PRODUCER PRICE INDEXES – JULY 2022

The Producer Price Index for final demand fell 0.5 percent in July, seasonally adjusted, the U.S. Bureau of Labor Statistics reported today. This decline followed advances of 1.0 percent in June and 0.8 percent in May. (See table A.) On an unadjusted basis, final demand prices moved up 9.8 percent for the 12 months ended in July.

In July, the decrease in the index for final demand is attributable to a 1.8-percent decline in prices for final demand goods. In contrast, the index for final demand services advanced 0.1 percent.

Prices for final demand less foods, energy, and trade services moved up 0.2 percent in July following a 0.3-percent rise in June. For the 12 months ended in July, the index for final demand less foods, energy, and trade services increased 5.8 percent.

Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted

Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted

Final Demand

Final demand goods: The index for final demand goods fell 1.8 percent in July, the largest decline since moving down 2.7 percent in April 2020. The July decrease can be traced to a 9.0-percent drop in prices for final demand energy. Conversely, the indexes for final demand foods and for final demand goods less foods and energy rose 1.0 percent and 0.2 percent, respectively.

Product detail: Eighty percent of the July decline in the index for final demand goods is attributable to gasoline prices, which fell 16.7 percent. The indexes for diesel fuel, gas fuels, oilseeds, iron and steel scrap, and grains also moved lower. In contrast, prices for chicken eggs jumped 43.1 percent. The indexes for industrial chemicals and for electric power also increased. (See table 2.)

Final demand services: The index for final demand services inched up 0.1 percent in July, the third consecutive increase. Leading the July advance, margins for final demand trade services rose 0.3 percent. (Trade indexes measure changes in margins received by wholesalers and retailers.) Prices for final demand transportation and warehousing services moved up 0.4 percent. Conversely, final demand services less trade, transportation, and warehousing decreased 0.1 percent.

Product detail: Leading the July increase in prices for final demand services, margins for fuels and lubricants retailing rose 12.3 percent. The indexes for services related to securities brokerage and dealing (partial), hospital outpatient care, automobiles and automobile parts retailing, and transportation of passengers (partial) also moved higher. In contrast, prices for portfolio management declined 7.9 percent. The indexes for securities brokerage, dealing, and investment advice; food and alcohol retailing; and long-distance motor carrying also fell.

Intermediate Demand by Commodity Type

Within intermediate demand in July, prices for processed goods decreased 2.3 percent, the index for unprocessed goods fell 12.4 percent, and prices for services advanced 0.1 percent. (See tables B and C.)

Processed goods for intermediate demand: The index for processed goods for intermediate demand fell 2.3 percent in July, the largest decline since moving down 3.4 percent in April 2020. Most of the broad-based decrease in July can be traced to a 9.0-percent drop in prices for processed energy goods. The indexes for processed materials less foods and energy and for processed foods and feeds also moved lower, 0.2 percent and 0.1 percent, respectively. For the 12 months ended in July, prices for processed goods for intermediate demand increased 17.4 percent.

Product detail: Over half of the July decline in the index for processed goods for intermediate demand is attributable to a 16.6-percent decrease in prices for diesel fuel. The indexes for gasoline; utility natural gas; cold rolled steel sheet and strip; liquefied petroleum gas; and shortening, cooking oil, and margarine also fell. Conversely, prices for industrial chemicals advanced 1.9 percent. The indexes for commercial electric power and for beef and veal also moved higher.

Unprocessed goods for intermediate demand: Prices for unprocessed goods for intermediate demand fell 12.4 percent, the largest decline since moving down 14.4 percent in April 2020. Most of the broad-based decrease in July is attributable to a 21.2-percent drop in the index for unprocessed energy goods. Prices for unprocessed nonfood materials less energy and for unprocessed foodstuffs and feedstuffs also declined, 6.9 percent and 0.8 percent, respectively. For the 12 months ended in July, the index for unprocessed goods for intermediate demand increased 27.5 percent.

Product detail: Over half of the July decrease in prices for unprocessed goods for intermediate demand can be traced to a 27.6-percent decline in the index for natural gas. Prices for crude petroleum, grains, iron and steel scrap, oilseeds, and nonferrous metal ores also fell. In contrast, the index for slaughter hogs jumped 23.2 percent. Prices for coal and for recyclable paper also rose.

¹ Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for March 2022 through June 2022 have been revised to reflect the availability of late reports and corrections by respondents.

Services for intermediate demand: The index for services for intermediate demand edged up 0.1 percent in July after a 0.3-percent decline in June. Leading the increase, prices for transportation and warehousing services for intermediate demand rose 0.9 percent. The index for services less trade, transportation, and warehousing for intermediate demand moved up 0.1 percent. Conversely, margins for trade services for intermediate demand decreased 0.4 percent. For the 12 months ended in July, the index for services for intermediate demand advanced 5.7 percent.

Product detail: Within the index for services for intermediate demand in July, prices for courier, messenger, and U.S. postal services rose 2.2 percent. The indexes for business loans (partial), services related to securities brokerage and dealing (partial), fuels and lubricants retailing, and bundled wired telecommunications access services also advanced. In contrast, margins for machinery and equipment parts and supplies wholesaling decreased 1.6 percent. Prices for portfolio management; securities brokerage, dealing, and investment advice; and for services related to air transportation also declined.

Intermediate Demand by Production Flow

Stage 4 intermediate demand: Prices for stage 4 intermediate demand fell 0.6 percent in July, the first decline since dropping 1.7 percent in April 2020. In July, the index for total goods inputs to stage 4 intermediate demand decreased 0.9 percent, and prices for total services inputs moved down 0.4 percent. (See table D.) Declines in the indexes for gasoline; portfolio management; diesel fuel; machinery and equipment parts and supplies wholesaling; grains; and securities brokerage, dealing, and investment advice outweighed increases in prices for services related to securities brokerage and dealing (partial), business loans (partial), and beef and veal. For the 12 months ended in July, the index for stage 4 intermediate demand rose 8.9 percent.

Stage 3 intermediate demand: The index for stage 3 intermediate demand declined 1.2 percent in July, the first decrease since a 5.4-percent drop in April 2020. In July, prices for total goods inputs to stage 3 intermediate demand fell 2.6 percent. Conversely, the index for total services inputs advanced 0.3 percent. Declining prices for diesel fuel, grains, gasoline, jet fuel, cold rolled steel sheet and strip, and services related to air transportation outweighed increases in the indexes for business loans (partial), slaughter hogs, and ungraded chicken eggs. For the 12 months ended in July, prices for stage 3 intermediate demand rose 15.4 percent.

Stage 2 intermediate demand: Prices for stage 2 intermediate demand declined 6.1 percent in July, the largest decrease since the index entered calculation in December 2009. In July, prices for total goods inputs to stage 2 intermediate demand dropped 11.9 percent. In contrast, the index for total services inputs advanced 0.8 percent. Falling prices for gas fuels, crude petroleum, oilseeds, iron and steel scrap, nonferrous metal ores, and portfolio management outweighed increases in the indexes for business loans (partial), fuels and lubricants retailing, and industrial chemicals. For the 12 months ended in July, prices for stage 2 intermediate demand rose 15.6 percent.

Stage 1 intermediate demand: The index for stage 1 intermediate demand declined 1.7 percent in July, the largest decrease since a 4.3-percent drop in April 2020. In July, prices for total goods inputs to stage 1 intermediate demand fell 3.0 percent, and the index for total services inputs moved down 0.1 percent. Declining prices for diesel fuel; utility natural gas; grains; gasoline; portfolio management; and securities brokerage, dealing, and investment advice outweighed increases in the indexes for services related to securities brokerage and dealing (partial); industrial chemicals; and courier, messenger, and U.S. postal services. For the 12 months ended in July, prices for stage 1 intermediate demand advanced 12.2 percent.

The Producer Price Index for August 2022 is scheduled to be released on Wednesday, September 14, 2022, at 8:30 a.m. (ET).

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2022, the PPI covered 71 percent of services as measured by 2012 Census revenue, and 31 percent of construction.

More than 64,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing (SOP) system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the SOP system through the addition of services, construction, exports, and government purchases.

Compared with finished goods under the SOP system, the PPI for final demand goods includes nearly a 50 percent expansion of coverage. This increase can be traced to the addition of government purchases and exports. For overall final demand, expansion to include final demand services represents an even larger increase in coverage. In December 2021, final demand goods were about 33 percent of overall final demand, final demand services were roughly 65.1 percent, and final demand construction was about 1.7 percent of final demand. Within intermediate demand, coverage of services for intermediate demand resulted in about a 45 percent increase in coverage of the intermediate demand portion of the economy.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table

from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

Final Demand: The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

Intermediate Demand: The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to

production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4

intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see www.bls.gov/ppi/fd-id/ppi-intermediate-demand-by-production-flow-industry-stage-assignments.htm.

Comparing the PPI with CPI

Although some data users utilize the PPI as a potential indicator of the Consumer Price Index (CPI), there are many reasons why the PPI and the CPI may diverge. The scope of the personal consumption portion of the PPI includes all marketable output sold by domestic producers for households. The scope of the CPI includes goods and services provided by business or government, where explicit user charges are paid by consumers. For example, the most heavily weighted item in the CPI, owners' equivalent rent, is excluded from the PPI. The scope of the CPI includes imports. The PPI excludes imports. The CPI only includes components of personal consumption directly paid for by the consumers, while the PPI includes components of personal consumption that may not be paid for by consumers. For example, the PPI includes medical services paid for by third parties. In contrast to CPI, PPI does not completely cover services. PPIs exclude taxes, since they do not represent producer revenue. Conversely, sales and other taxes paid by consumers are part of household expenditure and are included in the CPI. Additional technical differences between PPI and CPI also exist. For more information see "Comparing new final demand producer price indexes with other Government price indexes," *Monthly Labor Review*, January 2014, at www.bls.gov/opub/mlr/.

Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In

addition, most industries have secondary product indexes that show changes in prices received by establishments for products chiefly made in some other industry. Some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products; for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted online via the BLS Internet Data Collection Facility (IDCF). Data provided by survey respondents are supplemented with data from other sources for some areas.

Price data are provided by survey respondents on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes, not actual prices. All PPIs are subject to monthly revisions up to 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Information on these resampling efforts are noted in the *PPI News Release* and *PPI Detailed Report* in the months they occur.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2012 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2012 to December 2017, PPI weights were derived from 2007 shipment values. Industry indexes now are calculated under the 2017 NAICS structure utilizing 2012 value of shipment weights and 2007 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI

series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14.htm.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract

specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Price Adjustment Guide for Contracting Parties*, on the Web at: www.bls.gov/ppi/publications/price-adjustment-guide-for-contracting-parties.htm.

Seasonal adjustment is accomplished using X-13 ARIMA, a software package published by the U.S. Census Bureau. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the COVID-19 pandemic. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of over 400 seasonally adjusted commodity series, 76 were subject to intervention in 2022.

For more information relating to seasonal adjustment methods, see “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*, and “PPI and CPI Seasonal Adjustment During the COVID-19 Pandemic” in the May 2022 *Monthly Labor Review*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to the internet. There were more than 9 million instances of PPI data being downloaded from the BLS website during 2021.

Retrieving PPI data from the PPI Web site

PPI data can be obtained online (www.bls.gov/ppi). On this page, under the tab labeled “Featured PPI databases” links provide the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and FD-ID indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpu4	Final demand, not seasonally adjusted
wpsid63	Services for intermediate demand, seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu”. After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

*Industry-product code,
discontinued NAICS series*

ndu212231212231	Lead and zinc ore mining
ndu2122312122312	Lead, zinc concentrates
ndu212231212231214	Lead concentrates

- **Text Files** are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation, such as seasonal factor tables and relative importance tables. The text files can be accessed at download.bls.gov/ or directly from links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

Industry Data	<u>Directory:</u> /pub/time.series/pc
Industry Data - Discontinued (NAICS basis)	/pub/time.series/nd
(SIC basis)	/pub/time.series/pd
Commodity Data (incl. FD-ID)	/pub/time.series/wp
Commodity Data – Discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The “PPI Publications” section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov. If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

² All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

³ PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

⁴ Trade indexes measure changes in margins received by wholesalers and retailers.

⁵ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁶ Distributive services include transportation, warehousing, and trade of goods.

⁷ Includes intermediate trade, transportation, and warehousing services.

⁸ Includes crude petroleum.

⁹ Excludes crude petroleum.

^p Preliminary

"-" Data not available.

Table 2. Producer price index percentage changes for selected commodity groupings by Final Demand-Intermediate Demand category, seasonally adjusted — Continued
[July 2022]

Grouping	Commodity code		Unadjusted 12-month percent change ¹	Seasonally adjusted 1-month percent change ¹				
	Group code	Item code		July 2021 to July 2022 ^P	Feb. to Mar.	Mar. to Apr. ^P	Apr. to May ^P	May to June ^P
Aircraft parts and auxiliary equipment, n.e.c.....	14	25	2.2	0.0	-0.1	0.2	0.3	0.1
Medical, surgical, and personal aid devices.....	15	6	2.6	0.5	0.3	-0.2	0.3	0.1
Unprocessed goods for intermediate demand.....	ID6	2	27.5	2.9	5.5	5.4	4.5	-12.4
Unprocessed foodstuffs and feedstuffs.....	ID6	21	28.9	7.7	4.2	0.2	-0.4	-0.8
Wheat ²	01	21	22.3	24.3	4.3	1.1	-4.1	-22.7
Corn.....	01	2202	9.3	14.5	3.5	0.5	3.8	-8.5
Slaughter cattle.....	01	31	15.0	-0.4	1.2	1.6	5.0	-1.5
Slaughter hogs.....	01	32	12.3	-2.4	2.9	-9.4	-4.0	23.2
Slaughter chickens.....	01	4102	56.6	19.0	5.4	-0.5	2.0	-1.9
Slaughter turkeys.....	01	42	28.5	0.4	4.9	1.5	5.3	6.7
Raw milk.....	01	6	50.3	5.0	4.2	2.2	-1.2	0.3
Hay and hayseeds ²	01	81	55.7	4.3	-11.5	10.1	-1.0	12.5
Oilseeds.....	01	8301	5.7	5.6	1.3	-0.6	4.8	-13.7
Raw cane sugar and byproducts ²	02	5201	16.3	0.8	1.3	0.9	-0.6	1.2
Unprocessed nonfood materials.....	ID6	22	27.1	0.7	6.2	7.8	6.6	-17.2
Raw cotton ²	01	51	24.4	-1.5	12.9	3.7	-0.1	-23.8
Hides and skins.....	04	1	-29.5	-8.7	4.2	-6.0	3.2	-2.3
Coal.....	05	1	60.5	5.3	15.1	1.0	6.1	4.4
Natural gas ²	05	31	61.1	-20.7	20.0	32.1	7.9	-27.6
Crude petroleum ²	05	61	33.4	10.6	0.6	2.1	14.2	-19.1
Logs, bolts, timber, pulpwood, and woodchips ²	08	5	5.9	0.3	0.3	1.1	0.8	0.7
Recyclable paper ²	09	12	9.4	3.0	3.3	-5.6	0.2	2.9
Iron ores.....	10	11	15.8	3.4	-3.7	-3.0	6.6	4.1
Iron and steel scrap ²	10	12	-19.7	24.9	0.1	-11.9	-11.6	-11.2
Nonferrous metal ores ²	10	21	-2.1	6.3	-0.4	-3.7	-1.6	-9.6
Copper base scrap ²	10	2301	-9.8	1.6	1.5	-7.4	-2.7	-8.5
Aluminum base scrap.....	10	2302	-14.8	17.1	-0.1	-8.4	-0.9	-24.6
Construction sand, gravel, and crushed stone.....	13	21	11.5	0.8	0.8	0.7	2.4	0.8
Services for intermediate demand.....	ID6	3	5.7	1.3	0.9	0.5	-0.3	0.1
Trade services for intermediate demand ³	ID6	33	10.0	4.4	1.0	0.6	-0.8	-0.4
Machinery and equipment parts and supplies wholesaling ²	57	1102	8.6	0.3	-1.0	0.6	0.8	-1.6
Building materials, paint, and hardware wholesaling.....	57	3	22.7	3.8	0.2	-1.2	0.6	1.0
Metals, minerals, and ores wholesaling ²	57	4	-3.8	10.0	9.2	4.0	-7.5	-0.2
Chemicals and allied products wholesaling ²	57	5	5.1	0.7	1.3	5.2	-3.7	-0.2
Paper and plastics products wholesaling ²	57	6	23.1	6.5	3.8	2.7	-0.3	-0.7
Food wholesaling ²	57	8101	14.3	2.1	0.9	-1.2	1.0	0.4
Automotive parts, including tires, retailing ²	58	6102	18.4	1.8	1.2	1.5	3.1	2.5
Hardware, building material, and supplies retailing.....	58	D	-4.2	11.4	-3.1	-5.4	-5.8	-3.8
Transportation and warehousing services for intermediate demand.....	ID6	32	13.5	2.1	1.8	0.7	0.0	0.9
Rail transportation of freight and mail ²	30	11	11.8	0.7	2.7	2.0	0.5	1.2
Truck transportation of freight ²	30	12	21.7	4.9	1.9	2.1	-0.5	-0.3
Water transportation of freight ²	30	13	30.2	-0.9	8.2	11.8	-1.6	1.7
Air transportation of freight ²	30	14	15.9	3.5	1.8	-0.1	3.3	-0.7
U.S. Postal Service.....	30	1601	10.7	0.2	0.2	0.3	0.1	5.0
Courier and messenger services, except air mail.....	30	1602	10.7	1.1	1.2	1.0	0.6	0.3
Air mail and package delivery services, excluding by USPS.....	30	1603	19.2	2.6	4.2	3.7	-2.2	0.2
Pipline transportation ²	30	17	—	—	—	—	0.0	2.9
Transportation of passengers (partial).....	30	2	22.3	10.9	2.2	3.8	3.9	1.1
Services related to water transportation.....	31	1	5.3	0.5	1.1	0.7	0.0	-0.1
Arrangement of freight and cargo ²	31	31	14.7	-1.1	-2.3	-5.5	-5.0	2.3
Warehousing, storage, and related services ²	32	1	11.7	-0.7	5.6	-5.6	3.9	-0.9
Services less trade, transportation, and warehousing for intermediate demand.....	ID6	31	2.7	0.0	0.6	0.4	-0.2	0.1
Network compensation from broadcast TV, cable TV, radio ²	35	—	4.2	0.0	0.0	0.0	1.9	0.0
Advertising space sales in periodicals and newspapers ²	36	11	0.9	1.8	-1.2	0.6	0.4	-0.9
Advertising space sales in directories and mail lists ²	36	12	0.1	0.0	0.0	0.0	0.0	0.0
Television advertising time sales.....	36	2	0.5	1.3	3.3	3.2	-7.5	0.4
Radio advertising time sales.....	36	3	0.5	1.1	-1.9	8.7	-3.1	-7.1
Internet advertising space sales, excluding Internet ads sold by print publishers ²	36	5	15.6	4.4	1.0	1.5	3.3	1.7
Business wired telecommunication services ²	37	12	1.0	0.0	0.0	0.0	0.7	0.3
Wireless telecommunication services.....	37	2	0.8	-0.1	-0.1	0.5	0.2	0.0
Cable and satellite subscriber services.....	37	3	3.9	0.3	0.1	0.5	0.7	1.1
Bundled wired telecommunication access services ²	37	5	6.7	0.1	0.0	0.0	-0.5	3.2
Data processing and related services ²	38	1	-1.2	-0.8	0.1	0.1	-0.1	-0.3

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² Seasonal tests did not indicate the presence of seasonality. Data shown is not seasonally adjusted.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

p Preliminary

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

Total energy goods inputs to stage 4 intermediate demand.....	04/10	ID5	9415	134.251	137.583	142.183	154.015	144.875
Total goods less foods and energy inputs to stage 4 intermediate demand.....	04/10	ID5	9416	142.649	143.984	145.707	146.083	146.134
Total goods inputs to stage 3 intermediate demand.....	04/10	ID5	9311	151.418	157.207	161.100	163.427	159.252
Total services inputs to stage 3 intermediate demand.....	04/10	ID5	9312	138.063	139.851	140.666	140.056	140.539
Total construction inputs to stage 3 intermediate demand.....	04/10	ID5	9313	135.890	136.927	138.038	139.271	141.065
Total foods inputs to stage 3 intermediate demand.....	04/10	ID5	9314	167.778	177.512	177.923	176.938	177.021
Total energy goods inputs to stage 3 intermediate demand.....	04/10	ID5	9315	154.137	168.066	177.678	192.072	172.367
Total goods less foods and energy inputs to stage 3 intermediate demand.....	04/10	ID5	9316	149.072	151.008	154.516	154.381	153.349
Total goods inputs to stage 2 intermediate demand.....	04/10	ID5	9211	136.070	142.376	151.947	159.781	140.802
Total services inputs to stage 2 intermediate demand.....	04/10	ID5	9212	134.702	135.762	135.946	136.157	137.288
Total construction inputs to stage 2 intermediate demand.....	04/10	ID5	9213	135.890	136.927	138.038	139.271	141.065
Total foods inputs to stage 2 intermediate demand.....	04/10	ID5	9214	172.419	175.837	177.068	180.403	171.525
Total energy goods inputs to stage 2 intermediate demand.....	04/10	ID5	9215	115.854	125.770	143.540	158.303	125.229
Total goods less foods and energy inputs to stage 2 intermediate demand.....	04/10	ID5	9216	143.998	145.834	145.915	145.231	143.870
Total goods inputs to stage 1 intermediate demand.....	04/10	ID5	9111	135.770	139.381	142.451	145.991	141.573

See footnotes at end of table.

Table 3. Producer price indexes for Final Demand-Intermediate Demand groupings, seasonally adjusted — Continued

[July 2022, Index base Nov. 2009=100, unless otherwise indicated]

Grouping	Other index base	Commodity code		Seasonally adjusted index ¹				
		Group code	Item code	Mar. 2022	Apr. 2022 ^p	May 2022 ^p	June 2022 ^p	July 2022 ^p
Total services inputs to stage 1 intermediate demand.....	04/10	ID5	9112	139.777	140.949	141.900	140.983	140.773
Total construction inputs to stage 1 intermediate demand.....	04/10	ID5	9117	135.890	136.927	138.038	139.271	141.065
Total foods inputs to stage 1 intermediate demand.....	04/10	ID5	9114	163.154	169.012	170.043	171.002	161.611
Total energy goods inputs to stage 1 intermediate demand.....	04/10	ID5	9115	153.950	163.980	171.235	188.715	170.076
Total goods less foods and energy inputs to stage 1 intermediate demand.....	04/10	ID5	9116	127.550	129.320	131.404	131.612	131.221

¹ All indexes are subject to revision for 4 months after their originally scheduled publication to incorporate late reports and corrections by survey respondents. In addition, seasonally adjusted indexes are subject to change for up to 5 years due to the recalculation of seasonal factors published each January.

² PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

³ Trade indexes measure changes in margins received by wholesalers and retailers.

⁴ The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

⁵ Distributive services include transportation, warehousing, and trade of goods.

⁶ Includes intermediate trade, transportation, and warehousing services.

⁷ Includes crude petroleum.

⁸ Excludes crude petroleum.
