining a month earlier. Prices for commercial electric power advanced at faster rates than they had in December, while the index for natural gas to electric utilities fell less than it had in the previous month. Alternatively, gasoline prices moved down 3.5 percent in January, following a 7.2-percent rise in December. The indexes for liquefied petroleum gas, diesel fuel, and home heating oil also turned down, after climbing in the preceding month. (See table 2.)

Prices for materials for nondurable manufacturing, which were unchanged in December, increased 1.9 percent in January. The index for primary basic organic chemicals surged 10.4 percent, following a 1.9-percent decrease in December. Prices for gray fabrics, inedible fats and oils, paper, and paperboard also moved up in January, after falling a month earlier. The index for basic inorganic chemicals advanced at a quicker rate than it had in December, while prices for plastic resins and materials declined less than in the prior month. By contrast, prices for fertilizer materials decreased 1.9 percent in January, after falling 0.1 percent in December. The index for intermediate basic organic chemicals rose less than in the previous month.

The index for materials and components for construction increased 1.0 percent in January, after climbing 0.6 percent in December. The majority of this acceleration is attributable to prices for concrete products, which rose 1.9 percent following a 0.3-percent decline in the prior month. The indexes for softwood lumber, wiring devices, asphalt felts and coatings, and cement advanced at faster rates in January than they had a month earlier. Prices for treated wood and mineral wool for structural insulation turned up, after falling in December. Conversely, the index for nonferrous wire and cable moved down 0.3 percent in January, following a 4.5-percent jump in the preceding month. Prices for fabricated structural metal products and millwork rose less than they had in the previous month.

The index for intermediate foods and feeds increased 0.9 percent in January, after inching down 0.1 percent in December. Prices for prepared animal feeds advanced 2.5 percent, compared with a 0.4-percent gain in the prior month. The indexes for confectionery materials, refined sugar and byproducts, and dry milk products also increased at quicker rates in January than they had a month earlier. Prices for shortening and cooking oils and for pork turned up, after retreating in December, while the index for fluid milk products declined at a slower rate than it had in the preceding month. By contrast, the index for natural, processed, and imitation cheese decreased, following a rise in December. The index for beef and veal increased less in January than it had a month earlier, while prices for processed young chickens fell more than in the preceding month.

The materials for durable manufacturing index advanced 1.0 percent in January, after rising 1.5 percent in December. Prices for primary aluminum (except extrusion billet) increased 3.3 percent, compared with a 10.6-percent surge in the previous month. The indexes for copper cathode and refined copper, copper and brass mill shapes, aluminum mill shapes, and building paper and board also rose less in January than a month earlier. Prices for steel mill products turned down, following December gains. Conversely, the softwood lumber index climbed 4.9 percent in January, after increasing 1.6 percent in the preceding month. Prices for cement and prepared paint also moved up at faster rates than they had in the prior month.

Crude goods

The Producer Price Index for Crude Materials for Further Processing declined 0.5 percent in January, following a 2.3-percent fall in December. In January, decreasing prices for crude foodstuffs and feedstuffs and basic industrial materials outweighed rising prices for crude energy materials. (See table B.)

The crude foodstuffs and feedstuffs index fell 3.0 percent in January, after advancing 2.5 percent in December. Prices for slaughter cattle moved down 2.1 percent, following a 4.1-percent rise in the prior month. The indexes for slaughter hogs, soybeans, and slaughter turkeys also turned down in January. Prices for corn and for fresh and dry vegetables grew at slower rates than they had in the preceding month. By contrast, prices for slaughter broilers and fryers declined 2.7 percent, following a 6.2-percent decrease in December. The wheat index also decreased at a slower rate than it had in the previous month. Prices for fluid milk were unchanged, after moving down in December. The index for raw cane sugar and byproducts rose more than a month earlier. (See table 2.)

Prices for basic industrial materials edged down 0.1 percent in January, following a 0.5-percent increase in December. The iron and steel scrap index fell 8.4 percent in January, following a 1.4-percent drop in the preceding month. Prices for phosphates and pulpwood also decreased more than they had in December. The index for nonferrous metal ores increased at a slower rate, compared with the previous month. Conversely, the nonferrous scrap index advanced 6.8 percent in January, after rising 0.2 percent in December. The index for construction sand, gravel, and crushed stone also rose more than it had in December. Prices for wastepaper, iron ore, hides and skins, and raw cotton also turned up in January. The index for hardwood logs, bolts, and timber fell less than in the previous month.

The crude energy materials index increased 0.6 percent in January, subsequent to a 5.4-percent decline in December. Prices for coal rose 10.1 percent, after showing no change in the previous month. The natural gas index fell 1.4 percent in January, after decreasing 11.4 percent in the prior month. Conversely, prices for crude petroleum gained 2.6 percent in January, following a 7.9-percent advance in December.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Mining Industries declined 0.2 percent in January, following a 2.9-percent drop in the prior month. (Net output price indexes are not seasonally adjusted.) Price decreases received by the industries for natural gas liquid extraction and for oil and gas operations support activities outweighed rising prices received by the industries for crude petroleum and natural gas extraction, oil and gas well drilling, bituminous coal underground mining, copper ore and nickel ore mining, and bituminous coal and lignite surface mining. In January, the Producer Price Index for the Net Output of Total Mining Industries was 237.7 (December 1984 = 100), 45.6 percent above its year-ago level.

Manufacturing. The Producer Price Index for the Net Output of Total Manufacturing Industries advanced 0.9 percent in January, following a 0.1-percent gain in the previous month. Prices received by manufacturers of petroleum and coal products rose 3.2 percent, after falling 0.4 percent in December. The industry group indexes for transportation equipment, beverages and tobacco, and plastics and rubber products also turned up in January, after declining a month earlier. Prices received by manufacturers of chemicals, nonmetallic mineral products, and machinery advanced more than they had in December. By contrast, the industry group index for primary metal manufacturing increased 0.9 percent, after rising 1.4 percent in the previous month. In January, the Producer Price Index for the Net Output of Total Manufacturing Industries was 154.1 (December 1984 = 100), 5.4 percent above its year-ago level.

Services. Among services industries in January, prices received by the scheduled passenger air transportation industry advanced 3.0 percent, after falling 3.2 percent in the prior month. The industry indexes for offices of lawyers; investment banking and securities dealing; saving institutions; long-distance, general freight trucking (less than truckload); and hotels and motels (excluding casinos) also turned up, following declines in December. Prices received by the United States Postal Service increased in January, after remaining unchanged a month earlier. The indexes for direct health and medical insurance carriers, general medical and surgical hospitals, commercial banking, and couriers rose more than in the previous month. By contrast, the industry index for temporary help services declined 1.2 percent in January, following a 1.0-percent increase a month earlier.

Producer Price Index data for February 2006 are scheduled to be released on Tuesday, March 21, 2006, at 8:30 a.m. (EST).

Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2005 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2001 through December 2005. Revised seasonally adjusted data for this period, as well as seasonal adjustment factors for commodity indexes to be used through December 2006, were released February 15, 2006. To request this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2005, based on former and recalculated seasonal factors. These percent changes include final price data through August 2005 and may differ from values shown in tables A and B of this release, which include final price data through September 2005.

Over-the-month percent changes in major stage-of-processing indexes, seasonally adjusted, using former and recalculated seasonal factors for 2005

Month	Finished Goods		Intermediate Goods		Crude Goods	
	Former	Recalculated	Former	Recalculated	Former	Recalculated
January	0.1	0.1	0.3	0.5	-2.0	-1.7
February	.4	.5	.6	.6	-1.0	-.7
March	.8	.8	1.0	.9	4.7	4.7
April	.5	.5	.7	.7	2.6	2.7
May	-.5	-.2	-.7	-.3	-3.1	-3.1
June	0	.1	.3	.2	-1.9	-1.7
July	1.0	.8	1.1	1.0	5.4	5.1
August	.6	.5	.7	.5	3.5	3.5
September	1.7	1.4	2.3	2.0	9.4	9.4
October	.7	.8	3.0	2.9	6.7	6.5
November	-.7	-.4	-1.2	-1.0	-1.2	-1.5
December	.9	.6	.2	.1	-2.3	-2.3

Resampling of Industries

Effective with this release, the Producer Price Index (PPI) includes data for 38 resampled industries classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see the January 2006 issue of the *PPI Detailed Report* or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Technical Note

Brief Explanation of Producer Prices Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

<i>Title</i>	<i>Code</i>	<i>PPI Detailed Report Issue</i>

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at (http://www.bls.gov/opub/hom/homch14_etc.htm), and reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: Prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from the BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data Via the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.

Retrieving PPI data from the PPI Website

PPI data can be obtained from the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the “Get Detailed Statistics” header reveals the following 5 methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, nonJava-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

Commodity code	Will provide data for:
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpu063803	Pharmaceutical preparations, cardiovascular system
wpusop3000	Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix “pcu” followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the six-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as place holders for higher-level industry group codes.

Industry-product code, Current NAICS series	Will provide data for:
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) *In all cases, no spaces are permitted.*

Industry-product code, Discontinued SIC series	Will provide data for:
pdu28_#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

• **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

	Directory:
• NAICS Current Series	/pub/time.series/pc
• SIC Discontinued Series	/pub/time.series/pd
• Commodity Series	/pub/time.series/wp
• Special Requests	/pub/special.requests/ppi
• Latest News Release	/pub/news.release/ppi.txt

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (which appear in tables 4, 5, and 9 of the monthly PPI report and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files are also maintained within each of the five directories listed above.)

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the “Get Detailed Statistics” link at the top of the homepage a chart appears listing all of the available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page including: Economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or ppi-info@bls.gov. Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.

Table 1. Producer price indexes and percent changes by stage of processing (1982=100)

Grouping	Relative importance	Unadjusted index				Unadjusted percent change to Jan. 2006 from:		Seasonally adjusted percent change from:		
		Dec.	Sept.	Dec.	Jan.	Jan.	Dec.	Oct. to	Nov. to	Dec. to

- 1/ Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.
- 2/ The indexes for September 2005 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.
- 3/ Not available.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004.

Table 5. Producer price indexes by stage of processing, seasonally adjusted
(1982=100)

Grouping	Index 1/					
	Aug. 2005	Sep. 2005	Oct. 2005	Nov. 2005	Dec. 2005	Jan. 2006
Finished goods.....	156.2	158.4	159.6	159.0	160.0	160.4
Finished consumer goods.....	161.0	164.0	165.6	164.7	166.1	166.4
Finished consumer foods.....	153.7	155.6	155.4	156.3	157.5	157.8
Crude.....	127.7	141.2	134.6	140.4	153.9	154.7
Processed.....	155.9	156.7	157.2	157.6	157.7	157.9
Finished consumer goods, excluding foods.....	163.5	166.8	169.2	167.6	169.1	169.4
Nondurable goods less foods.....	174.2	178.9	182.9	180.7	182.7	182.9
