Producer Price Index – May 2008

The Producer Price Index for Finished Goods increased 1.4 percent in May, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This rise followed a 0.2-percent advance in April and a 1.1-percent increase in March. At the earlier stages of processing, prices received by producers of intermediate goods rose 2.9 percent following a 0.9-percent advance a month earlier, and the crude goods index increased 6.7 percent after climbing 3.2 percent in April. (See table A.)

Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted

Month	Finished goods					Intermediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for January 2008 have been revised to reflect the availability of late reports and corrections by respondents.

In May, the index for finished energy goods turned up 4.9 percent after falling 0.2 percent a month earlier. Prices for finished consumer foods increased 0.8 percent following no change in April. By contrast, partially offsetting the acceleration in the finished goods index, the rise in the index for finished goods less foods and energy slowed to 0.2 percent from 0.4 percent in the previous month.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 1.6 percent in May to 179.6 (1982 = 100). From May 2007 to May 2008, finished goods prices advanced 7.2 percent. Over the same period, the finished energy goods index rose 19.7 percent, prices for finished goods less foods and energy increased 3.0 percent, and the index for finished consumer foods climbed 6.5 percent. For the 12 months ended May 2008, prices received by manufacturers of intermediate goods advanced 12.6 percent, and the crude goods index jumped 41.5 percent.

Finished goods

The index for finished energy goods turned up 4.9 percent in May after decreasing 0.2 percent in the preceding month. The index for gasoline rose 9.3 percent following a 4.6-percent decrease in April. Prices for diesel fuel also turned up after declining in the prior month. The indexes for home heating oil, liquefied petroleum gas, and kerosene rose more than they had in April. Conversely, partially offsetting the upturn in finished energy goods prices, the advance in the index for residential electric power slowed to 0.6 percent in May from 1.2 percent a month earlier. Prices for residential natural gas also rose less than in April. The index for lubricating and similar oils was unchanged in May after increasing in the preceding month. (See table 2.)

Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted

Month	Intermediate goods				Crude goods

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for January 2008 have been revised to reflect the availability of late reports and corrections by respondents.

The index for finished consumer foods rose 0.8 percent in May following no change in the prior month. The index for beef and veal turned up 2.5 percent after falling 1.7 percent in April. Prices for natural cheese (except cottage cheese) also increased following declines a month earlier. The indexes for pork and snack chips rose more in May than in the preceding month. Prices for chicken eggs fell less than in April. By contrast, the index for melons turned down 14.3 percent in May after jumping 90.7 percent in the previous month. Prices for packaged fluid milk products and for dry, condensed, and evaporated milk products also fell after rising in April.

The rise in the index for finished goods less foods and energy slowed to 0.2 percent in May from 0.4 percent in the prior month. The index for pharmaceutical preparations increased 0.2 percent after rising 0.7 percent in April. Prices for light motor trucks, passenger cars, nonwood furniture and store fixtures, periodical circulation, and distilled bottled liquor (except brandy) turned down after advancing a month earlier. By contrast, the increase in the index for tobacco products accelerated to 2.2 percent in May from 0.1 percent in the previous month. Prices for aircraft also rose more than in April. The indexes for plastic products and for communication and related equipment turned up after falling in the preceding month.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components advanced 2.9 percent in May following a 0.9-percent increase in April. Prices for intermediate energy goods, materials for both durable and nondurable manufacturing, and materials and components for construction rose more than they had in the previous month. The index for intermediate foods and feeds turned up in May after falling a month earlier. By contrast, partially offsetting the acceleration in intermediate goods prices, the index for containers rose slightly less than in the prior month. Excluding prices for foods and energy, intermediate goods moved up 2.0 percent in May after rising 1.2 percent a month earlier. (See table B.)

The intermediate energy goods index climbed 6.2 percent following a 0.5-percent increase in the preceding month. Diesel fuel prices jumped 11.2 percent after falling 0.9 percent in April. The indexes for gasoline and residual fuels also turned up in May following decreases in the prior month. Prices for commercial electric power, utility natural gas, home heating oil, industrial electric power, and liquefied petroleum gas rose more than they had a month earlier. By contrast, the index for finished lubricants moved up 0.4 percent after advancing 2.9 percent in April. (See table 2.)

Prices for materials for durable manufacturing climbed 4.5 percent following a 1.9-percent increase in April. The steel mill products index advanced 10.7 percent after rising 5.5 percent in the previous month. Prices for primary nonferrous metals, nonferrous wire and cable, refined lead, building paper and board, and cement turned up in May after falling a month earlier. The index for unfinished softwood lumber (not made from purchased materials) rose more than it had in the preceding month. By contrast, prices for aluminum mill shapes inched down 0.1 percent in May after increasing 3.2 percent in the prior month. The index for secondary aluminum rose less than it had in April.

The index for materials for nondurable manufacturing increased 3.2 percent after moving up 1.7 percent a month earlier. Prices for primary basic organic chemicals climbed 7.5 percent in May following a 3.8-percent advance in the preceding month. The indexes for plastic resins and materials, nitrogenates, newsprint, alkalies and chlorine, and for writing and printing papers also increased more than they had in the prior month. Conversely, the rise in prices for phosphates slowed from 11.1 percent in April to 5.4 percent in May. The indexes for intermediate basic organic chemicals and for processed yarns and threads also rose less than they had in April.

Prices for intermediate foods and feeds advanced 3.2 percent following a 0.6-percent decline in April. The index for corn, cottonseed, and soybean cake and meal increased 15.7 percent after falling 1.6 percent in the previous month. Prices for beef and veal and for natural cheese (except cottage cheese) also turned up in May. The indexes for shortening and cooking oils, pork, and for sugar and confectionery products rose more than they had in April. Flour prices fell less than in the prior month. By contrast, the index for fluid milk products declined 2.3 percent subsequent to a 2.9-percent gain in April. Prices for dry, condensed, and evaporated milk products and processed eggs also turned down after rising in the preceding month.

The index for materials and components for construction advanced 2.1 percent after rising 1.0 percent in the preceding month. The nonferrous wire and cable index increased 2.2 percent subsequent to a 3.1-percent decline a month earlier. Prices for steel mill products, unfinished softwood lumber (not made from purchased materials), paving mixtures and blocks, and for asphalt felts and coatings rose more than they had in April. The indexes for plastic construction products and treated wood turned up in May following declines in the prior month. Conversely, prices for precast concrete products fell 2.3 percent after climbing 6.1 percent in April. The index for fabricated structural metal advanced less in May than a month earlier. Prices for switchgear and switchboard equipment turned down after rising in the preceding month.

The index for containers moved up 0.5 percent, slightly less than the 0.6-percent gain in April. In May, higher prices for barrels, drums, and pails; paper, plastic, and foil bags; steel cans; paper boxes and containers; and wooden boxes outweighed lower prices for glass containers; fiber and composite cans and related products; and aluminum cans.

Crude goods

The Producer Price Index for Crude Materials for Further Processing climbed 6.7 percent in May after rising 3.2 percent in April. Leading this acceleration, prices for crude energy materials advanced significantly more in May than they had a month earlier. Also contributing to this faster rate of increase, the index for crude foodstuffs and feedstuffs turned up after falling in April. By contrast, partially offsetting the acceleration in prices for crude goods, the index for crude nonfood materials less energy moved up less in May than it had in the previous month. (See table B.)

The index for crude energy materials jumped 13.1 percent in May after increasing 4.1 percent in April. Leading this broad-based acceleration, prices for natural gas surged 17.0 percent in May following a 4.3-percent advance in the prior month. The crude petroleum index rose 11.1 percent compared with a 4.5-percent gain in April. Coal prices climbed 2.9 percent in May after edging up 0.3 percent a month earlier. (See table 2.)

The index for crude foodstuffs and feedstuffs increased 1.8 percent in May following a 0.9-percent decline in April. Slaughter cattle prices moved up 3.7 percent in May after no change in the preceding month. The indexes for wheat and for ungraded chicken eggs fell less than they had in April. Prices for slaughter hogs rose more in May than they had a month earlier. The fluid milk index was unchanged following a decrease in April, and prices for citrus fruits turned up in May. Conversely, corn prices declined 1.7 percent in May following a 6.6-percent advance in April. The indexes for Irish potatoes for processing and melons also turned down in May. Prices for rough rice increased less than they had in April.

The index for crude nonfood materials less energy rose 5.0 percent in May after climbing 7.9 percent in April. Price increases for iron and steel scrap slowed to 9.0 percent in May from 32.2 percent in the previous month. The indexes for phosphates and for cattle hides and skins also moved up less than they had in April. Prices for gold ores and corrugated wastepaper fell more than they had a month earlier. The nonferrous scrap index turned down in May, and iron ore prices were unchanged following advances in April. By contrast, the index for construction sand, gravel, and crushed stone rose 0.5 percent in May after declining 0.7 percent in the prior month. Prices for high grade wastepaper and for plant and animal fibers also turned up after decreasing in April.

Net output price indexes

Mining, Utilities, and Manufacturing Industries. The Producer Price Index for the Net Output of Total Mining, Utilities, and Manufacturing Industries advanced 2.3 percent in May after increasing 1.2 percent in April. (Net output price indexes are not seasonally adjusted.) Prices received by the petroleum refining industry climbed 10.9 percent subsequent to a 3.4-percent gain a month earlier. The industry indexes for crude petroleum and natural gas extraction and for electric power distribution also rose more than they had in April. Prices received by animal slaughterhouses (excluding poultry) and cheese manufacturers turned up in May. By contrast, slightly offsetting the acceleration in the index for total mining, utilities, and manufacturing industries, the industry index for electric power generation declined 2.9 percent following a 7.0-percent increase in April. Prices received by manufacturers of automobile, light truck and utility vehicles also declined after rising in the prior month. In May, the index for total mining, utilities, and manufacturing industries was 114.2 (December 2006 = 100), 9.7 percent above its year-ago level.

Trade Industries. The Producer Price Index for the Net Output of Total Trade Industries increased 1.3 percent after moving up 1.2 percent in April. (Trade indexes measure changes in margins received by wholesalers and retailers.) In May, rising margins received by merchant wholesalers of both durable and nondurable goods, supermarkets and grocery stores, family clothing stores, and sporting goods stores outweighed falling margins received by gasoline stations, women's clothing stores, department stores, and hardware stores. In May, the index for total trade industries was 108.1 (December 2006 = 100), 3.3 percent above its year-ago level.

Transportation and Warehousing Industries. The Producer Price Index for the Net Output of Total Transportation and Warehousing Industries moved up 1.7 percent compared with a 1.2-percent gain in April. The index for the U.S. Postal Service rose 2.8 percent in May following no change a month earlier. Prices received by couriers, local general freight truckers, long distance general freight truckers (truckload), line haul railroads, and nonscheduled passenger air transporters advanced more than they had in the prior month. By contrast, the industry index for local specialized freight trucking of new goods increased 1.0 percent subsequent to a 6.9-percent rise in April. Prices received by the industries for scheduled passenger air transportation, freight transportation arrangement, and long distance general freight trucking (less than truckload) also advanced less in May than a month earlier. In May, the index for total transportation and warehousing industries was 112.4 (December 2006 = 100), 8.7 percent above its year-ago level.

Traditional Service Industries. The Producer Price Index for the Net Output of Total Traditional Service Industries edged down 0.1 percent after advancing 0.7 percent in April. The industry index for commercial banking declined 1.4 percent in May compared with a 4.7-percent gain a month earlier. Prices received by cellular and other wireless carriers, investment bankers and securities dealers, non-casino hotels and motels, and software publishers also turned down in May. The industry index for offices of real estate agents and brokers decreased more than it had in April. By contrast, prices received by portfolio managers moved up 3.8 percent after falling 0.7 percent a month earlier. The indexes for the securities brokerage and passenger car rental industries also turned up in May. In May, the total traditional service industries index was 101.9 (December 2006 = 100), 1.0 percent above its year-ago level.

Producer Price Index data for June 2008 are scheduled to be released on Tuesday, July 15, 2008 at 8:30 a.m. (EDT).

PPI Transitions to New Computer System

The Producer Price Index (PPI) program is converting its monthly processing to a new computer system with the release of data for May 2008. As a result of this conversion, there will be some changes to previous PPI practices:

- The traditional concordance between the detailed Commodity indexes and Industry-classified product indexes will cease to exist. All detailed Commodity indexes will continue to include price data from their primary Industry-classified counterparts, but these data will be supplemented with similar item specific data of other Industries. This will result in additional price quotations, thus larger sample sizes for the Commodity indexes.
- The visual representation of some PPI publication tables will change. Although most information previously provided will continue to be published, some tables will differ visually from what had been traditionally produced. The only piece of information that will no longer be published is the Finished Goods index on a 1967 = 100 basis, which had been provided as a courtesy to users.

Further information is available from the PPI Section of Index Analysis and Public Information at: (202) 691-7705.

TECHNICAL NOTE

Brief explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-processing indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer goods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood

materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (two-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (six-digit codes), and individual items (eight-digit codes). The structure of the traditional commodity classification thus follows a strict, consistent hierarchy.

Industry net-output price indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 2002 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2002 through December 2006, PPI weights were derived from 1997 shipment values. Industry indexes now are calculated with 2002 weights and 1997 net output ratios. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights

for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price index reference base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at http://www.bls.gov/opub/hom/homch14_itc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at <http://www.bls.gov/ppi/ppiescalation.htm>. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment

method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 were subject to intervention in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 2.2 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2007.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the "Get Detailed PPI Statistics" header reveals the following methods of data retrieval:

- *Most Requested Series* is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- *Create Customized Tables* is a form-based query application designed for users unfamiliar with the PPI coding structure. The application guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity

or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- *Series Report* is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a "wdu" prefix (not seasonally adjusted) or a "wds" prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<p><i>Industry-product code, current NAICS series</i> pcu325---325---</p> <p>pcu336110336110</p> <p>pcu621111621111411</p> <p>pcu325412325412A</p>	<p><u>Provides data for:</u> Chemical manufacturing, not seasonally adjusted</p> <p>Automobile and light duty motor vehicle manufacturing</p> <p>Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice</p> <p>Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system</p>
--	--

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

<p><i>Industry-product code, discontinued SIC series</i> pdu28_#</p> <p>pdu331_#</p> <p>pdu3711#111</p>	<p><u>Provides data for:</u> Chemicals and allied products, not seasonally adjusted</p> <p>Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted</p> <p>Passenger cars</p>
---	--

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

<p><i>Industry-product code, discontinued NAICS series</i> ndu212231212231</p> <p>ndu2122312122312</p>	<p><u>Provides data for</u> Lead ore and zinc ore mining</p> <p>Lead and zinc concentrates</p>
--	--

ndu212231212231214

Lead concentrates

Flat Files and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include the following:

	<u>Directory:</u>
NAICS series, current	/pub/time.series/pc
NAICS series, discontinued	/pub/time.series/nd
SIC series, discontinued	/pub/time.series/pd
Commodity series, current	/pub/time.series/wp
Commodity series, discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi
Latest news release	/pub/news.release/ppi.txt

The FTP site maintains files to help with searches and downloads. These files are centrally located in the /pub/doc directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is **wp.txt**; for discontinued commodity series, **wd.txt**; for current industry-based PPI data based on NAICS, **pc.txt**; for industry-based SIC time series that have been discontinued, **pd.txt**; and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled /pub/time.series/compressed/tape.format/ on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). Clicking on the “Get Detailed Statistics” link at the top of the homepage calls up a chart listing all available BLS programs. The following methods are available for retrieving PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

Information in this release is available to sensory impaired individuals. Voice phone: 202-691-7828; TDD phone: 202-691-5897; TDD message referral phone: 1-800-326-2577.

1 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available.

2 The indexes for January 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject revision 4 months after original publication.

3 Includes crude petroleum.

4 Excludes crude petroleum.

5 Percent of total finished goods.

6 Percent of total intermediate materials.

7 Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

8 Percent of total crude materials.

Materials for food manufacturing.....	170.7	174.4	177.5	180.4	179.9	182.2
Materials for nondurable manufacturing.....	195.0	199.2	201.2	204.2	207.6	214.3
Materials for durable manufacturing.....	188.3	189.5	192.2	199.5	203.3	212.5
Components for manufacturing.....	136.9	137.4	137.6	138.1	138.7	139.3
Materials and components for construction.....	193.8	194.5	195.5	197.1	199.1	203.2
Processed fuels and lubricants.....	192.7	195.9	197.2	209.1	210.7	224.1
Manufacturing industries.....	186.6	189.7	190.4	201.6	201.3	211.4
Nonmanufacturing industries.....	195.7	198.9	200.6	212.7	215.1	229.9
Containers.....	183.5	185.1	185.6	185.8	187.0	188.0
Supplies.....	164.6	166.8	167.9	169.4	170.5	172.8
Manufacturing industries.....	165.0	166.3	167.0	167.5	168.4	168.6
Nonmanufacturing industries.....	163.1	165.4	166.8	168.5	169.6	172.4
Feeds.....	153.5	163.3	170.0	180.3	177.8	187.1
Other supplies.....	165.3	166.8	168.0	169.0	170.4	172.0
Crude materials for further processing.....	230.3	236.9	246.2	266.0	274.6	293.1
Foodstuffs and feedstuffs.....	160.2	165.1	166.1	169.4	167.9	170.9
Nonfood materials.....	276.3	283.8	299.8	332.5	349.1	384.7
Nonfood materials except fuel ²	278.1	288.3	294.1	327.6	346.4	373.1
Manufacturing ²	258.7	268.3	273.7	305.2	322.9	348.1
Construction.....	198.5	198.3	198.2	198.9	196.9	196.9
Crude fuel ³	251.2	253.5	283.5	312.4	324.4	374.1
Manufacturing industries.....	238.4	240.8	268.5	295.3	306.4	352.5
Nonmanufacturing industries.....	256.9	259.3	290.0	319.7	331.9	382.9
Special groupings						
Finished goods, excluding foods.....	171.0	172.7	173.7	175.4	175.8	178.5
Intermediate materials less foods and feeds.....	177.8	179.7	181.0	185.2	187.0	192.4
Intermediate foods and feeds.....	165.2	171.0	174.8	179.9	178.8	184.5
Crude materials less agricultural products ²	283.7	291.2	307.8	341.6	358.6	396.6
Finished energy goods.....	169.7	173.5	174.6	179.6	179.3	188.1
Finished goods less energy.....	165.1	166.5	166.9	167.7	168.2	168.9
Finished consumer goods less energy.....	171.6	173.4	173.6	174.7	175.2	176.0
Finished goods less foods and energy.....	163.1	164.0	164.8	165.2	165.9	166.3
Finished consumer goods less foods and energy.....	171.8	172.8	173.7	174.2	174.9	175.5
Consumer nondurable goods less foods and energy.....	200.0	201.3	202.6	203.4	204.1	205.9
Intermediate energy goods.....	194.0	197.6	199.5	211.3	212.3	225.5
Intermediate materials less energy.....	170.6	172.3	173.4	175.4	177.3	181.1
Intermediate materials less foods and energy.....	171.0	172.5	173.4	175.3	177.4	180.9
Crude energy materials ²	268.6	273.4	291.3	330.2	343.7	388.7
Crude materials less energy.....	196.2	203.3	206.5	211.6	216.1	222.7
Crude nonfood materials less energy ³	294.6	308.5	319.8	330.9	357.1	375.0

1 All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for January 2008 have been recalculated to incorporate late reports and corrections by respondents.

2 Includes crude petroleum.

3 Excludes crude petroleum.
