Producer Price Indexes – September 2006

The Producer Price Index for Finished Goods fell 1.3 percent in September, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This decline followed increases of 0.1 percent in both August and July. At the earlier stages of processing, prices received by manufacturers of intermediate goods moved down 1.4 percent in September after increasing 0.4 percent in the preceding month, and the crude goods index dropped 3.4 percent following a 2.2-percent gain in August. (See table A.)

Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted

Month	Finished goods				Change in finished goods from 12 months ago (unadj.)	Inter-mediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy			
2005

r=revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for May 2006 have been revised to reflect the availability of late reports and corrections by respondents.

Among finished goods in September, prices for energy goods declined 8.4 percent compared with a 0.3-percent increase in August. The finished consumer foods index rose 0.7 percent after advancing 1.4 percent in the prior month. By contrast, prices for finished goods other than foods and energy climbed 0.6 percent in September following a 0.4-percent decline in August.

During the third quarter of 2006, prices for finished goods decreased at a seasonally adjusted annual rate (SAAR) of 4.4 percent after moving up at a 6.4-percent SAAR during the second quarter of 2006. Excluding prices for foods and energy, the finished goods index edged down at a 0.3-percent SAAR for the 3 months ended September 2006 subsequent to rising at a 2.3-percent SAAR for the 3 months ended June 2006. Among prices for raw and partially processed goods, the intermediate goods index fell at a 1.9-percent SAAR in the third quarter of 2006 after climbing at a 10.3-percent SAAR from March to June 2006. The crude goods index moved up at an 8.0-percent SAAR for the 3 months ended September 2006 following a 6.4-percent rate of increase during the previous quarter. (See summary table below.)

Before seasonal adjustment, the Producer Price Index for Finished Goods decreased 1.1 percent in September to 160.3 (1982 = 100). From September 2005 to September 2006, prices for finished goods rose 0.9 percent. Over the same period, the index for finished goods other than foods and energy went up 1.2 percent, prices for finished consumer foods climbed 2.2 percent, and the finished energy goods index declined 1.8 percent. For the 12 months ended September 2006, intermediate goods prices advanced 4.7 percent, and the crude goods index decreased 7.8 percent.

Summary of December-to-December, 9-month, and 3-month seasonally adjusted annual rates of change in price indexes at selected stages of processing

Grouping	Percentage change 12 months ended December			Seasonally adjusted annual rate for			
	2003	2004	2005	9 months ended September 2006	3 months ended March 2006	3 months ended June 2006	3 months ended September 2006
Finished goods	4.0	4.2	5.4	-0.1	-2.0	6.4	-4.4
Finished consumer foods	7.7	3.1	1.7	.9	-7.9	3.7	7.6
Finished energy goods	11.4	13.4	23.9	-6.5	-11.4	22.3	-24.7
Finished goods less foods and energy	1.0	2.3	1.4	2.0	3.9	2.3	-.3
Finished consumer goods, excluding foods and energy	1.1	2.2	1.6	1.8	4.2	2.2	-1.0
Capital equipment	.8	2.4	1.2	2.2	3.6	2.5	.5
Intermediate materials, supplies, and components	3.9	9.2	8.6	3.7	3.0	10.3	-1.9
Intermediate foods and feeds	12.9	-2.3	2.4	.3	-2.1	-.9	3.9
Intermediate energy goods	10.9	15.8	26.2	-6.4	-7.8	18.2	-24.8
Intermediate materials less foods and energy	2.1	8.3	4.8	6.8	6.5	9.0	5.0
Materials for nondurable manufacturing	4.9	13.7	8.9	3.8	5.7	10.8	-4.4
Materials for durable manufacturing	4.0	18.3	5.9	19.1	14.9	29.6	13.4
Materials and components for construction	3.0	10.1	6.1	6.9	7.7	7.8	5.2
Crude materials for further processing	19.5	17.4	21.1	-11.0	-38.6	6.4	8.0
Foodstuffs and feedstuffs	24.1	-2.6	1.6	-4.4	-29.1	4.6	18.0
Crude energy materials	14.4	35.9	42.2	-24.7	-55.7	-10.3	7.2
Crude nonfood materials less energy	21.6	20.5	5.2	22.6	17.9	59.4	-1.9

NOTE: Late reports and corrections by respondents may cause some indexes to change 4 months after original publication. In addition, seasonally adjusted indexes may be revised for 5 years due to the recalculation of seasonal factors each January.

Finished goods

The index for finished energy goods declined 8.4 percent in September following a 0.3-percent gain in August. Over half of this downturn was due to gasoline prices, which dropped 22.2 percent in September subsequent to a 2.2-percent decrease in the previous month. The indexes for home heating oil, liquefied petroleum gas, residential electric power, and diesel fuel turned down after rising in August. By contrast, the index for residential natural gas advanced 1.8 percent in September following a 1.6-percent increase in the prior month. (See table 2.) During the third quarter of 2006, prices for finished energy goods fell at a 24.7-percent SAAR after moving up at a 22.3-percent SAAR during the second quarter of 2006.

The rate of increase in the index for finished consumer foods slowed from 1.4 percent in August to 0.7 percent in September. Prices for fresh and dry vegetables rose 3.5 percent after jumping 20.7 percent in the previous month. The index for eggs for fresh use also rose less than it had in August. The indexes for fresh fruits and melons, processed young chickens, and processed turkeys turned down in September following increases a month earlier. Prices for confectionery end products decreased after remaining unchanged in the preceding month. Alternatively, finfish and shellfish prices advanced 6.7 percent in September following a 9.1-percent decline in August. Prices for beef and veal also turned up after falling in August, and the index for pork rose at a faster rate than it had in the prior month. From June to September 2006, the index for finished consumer foods advanced at a 7.6-percent SAAR after increasing at a 3.7-percent SAAR for the 3 months ended June 2006.

Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy (unadj.)	Except foods and energy	Change in crude goods from 12 months ago (unadj.)

r=revised. Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for May 2006 have been revised to reflect the availability of late reports and corrections by respondents.

Prices for finished consumer goods other than foods and energy increased 0.5 percent in September after falling at the same rate in the previous month. The light motor trucks index climbed 3.5 percent following a 3.4-percent decline in August. Prices for passenger cars, alcoholic beverages, and mobile homes also turned up in September after decreasing a month earlier. The index for pharmaceutical preparations fell less than it had in the prior month, while prices for soaps and synthetic detergents rose after remaining unchanged in August. By contrast, the index for household appliances moved down 1.4 percent subsequent to a 0.7-percent gain in the preceding month. Prices for men's and boys' apparel increased at slower rates in September compared with the previous month. The index for women's, girls', and infants' apparel was unchanged following an increase in August. During the third quarter of 2006, the index for finished consumer goods other than foods and energy decreased at a 1.0-percent SAAR after advancing at a 2.2-percent SAAR from March to June 2006.

Capital equipment prices increased 0.6 percent in September after falling 0.3 percent in August. The index for passenger cars moved up 2.8 percent following a 2.6-percent decline in the prior month. Prices for light motor trucks, communication and related equipment, commercial furniture, and for x-ray and electromedical equipment also turned up in September after declining a month earlier. By contrast, the civilian aircraft index was unchanged following a 0.4-percent gain in August. Prices for industrial material handling equipment advanced less in September than they had in the preceding month. The index for truck trailers turned down after increasing in August. For the 3 months ended September 2006, capital equipment prices rose at a 0.5-percent SAAR after climbing at a 2.5-percent SAAR for the 3 months ended June 2006.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components decreased 1.4 percent in September following a 0.4-percent increase in August. Most of this downturn can be traced to prices for intermediate energy goods, which fell after rising in the prior month. The index for materials for nondurable manufacturing also turned down, while prices for materials and components for construction advanced less in September than they had a month earlier. Alternatively, the index for intermediate foods and feeds moved up following a decline in the prior month, and prices for materials for durable manufacturing increased more than they had in August. Excluding foods and energy, prices for intermediate goods edged up 0.1 percent in September after rising 0.4 percent in the preceding month. (See table B.)

The index for intermediate energy goods decreased 7.5 percent in September following a 0.7-percent advance in August. Diesel fuel prices dropped 22.3 percent after increasing 2.7 percent in the prior month. The indexes for jet fuel, home heating oil, liquefied petroleum gas, and residual fuel also moved down in September following advances a month earlier. Gasoline prices fell more than in August, while the indexes for industrial natural gas and natural gas to electric utilities increased less in September than they had in the previous month. Conversely, the index for commercial natural gas climbed 3.0 percent in September compared with a 1.8-percent gain in August. Prices for commercial electric power decreased less than they had in the preceding month. (See table 2.) The intermediate energy goods index declined at a 24.8-percent SAAR during the third quarter of 2006 after advancing at an 18.2-percent SAAR during the second quarter of 2006.

The index for materials for nondurable manufacturing fell 1.5 percent in September following a 0.2-percent increase in August. Leading this downturn, prices for basic organic chemicals decreased 4.0 percent after rising 2.0 percent in the prior month. The indexes for inedible fats and oils and for gray fabrics also moved down in September following advances a month earlier. Prices for plastic resins and materials and for stemmed and redried tobacco were unchanged after rising in August, while the indexes for paperboard and paper increased less than in the previous month. By contrast, prices for nitrogenates climbed 4.5 percent in September following a 6.0-percent drop in the preceding month. The index for synthetic fibers also turned up after falling in August. Prices for materials for nondurable manufacturing declined at a 4.4-percent SAAR for the 3 months ended in September after moving up at a 10.8-percent SAAR for the 3 months ended in June.

The index for materials and components for construction rose 0.2 percent in September following a 0.4-percent increase in August. Prices for fabricated structural metal products were unchanged after climbing 1.0 percent in the prior month. The nonferrous wire and cable index moved up less in September than it had a month earlier. Prices for concrete products, gypsum products, paving mixtures and blocks, hardwood lumber, and plastic construction products turned down following advances in August. Conversely, the softwood lumber index moved up 0.7 percent in September after dropping 5.6 percent in the previous month. Prices for treated wood also turned up following declines in August. The plywood index fell less in September than it had in the preceding month, while prices for steel mill products and for air conditioning and refrigeration equipment increased more than in the prior month. The index for materials and components for construction rose at a 5.2-percent SAAR in the third quarter of 2006 after advancing at a 7.8-percent SAAR in the second quarter of 2006.

The index for intermediate foods and feeds increased 0.8 percent in September compared with a 0.2-percent decrease in August. Flour prices moved up 1.7 percent after falling 5.1 percent in the prior month. The beef and veal index also turned up in September following a decline a month earlier. Prices for pork and for natural, processed, and imitation cheese rose more than they had in August, while the indexes for prepared animal feeds and for refined sugar and byproducts fell less than in the previous month. By contrast, prices for processed young chickens decreased 0.6 percent in September after advancing 4.6 percent in August. The index for dry, condensed, and evaporated milk products increased less than it had in the preceding month. Prices for intermediate foods and feeds climbed at a 3.9-percent SAAR for the 3 months ended in September after moving down at a 0.9-percent SAAR for the 3 months ended in June.

The index for materials for durable manufacturing advanced 0.5 percent in September following a 0.4-percent gain in August. In September, rising prices for cold rolled steel sheet and strip; hot rolled steel sheet and strip; hot rolled steel bars, plates, and structural shapes; softwood lumber; prepared paint; and cement outweighed falling prices for aluminum mill shapes, primary aluminum (except extrusion billet), cold finished steel bars, building paper and board, and hardwood lumber. The index for materials for durable manufacturing increased at a 13.4-percent SAAR in the third quarter of 2006 after surging at a 29.6-percent SAAR in the second quarter of 2006.

Crude goods

The Producer Price Index for Crude Materials for Further Processing fell 3.4 percent in September following a 2.2-percent increase in August. Prices for crude energy materials turned down after rising in the previous month. Conversely, the basic industrial materials index increased after declining in August. The index for crude foodstuffs and feedstuffs rose more than in the prior month. (See table B.)

Prices for crude energy materials dropped 8.4 percent in September following a 5.9-percent rise in the preceding month. Leading this downturn, natural gas prices fell 5.5 percent after climbing 15.7 percent in the previous month. The crude petroleum index dropped 13.3 percent following a 1.9-percent decrease in August. Alternatively, prices for coal advanced 0.2 percent after declining 1.4 percent in the prior month. (See table 2.) During the third quarter of 2006, the crude energy materials index increased at a 7.2-percent SAAR after falling at a 10.3-percent SAAR in the second quarter of 2006.

The index for crude nonfood materials less energy advanced 1.0 percent after decreasing 2.8 percent in August. Iron and steel scrap prices rose 5.0 percent following a 14.7-percent drop in the previous month. Prices for aluminum base scrap also turned up in September following declines in the preceding month. Conversely, prices for nonferrous metal ores fell 5.3 percent after increasing 4.8 percent in August. The raw cotton index also turned down following an advance in the previous month. Prices for construction sand, gravel, and crushed stone and for wastepaper rose less in September than in August. The index for copper base scrap fell after remaining unchanged in the previous month, and the index for pulpwood was unchanged after increasing a month earlier. For the 3 months ended September 2006, the basic industrial materials index decreased at a 1.9-percent SAAR after rising at a 59.4-percent SAAR in the 3 months ended June 2006.

The index for crude foodstuffs and feedstuffs increased 2.3 percent in September following a 0.1-percent gain in the previous month. Corn prices turned up 1.0 percent after dropping 13.9 percent in August. The fluid milk, wheat, and unprocessed finfish indexes also rose after declining in the prior month. Prices for slaughter hogs increased more in September than in the preceding month. By contrast, the slaughter broilers and fryers index declined 2.5 percent after increasing 3.2 percent in August. Prices for fresh fruits and melons also turned down following increases in the prior month. The indexes for fresh and dry vegetables and for slaughter cattle advanced less in September than in the previous month. The crude foodstuffs and feedstuffs index increased at an 18.0-percent SAAR during the third quarter of 2006 after rising at a 4.6-percent SAAR in the prior quarter.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Mining Industries turned down 7.4 percent in September after rising 4.7 percent in August. (Net output price indexes are not seasonally adjusted.) The index for the oil and gas extraction industry group declined 9.8 percent following a 6.2-percent gain in August. Prices received for copper ore and nickel ore mining, oil and gas well drilling, gold ore mining, and bituminous coal underground mining also turned down after increasing a month earlier. The industry index for phosphate rock mining fell more than in the previous month. By contrast, the index for bituminous coal and lignite surface mining increased 0.1 percent following a 1.5-percent decrease in August. Prices received for oil and gas operation support activities rose in September after remaining unchanged in the previous month. For the 3 months ended September 2006, the Producer Price Index for the Net Output of Total Mining Industries advanced at a 7.7-percent annualized rate, compared to a 1.4-percent annualized rate of increase in the second quarter of 2006. In September, the Producer Price Index for Total Mining Industries was 206.5 (December 1984 = 100), 11.4 percent below its year-ago level.

Manufacturing. The Producer Price Index for the Net Output of Total Manufacturing Industries turned down 1.9 percent in September after rising 0.1 percent a month earlier. The industry group index for petroleum and coal products declined 16.2 percent after increasing 0.7 percent in August. Prices received by the plastics and rubber products and by the medical equipment and supplies industry groups also turned down after rising in the previous month. The industry group index for electrical equipment and appliances rose less than in August. Alternatively, the industry group index for transportation equipment increased 0.9 percent in September after falling 1.2 percent a month earlier. Prices received by the wood products and by the computer and electronic products industry groups also rose after August declines. The food industry group index rose more than in the prior month. For the third quarter of 2006, the Producer Price Index for the Net Output of Total Manufacturing Industries fell at an annualized rate of 6.6 percent, compared with a 12.1-percent annualized rate of increase in the prior quarter. In September, the Producer Price Index for Total Manufacturing Industries was 156.8 (December 1984 = 100), 1.7 percent above its year-ago level.

Services. Among services industries, prices received for scheduled passenger air transportation turned down 10.8 percent in September after rising 1.0 percent in August. The industry indexes for general medical and surgical hospitals and for cellular and other wireless carriers also decreased in September after increasing in the previous month. By contrast, prices paid to commercial bankers rose 3.1 percent after advancing 2.0 percent in the prior month. The industry indexes for investment advice, casino hotels, passenger car rental, and newspaper publishing turned up after declining in August. Prices paid to Internet service providers decreased less than a month earlier.

Producer Price Index data for October 2006 are scheduled to be released on Tuesday, November 14, 2006, at 8:30 a.m. (EST).

Technical Note

Brief Explanation of Producer Prices Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (two-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (six-digit codes), and individual items (eight-digit codes). Nearly all eight-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Title	Code	<i>PPI Detailed Report Issue</i>

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_itc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at www.bls.gov/ppi/ppiescalation.htm. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 were subject to intervention in 1997.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2003.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Scrolling down the page to the “Get Detailed PPI Statistics” header reveals the following methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. The application guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.
There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

For commodity and stage-of-processing indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

Commodity code	Provides data for:
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

Commodity code	Provides data for:
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code, current NAICS series	Provides data for:
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice
pcu325412325412A	Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

***Industry-product code,
discontinued SIC series***

pdu28_#
pdu331_#
pdu3711#111

Provides data for:

Chemicals and allied products, not seasonally adjusted
Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

***Industry-product code,
discontinued NAICS series***

ndu212231212231
ndu2122312122312
ndu212231212231214

Provides data for:

Lead ore and zinc ore mining
Lead and zinc concentrates
Lead concentrates

- ***Flat Files*** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include the following:

NAICS series, current
NAICS series, discontinued
SIC series, discontinued
Commodity series, current
Commodity series, discontinued
Special requests
Latest news release

Directory:

/pub/time.series/pc
/pub/time.series/nd
/pub/time.series/pd
/pub/time.series/wp
/pub/time.series/wd
/pub/special.requests/ppi
/pub/news.release/ppi.txt

The FTP site maintains files to help with searches and downloads. These files are centrally located in the ***/pub/doc*** directory. Within this directory, the ***overview.txt*** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is ***wp.txt***; for discontinued commodity series, ***wd.txt***; for current industry-based PPI data based on NAICS, ***pc.txt***; for industry-based SIC time series that have been discontinued, ***pd.txt***; and for industry-based NAICS series that have been discontinued, ***nd.txt***.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled ***/pub/time.series/compressed/tape.format/*** on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (www.bls.gov). Clicking on the “Get Detailed Statistics” link at the top of the homepage calls up a chart listing all available BLS programs. The following methods are available for retrieving PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

1/ Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2/ The indexes for May 2006 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3/ Not available.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004.

Table 5. Producer price indexes by stage of processing, seasonally adjusted
(1982=100)

Grouping	Index 1/					
	Apr. 2006	May 2006	June 2006	July 2006	Aug. 2006	Sep. 2006
Finished goods.....	160.6	160.8	161.6	161.8	161.9	159.8
Finished consumer goods.....	166.4	166.6	167.6	167.9	168.3	165.0
Finished consumer foods.....	155.1	153.8	156.1	155.7	157.9	159.0
Crude.....	160.4	139.1	145.9	141.4	161.7	162.7
Processed.....	154.5	155.0	156.9	156.8	157.5	158.6
Finished consumer goods, excluding foods.....	170.4	171.2	171.7	172.3	171.9	167.0
Nondurable goods less foods.....	184.3	185.4	185.8	187.2	187.3	179.3

Processed fuels and lubricants.....	166.1	167.8	168.0	168.2	170.2	157.9
Manufacturing industries.....	158.9	160.0	157.4	159.3	161.8	155.4
Nonmanufacturing industries.....	170.7	172.8	174.6	173.9	175.5	159.5
Containers.....	172.8	173.2	176.8	176.6	176.5	176.8
Supplies.....	156.1	156.4	156.8	157.3	157.6	157.8
Manufacturing industries.....	160.5	160.5	160.6	160.9	161.5	161.6
Nonmanufacturing industries.....	153.7	154.1	154.6	155.1	155.3	155.5
Feeds.....	109.2	107.9	107.6	107.7	106.7	106.5
Other supplies.....	159.1	159.7	160.3	160.9	161.2	161.5
Crude materials for further processing.....	182.9	186.0	181.1	186.8	191.0	184.6
Foodstuffs and feedstuffs.....	113.5	110.7	115.9	118.0	118.1	120.8
Nonfood materials.....	231.9	239.6	226.7	235.1	242.5	229.0
Nonfood materials except fuel 2/.....	213.0	225.4	219.2	230.5	225.1	211.6
Manufacturing 2/.....	197.4	209.0	203.2	213.7	208.7	196.1
Construction.....	201.3	202.3	202.0	203.0	201.3	199.7
Crude fuel 3/.....	239.6	238.4	215.5	218.0	246.6	234.7
Manufacturing industries.....	227.6	226.5	205.3	207.6	233.9	223.0
Nonmanufacturing industries.....	245.1	243.9	220.3	222.9	252.2	240.1
Special groupings						
Finished goods, excluding foods.....	161.7	162.3	162.8	163.1	162.7	159.8
Intermediate materials less foods and feeds.....	164.6	166.5	167.1	168.0	168.8	166.1
Intermediate foods and feeds.....	133.0	132.6	133.7	134.2	133.9	135.0
Crude materials less agricultural products 2/.....	238.4	246.5	233.1	241.8	249.5	235.6
Finished energy goods.....	149.0	150.2	150.7	152.7	153.2	140.4
Finished goods less energy.....	157.3	157.2	158.1	157.7	157.8	158.7
Finished consumer goods less energy.....	162.0	161.8	162.9	162.4	162.8	163.7
Finished goods less foods and energy.....	158.4	158.8	159.2	158.8	158.2	159.1
Finished consumer goods less foods and energy....	166.5	166.9	167.4	166.9	166.1	167.0
Consumer nondurable goods less foods and energy..	191.0	191.7	191.9	192.1	191.8	192.0
Intermediate energy goods.....	166.4	168.5	168.5	168.4	169.6	156.9
Intermediate materials less energy.....	160.2	161.8	162.6	163.8	164.3	164.6
Intermediate materials less foods and energy.....	161.9	163.6	164.4	165.6	166.2	166.4
Crude energy materials 2/.....	231.6	233.5	217.6	228.1	241.6	221.4
Crude materials less energy.....	146.1	149.9	152.2	154.6	152.8	155.4
Crude nonfood materials less energy 3/.....	237.6	259.4	253.6	257.0	249.9	252.4

1/ All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for May 2006 have been recalculated to incorporate late reports and corrections by respondents.

2/ Includes crude petroleum.

3/ Excludes crude petroleum.
