PRODUCER PRICE INDEXES – DECEMBER 2021

The Producer Price Index for final demand increased 0.2 percent in December, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. This rise followed advances of 1.0 percent in November and 0.6 percent in October. (See table A.) On an unadjusted basis, final demand prices moved up 9.7 percent in 2021, the largest calendar-year increase since data were first calculated in 2010.

In December, the advance in the final demand index can be traced to a 0.5-percent increase in prices for final demand services. Conversely, the index for final demand goods decreased 0.4 percent.

Prices for final demand less foods, energy, and trade services rose 0.4 percent in December following a 0.8-percent increase in November. In 2021, the index for final demand less foods, energy, and trade services moved up 6.9 percent, following a 1.3-percent advance in 2020.

Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted

Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted

Final Demand

Final demand services: Prices for final demand services rose 0.5 percent in December following a 0.9-percent increase in November. Over half of the broad-based advance in December is attributable to margins for final demand trade services, which moved up 0.8 percent. (Trade indexes measure changes in margins received by wholesalers and retailers.) Prices for final demand services less trade, transportation, and warehousing and for final demand transportation and warehousing services rose 0.2 percent and 1.7 percent, respectively.

Product detail: Over a quarter of the December increase in the index for final demand services can be attributed to margins for fuels and lubricants retailing, which rose 13.0 percent. The indexes for airline passenger services, food retailing, machinery and vehicle wholesaling, machinery and equipment parts and supplies wholesaling, and traveler accommodation services also moved higher. In contrast, margins for automobile and automobile parts retailing decreased 2.7 percent. The indexes for deposit services (partial) and for health, beauty, and optical goods retailing also declined. (See table 2.)

Final demand goods: The index for final demand goods moved down 0.4 percent in December, the first decrease since falling 2.8 percent in April 2020. Leading the December decline, prices for final demand energy dropped 3.3 percent. The index for final demand foods fell 0.6 percent. Conversely, prices for final demand goods less foods and energy advanced 0.5 percent.

Product detail: A major factor in the December decrease in prices for final demand goods was the index for gasoline, which moved down 6.1 percent. Prices for meats, gas fuels, fresh and dry vegetables, diesel fuel, and primary basic organic chemicals also declined. In contrast, the index for ethanol increased 6.4 percent. Prices for residential electric power and for chicken eggs also moved higher.

Table A. Monthly and 12-month percent changes in selected final demand price indexes, seasonally adjusted

Intermediate Demand by Commodity Type

Within intermediate demand in December, prices for processed goods moved down 0.3 percent, the index for unprocessed goods dropped 5.6 percent, and prices for services advanced 0.8 percent. (See tables B and C.)

Processed goods for intermediate demand: The index for processed goods for intermediate demand fell 0.3 percent in December, the first decline since moving down 3.5 percent in April 2020. Leading the December decrease in prices for processed goods for intermediate demand, the index for processed energy goods dropped 4.1 percent. Prices for processed foods and feeds moved down 0.5 percent. Conversely, the index for processed materials less foods and energy rose 0.7 percent. In 2021, prices for processed goods for intermediate demand surged 24.4 percent, the largest calendar-year increase since jumping 28.9 percent in 1974.

Product detail: A major factor in the December decline in prices for processed goods for intermediate demand was the index for diesel fuel, which dropped 5.9 percent. Prices for utility natural gas, gasoline, primary basic organic chemicals, liquefied petroleum gas, and meats also moved down. In contrast, the index for softwood lumber rose 24.4 percent. Prices for ethanol and for dairy products also increased.

Unprocessed goods for intermediate demand: Prices for unprocessed goods for intermediate demand fell 5.6 percent in December, the first decline after eight consecutive increases. Leading the decrease in the index for unprocessed goods for intermediate demand, prices for unprocessed energy materials dropped 13.1 percent. The index for unprocessed nonfood materials less energy declined 2.0 percent. Conversely, prices for unprocessed foodstuffs and feedstuffs rose 2.8 percent. In 2021, the index for unprocessed goods for intermediate demand surged 38.0 percent, the largest calendar-year increase since data were first calculated in 1948.

Product detail: Sixty percent of the December decrease in prices for unprocessed goods for intermediate demand can be traced to the index for crude petroleum, which fell 16.4 percent. The indexes for natural gas, nonferrous metals, raw milk, carbon steel scrap, and fresh fruits and melons also moved down. In contrast, prices for slaughter poultry rose 17.7 percent. The indexes for grains and for phosphates also increased.

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for August 2021 through November 2021 have been revised to reflect the availability of late reports and corrections by respondents.

Services for intermediate demand: The index for services for intermediate demand rose 0.8 percent in December, the largest advance since climbing 1.2 percent in June. Leading the broad-based increase in December, margins for trade services for intermediate demand jumped 1.4 percent. Prices for services less trade, transportation, and warehousing for intermediate demand and for transportation and warehousing services for intermediate demand also moved higher, rising 0.4 percent and 1.6 percent, respectively. In 2021, the index for services for intermediate demand advanced 8.0 percent, the largest calendar-year increase since data were first calculated in 2010.

Product detail: One-fifth of the December rise in prices for services for intermediate demand is attributable to margins for machinery and equipment parts and supplies wholesaling, which advanced 2.6 percent. The indexes for loan services (partial), arrangement of freight and cargo transportation, gross rents for retail properties, television advertising times sales, and fuels and lubricants retailing also moved higher. Conversely, prices for deposit services (partial) fell 4.3 percent. The indexes for building materials, paint, and hardware wholesaling and for air mail and package delivery services (excluding USPS) also declined.

Intermediate Demand by Production Flow

Stage 4 intermediate demand: Prices for stage 4 intermediate demand increased 0.6 percent in December after climbing 1.0 percent in November. In December, the index for total services inputs to stage 4 intermediate demand moved up 0.7 percent, and prices for total goods inputs rose 0.4 percent. (See table D.) Advances in the indexes for machinery and equipment parts and supplies wholesaling; softwood lumber; biological products (including diagnostics); gross rents for retail properties; loan services (partial); and warehousing, storage, and related services outweighed declining prices for gasoline, meats, and deposit services (partial). In 2021, the index for stage 4 intermediate demand moved up 12.4 percent, after rising 2.4 percent in 2020.

Stage 3 intermediate demand: Prices for stage 3 intermediate demand rose 0.4 percent in December following a 0.8-percent advance in November. In December, the index for total services inputs to stage 3 intermediate demand moved up 0.8 percent, while prices for total goods inputs were unchanged. Increases in the indexes for arrangement of freight and cargo transportation, slaughter poultry, grains, softwood lumber, slaughter cattle, and temporary help services outweighed falling prices for diesel fuel, raw milk, and deposit services (partial). In 2021, the index for stage 3 intermediate demand jumped 20.2 percent, after inching down 0.1 percent in 2020.

Stage 2 intermediate demand: The index for stage 2 intermediate demand declined 2.3 percent in December, the largest decrease since a 4.4-percent drop in April 2020. In December, prices for total goods inputs to stage 2 intermediate demand fell 5.8 percent. In contrast, the index for total services inputs advanced 1.3 percent. Decreases in prices for crude petroleum, gas fuels, primary basic organic chemicals, deposit services (partial), nonferrous scrap, and carbon steel scrap outweighed increases in the indexes for fuels and lubricants retailing, ethanol, and loan services (partial). In 2021, prices for stage 2 intermediate demand rose 21.2 percent, after moving up 1.4 percent in 2020.

Stage 1 intermediate demand: Prices for stage 1 intermediate demand edged up 0.1 percent in December following a 1.2-percent increase in November. In December, the index for total services inputs to stage 1 intermediate demand rose 0.6 percent. Conversely, prices for total goods inputs fell 0.3 percent. In December, advances in the indexes for airline passenger services, ethanol, agricultural chemicals and chemical products, grains, and machinery and equipment parts and supplies wholesaling outweighed decreases in the indexes for diesel fuel; utility natural gas; primary basic organic chemicals; and building materials, paint, and hardware wholesaling. In 2021, prices for stage 1 intermediate demand increased 17.5 percent, following a 2.6-percent rise in 2020.

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for August 2021 through November 2021 have been revised to reflect the availability of late reports and corrections by respondents.

The Producer Price Index for January 2022 is scheduled to be released on Tuesday, February 15, 2022 at 8:30 a.m. (ET).

Recalculated Seasonal Adjustment Factors and Relative Importance Figures to be Available on February 11, 2022

Each year with the release of PPI data for January, seasonal adjustment factors and relative importance figures are recalculated to reflect price movements from the just-completed calendar year. The following seasonal information will be available on February 11, 2022 (2 workdays prior to the release of PPI data for January 2022 on February 15, 2022):

- Direct seasonal factors for PPI commodity indexes for the year 2022,
- Recalculated seasonal factors for the last 5 years (2017-2021) for PPI commodity indexes,
- Recalculated seasonal factors for the last 5 years (2017-2021) for PPI Final Demand-Intermediate Demand indexes,
- Recalculated seasonal index data for the last 5 years (2017-2021) for Final Demand-Intermediate Demand and commodity indexes. This revision to seasonally adjusted indexes for the previous 5 years will be posted to the PPI database on the BLS website.

In addition, the following relative importance tables, which include values for December 2021, will be available on February 11, 2022:

- Final demand by individual commodities
- Final demand by component series
- Individual commodities of intermediate demand by commodity type
- Component series of intermediate demand by commodity type
- Individual commodities of intermediate demand by production flow
- Component series of intermediate demand by production flow
- Commodities, all levels
- Wherever-provided services and construction

This information will be available on the PPI website at www.bls.gov/ppi or by contacting the PPI Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Coronavirus (COVID-19) Impact on December 2021 Producer Price Index Data

For each month from March 2020 to December 2021, BLS has published a summary of the impact of the pandemic on the Producer Price Index news release and data. The impact summary for December is available at www.bls.gov/covid19/producer-price-indexes-covid19-impacts-december-2021.htm. Beginning with publication of January 2022 data in February 2022, this month-specific impact summary will be discontinued. However, information related to the impact of the pandemic will continue to be available at www.bls.gov/covid19/effects-of-covid-19-pandemic-on-producer-price-index.htm.

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2018, the PPI covered 71 percent of services as measured by 2012 Census revenue, and 31 percent of construction.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2017, final demand goods were about 33 percent of overall final demand, final demand services were roughly 65.5 percent, and final demand construction was about 1.5 percent of final demand. Within intermediate demand, coverage of services for intermediate demand resulted in about a 45 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table

from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4

intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see www.bls.gov/ppi/fd-id/ppi-intermediate-demand-by-production-flow-industry-stage-assignments.htm.

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the PPI includes medical services paid for by third parties. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at www.bls.gov/opub/mlr/.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In

addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted online via the BLS Internet Data Collection Facility (IDCF).

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to monthly revisions up to 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Information on these resampling efforts are noted in the *PPI News Release* and *PPI Detailed Report* in the months they occur.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2012 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2012 to December 2017, PPI weights were derived from 2007 shipment values. Industry indexes now are calculated under the 2017 NAICS structure utilizing 2012 value of shipment weights and 2007 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base

later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at <https://www.bls.gov/opub/hom/homch14.htm>.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts

such as purchasing agreements or real estate leases. For more information, see *Price Adjustment Guide for Contracting Parties*, on the Web at: www.bls.gov/ppi/publications/price-adjustment-guide-for-contracting-parties.htm.

Seasonal adjustment is accomplished using X-13 ARIMA, a software package published by the U.S. Census Bureau. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of almost 400 seasonally adjusted series, only 42 were subject to intervention in 2018.

For more information relating to seasonal adjustment methods, see “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*, and “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed*

Report. There were more than 4 million instances of PPI data and tables being downloaded from the BLS website during the 12 months ended December 31, 2017.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (<https://www.bls.gov/ppi>). On this page, under the tab labeled “Featured PPI databases” links provide the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpufd4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu”. After the prefix, there are 12

numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

*Industry-product code,
discontinued NAICS series*

ndu212231212231
ndu2122312122312
ndu212231212231214

Provides data for

Lead and zinc ore mining
Lead, zinc concentrates
Lead concentrates

- **Text Files** are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation, such as seasonal factor tables and relative importance tables. The text files can be accessed at <https://download.bls.gov/> or directly from links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

Industry Data	<u>Directory:</u> /pub/time.series/pc
Industry Data - Discontinued (NAICS basis)	/pub/time.series/nd
(SIC basis)	/pub/time.series/pd
Commodity Data (incl. FD-ID)	/pub/time.series/wp
Commodity Data – Discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi

Additional information

The PPI homepage (<https://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

² All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

³ PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

⁵ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁶ Distributive services include transportation, warehousing, and trade of goods.

⁷ Includes intermediate trade, transportation, and warehousing services.

⁸ Includes crude petroleum.

⁹ Excludes crude petroleum.

p Preliminary

"-" Data not available.

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² Seasonal tests did not indicate the presence of seasonality. Data shown is not seasonally adjusted.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

p Preliminary

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Transportation and warehousing of goods for nonmanufacturing industries.....	12/12	ID6	3222	129.362	134.508	135.203	135.676	137.745
Services less trade, transportation, and warehousing for intermediate demand.....		ID6	31	124.164	124.753	124.439	125.335	125.873
Services less trade, transportation, and warehousing for manufacturing industries.....		ID6	311	116.172	116.494	117.749	118.174	118.665
Services less trade, transportation, and warehousing for nonmanufacturing industries.....		ID6	312	124.419	125.017	124.648	125.561	126.100
Construction								
Construction for intermediate demand.....		ID6	4	128.407	130.179	130.819	131.552	131.923
Intermediate Demand by Commodity Type Special Groupings								
Processed materials less foods and feeds.....	00/82	ID6	9111	237.664	240.177	246.783	251.059	250.311
Processed foods and feeds.....	00/82	ID6	9112	226.241	229.957	227.553	227.554	226.427
Processed energy goods.....	00/82	ID6	9113	213.354	217.785	233.492	241.602	231.611
Processed materials less energy.....	00/82	ID6	9118	239.609	241.739	245.033	247.847	249.375
Processed materials less foods and energy.....	00/82	ID6	9115	240.766	242.701	246.662	249.803	251.642
Intermediate distributive services ⁶	04/10	ID6	9116	149.855	150.412	151.287	150.616	152.659
Processed goods plus intermediate distributive services.....	04/10	ID6	9117	134.347	135.543	138.113	139.504	139.727
Unprocessed materials less agricultural products.....	00/82	ID6	9211	267.212	280.735	313.512	320.052	288.022
Unprocessed energy materials ⁷	00/82	ID6	9212	193.303	208.619	246.250	250.332	217.648
Unprocessed materials less energy.....	00/82	ID6	9213	279.180	278.095	271.702	278.559	280.765
Unprocessed nonfood materials less energy ⁸	00/82	ID6	9216	488.700	477.738	470.143	488.604	478.872
Intermediate Demand by Production Flow								
Stage 4 Intermediate Demand								
Stage 4 intermediate demand.....		ID5	4	134.145	134.695	135.565	136.893	137.689
Inputs to stage 4 goods producers.....		ID5	41	133.363	133.707	135.333	136.571	137.576
Goods.....		ID5	411	128.294	129.105	130.613	132.263	132.805
Foods.....		ID5	4111	140.407	138.274	137.027	140.579	140.337
Energy.....		ID5	4112	128.080	130.858	137.085	143.195	147.473
Goods excluding foods and energy.....		ID5	4113	126.515	127.752	129.633	130.959	131.586
Services.....		ID5	412	150.064	149.120	151.105	151.226	153.532
Trade services.....		ID5	4123	159.764	158.511	160.778	160.686	163.576
Transportation and warehousing services.....		ID5	4122	124.421	123.735	124.833	127.036	128.461
Transportation of passengers.....		ID5	41221	116.891	106.946	104.663	109.360	115.182
Transportation and warehousing of goods.....		ID5	41222	134.135	135.216	137.047	138.914	139.582
Services less trade, transportation, and warehousing.....		ID5	4121	118.141	118.318	119.454	119.765	120.062
Inputs to stage 4 services producers.....		ID5	42	131.515	132.221	132.309	133.603	134.232
Goods.....		ID5	421	130.280	131.459	132.895	134.978	135.130
Foods.....		ID5	4211	142.303	145.354	142.955	142.946	142.244

Intermediate Demand by Production Flow Special Groupings								
Total goods inputs to stage 4 intermediate demand.....	04/10	ID5	9411	129.499	130.414	132.105	134.114	134.657
Total services inputs to stage 4 intermediate demand.....	04/10	ID5	9412	135.127	135.321	135.400	136.057	137.063
Total construction inputs to stage 4 intermediate demand.....	04/10	ID5	9413	127.343	129.100	129.735	130.462	130.830
Total foods inputs to stage 4 intermediate demand.....	04/10	ID5	9414	138.068	138.129	136.433	138.432	138.005
Total energy goods inputs to stage 4 intermediate demand.....	04/10	ID5	9415	112.069	113.631	118.452	122.807	120.030
Total goods less foods and energy inputs to stage 4 intermediate demand.....	04/10	ID5	9416	131.837	132.788	134.524	136.201	137.396
Total goods inputs to stage 3 intermediate demand.....	04/10	ID5	9311	131.114	132.669	135.033	136.826	136.796
Total services inputs to stage 3 intermediate demand.....	04/10	ID5	9312	131.770	133.075	133.360	133.537	134.571
Total construction inputs to stage 3 intermediate demand.....	04/10	ID5	9313	127.343	129.100	129.735	130.462	130.830
Total foods inputs to stage 3 intermediate demand.....	04/10	ID5	9314	137.256	138.558	134.068	134.879	139.871
Total energy goods inputs to stage 3 intermediate demand.....	04/10	ID5	9315	105.254	107.861	118.008	120.944	114.681
Total goods less foods and energy inputs to stage 3 intermediate demand.....	04/10	ID5	9316	140.540	141.912	144.764	146.621	146.725
Total goods inputs to stage 2 intermediate demand.....	04/10	ID5	9211	113.682	117.610	126.904	128.811	121.276
Total services inputs to stage 2 intermediate demand.....	04/10	ID5	9212	128.916	130.123	130.027	130.676	132.312
Total construction inputs to stage 2 intermediate demand.....	04/10	ID5	9213	127.343	129.100	129.735	130.462	130.830
Total foods inputs to stage 2 intermediate demand.....	04/10	ID5	9214	155.219	154.055	148.936	147.813	148.533
Total energy goods inputs to stage 2 intermediate demand.....	04/10	ID5	9215	85.749	92.753	109.332	110.981	96.280
Total goods less foods and energy inputs to stage 2 intermediate demand.....	04/10	ID5	9216	132.060	132.626	134.424	136.841	137.276
Total goods inputs to stage 1 intermediate demand.....	04/10	ID5	9111	120.697	121.398	124.479	127.124	126.796
Total services inputs to stage 1 intermediate demand.....	04/10	ID5	9112	134.383	133.896	133.441	133.649	134.419

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[December 2021, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Aug. 2021	Sept. 2021 ^p	Oct. 2021 ^p	Nov. 2021 ^p	Dec. 2021 ^p
Total construction inputs to stage 1 intermediate demand.	04/10	ID5	9117	127.343	129.100	129.735	130.462	130.830
Total foods inputs to stage 1 intermediate demand.	04/10	ID5	9114	148.458	143.003	138.695	142.239	143.908
Total energy goods inputs to stage 1 intermediate demand.	04/10	ID5	9115	117.529	119.668	129.474	134.028	129.146
Total goods less foods and energy inputs to stage 1 intermediate demand.	04/10	ID5	9116	117.964	118.752	120.617	122.631	123.325

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

⁴ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁵ Distributive services include transportation, warehousing, and trade of goods.

⁶ Includes intermediate trade, transportation, and warehousing services.

⁷ Includes crude petroleum.

⁸ Excludes crude petroleum.
