Explanatory notes to the statistical series. ..... 193
Sources of data. ..... 323, 324
General index. ..... 325 ff .

## Foreword

This is the tenth volume in the series of basic economic guides called Business Statistics.

Designed to be used in conjunction with the monthly Survey of Current Business, each biennial volume has two main functions: (1) to put at hand data for past years for all of the statistical series for which current data are reported in the magazine; and (2) to assemble for all 2600 statistical indicators the information which is requisite to an understanding of their nature and proper use.

The statistical tables present monthly or quarterly data from January 1951 through December 1954, and annual averages from 1929 through 1954. The time span of a quarter century exceeds that shown in other recent editions and will increase the usefulness of the volume for reference purposes.

The explanatory notes in the back portion contain names of compilers and descriptions of methods of compilation of the data. Most users of the monthly Survey will find these descriptive notes invaluable for clear understanding and effective use of its statistical contents.

Monthly data for years prior to 1951 can in most cases be obtained from previous editions of Business Statistics. Unless otherwise indicated in the descriptive notes, earlier editions should be consulted as follows: For monthly data for years 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 193637, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; and for years prior to 1932, the 1932 Edition. Limited supplies of the 1947 and later editions are still available for purchase from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., or any of the Field Offices of the Department of Commerce. Sales supplies of prewar editions are exhausted, but reference copies are on file in the Field Offices and in hundreds of Government depository and other libraries.

To the compilation of the data and the development of the explanatory notes published here, the many private organizations and Government agencies which regularly provide material for the monthly Survey of Current Business have contributed generously. The Office of Business Economics gratefully acknowledges their assistance. These sources are listed, with their addresses, in an appendix table.

The present volume was prepared by the Current Business Analysis Division, of which Dr. Charles A. R. Wardwell is Chief. K. Celeste Stokes, Chief of the Statistical Series Section, was in immediate charge of its preparation. Staff members contributing were: Leo V. Barry, G. Alva Carriere, Jean M. Plass, Edith M. Robinson, Sylvia Serafin, Anne Taeves, and V. Grace Watson.

June 1955

GENERAL BUSINESS INDICATORS-NATIONAL INCOME

For footnotes giving source of data and description of series, see pp. 193 and 194.

GENERAL BUSINESS INDICATORS--GROSS NATIONAL PRODUCT

For footnotes giving source of data and description of series, see pp. 194 and 195.

# Explanatory Notes to the Statistical Series 

## MEANING OF SEASONAL ADJUSTMENT

Many of the series of data contained in this volume are labeled as "seasonally adjusted, " or simply "adjusted." This means that adjustments have been made to eliminate the effects of seasonal variations. Seasonal variations are those which follow the calendar and tend to occur in about the same way at about the same time year after yearlargely because of weather or custom. Some grow out of the round of the seasons-such as the harvesting of many crops in late summer or the slackening of construction activity in the winter in northern latitudes-while others are largely due to social conventions such as the observance of certain holidays or the closing of schools for summer vacations, and still others are based on legislation such as the peak load of income-tax payments in March or April.

The purpose of the seasonal adjustment is to remove, as far as possible, the effects of these regularly recurring movements of the sort indicated above, so that the underlying trend of developments can be observed without interference. Thus by adjusting December retail sales for the customary Christmas buying rush, one is better able to determine whether December sales registered more or less than the usual gain from November; similarly, by adjusting October cash income from farm marketings for the usual heavy movement of crops to market in that month, one can tell better what the trend of cash farm income would have been if farm products were marketed evenly throughout the year.

Eecause the usual way of deriving a seasonal pattern is to base it upon data of a broad group of firms representing an entire industry, it will not, of course, necessarily apply to any individual firm. Data are adjusted for seasonal effects by dividing the unadjusted datum for a given month by a constant percentage factor whose deviation from 100 registers the extent to which that period of the year is typically above or below some measure of "normal" because of seasonal influences.

Adjusted data are better indicators than are unadjusted data of the underlying trends of business activity in cases where strong seasonal movements tend to obscure the cyclical movements.

## Page 2

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. "National income" is the aggregate earnings of labor and property which arise from the current production of goods and services by the Nation's economy. The Nation's economy refers to the labor and property supplied by residents of the Nation. Earnings are recorded in the forms in which they accrue to residents of the Nation, inclusive of taxes on those earnings. They consist of compensation of employees, the profits of corporate and unincorporated enterprises, net interest, and the rental income of persons.
"Compensation of employees" is the income accruing to persons in an employee status as remuneration for their work. It is the sum of wages and salaries and supplements to wages and salaries.
"Wages and salaries" consist of the monetary remuneration of employees commonly regarded as wages and salaries, inclusive of executives' compensation, commissions, tips, and bonuses, and of payments in kind which represent income to the recipients.
"Supplements to wages and salaries" represent the compensation of persons in an employee status not commonly regarded as wages and salaries. They consist of employer contributions for social insurance, employer contributions to
private pension and welfare funds, compensation for injuries, directors' fees, pay of the military reserve, and other minor items of labor income.
"Proprietors' income" (shown separately for business and professional enterprises and farm enterprises) measures the monetary earnings and income in kind of sole proprietorships, partnerships, and producers' cooperatives from their current business operations-other than supplementary income of individuals derived from renting property. As with corporate profits, capital gains and losses are excluded and no deduction is made for depletion.
"Inventory valuation adjustment" measures the excess of the value of the change in the volume of nonfarm business inventories, valued at average prices during the period, over the change in the book value of nonfarm inventories. This adjustment is required since, as is customary in business accounting, corporate profits and income of unincorporated enterprises are taken inclusive of inventory profit or loss, whereas only the value of the real change in inventories is counted as current output in the national product. Inventory valuation adjustment is shown separately only for corporations; this adjustment is included, however, in the data shown for unincorporated enterprises, as indicated in note 3 .
"Rental income of persons" consists of the monetary earnings of persons from the rental of real property (except those of persons primarily engaged in the real estate business), the imputed net rental returns to owner-occupants of nonfarm dwellings, and the royalties received by persons from patents, copyrights, and rights to natural resources.
"Corporate profits before tax" are the earnings of corporations organized for profit which accrue to residents of the Nation, measured before Federal and State profit taxes, without deduction of depletion charges and exclusive of capital gains and losses.
"Corporate profits tax liability" comprises Federal and State taxes levied on corporate earnings. Disbursements of tax refunds are deducted from tax liability in the year in which the tax liability was incurred.
"Net interest" measures the monetary interest and imputed interest accruing to the Nation's residents from private business and from abroad, minus government interest disbursements to business. Imputed interest consists of the value of financial services received by persons without explicit payment and property income withheld by life-insurance companies and mutual financial intermediaries on the account of persons. As government interest paid to business appears as part of business incomes, it is deducted in computing net interest to prevent its inclusion in the national income.

The quarterly data for national income represent interpolations of annual totals (the methods employed in calculating the annual estimates are beyond the scope of this descriptive note). For the most part, the interpolating data used are components of the personal income series (described in some detail in note 1 for $p$. 4) supplemented by special studies on corporate profits, which utilize publicly reported quarterly corporate-earnings data. In the comprtations of seasonally adjusted corporate profits, separate indexes were constructed for individual industries by a variety of methods: Ratio to moving averages, interpolation by seasonally adjusted receipts data, and by graphic techniques.

Quarterly data for 1939-50, as well as more detailed annual data back to 1929, are shown in the National Income Supplement to the Survey Of Cubrent Business, 1954 edition. This report includes annual data by industrial origin for total national income and for the various components (other than rental income of persons) and a breakdown of total national income by legal form of organization. The annual series on salaries and wages are supplemented by data on employment and average annual earnings of employees, by industries.
${ }^{2}$ Includes the pay of employees of government enterprises and of permanent United States residents employed in the United States by foreign governments and international organizations.
${ }^{3}$ Data for business and professional income include inventory valuation adjustment. Farm income is measured exclusive of inventory profits, therefore no valuation adjustment is required.
${ }^{4}$ Less than $\$ 50,000,000$.

## Page 3

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. "Gross national product or expenditure" is the market value of the output of goods and services produced by the Nation's economy, before deduction of depreciation charges and other allowances for business and institutional consumption of durable capital goods. Other business products used up by business in the accounting period are excluded. The Nation's economy in this context refers to labor and property supplied by residents of the Nation. Gross national product comprises the purchase of goods and services by consumers and government, gross private domestic investment, and net foreign investment.
"Personal consumption expenditures" consist of the market value of purchases of goods and services by individuals and nonprofit institutions, and the value of food, clothing, housing, and financial services received by them as income in kind. They include the rental value of owner-occupied homes, but do not include the purchase of new dwellings. A breakdown of personal consumption expenditures by groups is shown on $P$. 44; note 1 for that page describes the statistical sources and methods used in deriving the series.
"Gross private domestic investment" consists of acquisitions of newly produced capital goods by private business and nonprofit institutions, and the value of the change in the volume of inventories held by them. It covers all private new dwellings, including those acquired by owner-occupants.
"New construction" consists of total private new construction as given on p. 32, plus estimated construction expenditures for crude-petroleum and natural-gas drilling. An explanation of the former series is to be found in note l for $p$. 32. The petroleum and natural-gas drilling estimates are based primarily upon reports in "Oil Weekly" and "Oil and Gas Journal" of number of new wells drilled, and upon Census studies of average costs per well in 1939, with appropriate allowances in subsequent periods for changes in labor and equipment costs, differences in average depth of wells, and deepening of old wells. Monthly seasonal factors for private new construction are computed, by components, and applied to yield seasonally adjusted monthly totals, from which quarterly summations are then obtained. Quarterly seasonal factors are applied to the unadjusted quarterly estimates for petroleum and gas drilling to produce an adjusted series.
"Producers' durable equipment" for 1939 and prior census years was generally estimated from commodity production data in the biennial "Census of Manufactures" combined into various groups and raised from the manufacturers' value of production to a value representing final prices paid by ultimate users by allowing for transportation charges from the factory, government purchases, wholesale and retail markups, wholesale and retail inventory changes, and net exports. Chief sources of data for these adjustments included Interstate Commerce Commission freight commodity statistics; Temporary National Economic Committee, "Study of Government Purchasing"; Departments of the Navy and Air Force tabulations of Federal purchases; Census of Business, "Distribution of Manufacturers' Sales,". "Wholesale Trade," and "Retail Trade"; Bureau of the Census, "Wholesalers' Sales, Inventories, and Credits"; Dun and Bradstreet, "Survey of Sales and Inventories, 1935-1939"; U. S. Department of Commerce, "Foreign Commerce and Navigation of the United States." For intercensal years, manufacturers' values of production or sales were interpolated by groups by series derived chiefly from the Internal Revenue Service, "Statis-
tics of Incone," and from Securities and Exchange Commission, "Survey of American Listed Corporations." The interpolated series were raised to the value representing final prices paid by ultimate users by the adjustments indicated above.

A similar procedure was followed for 1947. Shipments data were derived from the Census of Manufactures for that year, and reliance was placed largely on the 1948 Census of Business and Internal Revenue Service data for computation of wholesale and retail markup rates. In the main, the Federal Government purchase estimates were made by the Bureau of Labor Statistics from data of the various departments concerned; and Census, Office of Education, and Bureau of Public Roads reports were the primary basis of the estimates of State and local government expenditures.

For 1942 through the first half of 1946, the estimates were based on manufacturers' commodity shipments data reported by Bureau of the Census in "Fabricated-Metal-Products Plant Operations," and combined by groups comparable to those based on the "Census of Manufactures." Estimates of the portion of total shipments of each commodity destined for private domestic use were based on priorities data reported in the same source. In addition, Interstate Commerce Commission data on railroad purchases of equipment, Office of Tefense Transportation figures on motor-vehicle sales, and other data were used.

For 1940 and 1941, individual groups were interpolated by series derived chiefly from "Statistics of Income" and Bureau of Foreign and Domestic Commerce, "Industry Survey" and "Survey of Current Business."

For the second half of 1946 and the period 1948-49, group benchmarks of manufacturers' commodity shipments were interpolated chiefly by industry sales reported in the "lndustry Survey" and Census data on wholesalers' sales, with deductions for exports based on data obtained from export worksheets from the Foreign Trade Division of the Bureau of the Census. For 1950-52, shipments were derived by computing new semi-benchmarks on the basis of Census sample surveys of manufactures. Government purchases were estimated from unpublished tabulations of the Army, Navy, and National Production Authority, and other Federal departments, and from Census reports. Additional data used include the Interstate Commerce Commission figures on railroad expenditures for equipment; manufacturers' reports on truck sales; automobile and truck registrations; Bureau of Customs reports of additions to the merchant marine; Maritime Administration records of new vessel construction; current Census data relating to aircraft, construction machinery, farm machinery, and tractors; and information from private trade associations.
"Change in business inventories" measures the change in the physical volume of inventories valued at average prices of the period. To ascertain the net physical change in the stocks of nonfarm inventories, year-end book values are expressed in terms of constant prices by means of selected Bureau of Labor Statistics wholesale price indexes appropriate to each industry. The increments in the constant dollar inventory series are converted to current prices by multiplying them by index ratios of current prices to base-period prices. Quarterly data are obtained by adjusting the results of similar quarterly calculations made in less detai] to the annual estimates. The change in farm inventories is estimated by the Agricultural Marketing Service from physi-cal-quantity data.

The book values of year-end inventories held by corporations are obtained from the "Statistics of Income, Part 2." Noncorporate inventories are mainly derived from benchmark data obtained from the "Censuses of Manufactures, Wholesale Trade, and Retai] Trade," and from Internal Revenue Service special tabulations of the tax returns of sole proprietorships and partnerships.

The interpolations of the noncorporate data for years before 1939 are based on estimates of noncorporate sales derived in estimating noncorporate business income, on inven-tory-sales ratios developed from census and tax return data, and on corresponding corporate inventory-sales ratios. The interpolations and extrapolations of the noncorporate data for years after 1939 are based on the movement of the noncorporate components implicit in the inventory estimates published monthly in the Survey of Current Business. These
estimates are based on industry surveys compiled by the Office of Business Economics.

The year-end estimates of the book value of inventories for years after 1951 and the quarterly estimates of the book value of inventories, starting in 1939, are also based, for the most part, on inventory data obtained from these samples.
"Net foreign investment" is the net change in international assets and liabilities, including the monetary gold stock, arising out of the current international flows of goods and services, factor incomes, and cash gifts and contributions. Thus it measures the excess of (l) domestic output sold abroad over purchases of foreign output,
(2) production abroad credited to United States-owned resources over production at home credited to foreign-owned resources, and (3) cash gifts and contributions received from abroad over cash gifts and contributions to foreigners. The net transfer of cash gifts and contributions offsets corresponding entries in "personal consumption expenditures" and "Government purchases of goods and services."

As a measure of net foreign investment, the United States balance of international payments on current account, rather than the sum of known capital transactions (including gold), is accepted. While the implied assumption that statistical errors and omissions shown in balance-of-payments statements consist entirely of capital items is inaccurate, there exists no reliable basis for estimating what portion of the error occurs in the current account.

The principal items in the current account of the balance of payments, together with brief descriptions of each, are as follows:

Merchandise trade estimates are based primarily on the recorded trade statistics compiled by the Census Bureau (shown here on pp. $104 \mathrm{ff}$. ), with adjustments for incorrect valuations, parcel-post shipments, and merchandise transactions of the United States Covernment not included in the recorded data.

Freight and shipping earnings are estimated by applying established freight rates to data regarding tonnage, commodity composition, and destination or origin of United States exports and imports as compiled by the Census Bureau from shippers' export declarations and import entries. Port expenditures are assumed to be relatively constant proportions of gross revenues, the percentages being based on financial reports filed by steamship companies with the U. S. Maritime Administration.

Travel expenditures are derived by multiplying average expenditures per traveler in each of several categories by corresponding numbers of travelers. Such numbers are based, with regard to overseas travelers, on records of the U. S. Immigration and Naturalization Service, and, for Canada and Mexico, official records of those governments. The appropriate average expenditures are determined chiefly from questionnaire samples.
U. S. Government expenditures and receipts are based on data supplied by individual agencies to the Balance of Payments Division, Office of Business Economics.

Income on investments is derived from withholding tax records of the Internal Revenue Service and from questionnaire returns filed with the Office of Business Economics by United States corporations having foreign"branches or subsidiaries and by United States fiscal agents for foreign dollar bonds.

Other current transactions are based largely on direct reports from motion picture companies, communications companies, banks, religious and charitable institutions, and other organizations responsible for the transactions.

To the extent that gifts and contributions in kind are recorded under the above headings, offsetting entries are made under the caption "unilateral transfers," so that they are not reflected in the net balance on current account.
"Government purchases of goods and services" measure purchases of goods and services by government bodies, exclusive of acquisitions of land and used depreciable assets and of current outlays of government enterprises. They consist of general government expenditures for compensation of employees, purchases from business (net of sales by government of consumption goods and materials), net government purchases from abroad and international contributions, and the gross investment of government enterprises. Therefore,
"government purchases of goods and services" exclude transfer payments, government interest, and subsidies, as well as loans and other financial transfers outside the scope of income and product transactions.
"Federal purchases of goods and services" are based essentially on the Daily Statement and Monthly Statement of the Treasury. However, since the total of budgetary expenditures as reported in those publications includes amounts not representing purchases of goods or services and excludes other items which do constitute purchases according to the definition of gross national product, and reflects still others with timing different from that of the actual purchases, numerous adjustments must be made.

The procedure is to treat the Treasury total of budget expenditures as a benchmark, adding or subtracting appropriate amounts so as to derive purchases of goods and services as a residual. The principal deductions are transfers to trust accounts, net expenditures of Government enterprises, subsidies, purchases of existing assets, tax refunds, grants-in-aid to State and local governments, transfer payments, interest, and loans and other capital transactions not included under any of the above captions. Chief additions are the acquisition of fixed assets and inventories by Government enterprises, general Government contributions to social-insurance funds, and purchases of goods or services reflected in trust accounts rather than in general and special accounts of the Treasury. It will be noted that some of the additions involve restoration, with different timing, of items previously deducted. Adjustments for renegotiation of war contracts, for Government purchases on credit, and for advances and prepayments are made. Still further adjustments grow out of technical peculiarities in the accounting practices followed in compilation of the Treasury Statements.

Nany of the necessary adjustments are found explicitly in the Treasury Statements, but for the others resort must be had to the Eudget, the Treasury's Combined Statement of Receipts, Expenditures, and Balances, financial reports of Government corporations, a wide variety of other documents, and contacts with officials of Government agencies.

From the gross Federal purchases of goods and services to which the above comments relate must be subtracted all foreign sales by the Government, as well as its domestic sales of surplus consumption goods and materials. Data on the foreign sales come from the U. S. balance-of-payments statistics, while the domestic sales are based on reports of the War Assets Administration for some years and on the Budget for others.
"State and local purchases of goods and services" are derived primarily from the "State Finances," "City Finances," "County Finances," "Summary of Governmental Finances," and other reports of the Governments Division of the Bureau of the Census. As in the case of the Federal estimates, expenditures, other than for goods and services (such as transfer payments, interest, transfers to sinking funds, grants to other governments, and transfers to public-service enterprises) are omitted, and excluded goods-and-service expenditures (such as the capital outlay of government enterprises) are added. Interpolation or extrapolation of data for the intercensal periods is accomplished primarily through the use of independent State and local payroll and public-construction data.

Quarterly data for 1939-50 are shown in the National Income Supplement to the Survey of Current Business, 1954 edition.
${ }^{2}$ National-security purchases series for the $1939-46$ period conforms in general to the Daily Treasury Statement classification of expenditures between war and nonwar activities; for 1947-54 the series conforms, in general, to the "major national security programs" classification in The Budget of the United States Government for the Fiscal Year Ending June 30, 1954, p. 1090.
${ }^{3}$ Consists of sales to abroad and domestic sales of surplus consumption goods and materials.
${ }^{4}$ Data for "national security" included with "other."
${ }^{5}$ Less than $\$ 50,000,000$.

## Page 4

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. "Personal income" is the current income received by persons from all sources, inclusive of transfers from government and business, but exclusive of transfers among persons. Not only individuals (including owners of unincorporated enterprises) but nonprofit institutions, private trust funds, and private pension and welfare funds are classified as "persons." Personal income is the sum of wage and salary disbursements, other labor income, proprietors' and rental income, dividends and interest, and transfer payments, less personal contributions for social insurance.
"Wage and salary disbursements" are equal to wages and salaries, except that retroactive wages are counted when received rather than when earned. They include income in kind as well as monetary receipts in the form of wages, salaries, commissions, etc. For information on the several components of employer disbursements, see note 3 below. An explanation of "other labor income" is given in note 4.
"Proprietors' and rental income" is the sum of income of uniacorporated enterprises and inventory valuation adjustment and rental income of persons as given in the components of national income (see description in note $l$ for p. 2).
"Personal interest income" measures the monetary interest and the imputed interest accruing to individuals and nonprofit institutions.
"Transfer payments" consist of monetary income receipts of individuals from government and business (other than government interest) for which no services are currently rendered, of government payments and corporate gifts to nonprofit institutions, and of individuals' bad debts to business. The contents of this item are given in detail in note 5.

Personal income differs from national income in that it includes transfer payments and government interest, while it excludes both employee and employer contributions for social insurance, corporate profits tax liability and inventory valuation adjustment, and undistributed corporate profits. A minor difference also appears in the wage and salary components in that retroactive wage payments are included in personal income when received and in national income when earned.

The sources and methods used in compiling the monthly series are given in paragraphs following. In the quarterly series showing disposition of personal income, total personal income is the sum of the monthly totals.

For interpolating the annual series and for extending the series currently, monthly data from various governmental and private agencies are employed. Monthly reports of the U. S. Bureau of Labor Statistics, Interstate Commerce Commission, Social Security Administration, Census Bureau, and other agencies are used to estimate wages and salaries.

Estimates for wages and salaries are prepared individually by industries, and for the period 1939-53 these are based mainly on payroll indexes of the Bureau of Labor Statistics, payroll indexes constructed from wage and employment data from the Social Security Administration, reports by carriers to the Interstate Commerce Commission, and payroll estimates of the Maritime Administration and Agricultural Marketing Service. In only a few instances were indirect methods of estimate employed. Since there is a considerable lag in the publication of Social Security data, current estimates are less detailed, and resort is more frequently made to indirect methods of estimates. Nevertheless, the total payroll of groups for which no current information is available amounts to only about 10 percent of total wages and salaries.

Seasonal indexes for the wage and salary data were constructed separately for individual industries. For those industries in which the seasonal fluctuations are relatively minor, and for others where no adequate current information is available, no seasonal correction is applied. During the World War II years it was necessary to modify the existing seasonal factors and in some cases abandon them entirely. In the durable-goods manufacturing industries, the seasonals were set at 100 beginning with January 1941 for metals and
metal products, except automobiles, and for those nondura-ble-goods industries in which payrolls were markedly out of line with prewar patterns. For the automobile industry, seasonal adjustments were abandoned beginning with January 1942. In addition, during the war period, the amplitude of seasonal factors used to adjust construction payrolls was considerably dampened. During the postwar period, seasonal correction was again applied to the manufacturing industries when indicated.

Transfer payments, for the most part, are reported directly by various governmental agencies such as the Veterans Administration, Social Security Administration, and U. S. Civil Service Commission. For some of the components of transfer payments (such as State and local government employees' retirement pensions and business transfer payments), no monthly information is available. The procedure used in constructing monthly estimates is to plot the annual averages at the midpoint of each year and to draw a smooth curve through these annual averages. It is necessary to use this procedure for about 15 percent of total transfer payments currently.

Dividend payments are currently estimated from a sample of publicly reported dividends which is maintained by the Department of Commerce and embraces approximately 5,500 corporations. It has not been found feasible to adjust dividends for seasonal variation except on a quarterly basis, as this is the shortest time period for which any regularity can be established. Ratios to moving averages yield seasonal factors which are applied to quarterly totals. The seasonally adjusted quarterly totals are assumed to be representative of the midpoint of the quarter, and straightline interpolation between the midpoints of the quarters provides seasonally adjusted estimates for the other months.

Although the monthly estimates of proprietors' income and rental income are prepared in considerable detail, they are based on less adequate data than are wages and salaries. Farm proprietors' income is based mainly on cash income from farm marketings data provided by the Agricultural Marketing Service. Business and professional proprietors' income estimates are based, for the most part, on annual regressions of receipts to proprietors' income. Since the monthly receipts data which are employed have already been corrected for seasonal variation, no further seasonal correction is necessary.

The rent estimates are based largely on information on residential rents collected by the Bureau of Labor Statistics for its Consumer Price Index.

Interest estimates are in part based on current information, as in the case of the large Federal Government component, and on assumptions as to monthly pattern for the remainder of the category. Since a good deal of the interest consists of imputed interest, which represents the value of financial services received without explicit payment, it is assumed that these services flow regularly throughout the year and consequently this portion of interest is smoothed. The seasonally adjusted interest series represents a smoothing of the annual data. The resulting monthly data reflect, therefore, only trend and cyclical fluctuations.

Other labor income represents, with the exception of pay of military reservists for which some information is available currently, a series obtained by plotting annual averages and drawing a smooth curve through these averages.

Employee contributions for quarterly periods are based on data reported by the various funds, with the exception of State and local government employees' contributions. Monthly interpolations are based on relevant wage and salary data. Currently, it is necessary to project employee payments into the Old Age and Survivors Insurance and State Unemployment Compensation funds and Railroad Retirement funds on the basis of payrolls, taking account of changes in contribution rates. Seasonal adjustment is made for the Old Age and Survivors Insurance contributions. Estimates of annual contributions of self-employed persons to the OASI fund, which are payable in the first quarter of the year, are obtained from the Social Security Administration and smoothed through the year to approximate seasonal adjustment.

Quarterly data back to 1939 for disposition of personal income and monthly data back to 1929 for personal income by source are available in the National Income Supplement to the Survey Of Current Business, 1954 edition.

2 "Personal tax and nontax payments" consist of taxes levied against individuals, their income, and their property that are not deductible as expenses of business operations, and of other general government revenues fromindividuals in their personal capacity. They include payments for such specific services as are provided within the framework of general government activities but exclude purchases from government enterprises. Tax refunds are deducted from payments at the time of refund.

Federal personal tax payments are derived from individual income, estate, and gift tax collection data as reported by the Internal Revenue Service. In the years of their operation, the victory tax, the tax on use of noncommercial boats, and a share (based on an estimated ratio of personal vehicles to total registrations) of the motor-vehicle use tax are also included. Collections of withholding tax (including the victory tax) are lagged so as to reflect the timing of actual withholding; after January 195l, estimated contributions of both employers and employees for old age and survivors insurance are deducted. Seasonal adjustment of the quarterly series is accomplished by distributing such lagged calendar-year totals through four quarters in accordance with the movement of seasonally adjusted payrolls subject to withholding. Appropriate allowances are made for changes in tax rates. Payments of other individual income taxes (declaration, end-of-year, and back payments), estate and gift taxes, and the personal share of motor-vehicle use taxes in any calendar year are accepted as an expression of the annual rates prevailing in each quarter of that year; after January 1951, estimated contributions of the selfemployed for old age and survivors insurance are deducted. Similarly, the annual rate of personal tax refunds netted out in each quarter of any year is the amount of individual income, estate, and gift taxes actually refunded during that calendar year. These amounts are determined from Annual Reports of the Commissioner of Internal Revenue and adjusted, together with indirect business and corporate profits tax refunds, to the annual totals of all tax refunds as shown in the Daily Treasury Statement prior to 1954, and in the Monthly Treasury Statement beginning in 1954. Federal personal nontax payments are determined principally from detailed analysis of Budget data on miscellaneous receipts of the Treasury.

State and local personal tax payments (which consist of income, death and gift, motor vehicle, personal property, and poll taxes, and miscellaneous personal licenses) are based on the "State Finances," "City Finances," "County Finances," "Summary of Governmental Finances," and other reports of the Governments Division of the Census Bureau, with appropriate interpolation or extrapolation of intercensus years. State and local personal nontax payments, consisting largely of fines, penalties, and charges for current services (other than by government enterprises), are obtained from the same sources and by the same methods. Seasonally adjusted quarterly data at annual rates are calculated by graphic interpolation or extrapolation, except in the case of individual income taxes, where calendar-year collections are taken to reflect the annual rate in each quarter of any year.
"Total disposable income" is the income remaining to persons after deduction of personal tax and nontax payments to general government.
"Personal saving" is obtained by deducting, from total disposable income, personal consumption expenditures which are not given separately here but are shown as a component of gross national product or expenditure on p. 3 (see second paragraph of note 1 for that page). Personal saving is therefore the excess of personal income over.personal consumption expenditures and taxes and other payments to general government. It consists of the current saving of individuals (including owners of unincorporated businesses), nonprofit institutions, and private pension, welfare, and trust funds. Personal saving may be in such forms as changes in cash and deposits, security holdings, indebted-
ness, and reserves of life-insurance companies and mutualsavings institutions, the net investment of unincorporated enterprises, and the acquisition of real property net of depreciation.

Quarterly data for 1939-50, as well as more detailed annual data back to 1929, are shown in the National Income Supplement to the Survey Of Current Business, 1954 edition.

3 "Commodity producing industries" consist of agriculture, forestry and fisheries, mining, contract construction, and manufacturing. "Distributive industries" consist of wholesale and retail trade, transportation, communications, and other public utilities. "Service industries" comprise finance, insurance and real estate, and services. "Government" comprises Federal, State, and local government and government enterprises and pay of permanent United States residents employed in the United States by foreign governments and international organizations.
${ }^{4}$ Includes compensation for injuries, employer contributions to private pension and welfare funds, pay of military reservists (except pay of reservists on full-time active duty which is included in Government wages and salaries), and the following miscellaneous items: Directors' fees, jury and witness fees, compensation of prison inmates, Government payments to enemy prisoners of war, marriage fees to justices of the peace, and merchant marine war-risk life and injury claims.
${ }^{5}$ Consists largely of monetary income receipts of individuals for which no services are rendered currently, as follows: Benefits under the unemployment compensation and old age insurance provisions of the Social Security Act and the Railroad Retirement Act; Federal civilian pensions; Government life insurance benefits; Federal military pensions; disability and retirement payments; adjusted compensation benefits; mustering-out payments to discharged servicemen; readjustment, self-employment, and subsistence allowances to veterans and military and naval insurance payments; Federal, State, and local government direct relief; and State and local government pensions, cash sickness compensation, and veterans' aid and bonuses. The item includes also government payments and corporate gifts to nonprofit institutions, individuals' bad debts to business, and other business transfers to individuals.
${ }^{6}$ Includes contributions of employees and of self-employed persons (after January 1951) to old age and survivors insurance and employee contributions to State unemployment insurance, railroad retirement insurance, Federal civilian and State and local employee retirement funds, and cash sickness compensation funds, and premium payments to Government life insurance fund and national service life insurance fund.
${ }^{7}$ Equals personal income exclusive of net income of unincorporated farm enterprises, farm wages, agricultural net interest, and net dividends paid by agricultural corporations.

Page 5
${ }^{1}$ Compiled by the Securities and Exchange Commission and the D. S. Department of Commerce, Office of Business Economics. Data are available on an annual basis for the years 1939 and beginning 1945, and quarterly beginning 1947. The estimates relate to the whole of American private industry, exclusive of agriculture, professionals, and institutions. Annual estimates are based on reports from all corporations registered with the Securities and Exchange Commission, reporting to the Commission, and a large sample of unregistered manufacturing companies, unincorporated and incorporated, reporting to the Department of Commerce. The quarterly data are based on the Department of Commerce sample and a sample consisting of most corporations registered with the Securities and Exchange Commission.

The figures here do not agree precisely with the totals included in the gross national product estimates of the Department of Commerce on p. 3. The main difference lies in
the inclusion in the latter data of investment by farmers, professionals, and institutions, and of certain outlays charged to current account.

Quarterly data for 1947-50 (with the exception of seasonally adjusted data for the durable-and nondurable-goods industries for manufacturing) are shown in the December 1951 and August 1952 issues of the Survey Of Current Business.
${ }^{2}$ Includes trade, service, finance, communication, and construction.

## Page 6

${ }^{1}$ Compiled by the IV. S. Department of Agriculture, Agricultural Marketing Service (formerly the Bureau of Agricultural Economics). Monthly estimates of cash receipts from farm marketings are derived from estimates of monthly sales and prices received by farmers for the various farm commodities. Where farm products are placed under loan to the Commodity Credit Corporation, receipts through loans are counted as income during the month the loan is made and, if the product is later redeemed, the cost of redemption is subtracted from receipts at the time of redemption. Government payments, which are added to cash receipts from marketings to obtain total cash receipts from farming, comprise all payments made directly to farmers under the various programs-that is, rental and benefit, cotton option, conservation, Sugar Act, price adjustment, parity, dairy production, and other production payments. Government aid which is reflected in prices received by farmers for their products is not included in this item since it is covered in the estimates of receipts from marketings.

The current estimates of marketings are based on estimated production, the normal percentage of the product sold, and the usual seasonal movement to market, supplemented by available current data on market receipts, and various data relating to the transportation, marketing, and processing of farm products. The estimates are subsequently revised as more complete data on production, crop-year sales, and monthly marketings become available. The estimates of monthly marketings for most of the important farm products are valued by midmonth prices. Average prices received during the month are used in computing income from truck crops. Cash receipts for a few crops are computed by applying a season average price. Estimates for 1954 are preliminary.

The indexes of cash receipts from farm marketings and C.C.C. loans are computed by dividing the estimates of the relevant totals of cash receipts for each month by the monthly average of the corresponding total in the base period 1935-39. The indexes shown here are not adjusted for seasonal variation.

Monthly data for 1949-50 for dollar figures for farm marketings appear in the 1953 issue of BUSINESS STATISTICS; annual totals for 1910-28 are shown on p. 23 of the December 1951 Survey. Monthly data for indexes of cash receipts for 1941-50 appear in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; annual data for 1913-28 and monthly data for 1935-40 are available on p. 28 of the May 1943 Survey.
${ }^{2}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service (formerly the Bureau of Agricultural Economics); prior to 1943, by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, in cooperation with the Department of Agriculture. The index measures the physical quantity of farm products moving to market each month. The monthly estimates of sales of individual farm commodities used in computing the estimates of cash farm income provide the basic material for calculating the index. These estimates include quantities marketed by farmers through ordinary channels and quantities placed under Government loan less the quantities redeemed during the month. The marketing estimates exclude quantities of products retained by farmers for home consumption and, for the most part, interfarm sales. Some duplication is involved to the extent that farmers buy agricultural products from central markets or from other farmers in distant markets, such as the purchase of feeder livestock from ranges and central markets for further feeding.

The index is based on marketings of 70 agricultural products which, in the base period 1935-39, accounted for more than 93 percent of the cash receipts from all farm marketings. Sales of individual commodities are combined into groups of commodities by weighting each item by the average price received by farmers in the base period 1935-39. The group aggregates are converted to indexes and these group indexes are, in turn, weighted in accordance with the relative importance of each group in the base period (as measured by income from marketings) to obtain indexes for crops, livestock and products, and all farm products.

Data on monthly marketings of some items included in the index are not available currently and it is necessary to estimate monthly marketings from estimated production, the normal percentages sold, and the usual seasonal movement to market. The estimates are subject to revision as more complete data on marketings become available. The indexes for 1945-50 do not include adjustments to levels indicated by data collected in the 1950 Census of Agriculture.

The index of physical quantity of farm products sold and the index of prices received by farmers shown on p. 25 provide measures of the causes of fluctuations in cash receipts from marketings but do not measure exactly the movement in cash receipts, and in some months changes in the indexes appear inconsistent. Part of the apparent discrepancy in the movements of the incexes is explained by the fact that several sources of cash farm income cannot be included in the index of prices and marketings. The technique of the construction of the indexes also accounts in part for the discrepancies in the movements. In order to provide indexes that reflect only changes in prices or changes in volume of marketings, constant weights for the indexes of prices and of marketings have been used throughout the period while the index of cash receipts reflects current variations both in quantities marketed and in prices received for different farm products.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and the 1947 issues of the Statistical Supplement. For a more complete description of the index and monthly data for 1935-40, see pp. 23-32 of the April 1943 monthly Sunvey and the November 1943 issue of "The Farm Income Situation" published by the U. S. Department of Agriculture.

## Page 7

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System, Division of Research and Statistics, to measure changes in the physical volume of output of manufactures and minerals.

The index reflects output changes at all stages within manufacturing and mining industries, including intermediate as well as final products. It does not cover production on farms, in the construction industry, in the utilities, in transportation, or in various trade and service industries. The manufacturing and mining sectors in recent years have accounted for about one-third of national income and are of particular importance in the analysis of business fluctuations.

The index includes production at Government arsenals and shipyards (both Navy and private). Atomic energy manufacturing activity is represented beginning with 1947. A number of groups and subgroups include data for individual series not published separately, and metal fabricating contains the ordnance group in addition to the groups shown. Production of certain types of combat matériel is included in major group totals but not in individual indexes such as those for autos and some other products.

The index as published in the 1953 issue of BUSINESS Statistics has been superseded by completely revised series. The revised index has been improved by (1) the development of an independent set of annual indexes from the more comprehensive and detailed data available at yearly intervals; (2) the incorporation of a large number of new or revised series in the monthly index; (3) the revision of weights to bring them up to date; (4) the revision of seasonal adjustment factors and working-day allowances; (5) the adoption of a more recent comparison base period, or 100 level; and (6) the use of an improved industrial classification structure.

Detailed revisions have been confined for the present to the period beginning January 1947. Pending completion of revisions for earlier years (1939-46) the old total index and the old indexes for manufactures, durable and nondurable manufactures, and minerals from January 1919 to December 1946 have been converted to the new 1947-49 comparison base and adjusted to benchmark levels based mainly on Census of Manufactures data for 1939 and 1947. Since the 1939 Census of Mineral Industries was the latest available, a corresponding census index could not be calculated for this sector. For consistency with the treatment of manufactures, the old pre-1947 index for minerals has been adjusted to a benchmark measure calculated from Bureau of Mines data for 1939 and 1947.

The general concepts and methods used in calculating the index are the same as before the 1953 revision, except for the changes mentioned above and certain changes in the treatment of seasonal adjustments and working-day allowances. (For detailed descriptions and data as previously revised, see the Federal Reserve Bulletin, issues of October 1943, September 1941, August and September 1940, and February and March 1927.) The following paragraphs concern primarily the features of the index according to the latest revision.

A set of comprehensive and detailed annual indexes based on about 1400 separate product and industry series now affords a reliable measurement for review and adjustment of the individual monthly index levels. The relationship between the monthly and annual measures may be stated in two ways: (l) the annual index for a particular industry or combination of industries, as the more complete and reliable measure, provides the basis for periodic review and, where necessary, for adjustment of the levels of the monthly series for the corresponding area of activity; and (2) the monthly series for a particular area provides the means for indicating monthly movements around the annual indexes and for extrapolating these movements until annual data become available.

About 62 percent of the new annual index and 45 percent of the monthly index are based on figures relating to quantities produced or shipped. Figures on quantities of material consumed by, delivered to, or produced mainly for certain industries account for about 12 percent of the annual measure and 8 percent of the monthly. The remaining 26 percent of the annual index is represented by estimates based on several types of data, deflated value figures, and man-hour figures with adjustments for estimated changes in output per man-hour. Man-hour figures account for only 4 percent of the annual index, whereas such figures are used for about 45 percent of the monthly index.

In the revised index the component series have been classified in terms of 26 major industry groups as defined in the most recent Standard Industrial Classification Manuals and, where feasible, this classification also has been followed for more detailed categories. The number of basic monthly series in the index has been increased from 100 to about 175 and about half of the old series have been revised substantially.

The component series of the index are combined with weights, or measures of relative importance, based largely on the value added to purchased materials in the process of fabricating them into finished or more nearly finished goods. The weights of the new index for manufacturing, for the period starting in 1947, are developed mainly from value-added data from the 1947 Census of Manufactures; those for mining industries are based largely on estimates for 1947 prepared by the Bureau of Labor Statistics (Department of Labor) in their input-output studies.

As indicated earlier, the total index and the indexes for major divisions for the period 1939 through 1946 are adjusted to benchmark measures with average valuations from 1939 and 1947. For the indexes before 1939 the old weight periods are unchanged, with 1937 valuations used from 1930 through 1938, 1923 valuations from 1923 through 1929, and average 1919 and 1923 valuations from 1919 through 1922.

The method used in combining the individual series is the weighted average of relatives. This consists of (1) reducing each series into relatives with the average for the base period, 1947-49, as 100; (2) multiplying each series of
relatives by a base-year weight factor; and (3) adding the products (series of relatives multiplied by weights) for any one month to obtain the total index number for the month. Since the weights used are percentage weight factors and since the total of the percentage weight factors is equal to 100, the sum of the products for all series for a particular period gives the total index of industrial production for that period. The multiplication of each series by the corresponding weight gives a figure which is the number of "points" contributed by the particular series to the total index. Indexes for any desired combination of series are obtained by adding the appropriate points and dividing their sum by the total of the corresponding weights.

Components of the index are adjusted for two kinds of short-time recurring fluctuations, i.e., for differences in the number of working days from month to month and for seasonal variations. In the working-day adjustment, reported quantity figures used for the monthly index are put on a daily-average basis. The base used for calculating index numbers for the resulting daily-average figures is the daily-average output in the 1947-49 period. No adjustment is required for monthly series based on man-hour data because they relate to a payroll period in the middle of the month and are not affected by calendar variations.

In adjusting for differences in the number of working days each month, only regular weekend closings (where in effect) are treated as nonworking days. Since in the new index the working-day adjustment is confined to weekend closings, any effect that holiday shutdowns have on monthly output are reflected in the set of indexes unadjusted for seasonal variation. The effects of holiday shutdowns, however, are taken account of in the seasonally adjusted data together with those of other seasonal influences. In the old index (and for data shown here prior to 1947) holidays observed by individual industries were treated as nonworking days, together with weekend closings, and the total number of days involved in both was subtracted from the number of calendar days in the month.

For determining seasonal factors in the index, the "ratio to freehand curve" method is used. (This method is described fully in the Federal Reserve Bulletin for June 1941.) In the new index, seasonal adjustments are determined directly for each of the $2 l$ manufacturing and 5 mineral major-industry-group indexes, and the adjusted indexes for the major divisions and the total are obtained by aggregating the adjusted group indexes.

A complete description of the revised industrial production index with seasonal factors and weights for the series used in the index and the number of working days for each industry are available in the December 1953 issue of the Federal Reserve Bulletin. That volume contains also monthly data for all series, beginning January 1947, and monthly data beginning January 1919 for total industrial production, total manufactures, durable and nondurable manufactures, and total minerals.

The 1953 issue of Business Statistics, the Statistical Supplement to the Survey Of Current Business, contains monthly averages for 1935-52 and monthly data for 1949-52 on the old 1935-39 base and a description of that series with references to earlier data.

Page 8
${ }^{1}$ See note 1 for $p .7$.

## Page 9

${ }^{1}$ See note 1 for $p .7$.
${ }^{2}$ Seasonal factor for this industry is fixed at 100 ; the "adjusted" index for this series is therefore the same as the unadjusted index.

## Pages 10 and 11

${ }^{1}$ See note 1 for p. 7.

## Page 12

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System. The index measures output of durable goods of the types produced primarily for sale to consumers. Such output includes not only the units produced for consumers but also the units produced for business and Government use (including military use) and for export. Imports of finished consumer durable goods are not included.

These data are a combination of the revised index of "major" consumer durable goods and the new indexes developed for "other" consumer durable goods, the latter covering automobile parts and tires and miscellaneous home and personal goods. The revised index of major consumer durables incorporates information developed in revising the index of industrial production. (Revision of the industrial production index was completed December 1953.) Weights used for combining individual series into indexes for the subgroups and the total are based on gross factory value of output, not value-added data as are used for the industrial production index. The weight data are drawn chiefly from the Census of Manufactures for the year 1947.

As in the.industrial production index, annual measures calculated in greater detail or from preferable types of data are used for the purpose of periodically checking and correcting the levels of niost of the monthly indexes.

In general, the indexes for individual series are based on quantities produced (or shipped) and on man-hours. Monthly indexes are adjusted for differences in the number of working days from month to month and for seasonal variations. In 1952, a survey of trade associations was made by the Federal Reserve to ascertain the length of the workweek in individual industries. A 5 -day workweek was found to be generally observed in consumer-durable-goods industries and this information has been used as a basis for determining the number of working days each month for computing daily average output from monthly totals. An exception is the auto-tire industry where the workweek indicated was $5 \mathrm{l} / 2$. days. A daily average computation is not required for series based on man-hour data, since they are reported as weekly rates rather than monthly totals.

Allowances for output fluctuations due to holiday shutdowns are included in the seasonal adjustment rather than in the working-day adjustment. In general, the seasonal adjustments have been made to subgroups and not to individual series. Thus a seasonally adjusted series is calculated for refrigeration appliances, but not for refrigerators separately. The method used in making the seasonal adjustment follows closely that described in the December 1941 issue of the Federal Reserve Bulletin.

For more complete details on the index (including description of series included and seasonal factors used) and for monthly data back to January 1947, see the May 1954 is sue of the Federal Reserve Bulletin, pp. 438-452. That Bulletin also explains the important respects in which the index of output of consumer durable goods differs from the Department of Commerce estimates of personal consumption expenditures for durable goods.

## Page 13

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. Sales are estimated aggregate dollar values and inventories are estimated book values at the end of the year or month. Business sales and inventories are here defined as the sum of data for manufacturing and wholesale and retail trade. These figures are smaller than the nonfarm business statistics used in gross national product computations by the amount of sales (or revenues) and inventories for construction, utilities, and other nonindustrial sectors.

The term "sales" as here used signifies essentially sales or shipments for retail and wholesale trade and billings or shipments for manufacturing. In wholesale trade, however, some respondents probably report orders (bookings) as sales.

Trade inventories are valued at cost of merchandise on hand, while manufacturers' inventories are, in general, valued at the lower of cost or market price. About 15 per-
cent of manufacturers' inventories are valued on a last-in-first-out (LIFO) basis; the use of LIFO is much less prevalent in trade generally (though it is used extensively by department stores).

Changes in the book value of business inventories reflect movements of replacement costs as well as changes in physical volume. In measuring inventory investment as part of the gross national product, the data are adjusted to remove the effect of changes in replacement costs. (See explanation of "inventory valuation adjustment" in note 1 for p. 2.)

Monthly data for 1939-50 are available upon request.
${ }^{2}$ See note 4 for $p$. 14 for description of the manufacturing series.
${ }^{3}$ See note 2 for $p$. 55 for description of the wholesale trade series.
${ }^{4}$ See note 1 for p .45 for description of the retail trade series.
${ }^{5}$ Monthly averages for business sales are based on annual totals for the unadjusted series; data for inventories are end-of-year figures, not averages of end-of-month data.
${ }^{6}$ Monthly averages for 1929 and 1933 for retail trade are based on annual totals from the Census of Business for those years.
${ }^{7}$ Data incorporate the new series beginning January 1951 for retail sales, and beginning December 1950 for retail inventories; they are not comparable with earlier figures. For comparative purposes, the 1951 monthly average for retail sales and the December 1950 retail inventories on the old basis are shown (in italics) above the corresponding figures on the new basis. Information on the new retail sales and inventory series is provided in note 1 for p. 45 and'note 1 for p. 49, respectively.

## Page 14

${ }^{1}$ See note 1 for $p .13$.
${ }^{2}$ See note 2 for p .55.
${ }^{3}$ See note 1 for p .49.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Office of Bus iness Economics. The manufacturing data on this page and on pp. 13 and 15-22 are estimates based on a sample of reporting companies which account for more than 45 percent of total manufacturing sales.

The sales and inventory figures in the present volume supersede those in earlier issues of the Statistical SUP. plement. The revised estimates shown here are based on annual data through 1952 published by the Internal Revenue Service in Statistics of Income, Part 2, with an adjustment for unincorporated manufacturing concerns. For a detailed description of the procedures used in compiling the series, see the following issues of the Survey: May 1955, p. 20; January 1954, p. 17; December 1953, p. 21; October 1952, p. 14; October 1951, p. 15; October 1950, p. 16; October 1949, pp. 12-14.

Sales are net, i.e., less discounts, returns, and allowances, and are adjusted for renegotiation of war contracts in the relevant years. The figures represent sales and receipts involved in any activity of a manufacturing company, including those activities that do not pertain strictly to manufacturing. They include sales from one manufacturer to another and, therefore, do not measure changes in the net flow of goods from the manufacturing industry as a whole.

Inventory data are book values of stocks on hand at the end of the period and comprise purchased materials, goods-in-process, and finished goods. All inventories owned by a company are covered, including not only those located in factories but also goods-in-transit, in warehouses, in manufacturers' sales branches, etc. For further explanations regarding methods of valuing inventories, see the 3 d and 4th paragraphs of note 1 for $p .13$.

Monthly data for 1948-50 appear on pp. 21-24 of the May 1955 issue of the SURVEY; monthly data for 1939-47 are available upon request.
${ }^{5}$ Data for inventories are end-of-year figures, not averages of end-of-month data.

${ }^{4}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. Data for new and unfilled orders are dollar aggregates directly comparable with the sales and inventory series. Unfilled orders were obtained by estimating the aggregate value as of December 1947, and then computing the movmements forward and back from that point. To derive the level, the reporting sample was stratified by industry and size in the same way as for estimating sales, and in each stratum, the sample ratio of unfilled orders on December 1947 to sales for 1948 was applied to total sales for 1948.

The sample of companies reporting orders data is smaller than that reporting sales, because of the number of companies for which new orders were equal to sales and also because of those which have backlogs but do not report. However, the sample accounts for more than 25 percent of unfilled orders for all manufacturing.

The month-to-month percentage changes in unfilled orders shown by the sample were used to obtain the monthly movements of total backlogs in each stratum. Then net new
orders were computed from the estimated monthly sales added to the change in unfilled orders.

Monthly unadjusted data for 1950 are shown on p .23 of the December 1953 Survey; for 1949 and 1948, on p. 17 of the November 1952 SURVEy. Monthly seasonally adjusted data for new orders for 1950, 1949, and 1948 are shown on p. 25 of the December 1953 Survey. Nonthly data for 1939-47 for unadjusted new and unfilled orders are available upon request.
${ }^{5}$ Data for inventories are end-of-year figures, not averages of end-of-month data.

## Page 23

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. The data on operating businesses and new, discontinued, and transferred businesses refer to number of "firms" as opposed to the number of "establishments." A firm is defined as a financially responsible business organization under one management with an established place of business and may control one or more plants or outlets.
However, firms are on an unconsolidated rather than a consolidated basis, i.e., each corporation and each corporate subsidiary is separately counted. All nonfarm businesses are included, regardless of size; however, professional practices such as those of physicians, lawyers, etc., are not considered business firms.

Discontinued businesses include closures of all kinds without reference to the reason for going out of businesse.g., retirement, failure, illness, etc. A firm which is maintained as a business entity but which undergoes a change in ownership is not a discontinuance but is counted among the business transfers. Transfers also include firms which have undergone a change in legal form of organiza-tion-e.g., from partnership to corporation. New businesses include only firms that have been newly established, since going businesses which have been purchased are considered trans fers.

The data on number of operating businesses and number of new, discontinued, and transferred businesses are estimates of the Office of Business Economics. Estimates are based primarily on statistics compiled by the Bureau of Old Age and Survivors Insurance. Breakdowns by industry are presented according to the Standard Industrial Classification as of May 1949, except for the manufacturing division for which the 1945 revision of the Standard Industrial Classification was used. Firms engaged in more than one industry are classified according to the industry of greatest employment.

The data shown here represent revisions of earlier series on number of operating businesses, number of new and discontinued businesses, and number of business transfers. This revision, along with a description of the sources and methods and definitions of terms used in preparing the estimates, is presented in the January 1954 Surver. In the January 1954 issue of the Survey may be found annual average number of firms in operation (1929-June 30,1953 ) by industry divisions and semiannual data (December 1944-June 1951) by industry divisions and major groups for manufacturing, retail trade, and service industries; also the number of new, discontinued, and transferred businesses (1940-

June 30 , 1953) by industry divisions and (1945-50) by industry divisions and major groups for manufacturing, retail trade, and service industries. Revised quarterly data by industry division are available upon request as follows: Number of firms in operation, 1939-50; number of new, discontinued, and transferred businesses, 1944-50.

Special articles in the SURVEY have also presented business population estimates by legal form of organization (April 1955 issue), by size of firm (May 1954 issue), by age of firm (December 1952 issue), and by State and region (November 1954 issue).
${ }^{2}$ Data through 1952 for operating businesses are averages of end-of-quarter estimates centered at June 30; for 1953, averages of semiannual estimates centered at June 30. The figures for new businesses and discontinued businesses are quarterly averages through 1953. Data for the first half of 1954 are preliminary.

## Page 24

${ }^{1}$ See note 1 for $p .23$.
${ }^{2}$ Compiled by Dun © Bradstreet, Inc. Figures for new business incorporations represent the total number (for the 48 States, excluding the District of Columbia) of stock corporations issued charters under the general business corporation laws of the various States. The statistics include completely new businesses which are incorporated, as well as changes in existing businesses from the noncorporate to the corporate form of organization, existing corporations which have been given certificates of authority to operate also in another State, and the transfer of an existing corporation to a new State.

Monthly data for July 1945-December 1948 appear on p. 21 of the May 1950 SURVEY; those for 1949-50 are in the 1953 Statistical Supplement.
${ }^{3}$ Compiled by Dun Ei Bradstreet, Inc. During the period for which data are shown, there have been two major revisions of the failure statistics resulting in material changes in the coverage between 1932 and 1933, and between 1938 and 1939, and also revisions in the industry classifications, so that no data are available prior to 1939 comparable with the present series.

A failure is defined as "a concern that is involved in a court proceeding or a voluntary action that is likely to end in loss to creditors." All industrial and commercial enterprises which are petitioned into the Federal Bankruptcy Courts are included in the failure records; also included (but incompletely prior to 1939) are concerns which are forced out of business through such actions in the State courts as foreclosure, execution, and attachments with insufficient assets to cover all claims, as well as voluntary discontinuances with known loss to creditors, where obtainable.

Data for all years shown herein exclude railroad failures. Through 1932, the data include real estate and financial companies. Beginning 1933, the records are confined strictly to industrial and commercial enterprises; they exclude, in addition to railroads, such activities as banks, financial companies, holding companies, real estate and insurance brokers, amusement enterprises, shipping agents, tourist companies, transportation terminals, etc. The revisions incorporated in the 1933 data reduced the number of failures in that year from 20,307 to 19,859 and the liabilities from $\$ 502,830,000$ to $\$ 457,520,000$.

The series shown for liabilities represent approximately current liabilities (i.e., all accounts and notes payable, and all obligations whether secured or not, known to be held by banks, officers, affiliated companies, supplying companies, or the Government). They do not include long-term publicly held obligations. Offsetting assets are not taken into account. A relatively small amount of mortgages held by individuals is included prior to 1934.

The comparability of the data is affected between 1938 and 1939 by more complete coverage (beginning the latter year) of voluntary discontinuances with loss to creditors and of small concerns forced out of business by such actions as attachment, execution, or foreclosure, with insufficient as-
sets to cover all claims. Inclusion of the additional cases in 1939 increased the total number of failures for that year by 29 percent and the current liabilities by 9 percent (monthly averages for 1939 comparable with earlier years are-total number of failures, 951 ; liabilities, $\$ 14,017,000$ ). Practically all of the additions were small concerns with liabilities under $\$ 25,000$, and a majority of these had debts of less than $\$ 5,000$.

The classification of the failure records by industries was revised, beginning January 1940, to conform to the
"Standard Industrial Classification Manual," in order to facilitate direct comparison between failures and any other series of data based on the same official code. This revision resulted in the shifting of bakeries with retail outlets from manufacturing to retail trade. The monthly average number of bakery failures transferred from the manufacturing to the retail group for 1940 was 14 and monthly average amount of liabilities, $\$ 65,500$. Similar revisions have not been made in the 1939 figures for manufacturing and retail trade which are shown in italics.

Monthly data for 1939-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942. Revisions for 1945 are as follows: Number of failures for December-grand total, 41; commercial service, 4; amount of liabilities for December and monthly average, respectively-grand total, $\$ 1,654,000, \$ 2,519,000$; commercial service, $\$ 202,000, \$ 423,000$. Revisions for 1946 are as follows: Number of failures for November-grand total, 103; commercial service, 12 ; amount of liabilities for November and monthly average, respectively-grand total, $\$ 9,511,000$, $\$ 5,612,000$; commercial service, $\$ 202,000, \$ 531,000$.

Comparable data prior to 1939 for the industry groups are not available because of revisions in the series in 1939 and 1940 referred to above. Monthly figures for 1936-39 on the old basis are available in the 1940 SUPPLEMENT and earlier monthly figures on the same basis appear on pp. 17 and 18 of the December 1938 Sunvey.
${ }^{4}$ Data for 1929-32 are not comparable with figures for later years; see 3d paragraph of note 3 above for explanation of revision beginning 1933.
${ }^{5}$ Data for 1933-38 are not comparable with figures for later years; see 5 th paragraph of note 3 above for an explanation of revision beginning 1939.
${ }^{6}$ Not entirely comparable with data for later years; see 6th paragraph of note 3 above.
${ }^{7}$ The figures for discontinued businesses and business transfers are quarterly averages through 1953. Data for the first half of 1954 are preliminary.
${ }^{8}$ Average for 6 months (July-December) for 47 States (excluding Louisiana).

## Page 25

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Indexes are based on prices (about the 15 th of month) received by farmers for their products sold at local markets or at the point to which farmers deliver their products in their own conveyances or in local conveyances they hire for the purpose.

The reported prices received by farmers are tabulated and averaged by crop-reporting districts. These district averages are weighted by district sales or production estimates to obtain weighted State averages. The State averages are weighted by State marketing or production estimates to arrive at national averages.

In computing the subgroup indexes, the weights applied to the U. S. average prices to obtain aggregates for individual commodities for 1910 through 1934 were average quantities sold by farmers for the 6-year period, 1924-29; beginning with 1935, weights are 5 -year averages of sales by farmers during 1937-41. For livestock and livestock products, calendar-year sales were used in computing the averages; for crops, the corresponding crop-year sales were used.

For combining the various subgroup indexes into an allcrop, an all-livestock and livestock products, and an all-
farm-products index, weights are percentages based on average cash receipts of farmers (with adjustments to reflect imputed weights for items not included in the index) for the two periods, 1924-29 and 1937-41.

There are 52 commodities now represented in the index. These items accounted for about 92 percent of the total cash receipts from farm marketings in 1937-41. Data for some commodities are not available all the way back to 1910 (the earliest year for which the index was computed). Thus strawberries were added to the index in January 1919, eleven commercial vegetable crops in January 1924, soybeans, grain sorghums, turkeys, cantaloups, cucumbers, and watermelons in January 1935, broccoli in January 1939, and sweet corn in January 1949. Grapes were dropped from the index as of January 1935 and green peas as of January 1949. (Indexes for October 1943-June 1946 reflect wartime-subsidy payments made on butterfat, milk, beef cattle, and lambs during that period.)

A major revision of the indexes was made in January 1950; there were further revisions in January 1954; and in May 1955 the indexes for the period January 1952-March 1955 were revised to incorporate the latest revisions in the price series for the individual commodities. In January 1954, in addition to incorporating price revisions in individual price series, the index was revised to reflect in the basic weight data for 1937-41 the latest sales and income estimates. The net effect of these revisions was to raise the 1944-53 average of the "all farm products" index by 1 point, or 0.4 percent.

The most important revision was made in the commercial vegetable index beginning 1935, which for the period 194453 was raised 32 points or 15 percent. This change consists of the inclusion of broccoli, cantaloups, sweet corn, cucumbers, and watermelons; also, in the fall of 1952 of revising the estimates relating to commercial vegetables for fresh market so as to include all commercial fresh market production rather than only commercial truck crop production in well-recognized commercial areas, mainly producing for shipment to distant markets.

The second most important revision was in the fruit index, which lowered the 1944-53 average for that index 11 points. There was a change in prices used for citrus fruits, peaches, and pears; strawberry prices were revised and grapes were dropped from the index

The revisions raised the feed grains and hay index several points beginning 1939; the potato price series was revised beginning 1909; and the poultry and egg index was revised upward a few points in most months from 1934 through 1951. The index for tobacco was unchanged and there were only minor revisions in the other series.

The items represented in each group and the percentage weights of the groups based on average cash receipts in 1924-29 and 1937-41, respectively, are as follows: Food grains (wheat, rye, rice), 8.9 and 7.0 ; feed grains and hay (corn, oats, barley, grain sorghums, hay), 7.5 and 6.7; cotton, 13.9 and 8.3 ; tobacco, 2.6 and 3.7 ; oil-bearing crops (cottonseed, soybeans, peanuts, flaxseed), 2.3 and 3.1; fruit (apples, oranges, lemons, grapefruit, pears, peaches, strawberries), 6.0 and 5.8 ; commercial vegetables for fresh market-formerly truck crops-(snap beans, cabbage, carrots, cauliflower, celery, onions, lettuce, green peas, green peppers, spinach, broccoli, cantaloups, sweet corn, cucumbers, watermelons, tomatoes), 3.5 and 4.8; other vegetables (white potatoes, sweet potatoes, dry edible beans), 3.3 and 2.8; meat animals (cattle, calves, sheep, lambs, hogs), 26.1 and 28.6; dairy products (milk, wholesale and retail, butterfat), 15.1 and 17.7; poultry (chickens, turkeys, and eggs), 9.9 and 10.2 ; wool, . 9 and 1.3 .

The indexes shown here are not adjusted for seasonal variation. The original reports include also adjusted indexes for five subgroups-fruit; commercial vegetables; potatoes, sweetpotatoes, and dry edible beans; dairy products; and poultry and eges.

Monthly data beginning in 1910, along with a brief discussion of the revisions made in May 1955, are included in "Supplement No. 1; Agricultural Prices, May 1955" (available from the U. S. Department of Agriculture). A brief description of the revisions of the indexes made in January 1954 is included in "Supplement No. 2, Agricultural Prices, January

1954" (available from the U. S. Department of Agriculture). A complete description of the major revisions of the indexes in January 1950 appears in the April 1950 issue of "Agricultural Economics Research," published by the U. S. Department of Agriculture.
${ }^{2}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. The index of prices paid by farmers is a measure of the changes that occur in the level of prices paid by farmers and their families for commodities used in living and farm production. In addition to commodities, the combined index (Parity Index) now includes data for interest per acre on farm indebtedness secured by farm real estate, taxes per acre on the farm real estate, and cash wage rates paid hired farm labor.

Prices paid by farmers are compiled primarily from data reported presently (1955) by about 28,000 independent retail merchants and chain stores. The data were collected quarterly from 1923 to 1936 for most groups of items, annually before 1923, and monthly from 1937 to date. Most independent store surveys are made quarterly, some semiannually, and others seasonally. Feed prices and chain store reports on nearly all family living items are collected each month of the year. Prices paid for individual commodities are averaged and officially estimated for individual States, and then weighted by available estimates of purchases of the commodity by farmers in each State to obtain an average for the country as a whole.

The index of prices paid, as now constituted, includes 192 family living items (commodities and services) and 193 commodities used in production. For the period 1910-March 1935, indexes for the several commodity groups were constructed by weighting prices of individual commodities by the average quantities estimated to have been purchased per farm during 1924-29. Since March 1935, prices of individual commodities have been weighted by average quantities estimated to have been purchased per farm during 1937-41. The commodity-group indexes have been combined into an index representing commodities used in both living and production, together with interest, taxes, and wage rates paid hired farm labor, by weighting the several group indexes in proportion to the percentage of total expenditures represented by the commodities and services in the corresponding groups in the respective periods.

Percentage weights used in deriving the combined index are as follows (1924-29 and 1937-41 weight bases, respectively): Conmodities in living, 41.2 and 44.0; commodities in production, 36.4 and 41.2; taxes, 5.7 and 3.8; interest, 6.5 and 3.0 ; cash wage rates, 10.2 and 8.0.

The Parity Ratio is obtained by dividing the Index of Prices Received by Farmers for All Farm Products by the Index of Prices Paid, including Interest, Taxes, and Wage Rates.

The Parity Ratio was revised to reflect the January 1954 revision in the Index of Prices Received by Farmers and also a change in the interest and tax indexes. Monthly data prior to 1951 for Indexes of Prices Paid (all commodities, interest, taxes, and wage rates) and for the Parity Ratio appear on p. 24 of the April 1954 issue of the SURVEY OF Cubrent Business.

A description of the index of Prices Paid by Farmers (including interest, taxes, and wage rates) is contained in "Supplement No. 2, Agricultural Prices, September 1954" and the method of computing Parity prices is described in Supplement No. 1 to the January 1955 issue of Agricultural Prices. A complete description of the major revision of the indexes in January 1950 appears in the April 1950 issue of Agricultural Economics Research. All of these publications except the latter, which is out of print, are available from the U. S. Department of Agriculture.
${ }^{3}$ Averages for prices paid by farmers and the Parity Ratio for 1929 through 1936 are based on quarterly figures.

Page 26
${ }^{1}$ Compiled by U. S. Department of Commerce, Office of Business Economics. The series represents the movement of prices at retail stores and is designed for use in connec-
tion with the Department's estimates of sales of retail stores. The price index is based on data collected by the U. S. Department of Labor, Bureau of Labor Statistics, the U. S. Department of Agriculture, Agricultural Marketing Service, and other agencies. It differs from the consumer price index compiled by the Bureau of Labor Statistics by the ommission of rents and other service prices and the inclusion of prices for building materials, farm machinery, and other nonconsumer goods sold through retail stores.

The combined index is built up from eleven component indexes, one for each major group of retail stores, by the use of constant weights - namely, the dollar sales in the period 1935-39 of the group of stores to which the index applies. Where component indexes are obtained by combining several series, weights are based on an analysis of sales by commodity groups from the 1939 Census of Retail Trade.

For some of the groups adequate price data are not available, and the choice of representative series was necessarily arbitrary. For example, in the case of eating and drinking places, for lack of more adequate figures, the Bureau of Labor Statistics retail food price index is used. Hence, considerable caution must be exercised in the use of the retail-store price index, even in normal times. Furthermore, the effect of the disappearance during World War II and the subsequent reappearance of certain lower-price lines and, in some cases, of complete lines of goods, as well as changes in the quality of products, cannot be measured. Some appraisal of these and other qualifying factors must be made before the price series can be used as deflators in determining changes in the physical volume of goods sold at retail stores.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data for 1939-40 are available on p. 31 of the February 1946 SURVEY.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The Consumer Price Index measures the effect of price change in the living costs of city wage-earner and clerical-worker families. It is calculated by comparing, from one period to the next, the cost of a "market basket" of goods and services usually purchased by this particular population group.

The quantity and quality of items contained in the market basket are held constant over the measurement period. The Consumer Price Index reflects, therefore, only "changes in prices"; it tells nothing about changes in the kinds and amounts of goods and services families buy, or the total amount families spend for living, or the differences in living costs in different places. Data are compiled separately for the individual cities in which prices are collected and are combined by population weights to obtain the index for the United States.

The index is of the weighted aggregative type. When it was first issued in 1919 (with index data going back to 1913), the time-to-time changes in retail prices were weighted according to expenditures of wage earners and clerical workers in large cities during 1917-19. The index numbers as presently in effect utilize the 1917-19 expenditure weights for the 1913-25 period; 1934-36 expenditure weights for the 1930-49 period; and the average of the two sets of weights for the intervening period of 1926-29. Weights for $1950-52$ represent $1949-50$ spending patterns, and those used beginning January 1953 have been adjusted to 1952 spending patterns.

At three different times it has been necessary to modernize the samples and methods of calculation of the index and to bring up-to-date the "market basket" of goods and services included. Pending completion of the latest major revision (completed in January 1953), certain interim adjustments were made in 1951 and the indexes were recalculated back to January 1950 (except data for "all items" and "rent" which were revised back to January 1940 wherever necessary).

In the latest major revision a new "market basket" for the index was developed, many important improvements in pricing and calculation methods were introduced, and prices were obtained from a sample of 46 cities instead of 34 as formerly. All features of this revision were incorporated
into the index beginning with data for January 1953. A continuous series going back to 1913 was obtained by linking (splicing) the new indexes beginning January 1953 to the adjusted series through December 1952. The revision beginning with data for January 1953 affected the adjusted series indexes previously published through December 1952 only to the extent that the base period was shifted from 1935-39=100 to 1947-49 = 100 and a different classification of items was used.

The description in the following paragraphs applies primarily to the revised index for the period beginning January 1953. (For details relating to the indexes through December 1952, see references given in the final paragraph of this note.)

The goods and services covered by the index are those customarily identified as "consumption" items. For the index beginning January 1953, about 300 items were selected for regular periodic pricing. These are items which are relatively important in the spending pattern of moderateincome urban families, which are distinctive in price movement, and which are representative of price trends of groups of related items. Among the important additions to the pricing list are used cars, home purchase and maintenance, and restaurant meals. Federal, State, and city taxes are added to the retail prices for the items on which they are imposed. Automobile taxes are added; property taxes are included in the cost of homeownership, and implicitly included in rental costs. Neither income taxes nor social-security taxes are included.

The food component includes both food at home and food away from home (restaurant meals and other food bought and eaten away from home). Prior to January 1953, prices for "food away from home" were estimated to move like prices for "food at home," but since that date have been measured by prices for restaurant meals. "Other goods and services" include tobacco, alcoholic beverages, and miscellaneous services (such as legal services, banking fees, burial services, etc.).

Foods, fuels (including gas and electricity), rents, and a few other items are priced monthly in all cities. Prices of most other goods and services art obtained on a regular rotating pricing cycle-monthly in the 5 largest cities, every 3 months in 25 large and medium-sized cities, and every 4 months in the 16 smallest cities.

As previously stated, the quantity weights currently used represent the average purchases of urban wage-earner and clerical-worker families in the year 1952. The basic information for this weight calculation was obtained from the 1950 Survey of Consumer Expenditures in 91 cities, and from surveys made for other cities in earlier postwar years. The survey data were adjusted to 1952 spending patterns by taking account of changes in prices and income between 1950 and 1952.

Samples for the surveys included over 8,000 wage-earner and clerical-worker families. The average family size was about 3.3 persons and the 1952 family income after taxes averaged about $\$ 4,160$. Many of the families have two or more wage or salary workers; thus average family incomes are higher than average individual earnings. On the other hand, single workers living alone, and families whose 1950 total family income after taxes exceeded $\$ 10,000$, were excluded. In 1952 the "index" families represented about 64 percent of all people living in urban places and about 40 percent of the total U. S. population.

Price changes for all items in each city are combined in accordance with their importance in the "market basket" for that city. Price changes for the 46 cities are combined for the United States with the use of 1950 population data. Each city is given an importance or weight proportionate to the wage-earner and clerical-worker population it represents in the index. The 12 largest cities, each weighted by its own population, when combined have about two-fifths of the total weight in the national index. Each of the 3 other city-size groups has about one-fifth of the total weight; i.e., the 9 other large cities, the 9 medium-sized cities, and the 16 small cities.

In December 1954, the relative importance of the major groups of goods and services priced for the Consumer Price Index was as follows: Food, 28.9 percent; housing, 33.0 ;
apparel, 9.3; transportation, 11.2 ; medical care, 5.l; personal care, 2.1 ; reading and recreation, 5.2 ; and other goods and services, 5.2 percent.

For a description of the interim adjustment of the index for the $1950-52$ period, see the 1953 issue of BUSINESS Statistics, the Statistical Supplement to the Survey Of Current BuSiness. Monthly data for 1949-52 are shown in that volume.

Monthly releases of the U. S. Department of Labor contain (in addition to the national average) indexes for the major groups for the following 20 cities: Atlanta, Baltimore, Boston, Chicago, Cincinnati, Cleveland, Detroit,
Houston, Kansas City, Los Angeles, Minneapolis, New York, Philadelphia, Pittsburgh, Portland, Ore., St. Louis, San Francisco, Scranton, and Washington, D. C. Releases on "Retail Food Prices by Cities" cover food prices in the same 20 cities.

Additional information on the uses and limitations of the index may be found in the following publications of the U. S. Department of Labor:
"The Consumer Price Index, A Short Description of the Index as Revised, 1953"-a multilith statement issued by BLS in January 1953.
"The Revised Consumer Price Index," an article in the February 1953 issue of the Monthly Labor Review.

Bulletin No. 1165, "Consumer Prices in the United States, 1949-52. "

Bulletin No. 1140, "The Consumer Price Index: A Layman's Guide."

Bulletin No. 1039, "Interim Adjustment of Consumers' Price Index."

Bulletin No. 966, "Consumers' Prices in the United States, 1942-48."

Bulletin No. 699, "Changes in Cost of Living in Large Cities in the United States."
${ }^{3}$ Includes also cereals and bakery products, other foods at home, and restaurant meals.
${ }^{4}$ Includes also solid fuels and fuel oil, household operation, home purchase, and other home-owner costs.
${ }^{5}$ Includes tobacco, alcoholic beverages, and miscellaneous services (such as legal services, banking fees, burial services, etc.).

## Page 27

${ }^{1}$ Computed by the U.S. Department of Labor, Bureau of Labor Statistics. The index is designed to show the general rate and direction of the composite of price movements in primary markets and the specific rates and directions of price movements for individual commodities or groups of commodities. It is designed to measure "real" price changes between two periods of time, i.e., to measure price changes not influenced by changes in quality, quantity, terms of sale, etc. The term "wholesale" refers to sales in large lots, not to prices paid by or received by wholesalers, jobbers, or distributors. The prices used in constructing the index represent the first important commercial transaction for each commodity. Most of the quotations are the selling prices of representative manufacturers, or prices quoted on organized exchanges or markets.

A general revision of the wholesale price index was completed in early 1952. The principal changes from the old series are as follows: (1) increase in the commodity coverage from about 900 to about 2,000 items; (2) change in the basis for weights from average sales for 1929-31 to 1947 sales (through 1946, the index weights were based on average sales in the years 1929, 1930, and 1931 for farm products, and on average sales in 1929 and 1931 for all other commodities); (3) change in the base period from 1926 to 1947-49; and (4) a modification of the classification system.

The revised series was worked back to January 1947 and was linked to the old series as of that date to provide a continuous index. The "linked" series does not supersede the former index as the "official" Federal Government series for the period prior to 1952 . The only official series are the former series ( $1926-100$ ) through the end of 1951 and the revised series from 1952 forward.

The prices used in the index through 1951 are the simple arithmetic averages of the 4 or 5 weekly prices for each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those which prevail on a particular day of the month-in most cases, Tuesday of the week containing the 15 th. Usually the prices selected are f.o.b. production or central marketing points. Delivered prices are included only when it is the customary practice of the industry to quote prices on this basis.

The individual price series are combined into the index by multiplying the value weight assigned each item by its current price relative, and summing to obtain the current aggregate. The current index is obtained by dividing this aggregate by the aggregate for the base period. The weights used in the index from 1947 through 1954 are based on the total value of primary market transactions for commodities in 1947, the latest year for which a complete Census of Manufactures is presently available. Beginning with 1955, weights are based on an average of the dollar value of primary market transactions in 1952 and 1953. The weights for the 1947-54 period are based on 1947 data, shifted to a 1947-49 base (i.e., weights adjusted by change in item prices from 1947 to 1947-49 average). Within product classes, the total 1947 adjusted weight has been allocated among items to reflect more recent or "normal" conditions. Each commodity price series in the index has its own direct weight (i.e., the value of the sales of that commodity on primary markets in 1947) plus an imputed weight for other commodities not priced frr the index, but for which it is known, or assumed, that prices move like the commodity priced.

For a more detailed description of the revised wholesale price index, see the February 1952 Monthly Labor Review. A reprint of that description (Serial No. R.2067) may be obtained upon request from the U. S. Department of Labor.

The Department of Labor also issues a weekly index based on actual prices for a small sample (about 200) of the commodities included in the monthly index, and on an estimate of the prices for all other commodities. The current weekly indexes for all commodities, farm products, processed foods and "all other" are published regularly in the WEEKLY Supplement to the Survey Of Current Business. The weekly index is computed as an estimated percentage change from the latest published monthly index and represents the best estimate of what the monthly index would be if it were computed each week. The weekly index, however, is not the official index and is not maintained as a continuous historical series. As soon as a monthly index is published, all weekly indexes falling in that month are superseded.

Monthly data for 1949-50 are published in the 1953 edition of Business Statistics; those for 1926-46 for "all commodities" and "all commodities other than farm products and foods," on p. 24 of the June 1952 Survey Of Current Business. Monthly data for 1947-48 for all groups (except "miscellaneous") and subgroups (except "prepared paint") included in the present volume appear on pp. 22-24 of the March 1952 SURVEY (1948 indexes for concrete products should read 99.7 for June and 100.5 for July).
${ }^{2}$ Prior to January 1947, frozen fruits and vegetables were not included in the index.

## Page 28

${ }^{1}$ See note 1 for $p .27$.
${ }^{2}$ Monthly averages for 1947-52 and monthly data for 1951 and 1952 cover data for radios, television sets, and phonographs.

Pages 29 and 30
${ }^{1}$ See note 1 for $p .27$.

Page 31
${ }^{1}$ See note 1 for p. 27.
${ }^{2}$ The data from January 1947 through January 1953 for total tobacco manufactures, etc., and from January 1947 through December 1952 for cigarettes differ from the official series because of a change in the method of eliminating excise taxes and discounts.
${ }^{3}$ Computed by the $l$. S. Department of Commerce, Office of Bus iness Economics, from indexes compiled by the U. S. Department of Lavor, Bureau of Labor Statistics. The series are obtained by computing the reciprocals of the Department of Labor wholesale price index, consumer price index (formerly called "cost of living index"), and index of retail food prices. These reciprocals are expressed as percentages with the average of the base period 1947-49 inclusive equal to 100 . The original indexes from which these series are computed are shown on pp. 26 and 27.

Since the purchasing-power indexes are based on the reciprocals of the corresponding price indexes, percentage changes in the former are not numerically equivalent to percentage changes in the latter. For example, if prices rise one-third during a period, at the end of it they are $4 / 3$ of prices at the beginning; since the reciprocal of $4 / 3$ is $3 / 4$, it is obvious that a one-third price rise results in a onefourth decline in purchasing power; or if prices at the end of a period are $2 / 3$ those at the beginning, then purchasing power at the end of the period is $3 / 2$ that at the beginning. Hence if it is desired to adjust a given dollar value for changes in purchasing power between two fates, the simplest adjustment factor is identical with the percentage change in the corresponding price index over the period; the same adjustment is obtained by expressing the change in the pur-chasing-power index over the period as a percentage of the purchasing power at the end of the period.

Monthly data for 1949-50 appear on $p$. 31 of the 1953 issue of Business Statistics. Monthly data for 1926-48 for purchasing-power indexes based on wholesale prices and for 1913-48 for those based on consumer and retail food prices are available upon request.

## Page 32

${ }^{1}$ Compiled jointly by the U. S. Department of Commerce, Building Materials and Construction Division and predecessor offices, and the U.S. Department of Labor. Lstimates represent the monetary value of construction work performed within the continental United States during the stated period of time. This monetary value is equivalent to the cost of the naterials put in place or otherwise consumed, the wages of workers who placed the materials, and appropriate charges to the work for overhead and profit. In these estimates, "new construction" includes the production of all fixed works and structures, whether by contract or force account. Major additions and alterations are included for all types of building, but maintenance and minor repair work are excluded. Figures include the installed value of equipment generally considered an integral part of a structure and commonly included in the contract price, such as plumbing and heating equipment and elevators; they exclude separable equipment, such as production machinery, power-generating equipment, and furnishings.

The estimating procedure for each type of construction follows one or more of three general patterns: (1) All types of private construction, except farm and public utility, and all types of State and local public construction, except those which are federally aided, are estimated from contract awards or building permits; (2) construction by privately owned public utilities is estimated basically from financial data; and (3) most types of Federal construction are estimated from progress reports on individual projects.
"Private nonfarm residential construction" estimates are based on the number and value of new dwelling units for which building permits are issued each month, covering at the present time approximately 2,500 cities and 3,500 rural nonfarm places throughout the country (including over 500 counties and townships). Adjustments for undercoverage, abandonments, undervaluation, and delays in starting construction are made. Approximately 20 to 25 percent of all dwelling units started in recent years have been located in rural nonfarm areas of the country where building permits are not required.
"Private nonresidential construction" estimates are based principally on the contract awards in 37 States east of the Rocky Mountains, as compiled by F. W. Dodge Corporation. Several adjustments are made for cancellations, undercoverage in the 37 States, expansion to cover all States, and duplication of data on public utilities. Relevant timing patterns are applied to convert the data to a work-inplace basis. The following classes are included: (1) Industrial, which covers manufacturing buildings, assembly plants, and factory warehouses, also refrigeration, ice, and cold-storage plants of such warehouses, industrial grain elevators and storage silos, dry-cleaning plants, laundries, and miscellaneous light manufacturing buildings; (2) commercial, which includes commercial warehouses and storage buildings (except cold storage, grain elevators, and storage silos), office and loft buildings (including banks, building and loan associations, etc.), stores, restaurants, and garages; and (3) other types, covering religious, educational, hospital and institutional, social and recreational, and miscellaneous construction.
"Farm construction" annual estimates are prepared by the Agricultural Marketing Service, U. S. Department of Agriculture. Current monthly estimates are prepared by the Department of Commerce by projecting annual estimates for the preceding year on the basis of the trend of farm income and applying a seasonal pattern to the annual totals. This itemincludes both residential and nonresidential farm construction.

Data for "public utilities" are estimates of value of new construction by privately owned railroads, local transit, petroleum pipelines, electric light and power, gas, and telephone and telegraph companies. The expenditures of municipally owned utilities are included in "other types" of public construction.

Included in total private construction, but not shown separately, are data for dams and reservoirs, filtration plants, mains and buildings, private roads and bridges, and miscellaneous nonstructural items such as private parks and playgrounds.
"Public nonresidential building" estimates are derived from contract-awards data of the F. W. Dodge Corporation, other construction contract news sources, and from reports of Federal agencies.
"Military facilities" estimates are based on reports of the Department of Defense.
"Highway construction" estimates are derived from reports of the Bureau of Public Roads.
"Other types of public construction" includes expenditures for residential construction, conservation and development, sewer systems, sewage disposal plants, incinerators, 'drainage ditches (other than in connection with highway or conservation work), water supply systems, filtration and treatment plants, reservoirs for municipal water supply, water towers, aqueducts, and other transmission and distribution facilities, publicly owned electric light and power plants, gas facilities, central heating plants, local transit systems, waterfront developmient, and all construction work at airports (except administration, terminal, hangar, and other buildings), public parks and playgrounds, ball parks, tennis courts, football fields, street and other lighting, landscaping and roads and paths in parks, retaining walls, memorials, and other public work not elsewhere classified.

The seasonally adiusted activity estimates are derived from the application of seasonal indexes computed by use of the ratio-to-moving-average method. In order to arrive at a typical ratio for each month, the highest and lowest ratio values obtained for each of the 12 calendar months were excluded in averaging the ratios of the actual monthly figures to the 12 -month moving average.

For individual types of construction, seasonally adjusted values have been derived by dividing the unadjusted estimates by corresponding seasonal indexes. Seasonally adjusted series for total new construction, total private construction, and total public construction have been obtained by adding the seasonally adjusted figures for the various components.

For additional information, see the "Statistical Supplement" to the May 1954 Construction and Building Materials Report, published by the U. S. Department of Conmerce. That
source also contains monthly data from 1948 through 1952 and annual estimates beginning with 1915. Estimates of construction by States will be found in the "Statistical Supplement" to the June 1952 report on Construction and Building Materials.

Monthly data for 1949 for all series and for 1947-48 for private residential (nonfarm) and nonresidential construction and public construction (except total and highway) are shown in the 1953 and 1951 issues of the Statistical Supple ment. Monthly figures from 1942-48 and 1950 are shown in the September 1954, March 1953, and August 1951 issues of the Survey Of Current Bussiness. Monthly data for 1939-41 are available upon request.

## Page 33

${ }^{1}$ See note 1 for p. 32.
${ }^{2}$ Compiled by the F. W. Dodge Corporation from field reports of individual project contracts in the 37 States east of the Rocky Mountains. Reports include all areas other than farm, although coverage is generally less complete on low-cost projects in rural nonfarm areas than in urban areas.

Data include new construction, additions, and major alteration projects. No maintenance work is included. A negligible volume of farm building construction is included. In general, force-account work is included only when executed with materials earmarked for specific projects at the time of purchase. The percentage of all contract construction represented by the F. W. Dodge Corporation data is not known. An approximate indication of the coverage of the Dodge data may be obtained by comparing them with the total value of all new construction (both contract and force account) in the 48 States, as compiled by the U. S. Departments of Commerce and Labor. The two series are not strictly comparable, however, in part because the former measures the value of contract awards and the latter the value of construction put in place. For the entire period 1929-54 the Dodge 37 States data probably represent about one-half of the estimated 48 States total, fluctuating in individual years from about two-fifths as a minimum to somewhat over three-fifths as a maximum.

The comparability of the figures for number of residential building projects and total projects is seriously affected between 1936 and 1937 by a change in the method of counting residential projects. Beginning with 1937, data for residential projects represent the number of individual buildings, each house or apartment building in a housing development or project being counted separately. The earlier data represent the actual number of projects whether a project covered a single building or a group of buildings. Monthly averages for 1937 comparable with the earlier data shown in italics are as follows: Total number of projects, 12,039; number of residential projects, 7,614.

Some minor changes were made in project classification beginning in 1937. Floor area and valuation figures for the affected series (total and miscellaneous, nonresidential building, educational and science, social and recreational buildings, public works, and utilities) have been revised for earlier years. Data on number of projects have not been revised but the differences are not sufficient to affect seriously the comparability of the series involved.

The classifications of public works and utilities include certain types of projects which cannot be measured in terms of floor area, such as highways, pipelines, subways, etc. It should also be noted that, for security reasons, Atomic Energy Commission projects are entered only in the valuation figures.

A more completely itemized record of contracts awarded and a current service with geographical breakdowns is available from the F. W. Dodge Corporation.

Monthly data for 1936-50 for all series are shown in the 1953, 1951, 1949, 1947, 1942, and 1940 issues of the Statistical Supplement. (Revisions: June 1948-total public construction, $\$ 338,226,000$; total private construction, $\$ 596,972,000$; December 1944-total construction, total projects, 7,141; and residential buildings, projects, 3,093.) Earlier monthly data are available in the 1938,

1936, and 1932 SUPPLEMENTS as follows: Total construction, except valuation by ownership, and all series for manufacturing (formerly called factory or industrial buildings), hospital and institutional, miscellaneous nonresidential, public, religious, and residential buildings, 1929-35 (revi-sions-total valuation, March 1934, $\$ 178,346,000$; factory valuation, December 1935, $\$ 9,869,000$ ); valuation by ownership, 1934-35; all series for commercial buildings, 1929 and 1932-35; projects only (with limitations discussed above) for educational and science, and social and recreational buildings, 1929-35, for total nonresidential buildings, 1929 and 1932-35, and for public works and utilities, 1932-35. Additional monthly data are available in special tables in the monthly Survey as follows: September 1933 Survey, p. 20-all series for commercial buildings and projects only for total nonresidential buildings, 1930-31; projects only for public works and utilities, 1929-31; August 1937 Survey, p. 18-valuation by ownership, 1932-33. Monthly data for series and years not shown are available upon request from the F. W. Dodge Corporation.
${ }^{3}$ Excludes number of projects in the category "miscellaneous nonresidential buildings."
${ }^{4}$ Not comparable with earlier data. See 3d paragraph of note 2 for this page.

## Page 37

${ }^{1}$ Computed by the Board of Governors of the Federal Reserve System, Division of Research and Statistics. The index of the value of construction contracts awarded is derived from monthly figures reported by the F. W. Dodge Corporation for the 37 States east of the Rocky Mountains and the District of Columbia.

Two separate indexes are compiled-"residential" and "all other" types of construction. These are combined to obtain an index of total construction contracts awarded. The indexes are based on a 3 -month moving average of actual monthly total awards, centered at the middle month. Seasonal adjustments are computed separately for the two individual indexes by the "ratio to moving average" method. The adjusted value aggregates are then combined to obtain the seasonally adjusted total of contracts awarded.

A more detailed description of the construction of these indexes is published in the Federal Reserve Bulletin for July 1931, pp. 358-60 (second paragraph revised November 22, 1939, and March 25, 1952; fourth paragraph and footnote revised March 25, 1952). For further information relative to the basic data upon which these indexes are computed, see note 2 for p. 33.

Monthly data for 1949-50 are shown in the 1953 edition of Business Statistics: monthly data for 1929-48 are available upon request.
${ }^{2}$ Compiled by the Engineering News-Record. Data cover heavy engineering construction contracts awarded for public (Federal, State, and municipal) and private projects. The published figures, however, do not represent the value of all contracts let, but those above a certain amount. According to the compilers, they probably account for 60 percent of the total new construction market other than small
residential. Larger housing projects (both public and private), apartments, and hotels are included. Maintenance and operation expenditures are not included. There have been several changes in the minimum-cost limit of projects included, as construction costs have declined or increased. The minimum cost of construction projects included for the years 1929 forward, is as follows: For waterworks, excavation, drainage and irrigation-1929 through June 1932, $\$ 15,000$; July 1932 through 1935, $\$ 10,500 ; 1936, \$ 14,000$; January 1937 to April 1946, \$15, 000; May 1946 to November 1947, $\mathbb{2} 22,500$; December 1947 to November 1950, $\$ 28,000$; December 1950 to December 1954, $\$ 34,000$; beginning January 1955, $\$ 44,000$; other public works (not specified above)1929 through June 1932, $\$ 25,000$; July 1932 through 1935, $\$ 17,750 ; 1936, \$ 23,000$; January 1937 to April 1946, $\$ 25,000$; May 1946 to November 1947, $\$ 40,000$; December 1947 to November 1950, $\$ 50,000$; December 1950 to December 1954, $\$ 60,000$; beginning January 1955, $\$ 73,000$; industrial buildings- 1929 through June 1932, $\$ 40,000$; July 1932 through 1935, $\$ 28,500$; 1936, $\$ 37,000$; January 1937 to April 1946, $\$ 40,000$; May 1946 to November 1947, $\$ 55,000$; December 1947 to November 1950, $\$ 68,000$; December 1950 to December 1954, $\$ 82,000$; beginning January 1955, $\$ 93,000$; other buildings -- 1929 through June 1932, \$150, 000; July 1932 through 1935, \$105, 000; 1936, $\$ 140,000$; January 1937 to April 1946, $\$ 150,000$; May 1946 to November 1947, $\$ 205,000$; December 1947 to November 1950 , $\$ 250,000$; December 1950 to December 1954, $\$ 300,000$; beginning January 1955, $\$ 344,000$. The reports of the Engineering News-Record show, in addition to total awards, a breakdown by classes of construction and each class by States and geographic divisions. Weekly data are also available.

The data shown here as monthly totals are combinations of 4 - and 5 -week periods. The reporting week ends on Tuesday, but in computing the 4 - and 5 -week totals, the compilers have combined the weekly figures on the basis of the weeks ended on Thursday within the month. This procedure results in some slight distortion in the figures for certain months.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932 (revisions for 1931-July, $\$ 223,248,000$; November, $\$ 138,758,000$; December, \$125, 131, 000).
${ }^{3}$ Compiled by the Portland Cement Association, Chicago. Data represent the yardage of concrete pavement awards for roads, streets and alleys, and airports in continental United States. The monthly data shown in this volume and also in earlier Statistical Supplements cover 4- and 5week periods, except that December figures include awards through December 31 and January figures begin January 1. Beginning 1947, the monthly figures include weeks ended on Friday nearest the end of the month (exceptions were made in the case of weeks ended Thursday, September 1, 1949, Saturday, July 28, 1951, and Monday, November 30, 1953); 1939-46 monthly figures include weeks ended on Saturdays within the month unless a week ended on the lst or 2 d of the month when it was included in figures for the preceding month (exceptions were made in the case of weeks ended April 3, 1943, and January 3 and February 3, 1945, which were included in the preceding month and August 1946 which ended on Friday). In general, the same method of combining the weekly data was followed in years prior to 1939 except that weeks ended on the 3 d were usually, but not always, included in the preceding month.

Month-to-month reports are, in general, received only from the States in which the Association has district offices, except that from the latter part of 1940 through 1949 and in 1954 monthly reports were generally received for Northern California (in which the Association has no office) through another agency. During the period for which monthly data are shown here the States (or parts of States) in which the Association has no offices (other than Northern California) and for which data are included irregularly are as fol:lows: Southern Idaho, Montana prior to November 1952, part of Nevada, New Mexico prior to 1950, Oregon, South Dakota, Utah prior to 1949, New Jersey prior to February 1943, and

Colorado and Wyoming prior to May 1946. Data for these States are obtained once or twice a year and are not allocable by months. While the data are included somewhat irregularly, they are for the most part included in the December figures; this accounts for the relatively high awards in that month.

In some instances the initial yardage of an award is increased or decreased or an award is rescinded some time after the award of the original contract. Such changes reported to the Association throughout the year are accounted for by increasing or decreasing the figures for the month in which the reports are received. Additional adjustments for changes in yardage not reported currently and other corrections which are not allocated by months may be made in the annual figures when the district offices adjust their final totals to yardage actually awarded. The monthly averages shown here are based on these final annual totals and therefore differ in some cases from the sum of the monthly figures. Since 1941, adjustments included in the annual totals have been relatively small. For 1941 approximately 901,000 yards was added to total awards and 731,000 of this amount to roads.

Monthly figures for 1938-50 for all series are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement (as the note in the 1942 Statistical SUPPLEMENT indicates, 1939 monthly data for airports are too incomplete to be of value and are shown merely to indicate the amounts included in the totals). Monthly data back to 1929 for roads and the total and beginning 1934 for streets and alleys are shown in the 1940, 1938, 1936, and 1932 SupPLEMENTS (there have been some slight revisions in the figures published in the latter volume).
${ }^{4}$ Compiled by the U. S. Department of Labor. Bureau of Labor Statistics. Beginning January 1954, data are based on revised techniques for estimating the number of new permanent nonfarm dwelling units started each month; the new techniques take into account the sweeping changes in population distribution since 1940 , as well as changing building rates in various sections of the country. This expanded coverage includes localities containing about 80 percent of the nonfarm population, 93 percent of the metropolitan nonfarm population, and 95 percent of the total urban population based on 1950 Census figures. It is estimated that about 85 percent of nonfarm housing is builtin these permitissuing places.

The dwelling unit, the unit of measurement of the volume of housing construction, is defined as a permanent dwelling place containing permanent cooking facilities, i.e., the minimum built-in facilities essential to housekeeping. The dwelling-unit count represents the number of families planned for in the construction of new permanent-type housekeeping dwellings and reflects the extent of new housing activity.

The series, therefore, excludes temporary units and units without housekeeping facilities and such dwellings as trailers, houseboats, sheds, and shacks. Excluded also are the temporary dwellings built during the period of defense and World War II, and the temporary structures erected at large Federal industrial facilities and on military posts. Accommodations in transient hotels, dormitories, and clubhouses are not counted in the dwelling-unit figures since they are usually nonhousekeeping quarters; however, apartment hotels are included when most of the space in the structure is devoted to housekeeping units. Restriction of coverage to new units automatically excludes units provided by the remodeling of existing residential structures or the conversion of nonresidential buildings into housing.

Monthly data for 1945-50 for the total new dwelling units started appear in the 1953, 1951, and 1949 issues of the STATISTICAL SUPPLEMENT; monthly figures beginning 1939 for privately owned (unadjusted), for 1950 for publicly owned (unadjusted), and back to 1946 for seasonally adjusted starts at annual rate (privately owned) are available upon request.
${ }^{5}$ Prior to 1933 , data for airports were included with streets and alleys.
${ }^{6}$ Based on annual total; no monthly data available.
${ }^{7}$ December data include some contracts awarded in prior months but not reported; see 2d paragraph of note 3 for this page.
${ }^{8}$ Less than 50 units.

## Page 38

${ }^{1}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data beginning 1954 have been expanded to cover nonfarm residential construction authorized in all localities (both urban and rural) that require building permits. The total of about 7,000 permit-issuing places, represented from 1954 forward, includes approximately 95 percent of all the nonfarm population in the 168 standard metropolitan areas defined in the 1950 Census, and 80 percent of the total nonfarm population based on the 1950 Census.

Data prior to 1954 (shown in italics and not comparable with later figures) cover new dwelling units authorized in all places defined as urban in the 1940 Census (i.e., all incorporated places with a 1940 population of 2,500 or more, plus a small number of unincorporated civil divisions classified as urban by special rule). Figures for January-June 1954 comparable with the italicized figures through 1953 are as follows (thousands of dwelling units): Total author-ized-35.0; $39.0 ; 55.6 ; 58.0 ; 53.5 ; 63.1$; total privately financed-33.2; $37.8 ; 53.7 ; 56.9 ; 52.7 ; 59.5 ;$ units in lfamily structures-23.3; 29.8; 43.4; 47.1; 44.3; 49.9; units in 2-family structures-1.5; 1.9; 2. 5; 2.6; 2.3; 2.4; units in multifamily structures-8.4; 6.1;7.7; 7.8; 6.1; 7.2; total publicly financed- $1.8 ; 1.1 ; 2.0 ; 1.1 ; .8 ; 3.6$.

Estimates for privately financed dwelling units are based on building permits issued; for publicly financed dwelling units, the estimates are based on notifications of contract awards and reports provided by Federal and local public agencies. Separate data for privately financed and publicly financed dwellings and the breakdown by type of structure are not available prior to 1939 and 1940, respec-
tively. tively.

Building-permit information was first collected by the Bureau in 1921 and covered about 250 large cities. This number was gradually increased as smaller cities and villages were included. By 1940 , about 2,500 places (account ing for over 85 percent of the urban population) were reporting, and by 1952, when the current revision began, almost 6,000.

No adjustment has been made to allow for canceled permits or for the elapsed time between the issuance of the building permit or contract and the start of construction, both of which factors were of importance in 1945 and in certain later years because of material shortages, limiting orders, and other construction difficulties. The data from 1945 should, therefore, be considered as number of new dwelling units for which permits were issued or contracts were awarded. Prior to 1945 they are considered to represent the estimated number of new family dwelling units upon which construction work was started.

Family units gained by alterations and conversions, trailer units, and dormitory accommodations are not included. (For definition of "dwelling unit," see paragraph 2 of note 4 for the preceding page; and exception to this general definition, however, is that temporary public housing is included in the urban estimates for 1941-53, as well as in the estimates beginning 1954 for all permit-issuing places.)

From the middle of 1942 through 1945 most of the public housing was temporary. The monthly average number of temporary and demountable units included in the figures for publicly financed and total urban dwelling units, beginning 1941, is as follows: 1941, 443; 1942, 4, 455; 1943, 7,085; 1944, 1,556; 1945, 841; 1946, 7,$525 ; 1947,138$. After 1947, the volume of temporary housing was negligible, totaling only 440 units for the seven years 1948-54 (none for 1953-54 in urban places).
${ }^{2}$ Compiled by the U. S. Department of Commerce, Building Materials and Construction Division (BDSA) and predecessor divisions. These data represent a combination of various
construction cost indexes weighted by the relative importance of the major classes of construction. They are implicit indexes computed by dividing the total estimate of new construction activity in current prices by the total expressed in 1947-49 prices. Since the total in 1947-49 prices is obtained by adding the estimates for the separately deflated classes of construction, the composite cost index is the equivalent of a variably weighted index, reflecting changes not only in the component indexes, but also in relative importance of the major classes of construction which are used as weights. In the computation of the monthly composite cost index, the shift in the relative importance of the major classes of construction due to their different seasonal movements is eliminated through the use of seasonally adjusted activity estimates. Beginning in 1945 the annual composite index is an average of 12 monthly indexes.

The cost indexes used for calculating the construction activity series in 1947-49 prices and thus entering into the composite index are as follows: E. H. Boeckh and Associates (residential building, except farm); The American Appraisal Company (nonresidential building, selected types, and military facilities); Turner (nonresidential, selected types, and military facilities); Fuller (nonresidential, selected types, and military facilities); U. S. Department of Agriculture (farm building); Interstate Commerce Commission (public utilities, selected types); Handy (public utilities, selected types); U. S. Department of Commerce, Bureau of Public Roads (military facilities and highway); Associated General Contractors (sewer and water, conservation and development, miscellaneous); Engineering News-Record (sewer and water, conservation and development, miscellaneous).

For additional information, see the "Statrstical SuppleMENT" to the May 1954 Construction and Building Materials Report, published by the U. S. Department of Commerce. That publication also contains monthly data back to 1948. Monthly data beginning 1939 are available upon request.
${ }^{3}$ Compiled by the Aberthaw Company, Construction Managers, Boston, Massachusetts. Beginning 1946, the index measures changes in costs of 36 major items entering into the construction in the New England area of five types of industrial buildings-three four-story types (wood frame, brick walls; steel frame, wood floors; reinforced concrete flat slab) and two one-story types (steel frame, monitor roof; reinforced concrete, monitor roof). New England prices of material items and labor rates are weighted on the basis of estimated quantities of materials and amounts of labor required for the types of buildings included. Labor rates are current New England union rates for all trades. The index includes all building-construction expense, with the exception of home-office expense and architects' or engineers' fees.

The index prior to 1946 , to which the current series is linked, is based on changes in the cost of constructing an eight-story reinforced concrete industrial structure originally built by the company in Connecticut in 1914, in which cement, steel, sand, gravel, lumber, and glass constituted the major items. The index is confined to labor, materials, and other construction costs actually required for construction of the building, and excludes data for home-office overhead and profit on the job, as in the current series. The data were brought up to date at the end of each quarter by preparing a completely new estimate of the cost of the original structure as of that date, which took into account changes in prices of building materials, variations in labor rates (standard union rates), and, as far as could be determined, labor efficiency. Any improvements in the design of the original building were not considered, nor were any substitutions made for materials which formed a part of the building

Quarterly data for 1929-50 are published in the following editions of the Statistrcal Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.

The figures were reported as of the first of each month through March 1929 and as of the first of April, July, October, and January thereafter through January 1931, and are shown in the Survey as of the end of the preceding month.
${ }^{4}$ Compiled by The American Appraisal Company. The indexes are based on a detailed bill of quantities of materials and labor entering into the structural portion of four representative types of buildings-frame, brick, concrete, and steel-in 30 cities throughout the United States, with allowance for contractors' overhead and profits.

Building fixture items such as plumbing, heating, lighting, sprinkler system, elevators, etc., are not included. Workmen's compensation and liability insurance and old-age pension factors are included in the labor portion.

The indexes reflect changes in average price levels with no allowance for the extreme costs resulting from overtime wages, premium on materials, or sacrifice prices and omissions of overhead costs and profits during depression periods. The material and labor costs are recomputed monthly in accordance with normal average prices and wages for the various kinds and grades of materials and classes of building trades, as verified or adjusted to normal from personal investigation of appraisers and information as to actual costs from clients and others. These computations automatically result in weighted averages for the individual buildings. Arithmetic averages are computed for the individual buildings and cities to obtain the city and national average. The latter covers 30 cities. The original reports give indexes for each of 22 typical cities, 4 of which are presented here. Since these index figures are based on 1913 as 100 for each individual location, they thus indicate the trend in each city and not the trend among the various locations. Actual costs vary widely among different buildings and different regions, and the indexes therefore are not applicable to specific buildings.

Monthly data for 1939-50 are shown in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement.
${ }^{5}$ Compiled by the Associated General Contractors of Ameri$c a$, Inc. Data are computed by combining indexes of wages and materials in the proportion of 40 percent for the former and 60 percent for the latter, which, according to data collected in the Census of the Construction Industry for 1929, 1935, and 1939, is approximately correct. According to these censuses, combined labor and material costs accounted for around 75 percent of the total of all expenditures for building construction. Wages used in computing this index are for hodcarriers and common laborers combined, and the material prices are those for sand, gravel, crushed stone, Portland cement, common brick, lumber (all weighted equally), hollow tile ( $1 / 2$ ), and structural and reinforcing steel (both together weighted 1/2). Wages and prices are reported as of the 15 th of each month by the 12 district offices of the association located in New York, Chicago, St. Louis, Cleveland, Cincinnati, San Francisco, Los Angeles, Atlanta, Detroit, Baltimore, Philadelphia, and Boston. The value of the material items included in the index represented about 45 percent of the total cost of all building materials used in 1929, according to the 1930 Census of the Construction Industry.

Monthly data back to 1929 are available in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.

## ${ }^{6}$ Quarterly averages.

${ }^{7}$ Data beginning 1954 are not comparable with earlier data (see note l for this page); the 1954 average includes revisions not distributed by months.

## Page 39

${ }^{1}$ Compiled by E. H. Boeckh and Associates, consulting valuation engineers, Cincinnati, Ohio, and Washington, D. C. Indexes are simple averages of indexes for 20 major pricing areas as follows: Atlanta, Baltimore, Birmingham, Boston, Chicago, Cincinnati, Cleveland, Dallas, Denver, Detroit, Kansas City, Los Angeles, Minneapolis, New Orleans, New York City, Philadelphia, Pittsburgh, St. Louis, San Francisco, and Seattle.

Basic cost data on materials are obtained from local building-material dealers, in connection with the company's cost-pricing service. Prevailing rates of wages are obtained primarily from contractors and building-trade associ-
ations. Actual wage rates are used, rather than nominal rates, and rates of both common and skilled labor are included. An arbitrary labor-efficiency correction is used, based on the organization's study of labor conditions in each area. Weights are based on studies of actual building costs by the organization and vary with the different types of structure.

Monthly data for 1945-50 are shown in the 1953, 1951, and 1949 issues of the Statistical Supplement; monthly figures for 1934-44 are given in the September 1949 SURVEy. (Revised index for October 1945 for frame commercial and factory buildings is 152.4.)
${ }^{2}$ Compiled by the Engineering News-Record. (The indexes shown here have been shifted to the 1947-49 base by the U.S. Department of Commerce.)

The construction cost index and the building cost index each has four components, three material items and labor. The material items for both indexes are: (1) the base price of structural steel shapes, which from the base period through July 1948 is at Pittsburgh only and since then is a 3 -mill average for Pittsburgh, Gary, and Birmingham; (2) consumers' net price of cement exclusive of bags, f.o.b. Chicago, from the base period through June 1948 and since then is a 20 -city average of foo.b. bulk prices; (3) lumber, which in the base period and through 1935 was $3^{\prime \prime}$ x 12" to $12^{\prime \prime} \times 12^{\prime \prime}$ long leaf yellow pine, wholesale, at New York, and beginning 1936 is $2^{\prime \prime} \times 4^{\prime \prime}$ S4S pine and fir in carload lots (ENR 20-city average). The labor component of the construction cost index, which is designed to show the movement of construction cost in general, is the common labor rate, ENR 20 -city average, while the labor component of the building cost index is the ENR 20 -city average for skilled labor. The labor rates are shown herein on $p .67$.

The component series are weighted according to their relative importance as determined by the compilers. As a step in arriving at proper weights, the average production of steel and cement in the years 1913, 1916, and 1919, average production of lumber for 1913 and 1916, and the number of common industrial laborers, according to the 1910 Census, were placed on a dollar-value basis using 1913 average prices as compiled by ENR wherever possible. These data are shown in the following table:

|  | Value | Per |
| :---: | :---: | :---: |
| 33,000,000 short tons steel at $\$ 30 \ldots \ldots . .$. | \$990,000,000 | 24 |
| 90,000,000 barreis cement at \$1.19 | 107,100,000 |  |
| 42,000,000 M board feet lumber at $\$ 28.50 \ldots$. | 1,197,000,000 | 29 |
| 1,200,000,000 man-days at \$1.52 (8 hours). | 1,824,000,000 | 4 |
|  | \$4, 118, 100,000 | 100 |

It should be noted that these data represent total production in the United States and not amounts used in the construction industry. According to the Engineering News Record, they were used as a guide, but the proportions of the items were adjusted to their importance in the construction industry with the aid of experienced construction men. An expenditure of approximately $\$ 100$ on the four items in these proportions was assumed for 1913 (the ENR base period) and the quantities of the three materials and the man-hours of labor that could be purchased for these amounts were computed. Purchases of similar quantities of these four items were assumed to be made at each successive period.

The expenditure of $\$ 100$, at 1913 prices, for the proper quantities of each item in the construction cost index is given below, and it may be noted that the "adjustment" mentioned above is an important factor.

```
2,500 pounds of structural steel at \(\$ 0.015\) (Pittsburgh base)
    (see paragraph 6 belou)....................................... \(\$ 37.50\)
6 barrels of cement at \(\$ 1.19\) (net barrel, f.o.b. Chicago)
    (see paragraph 7 below)..................................... 7.14
600 board feet, southem pine, \(3^{n} \times 12^{n}\) to \(12^{n} \times 12^{n}\) at \(\$ 28.50\)
    per N ft . (New York base) (see paragraph 8 be low)............ 17.10
200 man-hours at to. 19 (common tabor, average for country)... 38.00
Total.
                                    \$99.74
```

The adoption of the 3 -mill average for structural steel shapes in August 1948 did not necessitate any change in the weighting of this component.

In July 1948, when cement went of $f$ basing point pricing, the 20 -city average cement price was substituted; no adjustment in the weight factor was necessary.

For the Southern pine lumber series prior to 1936 the weight was 600 board feet. In linking this series with the series for $2^{\prime \prime} \times 4^{\prime \prime}$ pine and fir, the 1936 average value of lumber of the old type as included in the index was first determined (quantity weight, 600 board feet times the average price for the year). The equivalent 1936 average value of the new type was represented by 1,088 board feet of lumber, which quantity is now used as the weighting factor.

The building cost index is computed in the same manner as the construction cost index, except that the skilled labor trend is substituted for common labor. Since the skilled rate is considerably higher than the common rate, a weight of 68.38 man-hours was substituted for the common labor weight of 200 man-hours used in the construction cost index, as shown in the table above, in order to have the same labor component in the base period when the rate was multiplied by the weight. The computation for labor in 1913 for the building cost index is $68.38 \times \$ 0.555$, which gives approximately $\$ 38.00$. The trends of the two indexes reflect the divergent movements of wage rates for common and skilled labor; since 1932, rates for the former have increased more rapidly than those for the latter.

The indexes are computed as of the first of the month and are shown here and in the Survey as of the end of the preceding month. Monthly data for 1949-50 are shown in the 1953 issue of BUSINESS STATISTICS; monthly indexes back to 1929 are available upon request (revisions for building cost for August-November $1950-116.0,117.5,115.4,115.8$; for construction cost for August-December 1950-117.2, 118.4, 117.0, 117.2, 117.5, respectively).
${ }^{3}$ Compiled by U. S. Department of Commerce, Bureau of Public Roads. The index of highway construction costs (covering Federal-aid construction) is based on average contract unit bid prices for common excavation, concrete pavement, reinforcing steel for structures, structural steel, and structural concrete, weighted by average quantities during 1925-29 for each type of work or material involved per average mile of construction. Figures subsequent to 1940 are corrected for increased design requirements. Prior thereto, increased design requirements had a negligible effect on the index.

Average quantities used in weighting are as follows: 17, 491 cubic yards of excavation; 3,726 square yards of paving; 16,000 pounds of reinforcing steel; 4,325 pounds of structural steel; and 68 cubic yards of structural concrete.

Quarterly data for 1949-50 are shown in the 1953 issue of BUSINESS STATISTICS; quarterly data for 1931-48 are available upon request.
${ }^{4}$ Quarterly average.

## Page 40

${ }^{1}$ Compiled by the U. S. Department of Commerce, Building Materials and Construction Division and predecessor offices. The composite index of production of selected construction materials combines physical production of 20 materials and is then equated to a more inclusive annual composite index of 26 materials; it thus reflects production of 26 materials. The composite series was developed by translating the physical quantity of each material into dollar-value terms by multiplying the physical quantity by its 1946 average wholesale price. The individual dollar-value totals were then summed and each monthly total was related to the average monthly total for 1939. The resulting preliminary composite series was then equated to the more inclusive annual index to arrive at the published unadjusted series. Seasonal factors for the composite series were developed by the ratio-to-moving-average method from data for 12 of the 20 materials for which actual monthly data were available for the period January 1939-December 1946.

Monthly data for 1945-50 appear in the 1953, 1951, and 1949 issues of the Statistical Supplement. Monthly data for 1939-44 are shown in the Statistical Supplement to the Con-
struction Materials Report (1947), published by the compiling agency; the aforementioned report is out of print but may be referred to in the Department of Commerce field offices or in depository libraries.
${ }^{2}$ Compiled by the Federal Housing Administration. Data relate to the monthly or monthly average volume of home mortgages insured under the provisions of Title I-Sections 2 and 8, Title II-Sections 203, 213, 220, 221, 222, and 225, Title VI-Sections 603, 603-610, and 611, and Title IX-Section 903 of the National Housing Act.

Section 203 was approved June 27, 1934, as part of the original Act. No mortgages were insured under this section until January 1935.

The amendments of February 3, 1938, provided for the insurance of new home loans under Section 2. The first such loans were reported insured in April 1938. No insurance has been written under this section since March $1,1950$.

Section 603 approved March 28, 1941, provided for the insurance of mortgages on war housing, and was amended May 22, 1946, as part of the Veterans' Emergency Housing Program Mortgages were insured under the WH Program beginning in June 1941 and under the VEH Program beginning in July 1946. No insurance has been written under this section since April 30, 1948, except pursuant to commitments outstanding on that date or on mortgages given to refinance existing Section 603 insured mortgages.

Section 603-610 approved August 5, 1947, provided for mortgage insurance in connection with the disposition of publicly owned housing. The first such insurance was reported in December 1947.

The amendments of April 20, 1950 , provided for mortgage insurance under Section 8 on houses for families of low and moderate income, and for the insurance as single-family housing of site-fabricated projects under Section 611 and of sales-type cooperative housing under Section 213. Mortgage insurance under Section 8 was initially reported in August 1950 and the insurance of single-family home mortgages under Section 213 and Section 611 in February 1951 and July 1951, respectively.

No insurance has been written under Sections 8, 603-610, or 611 since August 2, 1954, except pursuant to commitments outstanding on that date.

Section 903 was enacted September 1, 195l, to supplement the existing systems of mortgage insurance in providing adequate housing in defense areas. The first mortgage insurance under this section was reported in February 1952.

The amendments of August 2, 1954, provided for mortgage insurance under Section 220 to assist in financing the rehabilitation of existing housing and the construction of new housing in slum clearance and urban renewal areas where Federal aid to slum clearances or urban renewal is being extended under the provisions of Title I of the Housing Act of 1949, or where the community has an approved workable program for the prevention and elimination of slums and blight. The 1954 amendments also authorized the FHA to insure under Section 221 mortgages on low-cost housing for families displaced by reason of governmental action in a community that has a workable program for the elimination and prevention of slums and urban blight, or where a Federally aided slum clearance and urban redevelopment project is being carried out.

Section 222, also added to Title II of the Act of 1954, establishes a system of mortgage insurance to aid in the provision of housing for servicemen in the Armed Forces and the Coast Guard, subject to certification by the Secretary of Defense (or the Secretary of the Treasury) to the effect that the serviceman requires housing, that he is serving on active duty, and has been on such duty for more than two years. The first mortgage insurance under Section 222 was reported in November 1954.

Finally, Section 225, added by the same amendments, authorized the insurance under other operating programs of "open end" mortgages containing a provision allowing the outstanding balance on the mortgage to be increased by additional amounts advanced to the borrower to pay for repairs, improvements, or additions to the property.

The series includes only those mortgages on properties on which final inspection of the completed home has been
made and the mortgage endorsed for insurance by the Federal Housing Administration. The data represent the aggregate face amount of the insured mortgages.

In addition to monthly and cumulative totals for the home mortgage series shown here, the monthly releases of the Federal Housing Administration provide data on the insurance of project mortgages on rental-housing projects under Sections 207, 220, and 221 and cooperative-housing mortgages under Section 213 of Title II, on the insurance of rental-housing mortgages, manufactured-housing loans, public-housing-disposition mortgages, and site-fabricated-housing mortgages under Sections 608, 609, 608-610, and 611, respectively, of Title VI, on military-housing mortgages insured under Title VIII, and on defense-housing-project mortgages insured under Section 908 of Titue IX. The FHA releases also show data on property-improvement loans insured under Section 2 of Title I of the National Housing Act.

Monthly data for 1949-50 are shown in the 1953 issue of Business Statistics.
${ }^{3}$ Compiled by the Veterans Administration. Data represent the principal amount of home loans guaranteed or insured under the authority of the Servicemen's Readjustment Act of 1944, as amended. The act was approved June 22, 1944, but loan-guaranty operations did not get under way until November 1944. All monthly figures cover month ending the 25 th day.

Title III, Section 501, of the act provides for the guaranty of loans to veterans, the proceeds of which are to be used for purchasing residential property or constructing a dwelling to be cccupied as the veteran's home or for the purpose of making repairs, alterations, or improvements in property owned by him and occupied as his home. Originally, only veterans of World War II were eligible. An amendment to the Act in July 1952 extended eligibility to veterans with service since June 27, 1950, the start of the Korean Campaign.

Originally, first mortgage home loans carried a guaranty of 50 percent of the loan, up to a maximum of $\$ 2,000$; the maximum guar anty was increased to $\$ 4,000$ in December 1945. An amendment to the act in 1950 provided, under certain conditions, that the amount guaranteed may be 60 percent of the loan and not over $\$ 7,500$. Private lending institutions make the loans, with the Government guaranteeing 50 or 60 percent of the loan, but in no case to exceed the above amounts. Under certain conditions the Yeterans Administration is authorized to lend up to $\$ 10,000$ directly to the veteran when private sources are not available.

Further details regarding veterans' loans are contained in the pamphlet GI Loans: The First 10 Years (Veterans Administration Pamphlet 4A-11).

Monthly data for 1947-50 are available in the 1953 and 1951 issues of the Statistical Supplement; monthly data for 1946 are available upon request. Prior monthly figures are not available. The total amount of home loans guaranteed from November 1944 through December 1945 was $\$ 192,240,000$.
${ }^{4}$ Compiled by the Home Loan Bank Board. Data represent the amount of Federal Home Loan Bank advances to member institutions, excluding interbank transactions. Member institutions comprise savings associations (i.e., building and loan associations, cooperative banks, homestead associations, and similar institutions), mutual savings banks, and insurance companies.

Monthly data for 1939-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement. Comparatively small revisions have been made in the monthly data beginning 1933 as shown in the 1942, 1940, 1938, and 1936 SUPPLEMENTS. Revised data are available upon request.
${ }^{5}$ Estimated by the Federal Savings and Loan Insurance Corporation from data reported monthly by insured savings and loan associations. The combined assets of these associations represent about 90 percent of the total assets of all savings and loan associations in the United States.

Statistics presented are estimates of the amount of mortgage loans closed during the periods specified by all institutions of the savings-and-loan type (including building and loan associations, cooperative banks, homestead associations, and similar institutions). In general, these
estimated totals are derived by expanding mortgage loans made by insured associations on the basis of the relationship between assets of insured institutions and total assets of all such associations.

Only loans on homes ( 1 - to 4 -family residential properties) are included in the construction and purchase loanpurpose categories. Loans on homes for any other purpose (e.g., refinancing, repairs and reconditioning, taxes and insurance), loans on residential structures with 5 - or morefamily units, and all nonhome loans are grouped in the miscellaneous category.

All federally chartered associations are required to be members of the Federal Home Loan Bank System, while membership is optional for State chartered associations.

Monthly data for 1936-50 are available in the 1953, 1951, 1949, 1947, 1942, and 1940 issues of the Statistical SUPPLEMENT.
${ }^{6}$ Compiled by the Federal Savings and Loan Insurance Corporation. Data are estimates of the total amount of nonfarm mortgages of $\$ 20,000$ or less recorded in the United States during the periods indicated. Estimates beginning 1946 are based on reports covering approximately 450 areas containing over one-half of the nation's l- to 4 -family dwelling units; the reporting sample was somewhat larger in earlier years. Data are limited to nonfarm mortgages of $\$ 20,000$ or less in order to relate the series as closely as possible to financing activity in the home-mortgage field. It should be noted, however, that all nonfarm mortgages within the size limitation are included.

Monthly data for 1939 and 1940 are shown on p. S-5 of the November 1942 SUrver; for 1944-46, on p. 21 of the May 1950 Survey. Monthly data for 1941-43 appear in the 1947 Statistical Supplement; for 1947-50, in the 1951 and 1953 issues.
${ }^{7}$ Compiled by the Federal Savings and Loan Insurance Corporation. Data represent the estimated total number of nonfarm real estate foreclosures in the United States and are based on reports from approximately 1,400 counties, cities, townships, and other governmental divisions; they indicate the number of properties acquired by mortgage lenders through foreclosure proceedings. App roximately three-fifths of all nonfarm l- to 4 -family dwelling units are included in the sample used.

Monthly data for 1934-50 are available upon request.
${ }^{8}$ Compiled by the National Board of Fire Underwriters. Data represent estimated direct incurred fire and lightning losses for buildings and contents reported to the agency to which is added an allowance for unreported and uninsured losses. Data do not include losses for automobiles and other classes of property written under marine forms, tornado, inland-marine, earthquake, sprinkler-leakage, explosion, war-risk, tourist-floater, registered-mail, parcelpost, riot, and civil-commotion insurance. Reinsurances in National Board companies also are excluded. The monthly figures are estimates based on reports by agents at the time fires occur. Monthly averages through 1953, however, are computed from data on aggregate property losses (including final adjustments) as indicated by annual surveys which, in some years, vary substantially from totals of the monthly figures. The 1954 monthly average is computed from the monthly figures shown.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953, 1951, 1949, 1947, 1942, 1940, 1938, 1936, and 1932. (Revised figure for October 1941, $\$ 30,833,000$.)

[^0]
## Page 41

${ }^{1}$ Compiled by McCann-Erickson, Inc., Central Research Department, and published monthly in Printers' Ink. (The indexes have been revised since publication of data in the 1953 issue of Business Statistics and in the monthly Survey prior to the April 1954 issue.) All series are based on national advertising and cover expenditures for media, talent,
and production. The indexes, therefore, are sensitive to both rate and volume changes.

The annual indexes given for years 1935-54 are not based upon a simple 12 -month average of the monthly indexes, since the accuracy of these monthly estimates is limited. The 1954 annual index is derived from preliminary dollar figures for the year; and the monthly indexes for 1954 used as benchmarks are derived from this later, more accurate series of dollar figures. All indexes prior to 1954 are derived from final dollar figures which become available approximately 6 months from the end of the year under consideration.

The base for all indexes, except the television index, is the average monthly expenditure for the particular medium under consideration during the years 1947-49. Television is based on the average for the years 1950-52. Each monthly index is seasonally corrected, the seasonal factors being determined by the method of 12 - month moving averages. Since the seasonal patterns are subject to change, they are recomputed annually on the basis of monthly records of the particular medium during the latest 3 years.

The business paper index is computed by converting page-volume figures to a dollar basis by means of a pagerate index computed from a representative sample of business papers in all classifications. (January 1948 is taken as the base month for this page-rate index.)

The index of magazine advertising is based on the reports provided by the Publishers' Information Bureau, Inc.; it includes advertising in national farm magazines, but excludes advertising in Sunday Supplements. An adjustment is made each month to take into account the variation in number of issues of weekly magazines in a month.

The index for newspaper advertising is based on monthly linage reports for 52 cities obtained from Media Records, Inc. These data are converted to 110 -city estimates by means of a linear relationship between the two groups of cities, and then converted to dollar figures by means of a rate index computed from a representative sample of newspapers throughout the country. The average month in 1946 is taken as the base month for this rate index.

The radio and television indexes are derived from gross national network billings reported by Publishers' Information Bureau; national spot billings, included in the old index, are now excluded. Dollar figures for television are adjusted for production costs and incorporated into the total expenditures. The television index is seasonally adjusted beginning with January 1953.

In order to insure proper weighting of the various components in the general index, each classification is adjusted to in lude art, mechanical, and talent costs, estimated at a fixed proportion of expenditures for that medium each month, so that the final adjusted expenditures represent all types of expenditures for the various media. The revised expenditures are totaled, seasonally adjusted, and related to the 1947-49 base to obtain the general index.

Separate monthly data prior to 1953 are not available for all indexes with the exception of the television index, for which monthly data are not available prior to 1952.
${ }^{2}$ Not seasonally adjusted prior to January 1953.
${ }^{3}$ Compiled by Tide Magazine, from a statistical method developed by J. K. Lasser \& Co. The combined index, representing national advertising only, comprises the following media: Newspapers; magazines; network radio; network television (included beginning 1949); outdoor advertising; farm publications; and business publications. Separate indexes are computed for each medium; no adjustment is made for seasonal variation.

The newspaper advertising component is based on general and automotive advertising linage in newspapers in 52 cities, as reported by Media Records, multiplied by the rate listed by Standard Rate and Data Service. The magazine index is based on gross magazine billings and the radio and television indexes on gross radio and television network billings of the National Broadcasting Company, the American Broadcasting Company, and the Columbia and Mutual Broadcasting systems, as reported by the Publishers' Information Bureau. The data for outdoor advertising are monthly revenues of
members of the Outdoor Advertising Association which comprises about two-thirds of all outdoor advertising, and for farm papers, advertising in 11 national farm papers as reported by Farm Publication Reports, Inc. The data on business publications are compiled by J. K. Lasser \& Company from a list of 122 business papers; monthly advertising pages are multiplied by the one-time page rate for each of the 122 papers to obtain monthly revenue figures.

Monthly data for 1950 appear in the 1953 edition of Business Statistics.
${ }^{4}$ Compiled by the Publishers' Information Bureau, Inc. Data represent gross network billings (time sold multiplied by the one-time rate charged for facilities) of the National Broadcasting Company, the Columbia Broadcasting System, the American Broadcasting Company (formerly the Blue Network of the National Broadcasting Company) and, except prior to October 1935, the Mutual Broadcasting System. Studio, production, and talent costs are not included. Data for the Mutual Broadcasting System are not available by classes prior to October 1935 and the amount included in the total and distributed by classes for October-December 1935, $\$ 497,000$, excludes data for the supplementary stations. The monthly average for the total for 1935 , including the Mutual Broadcasting System for all months, is $\$ 4,173,000$. Data since 1940 for the National Broadcasting Company, and also data for the American Broadcasting Company, are calculated by the compiling agency from time sales records and one-time gross rates.

Data for "electric household equipment," "financial," and "gasoline and oil" categories, shown separately in the 1953 issue of the Supplement and earlier issues, are included in "all other" in this edition of the Supplement. Data for "apparel and accessories" and for "housefurnishings and kitchen supplies," shown separately in the 1949 Statistical Supplement and earlier issues, are included in "all other" in later volumes. Figures beginning 1948 reflect certain changes in the classifications of the items included in the following categories: Electric household equipment; soap, cleanser, etc.; and toilet goods and medical supplies. Since data for individual items are not available, figures for earlier years cannot be adjusted for the transfer of the items involved. However, the comparability of data may not be significantly impaired by the changes made.

Monthly data for 1938-50 appear in the 1953, 1951, 1949, 1947, and 1942 issues of the SuPplement. Monthly figures for 1934-37 (except 1936 and 1937 figures for "all other") are available in the 1940 and 1938 SUPPLEMENTS and earlier monthly figures (except for minor revisions) are available on p. 20 of the September 1937 Surver; the figures for "automobiles and accessories" shown in those issues include data for "gasoline and oil" (separate monthly figures are not available for these series prior to 1938) and figures for "office furnishings" shown separately in those issues are now included in figures for "all other." The monthly averages for 1936 and 1937 for "all other" have been revised to correct inconsistencies in the classifications; corresponding monthly figures are not available.
${ }^{5}$ Annual indexes are based on revised data not allocated by months.

## Page 42

${ }^{1}$ Compiled by the Publishers' Information Bureau, Inc. Data represent gross time charges for network advertising on the following major television networks: ABC; NBC; Columbia; and Du Mont (not included in data for 1950). The figures exlude studio, production, wire, and talent costs. Net time charges-i.e., after application of size and frequency charges-in recentyears have been about 25 percent less than the gross charges.
${ }^{2}$ Compiled by the Publishers' Information Bureau, Inc. (Data have been revised since publication in the 1953 issue of Business Statistics and in the monthly Survey prior to the October 1954 issue.) Data represent advertising revenue of general magazines and national farm magazines. Space cost is based on the one-time rate; special rates are used
where applicable. Retail advertising and direct-mail advertising are not distributed according to individual classes, but are included in "all other" advertising. Figures for certain publications, not shown separately by industry classes for 1948, are also accounted for in "all other."

Basic data for industry class totals are reported on a cumulative basis only; therefore, monthly data are derived by subtraction. Figures from year to year may not be strictly comparable, as minor publications are added or deleted. Comparability of both the annual and monthly data may also be affected by shifts in the classifications of products. Comparable data prior to 1948 are not available.
${ }^{3}$ Data for Du Mont network not included.

## Page 43

${ }^{1}$ See note 2 for $p .42$.
${ }^{2}$ Compiled by Printers' Ink Publishing Company, Inc., and represents magazine advertising linage for the United States. The data have been estimated to include from 80 to 85 percent of all magazine linage and are regarded by the compilers and leading advertisers as a satisfactory measure of the trend of total advertising effort. The series does not cover identical magazines. It includes all linage currently reported to the compilers, including new magazines as reports become available, and thereby gives recognition to changes in advertising preference. For the monthly magazines represented, the data for each month are based on linage included in magazines dated the following month.

Monthly averages for 1913-28 and monthly data for 193850 appear in the $1953,1951,1949,1947$, and 1942 issues of the Statistical Supplement. Monthly data prior to 1938 are shown in the 1940,1938 , and 1936 Supplements and on p. 20 of the October 1933 issue of the Survey.
${ }^{3}$ Compiled by Media Records, Inc. Data represent newspaper linage in all newspapers, daily and Sunday, in the following 52 cities: Akron, Albany, Albuquerque, Atlanta, Baltimore, Birmingham, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Columbus, Dallas, Dayton, Denver, Detroit, El Paso, Fort Worth, Hartford, Houston, Indianapolis, Jacksonville, Knoxville, Los Angeles, Memphis, Milwaukee, Minneapolis, Nashville, New Orleans, Oakland, Oklahoma City, Omaha, Pittsburgh, Portland (Oreg.), Reading, Richmond, Rochester, Salt Lake City, San Antonio, San Diego, San Francisco, Seattle, South Bend, Spokane, St. Louis, Syracuse, Tacoma, Toledo, Tulsa, Washington, Worcester, and Youngstown. The list of cities is unchanged throughout the period covered by the data. General advertising is the advertising of specific products on general sale, as distinguished from the advertising of retail stores, and automotive or financial advertising. A series on department-store advertising, shown as a separate component of retail-store data, is also available from the original source.

Monthly data for 1938-50 appear in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement. For earlier monthly data beginning 1928, see the 1940, 1938, 1936, and 1932 Supplements (the figure for number of cities given in the total column in the latter volume is transposed and should be " 52 cities" instead of " 25 cities").

## Page 44

${ }^{1}$ Compiled by the $U$. S. Department of Commerce, Office of Bus iness Economics. These data represent selected series on personal consumption expenditures shown as a component of gross national product on $\mathbf{p} .3$.

The classifications shown are a regrouping of the detailed estimates published on an annual basis in table 30 of the National Income Supplement to the Survey Of Current BUSINESS ( 1954 edition) and the National Income number of the Survey Of Current Business, July 1955. The combinations, by group numbers as listed in that table, are as follows: Durable goods-automobiles and parts (VIII, la, b) ; furniture and household equipment (V,1-4; IX, 5); also
included in the total (II, 7; VI, 2; IX, 1, 4); nondurable goods-clothing and shoes (II, 1, 3, 4); food and alcoholic beverages (I, 1-4); gasoline and oil (VIII, ld); also included in the total (I, 5; III, $1 ; \mathrm{V}, 5-7,8 d ;$ VI, $1 ;$ IX, 2 3, 7; XII, 2); services-household operation (V,8a-c, 9-11); housing (IV); transportation (VIII, lc, e, f, 2, 3); also included in the total (II, 2, 5, 6, 8; III, 2; VI, 3-8; VII; IX, 6, 8-12; X; XI; XII, $1,3,4$ ).

In distributing the annual estimates on a quarterly basis, monthly and quarterly data prepared by governmental and nongovernmental agencies are employed. Among the sources used for estimating the movement of expenditures for goods are the retail-sales series of the Department of Commerce, department-store sales, by departments (Board of Governors of the Federal Reserve System), motor fuel taxed (Bureau of Public Roads), new car sales (Department of Commerce), retail prices (Bureau of Labor Statistics), farm-marketings data (Agricultural Marketing Service). For services, the principal sources used are as follows: Selected price series, such as rents and domestic service (Bureau of Labor Statistics); local transit revenues (American Transit Association); sales of electric power for residential use (Edison Electric Institute); sales of gas for residential use (American Gas Association); and telephone station revenues (Federal Communications Commission).

In general, the movement of a series, where considered representative of the movement of expenditures in a given group, is applied directly to the base. Where a single series is not considered wholly representative of a specific segment, weighted combinations of several related series are employed to obtain the desired result.

Quarterly data for 1939-50 may be obtained from table 51 of the National Income Supplement to the Survey Of Current Business, 1954 edition (referred to above).

## Page 45

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. The definition of sales of retail stores and the classification of stores by kinds of business are in accordance with the Census of Business, 1948. The breakdown between durable-goods stores and nondurable-goods stores is based on the durability of the commodities accounting for the major portion of the sales of each kind-of-business group.

In 1951 a basic change in the method of estimating retail sales was introduced. As a result the new series which starts in danuary 1951 is not comparable with the sales figures for earlier periods.

Census of Retail Trade data for the years 1929, 1933, 1935, 1939, and 1948 were used as benchmarks for the old series which is available for the period 1929-195l. Sales estimates in the intercensus years after 1935 were based in large part on changes in sales-tax collections of 20 States. These States accounted for about 40 percent of the total retail sales. Since data from all the States were not available over the entire period, and also since the States differed in the degree of detail shown for the kind-of-business breakdown, the number of States used in deriving the estimates varied in different years as well as for the different sales categories. The sales-tax data were further supplemented by special Internal Revenue Service compilations, business population trends, the Federal Reserve Board index of department-store sales, and data from the Bureau of Public Roads and the American Petroleum Institute on the taxable quantity and the average price of gasoline.

The monthly estimates of retail sales were derived from the monthly movement of sales as reported to the Bureau of the Census by a constant sample of large independent retailers and of chain stores.

Beginning with January 1951, a new procedure for estimating retail sales directly from blown-up sample data was introduced. The new estimates are not linked to a Census of Retail Trade base as were the old, a factor that accounts for most of the difference between the levels of retail sales for the year 1951 indicated by the old and new series.

The new monthly estimates are prepared by the Bureau of the Census from a sample of about 30,000 organizations con-
trolling and operating about 100,000 stores, each of which has been chosen wi th a known probability of selection. All organizations which in 1948 operated llor more retailstores are included in the sample. The sample also includes all department stores with sales of $\$ 5$ million or over in 1948. The remaining retail stores are represented by organizations located in 230 areas chosen at random, one from each of 230 primary strata. The sample within these areas is constituted as follows: For retail organizations which operated $l$ to 10 stores in 1948, the sample consists of (a) all "large" stores located in the area and (b) all small stores located in a sample of land segments selected at random within the sample areas. All new stores, regardless of size, which have come into existence within these samples of land segments are enumerated.

The estimates from this sample of reporting firms are derived essentially by weighting the reported sales of each member of the sample by a value dependent uponits probability of selection. A more detailed description of the sample may be obtained upon request from the Bureau of the Census.

The monthly estimates so derived are further adjusted for seasonal factors and trading-day variations by the Office of Business Economics.

Monthly data (old series) for 1951 appear on p .17 of the September 1952 issue of the Survey of Current Business; data for 1949-50 appear in the 1953 issue of Business StaTISTICS (total retail sales for December 1949 on p. 44 of that volume should read 13,154 instead of 13,514 ; March 1949 figure for grocery stores on p. 45 should read 2,056 instead of 3,056 ; and March 1949 figure for total automotive group on p. 46 should read 1,930 instead of 1,903 ). Monthly data for the old series prior to 1949 are available on request.
${ }^{2}$ Includes data for kinds of business not shown separately.
${ }^{3}$ Monthly averages for 1929 and 1933 are based on annual totals from the Census of Business for those years.
${ }^{4}$ Beginning with 1951, the monthly data presented are on the new basis. For comparative purposes, the 1951 average monthly sales on the old basis (italicized figures) are given above the averages for the new series. For a comparison of the new and old series by months for the year 1951, see the September 1952 issue of the Survey of Current Business.

## Page 46

${ }^{1}$ See note 1 for $p .45$.
${ }^{2}$ Includes data for kinds of business not shown separately.
${ }^{3}$ See note 3 for $p .45$.
${ }^{4}$ See note 4 for $p .45$.

## Pages 47 and 48

${ }^{1}$ See note 1 for p. 45.
${ }^{2}$ Includes data for kinds of business not shown separately.

## Page 49

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. These data represent estimated book values of nationwide retailers' inventories. For an explanation of methods of valuing inventories, see the 3 d and 4 th paragraphs of note 1 for $p$. 13.

The data shown are estimates of inventories held at the various kinds of stores and are not on a commodity basis. The breakdown into durable and nondurable inventories is
based on the durability of the commodities accounting for the major portion of the retailers' sales. Thus nondurable items carried by retailers dealing primarily in durable goods would be reported in durable-goods inventories.

A new Department of Commerce series on retail-store inventories has replaced the series previously compiled. The new series begins with December 1950. The old estimates for 1938 through 1950 are based on the Census of Business for 1939 and 1948 and are not comparable with the series described below.

The new estimates are comparable in concept and coverage to the new series on retail-store sales (see the description of this series in note 1 for $p$. 45). The new series of retail inventories involves a basic change in methodology adopted by the Bureau of the Census. Direct annual estimates of retail inventories starting with December 31, 1951 are now derived by the Bureau of the Census from blown-up sample data. The new estimates are not linked to a "Census of Retail Trade" base as were the old estimates.

Retail-inventory estimates for the year-end 1950 were derived by the Office of Business Economics by applying to the inventory estimate for December 31, 1951, the percentage change from 1950 to 1951 shown by the Census sample for those establishments reporting inventories both at the beginning and end of the year. These estimates were subsequently revised to conform with data for 1951 and 1952 published by the Bureau of the Census in the Annual Retail Trade Report for 1952. The year-end figures so derived were interpolated for the months of 1951 and 1952 and extrapolated thereafter by estimates derived by procedures essentially the same as used in the previously published series. The series shown here has not been adjusted to the estimates in the Annual Retail Trade Report for 1953.

The sample of establishments from whose inventory reports the new values for the year-end 1951 and 1952 were derived consisted of over 100,000 establishments, each of which was chosen with a known probability of selection. The estimates were derived from this sample of reporting firms by weighting the reporting inventories of each sample observation by a value dependent upon its probability of selection.

Other major sources for the annual estimates are as follows: Census of Business for 1939 and 1948 (providing yearend inventories for $1938,1939,1947$, and 1948); annual surveys of the Bureau of the Census (for inventories of independent stores); the Internal Revenue Service's Statistics of Income, Part 2 (annually 1938-50) for corporate year-end data; the Internal Revenue's compilations of noncorporate year-end data for $1938,1939,1944,1945,1946$, and 1947; and Federal Reserve data on department-store stocks. Monthly estimates are based on sources as follows: Bureau of the Census data for a sample group of multiunit retail organizations; Federal Reserve monthly data on stocks at furniture and department stores; Department of Commerce information on stocks of motor vehicles; other private and Governmental sources.

For a more detailed description of the new series which begins in December 1950, see pp. 14-16 of the November 1952 SURVEY and p. 18 of the January 1954 Sunvey. The latter issue also provides estimates of inventories for December 1950, 1951, and 1952 on the new basis and for December 1949 and 1950 on the old basis. For descriptions of the series published before the basic change in methodology adopted by the Bureau of the Census, see pp. 16 and 17 of the October 1951 Survfy and "Revised Estimates of Retail Inventories" in the June 1948 SURVEY.
${ }^{2}$ Figures beginning December 1950 represent the new series of retail inventories. For comparative purposes, data for the old series for December 1950 are also shown (see figures in italics).

## Page 50

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. The definition
of sales of retail stores and the classification of stores by kinds of business are in accordance with the Census of Business, 1948.

In the 1948 Census of Pusiness the term "chain stores" was not used as a Census designation. Organizations of two or more retail stores engaged in the same general kind of business and centrally controlled and operated were designated as "multiunits." The sales of these multiunits were further broken down into various groups of store units.

In 1951 a basic change in the method of estimating retail sales was introduced by the Bureau of the Census. As a result, the new series beginning with January 1951 is not comparable with the sales figures for the earlier period which are shown in italics.

The old series (designated by the Department of Commerce as "Retail Sales of Chain Stores and Mail-Order Houses") is available for the period $1929-51$ and represents sales of firms with 4 or more stores. The Census of Business data for the years 1929, 1933, 1935, 1939, and 1948 were used as benchmarks. The values for the intercensus years after 1935 were based on changes in sales of sample groups of organizations with 4 or more stores. Sample coverage of the individual lines of trade ranged from 30 to 90 percent of total sales of such stores in the year 1939. A detailed description of the sample and procedures is contained in the article "Retail Sales of Chain Stores and Mail-Order Firms" in the February 1944 issue of the Survey Of Current Business.

After 1951 the series representing sales of firms with 4 or more stores was discontinued and replaced by the new series beginning with January 1951. Because of sampling problems that could not be resolved, the new estimates of sales of multiunit organizations made by the Bureau of the Census cover only those organizations with 11 or more stores. These new figures are not linked to the 1948 Census of Business. The sample design includes all firms which in 1948 had 11 or more units. A detailed description of the procedures may be obtained by request from the Pureau of the Census.

Monthly data (old series) for 1951 appear on $p .19$ of the September 1952 issue of the Survey Of Current Business; data for 1949-50 appear in the 1953 edition of BuSiness Statistics. Monthly data prior to 1949 are available upon request.
${ }^{2}$ Includes data for kinds of business not shown separately,
${ }^{3}$ Catalog mail-order sales of all general-merchandise organizations were included in the old series. The new series includes these sales for firms with 11 or more units only. Total sales of catalog mail-order sales are now shown separately in the Department of Commerce series "Sales of All Retail Stores."
${ }^{4}$ Monthly average based on annual data from the Census of Business.
${ }^{5}$ Beginning with 1951, the monthly data presented are on the new basis. For comparative purposes, the 1951 average monthly sales on the old basis (representing firms with 4 or more stores; italicized figures) are given above the averages for the new series. A comparison of the new and old series by months for the year 1951 is presented in the September 1952 issue of the Survey Of Current Rusiness.

## Page 51

${ }^{1}$ See note 1 for p. 50. Seasonally adjusted data on an index basis for firms with 4 or more stores (old series) are available for the period 1935-5l and may be obtained upon request from the U. S. Department of Commerce, Office of Business Economics.

2 Includes data for kinds of business not shown separately.
${ }^{3}$ See note 3 for p. 50.
Page 52
${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System, with the exception of the collection ratios
prior to 1941 which were computed by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The data on sales by type of payment, the indexes of accounts receivable, and the collection ratios are computed from data reported to the Federal Reserve banks by the larger department stores located in all sections of the country and accounting for approximately 50 percent of total department-store business in the United States. The sample currently includes about 650 stores, more than 475 having charge accounts and about 400 having installment accounts. Collection ratios represent the ratio of total collections during the month to total amount of accounts outstanding at the beginning of the month. Collection ratios (installment accounts) were revised beginning January 1953 to exclude down-payment and trade-in data; the figures for January 1953 and later months are not strictly comparable with earlier data.

Monthly data for 1949-50 for accounts receivable are shown in the 1953 Statistical Supplement; for 1941-48, in the July 1952 Survey Of Current Business; 1940 figures are available upon request. Monthly data for 1941-50 for collection ratios and sales are shown in the 1953, 1951, 1949, and 1947 SUPplements. For monthly collection ratios for 1933-40, see the 1942, 1940, 1938, and 1936 Supplements.
${ }^{2}$ Compiled by the Board of Governors of the Federal Reserve System. The index measures changes in daily average sales and, for both the unadjusted and adjusted series, is computed by combining indexes of department-store sales for the 12 Federal Reserve districts described in note 3 following. The component indexes are combined with weights based on the relative importance of department-store sales in each district in total United States department-store sales in the base period 1947-49.

The district indexes are based on sample reports which in 1954 included, for all districts combined, approximately $\mathbf{1 , 5 7 5}$ stores which were estimated to account for about 89 percent of total department-store sales in the United States. Department-store sales account for approximately 6 percent of sales of all retail stores.

Annual averages of monthly indexes for 1919-28 appear on p. 32 of the February 1952 issue of the Survey Of Current Business. Monthly data for 1919-50 also appear in that issue, with the exception of several minor revisions as follows: Unadjusted data-for 1950 (April, 98; November, 123); adjusted data - for 1947 (March, 94; May, 98) ; for 1948 (February, 102; March, 101); for 1950 (January, 96; April, 101; July, 123; August, 112; December, 109).

A weekly index of department-store sales, available back to the beginning of 1937, is also compiled by the Poard of Governors, and is published regularly in the Weekly Supplement to the Survey Of Current Business. This index, computed on the basis of the 1947-49 average as 100 , is based on a smaller number of stores but shows changes closely similar to those indicated by the monthly index. The weekly index is not adjusted for seasonal variation, or for the number of trading days. A more complete description of the weekly series is published in the Federal Reserve Bulletin for April 1952.
${ }^{3}$ Computed by the Federal Reserve Banks for the specified districts, following a general method worked out by Federal Reserve System representatives. The indexes are based on monthly reports of cooperating stores, including independent and chain department stores and retail outlets (but not catalog sales) of two large mail-order houses. The reporting samples in 1954 were estimated to account for more than 90 percent of total department-store sales in the Atlanta, New York, St. Louis, and San Francisco districts, and from 75 to 89 percent in the other eight districts. The samples include stores in virtually every department-store trading area of importance.

The majority of the district indexes are computed directly from the daily average sales of the reporting sample, believed to be representative of total department-store sales in the district. For five of the districts, the district index is obtained by combining separate indexes for various parts of the district. For the Atlanta and San Francisco districts, individual city and area indexes are combined; for Richmond, the combined index is obtained from separate State indexes and, for Philadelphia and Minneap-
olis, from a major city and an "all other district" index. In each case the component indexes are combined with weights. In computing the district indexes, or the component parts of a district index, the monthly sales of the stores included in the index sample are summed and these monthly totals are then divided by the number of trading days in the month to obtain daily average sales. The daily average sales are converted to index numbers by dividing each by the daily average sales during the base period 194749. Where necessary, this base is adjusted for changes in the number of reporting stores. The indexes have been adjusted to 1939 and 1948 Census levels if necessary. Seasonal adjustment factors are computed by the method described in the Federal Reserve Rulletin for June 1941. A special adjustment is made in the March and April seasonal factors to allow for changes in the date of Easter. In most cases where the total district indexes are obtained by combining separate indexes for various cities or areas within the district, each of the component series is adjusted for seasonal variation before being consolidated into a district index.

In computing the number of trading days, Sundays, New Year's Day, Memorial Day (except in the Atlanta and Dallas districts), Independence Day, Labor Day (except in the Dallas district), Thanksgiving, and Christmas are considered nontrading days. Allowance is made also for February 22 in the Roston, New York, and San Francisco districts. In the Boston, Chicago, Kansas City, Richmond, St. Louis, and San Francisco districts, special allowances are made for differ ences in the relative importance of particular days in the trading week.

Annual averages of monthly indexes prior to 1929 and monthly data prior to 1951 for individual districts are available upon request.

## Page 53

${ }^{1}$ See note 3 for $p$. 52 for all items except adjusted sales for total United States.
${ }^{2}$ See note 2 for $p .52$.

## Page 54

${ }^{1}$ See note 3 for p. 52.
${ }^{2}$ Compiled by the Board of Governors of the Federal Reserve System. The index is computed by combining district indexes, compiled by the respective Federal Reserve banks in cooperation with the Board of Governors, on the basis of the relative importance of the retail value of stocks in each district in the base period ( $1947-49=100$ ). The indexes are computed from end-of-month figures on retail value of stocks held in the stores or warehouses, as reported by a sample group of stores. Most of the stock indexes are based on somewhat smaller samples than the corresponding sales indexes described in note 3 for p. 52. In 1954, reports were received from around 1,100 stores, including a representative number of retail outlets of mail-order companies, which accounted for about 75 percent of estimated total depart-ment-store stocks. The stock indexes have been tied to sales indexes which are adjusted to levels indicated by 1939 and 1948 Census data. Whenever necessary, because of a change in sample, the base of the index is adjusted for changes in the number of reporting stores by a procedure similar to that used in the computation of the index of de-partment-store sales. For a more detailed description of the indexes see the Federal Reserve Bulletin for December 1951. The indexes are adjusted for customary seasonal movements by the method described in the Federal Reserve Bulletin for June 1941. It was found that no special adjustment for the changing date of Easter was necessary as in the case of department-store sales.

Annual averages of monthly indexes for 1919-28 appear on p. 32 of the July 1952 Sunvey. Monthly data for 1919-50 also appear in that issue with the exception of the follow-
ing revisions: Unadjusted data for 1949 (February, 97; June, 94), for 1950 (March through December, respectively107, 109, 107, 99, 95, 105, 119, 134, 137, and 109); adjusted data for 1947 (January, 94; March, 93; October, 94). for 1948 (March, 107; September, 108), for 1949 (August, 97; October, 99; November, 100), and for 1950 (April through September, respectively- $103,104,104,104,109,115$; and November, 121).
${ }^{3}$ Reported to the U. S. Department of Commerce, Office of Business Economics, by the two companies. Sales shown are gross sales for calendar months, and include both catalog and store sales. The number of stores of the two companies has increased very considerably in the period covered.

Monthly data for 1941-50 appear in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; those prior to 1941, in the $1942,1940,1938,1936$, and 1932 volumes.
${ }^{4}$ Constructed by the U. S. Department of Commerce, Office of Business Economics. The indexes are computed from data supplied by large mail-order houses and a chain-store system which also serves the rural population. The number of reports received from independent stores doing business in small communities was insufficient for inclusion in this series. The companies which cooperate in supplying figures are: Aldens Incorporated (formerly Chicago Mail Order House), Montgomery Ward \& Company, Sears, Roebuck \& Company, and J. C. Penney Company.

Although the figures obtained provide a fairly large sample of rural sales, it should be noted that this sample is not entirely representative. The character of the business done by small independent rural stores is not identical with that of the large companies, and the trend of their sales may differ from that of the larger units. Despite its obvious limitations, the index should provide a better indication of the volume of rural purchasing of general merchandise than is provided by the sales of a limited number of individual companies.

For the three mail-order companies, only catalog sales (the bulk of which goes to persons in communities of less than. 10,000 population) are used; the sales of retail stores maintained by the mail-order companies are excluded from the index, because such stores engage in a large volume of urban trade.

Total sales of the four companies (as used in the index) represent about one-third of all general-merchandise sales in places of less than 30,000 population, according to the 1948 Census of Business.

Figures are provided by the J. C. Penney Company, comparing sales for each month with sales of the same stores in the corresponding month of the preceding year. The effect of expansion in the number of store units is therefore eliminated.

In constructing the index, daily average sales of the four firms in the four regions are related to the 1935-39 average, and adjusted for seasonal variation by the "ratio to moving average" method. To obtain regional indexes, the relatives for the four companies are weighted by regions in accordance with the proportion of total sales represented by each company in the base years and averaged arithmetically. For sales of the J. C. Penney Company, allowance is made in adjusting the data to a daily-average basis for the varying sales importance of the different days of the week, for Sundays, and for six legal holidays. For mail-order sales, allowance is made for Sundays and one-half day for Saturdays for two mail-order companies and one full Saturday for the third. No adjustment is made for the changing date of Easter.

The composite index for the country as a whole is computed from the total sales figures of each of the four firms, rather than by weighting and combining the regional indexes. A more complete description of the index appears on p. 20 of the December 1934 Surver.

Monthly data for 1945-50 appear in the 1953, 1951, and 1949 issues of Business Statistics. Monthly data for 192944 are available upon request. The index of rural sales was discontinued after release of data for December 1954.

## Page 55

${ }^{1}$ See note 4 for p. 54.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. The series, which begin with 1939, represent sales and inventories of all wholesalers and are based on the definitions and classifications in the 1948 Census of Business (except as noted in the following paragraph) and on the 1939 Census of Business data which have been recast to conform to the 1948 Census. Groups of wholesalers represented in the series are as follows: Merchant wholesalers (designated "service and limited-function" wholesalers in censuses prior to 1948) ; manufacturers' sales branches and offices; agents and brokers; assemblers (mainly of farm products); petroleum bulk stations; and wholesalers.' administrative offices and auxiliary units for which data were collected for the first time in the 1948 Census.

The exceptions to the definitions and classifications shown in the 1948 Census of Business are as follows: (1) Operations of corporate manufacturers' sales branches and offices and marketing stations of petroleum refiners have been excluded, since sales and inventories of these branches are covered in the manufacturing series of the Office of Business Economics; (2) sales of agents and brokers are included on the basis of actual receipts of the agents and brokers rather than as the total value of goods sold as reported in the Census of Business.

Wholesalers' inventories are valued at cost of merchandise on hand. Thus the data represent changes in costs as well as in physical volume. In deriving the gross national product, these data are adjusted to remove the effects of changes in replacement costs (see explanation of "inventory valuation adjustment" in note 1 for $p$. 2).

The major sources of information used in estimating statistics of wholesale trade are as follows: Census of Wholesale Trade for the years 1939 and 1948; the Internal Revenue Service's Statistics of Income, Part 2 (annually 1938-50), for corporate data; the Internal Revenue Service's compilations of noncorporate data on sales in 1939, 1945, and 1947 and of year-end inventories for 1938, 1939, 1944, 1945, and 1947; and for monthly estimates, "identical firm" sample of merchant wholesalers reporting stocks and sales to the Bureau of the Census. Until mid-1954, the sample consisted of approximately 4,000 merchant wholesalers. Since that time, a new and enlarged sample has been introduced by the Bureau of the Census, designed to provide dollar estimates for all merchant wholesalers by kinds-of-business groups.

In addition to the sources named above, data are utilized from various other Government agencies (including the Bureau of Mines, the Bureau of Labor Statistics, and the Agricultural Marketing Service) and from private research agencies. For a more detailed description of the sources used in compiling the series, see pp. 17 and 18 of the October 1951 Survey Of Current Business and p. 13 of the October 1952 issue. The only significant subsequent change in methodology has been the use of the new Bureau of the Census sample in obtaining monthly estimates for all merchant wholesalers. It should be noted that the series shown here have not been revised to the Internal Revenue Service's corporate tax returns for 1951 and 1952 or to the Bureau of the Census Annual Wholesale Trade Report for 1953.

Monthly data prior to 1951 are available upon request.

## Page 56

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data represent the latest published estimates for the specified dates. These estimates are based on the 1930, 1940, and 1950 censuses, taken as of April 1 of these years; on statistics and estimates of births and deaths, provided by the National Office of Vital Statistics, United States Public Health Service; statistics on the movement of civilian citizens and aliens to and from continental United States, provided by the Immigration and Naturalization Service, Department of Justice; and data on the size of the armed forces, obtained from the Department of Defense. Census figures were obtained by complete enumeration of the
population in continental United States, information generally being secured by personal interview. The intercensal and postcensal estimates given here are consistent with the Census figures in that they imply the same general level of net understatement that quite likely occurs in the censuses. The figures for births and deaths used in making these estimates include allowances for underregistration.

Estimates relate to the first day of the specified month. Estimates in this series for months other than January and July are not available except for the period April 1950 to date. Revised monthly data for April-December 1950 are as follows (thousands): 151,132; 151,292; 151, 476; 151,683; 151,921; 152,174; 152,416; 152,647; 152,860. Note that data for 1935-39 as shown in the STatistical SUPPLement prior to the 1953 issue are here revised to include the overseas armed forces.

These estimates are not comparable with those for the noninstitutional population and the labor force given in the adjacent columns. The former figures take account of more recent data relating to births, deaths, and immigration than do the estimates of the noninstitutional population shown here and used in processing the labor force data obtained in the sample surveys. Moreover, the labor force data refer primarily to the survey week (the calendar week containing the 8 th day of the month).
${ }^{2}$ Estimates beginning 1940 are compiled by the $U$. S. Department of Commerce, Bureau of the Census. (See note 3 below for source and description of earlier data.) The estimates (through December 1952) are based on the 1940 census and the compiling agency's cross-section survey which provides information on the employment characteristics of the population 14 years of age and over. This information is obtained through personal interviews each month with a sample of about 25,000 dwelling units and other living quarters throughout the country selected by scientific sampling methods. The figures relate to the calendar week (Sunday to Saturday) which contains the 8th day of the month.

In preparing the estimates, the sample results are inflated to independent estimates of the population derived by projecting the results of the most recent census for which data are available at the time. The sample figures from 1953 forward were inflated to population data based on the 1950 census, whereas those for 1952 and earlier years were inflated to population projections based on the 1940 census. This change in the population base starting in 1953 had the effect of raising the labor force level by roughly 400,000 and the agricultural and nonagricultural employment levels by roughly 250,000 and 150,000 , respectively. Appropriate allowances should be made in comparing the statistics for 1953 and later years with those for the earlier period. The upward adjustment of the labor-force level was introduced gradually over the period January-March 1953. In comparing monthly estimates prior to January 1953 with subsequent data, the rough adjustment factors shown below could be added to the pre-1953 figures.

|  | Employment |  |  | Persons not in the labor force |
| :---: | :---: | :---: | :---: | :---: |
|  | Total | Agricultural | Nonagricultural |  |
| January............ | 130,000 | 80,000 | 50,000 | 70,000 |
| February............ | 260,000 | 160,000 | 100,000 | 140,000 |
| March-December. .... | 400,000 | 250,000 | 150,000 | 200,000 |

The statistics for 1953 have been revised to link the series more closely to the estimates for 1954, which are based on a new sample introduced in January 1954 covering 230 areas (although still retaining the overall size of 25,000 sample units). Data prior to 1954 were based on a sample which covered 68 areas.

The population covered by these estimates, referred to as the "noninstitutional population" 14 years of age and over, comprises all civilians living within the continental limits of the United States (except inmates of penal and mental institutions, tuberculosis sanitariums, homes for the aged, infirm, and needy, and-during 1942 to 1945-War Relocation Camps) and persons in the armed forces. These
estimates may not be fully consistent with other estimates of population published by the Census Bureau. The inconsistency results in part from the fact that other estimates of the population, published in reports specifically devoted to that subject, are revised as more data relating to births, deaths, immigration, and other factors affecting population size become available. The estimates shown here are included primarily to permit computation of labor-force rates and similar statistics and are not intended to be used as precise estimates of the population itself. Definitions of the major categories within which the noninstitutional population is classified are given in the following paragraphs.

Labor force. -The civilian labor force includes all persons who were either employed or unemployed, in accordance with the criteria given below. The total labor force also includes the armed forces, for which monthly estimates are obtained from official records of the Department of Defense. The armed forces figures include those stationed abroad. The total labor force figures prior to 1953 in this volume have been adjusted to include some 150,000 members of the armed forces stationed outside the United States at the time of the 1940 census who were excluded from the series shown in earlier volumes of the SUPPLEment.

Employed.-Employed persons comprise those who, during the survey week, were either (a) "At work"-those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or business; or (b) "With a job but not at work"-those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of vacation, illness, labor-management dispute, bad weather, or temporary lay-off with definite instructions to return to work within 30 days of layoff; also included are persons who had new jobs to which they were scheduled to report within the following 30 days.

Unemployed. -Unemployed persons include those who did not work at all during the survey week, and who were looking for work. Also included as unemployed are "inactive unemployed" persons who would have been looking for work except that (a) they were temporarily ill, (b) they expected to return to a job from which they had been laid off for an indefinite period, or (c) they believed no work was available in their line of work in the community. During the period in which public emergency work projects were being conducted by the Works Project Administration, the National Youth Administration, the Civilian Conservation Corps, and State and local work relief agencies (this period ended about June 1943), persons at work on, or assigned to, such projects were also included among the unemployed. Of the two NYA programs, only the out-of-school program was considered as emergency work; youths in the NYA Student Work program were classified as "in school" and not in the labor force.

Not in the labor force.-All persons 14 years of age and over in the noninstitutional population who are not classified as employed or unemployed are defined as "Not in the labor force." The group includes all persons reported as keeping house, in school, retired, too old or permanently unable to work, seasonal workers for whom the survey week fell in an "off" season, and the voluntarily idle. Also included are those doing only incidental unpaid family work (less than 15 hours) during the survey week.

The estimates of nonagricultural employment obtained by direct household interview differ appreciably from those compiled by the Bureau of Labor Statistics (p. 57) based on reports from business establishments. The differences are accounted for principally by the fact that the BLS figures do not include domestic service workers, the self-employed, and unpaid family workers. The remaining differences are due to several factors of which the most significant are (l) the BLS estimates, based on employment and payrolls reported by a sample of business establishments, may include some persons under 14 years of age, and some who, by holding two or more jobs or by changing jobs in the reported week, are counted more than once; (2) both estimates are based on samples and thus are subject to sampling error; (3) the Census estimates include employed persons temporarily away from work, who will not be reported in the BLS sample by their employers during the corresponding payroll period unless they received pay; and (4) the Census estimates relate to employment in the week including the 8 th of the month, while
the BLS estimates refer,in general, to employment in the payroll period ending nearest the 15 th of the month, so that the BLS figure will often represent a later week than the Census figure.

Monthly data for 1941-50 are published in the 1951 and 1947 issues of the STATISTICAL SUPPLEMENT (as noted above, data therein do not include 150,000 members of the armed forces overseas; they exclude detail by sex for "unemployed" and "total labor force"). The series shown in the 1953 SUPPLEMENT exclude armed forces. Monthly data are available only beginning March 1940 (figures shown on monthly average lines prior to 1940 are annual estimates). March 1940 data were based on revised decennial census data covering the week of March 24-30. Estimates for April 1940 were interpolated from the data for March and the sample survey estimates for May. The 1940 averages include an allowance for January and February. The March-December 1940 monthly figures are available upon request.

More complete descriptions of these data and additional detail by age and sex, hours worked, duration of unemployment, etc., are given in the following publications of the Bureau of the Census: Issue of the Labor Force Bulletin entitled "Labor Force, Employment, and Unemployment in the United States, 1940 to $1946^{\prime \prime}$ and "Current Population Re-ports-Labor Force, Series P-57," published monthly.
${ }^{3}$ Estimates of the labor force for years prior to 1940 were constructed by the U. S. Department of Labor, Bureau of Labor Statistics, to provide a historical series comparable in concept to the estimates issued by the Bureau of the Census beginning that year. The population censuses of 1930 and 1940 were used as benchmarks, after adjustments for comparability with the current labor force concepts and enumeration procedures of the Bureau of the Census, and a further adjustment of the 1940 census data to include 150,000 members of the armed forces who were stationed outside the United States at the time of the 1940 census, as stated in note 2 above.

Intercensal estimates were constructed as follows: Total labor force-Estimates were based on a straight-line interpolation of age-sex specific worker rates (i.e., percentages of the population in each 5 -year age sex group who were in the labor force) between the adjusted Census benchmarks, extended backwards to 1929. The worker rates were then applied to Census population estimates, by age and sex, for each year, to yield the estimates of the total labor force. Civilian labor force-Estimates of the armed forces, including those outside of the continental United States, were obtained directly from the armed services, and were subtracted from the total labor force to provide estimates of the civilian labor force. Total employment-Agricultural employment was estimated on the basis of the movement of the farm employment series of the Bureau of Agricultural Economics. The estimates of nonagricultural wage and salary workers, excluding domestics, were based on the movement of the revised estimates of employees in nonagricultural establishments, prepared by the Bureau of Labor Statistics. Independent estimates of the nonagricultural self-employed and of domestics were developed on the basis of data from the Censuses of Manufactures, Business, and Construction, and from other available sources. Unemployment-Estimates of unemployment were derived by subtracting the estimated total employment from the civilian labor force.
${ }^{4}$ Data represent midyear estimates, not monthly averages.

## Page 57

${ }^{1}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning September 1954, the estimates are also adjusted for seasonal variation by the BLS; prior to that time, the adjusted data were compiled by the Board of Governors of the Federal Reserve System. The estimates of nongovernmental employees include all full-time and parttime workers in nonagricultural establishments who worked during, or received pay for, the pay period ending nearest the 15 th of the month. Employment in Federal Government establishments relates to persons who worked on, or received pay for, the last day of the month. Persons who worked in
more than one establishment during a single reporting period are counted more than once. "All employees" include production and related workers (for definition see note 3 for p. 59) and workers engaged in the following activities: Executive, purchasing, finance, accounting, legal, personnel (including cafeterias, medical, etc.), professional and technical activities, sales, sales-delivery, advertising, credit collection, installation and servicing of own products, routine office functions, factory supervision (above the working-foreman level), and force-account construction work. Proprietors, self-employed persons, unpaid family workers, domestic servants, and personnel of the armed forces are excluded. For a discussion of the difference between these estimates of employees in nonagricultural establishments and estimates of nonagricultural employment by the Bureau of the Census, see note 2 for p. 56.

In preparing employment estimates, the Bureau of Labor Statistics establishes a benchmark or level of employment, representing a complete count or an estimate with a satisfactory degree of accuracy, which is carried forward on the basis of monthly reports from a sample group of establishments. Estimates prepared since the last benchmark are reviewed and revised if any adjustment in the level is required. Currently, the benchmark period is the first quarter of the year; the estimates shown in the present volume have been adjusted to the first quarter 1954 benchmark.

Prior to 1939 the various industrial censuses taken by the Bureau of the Census were used as sources of benchmark data for private employment. Since that time, the primary source for benchmark materials has been the employment covered under the social-security program: (l) Employment in firms liable to contributions to the State unemployment compensation funds; (2) data from the Bureau of Old-Age and Survivors Insurance on employment in firms exempt from State unemployment insurance laws because of their small size. Information from these two sources covers a substantial number of the persons engaged in nonfarm employment in each State. Special benchmarks are used for industries not covered by the social-security program. Services for Federal, State, and local governments, and services performed for religious, educational, and charitable organizations are among the more important exclusions from the social-security program. State and local government benchmarks are based on data reported to the Bureau of the Census, and the data on Federal Government employment are made available by the U. S. Civil Service Commission. The Interstate Commerce Commission is the source for railroads.

In general, month-to-month changes reflect fluctuations in employment shown by establishments in many different industries reporting to the Bureau of Labor Statistics. Because the existence of new firms is not readily ascertainable, such firms are frequently introduced into the reporting samples after they have been in operation for some time. The lapse of time in taking account of new firms produces a consistent understatement. This bias is corrected in the periodic adjustments to benchmark data.

Since publication of the 1953 Statistical Supplement the employment and the hours and earnings series have been revised beginning 1953 to adjust to levels indicated by the first quarter 1954 benchmark. (Estimates on the revised basis were first published in the May 1955 Survey of Current Business.

Basic revisions for all series (including the adoption, for manufacturing industries, of the 1945 Standard Industrial Classification and the reclassification of reporting establishments according to annual sales volume of their major postwar product) have resulted in a lack of historical continuity, prior to 1947, for many industries and in a substantial change in the list and definitions of the industries for which statistics are prepared. These data were first published in the October 1949 Sunvey and were more fully explained in the 1951 Statistical Supplement.

The methods and sources used in preparing the estimates are described in detail in the monthly Employment and Earnings report of the Bureau of Labor Statistics. Estimates of all employees and of production workers for over 140 mining and manufacturing industries, and estimates of nonagricul-
tural employment by industry divisions and by States are published monthly in that report.

Since publication of the 1953 Statistical Supplement, revisions have been made beginning 1939 in the finance, Government, and total nonagricultural employment divisions, and beginning 1945 in the service and miscellaneous division. Monthly data for 1947-50 for all series are available from the compiling source. Monthly figures for 1939-46 (comparaable with data shown in this volume) are available for all major industry divisions, and are published in part (except for the recently revised series noted above) as follows: In the 1949 and 1947 issues of the Statistical Supplement-194l-August 1946 monthly figures for all divisions except trade (use the 1949 volume for monthly figures beginning 1945); in the December 1950 Survey, p. 22-1939-46 monthly figures for trade; in the November 1949 Survey, p. 24-September-December 1946 figures for all major divisions except trade; in the May 1947 Sunvey, p. 22-1939-40 monthly figures for all major divisions except trade.

Monthly data for the subgroups of mining and trade are available beginning 1939. Monthly data prior to 1947 are not available for the subgroups of transportation and public utilities; service; and the industry groups of retail trade (except for general merchandise stores for which data are available beginning 1939).
${ }^{2}$ The manufacturing division includes privately operated establishments engaged in the mechanical or chemical transformation of inorganic or organic substances into new products; such establishments are usually described as plants, factories, or mills which characteristically use powerdriven machines and materials-handling equipment. Establishments engaged in assembling component parts of manufactured products are also considered manufacturing if the new product is neither. a structure nor other fixed improvement. Governmental manufacturing operations such as arsenals and navy yards are excluded from manufacturing and included with the Government division.
${ }^{3}$ The mining diyision includes establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; as well as various contract services, such as removal of overburden and tunneling and shafting in surface or underground mining and the drilling or acidizing of oil wells. Also included are establishments engaged in dressing, beneficiating, or concentration of ores. Smelting and refining of ores and production of coke from coal are included in manufacturing industries; transportation of petroleum products by common-carrier pipelines is included in the transportation and public utilities division.
${ }^{4}$ The contract construction division includes only those private firms engaged in the construction business which work on a contract basis for others. There are three major types of contractors included: General contractors who ordinarily assume responsibility for an entire construction project and may subcontract those portions of the job requiring special skills or equipment; special trade contractors, specializing in such activities as plumbing, painting, electrical work, carpentry, etc., installation of prefabricated building equipment and materials, etc., who may not only work under a subcontract for the general contractor, but may also work directly for the owner; and nonbuilding contractors primarily engaged in heavy construction, such as highways, bridges, airports, water-power projects, and marine construction. Excluded from this division is force-account construction which is classified according to the principal activity normally carried on in the establishment.
${ }^{5}$ The transportation and public utilities division covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services (except that radio and television broadcasting are classified in the service and miscellaneous division); or providing electricity, gas,
steam, water, or sanitary service. Similar Government establishments are included with the Government division.
${ }^{6}$ Data refer to privately operated lines only. Note that the hours and earnings series prior to January 1953 (shown on pp. 67, 73, and 77) pertain to both privately operated and government-operated establishments.

## Page 58

${ }^{1}$ See note 1 for $p .57$.
${ }^{2}$ See note 5 for $p .57$.
${ }^{3}$ The wholesale- and retail-trade division includes establishments primarily engaged in the buying, selling, and rendering of services incidental to the sale of tangible goods as distinct from securities and from services.

The wholesale-trade subdivision includes all establishments engaged in selling merchandise to retailers; to other wholesalers; to institutions, restaurants, and hotels; and to other industrial users. Also included are full-service and limited-function wholesalers, agents and brokers, commission merchants, manufacturers' sales branches with or wi thout stocks, sales agents, assemblers and country buyers of farm products, and lumber and building-material wholesalers.

The retail-trade subdivision includes all types of establishments engaged in selling merchandise for personal or household consumption, and rending services incidental to the sale of goods. (Note that hours and earnings data for retail trade, shown on pp. 67, 73, and 78, relate only to nonsupervisory employees in all retail trade industries except eating and drinking places.)
${ }^{4}$ Data for the wholesale- and retail-trade and service and miscellaneous divisions, beginning with 1939, are not comparable with data for earlier years because of the shift of the automotive repair service industry (involving 92,800 employees in 1939) from the trade to the service division.
${ }^{5}$ The finance, insurance, and real-estate division includes establishments operating in the fields of finance (banks-including Federal Reserve Banks and the mixed-ownership banks of the, Farm Credit Administration, security dealers, loan agencies, holding companies, and other finance agencies); insurance (insurance carriers and independent agents and brokers) ; and real estate (real-estate owners, including speculative builders, subdividers, and developers, and agents and brokers).
${ }^{6}$ The service and miscellaneous division includes establishments rendering services to individuals and business firms, such as hotels and other lodging places; personal, business, repair, and amusement services; medical, legal, engineering, and other professions; educational institutions, nonprofit membership organizations, and various other services. Agricultural services, forestry, fishing, and service establishments, not elsewhere classified, are also included. All government-operated establishments (such as hospitals, museums, and schools, etc.) and all domesticservice employees are excluded.
${ }^{7}$ The government division includes Federal, State, and local governmental establishments primarily engaged in activities which are peculiarly governmental in character, as well as all government-operated establishments and institutions (arsenals, navy yards, hospitals, etc.), government corporations, and government force-account construction. The figures relate to civilian employment only.
${ }^{8}$ Not comparable with preceding data; see note 4 for this page.
${ }^{9}$ Not comparable with earlier data; average for 1947 comparable with preceding figures in italics, 582,000 employees.
${ }^{10}$ Data reflect work stoppage.

## Page 59

${ }^{1}$ Effective September 1954, the estimates of all employees are adjusted for seasonal variation by the U. S. Department of Labor, Bureau of Labor Statistics; prior to that time by the Board of Governors of the Federal Reserve System. The seasonal adjustment allowances have been computed on an overall basis for each major industry division with the exception of the manufacturing and the transportation and public-utilities divisions. For manufacturing, separate adjustments have been made for the salaried workers and the production workers by major industry groups. For the transportation and public-utilities divisions, separate adjustments have been made for transportation, communications, and other public-utilities groups. The seasonal adjustments have been brought in line with the Bureau of Labor Statistics data for all of the major industry groups beginning 1939.

Since publication of the 1953 Statistical Supplement and earlier volumes, the monthly estimates have been revised periodically to adjust to more recent benchmarks of actual employment. In addition, revisions have been made beginning 1939 in the finance, Government, and total nonagricultural divisions, and beginning 1945 in the service division. (See note 1 for $p$. 57.) Revised monthly figures are available upon request to the compiling source. Published figures for the following series may be found as noted: Monthly data for 1939-46 for manufacturing and trade are shown on p. 23 of the December 1950 Survey; monthly data for 1946 for mining, contract construction, and transportation and public utilities, on p. 22 of the May 1950 Survey. Monthly figures for 1945 for all of the aforementioned series are shown in the 1949 Statistical Supplement.
${ }^{2}$ Data for the wholesale- and retail-trade and service divisions, beginning with 1939, are not comparable with data for earlier years because of the shift of the automotive repair service industry from the trade to the service division.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The employment estimates and the employment indexes on $p .63$ relate to all full-time and part-time production and related workers (prior to 1945, wage earners) in private manufacturing industries, who worked during, or received pay for, the pay period ending nearest the 15th of the month. The weekly payroll index, also on p. 63, relates to the amount of payroll for the identical week. Governmental manufacturing operations such as arsenals and navy yards are excluded. "Production and related workers" include working foremen, and all nonsupervisory workers (including leadmen and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, mainte nance, repair, janitorial and watchman services, products development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with the above production operations. The term was substituted for wage earners in 1945 to conform to the terminology and standard definition of classes of workers in manufacturing industries formulated by the Division of Statistical Standards, U. S. Bureau of the Budget. The change has no appreciable effect on the comparability of the data, since there is very little difference in the definitions.

Effective September 1949, the production-worker employment series was revised as explained in the 6th paragraph of note $l$ for $p$. 57. The descriptions of the industries within the manufacturing division are based on the 1945 Standard Industrial Classification, and generally adhere to the basic definitions. The series shown here include all major industrial groups, and selected principal industries included in the original reports.

In preparing employment estimates, the Bureau of Labor Statistics'establishes a benchmark or level of employment. representing a complete count or an estimate with a satisfactory degree of accuracy, which is carried forward on the basis of monthly reports from a sample group of cooperating
establishments. Estimates prepared since the last benchmark are reviewed and revised if any adjustment in the level is required. Currently, the benchmark period is the first quarter of the year.

Because the existence of new firms is not readily ascertainable, they are not introduced into the monthly sample until they have been in operation for some time. The lapse of time in taking into account new firms causes a downward bias. This bias is corrected in the periodic adjustments.

The level of the employment estimates beginning with 1939 is determined mainly by employment covered under the social-security program, relating to workers covered by State unemployment compensation programs, and data from the Bureau of Old-Age and Survivors Insurance on employment in firms exempt from State unemployment insurance laws because of their size. Prior to 1939, the estimates for individual industries were based on data from the Census of Manufactures for various years. Employment estimates for the individual industries and the employment and weekly payroll indexes, as well as data for the major groups and the totals, have been adjusted to first quarter 1954 benchmark levels.

Approximately 155,000 cooperating establishments now furnish monthly employment and payroll schedules, by mail, to the Bureau of Labor Statistics. The current employment statistics program is an integrated Federal-State project which provides industrial employment information on a national, State, and area basis.

Monthly data for 1939-46 (or 1941-46) for total manufacturing and the durable-goods industries are given on pp. 17 and 24 of the September 1950 Survey (Correction: Monthly average employment for 1941-primary metal industries and fabricated metal products combined, $1,688,000$; ordnance and accessories, 57,000 ); similar data for nondurable-goods industries appear on pp. 23-24 of the October 1950 Survey. For unrevised monthly data for 1939-40 not republished in the September and October 1950 Surveys, see p. 22 of the December 1945 Survey.

Monthly data beginning 1939 (or 1947) for the selected industries shown here and additional industries are available in separate summary sheets from the Division of Manpower and Employment Statistics, Bureau of Labor Statistics, U. S. Department of Labor.
${ }^{4}$ Not comparable with earlier data; average for 1939 comparable with preceding figures in italics, $3,611,000$ employees.

## Page 60

${ }^{1}$ See note 3 for $p .59$.
${ }^{2}$ Data for 1939-46 for lumber and wood products include figures for furniture and fixtures.
${ }^{3}$ Data for 1939-46 for primary metal industries include figures for fabricated metal products.
${ }^{4}$ The italicized production-worker figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1939 on old basis comparable with italicized figures are as follows: Machinery, except electric, 529,000; electrical machinery, 259,000; transportation equipment (total), 561,000.
${ }^{5}$ Monthly data for September 1945-December 1948 have been revised since publication of the 1953 Statistical Supplement and are available upon request.

## Page 61

${ }^{1}$ See note 3 for p. 59.
${ }^{2}$ Data for 1939-46 for miscellaneous manufacturing include figures for instruments and related products.
${ }^{3}$ Data beginning 1947 are not comparable with earlier figures; 1947 monthly average on old basis is 220,000 for canning and preserving and 235,000 for bakery products.
${ }^{4}$ Data beginning 1947 reflect the adoption of the most recent Standard Industrial Classification for manufacturing and, therefore, are not comparable with earlier figures.
${ }^{5}$ Not comparable with earlier data; average for 1939 comparable with preceding figures in italics, 4,58l,000 workers.

## Page 62

${ }^{1}$ See note 3 for p. 59.
${ }^{2}$ The italicized production-worker figures represent data on old basis and are not comparable with succeeding figures on new basis. Overlapping monthly averages on old basis comparable with italicized figures are as follows: Pulp, paper, and paperboard mills, 1947-199,000; chemicals and allied products (total), 1939-288,000; products of petroleum and coal (total), 1939-106,000; petroleum refining, 1939-73,000; rubber products (total), 1939-121,000. For tires and inner tubes, the December 1938 figure on the old basis and the January 1939 figure on the new basis are the same, 52,000 .
${ }^{3}$ Not comparable with earlier data; average number of workers for 1939 comparable with preceding figures in italics-durable-goods, 3,611,000; nondurable-goods, 4,581,000.
${ }^{4}$ Data beginning 1947 reflect adjustments to the first quarter 1951 benchmark and are not strictly comparable with earlier figures.

## Page 63

${ }^{1}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The production-worker employment index is computed from the production-worker employment estimates using the average for the years $1947-49$ as a base. It is the number of production workers expressed as a percentage of the average employment in the base period 1947-49. The basic revisions (beginning 1939) made by the Bureau of Labor Statistics in the employment data are reflected in these figures; see note lor p. 57. The earlier figures were correspondingly revised so as to provide a continuous series of monthly data back to 1919 for the unadjusted series.

Monthly data for 1949-50 are shown in the 1953 StatisTICAL SUPPLEMENT; monthly data for 1919-46 are shown on p. 20 of the October 1952 SURVEY. Revised indexes for Janu-ary-December 1947 and 1949 are as follows (1947-49 =100): 1947-103.6; 104.0; 104.0; 103.0;101.3; 101.6; 100.5; 103.3; $105.0 ; 104.9$; 104.8; 105.2; 1948-104.1;103.3; 103.6; 100.8; 100.2 ; 101.5; 101.7; 103.7; 105.5; 104.4; 103.2; 101.6.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics, beginning September 1954 and prior to that time by the Board of Governors of the Federal Reserve System. The indexes adjusted for seasonal variation are derived from the unadjusted production-worker series (see note 1 above and note 3 for p. 59). Monthly data for 191946 are shown on p. 20 of the October 1952 SURVEY. Revised figures for 1947-50 are available upon request.
${ }^{3}$ Compiled by the U. S. Civil Service Commission. Data represent the number of civil employees in the executive branch of the Federal Government, including, for pertinent periods, administrative personnel paid from emergency relief appropriations. Figures include both permanent and temporary employees (full-time and part-time basis) and occupants of classified positions (subject to competitive examination under civil-service law) and unclassified positions (excepted from competitive examination by law and Executive Order). Figures do not include project personnel paid from emergency relief appropriations, enrollees of the Civilian Conservation Corps, military (uniformed) personnel, employees of the judicial and legislative branches of the Federal Government, or the employees of the District of

Columbia Government. The data prior to 1937 represent the number of persons having Federal appointments on the last day of the month regardless of whether or not they received any pay in the month in which they were reported; data for 1937 through May 1943 relate to the number of employees who received pay during the last payroll period of the month. Beginning June 1943, the data relate to the number of persons in active-duty status on the last day of the calendar month (plus intermittent workers who worked at anytime during the month) and who are paid for personal services rendered for the Federal Government, regardless of the nature of appointment or method of payment, and cover employees in continental United States only (excluding Alaska and Canal Zone); earlier data include some off-continent employees. Beginning June 1937, data exclude persons serving without compensation, persons on leave without pay for scheduled periods longer than 30 days, persons in leave status after reduction-in-force, casual workers, and trainees or workers whose pay is in the nature of an allowance. (There is no satisfactory overlap between the figures prior to June 1937 and those beginning that month.) Temporary substitute post office employees hired during the Christmas rush are included; in December 1953 and December 1954, respectively, there were approximately 289,000 and 304, 000 such employees in all areas. Because of security reasons, employment of the Central Intelligence Agency is not reported by the Commission.

Monthly data beginning January 1939 have been revised by the compiling source to include third-class postmasters, special delivery messengers, and other part-time workers of the Post Office Department not reported previously; in January 1939, there were approximately 19,800 such employees. For monthly figures beginning January 1941, further adjustments have been made to incorporate the following changes in coverage: (l) Employees of the General Accounting Office and the Government Printing Office, formerly counted as personnel of the executive branch, were transferred to the legislative branch (the number transferred in January 1941 totaled 12,200 persons); (2) employees of Howard University and Gallaudet College (Columbia Institute for the Deaf), not now classified as Federal employees, were omitted (January 1941 employment, 500 persons); (3) approximately 17,100 employees of the National Youth Administration were included in January 1941 for the first time. In addition to the aforementioned adjustments, other small groups of employees now classified as Federal employees, although paid from funds appropriated to the District of Columbia, are included in the totals shown here. Also, see note 4 for this page regarding the expansion of the Washington, D. C., metropolitan area. The comparability of the data was further affected in June 1943 (by approximately 2 percent) by the exclusion of employees on terminal leave.

Revised monthly data for both series for 1939-50 are available upon request; monthly figures for 1938 (not adjusted for the changes in coverage previously noted) are available in the 1942 Supplement. Revised monthly figures for 1933-37 and monthly data back to 1929 are available upon request.
${ }^{4}$ Beginning December 1949, the Washington, D. C., metropolitan area comprises the District of Columbia; Alexandria and Falls Church Cities, Arlington and Fairfax Counties, Virginia; and all of Montgomery and Prince Georges Counties, Maryland. For the period December 1941-November 1949, only parts of these counties were included; prior to December 1941, the figures cover employment in Washington, D. C., only.
${ }^{5}$ Compiled by the Interstate Commerce Commission. Data for number of employees represent the number of persons (except executives, officials, and staff assistants) employed by class I steam railways, including the switching and terminal companies of thèse railways. Figures are for those on the payroll at the middle of the month. It should be noted that these data differ from the data used in computing the indexes shown on p. 63 and described below.

Monthly data for the series on number of employees for 1929-50 are published in earlier editions of the Statistical SUPPLEMENT (1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936)
and on p. 20 of the November 1936 Survey. The monthly averages include in some years comparatively small revisions that cannot be allocated by months.

The indexes of railway employees are based on data for all employees (including executives, officials, and staff assistants) of class I steam railways, excluding switching and terminal companies. The figures are for the number on the payroll at the middle of the month. The base period for the unadjusted series is the average for the 60 months of 1935-39; the adjusted index is computed by relating the data for each month to the average for $1935-39$ for the corresponding month.

Monthly indexes for 1941-50 are shown in the 1953, 1951 1949, and 1947 issues of the Statistical Supplement; monthly figures for 1939-40 are available upon request. Monthly indexes on the revised basis have not been computed for years prior to 1939.
(Beginning in the June 1955 Survey of Current Business, the published indexes are computed on the years 1947-49=100. January-December data for 1953 and 1954 on the 1947-49 base are as follows: Unadjusted, 1953-92.7; 91.8; 92.1; 93.4; $94.4 ; 95.3 ; 96.1$; 95.9 ; 94.9 ; 94.1 ; 92.1 ; 89.5; 1954-85.9; 84.0; 82.1; 81.6; 82.4; 83.3; 83.6; 83.0; 82.5; 81.8; 80.4; 79.8; adjusted, 1953-91.8; 92.0; 92.9; 94.7; 93.1; 93.2; $94.1 ; 94.1 ; 94.7$; 96.1 ; 94.2 ; 91.5 ; 1954-85.1; 84.1; 82.8 ; 82.7; 81.2; 81.5; 81.8; 81.5; 82.3; 83.5; 82.2; 81.5.)
${ }^{6}$. Compiled by the 0 . S. Department of Labor, Bureau of Laoor Statistics, and represent the production-worker average weekly payroll expressed as a percentage of the average weekly payroll for the 1947-49 period. Payrolls are the private, weekly payrolls of both full- and part-time production and related workers who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month, before deductions for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues. The data include pay for sick leave, holidays, and vacations taken, but exclude cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, contributions to welfare funds and insurance or pension plans, and bonuses, unless earned and paid regularly each pay period. For the definition of production workers, see note 3 for p. 59.

Monthly data for 1949-50 are published in the 1953 STAtistical Supplement. Monthly data for 1919-46 are shown on p. 19 of the October 1952 SuRver. Revisions for JanuaryDecember 1947 and 1948 are as follows (1947-49 = 100) : 1947-93.5; 94.0; 94.8; 94.0; 94.2; 96.2; 94.6; 97.7; 101.7; 102.5 ; 103.3; 106.3; 1948-103.9; 102.6; 103.5; 100.1; 100.0; 103.3; 103.7; 107.8; 109.9; 109.7; 108.4; 107.7.
${ }^{7}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. See note 1 for p. 57 for a description of the basic revisions made in the hours and earnings series beginning 1947. In addition to the adjustment to the latest benchmark (lst quarter 1954), the hourly earnings data (beginning 1951) have been recalculated using figures rounded to the nearest cent, rather than the nearest mill, in weighting the industry groups and major groups.

The current series on gross average hourly and weekly earnings and average hours per worker for the manufacturing and the nonmanufacturing industries are based on monthly reports from approximately 151,000 cooperating establishments employing 17,500,000 workers (as of end of 1954), covering both full- and part-time employees who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. The data for the series are reported on the same schedules as those used to obtain employment and payroll information described in note 3 for $p$. 59. However, hours and earnings estimates are based on a slightly smaller sample than that for employment estimates because some establishments which report employment do not furnish payroll and man-hour information. The data relate to nonsupervisory employees and to production workers only (prior to 1945, wage earners). In general, the substitution of the term "production and related workers" for "wage earners" beginning January 1945 had no appreciable effect on the comparability of the data, since there is only a slight difference in the definitions. The reporting establishments
are classified into significant groups on the basis of product or activity as determined from annual sales data. The number of establishments reporting varies from month to month and the averages are therefore not strictly comparable. The sampie, however, is believed to be adequate in virtually all instances to indicate the general movement of hours and earnings.

Average earnings do not represent full-time earnings since they are based on data for both part-time and fulltime employment. They include premium pay for overtime and late-shift work and sick leave and vacation pay, but exclude special bonuses, cash payments for vacations, and other items. They are reported prior to deductions for old-age and unemployment insurance, withholding tax, bonds, union dues, and special clothing allowances. The number of hours reported represents hours worked or paid for, including hours paid for holidays, sick leave, and vacation taken; if employees elect to work during a vacation period, only actual hours worked by such employees are included. Where reporting firms use a two-week or longer pay period, reports are edited to reduce the payroll and man-hour aggregates to their proper equivalents for a weekly period.

The average hourly earnings are on a "gross" basis; that is, they reflect not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive basis. Also, the changing employment of workers as between relatively high-paid and low-paid work affects the general average of hourly earnings. Changes in the importance of individual establishments are also reflected as are changes in workers' earnings in these establishments. Averages for major groups and divisions further reflect changes in the relative importance of individual industries. Averages of hourly earnings should not be confused with wage rates, which represent the rates stipulated for a given unit of work or time, while earnings refer to the actual return to the worker for a stated period of time. Owing to the exclusion of irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and of earnings for those employees not covered under the production-worker or nonsupervisory employees definitions, the average earnings series should not be interpreted as representing total labor costs on the part of the employer.

Gross average weekly earnings are computed by multiplying gross average hourly earnings by average weekly hours. In addition to the factors mentioned, which exert varying influences upon gross average hourly earnings, gross average weekly earnings are affected by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism. Weekly earnings, although sometimes incorrectly termed "take-home pay" are not the same as the amount that is actually available to workers for spending, since no deduction has been made for income and social-security taxes, group insurance, occupational supplies, and union dues.

The series shown in the Sunvey include data for all major manufacturing groups, selected manufacturing industries, and nonmanufacturing groups. The monthly Employment and Earnings report of the U. S. Department of Labor includes separate data for additional industries. Continuity of the various series has been maintained as follows: Hours worked and hourly earnings, beginning 1932 for total manufacturing, durable-goods industries, and nondurable-goods industries; weekly earnings, beginning 1919 for total manufacturing and beginning 1923 for durable-goods and nondurable-goods industries. Monthly data prior to 1947 for the above-mentioned series are available in the 1949 Statistical SuppleMENT and earlier issues. (Revisions for September to December 1946 and 1946 monthly average, respectively: Total man-ufacturing-weekly earnings, $\$ 45.54 ; \$ 45.97 ; \$ 46.07 ; \$ 47.32$; $\$ 43.82$; hourly earnings, $\$ 1.130 ; \$ 1.135 ; \$ 1.146 ; \$ 1.157$; \$1.086; nondurable -goods-weekly earnings, $\$ 42.52$; $\$ 42.73$; © 43.32 ; $\$ 44.84 ; \$ 41.14$; hourly earnings, $\$ 1.055 ; \$ 1.063$; $\$ 1.075$; \$1.091; \$1.015; durable-goods-hourly earnings, December 1946 only, $\$ 1.215$.)

Data for the industry groups and the individual industries of the manufacturing and nonmanufacturing divisions are available on the old basis through 1948 in the 1949 STA-
tistical SUPPLEment and earlier issues. The revisions described in note 1 for $p$. 57 have resulted in a lack of historical continuity prior to 1947 for many industries. Comparable monthly data prior to 1947 are available for the following manufacturing industry groups or industries: Blast furnaces, steel works, and rolling mills; primary smelting and refining of nonferrous metals; automobiles; ship and boat building and repairing; canning and preserving; bakery products; pulp, paper, and paperboard mills; petroleum refining; tires and inner tubes; footwear, except rubber.

For nonmanufacturing, comparable monthly data prior to 1947 are available for the following series: Metal mining; anthracite mining; bituminous-coal mining; nonmetallic mining and quarrying; petroleum and natural-gas production (except contract services) ; building construction; local railways and bus lines; telephone; telegraph; retail trade; hotels (year-round); and laundries.
${ }^{8}$ The italicized weekly hours figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Lumber and wood products, except furniture, 42.2; sawmills and planing mills, 41.8; and furniture and fixtures, 41.7.
${ }^{9}$ The method of reporting employees was changed in June 1937 (see lst paragraph of note 3 for this page); the average shown is for 7 months, June-December. Averages for January-May (in thousands), strictly comparable with earlier data are as follows: United States total, 856; Washington, D. C., 115.
${ }^{10}$ The method of reporting employees was changed in 1939; see $2 d$ paragraph of note 3 for this page.
${ }^{11}$ See 2 d paragraph of note 3 for this page relating to changes in employees covered, and note 4 for this page regarding expansion of the Washington, D. C., area.
${ }^{12}$ The monthly data included in the averages are not entirely consistent; see note 3 (lst and $2 d$ paragraphs) for this page.

Page 64
${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized weekly hours figures represent data on old basis and are not strictly comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Stone, clay and glass, 40.5; machinery (except electrical), 41.3; electrical machinery, 40.2 .

## Page 65

${ }^{1}$ See note 7 for $p .63$.
${ }^{2}$ The italicized weekly hours figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Food, 43.0; tobacco, 38.6; textile-mill products, 39.5 .
${ }^{3}$ Data beginning January 1951 represent a new series and are not comparable with those for earlier periods. Figures for January-March 1951 comparable with data through 1950 are as follows (hours): Bakery products-41.3; 41.5; 41.5; apparel, etc. $-36.9 ; 37.5 ; 37.4$.
${ }^{4}$ Annual averages for 1932-38 relate to the fabric subgroup; average for 1939 for the fabric subgroup is 36.6 hours (same as for the textile-mill products group).

## Page 66

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized weekly hours figures represent data on old basis and are not strictly comparable with succeeding
figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Chemicals and allied products, 41.2; products of petroleum and coal, 40.5; rubber products, 39.7; leather and leather products, 38.7 .
${ }^{3}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. Average for 1939 comparable with italicized figures is 40.0 hours.
${ }^{4}$ Data are for petroleum and natural-gas production, excluding contract services.

## Page 67

${ }^{1}$ See note 7 for $p .63$.
${ }^{2}$ Data beginning January 1953 include only privately operated establishments; prior to 1953 the figures relate to both privately operated and government operated lines. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{3}$ The italicized figures (not comparable with succeeding data) relate to all employees except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures (through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 1945 are based on revised and improved procedure for reporting (April 1945 figure on new basis is 40.6 hours and on old basis, 42.9 hours).
${ }^{4}$ Data through 1951 relate mainly to land-line employees, excluding employees compensated on a commission basis, general and divisional headquarters personnel, trainees in school, and messengers. Beginning January 1952, figures relate to domestic employees, except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are as follows (hours): 43.8; 43.7; 43.8. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January-March and June-December.
${ }^{5}$ Data beginning 1938 are not strictly comparable with earlier data (in italics) which include figures for corporation officers, executives, and other employees whose duties are mainly supervisory. Figure for December 1937 comparable with the average shown for the year 1938 is 42.7 hours.
${ }^{6}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly average for 1939 on old basis is 38.8 hours.
${ }^{7}$ Average for 7 months, June-December.
${ }^{8}$ Average for 9 months, April-December. See also note 3 for this page.
${ }^{9}$ Average for 11 months, February-December. Data not available prior to February 1946.
${ }^{10}$ Data beginning 1948 relate to both publicly and privately financed projects and to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and only on-site workers. Data for January-March 1948 comparable with earlier figures are as follows (hours): Total-37.3; 36.9; 37.4; nonbuilding$37.8 ; 38.5 ; 38.9$; building-37.2; 36.6; 37.1.

## Page 68

${ }^{1}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data include all known work stoppages arising out of labor-management disputes involving six or more workers and continuing a full day or shift, or longer whether initiated by the workers or by the employers. In addition, jurisdictional and sympathy strikes involving work stoppage are also covered. The data are based on notices or
leads regarding labor disputes appearing in daily papers and trade journals, as well as records from Federal and State agencies that deal with employer-employee disputes, various employers and employer associations, international unions, and construction firms doing work for the Atomic Energy Commission. Questionnaires are sent to representatives of parties in the disputes asking for detailed and authentic information to substantiate these published reports.

The figures on "man-days idle" and "workers involved" cover all workers made idle in establishments even though they may not be active participants or supporters of the controversy. They do not measure the indirect or secondary effects on other establishments or industries whose employees are made idle as a result of material or service shortages. The figures for "in effect during the month" include data for stoppages beginning in the specified month and those continuing from the preceding months.

Monthly data for 1934-50 are available in the 1953, 1951, 1949, 1947, 1942, 1940, and 1938 issues of the Statistical Supplement. Monthly figures for 1927-33 are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Employment Security (formerly by the Federal Security Agency. Social Security $\bar{A} d m i n i s t r a t i o n)$. A placement represents a verified entry of a worker on a job as a direct result of employment service activities. Data prior to 1939 relate to continental United States, Alaska, and Hawaii; for 1939-49 to continental United States only. Beginning 1950, the figures refer to total nonagricultural placements in the United States and Territories (monthly average for 1949 comparable with subsequent years, 372,000 persons). The forestry and fishing industry is excluded for 1936-39.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. The data shown in the 1942 SUPPLEMENT include agricultural as well as nonagricultural placements and, therefore, are not comparable with figures in later volumes. Beginning in 1943, agricultural placements were made by the U. S. Employment Service only in cooperation with the U. S. Department of Agriculture Extension Service. Monthly figures for nonagricultural placements for 1935-40 are available upon request.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Employment Security (formerly by the Federal Security Agency, Social Security Administration). Data cover operations under State laws only (i.e., unemployment insurance programs under the Veterans' Readjustment Assistance Act of 1952, the Servicemen's Readjustment Act of 1944, and the Railroad Unemployment Insurance Act are excluded) and include, except as noted, operations in all States in which benefits were payable, as well as in the District of Columbia, Alaska, and Hawaii. However, in interpreting these data it should be recognized that the States, etc., initiated benefit payments at varying times. Benefits were payable first in Wisconsin, and in 1936 and 1937 that was the only State making such payments. The total number of States paying unemployment benefits in later years is as follows: 23 States in January 1938; 25 in April 1938; 29 in September 1938; 31 in December 1938; and in January 1939, all States (except Illinois and Montana) and the District of Columbia, Alaska, and Hawaii. Benefits were first payable in Illinois and Montana in July 1939. The South Dakota agency suspended operations in 1939 from July 28 to September 26.

It should also be noted that unemployed persons who have exhausted their benefit rights are not covered; in times of prolonged unemployment, the loss of benefit rights could cause a marked divergence between the trends of insured unemployment and total unemployment. In addition, the data are affected by the timing of the "benefit year." For the 8 States and Alaska, which have a uniform benefit period, a rise occurs (beginning April 1 for 4 States, May 1 for 1 State, and July 1 for 3 States and Alaska) in the number of insured unemployed which represents the filing of claims by workers becoming eligible in the new year rather than an increase in new unemployment. (Of the 3 States and Alaska, whose benefit years begin in July, 3 begin with the first week and 1 on July l.)

An "initial claim" is the first claim in a benefit year filed by a worker after losing his job, or the first claim filed at the beginning of a second or subsequent period of unemployment in the same benefit year. A "benefit year" is usually a l-year or a 52 -week period within which a worker may receive his annual benefits, if eligible. Initial claims do not result in benefit payments but are just the first step in the process. The data through 1948 for initial claims include transitional claims (i.e., claims filed by a person, already in a claimant status, for determination of benefit rights in a new benefit year). Effective with July 1949, transitional claims are excluded and the data, therefore, represent more closely instances of new unemployment. (Note that the figures in earlier issues of Business Statistics include transitional claims for all years.)

Data for insured unemployment for continental U. S. (excluding Alaska and Hawaii) have been substituted for the series on "number of continued claims filed" shown in the 1953 edition of Business Statistics and earlier issues. The insured unemployment series is derived by adjusting the number of weeks of unemployment for the lag between the week of unemployment and the time the claim is filed, so that the adjusted series refers to the week in which unemployment actually occurred. The monthly figures are averages of weekly data adjusted for split weeks in the month on the basis of a 5-day week.

Data for weekly average number of beneficiaries receiving benefit payments are estimated for 1938; for 1939 they relate to the number of claimants receiving benefits during the week ended nearest the middle of the month. Monthly figures represent the average weekly number of beneficiaries, computed from weeks compensated in the calendar month. With the exception of the 1938 and 1939 averages, which are based on estimated data for some months, the annual averages represent the average weekly number based on weeks compensated in the calendar year rather than averages of the monthly figures.

Monthly averages for amount of benefit payments for 1936 and 1937 represent gross amount of benefit payments and contain no adjustment for voided benefit checks; monthly averages beginning 1938 are based on net amounts adjusted to exclude such checks.

Monthly data for average weekly insured unemployment (for 1947-50) and monthly figures for initial claims, excluding transitional claims (for July 1949-December 1950) are available upon request. Monthly data for series formerly shown, as noted above, for 1941-52 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly figures for 1938-40 for continued claims and benefit payments are shown in the 1942 Supplement.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Employment Security. Data relate to benefits payable from Federal funds under the Veterans' Readjustment Assistance Act of 1952 and operating in all States, the District of Columbia, Alaska, Hawaii, Virgin Islands, and Puerto Rico (except as noted); they do not include veterans receiving benefits under the Servicemen's Readjustment Act of 1944. Effective October 15, 1952, readjustment allowances were available to veterans with military service on or after June 27, 1950. Benefit payments are made in accordance with the provisions of the employment-security laws of the States insofar as those laws are applicable. The maximum allowance for any week of total unemployment is $\$ 26$, payable for 26 weeks. If the veteran receives less than $\$ 26$ per week under this program as a supplement to State benefits or because of partial unemployment, he may continue to receive benefits, when eligible, for more than 26 weeks until a maximum of $\$ 676$ has been received.

Data for "initial claims". relate to the first claim filed by a veteran following his discharge from the Armed Services and to additional claims (second or subsequent period of unemployment) but exclude the number of transitional claims to represent more closely instances of new unemployment. No waiting period is required. The insured unemployment figures (covering continental U. S. only) exclude claims from veterans which were filed to supplement benefits under State or railroad unemployment insurance pro-
grams; this is done to avoid duplication of claims counted under State programs (shown also on p. 68). The number of beneficiaries and the amount of payments include all veterans receiving unemployment compensation payments under the VRA Act of 1952, whether or not the payments supplement benefits under either State or railroad insurance programs. "Amounts of payments" are gross and are not adjusted for voided checks.

The Federal-State unemployment insurance program was expanded during 1952 with the enactment by the 82 d Congress of Public Law 550-Veterans' Readjustment Assistance Act of 1952-providing funds for unemployment benefit payments to eligible unemployed veterans who have had service on or after June 27, 1950. This program is-administered by the 48 States, Alaska, Hawaii, Puerto Rico, Virgin Islands, and the District of Columbia under agreements with the Secretary of Labor. The program is financed with Federal funds which are advanced to each of the States listed above to cover the benefits paid to veterans under the Act. These benefit payments are made in accordance with the provisions of the em-ployment-security laws of the States insofar as those laws are applicable.

The veteran under Title IV is entitled to receive $\$ 26$ for each week of total unemployment until a maximum of $\$ 676$ has been paid. If the veteran has benefit rights under the State Unemployment Compensation Law or a Railroad Unemployment Insurance Law, he must exhaust those benefits before being eligible to receive Title IV payments; or if his beñefit rights under those Acts are less than $\$ 26$ per week, he is entitled to a supplement to make up the difference between his State benefit right and the \$26. If a veteran receives less than $\$ 26$ per week under this program (either as a supplement to other benefits or for partial unemployment) he is entitled to benefits, if otherwise eligible, for more than 26 weeks, i.e., until the maximum of $\$ 676$ has been received.

Statistics for the veterans' unemployment insurance program under the Servicemen's Readjustment Act of 1944 for the period 1944-52 are shown in the 1949 and 1953 issues of Business Statistics. Figures for 1945-52 for the number of claims paid to veterans receiving self-employment allowances and the monthly average amount of payments under the Servicemen's Readjustment Act of 1944 are shown on P. 222 of the 1953 edition of Business Statistics.
${ }^{5}$ Average for 6 months, July-December.
${ }^{6}$ Average based on estimates for 11 months, FebruaryDecember.
${ }^{7}$ Average for 1939 relates to persons receiving benefits during week ended nearest the middle of the month.
> ${ }^{8}$ Average for 6 months, July-December. Beginning July 1949, figures exclude transitional claims; for the last six months of 1949 transitional claims averaged less than one percent of total initial claims including transitional claims. (The revised monthly average for January-December 1949, including transitional claims and thus comparable with earlier averages, is $1,470,000$ claims.)
> ${ }^{9}$ Beginning August 1950, the average weekly number of beneficiaries is based on a 5 -day workweek rather than the calendar week; data, therefore, are not strictly comparable with those for earlier periods.
${ }^{10}$ Average for 3 months, October-December.
${ }^{11}$ Average for 2 months, November-December.

## Page 69

${ }^{1}$ Compiled by the U. S. Department of Labor, Bureau of Laoor Statistics; based on monthly reports from a varying number of representative manufacturing establishments. "Labor turnover," as used in this series, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms. All groups of employees, i.e., both full- and part-time and both permanent and temporary, are included. Personnel actions of each type
are cumulated on an industry basis and expressed as a percentage of employment in the industry. Data are obtained each month from a representative sample of establishments by means of a mail questionnaire.

In June 1929, the first month for which comparable data are available, the estimates were based on approximately 400 manufacturing establishments employing about 700,000 workers. The scope of the survey has been gradually broadened and in December 1954 the reporting sample included 6,600 manufacturing establishments which employed approximately $4,800,000$ workers. The major seasonal industries excluded from the sample are as follows: Canning and preserving; printing and publishing (since April 1943); women's and misses' outerwear; and fertilizer. The date represent a general rate for each month for all industries combined, weighted by estimated employment in major industry groups. Data for selected individual industries are included in the original monthly report, Employment and Earnings. The rates beginning 1943 relate to all employees, whereas earlier data relate to factory workers, or wage earners, only.

In December 1949 the labor-turnover series were revised to use the Standard Industrial Classification (1945) coding structure which changed the definitions of some industries and provided new industrial groupings. Previously, the industry definitions used were in accordance with the Social Security Board Classification system (1942). Also in December 1949, weighting was introduced in the computation of industry-group rates. The rates for each industry group are obtained by weighting the rate of each component industry in proportion to employment in these industries. The comparability of the data with previous data for manufacturing as a whole (shown here) is not affected.

A brief statement of the method of computation is as follows: For each item of labor turnover the total number of personnel changes reported during a month by establishments in the sample for each industry is divided by the total number of employees who worked during or received pay for any part of the pay period ending nearest the 15 th of the month. The result so obtained is multiplied by 100. For example, in an industry sample, the total number of employees who worked during or received pay for the week of January 12-18 was reported as 25,498. During the period January l-31, in all the reporting firms a total of 284 employees quit. The quit rate for the industry is:

$$
\frac{284}{25,498} \times 100=1.1
$$

Labor turnover rates from month-to-month are based on comparable but not necessarily identical samples. The rates for each industry group are obtained by weighting the rates for each component industry in proportion to employment in these industries. The rate for all manufacturing is weighted by employment in the major industry groups. In compiling the rates, the actual numbers for the several establishments are added and the general rates compuced from the grand total. The definitions adopted by the Bureau of Labor Statistics for the various captions used in this table are as follows:
"Accessions" are all additions to the work force during the calendar month, whether of new or rehired employees. Returns to work after lay-offs or after any unauthorized absence of at least 7 calendar days are considered accessions.
"Separations" are all terminations of employment during the calendar month which last at least 7 consecutive calendar days. (Persons on paid or unpaid authorized leave of absence are not counted as separations until it is definitely determined that such persons will not return to work.) Separations are further classified according to cause-i.e., quits (or voluntary separations); and discharges, lay-offs, and miscellaneous separations (collectively called involuntary separations).
"Discharges" are terminations of employment during the calendar month initiated by the employer for such reasons as incompetence, violation of rules, dishonesty, insubordination, laziness, and habitual absenteeism. Discharges also include terminations because of employees' inability to meet an organization's physical standards.
"Lay-offs" are terminations of employment during the calendar month (lasting or expected to last 7 consecutive
calendar days) initiated by the employer, without prejudice to the workers, for such reasons as lack of orders or materials, conversion of plants, release of temporary help, and introduction of labor-saving machinery or processes. A termination of employment with definite instructions to return to work within 7 days is not regarded as lay-off. Vacations or suspensions of operations during inventory periods are likewise not considered lay-offs.
"Quits" are terminations of employment during the calendar month initiated by employees for such reasons as acceptance of a job elsewhere, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement (except on company pension). Unauthorized absences of 7 consecutive calendar days are considered quits. Quits for the purpose of entering the Armed Forces are reported under miscellaneous separations. Prior to September 1940, miscellaneous separations are included with quits.
"Miscellaneous separations (including military)" are terminations of employment during the calendar month because of permanent disability, death, retirement on pension, or entrance into the Armed Forces. Prior to September 1940, miscellaneous separations are included with quits.

Beginning September 1940, workers leaving to enter the Armed Services of the United States (and expected to serve more than 30 consecutive calendar days) are included. Transfers from one plant to another of the same company are not considered accessions or separations.

Month-to-month changes in total employment in manufacturing industries as indicated by labor-turnover rates are not precisely comparable with those shown by the compiling agency's reports on employment and payrolls, as the former are based on data for the entire month, while the latter, for the most part, refer to a l-week period ending nearest the middle of the month. The turnover sample is not so extensive as that of the employment and payroll survey (proportionally fewer small plants are included) and certain industries are not covered, as indicated above. In addition, employment and payroll reports relate to production and related workers (wage earners prior to 1945) for all years.

Monthly data prior to 1950 are shown in the 1953, 1951, 1949, 1947, 1942, 1938, and 1936 issues of the Statistical Supplement, and on p. 20 of the April 1935 Survey. Revised data for February 1948 for lay-off rate and total separation rate are 1.7 and 4.7 , respectively.

## ${ }^{2}$ See note 7 for p. 63.

${ }^{3}$ The italicized weekly earnings figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Lumber and wood products (except furniture), $\$ 43.35$; sawmills and planing mills, $\$ 42.28$; furniture and fixtures, $\$ 44.36$; stone, clay, and glass products, $\$ 48.18$.
${ }^{4}$ Average for 7 months, June-December
5 "Quits" and "miscellaneous separations" combined prior to January 1940.

## Page 70

${ }^{1}$ See note 7 for $p .63$.
${ }^{E}$ The italicized figures represent data on old basis and are not strictly comparable with succeeding figures on new basis. Monthly averages on old basis comparable with italicized figures are as follows: Electrical machinery-1947, $\$ 51.40$; automobiles $-1934, \$ 23.31$; food and kindred prod-ucts-1947, \$48.27.

## Page 71

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Data beginning January 1951 represent a new series and are not comparable with those for earlier periods. Figures for January-March 1951 comparable with data through 1950: $\$ 54.68$; $\$ 55.49$; $\$ 55.32$.
${ }^{3}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Tobacco manufactures,
$\$ 36.67$; textile-mill products (total), $\$ 40.94$; paper and allied products (total), $\$ 50.15$; printing, publishing, and allied industries, $\$ 59.77$; chemicals and allied products (total), \$50.59.
${ }^{4}$ For apparel and other finished textile products, there are three "breaks" in the continuity of the data. Figures for January-March 1951 comparable with data for the period 1947-50 are $\$ 47.42$, $\$ 48.38$, and $\$ 47.27$; monthly average for 1947 comparable with figures for $1939-46, \$ 37.29$; monthly average for 1939 comparable with figures for 1932-38, $\$ 18.10$.

## Page 72

${ }^{1}$ See note 7 for $p .63$.
${ }^{2}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Products of petroleum and coal (total), $\$ 59.32$; rubber products (total), $\$ 55.97$.
${ }^{3}$ There are two "breaks" in the continuity of the data for leather and leather products. Monthly average for 1947 comparable with data for 1939-46, $\$ 40.73$; monthly average for 1939 comparable with data for 1932-38, \$19.09.
${ }^{4}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. The average for 1939 comparable with italicized figures is $\$ 28.05$.
${ }^{5}$ Data are for petroleum and natural-gas production, excluding contract services.
${ }^{6}$ Data beginning 1948 relate to both publicy and privately financed projects and to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and on-site workers only. Data for Janu-ary-March 1948 comparable with earlier figures are as follows: Total-\$65.72; $\$ 65.95$; $\$ 66.65$; nonbuilding- $\$ 63.28$; $\$ 65.42$; $\$ 65.85$; building - $\$ 66.26$; $\$ 66.04$; $\$ 66.80$.
${ }^{7}$ Average for 11 months, February-December. Data not available prior to February 1946.

## Page 73

${ }^{1}$ See note 7 for $p .63$.
${ }^{2}$ Data beginning January 1953 relate to privately operated establishments; prior to 1953 the figures include both privately operated and government-operated lines. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{3}$ The italicized figures (not comparable with succeeding data) relate to all employees except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures (through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 1945 are based on revised and improved procedure for reporting (April 1945 figure on new basis is $\$ 37.60$ and on old basis, $\$ 40.84$ ).
${ }^{4}$ Data through 1951 relate mainly to landline employees, excluding employees compensated on a commission basis, general and divisional headquarters personnel, trainees in school, and messengers. Beginning January 1952, figures relate to domestic employees except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are $\$ 70.52, \$ 70.31$, $\$ 70.47$, respectively. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January-March and June-December.
${ }^{5}$ Figures beginning 1938 are not strictly comparable with those for earlier periods which include data for corporation
officers, executives, and other employees whose duties are mainly supervisory. (December 1937 figure comparable with the average shown for the year 1938 is $\$ 29.21$.)
${ }^{6}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly average for 1939 on old basis is $\$ 17.80$.
${ }^{7}$ Average for 7 months, June-December.
${ }^{8}$ Average for 9 months, April-December. See also note 3 for this page.

Page 74
${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized figures are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Lumber and wood products, except furniture, $\$ 1.027$; sawmills and planing mills, $\$ 1.010$; furniture and fixtures, $\$ 1.063$; stone, clay, and glass products, $\$ 1.189$; machinery (except electrical), $\$ 1.353$; electrical machinery, $\$ 1.279$.

Page 75
${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized figures are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Food and kindred products, $\$ 1.124$; tobacco manufacturers, $\$ 0.951$.
${ }^{3}$ Data beginning January 1951 represent a new series and are not comparable with those for earlier periods. Figures for January-March 1951 comparable with data through 1950 are $\$ 1.324 ; \$ 1.337$; and $\$ 1.333$.

## Page 76

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized hourly earnings figures are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Textile-mill products (total), $\$ 1.035$; paper and allied products (total), $\$ 1.164$; printing, publishing, and allied industries, $\$ 1.491$; chemicals and allied products (total), $\$ 1.228$; products of petroleum and coal (total), $\$ 1.464$; rubber products (total), $\$ 1.409$; leather and leather products (total), $\$ 1.054$.
${ }^{3}$ For apparel and other finished textile products there are two "breaks" in the continuity of the data. Figures for January-March 1951 comparable with data for the period 1947-50 are $\$ 1.285, \$ 1.290$, and $\$ 1.264$; monthly average for 1947 comparable with figures for 1939-46, \$1.028.

## Page 77

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. Average for 1939 comparable with italicized figures is $\$ 0.705$.
${ }^{3}$ Data are for petroleum and natural-gas production, excluding contract services.
${ }^{4}$ Data beginning 1948 relate to both publicly and privately financed projects and to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and on-site workers only. Data for January-March 1948 comparable with earlier figures are as follows: Total- $\$ 1.761$; $\$ 1.788$; $\$ 1.784$; nonbuilding$\$ 1.676 ; \$ 1.700 ; \$ 1.692 ;$ building- $\$ 1.781 ; \$ 1.805 ; \$ 1.803$.
${ }^{5}$ Data beginning January 1953 relate to privately operated establishments; prior to 1953 the figures include both pri-
vately operated and government-operated lines. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{6}$ The italicized figures (not comparable with succeeding data) relate to all employees, except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures (through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 1945 are based on revised and improved procedure for reporting (April 1945 figure on new basis is $\$ 0.926$ and on old basis $\$ 0.952$ ).
${ }^{7}$ Data through 1951 relate mainly to landline employees, excluding employees compensated on a cofmission basis, general and divisonal headquarters personnel, trainees in school, and messengers. Beginning January 1952, figures relate to domestic employees except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are $\$ 1.610$, $\$ 1.609$, $\$ 1.609$, respectively. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January-March and June-December.
${ }^{8}$ Average for 7 months, June-December.
${ }^{9}$ Data beginning 1945 are not strictly comparable with earlier figures; January 1945 figure on old basis is $\$ 1.171$ and on new basis, $\$ 1.184$.
${ }^{10}$ Average for 9 months, April-December. See also note 6 for this page.
${ }^{11}$ Average for 11 months, February-December. Data not available prior to February 1946.

## Page 78

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Figures beginning 1938 are not strictly comparable with those for earlier periods which include data for corporation officers, executives, and other employees whose duties are mainly supervisory. (December 1937 figure comparable with the average shown for the year 1938 is $\$ 0.684$.)
${ }^{3}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages on old basis comparable with italicized figures are as follows: General-merchandise stores, 1939$\$ 0.454$; cleaning and dyeing plants, $1036-\$ 0.442$.
${ }^{4}$ Compiled by the Engineering News-Record. Figures represent the hourly wages of both common and skilled labor in the construction industry as of the lst of each month. The data are compiled from monthly reports of correspondents in 20 cities as follows: Atlanta, Baltimore, Birmingham, Boston, Chicago, Cincinnati, Cleveland, Dallas, Cenver, Detroit, Kansas City, Los Angeles, Minneapolis, New Orleans, New York, Fhiladelphia, Saint Louis, San Francisco, and Seattle. Both the skilled and common rates are arithmetic averages of wages actually paid in the 20 cities and cover take-home pay plus fringe benefits including welfare fund, pension fund, and others. The skilled rates are averages for three principal trades (bricklayers, carpenters, and structural ironworkers); the common rates, averages for building and heavy construction.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936. Earlier figures appear on p. 19 of the September 1933 Survey. Revisions of the published data are as follows: Common rates-August 1930, $\$ 0.562$; February 1932, $\$ 0.452$; July 1932, $\$ 0.411$; skilled rates-July 1925, \$1.22; September 1929, \$1.37; May 1933, ©0.998; July 1936, \$1.159; August 1946, \$1.824.
${ }^{5}$ Compiled by the IJ. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average farm wage rate per hour without board and room for hired farm labor, and are based on information received by the regional offices in mailed questionnaires from 15,000 to 20,000 farmers reporting quarterly. The farmer is asked to
report the average wage rates being paid "at this time" in his locality. The "at this time" on the average refers to a date two or three days before the first of the month. Data are compiled as of the 1st of January, April, July, and October. To obtain quarterly rates for the country as a whole, quarterly rates for each region are weighted by estimates of the number of hired farm employees in the region. To obtain the annual averages, five quarterly rates (the 4 quarters of the year plus the first quarter of the following year) are weighted by the total number of hired farm employees reported for each of the quarters (except that for January of the specified year, the weight is an average based on half of the number of employees for the preceding December plus the number of employees in January, and, for January of the following year, an average of the number of employees in November plus half of the employees in December).

Quarterly data for 1948-50 are shown in the 1953 and 1951 Statistical Supplements. Figures prior to January 1948 are not available for this series which has been substituted for the series on farm wage rates (without board) per month. Data through 1948 for the latter series appear in the 1949 Statistical Supplement and earlier issues.
${ }^{6}$ Compiled by the Interstate Commerce Commission and represent average hourly earnings of persons employed by the class I steam railways, including the switching and terminal companies of these railways. These data were computed from the number of persons (excluding executives, officials, and staff assistants) on the payroll at the middle of the month. Back pay resulting from retroactive wage agreements is not included in the monthly figures but is included in computing the monthly averages. The figures shown as monthly averages therefore differ substantially in some years from the average of the monthly figures. The figures for 1932 reflect the 10 percent wage cut made in that year. Restoration of 1/4 of the wage cut was made effective July 1, 1934; an additional $1 / 4$ was restored on January 1, 1935; and the remainder, April 1, 1935. It should be borne in mind that the average hourly earnings are affected by changes in the proportion of employees in each wage group, as well as by changes in wage rates.

Monthly figures for 1929-50 are available in the 1953, 1951, 1949, 1947, 1942, 1940, 1938, and 1936 SUPPLEMENTS and on p. 20 of the November 1936 SURVEy.
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of Public Roads. Data, except for September 1932-December 1936, represent average hourly wage rates for unskilled (common) labor in roadbuilding on Federal-aid projects. Since during the aforementioned period the number of Fed-eral-aid projects was at a low level, wage rates based on such data are not representative. For that period, therefore, the wage rates shown are based on reports from projects of the following types: For October 1932-September 1933, Emergency Highway Construction; October 1933-December 1935, Public Works Highway projects; and January-December 1936, Works Program Highway and Grade-Crossing Elimination projects.

The wage rates vary considerably in different regions. Changes in the United States average shown here are affected by the relative number of men employed in areas with higher or lower wage rates. The annual averages through 1946 are computed by the compiling agency from total hours and wages for the 12 months and are not averages of the monthly figures. Beginning July 1947, data are reported quarterly instead of monthly, and the annual average (after 1947) is computed from the quarterly reports.

Monthly or quarterly data for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement; monthly data for 1934-35 are in the 1938 volume; and for 1929-31, in the 1932 issue. Revised monthly figures for $1932,1933,1936$, and 1937 are available upon request.
${ }^{8}$ Quarterly average beginning 1948. For 1947, the average is based on monthly reports for first half of the year and quarterly reports thereafter.
${ }^{9}$ See note 5 for this page (last sentence of first paragraph).

## Page 79

${ }^{1}$ Compiled by the Federal Reserve Bank of New York since July 1936; prior thereto, by the American Acceptance Council. The figures represent the total acceptance liability outstanding on the last day of the month of banks and bankers in the United States and agencies of foreign banks in this country. Data comprise acceptances based on (a) imports, (b) exports, (c) goods stored in or shipped between points in the United States and foreign countries, and (d) dollar exchange, Data by classes of acceptances are available in the Federal Reserve Bulletin.

Monthly data for 1929-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{2}$ Compiled by the Federal Reserve Bank of New York and published in the Federal Reserve Bulletin. Data represent the volume of paper outstanding as reported by the principal dealers in the country; some finance-company paper sold in open market is included. Twenty-three dealers reported for January-October 1929; 22 for November and December 1929; 21 for January-October 1930; 20 for November 1930-April 1931; 21 for Nay-September 1931; 20 for October-December 1931; 19 for January 1932; 18 for February 1932; 17 for March 1932; 16 for April and Nay 1932; 15 for June 1932-February 1933; 14 for March-May 1933; 13 for June 1933-January 1937 (except for Nay-August 1934 when 12 reported); 12 for February 1937November 1941 (except for March 1940 when 15 reported); 11 for December 1941-February 1943; 10 for Narch 1943-August 1953 (except for June 1945 when 11 reported); and 11 beginning September 1953 (year-end data for 11 firms for 1948-52 are as follows, in millions of dollars: 277; 270; 345; 449; 552, respectively).

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (Minor revisions for 1929 and May 1931-April 1932 are available upon request.)
${ }^{3}$ Compiled by the Farm Credit Administration to provide a comprehensive picture of the farm credit activities under the supervision of this agency as of the specific periods covered, except that no data are included here for loans of joint-stock land banks and for emergency crop and droughtrelief loans. The Farm Credit Administration currently supervises the activities of the Federal land banks, the national farm loan associations, the Federal intermediate credit banks, the production credit corporations, the production credit associations, and the banks for cooperatives. The Agricultural Marketing Act revolving fund was supervised by FCA; however, during August 1953 the outstanding balance of loans from this fund was fully repaid.

The Farm Credit Administration formerly supervised also the lending activities of the Federal Farm Mortgage Corporation, an emergency institution on whose behalf the Land Bank Commissioner made loans (the authority to make Land Bank Commissioner loans expired July 1, 1947). The liquidation of the regional agricultural credit corporations was under the supervision of the Farm Credit Administration prior to April 16, 1949; as of that date the assets of such corporations were transferred by law to the Farmers Home Administration.

Also under the direction of the Farm Credit Administration was the liquidation of the joint-stock land banks, which were privately capitalized institutions organized under the Federal Farm Loan Act. Liquidation of these banks was completed in July 1949. (Data for loans of the jointstock land banks through June 1945 are available in the 1942 and earlier Supplements and the 1943-45 issues of the monthly Survey; figures for 1946-July 1949 are available upon request.) Prior to November 1,1946 , the emergency crop and drought relief loan offices were supervised by the Farm Credit Administration; as of that date, jurisdiction over these offices was transferred to the Farmers Home Administration. Data for loans of joint-stock land banks and emergency crop and drought-relief loans have been excluded from the figures shown here for all years.

District units of the Farm Credit Administration are located in each of the 12 Farm Credit districts coinciding
geographically with the Federal land bank districts. The offices are located in Springfield (Mass.), Baltimore, Columbia (S. C.), Louisville, New Orleans, St. Louis, St. Paul, Omaha, Wichita, Houston, Berkeley, and Spokane. In each district organization there are four permanent credit institutions-a Federal land bank, a Federal intermediate credit bank, a production credit corporation, and a bank for cooperatives-in addition to local national farm loan associations and production credit associations. In addition to the district units located in the above-mentioned cities, there is a Central Bank for Cooperatives located in Washington, D. C.

Data on agricultural loans included in the summary table on Government corporations and credit agencies on p. 87 include, for pertinent periods, the agricultural loans of the Commodity Credit Corporation, Reconstruction Finance Corporation, Farmers Home Administration and predecessor agencies, and the Rural Electrification Administration, as well as loans of agencies under the supervision of the Farm Credit Administration. In addition, data for loans of agencies under the supervision of the Farm Credit Administration included in the summary table differ from data shown here in that the summary table includes Federal intermediate credit bank loans to and discounts for production credit associations, which are not included in the totals shown here, and excludes loans by production credit associations which are here included.

Data in greater detail and descriptions of the lending institutions in the system may be found in the annual reports of the Farm Credit Administration.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT; monthly figures for 1932-40 are shown in the 1942, 1940, 1938, and 1936 SUPPLEMENTS and, except for a few minor revisions in the 1932-33 figures, are correct and comparable with data in subsequent volumes after adjusting the "grand total" and "total short-term credit" to exclude emergency crop loans and drought-relief loans. Figures for Federal land banks published in the 1932 SUPPLEMENT are substantially correct.
${ }^{4}$ Loans to cooperatives include loans (direct) by Federal intermediate credit banks, loans by the district banks for cooperatives and the Central Bank for Cooperatives (excluding advances in connection with CCC programs), and, prior to August 1953, loans from the Agricultural Marketing Act revolving fund.
${ }^{5}$ Data for other loans and discounts include Federal intermediate credit bank loans to and discounts for financing institutions (exclusive of loans to other Farm Credit Administration agencies), loans by production credit associations (beginning December 1933), and by regional agricultural credit corporations (for period October 1932-March 1949). Federal intermediate credit bank loans to and discounts for other Farm Credit Administration agencies (regional agricultural credit corporations, production credit associations, and banks for cooperatives) are omitted from the total for other loans and discounts and total loans for all agencies to avoid duplication. Emergency crop loans and drought-relief loans, which were formerly under the supervision of the Farm Credit Administration and are included in the totals for short-term credit (other loans and discounts) shown in the 1942 and earlier SUPPLEmENTS, have been excluded for all years covered in subsequent volumes.
${ }^{6}$ Compiled by the Board of Governors of the Federal Reserve System. The series has been revised to include 345 centers ( 141 in the old series); the 6 other centers comprise Boston, Philadelphia, Chicago, Detroit, Los Angeles, and San Francisco. Data represent debits or charges to demand deposit accounts of individuals, partnerships, and corporations, and of State and local governments, and payments from trust funds on deposit in the banking department. The revised series excludes debits to $U$. S. Government deposit accounts, debits to time deposit accounts, and (like the former series) payments of certified and officers' checks, payments in settlement of clearing-house balances, charges to expense and miscellaneous accounts, corrections and similar charges, and debits to the accounts of other banks (i.e., to interbank accounts).
${ }^{7}$ Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.
${ }^{8}$ The condition of the 12 Federal Reserve Banks is reported as of the end of each month by the Board of Governors of the Federal Reserve System. Detailed statements are presented in the monthly Federal Reserve Bulletin.

Effective June 12, 1945, only gold certificates are eligible as reserves (for year-end figures 1935-44 and monthly data 1941-May 1945 for total reserves, including cash, see the 1947 Statistical Supplement, p. 72). The reserve ratio represents the percentage which gold certificate reserves (total reserves prior to June 12 , 1945) are of the combined deposit and Federal Reserve note liabilities.

## Page 80

${ }^{1}$ See note 8 for p. 79.
${ }^{2}$ The data are reported weekly by the Board of Governors of the Federal Reserve System and are for reporting member banks in leading cities; the figures given here are for the Wednesday nearest the end of the month or year.

Beginning January 2, 1952, the series for weekly reporting banks was revised to increase and improve the coverage; a net addition of 8 banks was made, increasing the total number of banks reporting to 449 ( 441 reporting banks were included in data as shown here for 1946-51; prior thereto, a varying number in 101 cities as stated below). All branches of reporting banks are included (effective July 1946) regardless of the location. The expanded coverage of the reporting member banks series resulted in an increase on January 30 , 1952 , of $\$ 929,000,000$ in total loans and investments (including loans to banks) and $\$ 713,000,000$ in adjusted demand deposits.

The reporting banks in the 101 cities numbered about 420 at the end of 1932. This total was gradually changed by mergers and other causes until by June 1946 they had decreased to 37 l banks. A new and enlarged series was then initiated which included data for 441 reporting banks. Also, the percentage of the total commercial bank deposits represented by the reporting banks was increased from 49 to 57 percent and that of the total member bank deposits from 57 to 67 percent. The data for 1952 shown on pp. 80 and 81 of the 1953 Statistical Supplement are for the series covering 441 reporting banks; an overlap for that series and the current one is thus provided.

Since the weekly reporting banks are chiefly large city banks, which are most affected by short-time money market factors, they are especially significant in showing current changes in the credit situation. The assets and liabilities of banks in smaller places change more slowly, and weekly figures for these banks would ordinarily be of less significance and, owing to the larger number of such banks, more difficult to collect.

Because of a revision in the classification of "loans" in May 1937 (described in the Federal Reserve Bulletins for May and June 1937) and a regrouping of the items, data for the period prior to that time cannot be shown for the individual classifications except for real-estate loans and loans to brokers and dealers in securities. The latter item includes, beginning with May 1937, when the revision was made, a small amount of unsecured loans to brokers and dealers (when such loans are made for the purpose of purchasing or carrying securities); earlier data include only loans on securities. In the Federal Reserve presentation of these data; several combinations of the new classifications are shown which provide a fairly comparable continuation of the earlier series.

Beginning June 30, 1948, figures for individual loan items are reported gross (i.e., before deduction of valuation reserves) instead of net as previously; therefore, they are not entirely comparable with prior figures and do not add to total loans, which continue to be reported net. Data for July 1947-May 1948 for the various loan items, adjusted to a gross basis, are available upon request.

Beginning February 1939, data for time deposits, demand deposits, and investments in U. S. Government direct obligations were subdivided and new classifications were brought out. A small amount of U. S. Government time deposits
( $\$ 2,000,000$ on February 8) was shifted from the U. S. Government demand deposit series and included in the time deposit total. Minor changes were also made in the composition of several items of loans and investments. Certain amounts which previously had been classified as loans or securities, but indirectly representing bank premises or other real estate owned, are classified as "other assets" (not shown in this tabulation). These amounts on February 8, 1939, were $\$ 47,000,000$ for loans and $\$ 53,000,000$ for securities. A transfer of a small amount of loans theretofore classified as "commercial, industrial, and agricultural" to "other loans" was also made at that time.

Beginning with the 1947 Statistical Supplement, the data shown for interbank deposits include demand and time deposits of both domestic and foreign banks; they differ from figures in earlier SUPPLEMENTS which represent only domestic interbank deposits. Monthly figures for 1938-50 for all other items are shown in the 1953, 1951, 1949, 1947, and 1942 Supplements (loans on open-market paper, shown separately in the 1942 and earlier volumes, are now combined w/ith industrial, commercial, and agricultural loans).
Monthly figures prior to 1938 are available in the 1940, 1938, 1936, and 1932 Supplements as follows: Adjusted demand deposits (prior to September 1934, "net demand de-posits"-see note 6 for this page), total time deposits and total investments, 1923-37 (except for minor revisions for June 1923, February 1925, and January 1926); U. S. Government deposits, 1936-37; investments in U. S. Government obligations, 1932-37; investments in guaranteed obligations and in "other securities," loans to brokers and dealers in securities, real estate loans, and loans to banks, 1934-37; other classifications under loans, 1937. Available data prior to 1941 for all items are included in Banking and Monetary Statistics, published by the Board of Governors of the Federal Reserve System.
${ }^{3}$ Adjusted demand deposits represent deposits other than interbank and United States Government, less cash items reported as on hand or in process of collection. Data for adjusted demand deposits include certified and officers' checks in addition to other demand deposits shown here.
${ }^{4}$ Includes U. S. Government and postal-savings deposits not shown separately.
${ }^{5}$ Data represent net demand deposits, against which reserves were required to be held; computed by adding to all demand deposits other than U. S. Government deposits the excess of the balance due to banks over the balance due from banks.
${ }^{6}$ Data are for 441 reporting member banks; not comparable with preceding data nor data subsequent to 1951 (see note 2 for this page).
${ }^{7}$ Revised basis; includes a net of 8 additional banks; not comparable with preceding data (see note 2 for this page).

## Page 81

${ }^{1}$ See note 2 for $p .80$.
${ }^{2}$ For separate data on guaranteed obligations (1935 through June 1946), see the 1947 Statistical Supplement, p. 74.
${ }^{3}$ Exclusive of loans to banks and after deduction of valuation reserves; individual loan items are shown gross beginning June 30, 1948. (Notice that data in previous issues of the SUPPlement include loans to banks.)
${ }^{4}$ Direct obligations only.
${ }^{5}$ Guaranteed obligations only.
${ }^{6}$ Data are for 441 reporting member banks; not comparable with preceding data nor data subsequent to 1951 (see note 2 for p . 80).
${ }^{7}$ Beginning June 30, 1948, data are reported gross; see note 2 (paragraph 6) for p. 80.
${ }^{8}$ Revised basis; includes a net of 8 additional banks; not comparable with preceding data (see note 2 for p. 80).

## Page 82

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System. Data represent averages of rates charged on short-term loans (those maturing in 1 year or less) to business in the specified cities.

Figures through 1938, shown in italics and not comparable with succeeding data, are weighted averages of the prevailing rates (i.e., rates for the bulk of loans) for the week ending the 15 th of each month that banks reported as charging customers for loans represented by prime commercial paper eligible for rediscount at the Federal Reserve Banks under the provisions of the Federal Reserve Act.

Figures beginning 1939 are a revised series of interest rates adjusted for changes in the size composition of loans and, therefore, more accurately reflect variations over time in the level of interest rates. The revised report form (introduced June 1948) calls for the amount of the loans and the interest rate actually charged for each new loan or renewal made in the first half of March, June, September, and December by a selected group of 91 large banks in 19 leading cities. To afford a comparison between rates beginning June 1948 and earlier data, the old interest-rate reports have been reworked back to March 1939 to provide estimates of average rates charged using a constant system of weights derived from the size-of-loan data reported since June 1948. The reworked data, therefore, eliminate certain erratic fluctuations and long-run $t_{r e n d s}$ formerly introduced by shifts in the size composition of loans.

To adjust for size-of-loan differences, averages of rates paid on each size group of loans in each area are computed. This is done by dividing the dollar amount of interest charged, figured at an annual rate, by the dollar amount of loans made in each group of loans. The resulting rate averages for the minor size graps for each area are then combined into four major size groups of loans for the area. The weights used for this computation are based on the importance in each area of the minor size groups in the loan portfolios of reporting banks, as of November 20, 1946.

Major size categories of loans, for which weighted average rates are computed, are as follows:

## \$1,000-\$9,999 <br> $\$ 10,000-\$ 99,999$ <br> \$100,000-\$199,999 <br> $\$ 200,000$ and over

For each of the three geographic areas and for all 19 cities taken together an average rate is computed as a summary measure of movements in rates on all sizes of loans. The overall average, in each case, is obtained by combining the average rates for the four major size groups of loans. The weights used in making each average reflect the relative importance of the loan size groups in the business-loan volume outstanding as of November 20, 1946, at reporting banks in the area concerned.

Quarterly data beginning June 1948 are shown in the 1953, and 1951 issues of Business Statistics. Further details regarding the current series may be found in the March 1949 Federal Reserve Bulletin, pp. 228 ff.

Earlier monthly figures prior to April 1939 (except for the 19 cities), comparable with data shown here through 1938, appear on p. 17 of the March 1940 Survey. For a complete description of this series, see Banking and Monetary Statistics (pp. 426 ff.$)$, published by the compiling agency.

[^1]tical Supplement (November 1929 rate shown in the 1932 Supplement should be 4.50 percent).
${ }^{3}$ Compiled by the Farm Credit Administration and the predecessor agency, the Federal Farm Loan Board. The figures represent interest rates charged by the Federal intermediate credit banks for direct loans only. During the February 1934-February 1947 period, except in February 1939, the 12 banks had the same rate. When the banks have different rates, as in periods other than the aforementioned, the loan rates of the 12 banks are averaged. If a change of rate occurs during a month the bank's average rate for that month is obtained by weighting each rate by the number of business days it was in force. No weight is given to the number of loans closed at the various rates.

Monthly figures beginning 1929 are available in the 1953, 1951, 1949, 1947, 1942, 1938, 1936, and 1932 issues of the Statistical Supplement (revisions: May 1930, 4.82; August 1930, 4.13; June 1933, 3.12).
${ }^{4}$ Compiled by the Farm Credit Administration and the predecessor agency, the Federal Farm Loan Board. The figures are averages of the 12 banks' contract rates, or rates charged on new loans closed by the 12 Federal land banks on loans made through national farm loan associations. The law limits the rate to 6 percent. Direct loans are made at a rate $1 / 2$ of 1 percent higher than those made through the associations. When the banks have different loan rates, the rates of the 12 banks are averaged. When a change of rate occurs during a month, the bank's average rate for that month is obtained by weighting each rate in effect during the month by the number of business days it was in force. No weight is given to the number of loans closed at the various rates.

A temporary interest rate of $41 / 2$ percent was established by legislation on installments maturing during the period July 11, 1933, through June 30, 1935, on loans made through the national farm loan associations; on installments maturing from July 1, 1935, through June 30, 1944; the rate was further temporarily reduced to $31 / 2$ percent. On expiration of this reduced rate on June 30,1944 , the banks voluntarily reduced the interest rate to 4 percent on all loans outstanding, some of which bore a contract rate as high as 6 percent. No further changes were made until August 1, 1948, when the Columbia bank raised its rate to $41 / 2$ percent on association loans; on January 1, 1949, the Springfield bank raised its rate to $41 / 2$ percent; on July 1, 1951, the Columbia bank again raised its rate to ' 5 per-1 cent; and on October 1, 1951, the Baltimore bank raised its rate to $4 \mathrm{l} / 2$ percent.

For monthly data beginning February 1917, see the 1953, 1951, 1949, 1947, 1942, 1940, and 1938 issues of the Statistical Supplement and p. 20 of the April 1935 Survey.
${ }^{5}$ Compiled by the Board of Governors of the Federal Reserve System from data collected by the New York Federal Reserve Bank. Beginning with 1951, the monthly data for bankers' acceptances, commercial paper, and time loans have been revised to represent averages of daily quotations (prior thereto the figures are averages of weekly prevailing rates).

Monthly data for 1938-50 for all series are shown in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical SUPPLEMENT. Monthly data prior to 1938 for call loans are available in the $1940,1938,1936$, and 1932 SUPPLEMENTS; those for other series are available upon request.
${ }^{6}$ Compiled by the Board of Governors of the Federal Reserve System. Data through 1946 represent average rates on issues announced within the period; thereafter, on new bills issued within the period. Beginning with data for December 17, 1937, the rates are on 3 -month Treasury bills. For earlier periods, they are on bills of the following maturities: Three months, to February 16 , 1934 ; six months, from February 23, 1934, to February 23, 1935; nine months, from March 1, 1935, to October 15, 1937; bills maturing about March 16, 1938, from October 22 to December 10, 1937. The rates are for tax-exempt bills prior to March 1, 1941, and for taxable bills thereafter.

Monthly data for 1947-50 appear in the 1953 and 1951 issues of the Statistical Supplement. Monthly data for 1938-

46 (based on issues announced) are available in the 1949, 1947, 1942, 1940, and 1938 volumes.
${ }^{7}$ Compiled by the Board of Governors of the Federal Reserve System. Data are averages of daily figures. They are derived from yields on individual issues as computed by the Treasury Department. Each daily figure is an unweighted average of the yields of the issues included and is based on averages of closing bid and asked quotations.

Data through September 14, 1945, include taxable Treasury notes only (taxable notes were first issued in December 1940). Each issue with a maturity of more than 3 years was included until its period to maturity reached 3 years. Beginning September 15 , 1945, the series includes notes and/or selected bond issues. Substitutions of issues are made from time to time in order to provide, in general, a continuous and representative series. For some periods, the data are based on a single issue.

Monthly data for 1941-50 (for the taxable series as shown here) are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. For data through March 1942 on 3- to 5 -year tax-exempt Treasury notes, see the 1947 Staidstical SUPPLEMENT and earlier volumes.
${ }^{8}$ Compiled from data furnished by the Savings Bank Association of the State of New York on deposits in all savings banks in New York State-numbering 129 since August 1954. For December figures prior to 1947, reports of the New York State Banking Department are used. Since January 1935, the coverage of the monthly reports has been complete and, except for minor differences, data are comparable with the December figures from the State Banking Department.

Monthly data for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the STATISTICAL SUPPLEMENT. Monthly data for 1924-37 are shown in the 1940, 1938, 1936, and 1932 volumes; the 1924-31 figures shown in the latter issue include small estimates and the December figures differ slightly from the December figures from the State Banking Department shown in the 1942 SUPPLEMENT.
${ }^{9}$ Compiled by the U. S. Post Office Department. Data tabulated here are as of the end of the year or month indicated. Data on postal savings are shown in greater detail in the annual reports of the Postmaster General.

Balance to credit of depositors represents outstanding principal as evidenced by certificates of deposit and unclaimed deposits (accounts inactive over 20 years).

Monthly data for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical SUPplement. Earlier monthly figures which appear in the 1940, 1938, 1936, and 1932 SUPPLEMENTS are correct except for minor revisions in the figures in the latter volume.
${ }^{10}$ Data for bank rates on business loans for 1939-47 are annual averages; for 1948, quarterly averages. Data for discount rate, New York Federal Reserve Bank, and for savings deposits are as of the end of the year.
${ }^{11}$ Average for 5 months; February, April, May, August, and November.
${ }^{12}$ Revised series; comparable with succeeding data (see note 1 for this page). Averages of rates for January and February 1939 comparable with series shown through 1938 are as follows: 19 cities, 2.58 percent; New York City, 1.72 percent; 7 other northern and eastern cities, 2.83 percent; 11 southern and western cities, 3.29 percent.
${ }^{13}$ Average for 8 months; February, April-September, and November. Rates were negative for January, March, October, and December.
${ }^{14}$ Series revised beginning January 1947 to reflect yields on new bills issued within the period rather than issues announced.
${ }^{15}$ Bank rates beginning 1948 are averages of quarterly data.
${ }^{16}$ Revised to represent averages of daily quotations (see note 5 for this page).

## Page 83

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System. These data represent a continuation of the revised series of consumer credit outstanding as shown in the 1953 issue of BuSiness Statistics. In addition, they include the new estimates of consumer installment credit extended and repaid (completed in early 1954) which are consistent with the data on credit outstanding.

Consumer credit represents all short- and intermediateterm credit used to finance the purchase of commodities and services for personal consumption or to refinance debts originally incurred for such purposes. (This definition is essentially the same as that followed in the old series.) Because of certain difficulties, some credit that is really consumer credit cannot be included in the data here shown. On the other hand, it is impossible to exclude all the nonconsumer credit that the definition requires. The amount of consumer credit omitted from the series far exceeds the amount of nonconsumer credit that still remains in the series.

The term "credit" means an advance of purchasing power which could be used to obtain goods and services, or an advance of goods or services in exchange for a promise to pay at a later date. The term "consumption" means the process of using up goods and services as an end in itself rather than as a stage in production. Credit extended to governmental agencies and nonprofit or charitable organizations, as well as credit extended to businesses, is excluded.

Installment credit includes all consumer credit held by financial institutions and retail dealers which is scheduled to be repaid in two or more installments. Revolving credit and budget and coupon accounts are treated as installment credit rather than as charge accounts because they involve scheduled repayment on a monthly basis.

Descriptions of the four principal classes of installment credit follow. "Automobile paper" and "other consumergoods paper" represent credit extended for the purpose of purchasing automobiles and other consumer goods and, in most cases, secured by the items purchased. "Repair and modernization loans" include both FHA insured and noninsured loans made to finance the maintenance and improvement of owneroccupied dwelling units. "Personal loans" include all loans, not covered in the previous categories, made by financial institutions to individuals for consumer purposes, such as consolidation of consumer debts, payments of taxes and of medical, educational, or travel expenses, etc. Some personal loans are used for the purchase of consumer goods but, since they are not secured by the goods, they are not reported as commodity paper under automobile or other consumer goods.

Noninstallment credit is subdivided according to singlepayment loans, charge accounts, and service credit. "Sin-gle-payment loans" are loans made to individuals for consumer purposes and scheduled to be repaid in one payment. While some credit of this type is used for the purchase of consumer goods, most is for meeting short-term needs such as the payment of personal taxes or life-insurance premiums. "Charge accounts" are the outstanding balances owed to retail dealers for purchases made by individuals for consumer purposes. "Service credit" is the amount owed by individuals to professional practitioners and service establishments.

Like most economic statistics, the consumer-credit series is based on comprehensive benchmark data which become available periodically. Current monthly estimates are projected from the latest benchmarks in accordance with changes indicated by sample data. The estimated totals are adjusted as necessary whenever new benchmark data become available. Classifications are made on a "holder" basis. Thus installment paper sold by retail outlets is included in figures for the banks and sales-finance companies that purchased the paper.

Estimates of installment credit extended, repaid, and outstanding represent summaries of accounting records. Conceptually the amount of outstanding credit represents the sum of the balances in the installment receivable accounts
of financial institutions and retail outlets on any given date. Credit extended covers all debit entries to these accounts during a given period and credit repaid covers all of the credit entries except chargeoffs. The difference between credit extended and credit repaid during any given period is thus equal to the change in the outstanding balance during the period, if allowance is made for losses and chargeoffs. In these estimates, chargeoffs are included as repayments in most of the components of the series. Information is not available to make separate estimates of the amount of chargeoffs and under most circumstances the amounts involved are relatively small.

The estimates of the amount of credit outstanding and those of installment credit extended include any finance and insurance charges included as part of the installment contract. Similarly, installment-credit repayments include the payments on these charges. The inclusion of finance charges is general for most types of installment contracts, since they are usually written on a discount basis. The inclusion of insurance charges is of importance primarily in the case of automobile installment credit.

Another fact to consider in using figures on installment credit extended and repaid is the inclusion of loans to refinance or consolidate other installment obligations or to renew existing loans. The items simultaneously add to both credit extended and credit repaid with no net effect on the amount outstanding. Little is known of the exact amount of such refinancing, but it is not believed to be sufficiently large most of the time to have any significant effect on the totals of installment credit extended and repaid.

The adjusted data for installment credit extended and repaid reflect adjustments for differences in the number of trading days and for seasonal variation. The seasonal factors used are derived by the modified ratio-to-movingaverage method (for details of this method, see article in Federal Reserve Bulletin, June 1941).

There is a necessary relationship between credit extensions and repayments which is determined by the nature of the installment contract. Once a contract is made, the schedule of repayments is determined. Because repayments on installment contracts are distributed evenly over a number of months, data on repayments show much less seasonal variation than data on extensions. Moreover, the seasonal movements that do occur in repayments are related to some extent to the seasonal movements in extensions.

Detailed information regarding the compilation of data on consumer credit outstanding and figures back to January 1929 for total short- and intermediate-term consumer credit, installment credit, and noninstallment credit outstanding, by type, and back to December 1939 for all other series on outstanding credit are published in the April 1953 issue of the Federal Reserve Bulletin. A description of the series on extensions and repayments and figures back to January 1940 appear in the January 1954 Federal Reserve Bulletin.

End-of-month data for 1949 and 1950 for consumer credit outstanding may be found in the 1953 edition of BUSINESS Statistics.
${ }^{2}$ Includes all consumer installment credit extended for the purpose of purchasing automobiles and other consumer goods and secured by the items purchased, whether held by retail outlets or financial institutions. Includes credit on purchases by individuals of automobiles or other consumer goods that may be used in part for business.
${ }^{3}$ Includes only repair and modernization loans held by financial institutions; such loans held by retail outlets are included in "other consumer-goods paper."

## ${ }^{4}$ Includes mail-order houses.

${ }^{5}$ Includes only automobile paper; other installment credit held by automobile dealers is included with "other" retail outlets.

## Page 84

${ }^{1}$ See note 1 for $p .83$.
${ }^{2}$ Estimates of installment credit extended and repaid are based on information from accounting records of retail out-
lets and financial institutions and include finance, insurance, and other charges incurred under the installment contract. Renewals and refinancing of loans, repurchases and resales of installment paper, and certain other transactions may increase the amount of both credit extended and credit repaid without adding to the amount of credit outstanding.
${ }^{3}$ Data for noninstallment consumer credit are end-of-year figures, not monthly averages.

## Page 85

${ }^{1}$ See note 1 for $p .83$.
${ }^{2}$ See note 2 for $p .84$.
${ }^{3}$ Includes adjustment for differences in trading days.
${ }^{4}$ Compiled by the U. S. Treasury Department. Data cover only budgetary operations of the Federal Government, excluding from expenditures the amounts for public-debt retirement which are chargeable to the sinking fund, etc., under special provisions of the law. The monthly averages through 1953 and the monthly figures through June 1953 are on the basis of the "Daily Statement of the U.S. Treasury," compiled from the latest daily reports received from Government depositaries, Treasury disbursing offices, the Departments of the Army and Air Force, and other agencies. The monthly averages for 1954 and the monthly figures beginning July 1953 are on the basis of the "Monthly Statement of Receipts and Expenditures of the $U$. S. Government," compiled from reports received from all Government collecting and disbursing agencies and the Treasurer of the United States. The Monthly Statement shows receipts of taxes and customs duties on a collection basis, while other receipts are stated on a deposit basis, and expenditures are reported on the basis of checks issued or cash payments made by disbursing officers. This statement contains all receipts and expenditures of the Government, including those of agencies which maintain cash accounts outside the U. S. Treasury.

Budget accounts include general accounts, which are credited with receipts not designated by Congress for specific purposes and cover most appropriations and expenditures, special accounts, or funds earmarked by Congress for specific purposes, and operations in checking accounts of wholly owned Government corporations and credit agencies, other than transactions of these agencies on account of borrowings or repayments. They exclude trust account receipts and expenditures and related items.

Information on the content of various items of expenditures is given in notes $2-4$ for $p$. 86 . Items under receipts are explained as follows (see also note 5 for this page): "Income and employment taxes" include individual income and corporation income and profits taxes, unjust enrichment taxes (through June 1946), victory taxes (withheld pursuant to the Revenue Act of 1942 and repealed after 1943), and employment taxes for old-age insurance, for unemployment insurance, and for railroad retirement; except as otherwise noted, the data exclude railroad-unemployment-insurance contributions, which are included in "other receipts."
"Miscellaneous internal revenue" includes liquor taxes, tobacco taxes, manufacturers' and retailers' excise taxes, estate and gift taxes, capital-stock taxes, stamp taxes, and other miscellaneous taxes. This item and the preceding item (income and employment taxes) compose total internal revenue as classified in Treasury reports.
"All other receipts" include proceeds from the sale of surplus property (Act of October 3, 1044) and from Govern-ment-owned securities, deposits resulting from renegotiation of war contracts, repayments on credit to United Kingdom, Panama Canal tolls, seigniorage, railroad unemployment insurance contributions for administrative expenses through 1953, and miscellaneous receipts. Deposits resulting from the renegotiation of war contracts represent a large proportion of "other receipts" in certain years. Separate figures for such deposits are not available on the basis of the daily or monthly Treasury statements; on the basis of covering warrants, such amounts (including so-called voluntary returns) for fiscal years ended June 30 were as follows (in millions of dollars): 1943,$558 ; 1944,2,235 ; 1945,2,041$;
$1946,1,063 ; 1947,279 ; 1948,162 ; 1949,76 ; 1950,27 ; 1951$, 28; 1952, 13; 1953, 39; 1954, 36.

5 "Net receipts" represent total budget receipts less refunds of receipts (beginning with fiscal year 1931), and less appropriations of receipts to the Federal old-age and survivors' trust fund beginning with June 1936 and to the railroad retirement account beginning with 1942 for the monthly averages and with 1952 for the separate monthly data.
${ }^{6}$ Social-security taxes were first collected in June 1936 (total for 7 months, June-December, is $\$ 206,000$ ); prior thereto data represent income taxes only. Railroad-unemployment-insurance contributions are included in data for 1936 (as stated in note 7 below) but the amount is offset by transfers to the Old-Age Reserve Account.
${ }^{7}$ Prior to July 1, 1939, figures include railroad-unemployment-insurance contributions (paid under Title IX of the Social Security Act) amounting to $2.7,5.3$, and $6.8 \mathrm{mil-}$ lion dollars, respectively, for the calendar years 1036 , 1937, and 1938, and 2.9 million for January-June 1939. Similar contributions under the "Railroad Enemployment Insurance Act," effective July 1, 1939, are largely deposited directly in the trust-fund account for railroad unemployment insurance; the portion included in receipts is credited to funds for administrative expenses and is not classified as an employment tax under the Internal Revenue Code.
${ }^{8}$ The monthly averages beginning 1942 and the monthly figures beginning January 1952 for net budget receipts and= budget expenditures are revised data reflecting the exclusion of appropriations of receipts to the railroad retirement account.
${ }^{9}$ New reporting basis (see lst paragraph of note 4 for
this page) this page).
10 The 1951 monthly figures do not include deductions for appropriations of receipts to the railroad retirement account.

## Page 86

${ }^{1}$ See also note 4 for p. 85. Expenditures are "net," after allowance for reimbursements to appropriations, receipts of revolving-fund appropriations, and receipts credited to disbursing accounts of corporations and agencies having authority to use collections without formal covering into the Treasury. The figures include transfers to trust accounts, transactions of the Foreign Economic Cooperation Trust Fund, established under the Economic Cooperation Act of 1948, and transactions of wholly owned Government corporations and agencies. Beginning November 1950, investments by these corporations and agencies in public-debt securities are excluded from budget expenditures and included wi th other such investments under "trust account and other transactions." Corresponding adjustments were made in November 1950 and January 1951 for net investments classified as budget expenditures in the period July through October. Budget expenditures exclude also amounts for public-debt retirement which are chargeable to the sinking fund, etc., under special provisions of law. Payments to the Treasury, principally by wholly owned Government corporations, for retirement of capital stock and disposition of earnings are excluded from both receipts and expenditures.
${ }^{2}$ Includes transfers to the adjusted service certificate fund and the National service life-insurance fund, administered by the Veterans Administration, in addition to expenditures for veterans' pensions and compensations, benefits under the Servicemen's Readjustment Act, direct loans, public works undertaken by the Veterans Administration, and all other expenditures of the agency.
${ }^{3}$ Expenditures for "national security" include, in recent years, those for military functions of the Office of the Secretary of Defense, the Air Force, the Army, and the Navy; the mutual military program; Atomic energy; strategic and critical materials; direct forces support; payments under

Armed Forces Leave Act; expenditures of the U. S. Maritime Administration, prior to July 1, 1949 (thereafter, data are included with "all other expenditures"); UNRRA; surplus property disposal agencies; the Reconstruction Finance Corporation (after July l, 1947, expenditures of RFC for national defense and related activities were not segregated from other expenditures of the Corporation and its affiliates, which are included for the pertinent period under "other" expenditures); also expenditures for various other purposes related to national defense.

4 "All other expenditures" include, in recent years, expenditures for the following purposes: International affairs and finance; social security, welfare, and health; housing and commity development; agriculture and agricultural resources; natural resources; transportation and communication; finance, commerce, and industry; executive departments and other agencies not included elsewhere; and for legislative and judicial functions.
${ }^{5}$ Compiled by the U. S. Treasury Department. Figures represent gross debt at the end of the year or month specified. Beginning July 1942, data are on the basis of the Daily Statement of the Treasury, compiled from daily reports received from Government depositaries and Treasury offices holding Government funds. Owing to the distance of some of the offices from the Treasury, their reports may be somewhat delayed. The figures do not include delayed reports for the month concerned and include reports of the preceding month received too late for inclusion in the figures for that month. Prior to July 1942, the figures are from Public Debt Statements which take into account delayed reports. Data include matured debt on which interest has ceased and debt bearing no interest, in addition to interest-bearing debt.
"Public issues-interest bearing" consist of bonds, Treasury notes, certificates of indebtedness, and Treasury bills, and includes both marketable and nonmarketable issues. "Special issues to Government agencies and trust funds-interest-bearing" consist of notes or certificates issued to the following trust funds or accounts: Retirement funds, unemployment trust fund, Federal old-age and survivors insurance trust fund, adjusted service certificate fund, Postal Savings System, Federal Deposit Insurance Corporation, Federal Savings and Loan Insurance Corporation, Federal home loan banks, housing insurance funds, National service life-insurance fund, farm tenant mortgage insurance fund, Veterans' special term insurance fund, and Government life-insurance fund. "Noninterest-bearing" consists of matured debt on which interest has ceased, special notes of the United States for International Monetary Fund, U. S. savings stamps, excess prifits tax refund bonds, United States notes (Iess gold reserve), national bank and Federal Reserve bank notes assumed by the United States on deposit of lawful money for their retirement, and other debt bearing no interest.

The public debt reflects debt incurred to finance expenditures of Government corporations and credit agencies for which obligations of such corporations and agencies are held by the Treasury. Debt so incurred amounted to
$\$ 14,633,000,000$ on December 31, 1954. The reduction in the debt from the peak in February 1946. was accomplished almost entirely by a reduction in the cash balance in the Treasury during that year. The balance in the Treasury general fund as of December 31 in recent years has been as follows (millions of dollars): 1940, 1, 928; 1941, 3,560; 1942, 10,543; $1943,12,294 ; 1944,22,236$; 1945, 26,003 ; 1946, 3, 502 ; 1947 , 3,097; 1948, 4,208; 1949, 4, 679; 1950, 4, 232; 1951, 4,295; $1952,6,064 ; 1953,4,577$; 1954, 5,180 .

Monthly data for 1936-50 are available in the 1953, 1951, 1949, 1947, 1942, and 1940 issues of the Statistical SuppleMENT; earlier monthly data for total gross debt appear in the 1938, 1936, and 1932 SUPPLEMENTS and for the breakdown on p. 16 of the April 1949 Survey. Total interest-bearing debt is not shown in these earlier volumes but can be obtained by adding the two component series.
${ }^{6}$ Compiled by the U. S. Treasury Department (data through 1941 were compiled by the Board of Governors of the Federal Reserve System from reports of the U. S. Treasury Department). Data are as of end of the year or month specified
and represent the principal amount of obligations issued by Government corporations and credit agencies which are guaranteed as to principal and interest. Obligations of the Home Owners' Loan Corporation, issued July 1, 1933, guaranteed as to interest only, which were called for redemption July l, 1935, are not included. Only public issues are included; excluded throughout are obligations held by the United States Treasury and reflected in the public debt. Data include in-terest-bearing debt and matured debt on which interest has ceased beginning 1939; earlier data are interest-bearing debt only.

Since October 1941 funds needed by the Government corporations and credit agencies have been provided by the Treasury instead of by sale of guaranteed securities in the open market, except in the case of certain transactions involving the Federal Housing Administration and the Commodity Credit Corporation. As a result of this policy, there has been a large decrease in guaranteed obligations outstanding. Securities of the Government corporations and credit agencies held by the Treasury for debt incurred to finance their expenditures and reflected in the public debt totaled $\$ 14,633,000,000$ on December 31, 1954.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Earlier monthly data appear in the $1942,1940,1938$, and 1936 SUPPLEMENTS; data for all years shown in those volumes represent interest-bearing debt. The 1942 and earlier Supplements and the monthly Survey through the July 1944 issue show data by principal issuing agencies; since May 1945 the interest-bearing obligations have consisted entirely of debentures issued by the Federal Housing Administration in connection with mortgage insurance and, through March 1953, demand obligations of the Commodity Credit Corporation.
${ }^{7}$ Compiled by the U. S. Treasury Department. U. S. savings bonds were first offered in March 1935 and began to mature in March 1945. Data cover all issues of U. S. savings bonds, on sale as follows: Series A-D, between March 1935 and end of April 1941; E, beginning May 1941; F and G, between May 1941 and end of April 1952; J and K (which replaced $F$ and G), beginning May 1952; and series $H$ (a cur-rent-income bond), put on the market June l, 1952.

Sales figures included for series $A-F$ and $J$ represent issue price of bonds and total redemptions and amounts outstanding represent current redemption values (i.e., sales price plus accrued discount). All data included for series $\mathrm{G}, \mathrm{H}$, and K are at face value. The figures for redemptions include bonds redeemed before maturity and matured bonds turned in for redemption. Matured bonds are not turned in for redemption are reflected in amounts outstanding.

Sales of series E included in the combined figures are as follows (monthly averages in millions of dollars): 1941 (average for May-December), 143; 1942, 499; 1943, 862; 1944, 1,032 ; 1945, 819; 1946, 372; 1947, 340; 1948, 352; 1949, 351; 1950, 306; 1951, 266; 1952, 283; 1953, 326; 1954, 335.

When series E began to mature on May 1, 1951, owners of the matured bonds were offered three options: To redeem the bonds in cash in accordance with the original terms; to retain them with an extended maturity of 10 years at specified rates of interest accrual; or to exchange them for series $G$ bonds. A number of changes became effective May 1 , 1952. The principal ones were: The rate of interest accrual on series $E$ was increased, especially for the near term, with corresponding changes in extended series $E$; and, as noted above, series $F$ and $G$ were replaced by two new issues, series J (revised series F) and K (revised series G), also at higher interest rates. On May 1, 1953, series $F$ and G bonds began to mature. Prior to the maturity of these bonds the owners of bonds maturing from May 1 through December 1953 were offered for exchange $31 / 4$ percent fully marketable long-term Treasury bonds, dated May 1, 1953, maturing June 15, 1983, and callable on or after June 15, 1978. Eligible $F$ and $G$ bondholders not wishing to accept the new marketable bond in exchange for their maturing bonds would have the opportunity of reinvesting the proceeds in other series of savings bonds currently on sale, or to receive cash payment.

Series A-D and E (prior to May 1, 1952) bonds are 10year discount bonds sold at 75 percent of maturity value, and yield 2.90 percent per annum if held to maturity. Be-
ginning May 1, 1952, series E bonds yield approximately 3.00 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier date. Series F bonds are 12 -year discount bonds sold at 74 percent of maturity value, and yield 2.53 percent per annum if held to maturity. Series $G$ bonds are 12 -year current income bonds, sold at par, bearing interest at $21 / 2$ percent per annum, and redeemable at par at maturity or at stated prices less than par before maturity. Series J bonds are 12 -year discount bonds sold at 72 percent of maturity value, and yield approximately 2.76 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier dates. Series $K$ bonds are sold at par value, with interest paid semiannually at the rate of 2.76 percent per annum; redemption values at less than par to provide lesser yields if redeemed at earlier dates; but redemable at par in event of death of owner or if issued in exchange for matured series $E$ bonds. Series $H$ bonds mature 9 years and 8 months from issue date. Interest is paid semiannually by checks of varying amounts to provide an investment yield of approximately 3.00 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier dates.

Purchases of series A-D bonds were limited to $\$ 7,500$ is. sue price in any one calendar year. These bonds were available to all subscribers prior to April 1, 1940, and to individuals only beginning that date. Purchases of series E bonds are now limited to $\$ 15,000$ issue price in any ons calendar year, and may be made only by individuals; from $1=48$ through 19'51, the limitation on such bonds was $\$ 7,500$, and prior to $1948, \$ 3,750$. The limit for series $F$ and $G$ combined was $\$ 100,000$ issue price in any one calendar year ( $\$ 50,000$ in calendar year 1941). However, special cfferings were made to certain classes of institutional investors in excess of regular limitations; and at specified times in 1940, investors could buy series $F$ and $G$ bonds combined up to a total of $\$ 1,000,000$ in excess of the $\$ 100,000$ existing limit. Series $F$ and $G$ bonds were available to all subscribers except commercial and industrial banks. Commercial and industrial banks, however, were permitted to purchase these bonds during certain periods and with certain restrictions. The annual limit is $\$ 200,000$ (issue price) for series $J$ and $K$ combined, excluding series $K$ bonds issued in exchange for matured series $E$ bonds. They are available to all except banks which accept demand deposits. A $\$ 20,000$ maturity value is the annual limit for series $H$ bonds; such bonds are available to individual persons only.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; those for 1935-40 are available upon request.
${ }^{8}$ Data for public debt and guaranteed obligations outstanding are as of the end of the calendar year, not monthly averages.
${ }^{9}$ Average for 6 months, July-December.
${ }^{10}$ Average for 8 months, May-December. Receipts from sales in March and April first appeared in funds received in May.
${ }^{11}$ See note 8 for $p .85$.
${ }^{12}$ New reporting basis (see lst paragraph of note 4 for $p$. 85).
${ }^{13}$ The 1951 monthly figures reflect appropriations of receipts to the railroad retirement account.
${ }^{14}$ Net transactions by the Department of the Air Force and the Army relating to "deposit fund accounts" are excluded beginning June 1952; the figure for June includes the reclassification of this item for the full fiscal year 1952.

## Page 87

${ }^{1}$ Compiled by the U. S. Treasury Department from reports received from agencies and published in the Treasury Bulletin. The data are based on financial statements of (l) corporations in which the U. S. Government has a proprietary interest, direct or indirect, except Federal savings and loan associations and those corporations in which the proprietary interest of the United States is evidenced only by
preferred stock or capital notes acquired through the Reconstruction Finance Corporation or production credit corporations; and (2) certain activities of the executive departments and independent establishments of the U. S. Government. (On September 29, 1953, pursuant to the Act approved July 30, 1953, the RFC started liquidation of its activities except those which existing law or this law permitted to be transferred elsewhere.)

Figures beginning September 1944 are not comparable with earlier data, because of the adoption at that time of a completely revised reporting form and the inclusion of data for some agencies that formerly did not report. Data as shown in the 1947 Statistical Supplement and in all subsequent issues conform to the basis adopted in September 1944. Beginning that month all interagency items, which are excluded here, are segregated in the Treasury Bulletin (whereas they were only partially segregated in earlier reports), reporting of some other items is more complete than formerly, and total assets are shown on a net basis (after reserves for losses). The "major" classifications under assets are shown in the original reports on both a gross and a net basis. Effective with data for September 1944, only the net figures (except for the detail under loans) are shown here. Data as of June 30, 1939-44, have been revised by the U. S. Treasury Department, insofar as possible, to conform to the classifications adopted September 1944; the figures shown herein incorporate such revisions. Prior to September 1944, reserves against loans and valuation reserves were reported as "other liabilities" rather than as suspended credits to the respective asset items. No adjustment has been made for this change in reporting. The total amount of reserves deducted from assets for September 30,1944 , is $\$ 772,000,000$, including $\$ 432,000,000$ reserves against loans, $\$ 184,000,000$ for land, structures, and equipment, and $\$ 156,000,000$ for "all other assets."

Comparable data for the several classifications under loans have not been compiled for periods prior to September 1944. The content of the classifications is as follows: "Loans to aid agriculture" include farm mortgage loans, loans to agricultural credit corporations and to cooperative associations, crop, livestock, and commodity loans, and miscellaneous loans. They represent largely loans by Farm Credit Administration agencies, the Conmodity Credit Corporation (including guaranteed loans held by lending agencies), the Farmers Home Administration (loans transferred to this agency November 1946 from the Farm Security Administration), the Rural Electrification Administration, and the Federal Crop Insurance Corporation. Loans of all Federal land banks are included, although by the end of 1946 all but one of these banks had retired the capital stock and paid-in surplus held by the U. S. Government. On June 26, 1947, the proprietary interest of the United States in these banks ceased and data for the banks are excluded thereafter.
"Loans to aid home owners" include loans by the Federal National Mortgage Association; by the Housing and Home Finance Agency (prior to August 2, 1954, when functions were transferred to the Federal National Mortgage Association); by the Veterans Administration; by the Reconstruction Finance Corporation (prior to September 29, 1953; see last part of first paragraph of this note); and by the Home Owners' Loan Corporation (prior to June 1951; agency liquidated in 1951). "Foreign loans" include loans by the Treasury, the ExportImport Bank, the Foreign Operations Administration and predecessor agency (beginning June 1952), and the Reconstruction Finance Corporation (prior to September 1953).

Quarterly data for 1945-50 are shown in the 1953, 1951, and 1949 issues of the Statistical Supplement (revisions for June 1946, in millions of dollars: Commodities, supplies, and materials, 1,550 ; other securities, etc., 439; land, structures, and equipment, 17,438 ; other liabilities, 4,939; U. S. Government interest, 22, 889). Data as of June 30 and September 30, 1944, appear in the 1947 volume.
${ }^{2}$ Total loans prior to September 1944 and the detail under loans (for all periods) are amounts before reserves (see note 1 above). Reserves against loans are not completely segregated as to type of loans to which they are applicable; however, most of the reserves are held against agricultural loans. Beginning September 1944, loans include those guar-
anteed by the Commodity Credit Corporation, amounting to $\$ 378,000,000$ as of that month.
${ }^{3}$ Data beginning 1944 are as of December 31; data prior to 1944 are as of June 30.
${ }^{4}$ Includes data for commodities, supplies, and materials.
${ }^{5}$ Beginning June 1952, outstanding loans of the Mutual Security Agency and successor (Foreign Operations Administration) are included.
${ }^{6}$ Beginning June 1953, outstanding loans of the Federal Maritime Board and Maritime Administration are included.

## Page 88

${ }^{1}$ Compiled by the Institute of Life Insurance, Division of Statistics and-Research. The portfolios in the end-of-year data are at annual statement asset value, with bonds carried on an amortized value basis, and stocks at market value. The portfolios in the end-of-month data are at book value with total adjustments to annual statement asset value appearing in the category "other assets." The monthly data are estimates of 100 percent of the assets of all United States legal reserve life-insurance companies and are currently estimated on the basis of monthly reports received from 130 to 150 companies accounting for 85 to 100 percent of the totals on various items.

Assets for the accident and health departments of lifeinsurance companies are distributed by type and included in the assets of all companies.
"U. S. Government bonds" include both direct Government obligations and bonds of Federal agencies fully guaranteed as to principal and interest by the U. S. Government. Bonds of Federal agencies not guaranteed by the U. S. Government are included in "industrial and miscellaneous bonds." Shares of institutions insured by the Federal Savings and Loan Insurance Corporation are included under "preferred stocks" to the extent they are insured by that agency. The balance is included in "common stocks."

The classification "real estate" includes real estate sold on contract but does not include real estate owned subject to redemption. Foreclosed liens subject to redemption are included in "mortgage loans" and are not transferred to "real estate" until the redemption period is past. "Other assets" include collateral loans, bills receivable, due and deferred.

Monthly data for 1949-50 for total assets are shown in the 1953 issue of the STatistical Supplement. Monthly data back to 1947 for total assets, preferred and common stocks, policy loans and premium notes, cash, and other assets and back to 1944 for all other series are available upon request.
${ }^{2}$ End-of-year data represent annual statement asset value, with bonds carried on an amortized value basis, and stocks at market value; end-of-month figures represent book value of ledger assets.
${ }^{3}$ Includes data for foreign bonds (State, provincial, and local).

## Page 89

${ }^{1}$ Compiled by the Life Insurance Agency Management Association. Data represent the estimated total volume of new paid-for life insurance sold in the United States, exclusive of revivals, increases, dividend additions, reinsurance acquired, and credit insurance. (The latter is a type of insurance that insures borrowers to cover payment of loans in case of death.) The estimated totals are projected from monthly company reports which at the end of 1954 accounted for around 88 percent of the new ordinary insurance ( $80-87$ percent in earlier years), 63 percent of the new industrial insurance, and 93 percent of the new group and wholesale contracts.

For ordinary insurance, the reported data for each State are raised to a 100 -percent basis and the State figures
summed to obtain United States and regional totals. A ratio of the sales of the reporting companies to annual sales of all companies in each State, based on 4 years' aggregate experience, was used to raise the reported monthly figures through 1944. From January 1945 through 1949, the ratios for raising the data are based on the average of only 2 years' experience, since it was found that use of a longer period tended to make the figures inaccurate in a State when the contributing companies showed a definite upward or downward trend. Beginning in 1950, a 1 -year basis has been used. These ratios are calculated each year on the basis of the latest year for which data are available. Details by States are given in the regular monthly reports of the compiling agency.

States comprising the geographic areas shown here are: New England-Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut; Middle Atlantic-New York, New Jersey, and Pennsylvania; East North Central-Ohio, Indiana, Illinois, Michigan, and Wisconsin; West North Central-Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas; South Atlantic-Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida; East South Central-Kentucky, Tennessee, Alabama, and Mississippi West South Central-Arkansas, Louisiana, Oklahoma, and Texas; Mountain-Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada; Pacific-Washington, Oregon, and California.

Group and wholesale and industrial insurance are estimated for the United States only, using a raising factor based on the percentage of sales of reporting companies to all companies during a 2 -year period. Beginning in 1951 a 1 -year basis has been used.
"Group life insurance" is that issued, usually without medical examination, on a group of persons under a master policy. It is usually issued to an employer for the benefit of employees, the individual members of the group holding certificates as evidence of their insurance.
"Industrial life insurance" is that issued in small amounts, usually not over $\$ 500$. Premiums are payable on a weekly or monthly basis and are generally collected at the home by an agent of the company.
"Ordinary life insurance" is that usually issued in amounts of $\$ 1,000$ or more with premiums payable on an annual semiannual, quarterly, or monthly basis. The term is also used to mean a plan of insurance for the whole of life with premiums payable until death.

Monthly data for 1941-45 for all series and 1946 for group and wholesale and ordinary insurance written are shown in the 1949 and 1947 issues of the Statistical Supplement. (Revision for ordinary insurance for July 1945-Mountain area, $\$ 23,888,000$.) The 1947-50 monthly averages for total insurance and ordinary insurance (as shown in the present volume) are based on annual totals which include revisions not allocable to the monthly data. Monthly data for 1938-40 for ordinary insurance are available in the 1942 SUPPLEMENT; for monthly data for 1930-37 see the 1940 volume and pp. 18 and 19 of the September 1937 SURVEy.
${ }^{2}$ Includes a year-end upward adjustment not allocated by months. Adjustments are as follows (in thousands of dollars): Total, 201, 000; group and wholesale, 154, 000; industrial, 47,000.
${ }^{3}$ Includes $\$ 6,738,000,000$ Federal employee insurance ( $\$ 562,000,000$ monthly average).

## Page 90

${ }^{1}$ Compiled by the Institute of Life Insurance. The data represent estimated total payments to policyholders and beneficiaries in the United States, including payments by Canadian companies. They do not include payments made outside the United States by American companies. The estimated totals are based on reports covering 93 to 97 percent of all payments. Data for death-benefit payments include additional accidental death benefits. For the years 1941 to 1947 the monthly averages for annuity payments and surrender values have been revised to include all annuity surrender
values under the annuity payments data (monthly revisions are not available).

Monthly data for 1948-50 for annuity payments and surrender values and for 1941-50 for all other series are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical SUPPLEMENT.
${ }^{2}$ Compiled by the Life Insurance Association of America from reports of 39 companies which collected 71 percent of the premium income of all United States legal reserve lifeinsurance companies in 1953. The figures include both new and renewal premiums and considerations for annuities. Data for accident and health premiums were not collected by the compiling agency prior to January 1948.

Monthly data for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical SuppleMENT; annuities are shown separately only beginning January 1930 but are included for all years. Data shown in the 1940 and earlier Supplements cover 40 companies but differ only slightly from data shown here for 39 companies. Monthly figures prior to 1938 are available upon request.
${ }^{3}$ See note 1 for this page (last sentence of lst paragraph).
${ }^{4}$ Figures beginning 1948 include accident and health premiums (not previously available) and, therefore, are not comparable with earlier data shown in italics.

## Page 91

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System from the "Circulation Statement of United States Money," issued monthly by the Treasury. Figures are the gold stock at the end of the months and years indicated.

Until January 30, 1934, the gold stock of the United States consisted of gold coin in circulation in the United States and gold held by the Treasury and the Federal Reserve Banks, except gold held under earmark for foreign account. On that date, title to all gold owned by Federal Reserve Banks was transferred to the United States Government, while by a series of Executive Orders in 1933 gold coin was retired from circulation. Since January 30, 1934, the regular gold-stock figures for the United States have represented only gold held by the Treasury, exclusive of relatively small amounts held since April 1934 in the Exchange Stabilization Fund, the figures for which are reported quarterly and on a delayed basis. The Federal Reserve Banks now hold gold certificates, or gold certificate credits on the books of the Treasury, which have been issued against the bulk of the Treasury's gold holdings. The reported gold stock also includes gold against which no certificates or certificate credits have been issued; i.e., the inactive portion of the Exchange Stabilization Fund's holdings (liquidated February 26, 1947), gold held against certain Treasury currency issues, and gold in the Treasury's General Fund, including from December 24, l 936, through April 13, 1938, amounts set aside by the Treasury in a special Inactive Account.

According to the original estimates of gold coin in circulation, based on payments of gold coin into circulation and withdrawals from circulation, reported imports and exports of gold coin, mintings, meltings, and gold coin used in the arts, the circulation figure on January 30, 1934, was $\$ 287,000,000$. However, this amount was excluded from the gold stock and from money in circulation for all years shown in this volume. This was done primarily because private holdings became illegal in early 1934; but there was also reason to believe that much of the computed amount of gold coin in private hands had in fact been lost or taken out of the country by travelers.

The factors accounting for changes in gold stock are domestic production of gold, net gold imports or exports, and changes in the amount of gold under earmark. For several reasons the combined net movement of these factors in any given period may not correspond exactly to the reported change in gold stock in that period. There are usually various lags in the statistics as a result, for example, of delays in refining or assaying newly mined or imported gold; and net domestic consumption of gold in the arts and industry may affect the figures from month to month. There are
also less regular influences which, when they occur, are generally of much greater importance. Of this character was the increase in the gold stock in February 1934 attributable to the devaluation of the dollar, the decrease in the gold stock in February 1947 resulting from the payment of the United States gold subscription to the International Monetary Fund, and, since April 1934, net changes in gold held in the United States by the active portion of the Stabilization Fund.

Monthly data for 1936-50 are available in the 1953, 1951, 1949, 1947, 1942, and 1940 issues of the Statistical SUPPLEMENT; earlier monthly data are available upon request. The figures prior to 1934 as shown in the 1942 and 1940 volumes incorporate revisions back to 1913 to exclude the $\$ 287,000,000$ of gold coin which was dropped on January 31, 1934, as explained above, in order to make them comparable with later data. The resulting figures for the earlier years probably understate somewhat the amount of gold coin held by the public but fluctuations in the total are not affected by the revision. The large increase in the figures in 1934 resulted primarily from the revaluation of the gold stock on the basis of the changed gold content of the dollar. The revaluation added $\$ 2,806,000,000$ to the gold stock on February 1, 1934.
${ }^{2}$ Statistics on exports and imports of gold are from the U. S. Department of Commerce, Bureau of the Census; prior to May 1941, from Bureau of Foreign and Domestic Commerce. Data on changes in the amount of gold held under earmark are from the Board of Governors of the Federal Reserve System. The amount of net release from earmark represents gold released from earmark at Federal Reserve Banks for foreign account, less gold placed under earmark for foreign account (with allowance when necessary for changes in gold earmarked abroad for account of Federal Reserve Banks). Beginning August 1946, figures include gold held for account of international institutions. The minus sign indicates an increase in earmarked gold. An increase in earmarked gold is the equivalent of net export and a decrease the equivalent of net import.

Monthly data for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement; earlier monthly figures appear in the 1940, 1938, 1936, and 1932 Supplements. Previously published figures for net rel ease from earmark should be revised to read as follows (in thousands of dollars): December 1931,-22,913; June 1939,- 104, 846; July 1939, -163, 961.
${ }^{3}$ Compiled by the Board of Governors of the Federal Re-
serve System. Data cover production in countries and area for which monthly reports are available. Beginning 1934, values are calculated at the rate of $\$ 35$ per fine ounce; prior thereto, at the rate of $\$ 20.67$.

Data for Africa include the Belgian Congo, Rhodesia, Union of South Africa, and West Africa (beginning 1944, Gold Coast only). The Canadian data are reported by the Dominion Bureau of Statistics. Beginning with 1949, Canadian production includes production in Newfoundland. The data on production in the United States prior to 1946 include Philippine Islands production received in the United States; monthly figures are estimates of the American Bureau of Metal Statistics adjusted to accord with the annual estimates published by the United States Mint (in 1951, $\$ 297,000$ was subtracted fromeach monthly figure for the adjustment). Other monthly reporting areas included in the figures for "total reported monthly" but not shown separately include, when available, reports from Mexico, Colombia, Chile, Nicaragua, India, and Australia. Of the important producers in the group, Mexico is not available monthly from April 1942 through December 1946; and Australia is not available monthly prior to June 1945. Belgian Congo is not available monthly for 1938-46; therefore, monthly data for Africa for 1938-46 have not been revised.

Monthly data for 1947-50 for all series are shown in the 1953 and 1951 issues of the Statistical Supplement; for 1938-46 for Canada and the United States, in the 1949, 1947, and 1942 volumes. Revisions for 1950 (in thousands of dollars): Total production reported monthly-(January-June) 64,$000 ; 60,100 ; 66,400 ; 63,200 ; 65,600 ; 66,200$; Africa-(February-June) 36, 400; 39,600; 37,700; 40, 000; 39,000;

September, 38,500; November, 37,600; December, 37,200. For monthly data prior to 1938 see Pp. 11 and 12 of the March 1940 Survey and the 1940 Supplement.
${ }^{4}$ Compiled by the $U$. S. Department of Commerce, Bureau of the Census; prior to May 1941, by Bureau of Foreign and Domestic Commerce. Monthly averages for 1913-34 and monthly figures for 1938-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement; monthly figures for 1923-37 are shown in the 1940 , 1938, 1936, and 1932 volumes (revisions for imports, in thousands of dollars: 1913 monthly average, 2, 989; 1925-January, 7, 339; February, 4,929; March, 6,661; April, 4,945; 1930-December, 2,660 ).
${ }^{5}$ Silver prices are daily averages for the month as compiled by Handy and Harman and reported in "Metal and Mineral Markets" a weekly news service of the Engineering and Mining Journal. Quotations are per troy ounce 0.999 fine on the basis of market prices for bar silver in amounts of 50,000 ounces or more for nearby delivery, New York. Quotations prior to July 1946 are for foreign silver or silver not eligible for sale to the U. S. Government. Beginning July 1946, they apply also to domestic and Treasury silver if such silver enters into New York market transactions.

On December 21 , 1933, by Presidential proclamation, the U. S. Government price of newly mined damestic silver was established at $\$ 0.6464$ per fine ounce. Subsequent changes in the Government price for such silver are as follows: $\$ 0.7757$ from April 24, 1935, through December 30, 1937; $\$ 0.6464$ from December 31, 1937, through June 30, 1939; $\$ 0.7111$ from July 1, 1939, through June 30, 1946; $\$ 0.905$ beginning July 1, 1946.

Monthly averages for 1913-34 and monthly figures for 1938-50: are available in the 1953, 1951, 1949, 1947, and 1942 is sues of the STatistical Supplement; monthly figures for 1923-37 are shown in the 1940, 1938, 1936, and 1932 SUPPLEMENTS (revisions: January 1923, \$0.657; July 1933, \$0.376).
${ }^{6}$ Compiled by the Department of Trade and Commerce, Dominion Bureau of Statistics. The data cover silver in all forms from Canadian ores, including a small amount of silver in United States ores treated. The accounting is on the basis of either refinery production or silver in base bullion and in blister or converter copper produced, plus silver in ores and concentrates exported. Figures beginning May 1949 include production in Newfoundland.

Monthly figures for 1938-50 are shown in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement. Revisions for 1950 (in thousands of fine ounces): January-May-1,247; 1, 447; 1,848; 1,528; 1,831; July, 2,286. Monthly figures prior to 1938 shown in earlier Supplements are from the American Bureau of Metal Statistics and are not in agreement with the monthly averages shown in the 1940 SUP. plement and later issues.
${ }^{7}$ Compiled by the American Bureau of Metal Statistics. Data for the United States represent production of refined silver in commercial bars, 0.999 fine, or other refined forms, by United States refineries (from material of domestic origin) plus receipts of crude silver by the United States Mint, the latter representing only a small portion of the total. Refined forms other than bars comprise shot, crystal, etc.; these relatively unimportant. Production in the Philippine Islands is included in the United States figures through the year 1943 and for 1945. Reports of the compiling agency give also silver production from foreign material; the separation between silver of foreign and domestic origin is only approximate.

Production for Mexico in general is based on refined silver bullion, plus silver content of ores, etc., exported. The 1942-47 and 1949-52 monthly averages are based on the Mexican official figures for these years and differ from the averages of the monthly figures, which are in part estimated. Monthly data are not available for 1942-July 1946; the monthly averages are based on annual totals and, for 194345, are partly estimated.

Monthly averages beginning 1913 for the United States and 1921 for Mexico and monthly figures for 1938-50 are
available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement. For monthly figures for 1923-37 see the 1940, 1938, 1936, and 1932 Supplements. (Revisions for United States, in thousands of fine ounces: 1923-July, 5,986; September, 4, 901; October, 5,014; November, 5,249; December 5, 140; 1924-December, 5, 674.)
${ }^{8}$ Data for U. S. monetary stock are for the end-of-year, not monthly averages.
${ }^{9}$ Beginning 1934, values are calculated at the rate of $\$ 35$ per fine ounce; prior thereto, $\$ 20.67$.
${ }^{10}$ Less than $\$ 500,000$ increase in earmarked gold.
${ }^{11}$ Includes revisions not allocated to the monthly data.
${ }^{12}$ Monthly averages for 1942-46 are based on annual totals which include the following amounts not allocated to the monthly figures: Mexican production, 1942, \$2,335,000; 1943, $\$ 1,838,000 ; 1944, \$ 1,482,000 ; 1945, \$ 1,456,000 ; 1946$, $\$ 1,226,000$; adjustments in Australian and Nicaraguan production, 1943, \$2,000.
${ }^{13}$ Figures beginning May 1949 include production in Newfoundland.
${ }^{14}$ Not presently available.

## Page 92

${ }^{1}$ Compiled by the U. S. Treasury Department. Data are as of the end of the year or month indicated. They include all coin and paper currency of the United States, except money held by the Treasury, money held by or for the account of the Federal Reserve banks and agents, and coin estimated to be held outside the continental limits of the United States. Paper currency held outside the continental limits of the United States is included. The figures represent, therefore, not only money held by the public but vault cash held by banks and such United States money as may have been carried abroad, other than silver coin known to have been exported and gold coin. The latter has been excluded for all years shown in this volume, since title to all gold and gold coin was vested in the United States under the Gold Reserve Act of 1934 and private holdings became illegal after January 30, 1934.

Year-end figures back to 1914 and monthly figures for 1936-50 are shown in the 1953, 1951, 1949, 1947, 1942, and 1940 issues of the STATISTICAL SUPPLEMENT; monthly figures 1914-35 are available upon request. Figures originally reported for the period through January 1934 have been revised to exclude $\$ 287,000,000$ of gold coin for the reason explained in the third paragraph of note 1 for $p .91$.
${ }^{2}$ Compiled by the Board of Governors of the Federal Reserve System. Figures represent deposits at all banks in continental United States and currency outside banks, and provide an indication of the total volume of the means of payment outstanding in the country. Data have been adjusted to show as nearly as possible separate information on the privately held money supply. Foreign bank deposits, net, represent deposits of foreign banks less balances with banks in foreign countries. Figures for U. S. Government balances comprise Treasury cash and deposits at commercial, savings, and Federal Reserve banks. Demand deposits adjusted comprise all demand deposits at commercial banks (except interbank and U. S. Government deposits) less cash items in process of collection, commonly called "float." Time deposits comprise all time deposits at commercial banks (except interbank deposits, postal savings redeposited in banks, and U. S. Government time deposits), at mutual savings banks, and the deposits of the postal savings system (both amounts redeposited at banks and amounts not so redeposited). Data for currency outside banks represent total currency in circulation (i.e., outside the Treasury and Federal Reserve banks) less vault cash held by commercial and mutual savings banks.

Through 1942 the figures are available only for June or June and December call dates. Beginning 1943, estimates have been made for the other months and are rounded to the nearest 100 million dollars. These monthly estimates are
based on end-of-month reports for all member banks beginning December 1945. Prior to that month, estimates were based on averages of daily figures reported semi monthly by member banks, averaging reports for the last half of the month and the first half of the following month. Estimates for nonmember banks were based on such reports for country member banks. The monthly data are adjusted to June and December data for all banks based on reports to the Board of Governors of the Federal Reserve System, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

Monthly data for 1947-50 for all series (except that figures for total deposits and currency and foreign bank deposits are available only for June and December in 1947) are shown in the 1953 and 1951 issues of the Statistical SuppleMENT; June data for 1941-42 and monthly figures for 1943-46 for total deposits (adjusted) and currency, demand deposits (adjusted), time deposits, and currency outside banks are shown in the 1949 and 1947 volumes. The following data are available upon request: June figures for 1892-1940 and December figures for 1923-28 for the aforementioned series; data for June 1929-46 for total deposits and currency, foreign bank deposits (net), and U. S. Government balances.
${ }^{3}$ Compiled by the Board of Governors of the Federal Reserve System. The rate of turnover of demand deposit accounts is computed from data for reporting member banks in leading cities. To derive the monthly series (new basis), debits for a given month are divided by the average of month-end demand deposits (for current and preceding month), multiplied by the number of working days in the year, and divided by the number of working (business) days in the month. The number of working days in the year is the number after deducting the 52 (or 53 ) Sundays and the 8 so-called universal holidays: January 1, February 22, May 30, July 4, Labor Day, November 1l, Thanksgiving, and Christmas. For the annual turnover (shown here on line designated "monthly average"), total annual debits are divided by the average for month-end deposits (i.e., deposits reported for the two Decembers and 11 intervening month-ends divided by 13).

In 1953 the series on bank debits was revised for the period beginning January 1943 (see note 2 for p. 80), and the turnover rates as shown here are revised accordingly. For a complete description of the revision of bank debits see the Federal Reserve Bulletin for April 1953, Pp. 355-57.

Monthly data for 1943-50 (revised basis) are available upon request. Monthly data for 1941-42 for New York (old basis) are shown in the 1947 issue of the STATISTICAL SUpPLEMENT (the relevant note in that volume gives details on the method of computing the rates prior to 1943).
${ }^{4}$ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.
${ }^{5}$ Data for money supply are as of December 31.
${ }^{6}$ Minus sign denotes excess of balances with banks in foreign countries over foreign banks deposits in U. S.
${ }^{7}$ Based on revised data; see 2d paragraph of note 3 for this page.

## Page 93

${ }^{1}$ Compiled by the Federal Trade and Securities and Exchange Commissions. The estimates cover all United States manufacturing corporations. Data beginning with the 3d quarter of 1951 are based on a new sample, and the old estimates for the lst and 2d quarters of 1951 have been revised to afford approximately comparable figures by using the twoquarter overlap for the 3 d and 4th quarters of 1951 and applying the resulting ratios to data for the lst and $2 d$ quarters of 1951 as derived from the old sample.

Data through 1950 are based on the old sample and are not entirely comparable with those from 1951 forward. The precision of the figures compiled from the old sample was affected materially by the lack of currency of the sample; i.e., new manufacturing enterprises and firms going out of business were not adequately accounted for. The new sample is designed to achieve and maintain currency in the representation of the universe of manufacturing corporations.

The new sample on which the estimates are based comprises about 8,000 corporations and is made up as follows: (1) All manufacturing corporations registered with the Securities and Exchange Commission; (2) all nonregistered manufacturing corporations with total assets of $\$ 5,000,000$ and over at the end of 1949; (3) a sample of nonregistered manufacturing corporations with total assets of less than $\$ 5,000,000$ at the end of 1949; and (4) a series of quarterly samples of manufacturing corporate births, starting with the first quarter of 1950.

Since the published figures are based on individual company data for samples of corporations, the results are approximate rather than exact and, consequently, little significance should be attached to small differences between quarters or between groups within a quarter.

The industry classification is in accordance with the latest Standard Industrial Classification Manual, issued by the Bureau of the Budget to provide a standard for the classification of industry data by all Federal agencies.

It should be noted that there are some differences in the concept of profits in this series (which follows the usual accounting definition of profits) and that in the national income statistics compiled by the U. S. Department of Conmerce, Office of Business Economics. The national income series is benchmarked on tabulated profits (as reported to the Internal Revenue Service) adjusted by eliminating all depletion charges, capital gains and losses, and dividend receipts. The FTC-SEC series recognizes normal depletion charges and dividend receipts and adjusts for capital gains and losses where significant in amount. Another important difference is introduced because data used in this series are based on consolidated reports, whereas those used in the national income series are partially consolidated.
${ }^{2}$ See note 1 for this page, regarding data through 1950 which are not entirely comparable with later figures.

## Page 94

${ }^{1}$ Compiled by the Board of Governors of the Federal Reserve System. Figures relate to income after all charges and taxes and before dividends. These data are for Class A and $B$ electric utilities, including affiliated nonelectric operations. They cover about 95 percent of all electricpower operations.

Quarterly data are available only beginning 1940; data for that year are as follows (millions of dollars): 1st quarter, 148; 2d quarter, 128; 3d quarter, 123; 4th quarter, 149. Quarterly figures for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Revised data are as follows (millions of dollars): 1946, 1st to 4th quarter, respectively-193; 149; 141; 155; 1948-lst quarter, 185; 4th quarter, 175; 1950, 1st to 3d quarter, respectively-228; 210; 172.
${ }^{2}$ Compiled by the C'ommercial and Financial Chronicle. Included in the series are all capital issues which are publicly listed as being for sale, except bank loans and United States Treasury issues. Securities sold at private sale are included when the compilers are aware of such a sale. Securities of any character issued to retire other outstanding securities are classified as refunding.
"Domestic issues" include securities sold by all companies incorporated in the United States or its territories, regardless of where the funds may be spent. "Foreign issues" include only that part of an issue of a foreign company which is floated in the United States.

The classification "Federal agencies" includes obligations guaranteed by the United States-such as issues of the Federal Farm Mortgage Corporation, Home Owners' Loan Corporation, and Reconstruction Finance Corporation (latter two now liquidated)-and obligations of federally chartered institutions not so guaranteed-such as issues of the banks for cooperatives, Federal home loan banks, Federal intermediate credit banks, and Federal land banks. In October 1941, however, the United States Treasury Department adopted the policy of providing funds through its own financing to agencies empowered to issue Government-guaranteed securities. Accordingly, in recent years this classification has included no guaranteed issues.

The item "Municipal, State, etc.," contains financing of all political subdivisions in the United States, but does not include temporary loans or loans obtained directly by States and municipalities from Federal agencies. The compilers state, however, that the latter issues are generally absorbed by one of several Federal agencies, and are reflected in these statistics when they are later sold by the original purchaser in the private investment market. Data on long-term State and municipal issues compiled by The Bond Buyer and shown on p. 96 include loans to States and municipalities by Federal agencies.
"Foreign" comprises flotations in American markets of bonds of foreign corporations and bonds of foreign governments and their political subdivisions. Issues of United States territories and possessions are included with foreign issues. However, issues of corporations in these places are included with the domestic corporate issues.

Monthly averages are based on annual totals, reported by the compiling agency, which may not include some revisions of the monthly figures.

Monthly figures tor 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. (Scattered revisions of monthly data for $1944,1946,1947,1948$, and 1949 are available upon request.) Monthly averages beginning 1919 and monthly figures for 1936-40 are shown in the 1942 and 1940 volumes. Monthly figures for 1919-35 appear on pp. 14-2l of the February 1938 SURvey and p. 21 of the April 1938 issue.
${ }^{3}$ Data for profits are quarterly averages.
${ }^{4}$ Less than $\$ 500,000$.
${ }^{5}$ Includes issues of the International Bank for Reconstruction and Development not shown separately.
${ }^{6}$ Includes revisions not distributed by months.

## Page 95

${ }^{1}$ Compiled by the Securities and Exchange Commission. Data cover substantially all new securities offered for cash sale in the United States in amounts over $\$ 100,000$ and with terms to maturity of more than one year. The series include flotations irrespective of whether the issues were publicly or privately placed and regardless of whether they were registered under the Securities Act of 1933. The statistics thus embrace certain corporate and noncorporate issuing groups exempt from registration under the Securities Act of 1933, by virtue either of the nature of the transaction or issuer, such as issues placed privately, intrastate offerings, securities of railroad companies, Federal, State, and local government issues, issues of banks and eleemosynary institutions, and those between $\$ 100,000$ and $\$ 300,000$ in size offered pursuant to amendment of Regulation $A$ of the Securities Act of 1933.

The data appearing in these tables are based on material filed with the Commission in connection with the various Acts administered and questionnaires received from companies issuing securities without registration under the $\mathrm{Se}-$ curities Act of 1933. Notices of offering are obtained from the financial press, financial manuals, periodicals, and special reports from leading life-insurance companies, as well as material filed with the Commission.

Onitted from the statistics are issues which do not appear in the financial press (largely securities sold through continuous offering, such as issues of open-end investment companies and employee-purchase plans), intercorporate transactions, U. S. Government "special issues" and other sales directly to Federal agencies and trust accounts, notes issued exclusively to commercial banks, and parts of issues known to have been sold outside of the United States.

The figures represent offerings, not actual sales. However, the proportion of the total remaining unsold is believed to be quite minor, and is composed chiefly of nonunderwritten issues of small companies.

Estimated gross proceeds are derived by multiplying the principal amounts of units by offering prices, except for municipal issues for which principal amounts are used. Net
proceeds represent estimated gross proceeds less estimated cost of flotation.

Definitions of the various classifications which are not self-explanatory are as follows: The public-utility group, beginning 1948, comprises electric light and power, gas, and water; prior thereto, telephone and telegraph, pipelines, and street railway companies were also included; real estate and financial data excludes investment companies.
"United States Government" issues include United States Government direct and guaranteed issues; only issues to the public are included, the United States Government "special issues" (issues to trust funds and government agencies) and other interagency sales being excluded; sales of Treasury bills also are excluded because of their short-term maturity. "State and municipal" issues include all governmental subdivisions and issues of United States territories and possessions and are as compiled by the Commercial and Financial Chronicle through 1951, and The Bond Buyer beginning 1952.

These data compiled by the Securities and Exchange Commission differ in several respects from the series compiled by the Commercial and Financial Chronicle also included in the SuRver. As stated above, gross proceeds in the former are based on of fering price while the Chronicle data are based on offering price in the case of preferred stock of no par value and all classes of common stock, but represent par amount for bonds, notes, and preferred stock of a stated par value. The Chronicle frequently includes entire issues offered in exchange for outstanding securities where only unexchanged balances are offered for cash sale, while the Commission includes only the balances of such issues actually sold for cash. Among the more important differences in coverage are the following: The Securities and Exchange Commission's data include United States Treasury issues excluded from the Chronicle series; the corporate group in the Commission's series includes foreign corporate issues offered in the United States while the Chronicle's series covers only domestic corporate issues. The classification of issues by purpose also differs in the two series. The Chronicle allocates proceeds either as being for refunding purposes or nonrefunding purposes (new capital), including in the latter category all uses except retirement of funded debt and preferred stock.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT. Monthly figures for 1934-40 are available upon request (figures for corresponding period as shown in the 1942 SUPPLEMENT have since been revised).
${ }^{2}$ Less than $\$ 500,000$.
${ }^{3}$ See 6th paragraph of note 1 for this page for information regarding change in classification.
${ }^{4}$ Available only beginning 1953; prior thereto, these data were included in "commercial and other" which is not shown separately.

## Page 96

${ }^{1}$ See note 1 for p. 95.
${ }^{2}$ Compiled by The Daily Bond Buyer. Data represent sales of securities, including long-term refunding issues, by States and municipalities in the United States and bonds of United States territories and insular possessions and municipalities therein. Included in long-term loans are Public Works Administration loans and Reconstruction Finance Corporation loans to States and municipalities as follows (thousands of dollars): Public Works Administration loans-1933, 287,060 ; 1934, 227, 121; 1935, 20,869; 1936, 18, 125; 1937, 50,$923 ; 1938,48,783 ; 1939,19,134 ; 1940,2,320 ; 1941$, 1,300; 1942, 1,000; Reconstruction Finance Corporation loans-1932, 130,268; 1933, 206, 302; 1934, 61, 289; 1935, 58,162 ; 1936, 37,648; 1937, 57,625 ; 1938, 105, 443; 1939, 38, 653; 1940, 12, 017; 1941, 159, 109; 1942, 12, 867; 1943, 1,$000 ; 1944,500 ; 1945,800 ; 1946,13,500 ; 1947,18,420$; 1949, 13,777 ; 1949, 48,733; 1950, 1,624; 1951, 5,880; 1952, 4. 700 ; 1953, 2,514. Also included are U. S. Housing Authority note and bond issues as follows (thousands of dol-
lars): Long-term, bonds-1940, 21,569; 1941, 22, 388; 1942, 88,978; 1943, 60,558; 1944, 12,799; 1945, 2,956; 1946, 18,950 ; 1947, 4,366 ; 1948, 65, 770; 1949, 14.3, 300; 1950, 59,210; 1951, 389, 105; 1952, 358, 485; 1953, 499, 382; 1954, 374,972; short-term, notes-1939, 50,671 ; 1940, 495, 858 ; $1941,392,135 ; 1942,426,298 ; 1943,287,180 ; 1944,228,447$; $1945,249,790 ; 1946,329,039 ; 1947,412,927 ; 1948,495,540$; 1949, 769,831 ; 1950, 886, 622; 1951, 974,420 ; 1952, 1,205,508; 1953, 2,041, 480; 1954, 2, 432, 601.

A comparison of these figures with those for municipal, State, etc., issues compiled by the Commercial and Financial Chronicle and shown on p. 94 of this SUPPLEMENT indicates that the differences between the two series are to a large extent due to the exclusion from the Chronicle data of short-term loans and the Federal-agency loans previously mentioned.

Monthly averages prior to 1929 and monthly figures for 1938-50 are shown in the 1953, 1951, 1949, 1947, and 1942 is sues of the STATISTICAL SuPplement. Monthly figures for 1923-37, except April 1927 and 1934-35 figures for shortterm issues, are available in the 1938, 1936, and 1932 Supplements (the October and November 1930 figures for longterm issues in the latter volume are reversed and April 1927 figure for short-term issues should be 67,252). Revised monthly figures for 1934-35 for short-term issues are available upon request.
${ }^{3}$ Compiled by the Board of Governors of the Federal Reserve System. The data are as of the end of the month or year specified and are based on the reports of member firms of the New York Stock Exchange carrying margin accounts for customers. The principal items published in the Federal Reserve Bulletin are reproduced here. "Customers' debit balances" represent credit extended by the reporting brokers to their customers. Data exclude credit extended to other member firms of the New York Stock Exchange, to member firms of other national securities exchanges, and to the firms' own partners. Figures given are "net," i.e., after deduction of offsetting credit balances in individual accounts. "Cash on hand and in banks" represents the cash resources of reporting brokers, including cash segregated for the benefit of customers. "Money borrowed" includes all borrowings on all types of collateral by member firms of the New York Stock Exchange carrying margin accounts for customers, except borrowings between firms. This series is available only since September 1935. Earlier figures (shown here in italics) differ from the present series chiefly in that they represent borrowings on security collateral in New York only by all members of the exchange. A series on loans to brokers by weekly reporting member banks in leading cities appears on p. 81. "Customers' free credit balances" represent cash balances due from brokers to customers who are in no way obligated to such brokers.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly figures beginning 1934, or the earliest month for which data are available, appear in the 1942, 1940, and 1938 volumes.

The monthly Federal Reserve Bulletin gives further details including customers' "net" credit balances, debit and credit balances in partners' and firm investment and trading accounts, and ledger credit balances in capital accounts. A detailed description of the data and monthly figures beginning 1931 for some items appear in "Banking and Monetary Statistics" published by the compiling agency.
${ }^{4}$ Data for brokers' balances are as of the end of the year, not monthly averages.
${ }^{5}$ Data from 1935 forward are not comparable with earlier figures; see note 3 for this page.

## Page 97

${ }^{1}$ Computed by the New York Stock Exchange. Data represent the average price of all bonds listed on the exchange as of the end of each month, computed from the data on market value and face value of all listed bonds shown herein on $p$. 98. Beginning July 1947, averages for total listed bonds include data for bonds of the International Bank for Recon-
struction and Development not shown separately. Annual figures are averages of the 12 monthly figures.

Monthly data for 1941-50 are shown in the 1953, 195l, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT; monthly data for the period December 1924-40 appear in the 1942, 1940, 1938, 1936, and 1932 SUPPLEmENTS.
${ }^{2}$ Compiled by Standard and Poor's Corporation. Prices are a composite of data for high-grade corporate bonds (including industrial, utility, and railroad) and are a conversion of yield indexes, based on the yield to maturity of each bond and assuming a 4 -percent coupon with 20 years to maturity. From April 1937 to date, prices are averages of weekly data for $17 \mathrm{Al}+$ bonds; from January 1929 to March 1937, data are based on a varying groups of Al + bonds, one price monthly (first of month) being used.

Monthly data for 1947-50 are shown in the 1953 and 1951 issues of BuSiness Statistics; monthly figures for earlier years are available upon request.
${ }^{3}$ Compiled by Standard and Poor's Corporation. Data are based on Wednesday closing prices. An arithmetic average of yields to maturity for the 15 high-grade municipal bonds is first computed (see p. 98 for the yield series). The resulting series is then converted to a price basis using bond yield tables. A 4-percent coupon with 20 years to maturity is assumed.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. (Re-visions-dollars per $\$ 100$ bond: 1948-May, 127.l; July, 126.6; November, 125.0.) Monthly figures for earlier years are available upon request.
${ }^{4}$ Compiled by the Board of Governors of the Federal Reserve System. Monthly data are averages of daily figures. Beginning April 1952 the price index includes all fully taxable, marketable bonds due or callable in 12 years or more; whereas the data from November 1941 through March 1952 are for taxable bonds due or callable in 15 years or more and is a straight average of the market prices of the bonds. There was only one issue of taxable bonds within the maturity range prior to October 20,1941 (taxable bonds were first issued in March 1941). The index through October 1941 relates to long-term partially tax-exempt bonds; it is calculated to show the approximate trend of prices of a representative bond of unchanging coupon rate and maturity, rather than an average of actual market quotations which varied widely because of differences in coupon rates and maturities of the issues included. The price index for this earlier period is derived from the average yield series of long-term partially tax-exempt bonds due or callable in 15 years and over (shown on p. 92 of the 1947 Statistical Supplement) by calculating the price at which the "representative bond" would sell to return the average yield; the calculation for January 1931-October 1941 is on the basis of a $2-3 / 4$ percent 16-year bond; prior thereto, on the basis of a 4 percent 16year bond.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data prior to 1941 (for partially tax-exempt l6-year bonds) are available upon request.
${ }^{5}$ Compiled by the Securities and Exchange Commission on the basis of trades cleared during the calendar month. Clearances are usually effected 4 days after the actual trading date. The reports are from all registered exchanges, but most of the sales are made on the New York Stock Exchange (for which figures are given separately) and on the American Stock Fxchange (formerly the New York Curb Exchange). Data include sales of mortgage certificates and certificates of deposit.

These figures cover all sales on registered exchanges, except that they exclude for October 1934 to March 1935 stopped sales on the New York Stock Exchange and New York Curb Exchange and since March 1944, United States Government issues. Figures for the New York Stock Exchange excluding stopped sales throughout are shown in the series described under note 6 for this page.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949 , and 1947 issues of the Statistical Supplement. Earlier monthly data beginning October 1935 are shown in the 1942, 1940, and 1938 SUPPLEMENTS and are correct except as
follows (thousands of dollars): Market value, all exchanges, 1935-March, 349, 657; April, 319,926; August, 323,441; and September, 271,505; and face value, March 1937-all exchanges, 494,975; New York Stock Exchange, 442, 012 .
${ }^{6}$ Compiled by the New York St ock Exchange. Data represent volume (par value) of bond sales on the New York Stock Exchange, as reported on the ticker, computed as of the trading date. Stopped sales and other sales not reported on the ticker are excluded. Beginning July 1947, total sales and the total sales other than U. S. Government include bonds of the International Bank for Reconstruction and Development not shown separately.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly averages beginning 1913, or the earliest year available, and monthly figures for 1936-40 are shown in the 1942 and 1940 SUPPLEMENTS; monthly data for 1913-35, where available, are given on pp. 18-19 of the December 1937 SURVEY.
${ }^{7}$ Average for 3 months, October-December.
${ }^{8}$ Average for 6 months, July-December.
${ }^{9}$ Data beginning July 1947 include bonds of the International Bank for Reconstruction and Development not shown separately.

## Page 98

${ }^{1}$ Compiled by the New York Stock Exchange to show the price movements of bonds on the exchange and the growth in the securities listed. The market values are based on bid prices as of the close of the last market session of the month or, if bid prices are not available, on asked quotations or last sale prices.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly data beginning December 1924 are available in the 1942, 1940, 1938, 1936, and 1932 volumes.
${ }^{2}$ Compiled by Moody's Investors Service. These averages were set up in 1928 to include 10 bonds of each rating (Aaa, Aa, A, and Baa) for each group (railroad, public utility, and industrial), making 120 bonds in all. Since January l, 1935, however, there has not been a full set of 10 bonds in some rating classifications because of the limited number of suitable issues. At that time the Aaa industrials contained only 7 bonds and the Aa industrials only 6 bonds, compared with 10 bonds in each of the other rating classifications; the total number of bonds was therefore 113. On December 1, 1954, there were 107 bonds used, distributed in each group as follows: Railroad-6 Aaa, $7 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds; public utility- $10 \mathrm{Aaa}, 10 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds; and industrial-5 Aaa, $10 \mathrm{Aa}, 10 \mathrm{~A}$, and 9 Baa bonds.

Occasional substitutions in the bond list have been made when ratings have been changed, when a bond has been called, when a bond sold too far above its call price, or because of approaching maturity. Suitable adjustments (usually small), which are gradually amortized, are introduced to prevent such substitutions from impairing the comparability of the series. No convertible or other unusual issues are included. The average maturity on December 1, 1954, was 26.94 years.

Averages are computed as follows: A daily yield based on the closing price for each individual bond is first computed and then unweighted arithmetic averages of these yields are compiled for the different rating classifications. The corporate averages by ratings (Aaa, Aa, A, and Baa) and the group averages (railroad, public utility, and industrial) are compiled by averaging these rating-classification yields. Thus each rating group enters into the overall averages on the same basis whether it contains 10 bonds or less. The overall corporate yield average is the average of the four rating classifications (Aaa, $A a, A$, and Baa) and is also the average of the three groups (railroad, public utility, and industrial). The monthly series are averages of daily figures and the annual series are averages of 12 monthly figures. Comparable weekly data for the corporate average are shown regularly in the Weekly Supplement to the Survey.

In addition to the series shown here, averages by ratings are available for the railroad, public-utility, and industrial groups in Moody's Bond Survey.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly figures for 1919-40 are available in the 1942, 1940, and 1938 volumes and on Pp. 19 and 20 of the November 1937 SURvey.
${ }^{3}$ Compiled by The Bond Buyer. Data for the most part relate to bonds of large cities and represent the yield of a representative bond, having a maturity of about 20 years and selling at a price close to par. Originally the series included bonds of the 20 largest cities (excluding Washington, D. C.). Substitutions in the list of cities have been made from time to time, as some cities paid off the bulk of their debts or for many years had no debt outstanding with a sufficiently long maturity. In January 1940, bonds of one State and of the Port of New York Authority and the Metropolitan Water District (long) were substituted for three city bonds. The Port of N. Y. Authority and the Metropolitan Water District bonds were subsequently dropped; however, the latter issue was restored in May 1948. Two State bonds are included for 1941-45, three beginning 1946, and four beginning in 1948. Data were compiled as of the first of each month through December 1, 1946, and are shown as of the end of the preceding month. Subsequently, data have been compiled as of Thursday of each week and the figures shown here are for the Thursday nearest the end of the month (either the last Thursday of the given month or first Thursday of the following month).

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly figures for $1923-40$ are shown in the 1942, 1940, 1938, 1936, and 1932 Supplements.
${ }^{4}$ Compiled by Standard and Poor's Corporation (formerly by Standard Statistics Co., Inc.). The series is an arithmetic average of yields to maturity of 15 high-grade municipal bonds. The yields are based on Wednesday closing prices and are averages of the four or five weekly figures for the month. The yield series is used to compute the price data for municipal bonds shown on p. 97.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly figures for 1923-40 appear in the 1942, 1940, 1938, 1936, and 1932 Supplements (revisions: 1930-January, 4.22; 1931-July, 3.85; August, 3.83; September, 3.91; October, 4.35; November, 4.42; December, 4.64).
${ }^{5}$ Compiled by the U. S. Treasury Department. The data are averages of daily figures computed, beginning with April 1953, on the basis of the closing bid quotations on the over-the-counter market; prior thereto, on the basis of the mean of the closing bid and asked quotations. Also, beginning April 1952, the series includes all fully taxable marketable bonds due or first callable after 12 years; prior thereto, only bonds due or first callable after 15 years were included.

Monthly figures for October 1941-December 1950 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Data (through December 1945) on partially tax-exempt bonds are shown in the 1947 Supplement and earlier volumes.
${ }^{6}$ Data beginning July 1947 include bonds of the International Bank for Reconstruction and Development not shown separately.

## Page 99

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics. Data represent cash dividends paid by all companies for which reports are included in Moody's Dividend Record. The amount paid by each company is computed by multiplying the dividend rate per share as reported in the Dividend Record by the number of shares outstanding as reported in Moody's Manual of Investments. Cash dividends paid on both preferred and common stock are included. Data
are on a gross basis; that is, intercorporate dividend payments have not been excluded.

Stock dividends are excluded from the series. Liquidating dividends are also excluded, since they represent a repayment of capital investment rather than a disbursement of earnings. Dividend payments by companies incorporated outside the United States and its possessions are eliminated.

The corporations have been classified by industrial groups in accordance with the 1942 edition of the Standard Industrial Classification Code, developed by the Division of Statistical Standards, Bureau of the Budget; the classification is based on the major peacetime activity of the corporations. The miscellaneous group includes agriculture, contract construction, transportation other than railroads, public utilities other than communications and electric light and power, and motion pictures and other services.

The number of corporations included has increased from. nearly 4,500 in 1941 to over 5,500 in 1954. Publicly reported dividend payments in 1952, for example, amounted to about 74 percent of cash dividend payments as reported for that year, according to corporation tax returns filed with the Internal Revenue Service. The relationship of the publicly reported series to the totals compiled by the Internal Revenue Service varies considerably from industry to industry. It should be made clear that no attempt is made to maintain a conventional sample, either in the sense of identical firms from year to year, or in the sense of representing a constant proportion of a changing universe. Although the increase in the number of companies included over time is probably due in part to a genuine increase in the number of corporations in the universe, it is likely that improvement in availability of dividend reports to Moody is an even more important factor.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{2}$ Computed by Moody's Investors Service. The 200 stocks used in deriving the averages represent, for the most part, an identical list, except in the public-utility group. Because of the elimination of many utility holding companies and the consequent wider distribution of operating-company shares, a new list of 24 operating electric utilities was included beginning in 1946 and was chained to the average of the old list (revised to reflect the operating companies only, over the years 1942-45). The result is a continuous series, representing combined holding and operating companies prior to 1942 and operating electric companies thereafter.

Dividends are at annual rates and are determined at the end of each month on the basis of each company's most recent declaration. These dividends are multiplied by the number of each company's common shares outstanding and the products are added to obtain aggregate values (for the 200 companies and for companies in each industry), which are then divided by the total number of shares outstanding to obtain the pershare figures. The number of shares by which each group was divided to get the per-share figures as of December 31, 1946, was the actual number of shares outstanding at that time. For prior years the number of shares outstanding as per companies' balance sheets was used, adjusted for stock splits, etc., so as to be comparable with the number outstanding December 31, 1946; for subsequent periods the number of shares outstanding is also adjusted for comparability with data at the end of 1946.

Individual stock prices at the end of each month are used as the basis for deriving per-share prices. Earnings are net after taxes and contingencies less preferred dividend requirements (whether actually paid or not). Data (except for utilities) represent quarterly earnings (partly estimated for industrials) at annual rates; for utilities, they are for 12 months ended each quarter. The method of computing per-share data on stock prices and earnings is similar to that used for dividends.

Yields are obtained by dividing per-share dividends by per-share prices.

Monthly data for 1945-50 (except for public utility for 1945-46) are shown in the 1951 and 1949 issues of the STAtistical Supplement; monthly figures for 1929-44 for the to-
tal, industrial, railroad, bank, and insurance stocks and through 1946 for the public-utility stocks are available upon request. Figures for public-utility stocks have been revised since publication in the 1949 Statistical Supplement to exclude American Telephone and Telegraph Company stock; this stock, however, is included in the total.

## Page 100

${ }^{1}$ See note 2 for p. 99.
${ }^{2}$ Compiled by Standard and Poor's Corporation. Yields are computed for each of 14 high-grade noncallable issues ( 15 prior to August 1948), including public utility as well as industrial preferred stocks. The group yield is determined from the average of the eight median yields. The indexes are based on one price weekly with the monthly index computed from the average of the four or five weekly indexes of the month. Throughout the series the issues are converted to a price equivalent to $\$ 100$ par and a 7 percent annual dividend before averaging.

Monthly averages beginning 1913 and monthly figures for 1928-50 are available in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement and on p. 22 of the January 1942 Survey. The data prior to February 1928 were computed from the average price of 20 stocks (see note in the 1942 SUPPLEMENT); monthly figures beginning 1923 for this series appear in the 1932 Supplement. (Revisions: 1913 monthly average, 6.57; April 1938, 4.54; 1939-October, 4.47; monthly average, 4.19; November 1941, 4.01; 1948-May, 4.08; June, 4.05; July, 4.13.)
${ }^{3}$ Compiled by Dow-Jones \& Co., Inc., from the daily closing quotations furnished by the Wall Street Journal. The figures shown here are averages of the daily figures. The industrial averages include 30 stocks and the railroad averages 20 stocks over the entire period; the public-utility averages are for 20 stocks until June 1938 when the number was reduced to 15 . Changes have been made in the stocks used for the averages at various times. Over the period covered a number of split-ups have occurred, and many large stock dividends have been paid. Adjustment has been made for these changes and the historical continuity of the series has been preserved. A complete description of the methods used in constructing the index, together with daily and hourly indexes, is given in "The Dow-Jones Averages," published by Barron's Publishing Co., Inc., 388 Newbury Street, Boston 15, Mass.

Monthly averages prior to 1929 and monthly figures for 1934-50 are available in the 1953, 1951, 1949, 1947, 1942, 1940, and 1938 issues of the Statistical Supplement; earlier monthly figures for industrial, railroad, and utility stocks appear in the 1936 and 1932 Supplements (revisions-May 1938, utility, 19.09, railroad, 22.00; September 1932, railroad, 35.27; November 1929, utility, 78.98). For monthly figures for 1920-33 for 65 stocks, see p. 19 of the September 1938 SURVEY.
${ }^{4}$ Data from 1929 through July 1948 are based on 15 stocks; thereafter, on 14 stocks.
${ }^{5}$ Deficit.

## Page 101

${ }^{1}$ See note 3 for $p .100$.
${ }^{2}$ Compiled by Standard and Poor's Corporation. The formula used in computing these indexes in a "base-weighted aggregative" where the weighting factor is the number of shares of each stock outstanding in the base period. Certain modifications of this method have been found necessary to make allowance for the sale of new stock through the issuance of rights, consolidations, and for the addition of new securities necessary to maintain group representations as new corporations are formed in an industry. The index of 480 common stocks includes the industrial, public-utility, and railroad stocks, but not the bank and fire insurance stocks. The indexes are based upon Wednesday's closing
prices or the last preceding sale price. The number of stocks represents number currently used; the change in number does not affect the continuity of the series.

For a complete description of the indexes refer to "Security Price Index Record" published by Standard and Poor's Corporation. The aforementioned volume and "Current Statistics" published monthly by that agency provide weekly figures also.

Monthly data for 1941-April 1944, January-October 1945, and 1949-50 for fire insurance stocks and 1941-50 for all other series are snown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT; monthly figures for 1938-40 are shown in the 1942 Supplement. For monthly figures for 1918-40, see pp. 20 and 21 of the January 1942 SURVEY. Minor revisions are available upon request.
${ }^{3}$ Compiled by the Securities and Exchange Commission on the basis of trades cleared during the month. Clearances occur, for the most part, on the fourth day after the transaction date. Sales of voting trust certificates, American depositary receipts, certificates of deposit, rights, and warrants are included. Data represent the total value and volume of stocks sold on all registered exchanges, except that for the period October 1934 to March 1935 they exclude odd lot and stopped sales on the New York Stock Exchange and the New York Curb Exchange (now the American Stock Exchange).

These data are available only beginning October 1934; monthly figures prior to 1949, except October 1934-March 1935 figures for shares sold, are shown in the 1953, 1951, 1949, 1947, 1942, 1940, and 1938 issues of the STATISTICAL SUPPLEMENT. There have been a few minor revisions in the 1935 market-value data.
${ }^{4}$ Data on volume of sales excluding odd lot and stopped sales are compiled by the New York Times. Monthly data for 1938-50 are published in the following editions of the STAtistical SUPPlement: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly figures prior to 1938 appear in the 1938 , 1936, and 1932 SuPPLEMENTS under the total "Stock Sales, New York Stock Exchange. "
${ }^{5}$ Compiled by the New York St ock Exchange to show price movements of all stocks on the exchange and the trend in the securities listed. Market values are based on bid prices as of the close of the last market session of the month or, if bid quotations are not available, on asked quotations or last sale prices. The figures have been compiled on a monthly basis (as of the end of the month) as far back as December 1924.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STatistical Supplement; monthly figures prior to 1941 are available in the 1942, 1940, 1938, 1936, and 1932 Supplements.
${ }^{6}$ Average for 3 months, October-December.

## Page 102

${ }^{1}$ Compiled by the United States Department of Commerce, Office of Business Economics. Exports and imports of goods are based chiefly on the official foreign-trade statistics of the United States as compiled and published by the Bureau of the Census with certain adjustments, principally for merchandise transactions in which the goods do not actually cross the boundary of the United States. Military transfers (not separately available prior to 1946) cover supplies and services transferred under grants; they include loans and returns of military equipment (returns are deducted from exports). Military expenditures (not shown prior to 1940) cover expenditures for both merchandise and services. Such expenditures include those by military personnel in the foreign economies, as well as expenditures by the armed forces, both for their own use abroad and for transfers to our allies.

Income on investments includes all international payments of interest, dividends, and profits. Estimates of receipts are based largely on information furnished by American companies with foreign branches and subsidiaries, by fiscal agents for foreign dollar bonds, and by recipient

Government agencies. Payments to foreigners on private obligations are derived largely from information supplied by foreign-owned companies and income tax returns. Other services consist principally of international payments for shipping and travel and miscellaneous Government expenditures. The shipping estimates are derived from questionnaires sent to domestic and foreign shipping companies and from statistics of international tonnage movements by flag of carrier and area of origin or destination. The international movement of persons is recorded by the Immigration and Naturalization Service, United States Department of Justice. The number of travelers is multiplied by average expenditures secured from a questionnaire distributed to a sample of the travel population. Data for other miscellaneous service transactions, such as Government expenditures, motion-picture royalties, insurance, communications, etc., are obtained mainly from the agencies or companies participating in such transactions.

Unilateral transfers consist of all gifts, and other transfers without any immediate "quid pro quo," to (-) or from ( + ) foreign countries by either private citizens or the Government. Private gifts include personal and institutional remittances. The former are based largely on money-order data and information received from banks and include parcel-post gift packages; the latter are based on data furnished by the institutions making the remittances. Government unilateral transfers consist of the various aid programs of the United States Government, such as Lend-Lease, UNRRA, Interim Aid, European Recovery, Mutual Security, and Technical Assistance Programs, and other transfers such as pensions and payments of war-damage claims.

United States private capital movements include the outward (-) or inward ( + ) flow of capital such as movements of direct investments of American enterprises in foreign branches and subsidiaries, purchases and sales of foreign securities, loans and advances less repayments, and changes in deposits in foreign banks.

United States Government capital movements include loans (less repayments) by the Export-Import Bank, credits on surplus property and surplus ship sales, credits on postwar lend-lease transfers, the loans to the United Kingdom, and various commodity advances.

Foreign long- and short-term capital includes net investments by foreign enterprises in American branches and subsidiaries, foreign purchases and sales of American securities, credits and advances (less repayments) by foreigners to American business, and changes in foreign deposits in U. S. banks. The major part of the movements of foreign capital in the United States is due to changes in foreign dollar reserves, consisting primarily of deposits in U. S. banks and holdings of U. S. Government securities.

Gold sales ( + ) or purchases (-) represent transactions reducing or increasing the monetary gold stock of the United States. This includes transactions by the Government with foreign countries as well as from purchases of gold mined in the United States and from sales of gold for industrial use. Net purchases (-) from domestic sources or net sales ( + ) for domestic use are offset by an equal amount with the opposite sign in the merchandise account.

Errors and omissions represent the residual element in the statement and would be zero if all the preceding items had been correctly estimated.

More complete information on these series is contained in the Department of Commerce publication "Balance of Payments of the United States, 1919-53" (a supplement to the July 1954 Survey of Current Business). Quarterly data have been compiled since 1945 and are shown in the aforementioned publication. Detailed definitions and methods used in setting up a balance-of-payments statement are published in "Balance of Payments of the United States, 1949-5l."
${ }^{2}$ Data for military transfers, separately available since 1946 only, are included for 1941-45 with figures for merchandise and other services.
${ }^{3}$ Less than $\$ 500,000$.

## Page 103

${ }^{1}$ See note 1 for $p .102$.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of Foreign Commerce; based on foreign-trade statistics compiled by the Bureau of the Census since May 1941 and the Bureau of Foreign and Domestic Commerce prior thereto. (For general explanation of foreign-trade data, see note 1 for p. 104.)

The index numbers have been constructed by the so-called "ideal formula." The quantities of selected articles for each year and the year immediately preceding are used as weighting factors for their unit values in the calculation of unit-value indexes for each economic class (crude materials, crude foodstuffs, manufactured foodstuffs and beverages, semimanufactures, and finished manufactures). Within each such class, it is assumed that the relative price movement for export or import commodities not directly included in the calculation is the same, on the average, as for those selected, or as for a given segment of the selected sample. On this assumption, commodities not covered in the sample for each class are taken into account in the computation of the unit-value and quantity indexes. Indexes for total exports or imports are based on the combined totals of the values used in calculating indexes for the five economic classes. The index numbers for each pair of years are made into a series by the chain method. For imports, the indexes are based on general imports through 1933 and on imports for consumption thereafter.

The selected commodities on which the index calculations are based include most of the leading classes of exports and imports for which quantities are available and which show a reasonable degree of homogeneity. Quantity figures for many articles, particularly finished manufactures, are not available, and for other items the reported data lack homogeneity. Owing to changes in the classification of articles and the inclusion of new items which increased in relative importance, or for which quantity data became available in later years, the number of items and the proportion they bear to the total vary somewhat over the period. The selected commodities, however, are closely comparable from year to year and sufficiently varied to be fairly representative of each economic class of exports and imports. The commodities used in the computation represented 62-67 percent of the total value of United States merchandise exports for 1929-35, 55-60 percent for 1935-39, 40-47 percent for 1940-41 and 1945, 30-35 percent for 1942-44, 47-50 percent for 1946-51, 44 percent for 1952 , and $35-39$ percent for 1953-54. The decline in the percentage during the war periods and 1953-54 reflects the large increase in the proportion of total exports represented by finished manufactures, which are less adequately represented in the index than are other economic groups. The import commodities represent 68-73 percent of the total value of imports into the United States for all years here reported, except for 1932-33, 1941-42, and 1947-49 when the representation was somewhat higher.

Monthly data for 1947-50 appear in the 1953 and 1951 editions of the Statistical Supplement. The July 1951 Survey of Current Business contains data as follows: Annual indexes for 1913 and from 1919 forward; quarterly, 1929-2d quarter 1933; monthly, July 1933-46.
${ }^{3}$ Compiled by the U.S. Department of Agriculture, Office of Foreign Agricultural Relations, from basic data of the U. S. Department of Commerce. The index numbers are computed by weighting quantities traded in a given period by average unit values during the 6 -year base period. The monthly index numbers are adjusted for seasonal variation by a variant of the simple-average method.

The export index is based on exports of 74 commodity classifications which, during the 1924-29 base period, amounted to 96 percent of the total value of agricultural exports. The cotton classification covers cotton fibers and linters. Separate export indexes not shown in the SURvey of Current Business are available for cotton, tobacco,
fruits, wheat including flour, grains and grain products other than wheat, cured pork, and lard. Export indexes include shipments under the various special programs (see note 1 for p. 104). For 1947 and subsequent years, data include shipments under the Army Civilian Supply Program; such shipments for earlier years are not available.

The import index is based on data for imports of 122 commodity classifications which, during the 1924-29 base period, amounted to 97 percent of the total value of agricultural imports. Separate indexes are prepared for supplementary and complementary imports. Supplementary imports consist of all imports similar to agricultural conmodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities; complementary imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices. Individual import indexes are computed for sugar and molasses, dairy products, hides and skins, grains, tobacco, vegetable oils and oilseeds, and dutiable wool and are shown in the Department of Agriculture releases.

Monthly data for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly figures for 1938-40 are shown in the 1942 SuppleMENT; monthly data prior to 1938 are available upon request. A complete description and historical data for all series are shown in a special release of the Department of Agriculture issued April 1941, entitled "New Quantity Indexes of the Foreign Trade of the United States in Agricultural Products."
${ }^{4}$ Data for balance of payments are quarterly averages.
${ }^{5}$ Indexes through 1933 are based on general imports.

## Page 104

${ }^{1}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Complete details may be found in the "Quarterly Summary of Foreign Commerce of the United States" (formerly Monthly Summary), published by the Bureau of the Census. The Quarterly Summary also contains a general explanation of trade statistics, as well as of sampling procedures introduced in 1953 and 1954 and the effect of the sampling procedures on the trade statistics. (See also last two paragraphs of this note regarding sampling.)

Foreign-trade figures as shown in this SuPplement incorporate all revisions issued with reports through December 1954; however, for the most recent years, and for 1954 in particular, they are subject to further revision upon release of final data by the compiling agency.

Data are compiled from copies of Export Declarations and Import Entries filed with the United States customs officials. The statistics show trade (except gold and silver in the form of ore, bullion, and coin) between the United States customs area (continental United States, Alaska, Hawaii, Puerto Rico, and for January 1, 1935, through December 31, 1939, the Virgin Islands) and foreign countries but do not include trade between continental United States and the aforenamed noncontiguous territories. The Republic of the Philippines (Philippine Islands prior to July 4, 1946) and the Panama Canal Zone are considered for these statistical purposes as foreign countries for all years. The Virgin Islands are treated as a foreign country prior to 1935; since 1940, their trade both with the United States and with foreign countries is omitted from the statistics shown in this volume.

Exports.-Total exports include exports of United States merchandise plus reexports of foreign merchandise. Export figures cover all merchandise (other than merchandise intransit through the United States) shipped from the United States customs area, with the exception of goods destined to the United States Armed Forces abroad for their own use and with the further exception of items of relatively small importance (such as low-value or noncommercial shipments by mail, gifts valued less than $\$ 100$, household and personal effects, samples, etc.). Beginning January 1947, goods sup-
plied to civilians in occupied areas through the United States Armed Forces are included in the export figures. These shipments totaled $\$ 908,343,000$ in 1947 and $\$ 901,552,000$ in 1948; separate data for subsequent years are not available. (Army Civilian Supply shipments were also made in 1943-46, but separate information is not available and the data are not included in the export figures shown.) The export figures also include lend-lease shipments and shipments made under the United Nations Relief and Rehabilitation Program and other foreign-aid and relief programs for periods when such programs are effective, as well as relief shipments made through private relief channels. In other words, two general types of exports are represented--cash-purchase, or commercial, and foreign aid and relief. Further details on the Government programs are given in the following three paragraphs.

Amounts of lend-lease shipments included are as follows (in thousands of dollars): 1941 (total for 10 months, MarchLecember), 740,903; 1942, 4,932,739; 1943, 10, 357,533; 1944, $11,297,514 ; 1945,5,559,810 ; 1946,652,901 ; 1947,23,532$. Lend-lease shipments were negligible during the first half of 1948 and separate data are not available after June of that year. Lend-lease exports represent merchandise shipped under provision of the Lend-Lease Act of March 1941 which authorized the President to furnish, without compensation, supplies to the Government of any country whose defense he deemed vital to the defense of the United States. Shipments of supplies in lend-lease channels at the close of the war and supplies procured thereafter through lend-lease procurement facilities are classified as lend-lease exports, although after the program officially ceased to operate, the recipient nations (with few exceptions) arranged to finance them prior to the exportation of the merchandise. Statistics of lend-lease exports are not a measure of the total aid extended to foreign countries under the lend-lease program, but only a measure of that portion of the aid extended in the form of commodities exported from the United States.

Shipments made under the United Nations Relief and Rehabilitation Administration Program are included beginning September 1944; separate data are as follows (in thousands of dollars): 1944, 609 (total for 3 months, September, November, and December) ; 1945, 357,047; 1946, 1, 013, 383; 1947. 386,622; amounts for January-June 1948 are negligible and separate data are not available after June 1948. These UNRRA shipments were made in accordance with the provision of the Act of Congress of March 28, 1944, authorizing Lnited States participation in the work of the United Nations Relief and Rehabilitation Administration.

Other aid and relief shipments, initiated and included during 1947, are the Greek-Turkish aid, International Relief Organization shipments, and exports under the U.S. Foreignand Interim-Aid programs. Beginning April 1948, exports include shipments initiated under the authority of the Economic Cooperation Act of April 3, 1948; this act provides for financial assistance to the 16 nations that met in 1947 to plan the European Recovery Program. Included in the export figures beginning July 1950 (except in data shown here by geographic regions and countries) are shipments, both military and economic aid, authorized by the Mutual Defense Assistance Program (Mutual Security Progranisince 1952), an outgrowth of the North Atlantic Treaty signed April 4, 1949. Amounts of "military" shipments under the program are as follows (millions of dollars): 1950, July-December, 282.2; 1951, 1,065.1; 1952, 1, 997.2; 1953, 3,511.3; 1954, 2,255.0.

Imports. - Imports include private commercial trade, foreign merchandise purchased by United States Government agencies, merchandise owned by foreign governments and entering this country for their official use or for storage, and merchandise transferred to the United States under the recipro-cal-aid program (reverse lend-lease). The import statistics, in general, are a complete record of merchandise which moves into the United States from foreign countries (except for in-transit shipments); however, there are some exclusions of items of relatively small importance in terms of total value, such as household and personal effects, gifts valued at less than $\$ 100$, and (prior to 1954) all merchandise reported on informal entries.

General imports represent total arrivals of imported goods (except for in-transit shipments)-i.e., merchandise
released from Customs custody immediately upon arrival, plus merchandise entered (immediately upon arrival) into bonded storage warehouses, bonded manufacturing warehouses, and bonded refining warehouses. Imports for consumption consist of merchandise entered into United States consumption chan-nels-i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses, withdrawn for consumption or for exportation.

Export and import values. - The values stated are in United States dollars without reference to changes in the gold content of the dollar. (The statutory price of gold$\$ 20.67$ per ounce-in effect prior to January 31, 1934, was changed on that date by Executive Order to $\$ 35$ per ounce. Between March 10, 1933, and January 31, 1934, the foreign exchange value of the dollar was permitted to depreciate as a result of the restrictions placed on gold shipments to foreign countries.)

Export values are those declared by the shipper at the time of exportation. Values of containers and coverings are included. If the merchandise is produced at an interior place, freight charges to the point of export are included, but freight and other charges from the place of departure in the United States to the destination in the foreign country are not included. The import value, as defined in Section 402 of the Tariff Act of 1930, is usually the "market value or the price at the time of exportation of such merchandise to the United States, at which such or similar merchandise is freely offered for sale to all purchasers in the principal markets of the country from which exported, in the usual wholesale quantities and in the ordinary course of trade, including the cost of all containers and coverings of whatever nature, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the Enited States." Essentially the same definition was carried in previous tariff acts. Since the import values usually reflect the foreign market value of the merchandise or the selling price f.o.b. the exporting country, they should exclude insurance, transportation, and other charges incident to arrival of the goods in the United States. (Transportation costs to the United States may inadvertently be included in the case of merchandise not subject to an import duty based on value.) United States import duties are excluded. The foreign values of imported merchandise are converted into United States currency at the rate of exchange prevailing on the day the merchandise is shipped to the United States, in accordance with Section 522 of the Tariff Act of 1930.

Sampling. - Effective with statistics for July 1953, sampling procedures for low-value shipments were instituted in compiling export and import statistics. In export statistics beginning July 1953, quantities and values of shipments individually valued $\$ 100$ to $\$ 499$ (representing about 4 to 6 percent of the monthly export value totals) are estimated on the basis of a 10 -percent sample of such shipments.

In the import statistics for July-December 1953, values for under $\$ 100$ shipments (about $1 / 10$ th of 1 percent of total import value) for immediate consumption filed on formal entries are estimated from a 10 -percent sample of such shipments. These estimated values are excluded from the detailed commodity figures but are included in the overall total and country totals and, arbitrarily, in the economic class total for "finished manufactures." Beginning January 1954, values for $\$ 1$ to $\$ 250$ formal and in formal entry shipments for immediate consumption (about 1 percent of total import value) are estimated from a 5 -percent sample of such shipments (all informal entries were excluded prior to 1954). Effective September 1953 the value limit for informal entries was raised from $\$ 100$ to $\$ 250$ and beginning January 1954 in formal entries have been included in the import statistics. These estimated values are excluded from the detailed commodity totals but are included in the overall totals and are distributed, as appropriate, in the commodity-group, country, and economic-class totals.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. The shipping weight represents the gross weight of the shipments including the weight of containers, wrappings, crates, and moisture content. The data cover only water-borne trade, including traffic through Atlantic, Gulf, Pacific, and Great Lakes ports. They include shipments on all types of watercraft engaged in the foreign trade which are required to make formal clearance and to file manifests of cargoes laden_ aboard under U. S. Customs Regulations, and also, beginning January 1946, shipments by vessels not required to make formal customs clearances, which include ferryboats and passenger vessels making three or more trips a week between a United States port and a foreign port. Shipments on such passenger vessels and by ferry accounted for 1 to 2 percent of the totals in 1946.

Vessel export figures represent exports of domestic and foreign merchandise laden at the United States Customs area for shipment to foreign countries, and include export shipments to United States civilian government agencies as well as those foreign-aid program shipments which are not controlled by the Department of Defense.

Elements excluded from the vessel export figures for pertinent periods are as follows: (1) Shipments to United States armed forces of military and naval supplies and equipment for their own use; (2) shipments of "special category commodities (beginning July 1950); (3) all commodities exported under foreign-aid programs as Department of Defense controlled cargo (Department of Defense controlled cargo consists of those shipments under foreign-aid programs such as the Foreign Operations Administration Program, formerly Mutual Security, and the Civilian Supply Program which are exported from the United States on United States Army or Navy transports or United States flag commercial vessels chartered by the Department of Defense under time, voyage, and space charter arrangements); (4) effective with January 1954, shipments having a value of less than $\$ 500$ (formerly export shipments of less than $\$ 100$ were excluded).

Vessel import figures are general imports and represent the total of imports for immediate consumption plus entries into Gustoms bonded storage and manufacturing warehouses made at the United States Customs area from foreign countries. The following elements are excluded from the vessel import figures: (1) American goods returned by the United States armed forces for their own use; (2) import shipments on Army or Navy transports and, effective with April 1952 statistics, on vessels under time and voyage charter to the Military Sea Transportation Service; (3) prior to 1954, import shipments valued at less than $\$ 100$ where the shipping weight was less than 10,000 pounds; effective January 1954, imports valued at less than $\$ 100$ (irrespective of weight) and those having a shipping weight of less than 2,000 pounds (irrespective of value).

The following types of shipments are excluded from both the vessel export and import data: (1) Shipments of household and personal effects; (2) shipments by mail and parcel post; (3) shipments of vessels under their own power and afloat; (4) merchandise shipped in bond through the United States in transit from one foreign country to another "without having been entered as an import." (Imported merchandise cleared through Customs and subsequently reexported is included in both the import and export statistics.)

Monthly data on shipping weight of both exports and imports, covering trade by all methods of transportation, were compiled by the Bureau of the Census for January 1943 through June 1947; thereafter data have been compiled for water-borne trade only. Data for water-borne trade are not available separately by months prior to January 1946 and the only earlier data available at present are 1943-45 totals for export trade.

Monthly averages for 1950-53 are based on calendar-year totals; for other years, on statistical-year totals. Monthly data are on a statistical-month basis, i.e., they are tabulated from reports received in the month, regardless of when the shipment was made. Year-end adjustments are made to arrive at a calendar-year total. The 1946-50 monthly figures as shown in the 1953, 1951, and 1949 issues of the Statistical Supplement have been revised slightly; figures for the most recent years are subject to further revision.
${ }^{3}$ Export statistics generally show country of ultimate destination; if this is not known, country of consignment. Goods consigned to the armed forces or other representatives of any foreign country stationed in another foreign country are credited to the country to which the goods are physically sent. Imports are shown by country of origin, except that where the importer cannot readily obtain information as to the country of origin, the country of shipment is reported. In addition, countries reported as origin may actually represent shipment for merchandise which is transshipped before it reaches the United States. Prewar boundaries are still designated to serve for statistical purposes in foreign-trade schedules but in practice, since the close of the war, de facto boundaries have generally served. However, import commodities that are required to be stamped with the country of origin are credited to the country shown in the foreign-trade schedules rather than to the de facto country.

Monthly averages are based on 12 months in all cases, al though during the war period there was no trade with the enemy and blockaded countries in most months.

Monthly data for all series for 1941-45 (except for revisions mentioned below and except for exports of tobacco and coal and imports of cocoa beans) are available in the 1949 and 1947 issues of the Statistical SUPPLEMENT; most of the 1946 monthly figures shown in those volumes, and some of the 1947-50 monthly figures in the 1953 and 1951 volumes, have since been revised. There have also been revisions beginning 1942 of certain previously published monthly figures for imports, to adjust for the revaluation of tin-ore imports; these monthly revisions are available for total general imports and imports for consumption (total and by economic classes), and for the pertinent items specifically noted.

Monthly averages back to 1913 and monthly figures for 1938-40, except for Colombia and Venezuela, are available in the 1942 SUPPLEment. Monthly figures for 1923-37 for total exports, including reexports, total general imports, and exports and imports for geographic regions, and for Argentina, Brazil, Chile, Mexico, Canada, United Kingdom, France, Germany, Italy, and Japan are shown in the 1940, 1938, 1936, and 1932 volumes. The published figures are correct except for minor revisions in the figures in the 1932 volume and two major changes as follows: Total exports, including reexports, August 1929, $\$ 380,565,000$; Europe, total, April 1931, \$94,634, 000.
${ }^{4}$ Beginning 1935, data for Union of Soviet Socialist Republics in Asia are included in total for Europe; prior thereto, in Asia and Oceania. (In 1934, exports to U.S.S.R. in Asia totaled $\$ 130,000$.) Data for Turkey are included in Europe beginning 1952; previously, in Asia.
${ }^{5}$ Data include Manchuria beginning 1952.
${ }^{6}$ Burma included prior to January 1, 1938.
${ }^{7}$ Based on annual total which includes revisions not distributed by months.
${ }^{8}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see 4th paragraph of note 1 for this page). Beginning 1948, such shipments are included by the compiling agency.
${ }^{9}$ Beginning July 1950, data by geographic regions and by countries exclude shipments authorized by the Mutual Defense Assistance Program (Mutual Security Program since 1952); they also exclude "special category" shipments not made under this program.
${ }^{10}$ Less than $\$ 500$.

## Page 105

${ }^{1}$ See note 1 for $p$. 104 for a general description of for-eign-trade statistics.
${ }^{2}$ See note 3 for p. 104.
${ }^{3}$ Japanese Mandated Islands included with Japan prior to January 1, 1942. Exports to Japan in 1942, 1943, and 1945
represent relief shipments, including shipments to prisoners of war in Japan for 1943 and 1945. Figures for 1947 and subsequent years include goods supplied to occupied areas through the United States Armed Forces (these data were not included in earlier years); shipments to Japan under the Civilian Supply Program amounted to $\$ 354,380,000$ in 1947 and $\$ 246,338,000$ in 1948. Separate figures on shipments under this program have not been published for years subsequent to 1948.
${ }^{4}$ For statistical purposes, trade with Germany was defined to include (as far as ascertainable) trade with German-occupied areas from the following dates until the close of the war: Austria, May 6, 1938; Sudeten area of Czecho-Slovakia, November 10,1938 ; other Czecho-Slovak provinces (Protectorate of Bohemia-Moravia and part of Slovakia), March 18, 1939; and Danzig and the German-occupied parts of Poland, November 16, 1939. Trade with Germany includes also trade with Memel territory of Lithuania from March 25, 1939, until January 1, 1948. An explanation of the statistical coverage for Germany and other countries after the close of the war is included in note 3 for p. 104 referred to above.

Exports to Germany in the years 1942 through 1948 represent mainly relief shipments; data for 1947 and subsequent yeats include goods supplied to occupied areas through the United States Armed Forces, amounting to $\$ 456,574,000$ in 1947 and $\$ 586,521,000$ in 1948. Separate figures on shipments under this program have not been published for years subsequent to 1948.
${ }^{5}$ Data for 1947 include goods supplied to occupied areas through the Enited States Armed Forces, amounting to $\$ 9,108,000$ for that year. No goods were supplied to Italy through this channel in 1948.
${ }^{6}$ Includes Union of Soviet Socialist Republics in Asia and Europe.
${ }^{7}$ Data for Newfoundland and Labrador, which technically became a province of Canada on April 1, 1949, are included in figures shown here beginning January 1950 only. Exports to Newfoundland and Labrador for January-December 1949 totaled $\$ 18,515,000$; the corresponding figure for 1948 is $\$ 32,260,000$.
${ }^{8}$ Includes twenty Latin American Republics and for 1929 37, Canal Zone.
${ }^{9}$ Less than $\$ 500$.
${ }^{10}$ Based on annual total which includes revisions not distributed by months.
${ }^{11}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note 1 for p. 104). Beginning 1948 , such shipments are included by the compiling agency.
${ }^{12}$ See note 9 for $p$. 104.
${ }^{13}$ See note 7 for this page.

## Page 106

${ }^{1}$ See note 1 for p. 104 for a general description of for-eign-trade statistics, including information regarding the inclusion beginning 1947 of shipments under the Army Civilian Supply Program.
${ }^{2}$ See note 3 for $p .104$.
${ }^{3}$ Monthly data for 1949 and 1950 appear in the 1953 StaTISTICAL SUPPLEMENT; those for 1947-48 as published in the 1951 volume have since been revised. Monthly data for all series for 1941-46 (except figures for tobacco and manufactures; coal and related products; and tractors, parts, and accessories) are shown in the 1949 and 1947 issues of the Statistical Supplement. There have been minor revisions in the 1946 data which are available upon request. Monthly averages back to 1913 (or to the earliest year for which figures are available) and monthly data for 1938-40 for all series (except those mentioned above and textiles and manufactures) appear in the 1942 Supplement. Monthly data for

1923-37 for total exports of United States merchandise and exports by economic classes and for cotton unmanufactured (except 1936 figures which have been revised), packing-house products, automobiles, parts, and accessories, and total machinery are shown in the 1940,1938 , 1936, and 1932 volumes. The data are correct except for minor revisions in the figures in the 1932 SUPPLEMENT and revisions in the 1935-37 figures for "total machinery." Figures beginning 1935 for machinery, as shown in the 1940 and earlier Supplements, have been revised to include diesel and semi-diesel marine engines. Packing-house products are shown as "meats and fats" in Supplements prior to 1942. Monthly averages for total agricultural and total nonagricultural products shown in the 1942 Supplement for years prior to 1919 are for fiscal years ended June 30 .
${ }^{4}$ Effective with the statistics for July 1950, all semimanufactures reported under "special category, type l" commodity classifications have been included under finished manu factures.

## ${ }^{5}$ Includes linters.

${ }^{6}$ Beginning January 1948, figures have been adjusted (in accordance with the 1949 commodity classifications) to include fruit juices. Exports of fruit juices in 1948 amounted to $\$ 13,783,000$.
${ }^{7}$ Packing-house products include total meat products, animal oils and fats (edible), and animal oils and greases (inedible), except fish oils. Beginning January 1948, figures have been adjusted (in accordance with the 1949 commodity classifications) to exclude oleomargarine. Exports of oleomargarine in 1948 amounted to $\$ 1,107,000$.
${ }^{8}$ Based on annual total which includes revisions not distributed by months.
${ }^{9}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note 1 for p. 104). Beginuing 1948, such shipments are included by the compiling agency.
${ }^{10}$ Adjusted for comparability with succeeding data (see note 6 above for fruits, etc., and note 7 above for packinghouse products).
${ }^{11}$ See note 4 for this page.

## Page 107

${ }^{1}$ See note 1 for $p .104$ for a general description of for-eign-trade statistics, also for information regarding the inclusion beginning 1947 of shipments under the Army Civilian Supply Program.
${ }^{2}$ See note 3 for p . 106 for reference to earlier data.
${ }^{3}$ Excludes automobile service appliances and parts, and trailers. Beginning January 1948, data have been adjusted (to conform to the 1949 revision of the export schedule) to exclude exports of industrial trucks and to include those of electric buses and trackless trolleys.

The figures from January 1951 forward have been adjusted (to conform to the 1952 revision of the export schedule) as follows: Data formerly included for spark plugs and pumps transferred to electrical machinery and industrial machinery, respectively; service machinery and equipment, formerly elsewhere, now included.
"Special category" data are excluded during the period from July 1949 through 1951.
${ }^{4}$ Represents the total "chemicals and related products" group as shown in the original foreign-trade reports; includes chemicals (coal-tar, industrial, medicinal), pigments, paints, and varnishes, fertilizers and materials, explosives, soap, and toilet preparations. Beginning January 1948, data have been adjusted (in accordance with the 1949 commodity classifications) to include exports of vulcanized fiber sheets and printing ink. Beginning January 1954, jet fuel (totaling \$1,719,000 in 1953) formerly included with chemicals, etc., is included with petroleum and products.
"Special category" data are excluded beginning July 1950 ; however, the figures from January 1952 forward now include certain "special category, type II" items which previously were classified as type I and, therefore, were omitted for security reasons.
${ }^{5}$ Includes office appliances and printing machinery in addition to the classes of machinery shown separately. See note 7 regarding the inclusion (beginning 1948) of data for copper wire and cable. Beginning May 1949, "special category" data are excluded.
${ }^{8}$ Prior to 1948, exports of tractors, etc., are included with those of agricultural machinery. Data for tractors for May 1949 through 1951 exclude "special category" exports.
${ }^{7}$ Figures beginning January 1948 reflect the transfer of insulated copper wire and cable from the "copper and manufactures" group to the "electrical machinery" group. This transfer was made to adjust to groupings outlined in the 1949 revision of the export schedule. Data beginning with January 1951 have been adjusted in accordance with the 1952 revision of the export schedule. Beginning May 1949, "special category" items are excluded.

8 "Special category" data are excluded beginning July 1950.
${ }^{9}$ Beginning January 1948, data have been adjusted (in accordance with the 1949 revision of the export schedule) to include exports of scales and balances; gasoline, motor, station, warehouse, and factory trucks; push carts and hand trucks; and internal combustion marine engines. Data from 1951 forward have been adjusted to conform to the 1952 revision of the export schedule.
${ }^{10}$. Includes all finished textile products and yarn and other semimanufactures.
${ }^{11}$ Based on annual total which includes revisions not distributed by months.
${ }^{12}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note l for p. 104). Beginning 1948, such shipments are included by the compiling agency.
${ }^{13}$ Adjusted for comparability with succeeding data (see notes $3,4,5,7$, and 9 above on the various items).
${ }^{14}$ Data for the period indicated in the note for the column heading exclude "special category" exports not shown separately for security reasons; the figures, therefore, are not entirely comparable with those for other periods. The "special category" exclusions affect the data through 1951 for all indicated items, as well as data from 1952 forward for the following items: Chemicals and related products; total machinery; electrical machinery; and metalworking machinery. In general, however, the exclusions beginning 1952 are not so significant as formerly, since various commodities were shifted from type I to type II special category and, for type II, the publication of data (except by destination) is permissible.
${ }^{15}$ Beginning January 1951, data have been adjusted to conform to the 1952 revision of the export schedule (see also note for column heading).
${ }^{18}$ Beginning January 1954, exports of jet fuel (totaling $\$ 1,719,000$ in 1953) are included with petroleum and products; formerly, with chemicals, etc.

## Page 108

${ }^{1}$ See note 1 for p .104 for a general description of for-eign-trade statistics.
${ }^{2}$ See note 3 for $p$. 104 for reference to earlier data. See also note 5 below regarding revisions resulting from the revaluation of imports of tin ore.
${ }^{3}$ Beginning 1935, data for Union of Soviet Socialist Republics in Asia are included in total for Europe; prior
thereto, in Asia and Oceania. (ln 1934, imports from U.S.S.R. in Asia totaled $\$ 422,000$.$) Beginning January 1952,$ data for Turkey have been transferred from Asia to Europe.
${ }^{4}$ Including Manchuria beginning January 1952 and Outer Mongolia beginning January 1953.
${ }^{5}$ See note 3 for this page.
${ }^{6}$ Average based on revised annual total which includes adjustments for revaluation of tin imports. Revised monthly figures for 1942-46 for the United States total are available upon request. Revisions by months are not available for geographic regions and countries. Adjustments made in annual totals for regions and countries are as follows: Africa-1942, $+\$ 17,700 ; 1943,+\$ 411,000 ; 1944,+\$ 1,123,000$; 1945, $+\$ 881,000$; Asia and Ocenia-1942, $+\$ 2,117,000$; Southern North America-1943, $+\$ 14,000 ; 1944,+\$ 13,500 ; 1945$, $+\$ 2,700$; South America- 1942, $+\$ 8,897,000$; 1943, $-\$ 275,700$; 1944, $+\$ 8,459,000 ; 1945,+\$ 11,201,000$.
${ }^{7}$ Based on annual total which includes revisions not distributed by months.
${ }^{8}$ Less than $\$ 500$.

## Page 109

${ }^{1}$ See note 1 for $p$. 104 for a general description of for-eign-trade statistics.
${ }^{2}$ See note 3 for p. 104 for reference to earlier data and minor revisions for total Latin American Republics.
${ }^{3}$ Japanese Mandated Islands included with Japan prior to January l, 1942.
${ }^{4}$ See note 4 for p. 105.
${ }^{5}$ Union of Soviet Socialist Republics in Asia and Europe.
${ }^{6}$ Data for Newfoundland and Labrador, which technically became a province of Canada on April 1, 1949, are included in figures shown here beginning January 1950 only. Imports from Newfoundland and Labrador for January-December 1949 totaled $\$ 38,683,000$; the corresponding figure for 1948 is $\$ 39,707,000$.
${ }^{7}$ Includes twenty Latin American Republics and for 1929-37, Canal Zone.
${ }^{8}$ Average based on revised annual total which includes adjustments for revaluation of tin imports. This revision is not available by months. Adjustments made in annual totals are as follows: Indonesia-1942, $+\$ 2,117,000$; Latin American Republics-1942, $+\$ 8,897,000 ; 1943,-\$ 261,600 ; 1944$, $+\$ 8,472,000 ; 1945,+\$ 11,204,000 ;$ Argentina-1944, $+\$ 13,000$.
${ }^{9}$ Less than $\$ 500$.
${ }^{10}$ Includes minor revisions not distributed by months.
${ }^{11}$ See note 6 for this page.

## Page 110

${ }^{1}$ See note 1 for $p .104$ for a general description of for-eign-trade statistics.
${ }^{2}$ See note 3 for p. 104.
${ }^{3}$ Monthly data for 1949 and 1950 appear in the 1953 STAtistical Supplement. (The 1947 and 1948 figures in the 1951 volume have since been revised.) Monthly data for 1941-46 are shown in the 1949 and 1947 Statistical SUPPLements (except 1942-46 monthly data for total imports for consumption and for crude materials, which have been revised to reflect the revaluation of tin ore; these revisions are available upon request). Monthly figures for 1938-40 are available in the 1942 volume; for 1923-37 monthly figures for total imports for consumption and imports by economic classes, see the $1940,1938,1936$, and 1932 Supplements. The published figures are correct except for minor revisions in the 1932 SUPPLEMENT. The data by economic classes prior to 1934 are general imports.
${ }^{4}$ Monthly data for 1949 and 1950 appear in the 1953 STAtistical Supplement. (The 1947 and 1948 figures in the 1951 volume have since been revised.) Monthly data for 1941-46 (except for cocoa beans) are shown in the 1949 and 1947 STAtistical Supplements. Monthly figures for 1938-40 are available in the 1942 SUPPLEMENT (the figures prior to 1934 are general imports instead of imports for consumption). Monthly figures for years prior to 1938 have not been published in the SURVEY but, except for total agricultural and total nonagricultural imports, are available in the "Monthly Summary of Foreign Commerce of the United States." The monthly averages for total agricultural and total nonagricultural imports shown in the present volume and in the 1942 SUPPLEMENT for years prior to 1935 are for fiscal years ended June 30 .
${ }^{5}$ Data for 1929-33, as well as for succeeding years, represent imports for consumption. (Note that figures through 1933 for economic classes and commodities are general imports.)
${ }^{6}$ Average based on total for fiscal year ended June 30.
${ }^{7}$ Averages based on revised annual totals which have been ad.justed to include $\$ 14,100$ for 1943 and $\$ 13,500$ for 1944 for revaluation of tin ore imports; these revisions are not available by months.
${ }^{8}$ Based on annual total which includes revisions not distributed by months.

## Page 111

${ }^{1}$ See note 1 for $p$. 104 for a general description of for-eign-trade statistics.
${ }^{2}$ See note 3 for $p$. 104 for reference to earlier data.
${ }^{3}$ Data for 1942-46 represent revised figures which include adjustments for the revaluation of tin-ore imports. Revised monthly data (except for total nonferrous metals for 1943) are available upon request.
${ }^{4}$ Includes all nonferrous ores, metals, alloys, and manufactures, except precious metals, jewelry, and plated ware.
${ }^{5}$ Average based on total for fiscal year ended June 30.
${ }^{6}$ Based on annual total which includes revisions not distributed by months.

## Page 112

${ }^{1}$ Compiled by the Civil Aeronautics Board beginning January 1945 and (with the exception of data for airmail tonmiles) by the $U S$. Department of Commerce, Civil Aeronautics Administration and predecessor agencies, prior to 1945. Data cover scheduled operations of all domestic trunk airlines operating in continental United States, according to the latest classification of such lines by the Civil Aeronautics Board. Data for feeder (scheduled air carrier conducting local service), helicopter carriers, and territorial operations are not included. Figures for Colonial Airlines, operating from New York to Montreal, are included beginning January 1945, since most of the mileage of this line is in the United States. Earlier data have not been revised to include this company; however, it accounted for only 1.5 percent of the passengers carried in 1945, less than 1 percent of miles flown and passenger-miles, and a negligible percentage of other items. Operations of one line now classified as a feeder line are included prior to 1945 , but figures for this line are comparatively small and do not materially affect the comparability of the data.

All data cover revenue traffic only, whereas date relating to passenger traffic shown in Supplempints prior to the 947 issue cover revenue and nonrevenue passengers. There is duplication in the figures for number of passengers where the same passengers are carried by more than one air carrier and also, in the figures prior to 1945 , where some passengers are carried on more than one route of an air carrier. Monthly averages for 1942-44 (based on annual totals) excluding the duplication existing where passengers are car-
ried on more than one route of the same carrier are as follows: 1942, 251, 000; 1943, 238, 000; 1944, 322,000. Data excluding this duplication are not available currently, prior to 1942, or by months for 1942-44. There is no duplication in the figures for ton-miles and passenger-miles which take into account the distance carried. A "ton-mile" is equivalent to one ton carried one mile and a "passenger-mile" is equivalent to one passenger carried one mile.

Monthly data are available from the Board beginning 1946 for local service airlines, international and overseas, and domestic territorial lines in addition to data for trunk lines shown here.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947. Monthly figures for revenue miles flown for July 1931December 1940 appear in the $1942,1940,1938$, and 1936 SupPlements, and the January 1935 Survey. Monthly figures for 1931-40 for airmail ton-miles are also available in the SUPPLEMENTS referred to above (the 1931 figures are given in a footnote in the 1938 issue); the data are shown under the heading "postal business" in the Domestic Trade section and are in pound-miles; they should therefore be converted to ton-miles by dividing by 2,000 for comparison with figures shown here. Monthly figures for 1935-40 for express and freight ton-miles and revenue passengers carried, and for 1936-40 for revenue passenger-miles are avallable upon request.
${ }^{2}$ Data prior to 1945 are from the U. S. Post Office Department and are approximately comparable with later data from the Civil Aeronautics Board. Data for airlines within Hawaii and the U. S. possessions in the Caribbean area, which are excluded from the figures beginning 1945, are included in the earlier figures; while data for Colonial Airlines, which are included beginning 1945, are excluded for earlier years. The 1945 monthly average entirely comparable with earlier figures is $5,405,000$ ton-miles.
${ }^{3}$ Compiled from reports to the Interstate Commerce Commission. Data cover total operations of the Railway Express Agency, Inc. (formerly the American Railway Express Co.) and also, through June 1938, operations of the Southeastern Express Co. which was absorbed by the Railway Express Agency in July 1938. The data represent practically complete coverage of the express business on railroads, plus the express operations involved in servicing motor carriers, electric lines, water carriers, and airways.

Transportation revenues represent charges (by the express company) to customers for express service, plus some miscellaneous transportation charges. Express privilege payments are amounts paid by the express company to the carriers for the conduct of express operations. Such payments are derived by subtracting from income (i.e., the sum of charges for transportation, revenue from operations other than transportation, other income credits, and profit and loss credits) the following items: Operating expenses, taxes, other deductions from income, and profit and loss debits.

Monthly data for 1949-50 appear in the 1953 Statistical SUPPLEMENT; monthly data beginning 1929 are available upon request. Statistics shown in the 1951 SUPPLEMENT and prior issues cover operating revenues (transportation revenues plus other revenues less express privilege payments) and express operating income less express privilege payments.
${ }^{4}$ Compiled by the American Transit Association. Data beginning 1945 on average cash fares are based on fares paid in more than 400 cities, each having a population of 25,000 or more, according to the 1950 census (see next paragraph regarding data prior to 1945). The average fare is unweighted, i.e., the cash fare of the dominant transit company in each city, regardless of size, counts as a unit in the average. Averages are computed as of the last day of the month. No adjustments have been made for token fares or passes. Fares paid to motorbus and trolley-bus operators have been substituted where such services have replaced street railways.

Note that the series on cash fares as shown in earlier volumes differs from the present series (worked back to 1945) as follows: Figures shown in the 1953, 1951, and 1949 SUP-

PLEments are based on fares paid in more than 400 cities, each having a population of 25,000 or more, according to the 1940 census; those in the 1947 and earlier volumes, on fares paid in 357 cities having a population of 25,000 or more, according to the 1930 census. Monthly data for August 1945December 1950 for the current series are available upon request.

Data for revenue passengers carried and operating revenues are estimated totals for all local transit lines, including electric street railways, elevated and subway lines, interurban electric railways, trolley-coach lines, and all common-carrier local motorbus lines. Excluded from the figures are long distance interstate motor carriers, suburban railroads, sightseeing buses, and school buses.

The estimates of passengers and revenues are based on monthly reports from member and nonmember companies whose operations (in terms of revenue or traffic) represent approximately 80 percent of the total transit industry, and on annual reports which include additional companies and which account for about 90 percent of the industry. The current series on revenue passengers and operating revenues differ from similar series published in the 1942 and earlier SUPPLEMENTS, in that the latter include only those bus lines that were affiliated with or were successors to electric railways and exclude so-called independent bus lines which had no historical connection with the old electric railway industry; in addition, data for passengers carried, published in those issues, are reported data and do not include estimates for nonreporting companies. The monthly averages for 1935 for revenue passengers and for 1935-40 for operating revenues are computed from annual totals.

Monthly data for 1941-50 for passengers and operating revenues appear in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly figures for 1936-40 for passengers are available upon request.
${ }^{5}$ Compiled from quarterly reports to the Interstate Commerce Commission by a varying number of regulated carriers that furnish complete reports to the Commission. Effective with data.for 1949, class I motor carriers are defined as those with $\$ 200,000$ or more of average gross annual operating revenues; earlier data cover carriers with operating revenues of $\$ 100,000$ or more. However, comparison for the year 1949 on the new and old bases indicates that there is less than $l$ percent difference in terms of operating revenues.

Carriers of freight represent intercity carriers of all types of commodities, comprising common carriers of general and special commodities and intercity contract carriers; data include both common and contract services of these carriers. Tonnage of revenue freight carried includes duplications on account of tonnage received from connecting motor carriers. Intercity revenue passengers carried represent those reported by intercity carriers operating intercity schedules, local and suburban schedules, and charter or special service. Carriers reporting both intercity schedules and local and suburban schedules are classified as intercity carriers if the average revenue per passenger carried is in excess of 20 cents.

For the carriers of property, statistics shown in the 1953 edition of BUSINESS STATISTICS for the period 1945-52 relate to intercity common carriers of general commodities only; for 1938-44, to carriers of all types of commodities as shown in the present edition. Quarterly figures for 1949-50 for passenger carriers appear in the 1953 volume; quarterly data beginning 1938 for both series are available upon request.
${ }^{6}$ Data are as of December 31, based on fares paid in 357 cities having a population of 25,000 or more according to the 1930 census.
${ }^{7}$ Does not include $1,720,000$ miles flown by army planes during the period February 20-May 3l, 1934.
${ }^{8}$ Data for class I motor carriers are quarterly averages. These averages are based on annual totals for the number of carriers reporting in the final quarter of the year.
${ }^{9}$ Average based on annual total which includes revisions not available by months.

## Page 113

${ }^{1}$ See note 5 for p .112.
${ }^{2}$ Compiled by the Association of American Railroads, Car Service Division, and represent cars of revenue freight loaded for all reporting class 1 roads and their subsidiaries. Most class $l$ roads are included. The data include all cars of revenue freight originated for initial road haul on reporting roads. In general, figures are placed on a monthly basis in accordance with the number of weeks ending within each month of the year 1954, and this number governs the number of weeks in each month of the years prior to 1954. However, adjustments in the number of weeks are made, when necessary, in order to include 13 weeks in each quarter. The months consist of exactly 4 weeks, with the exception of January, May, July, and October, which cover 5 weeks.

The monthly figures shown in the 1953, 1951, 1949, and 1947 Statistical Supplements cover the weekly data which were combined on the basis of the number of weeks ending in each month of the last year shown in each volume, respectively. Weekly figures for 1935-54 are given in the report of the Association of American Railroads relating to cars of revenue freight loaded, issued January 4, 1955.
${ }^{3}$ Data for class $I$ motor carriers are quarterly averages. These averages are based on annual totals for the number of carriers reporting in the final quarter of the year.

## Page 114

${ }^{1}$ Computed by the Board of Governors of the Federal Reserve System from weekly data compiled by the Association of American Railroads. In computing the index, monthly loadings are derived from the weekly data by prorating the figures for weeks not included entirely within a single month according to the number of working days falling in each month. Daily averages for each class of freight are computed and related to the 1935-39 daily average. Allowance is made for Sundays, New Year's Day, Washington's Birthday ( $1 / 2$ day) through February 1942, Memorial Day ( $1 / 2$ day), Jndependence Day, Labor Day, Thanksgiving Day, and Christmas.

In computing seasonal adjustment factors for all groups except ore loadings, the ratio-to-freehand-curve method is used. For the seasonal factors for ore loadings, the usual procedure has been modified for April and May and, except in 1949, for October and November. The distortion resulting from the very erratic movement of loadings of iron ore in these months is lessened by treating April and May as a single period for seasonal adjustment purposes and treating October and November similarly. A single index for each of these periods has been computed and assigned to each of the 2 months in the period. In maintaining the index currently, preliminary indexes are computed for April and October and these are revised when the succeeding month's figures become available. Similarly for the livestock index, June and July have been treated as a single period for seasonal adjustment beginning 1939, except in 1946. Changes have been made in the seasonal adjustment factors from time to time to reflect changes in the seasonal pattern. The seasonal factor for coal was fixed at 100 beginning May 1941.

Beginning with data for 1931, weights derived from 1935-39 revenues by commodities, published by the Interstate Commerce Commission, have been used in combining the indexes for eight classes of freight into the total index. These weights are as follows: Coal, 21.3; coke, 0.7 ; forest products, 5.8; grain and grain products, 5.6 ; livestock, 1.8; merchandise, l.c.l., 7.6; ore, 2.4; miscellaneous, 54.8. Prior to 1931, the following weights (based on 1928 revenues) were used: Coal, 2l.4; coke, 0.8 ; forest products, 5.3; grain and grain products, 7.1; livestock, 1.5; merchandise, l.c.l., 9.7; ore, 2.2; miscellaneous, 52.0 .

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly indexes for 1938-40 are available in the 1942 SupPLEMENT and are correct except for revisions in the 1939-40 adjusted indexes for grain, livestock (June and July only), ore, miscellaneous, and the total, and a few additional one.
point revisions. Monthly indexes for 1931-37 are available on pp. 21 and 22 of the August 1941 SURvEY. For earlier monthly indexes, together with a detailed description of the methods used in computing the index, see the Federal Reserve Bulletins for June 1937, pp. 522 and 523 , and for June 1941, pp. 529-533.

## Page 115

## ${ }^{1}$ See note 1 for $p .114$.

${ }^{2}$ Compiled by the Association of American Railroads, Car Service Division. Data include only cars on class I railroads of the United States. Privately owned cars, except railroad-owned private refrigerator cars, are excluded. The car shortages cannot ordinarily be filled from idle cars because of the unequal geographical distribution of the latter. The totals include flat, stock, refrigerator, and miscellaneous cars and covered hoppers, not shown separately, in addition to box cars and gondolas and open hoppers. The item designated as "coal" cars in the 1949 and earlier Supplements has been changed to "gondolas and open hoppers," since these types of cars are used for many commodities other than coal. Reports of the Association give additional detail by types of cars.

Beginning June 1941, data represent the daily average freight-car surplus and shortage for 4- and 5 -week periods based on data for weeks ending Saturday within the month; earlier 1941 figures are averages of data reported for four periods of each calendar month. From 1932 through 1940, the averages are based on data for the period from the 15th through the last day of each month; from 1929 through 1931, for the period from the 23d through the last day of each month. The comparability of the series is not affected by the use of varying periods.

Figures as shown on the monthly-average lines covering the period through 1951 represent averages of the derived monthly data; those for 1952-54 are averages of the 52 weekly figures reported by the compiling agency.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. For car surpluses, monthly figures for 1929-40 are shown in the 1942, 1940, 1938, 1936, and 1932 Supplements. Revisions are as follows (thousands of cars): December 1928-total, 411 ; box, 199; coal (gondolas and hoppers), 159; August 1930--total, 432; box, 233; coal, 142; in 1932--minor changes. Data for 1917-30 for shortages are available in the 1931 SUPPLEmENT; there were no shortages reported for the 1931-42 period, except for a few months in 1936, 1937, and 1939, and the series for shortages were therefore not included in later Supplements until the 1947 issue.
${ }^{3}$ Beginning July 1947, data exclude covered hoppers (not shown in current reports) which previously had not been reported separately from other hoppers. The average daily surplus and shortage of covered hoppers for 1947-54 is as follows (number of cars): Surplus-July-December 1947, 10; 1948, 20; 1949, 247; 1950, 114; 1951, 10; 1952, 108; 1953, 305; 1954, 1,215; shortage-July-December 1947, 172; 1948, 69; 1949, 16; 1950, 112; 1951, 52; 1952, 60; 1953, 28; 1954, 2.
${ }^{4}$ Compiled by the Interstate Commerce Commission. Data cover class I railroads only (those having annual operating revenues in excess of $\$ 1,000,000$ ) and exclude switching and terminal companies. During the 1929-54 period, the operating revenues of class $I$ roads, exclusive of switching and terminal companies, have represented from 98 to 99 percent of the total operating revenues of all roads.

The number of class I railroads varies slightly from year to year. Data given in the Commission's monthly reports for the latest month and for the corresponding month a year earlier are based on the roads reporting in the most recent month. Any revisions made in the figures for the earlier year are included in the Survey presentation; hence data for the maximum number of railroads are not always included. For this reason, the data shown here may differ slightly from those appearing in annual reports of the Commission entitled "Statistics of Railways in the United States." In addition, several carriers make their monthly
reports on a system basis which does not obtain in the annual reports. This difference in reporting, however, has not appreciably affected the comparability of the data. Monthly averages are based on 12 -month summaries which may include revisions not distributed by months.

Net railway operating income represents operating revenues remaining after deducting operating expenses, railway tax accruals, and equipment and joint facility rents. Net income is the remainder after deducting from total income (net railway operating income plus other income) the fixed and contingent charges and certain miscellaneous items. It therefore represents income after all charges and taxes and before dividends. The monthly averages for financial operations, which are based on annual summaries issued in the monthly series, include some revisions not distributed to the monthly figures.

Data for freight carried 1 mile include both revenue and nonrevenue freight. Revenue passengers carried l mile relate to all revenue passengers, including commutation and multiple ride.

Monthly data for 1934-50 (except 1934-37 figures for taxes and joint facility and equipment rents) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. Earlier monthly data are available as follows: Operating revenues and expenses and net railway operating income, 1922-33-p. 20 of the April 1934 Survey; net income, 1932-33-1936 Supplement (monthly data for 1931 are available upon request); operating results, 1923-33 (except for minor revisions in 1923-31 figures)-1936 and 1932 Supplements. Monthly data for 192237 for taxes and joint facility and equipment rents may be obtained by deducting operating expenses and net railway operating income from operating revenues.

## Page 116

${ }^{1}$ See note 4 for p. 115.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census beginning May 1942 and Bureau of Foreign and Domestic Commerce prior to July 1936 , and by the $U$. S. Treasury Department, Bureau of the Customs, for the intervening period. Data represent the carrying capacity (including ships in ballast) of ships clearing ports of the United States, Virgin Islands (beginning 1935), Hawaii, Alaska, and Puerto Rico; they do not relate to the actual weight of cargo carried. A net ton represents 100 cubic feet carrying capacity after prescribed allowance for space occupied by crew, engines, and other machinery, etc. All types of watercraft engaged in foreign trade which are required to make formal clearance are included in the statistics. The following types of vessels touching port but not considered to be engaged in foreign trade are excluded: Vessels in distress or for repairs, not lading cargo; to effect crew changes or take on bunker fuel, provisions, etc; in traffic exclusively between the United States and noncontiguous territories; U. S. Army and Navy vessels clearing without commercial cargo, etc. Data for the period July 1951-December 1952 exclude vessels under time and voyage charter to Military Sea Transportation Service.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936. (October 1945 figure for foreign vessels should read $2,776,000$ tons.) Monthly figures for earlier periods (revised since publication) are available upon request.
${ }^{3}$ Compiled by the Panama Canal Company beginning July 1951 and by the predecessor agency, the office of the Governor of the Panama Canal, prior thereto. Data include traffic both ways and represent cargo carried by ocean-going commercial vessels of 300 net tons or over, Panama Canal measurement. The smaller commercial craft, Government vessels, and certain vessels which are exempt from tolls are not included here (cargo carried by these vessels totaled 2,787,301 long tons in the fiscal year ended June 30, 1954).

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. (Revisions for U. S. vessels:

1943-November, 352,000 tons; December, 149,000 tons.) For earlier monthly data on total tonnage beginning August 1914 , see p. 19 of the September 1935 Survey, and for monthly figures prior to 1934 for cargo carried on United States vessels, see the 1936 and 1932 Supplements.
${ }^{4}$ For September-December 1945 a number of carriers included, in their charges to operating expenses for amortization of defense projects, amounts in excess of normal accruals and credits to railway tax accruals because of the shortened period of amortization of these projects; the total amounts of such charges to operating expenses and credits to railway tax accruals for 1945 were $\$ 593,885,000$ and $\$ 433,867,000$, respectively. In 1946 a number of carriers included, in their Federal income tax accruals, credits covering refunds of 1944 and 1945 taxes on account of carry-backs in the 1946 unused excess profits credit and net operating loss; these credits totaled $\$ 170,491,000$ for the year 1946.
${ }^{5}$ Data for the period July 1951-December 1952 exclude vessels under time and voyage charter to Military Sea Transportation Service.
${ }^{6}$ Includes charges to operating expenses in connection with the Guthrie Wage Increase Award (March 18, 1953) as follows: 1953-March, \$17,667,000; April, \$2, 401,000.
${ }^{\mathrm{d}}$ Deficit.

## Page 117

${ }^{1}$ Compiled by Horwath $\&$ Horwath. Data represent a compilation from reports of a large number of hotels, transient and residential, throughout the country. Prior to 1942, reports were received from between 300 and 400 hotels in about 140 cities (both large and small) located in 30 States. The number of contributing hotels and the number of cities declined during the war years. For the $1942-46$ period, data are based on reports from between 250 and 350 hotels in about 110 cities. Thereafter, more than 300 hotels, located in 190 cities, are represented. Practically all of the hotels included operate throughout the year.

Figures for average sale per occupied room cover room revenue only. An indication of the trend of room sales can be obtained by multiplying average sales per occupied room by the percent of total rooms occupied. The resulting series would represent the average sale per available room. Data beginning 1951 for the occupancy rate have been adjusted to the levels of the 1948 Census of Business. The restaurant sales indexes for each month are related to the corresponding month of the base year 1929. As the sample varies from month to month, it is necessary to compute the index from percentage changes (the given month as compared with the corresponding month in the preceding year) based on the reports received. These indexes include both food and beverage sales. Most large hotels permit the sale of alcoholic beverages and these sales are included in the figures. Data for the principal cities are included in the Horwath \& Horwath reports.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936. Monthly figures on average sale per occupied room and rooms occupied for 1929-31 are shown in the 1932 Supplement.
${ }^{2}$ Compiled by the U. S. Department of Justice, Immigration and Naturalization Service (under U. S. Department of Labor prior to June 14, 1940), from passenger lists supplied by officers of transportation companies.

Data cover arrivals and departures of aliens and citizens, by sea and by air, between ports of the United States (including outlying areas) and noncontiguous foreign territory. Therefore, travel between foreign countries and Alaska, Hawaii, Puerto Rico, Virgin Islands, and Guam is covered (for Guam, beginning September 1952 for arrivals and February 1953 for departures). Excluded from these data are border crossers, seamen, military personnel, traffic between the continental United States and outlying areas, and cruise travelers. The Philippine Islands are
treated as a foreign country for all periods (except in figures prior to May 1934, which include no data relating to the Islands); hence, citizens of the Islands admitted to the United States are included as alien arrivals.

Since July 1932, passengers making cruises or round trips without change of vessel have been excluded. In the present volume, figures beginning 1945 for arrivals and departures of United States citizens and aliens exclude all travel via international land borders; for the years prior to 1945, data for permanent arrivals and departures (those involving a period of stay for a year or more) are included. For 1945, land-border arrivals of citizens amounted to about 4 percent of total arrivals and land-border departures, about 2 percent of total departures. Persons habitually crossing and recrossing international land borders are excluded. In the 1953 and earlier Supplements to the Survey, permanent arrivals and departures of $U$. S. citizens over international land borders were included in the data through 1950. Also, travel by aliens between U. S. and foreign countries shown in earlier Supplements and in the Survey Of Current Bussiness through March 1954 relates to emigrant and immigrant aliens only. Monthly data for 1945-50 comparable with current series are available upon request.

Figures for 1929-44 represent monthly averages based on fiscal-year totals of citizens and aliens admitted and departed; for aliens, the arrivals data cover admissions plus arrivals of nonadmitted aliens. Monthly averages from 1945 forward are based on calendar-year totals.

Monthly data for 1929-50, for the series as described above, are published in the following editions of the StaTISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. Monthly figures for July-December 1952 for emigrant aliens departed-not available at the time of publication of the 1953 SUPPLEMENT-are as follows: 3,369; 2,$706 ; 2,110 ; 1,579 ; 1,383 ; 1,631$. The revised January 1951 figure for number of U.S. citizens arrived is 51,650 . For all other revisions for the series as published in the above volumes, see the note in the 1953 Supplement.
${ }^{3}$ Compiled by the U. S. Department of State, Passport Di$v i s i o n$. Data represent total passports issued, including renewals, and passports issued to American seamen which were required by the State Department from February 1942 to August 1945.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revisions: 1929September, 9,132; 1930-August, 10,473; September, 8,770; October, 7,826; November, 7, 490.)
${ }^{4}$ Compiled by the U. S. Department of the Interior, National Park Service, from reports for all national parks in the United States. The parks covered are Acadia, Big Bend (opened 1944), Bryce Canyon, Carlsbad Caverns, Crater Lake, Everglades (opened December 1947), Glacier, Grand Canyon, Grand Teton, Great Smoky Mountains, Hot Springs, Isle Royale (opened 1940), Kings Canyon (formerly General Grant but expanded and renamed in 1940), Lassen Volcanic, Mammoth Cave (opened in 1936), Mesa Verde, Mt. Rainier, Olympic, Platt, Rocky Mountain, Sequoia, Shenandoah, Wind Cave, Yellowstone, Yosemite, and Zion. Monthly figures are available for all parks only beginning October 1940 . Monthly averages prior to 1941 are for the travel year, October 1 to September 30. The original reports also cover visitors to specified national monuments, historical areas, parkways, recreation areas, and memorial parks.

Monthly data for 1941-50 are shown in 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. This series replaces data in the 1942 and earlier volumes which are for 11 parks only. Monthly figures beginning 1932 and earlier monthly averages for the travel years for the selected parks are available in the 1942, 1940, 1938, 1936, and 1932 SUP. plements.
${ }^{5}$ Compiled by the $P u L L m a n C O$., and reported to the Interstate Commerce Commission. Data are for passenger-miles of paying passengers, exclusive of passenger-miles of chartered car passengers, and for the revenues (berth and seat) derived therefrom. Data for all United States, Canadian, and Mexican railroads on which the Pullman Company has cars are included.

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940. (Revision for passenger revenues, May 1940, $\$ 3,749,000$.) For earlier monthly figures on revenue passenger-miles beginning 1915, and passenger revenues beginning l913, see p. 18 of the January 1939 Survey.
${ }^{6}$ Compiled by the Federal Communications Commission beginning 1934; prior to that time by the Interstate Commerce Commission. Data cover principal domestic telephone carriers reporting monthly to the Commission; these carriers account for more than 90 percent of the annual gross operating revenues of the telephone industry in the United States. For the period 1952-53, data include operations of four carriers in outlying territories and possessions, and beginning 1954, two carriers outside continental United States.

The figures represent data for the following number of reporting companies: 1929-31, 103 to 106; 1932-34, 91; 1935-48, 100 to $114 ; 1949-53,53$ to $58 ; 1954,38$. The comparability of the series has not been seriously affected by the changes in the number of reporting companies. According to overlapping data for 1932, the change is less than 0.5 percent for all series. For the period beginning 1949, the comparability of the series, based on annual gross operating revenues, is affected by less than 3 percent. Beginning January 1954, only those companies having an annual gross operating revenue of $\$ 1,000,000$ or more are required to report monthly to the Commission; prior thereto, the reporting requirement was $\$ 250,000$ or more of annual revenues. Twelve carriers reporting prior to 1954 were excused from filing, and seven carriers no longer report because of reclassification and mergers.

It should be noted that the comparability of the series for operating expenses and for net operating income (operating income prior to 1932) was affected beginning 1932 by changes in the Uniform System of Accounts. Monthly averages for 1932 comparable with the averages shown for 1931 are as follows: Operating expenses, $\$ 58,513,000$; operating income, $\$ 18,672,000$. The effect of the change in the classification on the data for operating revenues was negligible.

Operating statistics for certain months reflect adjustments for refunds which cannot be allocated to the periods in which they properly belong. These refunds are not sufficiently large to seriously distort comparisons, except in June 1934, when a large refund covering a period of 11 years reduced both the revenue and expense accounts by approximately $\$ 16,000,000$.

Figures beginning 1942 for total operating revenues and operating expenses are shown after elimination of major company duplications for the Bell System; the earlier data are based on carriers reporting monthly and are not available exclusive of duplications.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. Monthly data for 1929-32 (on the old system of accounts) and 1933 are available upon request. Note the following exceptions: Monthly total operating revenues and expenses through 1946 are unadjusted for intercompany duplications; station revenues prior to 1937 are not available separately. Revisions, in thousands of dollars, are as follows: 1941, January and February, respectivelyoperating revenues, 114,707 ; 111,232; message tolls, 31,021 ; 29,177 ; operating expenses, 74,$115 ; 70,828$; net operating income, 20,187; 20,366; 1942, April and September, respec-tively-net operating income, 19,$574 ; 20,066$.
${ }^{7}$ Average for the travel year ending September 30 of the indicated year. Comparable average for the 1941 travel year is 672,000 .
${ }^{8}$ See second and third paragraphs of note 6, above, regarding comparability of series as affected beginning 1932 by change in accounting classification; also by change in number of reporting companies beginning 1932, 1949, and 1954.
${ }^{9}$ Monthly figures for December 1941-May 1942 are not available for Acadia. The total for these months, 6, 144, is included in the 1942 average.
${ }^{10}$ Beginning 1942, total operating revenues are shown after elimination of major intercompany duplications for the Bell System and are not strictly comparable with figures for prior years; data for 1935-41 are based on carriers reporting monthly and are not available exclusive of duplications.
${ }^{11}$ Data beginning 1945 exclude all travel via international land borders and are averages based on calendar-year totals. See 3d and 4th paragraphs of note 2 for this page.
${ }^{12}$ Data beginning January 1951 have been adjusted to the levels of the 1948 Census of Business; rate for January 1951 and 1951 monthly average comparable with earlier data, 79 percent.

## Page 118

## ${ }^{1}$ See note 6 for p. 117.

${ }^{2}$ Compiled by the Federal Communications Commission. Data through December 1947 are compiled from the reports of telegraph carriers (wire, ocean-cable, and radiotelegraph) having annual operating revenues of $\$ 50,000$ or more; these carriers account for practically the entire telegraph industry in the United States. Data beginning January 1948 are compiled from reports of carriers having annual operating revenues of $\$ 250,000$ or more; however, the one radiotelegraph carrier, excluded on the new reporting basis, accounted for only 0.3 percent of the total operating revenues of radiotelegraph carriers in 1947 and 1948. The landline and cable operations of the Western Union Telegraph Company have been segregated and statistics for the separate categories are shown here under data for wire-telegraph and cable carriers, respectively. Figures for wire-telegraph and radiotelegraph carriers include comparatively small amounts for telephone operations. "Net operating revenues" equals operating revenues less operating expenses and depreciation, operating taxes, and miscellaneous operating revenue deductions. The item includes no deduction for income taxes.

Insofar as possible, certain items of revenue and expenses for years beginning 1935 for wire and ocean-cable telegraph carriers and prior to 1940 for radiotelegraph carriers have been restated in accordance with changes in the accounting systems in those years and to place the data on a basis comparable with current reports. Monthly figures are not available on the restated basis prior to changes in the accounting system; annual statistics have been restated only beginning 1935.

Monthly data for 1941-50 for radiotelegraph carriers and for 1943-50 for wire-telegraph and cable carriers are published in the following editions of the Statistical SuppleMENT: 1953; 1951; 1949; 1947. Combined figures for wire and ocean-cable systems shown in the 1942 Supplement are not comparable with combined totals of the separate figures shown in subsequent volumes because of the revisions referred to above. For radiotelegraph carriers, operating revenues for 1940 as shown in the 1942 volume are approximately comparable with those shown in later issues.
${ }^{3}$ Annual data are as of December 31.
${ }^{4}$ See second and third paragraphs of note 6 for p. 117 regarding comparability of series as affected beginning 1932 by change in accounting classification; also by change in number of reporting companies beginning 1932, 1949, and 1954.
${ }^{5}$ Beginning 1942, operating expenses are shown after elimination of major intercompany duplications for the Bell System and are not strictly comparable with figures for prior years; data for 1935-41 are based on carriers reporting monthly and are not available exclusive of duplications.
${ }^{8}$ Beginning 1948, data represent carriers having annual operating revenues of $\$ 250,000$ or more; see note 2 for this page.
${ }^{\text {d Deficit. }}$

## Page 119

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of Census (data for sodium sulfate and for sulfuric acid, through 1950 only, were collected in cooper ation with the $U$. S. Department of Interior). Data cover all known commercial manufacturers of the selected chemicals (except as indicated in the note for sodium silicate) and represent the primary manufacture of new material, including quantities produced for further processing in the same plant, for intracompany transfer, and for sale. In some cases, data are included for material produced "in process" as an intermediate to the end product. The figures are believed to be essentially complete except for quantities produced by plants either owned or operated by the Federal Government or operated solely for its account; however, production of certain chemicals by plants operated by the Tennessee Valley Authority is included. See note 2 for this page.

Data have been collected on a monthly basis since 1941; no data were collected for 1940. Monthly averages for 1939 and earlier years are based on totals from the Census of Manufactures.

Annual data from the 1947 Census of Manufactures differ slightly from the totals of monthly figures for that year. Monthly averages based on the 1947 Census of Manufactures are as follows (units in short tons, except for oxygen and sulfuric acid which are in millions of cubic feet and thousands of short tons, respectively): Ammonia, synthetic anhydrous, 92,833 ; calcium carbide, 50,593 ; carbon dioxide, 39,817 ; chlorine gas, 120,268 ; hydrochloric acid, 36,880 ; nitric acid, 99,118 ; oxygen, 1,202 ; phosphoric acid, 84 !, 414; sodium carbonate (soda ash), 377,056; sodium bichromate and chromate, 7,524 ; sodium hydroxide, 175,263 ; sodium silicate, 41,070; sodium sulphate, 74,650; sulfuric acid, 898.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Data for carbon dioxide shown in the volumes prior to the 1953 edition are in pounds.
${ }^{2}$ Output of Government-owned plants, which was large through 1946. for both anhydrous ammonia and nitric acid and for the most part for military use, is not included (see note 10 regarding plants formerly Government-owned which are included beginning in June or August 1946). Data for a small amount of aqua ammonia are included in the figures for anhydrous ammonia reported by one company for 1943-45.
${ }^{3}$ Excludes quantities of liquid and gas $\mathrm{CO}_{2}$ converted and reported as dry ice and also amounts converted from pure $\mathrm{CO}_{2}$ (liquid or solid) purchased or received from other plants.
${ }^{4}$ Represents total production of gas, including quantities later liquefied for use, shipment, or storage.
${ }^{5}$ Production of sodium carbonate (soda ash), ammonia soda process, includes quantities used to manufacture finished light and finished dense soda ash, caustic soda, and refined sodium bicarbonate. The production of electrolytic soda ash and of natural soda ash is excluded from these statistics.
${ }^{8}$ Data for sodium hydroxide (caustic soda) include total production of liquid material by the electrolytic and limesoda processes, including quantities of liquid caustic which are later solidified.
${ }^{7}$ Data represent total production, except that prior to October 1953 small quantities were excluded for ortho-, meta-, and sesquisilicates when these chemicals were manufactured directly without going through the soluble glass stage. The former exclusions are estimated to represent less than 5 percent of the totals published for periods prior to October 1953.
${ }^{8}$ Data for sulfuric acid are combined totals for sulfuric acid produced by the contact and chamber processes, including spent acid fortified in the contact plants with the simultaneous production of new acid. Production of Govern-ment-owned plants, which was large during the war period, is
not included; for the most part, this production was available only for military use. The figures for 1946-50 include monthly estimates based on annual totals of byproduct operations of a few smelters reporting to the Bureau of Mines; the estimated data included vary from 4 percent in 1946 to 2 percent in 1950. Data for 1929 through 1939 are based on reports of the Census of Manufactures; they are shown in those reports on a $50^{\circ}$ Baumé basis but are here converted to 100 percent $\mathrm{H}_{2} \mathrm{SO}_{4}$.

The series shown beginning in the 1947 Statistical SupPLEMENT differs from data shown in the 1942 and earlier issues which relate only to sulfuric acid produced by fertilizer manufacturers.
${ }^{9}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data represent the price of sulfuric acid, $66^{\circ}$, commercial, tanks, f.o.b. eastern works. Through 1939 the data are averages of the market price (low) on Saturday of each week; for 1940-5l, averages of Friday prices; and beginning 1952, prices quoted on a day of the week containing the 15 th of the month.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
$1^{10}$ Data for synthetic anhydrous ammonia and nitric acid include operations of two large plants beginning June 1946 and, for the former, one additional plant beginning August 1946 which did not report previously; production at these plants was classified as military prior to the months indicated and was not included.
${ }^{11}$ Beginning January 1948, figures are not strictly comparable with earlier data because of the inclusion of additional plants; however, the addition of these plants increased the production of the specified chemical by less than 3.5 -percent.
${ }^{12}$ Beginning January 1950, data exclude quantities produced and comsumed in the same plants manufacturing soda ash. Monthly average for 1950, comparable with earlier data, is 53,326 short tons.

## Page 120

${ }^{1}$ Compiled by the U. S. Tariff Commission, with the exception of data for natural acetic acid which are compiled by the U. S. Department of Commerce, Bureau of the Census. Data cover all known commercial manufacturers of the selected chemicals and include production for sale and consumption, if any, in the reporting plants. Data for acetic acid include both synthetic and natural, but exclude recovered acetic acid. Acetic anhydride is produced from ketene, acetylene, ethylene, and from acetic acid by the vapor phase process

Monthly data for 1943-50 (except for DOT) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly data back to October 1945 for DDT are available upon request.
${ }^{2}$ Compiled by the $U$. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the industry, including operations in Hawaii and Puerto Rico. Production figures are net (excluding products used in redistillation). Except during part of the war period, production includes comparatively small amounts produced for beverage purposes; production for beverage purposes was reported separately only for the fiscal year 1944-45 and totaled $16,253,000$ proof gallons for that year. The amounts withdrawn tax-paid, representing withdrawals from industrial alcohol bonded warehouses upon payment of tax, are largely for use in the rectifying of beverage spirits.

Data through June 1941 and for July 1947-June 1950 represent withdrawals for denaturation. For July 194l-June 1947 and beginning July 1, 1950, the data represent all products "used" for denaturation (i.e., domestic ethyl alcohol produced by industrial alcohol plants; spirits produced by registered distilleries and regarded upon receipt at denaturing plants as alcohol; and alcohol imported under author ity of the Revenue Act of 1942, effective from October 22,
1942). During the latter-mentioned periods denaturing plants were permitted to store ethyl alcohol for purposes other than denaturation; therefore, alcohol used for denaturation was reported in lieu of withdrawals for denaturation.

In addition to the tax-paid withdrawals and withdrawals for denaturation, quantities are withdrawn tax-free for hospital, scientific, and educational use; for use of United States and subdivisions; for export; and in Puerto Rico for medicinal, beverage, and other purposes. These transactions, of course, affect the stock figures which represent the amount remaining in warehouses and denaturing plants at the end of each month. Stocks are also affected by losses. Stocks at denaturing plants were comparatively small prior to 1942 and were not reported.

A proof gallon is the alcoholic equivalent of a wine gallon ( 231 cubic inches) at $60^{\circ} \mathrm{F}$. containing 50 percent of ethyl alcohol by volume. The proof of spirits is twice the percent of the content, by volume, of ethyl alcohol.

During the war period of 1942-45, spirits produced at registered distilleries and stocks of unfinished spirits at industrial alcohol bonded warehouses were primarily for industrial purposes. For such data by months for 1942-45 (as well as combined data on ethyl alcohol and spirits), see p. lll of the 1947 Statistical Supplement; see also notes 3 and 5 for that page regarding further details on these items.

More complete annual figures for ethyl alcohol, including details by States, are contained in the annual reports of the Commissioner of Internal Revenue.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly figures for 1934-40 are available in the 1942, 1940, and 1938 SUPPLEMENTS. Earlier monthly figures beginning 1932 for tax-paid withdrawals and 1923 for other series are shown in the 1936 and 1932 SUPPLEMENTS and taxpaid withdrawals for 1925-31 are available on p. 20 of the April 1935 SURVEY; some revisions in the data are given in note 2 for $p .102$ in the 1942 SUPPLEMENT, which also explains certain limitations in the data prior to July 1934 (not "July 1933" as stated in the 1942 volume).
${ }^{3}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. The data cover operations of all denaturing plants, including plants in Puerto Rico and Hawaii; they include completely denatured and specially denatured alcohol produced from domestic alcohol and spirits and also from alcohol imported under authority of the Revenue Act of 1942 , effective October 22, 1942. Prior to July 1942, the data include small quantities produced from rum. Denatured rum was reported for years ending June 30 , as follows (thousands of wine gallons): Production, monthly average-1943, 104; 1944, 97 ; 1945, 98 ; 1946,86 ; 1947, 86 ; 1948, 89 ; 1949, 96 ; 1950, 90 ; 1951, 100 ; 1952, 99 ; 1953, 103; 1954, 93 ; consumption, monthly average-1943, 104; 1944, $98 ; 1945,96 ; 1946$, 88; 1947, 85; 1948, 88; 1949, 96; 1950, 89; 1951, 100; 1952, 98; 1953, 103; 1954, 95; stocks, June $30-1943,43$; 1944, 28; 1945, 42; 1946, 21; 1947, 39 ; 1948, 42 ; 1949, 42 ; 1950, $46 ; 1951,43 ; 1952,49 ; 1953,53 ; 1954,24$. The consumption figures represent removals from plants and include amounts shipped to bonded dealers.

A wine gallon is a standard United States gallon of 231 cubic inches.

Data by States, withdrawals classified according to formulas, amounts used in manufacturing, etc., are contained in annual reports of the Commissioner of Internal Revenue.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly figures for 1934-40 are available in the 1942, 1940, and 1938 SUPPLEMENTS. The monthly data through 1933 shown in earlier volumes are substantially correct except for scattered revisions in the consumption figures which are given in note $l$ for $p .102$ in the 1942 Supplement (revision given for July 1936 production is an error; should read $6,122,000$ gallons). Further information regarding the data for 1927-33 is included in the aforementioned note.
${ }^{4}$ Data for creosote oil include production by coke-oven operators and production by tar distillers from purchased
coal tar only or from oil-gas or water-gas tar produced or purchased by tar distillers. Production by tar distillers includes only that distillate of tar sold or consumed for wood-preserving purposes. Statistics for creosote oil produced by tar distillers are compiled by the U. S. Tariff Commission; those for creosote oil produced by coke-oven operators are compiled by the U.S. Department of the Interior, Bureau of Mines. Data cover all known commercial manufacturers of the selected chemicals and include production for sale and for consumption, if any, in the reporting plants

Monthly data for 1943-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947.
${ }^{5}$ Data are not available for publication.
${ }^{6}$ Based on annual total which includes revisions not allocated to the monthly figures.

## Page 121

${ }^{1}$ Compiled by the U. S. Tariff Commission. Data cover all known commercial manufacturers of the selected chemicals and are for production only in the reporting plants.

Monthly data for 1943-50 for ethyl acetate and phthalic anhydride are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly data back to January 1947 for ethylene glycol and to January 1946 for formaldehyde are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data for production are industry totals and include amounts produced for sale and for consumption in the producing plants. Stock figures include quantities held by and in transit to producers and consumers and in public storage. Monthly data were not collected prior to July 1942; the annual figures for production and consumption are monthly averages for all years.

Monthly data for 1945-50 are published in the following editions of the Statistical Supplement: 1953; 1951; and 1949. Quarterly or monthly data for 1941-44 are published in the 1947 issue. Quarterly figures for 1919-40 are available upon request.
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, with the exception of data beginning October 1945 for synthetic methanol which are from the U. S. Tariff Commission. Data beginning 1941 are for all known manufacturers and cover production for sale and for consumption in own plant. Data prior to 1941 for natural methanol are approximately complete and comparable with later data. Reports for natural methanol prior to June 1945 were for crude methanol 80-82 percent strength; all figures have been converted to equivalent 100 percent CH 3 OH .

Comparison with data reported in the 1939 Census of Manufactures indicates that figures for synthetic methanol prior to 1941 cover production for sale only; monthly average production for 1939 for consumption and sale, based on annual figures reported for 1939, is as follows (thousands of gallons): Total, 3,877 ; for sale, 2,846 ; for consumption, l,031.

Monthly data for 1941-50 (for natural methanol) are published in the following editions of the Statistical SuppleMENT: 1953; 1951; 1949; and 1947. Figures shown in the 1942 and earlier issues are for crude methanol 82 percent strength, and should be multiplied by 0.82 to obtain the refined equivalent, 100 percent, as shown in later volumes. The 1930-33 data are believed to cover about 80 percent of the industry.

Monthly data for 1930-50 (for synthetic methanol) are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (See second paragraph of this note regarding figures prior to 1941.)
${ }^{4}$ Compiled by the National Fertilizer Association from tax tag sales and shipments reported to the commissioners of agriculture in 11 southern States (Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Arkansas, Louisiana, Oklahoma, and Texas). For change in cover-
age of the monthly figures beginning 1951 , see note 10 for this page

Monthly records of fertilizer tax tags are kept by State control officials and may be slightly larger or smaller than the actual sales of fertilizer in any particular month. The figures indicate the equivalent number of short tons of fertilizer represented by the tax tags purchased and required by law to be attached to each bag of fertilizer sold in the various States. Beginning July 1949, tonnage figures for a few States represent the shipments of fertilizer for sale or use in these States as reported to State agencies. For some States the reports include cottonseed meal used as fertilizer. Direct distribution of fertilizer by Government agencies (Dept. of Agriculture and TVA) in not included in these data. Such consumption is a relatively small proportion of the total. Sales for the above-named States traditionally have been approximately 50 percent of total consumption in the United States.

Data shown in earlier editions of the Statistical SupPLEMENT cover a varying number of reporting States.
${ }^{5}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Impert figures are imports for consumption beginning 1934; prior thereto, they are general imports (for definitions and other pertinent foreign-trade information, see note 1 for p. 104). The totals for both imports and exports include prepared and miscellaneous fertilizers and fertilizer materials which are not shown separately.

Some imported fertilizer materials are reexported but quantities reexported are in general relatively small, ex: cept for sodium nitrate and potash materials in some years.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. (Revision for total imports, April 1941, 125, 451 short tons. Revisions for 1946, in short tons: Exportstotal, January, 96,947; April, 108,649; June, 96, 076; August, 113,721; October, 107,290; November, 91,328; phosphate materials, January, 72,826; April, 81,705; June, 76, 385; August, 90,130 ; October, 97,204 ; November, 76,444 ; importstotal, April 153, 692; July, 81, 207; nitrogenous materials, April, 138, 344 ; July, 66,859 ; nitrate of soda, April, 89, 092.)

Monthly figures for $1934-40$, except for the series on exports of potash materials, are published in the 1942, 1940, and 1938 editions of the Statistical Supplement. The 1937-40 figures for total imports of nitrogenous materials as published in those volumes have been revised to exclude tankage not fertilizer which was erroneously included; these revisions and monthly figures prior to 1941 for exports of potash materials are available upon request. (The September 1940 and November 1940 export figures for total fertilizers, as shown in the 1942 volume, should read 145,902 and 111,916 long tons, respectively; those for nitrogenous materials should read 31,283 and 15,891 long tons.) Monthly data prior to 1934 for most items are available in the 1936 and 1932 volumes as indicated in note 4 for $p .103$ in the 1942 SUPPLEMENT; this note explains certain limitations of the earlier data. It should be noted that figures in the 1942 and earlier SUPPLEMENTS are in long tons instead of in short tons as shown in later volumes.
${ }^{6}$ Averages are based on end-of-quarter stock figures.
${ }^{7}$ See second paragraph of note 3 for this page.
${ }^{8}$ Monthly average based on annual total containing revisions not distributed by months.
${ }^{9}$ Beginning June 1949, data for chemically pure glurerin include synthetic glycerin.
${ }^{10}$ Monthly figures beginning 1951 do not include Virginia (this State now reports on a quarterly basis). The 1951-54 monthly averages, however, are based on annual totals including data for Virginia and thus are comparable with previous monthly averages. Annual totals for Virginia, based on these quarterly reports, are as follows (thousands of short tons): 1951, 802; 1952, 843; 1953, 800; 1954, 779.

## Page 122

${ }^{1}$ See footnote 5 for page 121.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through July 1941 are averages of Friday market lows (Saturday, prior to 1940) for sodium nitrate, crude, imported, in 100 -pound bags, c.i.f. Atlantic, Gulf, and Pacific port warehouses; beginning August 1941, prices are quoted f.o.b. cars, port warehouses. Through 1951, data are weekly averages of the Friday (or Saturday) prices; thereafter, they represent prices quoted on a day of the week containing the 15 th of the month.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. The 1942 and earlier Supplements show prices (in dollars per hundredweight) for nitrate of soda, c.i.f. ports.
${ }^{3}$ Compiled by the American Potash Institute, representing deliveries within continental United States and to Canada, Cuba, Puerto Rico, and Hawaii. Data beginning 1940 represent deliveries of material (of domestic origin only) as reported by the major domestic producers. They cover four producers for 1940-42 (one of which began operations in 1940) and five producers for 1943-51. The company added in 1943 began operations in the latter part of 1938. Beginning January 1952; one large new company was added; however, the production of this company was not included until May 1952. In October 1952 and thereafter another producer was included, making 7 companies reporting.

Prior to 1940, data cover salts of foreign and domestic origin as reported by one large importer and three domestic producers. In 1940 the importer, who previously reported monthly, delivered 92,060 tons of potash.

The total volume of deliveries from these primary suppliers is estimated to be between 95 and 98 percent of the total industry prior to 1943 and practically the entire industry beginning that year. Recently, fertilizer manufacturers have absorbed over 90 percent of the total potash produced, while the remaining amount is consumed by chemical manufacturers.

The total bulk potassium salts have been reduced to their $\mathrm{K}_{2} \mathrm{O}$ content because of the variance in the equivalent $\mathrm{K}_{2} \mathrm{O}$ in the salts mined in different parts of the world.

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. Minor differences between the averages for 1938 and 1939 shown here and in some earlier volumes represent small revisions in the annual totals not allocated by months. In the 1940 volume, annual totals for 1928-35 are shown incorrectly as monthly averages.
${ }^{4}$ Compiled (beginning September 1942) by the U. S. Department of Commerce, Bureau of the Census, in cooperation with the National Fertilizer Association. Data cover all known manufacturers of superphosphate, including the Tennessee Valley Authority, except for one company that was producing in 1945 but was not included until 1946, and 11 companies included in the 1950 data but which did not report previously. However, the exclusion of these companies does not appreciably affect the comparability of the series. The data shown herein include all grades of superphosphate (normal and enriched, concentrated, and wet-base goods) in terms of 100 percent A.P.A. (available phosphoric acid); in earlier volumes, data are given on the basis of 18 percent A.P.A. The figures pertain only to superphosphate as such, and include no data for superphosphate in dry-base or dry-mixed goods.

Comparable monthly data are not available prior to September 1942. The monthly averages for 1929-42 are computed from annual totals compiled by the $U$. S. Department of Agriculture, Bureau of Plant Industry, Soils, and Agricultural Engineering. The 1940 and 1941 figures are based on a survey (of all plants producing ordinary superphosphate and wet-mixed base) made by the National Fertilizer Association with the cooperation of the Department of Agriculture; data on production of concentrated superphosphate were collected by the latter agency in complete surveys of such production for the years 1929-42. Annual figures for years prior to

1940 and 1942 are based on the surveys of production of concentrated superphosphate and on monthly statistics (collected by the Bureau of the Census) covering production of bulk superphosphate and wet-mixed goods by 52 manufacturers through August 1942 and total production of all grades of superphosphates by all plants for later months of 1942. The monthly series through August 1942 did not cover all manufacturers and also did not include production by the Tennessee Valley Authority. Comparison of monthly figures for 1940 and 1941 with data collected in the surveys of all plants for those years indicated that the Census series through August 1942 represented, approximately, the production of ordinary superphosphate and wet-mixed base. These data, therefore, were combined with figures for concentrated superphosphate to obtain totals for all superphosphates.

Monthly data for September 1942-50 (on basis of 18 percent A.P.A.) are shown in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Data shown in the aforementioned volumes may be converted to basis of 100 percent A.P.A. by multiplying by . 18 .
${ }^{5}$ Compiled by the Institute of Makers of Explosives from reports of member and nonmember companies for use in the annual reports of the $U$. S. Department of the Interior, Bureau of Mines. Data cover black blasting powder and high explosives (including permissibles) produced and sold in the United States, virtually all of which is for industrial purposes. Ammunition and fireworks, and nitroglycerin used as such, are not included. The explosives are used primarily in mining and quarrying and in railway and other construction work. Differences between the annual totals derived from the monthly reports and the annual totals published by the Bureau of Mines represent data for companies which do not report monthly.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Data shown in the 1942 and earlier volumes are combined totals for black blasting powder and high explosives. Comparable monthly figures prior to 1941 for the separate items are available upon request.
${ }^{6}$ Compiled by the O.S. Department of the Interior, Bureau of Mines. Data cover total production of crude native sulfur and producers' stocks (at mines, in transit, and in warehouses) at end of month.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly figures for August-December 1940 are shown on p. $24^{\circ}$ of the May 1946 Survey.
${ }^{7}$ Monthly average based on annual total containing revisions not distributed by months.
${ }^{8}$ Average for 5 months, August-December.
${ }^{9}$ Average for 5 months, August-December; see note 2 for this page.

## ${ }^{10}$ Average for 4 months, September-December.

${ }^{11}$ See note 3 for this page regarding coverage prior to 1943.
${ }^{12}$ Includes revisions not incorporated in final Census reports.
${ }^{13}$ See note 4 for this page regarding additional reporting companies.
${ }^{14}$ Increased coverage; see note 3 for this page.

## Page 123

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. The statistics relate to consumption (crushings) and stocks of raw materials used in producing vegetable oils, and to factory production, factory consumption, and factory and warehouse stocks of animal and vegetable fats and oils. Except as otherwise stated, the data cover quantities in the crude state. Factories canvassed in order to obtain information on factory production, consumption,
and stocks are as follows: (1) factories producing animal and vegetable fats and oils, including expressers; extractors, renderers, and reclaimers; (2) factories consuming fats and oils in the production of other fats and oils products or products of which fats or oils are a constituent part (such as shortening and oleomargarine), including refineries, mixing and compounding establishments, and other similar establishments; (3) factories consuming fats and oils in the production of soap, paint, varnish, linoleum, oilcloth, lubricants, and other products which contain considerable quantities of the fats and oils; and (4) factories consuming fats and oils as agents in the production of tin plate, textiles, leather, and other products.

As considerable equipment is required in producing most oils, the factory production reported, to which these statistics are limited, is intended to represent the total crude output in the United States of such oils as cottonseed, peanut, coconut, corn, soybean, olive, palm kernel, babassu, tung, perilla, castor, sesame, fish, and marine mammal. However, in the case of some animal fats, factory production does not represent total production, as considerable quantities of lard, tallow, and grease are produced on farms and by local butcheries and small renderers not included in the establishments canvassed.

The statistics on factory consumption include only the consumption in factories and do not, therefore, represent total consumption in all instances. Considerable quantities of some fats and oils are consumed outside of factories, such as in homes, hotels, restaurants, and bakeries, and by packagers; by painters, building contractors, and machine shops; and for lubricating purposes.

Except for five strategic oils mentioned in the next paragraph, fats and oils reported as stocks include the quantities held by and in transit to producers, factory consumers, and public storages, regardless of ownership, including quantities held for the Government. Stocks in the possession of household consumers and stocks held in private storage by retailers, wholesalers, and jobbers are not included. In some instances, stocks may include some imports not withdrawn from bonded warehouses. Raw materials for vegetable oils reported as stocks are confined to the quantities held in crushing mills and mill warehouses.

For security reasons, stocks data for June, July, and August 1950 for five strategic oils (castor oil No. 1, castor oil No. 3, crude palm oil, crude coconut oil, and sperm oil) were not published. Beginning with September 1950, stocks data for these oils have been published on a commercial stocks basis.

Beginning July 1949, data exclude approximately 1,000 producers and consumers of relatively small quantities of fats and oils. Based on reports covering the period JulyDecember 1949, the elimination of these companies, in most cases, did not affect the comparability of the data by more than one percent; where the differences were significant, the monthly and annual figures were adjusted accordingly. The number of small companies presently reporting on an annual basis only is approximately 1,500 .

Figures given in the SURVEY represent only summary totals and selected individual products. Separate data for additional products are included in current reports of the Bureau of the Census and more detailed statistics appear in the monthly and annual reports of the Bureau. Data have been collected monthly since July 1942; prior thereto, they were on a quarterly basis. Annual figures shown beginning with the 1947 issue of the STATISTICAL SUPPLEMENT are monthly averages, unless otherwise indicated in notes on the figures; annual figures in earlier volumes are quarterly averages.

Monthly or quarterly figures for 1938-50 are shown in the 1953, 1951, 1949, 1947, and 1942 SUPPLEments. Quarterly figures for 1932-37, except for soybeans and soybean oil, appear in the 1940, 1938, and 1936 Supplements. Revisions of data are specified in notes relative to the items affected. Unpublished data are available upon request.
${ }^{2}$ Data for animal fats cover rendered lard (except that used in refining), tallow (edible and inedible, except refined), and neat's-foot oil. Lard stocks include quantities held in refrigerated and dry storage. Prior to 1949 ,
data for lard and tallow may include a certain quantity of the refined product, as no distinction was made between "rendered" and "refined" in collection of the data.
${ }^{3}$ Figures for production and stocks of greases cover both wool grease and greases other than wool. Consumption data through 1948 relate to both types if greases; thereafter, to "greases other than wool" only. Beginning 1949, woolgrease stocks represent wool scourers' stocks and exclude consumer and storage holdings.
${ }^{4}$ Fish-oil data include cod and cod-liver oil, other liver oil, menhaden, sardine (pilchard), herring, whale, sperm, and other fish and other marine mammal oil; data represent production of fish-oil producers and fish canners. Prior to 1949, data may have included some refined fish oil. (The third-quarter production of fish oils in 1937 should read $129,394,000$ pounds.)
${ }^{5}$ Major oils included in total vegetable oils are cottonseed, peanut, corn, soybean, sesame, olive, palm and palm kernel, coconut, babassu, rapeseed, linseed, tung, perilla, castor, and oiticica.

Revisions for production of crude vegetable oils are as follows (thousands of pounds): 1944-November, 411,631; December, 369,097; 1945 (January-December, respectively) 409,538 ; 371,645 ; 352,182 ; 302,321 ; 311,373 ; 251,472 ; 230,323 ; 254, 527 ; 288,219; 371,583; 427, 471 ; 367, 033; 1946 (January-December, respectively) - 403, 113; 322, 882; 311, 867; 283,051; 259,161; 233,301; 261,433; 252,002; 280,025;
387,933; 408,841; 404,296. There have been minor revisions also in the 1932-33 consumption figures for total vegetable oils; such revisions are available upon request.
${ }^{8}$ Averages are based on end-of-quarter stocks.
${ }^{7}$ Data have been collected monthly beginning July 1942 but, since final revisions are available only on a quarterly basis prior to January 1946, the figures noted are quarterly averages.
${ }^{8}$ For certain periods during 1946-48, the data included for "other fish oil" indicate an excess of consumption over supply. This may be accounted for, in part, by duplication in consumption; oil reported consumed by hydrogenators and pressers was reported again when further processed by fat splitters and other users. Also, for certain periods prior to November 1948, consumer-owned stocks held at establishments producing fish oil were not reported.
${ }^{9}$ Includes a revision in production of crude coconut oil, not available by months.
${ }^{10}$ Beginning January 1949, data for animal fats include 45 plants, and for greases, 23 plants not previously reporting; operations at these plants in January (thousands of pounds): Animal fats-production, 3,290 ; stocks, 3,804 ; greasesproduction, 953 ; stocks, 1,949.
${ }^{11}$ Data for sperm, crude palm, coconut, and castor oil are excluded from the pertinent items for June-August; beginning September 1950, these oils have been restored on a commercial stocks basis.

## Page 124

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time.

Vegetable-oil exports include cottonseed, linseed, corn, coconut, peanut, and soybean oils, cocoa butter, vegetable soap stock, cooking fats other than lard, and all edible and inedible vegetable oils and fats; also, for some periods, a quantity of cooking fats containing some animal cooking fats which are not reported separately. The series includes, except as noted, all vegetable oils, fats, and compounds thereof, which have substantially related or competitive uses, though not all the items included are strictly oils. Shipments under the Army Civilian Supply Program are included beginning 1947 (see note 1 for p. 104); in that year such shipments amounted to 187,000 pounds.

Corresponding data for subsequent years are not available.

Beginning January 1948, Jata include oreomargarine (of animal or vegetable origin), exports of which amounted to $3,408,000$ pounds in that year. Beginning January 1952, data include mayonnaise, salad dressings, and related products (amounting to $3,179,000$ pounds in 1952), also a small amount of refined vegetable waxes.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Earlier monthly data are on p. 18 of the June 1938 Survey. Revisions are as follows (thousands of pounds): 1947-April, 7,330; November, 27,928; 1946 (January), 4, 314; 1933 (September), 4,995. Also, there have been a few minor revisions in the figures for 1938.
${ }^{2}$ Compiled by the D. S. Department of Commerce, Buriau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. Data are general imports through 1933 and imports for consumption thereafter. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Paint-oil imports include tung oil, linseed oil, perilla oil and, beginning 1936, oiticica oil. There have been no imports of perilla oil since 1945. Separate data on oiticica oil are not available prior to 1936, but the quantities imported in those years are believed to have been too small to affect materially the comparability of the series. The classification of "paint oils" is segregated because a large percentage of the domestic factory consumption of these oils is in the paint, varnish, linoleum, and oilcloth industries. Although other vegetable oils, notably soybean oil and castor oil, are used in paint manufacture, their other uses are more important.

It is not possible to make any further classification of vegetable-oil imports by type of use, since most of the vegetable oils imported can be, and are, used interchangeably in the manufacture of vegetable shortenings, oleomargarine, soap, and other edible and inedible compounds, the type of use for any one oil shifting substantially from year to year. "All other vegetable oils" cover all types of edible and inedible expressed vegetable oils, except the paint oils, but exclude vegetable tallow and wax, and essential or distilled oils; the major items covered include coconut, corn, cottonseed, peanut, olive, palm, palm kernel, soybean, sunflower seed, rapeseed oils, and cocoa butter. In recent years, however, imports of some of these oils-notably corn, palm kernel, sunflower, peanut, cottonseed, and sesamehave been small.

Prior to 1951 appreciable amounts of vegetable oils were reexported; tables showing such data for 1929-52 appear in the 1953 and 1942 editions of the Statistical Supplement.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly figures for 1936-40 are shown in the 1942 and 1940 SUPPLEMENTS and are correct except for small revisions in the July 1939, July and December 1940, and the 1937-38 figures for "all other vegetable oils" and the total; the revised figures are available upon request. Monthly figures for 1921-35 for paint oils and 1923-35 for "all other vegetable oils" appear on p. 18 of the June 1938 Survey.
${ }^{3}$ See note 1 for $p$. 123. The figures for copra, as shown in the 1942 Supplement and earlier volumes, have been revised to include comparatively small amounts of "coconuts and skins"; such data have been included in recent years but formerly were shown separately. The revised data for the earlier years are available upon request.

[^2]1947; 1942; 1940; 1938; 1936; and 1932. There have been some minor revisions in figures shown in the latter volume and a few larger revisions as follows: Copra (short tons)January 1931, 17,028; February 1931, 16,567; November 1931, 22,465 ; coconut oil, August 1930, $28,320,000$ pounds.
${ }^{5}$ Averages are based on end-of-quarter stocks.
${ }^{6}$ Beginning January 1948, oleomargarine is included; see note 1 for this page.
${ }^{7}$ Based on annual total which includes revisions not allocable by months.
${ }^{8}$ Data for stocks of crude coconut oil are not available for publication for June-August; beginning September 1950, data have been restored on a commercial stock basis.
${ }^{9}$ Average for 9 months, March-July and September-December.
${ }^{10}$ Beginning January 1952, includes additional items; see note 1 for this page.
${ }^{11}$ Data are not available for publication.

## Page 125

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data are collected under an Act of Congress which provides that the Bureau of the Census shall collect from all oil mills monthly reports concerning cottonseed received, crushed, and on hand, and cottonseed products manufactured, shipped out, and on hand; also that information be obtained from the refineries and consuming establishments and from warehousemen concerning crude and refined cottonseed oil. Complete coverage is maintained for cottonseed-oil mills and refineries.

Data for stocks represent quantities held, regardless of ownership. Stocks of refined cottonseed oil exclude quantities held by a number of small occasional consumers; however, the total quantity held by these establishments accounts for only a small part of total stocks and has no significant effect on the statistics.

Receipts of cottonseed at mills represent net receipts, excluding seed reshipped; they include some seed later destroyed. Stocks of crude oil include holdings of crude mills and of refining and manufacturing establishments, and oil in transit to refiners and consumers. Refined stocks include (in addition to stocks held at refineries and consuming establishments) oil held by refiners and warehousemen at places other than refineries and manufacturing establishments, and stocks in transit to refiners and manufacturers.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revision for cottonseed consumption (short tons): 1934-February, 437,274; July, 100, 699. Revised monthly figures for 1931 are on p. 20 of the February 1933 Survey.
${ }^{2}$ See note 1 for $p$. 123. There are minor revisions for cottonseed oil in 1932 and 1933.
${ }^{3}$ See note 3 for $p .127$.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1948 represent the price of prime summer, yellow, bleachable, tank-carlot deliveries, per pound, New York. Beginning November 1948, the price is for refined, edible, drums, l.c.l., f.o.b. New York. Through 1951, the data are averages of prices which prevailed on a specific day of each of the 4 or 5 weeks within a month; beginning 1952, they represent the price on a particular day of the week containing the 15 th of the month.

Monthly data for 1949-50 are shown in the 1953 STATIStical Supplement. Monthly data for 1929-48 for the series in italics are published in the following editions of the Statistical Supplement: 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{5}$ No quotation for August and September; 1946 average is for 10 months.
${ }^{6}$ Data for October-December 1948, comparable with series beginning January 1949, are as follows: $\$ 0.289$; $\$ .275$; $\$ .252$.
${ }^{7}$ Beginning July 1950, data are compiled by the Bureau of the Census; see note 3 for p .127.

## Page 126

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. The figure given for eacn year is the estimated total United States crop for the year; data for 1954 are preliminary.
${ }^{2}$ See note 1 for p. 123. Quarterly data prior to 1938 for soybeans and soybean oil are available upon request. Prior to 1949, linseed-oil stocks may have included some refined oil.
${ }^{3}$ Wholesale price data for flaxseed are from the U.S. Department of Agriculture, Agricultural Marketing Service; for linseed oil, from the $U$. S. Department of Labor, Bureau of Labor Statistics (based on prices from the Oil, Paint, and Drug Reporter). The flaxseed price is an average of daily prices, weighted by carlot sales, obtained originally from the Minneapolis Daily Market Record. The linseed-oil price through 1951 is the average of the market price (low) for Saturdays for raw, carlots, drums, f.o.b. New York; beginning January 1952, the price is f.o.b. Minneapolis, tank cars, and is for one day of the week containing the 15 th of the month.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions are as follows: Flaxseed-(1939) March, $\$ 1.96$; August, $\$ 1.53$; (September 1932), \$1.13; linseed oil (November 1933), \$0.096.
${ }^{4}$ Averages are based on end-of-quarter data.
${ }^{5}$ Average for 11 months, January and March-December.
${ }^{6}$ No quotation for May and June; average for JanuaryApril and July-December.
${ }^{7}$ Not comparable with earlier data which represent quotations at New York (see note 3 for this page). New York prices for January-May 1952 are as follows: $\$ 0.210$; $\$ .195$; $\$ .186 ; \$ .176 ; \$ .178$. The 1952 average price was calculated by the Office of Business Economics.

## Page 127

${ }^{1}$ See note 1 for $p$. 123. Revisions and quarterly data prior to 1938 for soybean oil are available upon request. Data for shortening include extractions from both vegetable and animal sources.
${ }^{2}$ Compiled by the U. S. Department of Labor. Bureau of Labor Statistics. The series beginning 1940 is for refined, edible, returnable drums, l.c.l., f.o.b. New York. Earlier data, shown in italics, are for domestic, refined, tank carlots, f.o.b. New York; the comparable average for 1940 is $\$ 0.066$. Monthly figures for January-December 1940 for the current series for edible oil are as follows (dollars per pound): 0.078; .078; . 081; .078; .076; .071; .072; .068; $.065 ; .064 ; .067 ; .068$.

Data through 1951 are averages of the prices which prevailed on a specific day of each of the 4 or 5 weeks within a month; beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
Monthly figures for 1938-40 for the italicized series are shown in the 1942 SUPPLEMENT; monthly figures for 1930-37 for that series are available upon request.
${ }^{3}$ Data for production of margarine and consumption of refined cottonseed oil in the production of margarine ( $p$. 125) are compiled beginning July 1950 by the U. S. Department of Commerce, Bureau of the Census. For the earlier period,
data are compiled by the U. S. Treasury Department, Bureau of Internal Revenue, from returns made for tax purposes. Data from both sources are believed to represent the entire industry. Stock data are from the Bureau of the Census and are not available prior to 1949.

Monthly data for 1929-50 for production of margarine and consumption of refined cottonseed oil in the production of margarine are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions are as follows (thousands of pounds): Production, 1931-July, 11,380; August, 15, 999; cottonseed oil consumption in margarine, July 1931, 885. Monthly data for 1949-50 for stocks are shown in the 1953 Statistical Supplement.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Through 1946, data represent prices of vegetable fat in one-pound cartons, in cases of 12 and 24, delivered eastern United States, manufacturer to jobber; beginning 1947, prices are for manufacturer to retailer. Beginning July 1950, the series applies to colored margarine. Data through 1951 are averages of the prices which prevailed on a specific day of each of the 4 or 5 weeks within a month; beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month.

Monthly data for 1949-50 are shown in the 1953 SUPPLE. MENT; those for 1947-48 are available upon request. Monthly figures for 1941-46 for the series in italics are shown in the 1949 and 1947 issues of the STATISTICAL SUPPLEMENT; in the 1949 volume the price was erroneously described as "Chicago" instead of "eastern United States." Comparable monthly data for the old series for 1929-40 are available upon request.
${ }^{5}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data beginning January 1951 represent estimates of total factory shipments of paint, varnish, and lacquer for the United States. They do not include shipments of whiting, putty, wood fillers, and intermediate paint products such as alkyd resins, turfentine, pigment dispersions, and bleached shellac. The estimates from January 1952 forward are based on data obtained from a sample of approximately 250 companies (comprising about 375 establishments). The estimated totals for 1951 were derived from the 1952 estimates and changes in shipments for those companies for which both 1951 and 1952 information was available. Shipments by firms common to both the new series and the old series ( 680 establishments, as described in next paragraph) accounted for more than 80 percent of the 1952 estimated total shipments. However, because of the method of deriving the 1951 estimates, definite information concerning their reliability is not available.

Data through 1950 represent sales by 680 manufacturing establishments of paint, varnish, lacquer, and filler. Of this number, 580 establishments reported classified sales and 100 reported only total sales; the unclassified sales are not shown separately in this volume but are included in figures for the total. Sales reported by the 680 establishments in 1947 represented approximately 85 percent of the total value of shipments and interplant transfers as reported in the Census of Manufactures for that year. According to available information, the coverage was somewhat higher in earlier years. The averages for 1935 and earlier years are based on reports of 579 establishments, raised to the level of data for 680 establishments on the basis of the relationship between the annual totals for 680 and 579 establishments for 1936-41. The ratio between the two series was fairly consistent and was approximately 1.04 .

Monthly data for the 680-establishment series for 1938-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; and 1942. Monthly figures for 1936-37 are shown on p. 26 of the July 1942 Survey.
${ }^{5}$ Averages are based on end-of-quarter stock figures.
${ }^{7}$ See note 2 for this page.
${ }^{8}$ See note 4 for this page. The monthly average for 1947 for the series in italics is $\$ 0.331$.
${ }^{9}$ Data beginning July 1950 are compiled by the Bureau of the Census; see note 3 for this page.
${ }^{10}$ Average for July-December 1950 for colored margarine; the January-June average for uncolored is $\$ 0.254$.
${ }^{11}$ Not comparable with earlier data; see note 5 for this page. Averages for 1951 comparable with italicized data are as follows (thousands of dollars): Total shipments, 98,603 ; industrial sales, 38,117 ; trade sales, 51,328 .
${ }^{12}$ Beginning September 1952, the price is based entirely on less-than-carlot shipments; earlier quotations were primarily for carlot shipments. Averages computed by the Office Of Business Economics are as follows (dollars per pound): January-August (carlot), 0.264; September-December (1.c.i.), . 283.

## Page 128

${ }^{1}$ Compiled by the U. S. Tariff Commission beginning July 1948 and by the U. S. Department of Commerce, Bureau of the Census, prior to that month. Data for all plastics and resin materials, except for vinyl resins, are on a dry basis (defined as total weight of the material, including resin, plasticizers, fillers, extenders, colors, and stabilizers, but excluding the weight of water, solvents, and other liquid diluents). Vinyl resins (with the exception of sheeting and film prior to 1951) are reported on a resin-content basis-ive., they exclude fillers, plasticizers, extenders, solvents, and liquids.

Data for production of protective coatings (as such) are excluded from the pertinent component items (except as noted for vinyl resins). Such coatings are produced to a greater extent by paint manufacturers than by the plastics industry; therefore, they are omitted from the series shown here.

Beginning January 1949, data represent production (the total of quantities produced for consumption in the same plant, for transfer to other plants of the same company, and for sale). The data (except for the "miscellaneous" category) are essentially comparable with the earlier figures for shipments and consumption in producing plants, except for inventory changes (which tend to balance out over a short period) and the inclusion of some companies not previously covered. Data for the entire period available (beginning August 1933 for cellulose acetate and nitrocellulose sheets, rods, and tubes) represent virtually complete coverage of the industry. Reports of the compiling agency give separate figures beginning June 1945 for most of the individual products included in the combined totals shown here for the several kinds of resins. In a few instances, however, figures are not shown for the entire period, either because of incomplete information or to avoid disclosing the operations of individual companies. For this reason, comparable data are not available prior to January 1946 for other cellulose plastics, total phenolic and other tar acid resins, and total urea and melamine resins; prior to September 1945 for polystyrene; prior to June 1946 for vinyl resins; and prior to August 1946 for miscellaneous resins.

Data prior to June 1945 for nitrocellulose and cellulose acetate in sheets, rods, and tubes are complete, or practically complete, and are essentially comparable with later data. There have been some changes in the reporting companies but it is believed that the changes have not appreciably affected the comparability of the data. Beginning February 1941, data for cellulose acetate (sheet, rods, and tubes) do not include shipments of cellulose acetate safety-glass sheets. However, the comparability of the series is not materially affected, since cellulose acetate has been supplanted by other plastics in the production of this type of product. Data for cellulose acetate (molding and extrusion materials) excIude consumption in reporting companies prior to June 1945; amounts reported, beginning that month, are comparatively small so that the comparability of the statistics is not greatly affected.

Monthly data for 1947-50 (for all categories) are published in the 1953 and 1951 editions of the Statistical Supplement. Monthly data for August 1933 through 1946 for cellulose acetate (sheets, rods, and tubes) and for nitrocellu-
lose appear in the following editions of the Statistical SUPPLEMENT: 1947; 1942; 1940; 1938; and 1936. Data are designated in the aforementioned SUPPLEMENTS as "shipments," but cover both shipments and consumption in reporting plants, as explained in notes. Data for cellulose acetate and nitrocellulose for January-July 1933, in the 1936 volume, are not comparable with later figures.

Monthly data beginning September 1945 for polystyrene, June 1945 for vinyl resins, and January 1946 for other cellulose plastics and for miscellaneous plastics appear for the first time in the 1947 volume. Revisions for 1946 (thousands of pounds): Phenolic resins-January-December, 18,$891 ; 17,913 ; 19,782 ; 21,445 ; 21,990 ; 22,548 ; 22,707$; 25,$145 ; 16,097 ; 18,087 ; 16,612 ; 20,453$; urea and melamine resins-July-December, 4,858; 6,011; 3, 893; 6,215; 5,943; 5,635.
${ }^{2}$ Cellulose plastics are derived from natural products; they include fillers, plasticizers, and extenders. "Other cellulose plastics" include data for sheets, rods, and tubes, and molding and extrusion materials derived from ethyl cellulose and other cellulosic materials.
${ }^{3}$ Data cover molding materials (including fillers, plasticizers, and extenders), bonding and adhesive resins, and resins for miscellaneous uses; protective coatings are not included.
${ }^{4}$ Includes fillers, plasticizers, and extenders but excludes protective-coating resins.
${ }^{5}$ Comprises bonding and adhesive resins, textile- and paper-treating resins, and resins for miscellaneous uses (including laminating and, beginning 1949, molding materials; molding materials are included under miscellaneous resins through December 1948 and are not available separately prior to 1949). Protective-coating resins are not included.
${ }^{6}$ Data cover sheeting and film (including safety-glass sheeting), adhesives, textile- and paper-treating resins, molding and extrusion materials, etc. Reginning 1951, all items are on a resin-content basis; prior to that time, sheeting and film are on a dry basis; see note 1 for this page. Protective coatings are excluded through 1950 and included thereafter (production not reported separately after 1950).
${ }^{7}$ Alkyd resins are used chiefly for protective coatings. Data include both modified and unmodified phthalic anhydride resins and polybasic acid resins, except phthalic. Beginning 1951, coverage was increased 10 to 15 percent over that in 1950.
${ }^{8}$ Rosin modifications are for protective coatings. Data include unmodified rosin and rosin esters (ester gums, etc.) and modified rosin and rosin esters (hard resins).
${ }^{9}$ Includes acrylic, polyethylene, nylon, and other molding materials, rosin modifications, silicone, and other plastics and resins for miscellaneous uses (other than protective coatings); all are on a dry basis.
${ }^{10}$ Average for 5 months, August-December 1933.
${ }^{11}$ Excludes data for rods and tubes for June-August; however, this does not appreciably affect the comparability of the statistics.
${ }^{12}$ Average for 4 months, September-December.
${ }^{13}$ Average for 7 months, June-December.
${ }^{14}$ Includes only adhesives and textile- and paper-treating resins in September; data for other urea and melamine resins could not be shown in the original reports without disclosing operations of individual establishments; the excluded data averaged about 6.9 percent of the totals for other months.
${ }^{15}$ Average for 5 months, August-December.
${ }^{16}$ Average for 4 months, January-April.
${ }^{17}$ Average for 11 months; data for June are not available.
${ }^{18}$ Reginning January 1949, data represent production; see paragraph 3 of note 1 for this page.
${ }^{19}$ Includes annual revisions not available by months.
${ }^{20}$ The substantial increase in production of miscellaneous plastics and resins beginning January 1949 is due to the inclusion of companies not previously reporting; data, therefore, are not comparable with earlier figures. The increased coverage, however, does not materially affect the comparability of the other series. (Monthly average includes annual revisions not available by months.)
${ }^{21}$ Protective coatings are included beginning 1951; production in that year amounted to $22,129,000$ pounds.
22See note 7 above regarding increased coverage for alkyd resins beginning 1951.

## Page 129

${ }^{1}$ Compiled by the Federal Power Commission. Total production of electric energy is the sum of energy produced by electric utilities and other organizations producing electric energy for public use and by industrial establishments.

Data for "electric utilities" are according to reports obtained from all electric-supply systems producing for public use. The "electric utilities" series covers plants of both the privately and municipally owned electric utilities, as well as other publicly owned producers. This latter group is composed of Federal projects, cooperatives, power districts, and State projects. Coverage of the electric utilities is substantially 100 percent, comprising at the end of 1954 about 3,627 generating plants operated by 1,334 utilities.

The series for "industrial establishments" represents estimated total production by manufacturing (including Government manufacturing) and extractive industries and stationary plants operated for motive power by electric railways and railroads. The figures do not include production where plant capacities are less than 100 kilowatts, where activities are presumably on a temporary basis as in army camps and other nonmanufacturing Government establishments, and where data are not currently available because of the size or character of the business. The reported monthly data for industrial establishments (as defined above) are extended to represent 100 -percent coverage on the basis of reports from about 800 generating plants, which account for approximately 85 percent of the total industrial production of electric energy in the United States. Annual totals on which the monthly averages (except for 1954) are based were obtained by complete canvas. Data for industrial establishments are available annually beginning 1939 and monthly beginning 1945.

Monthly data for 1941-50 for production of electric energy by electric utilities (revised basis) and for 1945-50 for total production and production by industrial establishments are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. It should be noted that data for electric-power production on the revised basis, shown beginning with the 1947 SUPPLEMENT, differ from data in former issues of the SUPPLEMENT chiefly because of the transfer of energy produced by electric railways and railroads from the "other producers" category (old basis) to industrial establishments (present series) and the inclusion in the series for industrial establishments of data not previously covered. Monthly figures for 1920-40 for privately and publicly owned utilities are available in the 1942 SupPLEMENT and on p. 18 of the December 1940 SURVEY. Revised annual totals or monthly averages beginning 1920 and monthly figures for 1936-40 for total production by utilities and production by source are shown on p. 32 of the February 1947 SURVEY; revised figures for the indicated periods may be obtained for "other producers" by subtracting from the revised totals in that issue data for privately owned and municipally owned utilities referred to above.
${ }^{2}$ Compiled by the Edison Electric Institute. Data are estimated totals for the entire electric light and power in-
dustry contributing to the public supply of electricity in the United States. The figures comprise operations of all private, municipal, cooperative, governmental, and industrial enterprises engaged in the production or distribution of electricity for the use of the public. The estimated totals are based on reports from enterprises representing in recent years approximately 90 percent of the industry.

Because of changes in the service classifications effective January 1, 1937, to incorporate the System of Accounts of the Federal Power Commission, data for 1936 and prior years are not strictly comparable with those beginning 1937. The major changes are discussed below.

For the period beginning 1937, the "rural" classification is based on the filed rate schedule and includes rural and farm customers served on a distinct rural or farm rate; it covers, in addition to a limited number of farm customers, the residences and commercial establishments in the smaller communities which are served on "distinct rural rates." A large part of the pumping or irrigation load in the West is on distinct or special rural rates. In the absence of other information, all sales by REA cooperatives are included in residential service. It should be noted that the "rural" classification bears no relationship whatsoever to farm electrification. Many farms and residents of small hamlets are served on the regular residential rate schedules; data for such customers are included in the "residential or domestic" classification beginning 1937. Data prior to 1937 for the latter classification represent a total of residential service (urban-rural nonfarm) and service to farms in the East; whereas data for "rural" (first shown in the 1942 SUPPLEMENT) cover western farms only.

For "commercial and industrial" service, the breakdown distinguishing between large and small customers is not entirely reliable. The unreliability is caused by the various changes in the systems of account and service classifications. The dividing point between small and large light and power is 50 kilowatts of demand or as near to it as rate classifications will permit.

Monthly figures for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical SUPPLEment; monthly data for 1938-40 will be found in the 1942 SUPPLEMENT. Revised monthly data for all series for 1937 are available upon request. Because of classification changes, monthly figures for 1937 published in the 1940 SUPPLEMENT are not comparable with those shown in later volumes. For total sales, revenue from sales, residential or domestic sales, small light and power (formerly called retail commercial and industrial) sales, and railways and railroads, monthly data for the years 1934-36 are shown in the 1940 and 1938 SUPPLEMENTS; those for the years 1929-33 may be obtained upon request.
${ }^{3}$ Excludes interdepartmental sales, which prior to 1937 were considered as energy used either by the company or by the railway department thereof.
${ }^{4}$ Average based on annual data; no comparable monthly figures available.
${ }^{5}$ Data beginning 1937 are not strictly comparable with those for earlier years; see paragraph 2 of note 2 for this page.

## Page 130

${ }^{1}$ See note 1 for $p .129$.
${ }^{2}$ Compiled by the American Gas Association, representing complete coverage of the gas utility industry. Classifications are made according to the kind of gas actually distributed. The data, therefore, pertain to the specific types of gas indicated, not to operations of a comparable group of companies.

For statistical purposes the types of gas are defined as follows: "Natural gas"-any gas of natural origin as produced from or existing in oil or gas wells and consisting primarily of hydrocarbons; "manufactured gas"-a combustible gas produced from coal, coke, or oil, or by the reforming of natural or liquefied petroleum gases (or any mixtures thereof) and including any natural or liquefied petroleum gas if
used for "enriching"; "mixed gas"-mixtures of manufactured gas with natural or liquefied petroleum gas, except where the natural or liquefied petroleum gas is used only for enriching or reforming. "Liquefied petroleum gas" is defined as any hydrocarbon mixture in either the liquid or gaseous state, the chief components of which consist of propane, butane, propylene, iso-butane, butylene, or mixtures thereof in any ratio or with air (for AGA statistics, only the aforementioned gases distributed through utility mains are included). Prior to 1945, figures for liquefied petroleum gas are included with those for manufactured gas; separate data for this type of gas have been compiled beginning 1945 (on annual basis only, 1954 not yet available), but they are not included with figures shown here. (Data for total customers, sales, and revenues for liquefied petroleum gas for 1945 through 1953, respectively, are as follows: Customers, in thousands, annual average-81; $123 ; 232 ; 315 ; 352 ; 327$; 309; 305; 300; sales, in millions of therms-23.2; 36.5; $60.3 ; 86.4 ; 90.9 ; 89.9 ; 88.1 ; \overline{8} 4.3 ; 84.4$; revenues from sales, in thousands of dollars-4,026; 6,086; 11,672 ; 18,$655 ; 22,298 ; 21,347 ; 20,931 ; 21,129 ; 21,485$. )

A therm is a unit of heat content representing 100,000 B.t.u. (British thermal units) and is roughly equivalent to 95 cubic feet of natural gas or to 185 cubic feet of manufactured gas.

The number of customers excludes customers purchasing gas for resale. Likewise, the sales and revenue figures exclude data for gas resold.

The various classes of service are based on the primary purpose for which the gas is used or the type of customer to which a stated rate shall apply. The common classes of service as applied to ultimate consumers and as recommended by the AGA for use by utilities, although not uniformly accepted, are defined below.
"Residential" applies to service supplied for residential purposes under individual contracts in a single-family dwelling or building, or in an individual flat or apartment in a multiple-family dwelling or building or portion thereof occupied as the home, residence, or sleeping place of one or more persons.
"Industrial" applies to service supplied for a process which creates a product or changes raw or unfinished materials into another form or product, or which involves the extraction of a raw material from the earth.
"Commercial" service relates to customers engaged in selling, warehousing, or distributing a commodity, in some business activity or in a profession, or in some other form of economic or social activity (offices, stores, clubs, hotels, etc.), and to service that does not come directly in one of the other classifications.
"Other" service (not shown separately in this volume) applies to municipalities or other governmental agencies, sales for street lighting, and interdepartmental sales if made under a definite rate schedule.

Sales to consumers are compiled on both a monthly and quarterly basis, whereas data for other items are compiled quarterly only. The reported monthly or quarterly data are expanded by the Association to represent 100 percent of the gas utility industry; this is done on the basis of annual surveys covering almost the entire industry, supplemented by data from secondary sources. Monthly and quarterly figures through 1953 have been adjusted to final annual totals for the pertinent years; 1954 data are preliminary. The reported 1954 monthly figures on total sales are adjusted to quarterly sales data (based on a larger sample) by applying to the quarterly totals the percentage distribution of the reported monthly figures.

Quarterly data for 1949 for customers and monthly or quarterly data for 1949-50 for sales and revenues appear in the 1953 Statistical Supplement. (The figure for total revenue for the fourth quarter of 1949 should read 293,085 thousand dollars.) Revised data on customers for 1950 are available upon request. Monthly or quarterly data for 194548 (compiled on type-of-gas basis and comparable with figures shown in later volumes) are shown in the 1951 and 1949 issues of the Statistical Supplement. (Notice that the sales figures in the 1951 SUPPLEMENT and earlier issues are expressed in cubic feet instead of therms; see third paragraph of this note for approximate number of cubic feet per therm.)
${ }^{3}$ The averages for manufactured and mixed gas sales and revenues, including those for total sales, are quarterly averages and, prior to 1954 , are based on revised annual totals. The figures for customers are annual averages for 1932-44 and averages of end-of-quarter figures for 1945-54.
${ }^{4}$ Average based on annual data; no comparable monthly figures available.
${ }^{5}$ Prior to 1937, interdepartmental sales were, in general, considered energy used either by the company or by the railway department thereof. Beginning 1937, such energy is considered as sales.
${ }^{6}$ Data beginning 1937 are not strictly comparable with those for earlier years; see paragraph 2 of note 2 for p. 129.

## Page 131

${ }^{1}$ See note 2 for $p$. 130.
${ }^{2}$ The averages for sales and revenues, including those for total sales, are quarterly averages and, prior to 1954, are based on revised annual totals. The figures for customers are annual averages for 1932-44 and averages of end-ofquarter figures for 1945-54.

## Page 132

${ }^{1}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the domestic fermented malt-liquor industry, including beer, ale, and other liquor produced from fermented malt. Data for Hawaii and, through June 1942, for Alaska are included. In addition to the tax-paid withdrawals published here, the original reports also show data for tax-free withdrawals, covering the amount withdrawn for export and for vessels and aircraft, consumed on brewery premises, and used for cereal beverages.

Monthly data prior to April 1933 are not available. Annual data (including statistics for cereal beverages containing less than one-half of 1 percent alcohol, by volume) for the prohibition period are available from reports of the Internal Revenue Service.

Monthly data for 1933-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. (March 1950 figure for tax-paid withdrawals should read 6,002,000 barrels.) Monthly data for April 1933-June 1938 are also shown on p. 16 of the July 1939 SURVEY (revision-production, April 1934, 3,732,000 barrels).
${ }^{2}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. The data represent complete coverage of operations of registered distilleries and fruit distilleries, exclusive of production for industrial purposes from January 1942 through September 1945.

In addition to whisky which is shown separately, the totals for distilled spirits include rum, gin, brandy, vodka, and other distilled spirits (comprising spirits-fruit produced at fruit distilleries, and spirits-grain, spiritscane, etc., produced at registered distilleries). Normally, registered and fruit distilleries are authorized to produce only beverage spirits. Because of the greatly increased demand for industrial alcohol during the war, Congress, by the acts of January 24 and March 27, 1942, made it legal for beverage distillers to engage in production of high-proof spirits for industrial purposes. Subsequently, production of spirits (other than brandy and rum) for beverage purposes was prohibited after October 8, 1942, until the end of the war period, except under special authorization during so-called liquor holiday months (August 1944, January 1945, and July 1945). Production figures for January 1942-September 1945 include only amounts of high-proof spirits produced for beverage purposes. Small amounts for industrial purposes are included after September 1945, since such production was not reported separately. (Total production of high-proof spirits by registered distilleries for 1942-45 is
shown on p. 111 of the 1947 Stati stical Supplement and the amounts for beverage purposes included in the totals and duplicated here are given separately in note 5 for that page.) Production figures are net-that is, gross production less amounts used in redistillation.

Stocks are domestic stocks in internal revenue bonded warehouses, based on the original entry gage. Losses are not determined until withdrawal and are therefore not included except for distilled spirits in cases for which losses have already been determined.

Withdrawals represent tax-paid withdrawals (exclusive of withdrawals of alcohol) from registered and fruit distilleries and internal revenue bonded warehouses. Also published in the reports of the Internal Revenue Service, but not included here, are data for tax-free withdrawals of distilled spirits for the following purposes: Fortification of wine; denaturation; for export; transfers to Customs manufacturing bonded warehouses; for vessels and aircraft; for use of the United States; and, beginning July 1953, transfers to Foreign Trade Zones.

For statistics relating to ethyl alcohol produced at industrial alcohol plants, see p. 120 of this volume. The amounts of ethyl alcohol withdrawn tax-paid shown on that page are largely for beverage purposes.

A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon (see note 5 following for definition of a standard proof gallon). For spirits of less than 100 proof the tax gallon is equivalent to the wine gallon.

Monthly data for 1933-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. Monthly data for July 1933- June 1938 are also shown on pp. 15 and 16 of the July 1939 Survey.
${ }^{3}$ Compiled by the Distilled Spirits Institute, Inc. Data are based on sales in all States in which sales of distilled spirits are legal. The number of States permitting such sales has increased since 1934 from 27 States and the District of Columbia to 46 States and the District of Columbia beginning July 1949. The sale of distilled spirits is prohibited in Mississippi and Oklahoma. Figures represent gallonage sales as indicated by sales of tax stamps in the license States and in the District of Columbia (except that since 1947, data for a number of the license States cover gallonage shipments to wholesalers) and by actual wholesale and retail sales reported by State Liquor Control Authorities in the monopoly States.

Monthly data for 1945-50 are shown in the 1953, 1951, and 1949 issues of the Statistical Supplement and for 194143 in the 1947 volume; for 1944 , on p. S- 27 of the November 1948 SURVEY. Monthly figures for 1938-39 are available in the 1942 SUPPLEMENT; those for 1940 (revised since publication of that volume) are shown on p. 22 of the July 1946 Surver. Monthly data for 1934-37 are available upon request.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Data are imports for consumption. They include spirits, cordials, liqueurs, bitters, ethyl alcohol, and compounds containing spirits. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note l for p. 104 .

Monthly data for 1933-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. (Minor revisions have been made in the 1943 figures for total distilled spirits as shown in the 1947 volume.) Monthly data for 1933-May 1939 for the total and 1934-May 1939 for whisky are al so shown on pp. 15 and 16 of the July 1939 Survey (total distilled spirits for December 1935 should read 706, 000 proof gallons).
${ }^{5}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the industry. Rectified spirits are spirits changed from their original character, such as blended whiskies, liqueurs, and cordials. Total rectified spirits and wines produced comprise whisky, gin, cordials and liqueurs, small quantities of alcohol, rum, brandy, vodka, and unclassified spirits, and (prior to July 1954) wines and vermouth. Materialsused
and production by kinds are available in the original reports.

A standard proof gallon is a wine gallon (231 cubic inches) of 100 proof spirits, the proof being twice the percent of the content, by volume, of ethyl alcohol. In a wine gallon of spirits of more or less than 100 proof, the number of proof gal lons is proportionally greater or smaller than 1 proof gallon.

Monthly data for 1933-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Monthly data for 1934-April 1939 are also shown on p. 17 of July 1939 Survey.
${ }^{6}$ Barrels of 31 wine gallons.
${ }^{7}$ Prohibition period; data available during those years are not comparable with data shown.
${ }^{8}$ Average for 9 months, April-December.
${ }^{9}$ Average for 6 months, July-December.
${ }^{10}$ Average for 4 months, September-December.
${ }^{11}$ Average based on annual total which includes revisions not available by months.

## Page 133

${ }^{1}$ Compiled by the U. S. Treasury Department. Internal Revenue Service. The data represent complete coverage of the industry. Figures are reported in taxable units and converted to wine gallons on the basis of 20 taxable units (onehalf pint or fraction thereof in bottle or container) per wine gallon. Data cover champagne, other sparkling wines, and artificially carbonated wines. In addition to the data on sparkling wines published here, the original reports show data for vermouth and aperitif wines other than vermouth.

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly figures for July 1934-December 1935 are shown on p. 16 of the July 1939 SURvey.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Data are imports for consumption. Figures for sparkling wines include champagne. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note l for p. 104 .

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly figures for January 1934December 1935 are shown on p. 18 of the July 1939 Survey.
${ }^{3}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. The data represent complete coverage of the industry and include small amounts (stocks only, in recent years) for Hawaii. Production of still wines represents the amount removed from fermenters, exclusive of distilling materials produced at wineries beginning July 1942 in the monthly figures (shown in 1947 STATISTICAL SUPPLEMENT) and beginning 1943 for the monthly averages. Stock figures also exclude data for distilling materials beginning July 1942.

In addition to tax-paid withdrawals of still wines, as shown here, there are considerable quantities of still wines withdrawn tax free for the following purposes: For production of sparkling wines, vermouth, aperitif wines other than vermouth, and vinegar; for export; for family use; for use of the United States; and for use as distilling materials.

Distilling materials produced at wineries represent substandard wines produced with excessive water or residue materials, which are used as distilling materials in the production of brandy. They were not reported separately from production of still wines prior to July 1942.

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly figures for July 1934-December 1935 are shown on p. 17 of the July 1939 SURvey.
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, from factory reports sent directly to the Department (except data for 1929 which are as
reported in the Census of Manufactures). Data for butter include the production of whey butter. Total cheese production includes American-type cheese (whole milk and partskim) and foreign and miscellaneous types (Swiss, Brick and Munster, Limburger, Italian, Neufchatel, cream cheese, etc.), but excludes cottage, pot, and bakers' cheese, and American full-skim. The latter is included in data shown in the 1942 and earlier issues of the SUPplement. The figures shown separately for American cheese include production from whole milk only, which generally accounts for about 99 percent of the total American cheese output; data represent largely Cheddar cheese but include other varieties known as Colby, washed curd, high- and low-moisture Jack, Monterey, and granular.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data for butter and American cheese for 1932-37 appear in the 1940, 1938, and 1936 Supplements, and monthly data for 1930-37 for total cheese production (including American full-skim amounting to not more than two-tenths of 1 percent of the total) are shown on p. 17 of the November 1939 SURVEY (revision, August 1930, 44, 504,000 pounds). Data prior to 1932 for these series as shown in the 1932 Supplement and on p. 17 of the November 1939 Survey have been revised to allow for incompleteness in reports. The revised monthly data are available on pp. 63-65 of Technical Bulletin No. 722, "Production and Consumption of Manufactured Dairy Products," published in April 1940 by the U. S. Department of Agriculture (for total cheese production, deduct American full-skim cheese as shown on p. 66 from the total factory production).
${ }^{5}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, from reports made by coldstorage establishments. Data are given on a "net weight" basis and represent stocks held in public and private coldstorage warehouses.

Stocks of butter and cheese include those held by the various States for relief distribution from April 1938-April 1940 and, since June 1938, Government holdings, which represent stocks held by the U. S. Department of Agriculture and other agencies. They include also stocks owned by the armed services and stored in warehouse space not owned or leased by them. Stocks held in space owned or leased and operated by the armed services are not included. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (Data for 1929-31 for cheese were revised and are shown on p. 19 of the April 1933 SURVEY; total cheese stocks for July 1939, as shown in the 1942 SUPPLEMENT, revised to $118,809,000$ pounds.)
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are average wholesale prices of creamery butter, grade A, 92 -score, in bulk, at New York City, for cash and short-term credit. Prices were under Government control from the latter part of 1942 until July 1946. Temporary price ceilings were established by the Office of Price Administration in October 1942 and specific dollar-and-cents ceilings on December 30, 1942. General price controls were again imposed the latter part of January 1951 and were effective for dairy products until February 18, 1953.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.

[^3]${ }^{12}$ Average based on annual total which includes revisions not available by months.

## Page 134

${ }^{1}$ See note 5 for page 133.
${ }^{2}$ Compiled by the D. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Data for imports of cheese are imports for consumption beginning 1934 and general imports for earlier years. All classes of cheese are included.

Exports beginning 1947 include shipments under the Army Civilian Supply Program; such data were not reported prior thereto. In 1947, 5, 000 pounds of condensed milk and 142,000 pounds of evaporated milk were shipped under this program. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions (thousands of pounds): Condensed milk, December 1946, 13,515; evaporated milk, December 1946, 14, 102; cheese, 1930-October, 6,325; December, 5,237.
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average wholesale price of single daisies at Chicago; this price has been substituted for that of twins on the Wisconsin Exchange, shown in the 1947 and earlier Supplements. Prices were under Government control from the latter part of 1942 until July 1946. The wholesale price ceiling was increased $3-3 / 4$ cents per pound February 1, 1946, to offset the discontinuance of the processors' subsidy of $3-3 / 4$ cents which was in effect from December 1, 1942, through January 31, 1946.

Monthly data for 1945-50 are shown in the 1953, 1951, and 1949 issues of the Statistical Supplement. Monthly figures for 1929-44 are available upon request.
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent practically the entire industry for unsweetened evaporated milk and for sweetened condensed milk. The series relate to case goods produced from whole milk (except that a small amount produced from skimmed milk is included in the data for condensed milk prior to 1949). In addition to the monthly series for case goods shown here, which are available currently, monthly data on production of sweetened and unsweetened condensed milk in bulk for industrial users are issued annually by the Department of Agriculture.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (Revision for evaporated milk stocks for February 1930, 153, 202,000 pounds.) The figures for evaporated milk production for 1929-30 given in the 1932 SUPPLEMENT include small amounts produced from skimmed milk which are not included in the present series and, therefore, are not strictly comparable.
${ }^{5}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are based on the reports made by manufacturers covering actual sales or goods delivered at manufacturers' distributing points on the basis of cash or short-term credit, and represent the average wholesale selling price per case of forty-eight 14-1/2-ounce cans. Prices of evaporated milk through January 1931 were quoted on the basis of 16 -ounce cans and were converted to $14-1 / 2$-ounce cans by multiplying by 0.90625 .

Temporary ceiling prices were established by the Office of Price Administration in October 1942 and specific dollar-and-cents ceiling was established effective December 30 , 1942. Price control was discontinued in July 1946. General price controls were again imposed the latter part of January 1951 and were effective for dairy products until February $18,1953$.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly figures for 1929-37 are available upon request.
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are estimated total production of milk on farms, based on daily average milk production per cow (from a sample group of farms) and the estimated number of cows on farms.

Monthly data for 1949-50 are shown in the 1953 Supplement. Monthly data for 1929-48 as published in various issues of the SUPPLEment have since been revised and are available upon request.
${ }^{7}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the consumption of fluid milk in the manufacture of the principal dairy products, with the exception of ice cream. The items included and the multiplying factors applied to the production figures for these items to compute the milk equivalent are as follows: Creamery butter, 20.3; American whole-milk cheese, 10.l; other whole-milk cheese and part skim, 9.6; evaporated milk, 2.16; condensed milk, sweetened and unsweetened (bulk and case), 2.2; and dried whole milk, 7.6. The products included accounted for 94 percent or over of the total whole-milk equivalent of all manufactured dairy products prior to 1941; 92 to 93 percent in 1941-43; 90 percent in 1944-45; 84 percent in 1946 and 1952; 86 percent in 1947 and 1951; 87 percent in 1948-50; and 85 percent in 1953-54.

A decline in the quantity of milk used in creamery butter and evaporated and condensed milk and increased production of ice cream and other frozen products (not included here) account for the decrease in the percentage.

Monthly data for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data for 1929-40 and revisions for 1946 are available upon request.
${ }^{8}$ Compiled by the D. S. Department of Agriculture, Agricultural Marketing Service, from reports of milk distributors, producers' associations, and municipal officers for more than 100 cities. Prices represent dealers' buying prices for standard-grade milk testing 3.5 percent butterfat which is used for city distribution as milk and cream and are for milk delivered f.o.b. local shipping point or at country plant. The prices at country points apply to milk delivered directly by farmers in their own cans to local milk plants. Price per 100 pounds may be reduced to cents per quart by dividing by 46.53 .

Monthly data for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly data prior to 1936 are available on p. 18 of the August 1939 Survey; the May 1923 price should read $\$ 2.55$.

## Page 135

${ }^{1}$ Compiled by the U.S. Department of Agriculture, Agricultural Marketing Service. Data cover production and stocks of dry whole milk and of nonfat dry-milk solids for human consumption as reported by the principal firms operating dry-milk factories in the United States.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement Monthly data for 1938-40 for production and stocks of nonfat dry-milk solids (designated as "dry skim milk for human consumption") appear in the 1942 SUPPLEMENT; monthly data beginning 1935 (the first year they were reported separately from animal feed) are available upon request. Data for total dry skim milk, which include dry skim milk for animal feed, are shown in the 1942 and 1940 SUPPLEments and on p. 17 of the March 1939 Survey. The production of dry skim milk for animal feed has been comparatively small since 1943, accounting for only 1.5 percent of the total production of dry skim milk in 1954. Earlier monthly data beginning 1929 are available upon request.
${ }^{2}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Data for exports of nonfat dry-milk solids beginning 1944 represent only exports of dry skimmilk for human consumption. Earlier data also are believed to represent only that for human consumption, although the data are reported as "dry skim milk" in export statistics
and are not specifically stated to exclude exports of dry skim milk for animal feed, if any. Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. In 1947, $10,164,000$ pounds of dry whole milk and 134,950,000 pounds of nonfat dry milk solids were exported under this program. For general explanation of foreign-trade data, as well as explanation for sampling procedures instituted July 1, 1953, see note 1 for $p .104$.

Monthly data for 1941-50 are published in the 1953, 1951, 1949, and 1947 editions of the Statistical Supplement. Data shown in the 1942 and earlier SUPPLEMENTS are combined totals of dry whole milk and dry skim milk; monthly figures prior to 1941 for the combined totals may be found in the 1942, 1940, 1938, 1936, and 1932 issues. Separate monthly figures for 1932-40 are available upon request.
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Prices are based on reports made by manufacturers covering actual sales to jobbers, wholesalers, grocers, and similar buyers, f.o.b. factory, on the basis of cash or short-term credit.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Earlier monthly data beginning August 1934 are available upon request.
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); the 1954 estimate is preliminary. Quantities unharvested on account of market conditions are included. The estimates through 1933 cover total production; thereafter, they cover production of apples in the commercial apple areas of each State and include fruit produced for sale to commercial processors, as well as that for sale for fresh consumption. The estimated total production for 1934 comparable with the earlier data is $128,203,000$ bushels.
${ }^{5}$ Data are compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, from reports of officials and local agents of common carriers. Shipments cover those by rail and water (reduced to car-lot basis) but do not include shipments by truck which have become increasingly important during the period covered here. Data beginning 1934 include shipments for emergency relief and other Government purchases. Shipments of citrus fruits include oranges, lemons, grapefruit, tangerines, and other citrus fruits.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932 (revisions for apples, in carloads: 1932-July, 5,593; August, 1,668; September, 8,412; October, 23,736). There have been some revisions in the monthly figures for earlier years but, with the exception of the last 3 months of 1931 for all series, revisions are of a minor nature.
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. Stocks in space owned or leased and operated by the armed services are not reported. Through 1949 , stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

The monthly averages for cold-storage holdings of apples are based on figures for 9 months (January-May and Sep-tember-December) for 1929-42 and for 10 months (January-May and August-December) for 1943 and 1944. Small stocks of apples are carried during the summer months, but reports for these periods prior to 1945 are incomplete; hence the reported data are not included in the figures shown here.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. (Notice that stocks of frozen fruits as shown in the aforementioned volumes include data for fruit juices and purees.) Monthly data for 1936-37 for coldstorage holdings of apples may be found in the 1940 SUPPLEMENT; monthly data prior to 1936 as shown in the 1938, 1936, and 1932 volumes are reported in barrels and may be converted to bushels by multiplying by 3 . The following
monthly data are available upon request: Cold-storage stocks of frozen fruits (including juices and purees), for June 1929-December 1937; frozen fruits and fruit juices and purees (shown separately), for June 1944-December 1950; frozen vegetables, for 1947.
${ }^{7}$ Bushels of 48 pounds.
${ }^{8}$ Data for 1929-34 include figures for animal feed; production and stocks for 1935 comparable with the earlier years are $24,792,000$ and $22,250,000$ pounds, respectively. See note 1 for this page.
${ }^{9}$ Data shown for dry whole milk for 1929-31 represent total dried milk; see note 2 for this page.
${ }^{10}$ Stocks of fruit juices and purees are included in the figures for stocks of frozen fruits.
${ }^{11}$ Average for 5 months, August-December.
${ }^{12}$ See note 4 for this page regarding change in coverage beginning with 1934.

## Page 136

${ }^{1}$ Reported by the U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); 1954 estimates are preliminary.

## ${ }^{2}$ See note 5 for p .135.

${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau. of Labor Statistics. The series beginning March 1947 represents the average price at New York for all varieties and types of white potatoes (old and new stock), U. S. No. 1 merchantable quality and condition. Through 1951, monthly quotations are the averages of data for the 4 or 5 weeks in each month; prices are as of Tuesday prior to September 1947 and as of Monday from September 1947 through 1951. Beginning 1952, the price is as of $l$ day of the week containing the 15th of the month.

Prices prior to April 1947 are not comparable with succeeding data. They represent New York prices of white potatoes, U. S. No. l (old stock only, until new stock became plentiful); data for April and May 1947 are $\$ 3.390$ and $\$ 3.812$. Corresponding prices for the new series are $\$ 3.992$ and $\$ 4.054$.

Monthly data for 1929-50 are published in the following editions of the Statistical Ssupplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. The prices were incorrectly described in the 1942, 1940, and 1938 volumes as quotations for Long Island No. l potatoes, whereas only the prices prior to 1933 (shown in the 1936 and 1932 SUPPleMENTS) covered this classification.
${ }^{4}$ Compiled from statistics of the U. S. Department of Commerce, Bureau of the Census (Bureau of Foreign and Domestic Commerce through April 1941). Data include exports of barley, corn, oats, rye, and wheat, plus the grain equivalent of malt, cornmeal, oatmeal, and wheat flour. The conversion factors used to obtain the grain equivalent of the several items are as follows: Malt- $9 / 10$ of a bushel to a bushel of barley through 1943 and beginning 1944, l bushel of malt per bushel of barley; cornmeat-4 bushels of corn to a barrel of cornmeal through 1945 and 6.194 bushels beginning 1946; oat-meal-5.56 bushels of oats to 100 pounds of oatmeal through 1942 and 7.6 bushels beginning 1943; wheat flour- 4.7 bushels of wheat to a barrel of flour through 1943; January-June 1944, 2.398 bushels of wheat per 100 pounds of flour; July 1944-February 1946 and July 1949-December 1954, 2.33 bushels of wheat per 100 pounds of flour; for March 1946 through June 1949 the wheat factor varies from month to month (ranging from 2.172 to 2.33 bushels per 100 pounds), being a weighted average based on the proportion of higher extraction flour sent to certain destinations. For periods when barley flour and rye flour were exported, these are also included, converted to grain equivalent at 5.5 bushels to the barrel for barley and 6 bushels to the barrel for rye flour. The conversion factors are those used by U. S. Department of

Agriculture and take into account changes in milling practices.

The weight per bushel for the various grains included is as follows (in pounds): Barley, 48; com (shelled) and rye, 56 ; oats, 32 ; and wheat, 60.

Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. Amounts shipped under this program in 1947 are as follows (thousands of bushels): Barley, 24, 152; corn, 45,643; oats, 8,803 ; rye, 11 ; wheat, 158,751 . For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note l for p. 104.

Monthly data for 1945-50 are shown in the 1953. 1951, and 1949 issues of the Statistical Supplement (revisions in thousands of bushels: 1946-July 28, 309; September, 23, 290; December, 34,527). Minor revisions in a few monthly figures for 1947-48 and revised monthly data prior to 1945 are available upon request. Revisions of export data as published in the 1947 SUPPLEMENT and earlier volumes are due to minor changes in the conversion factors for malt and oatmeal.
${ }^{5}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, on a weekly basis, and represent the receipts at Minneapolis, Milwaukee, Chicago, and Duluth, as reported in market publications. Weekly figures are reduced to a monthly basis by the U. S. Department of Commerce, Office of Business Economics, by prorating data for weeks falling in two months.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. (Revisions, in thousands of bushels: November 1932, 3, 254; April 1933, 5, 154; July 1933, 5, 144.) Monthly data prior to 1932 are on p. 20 of the November 1932 SURVEY.
${ }^{6}$ Compiled by the $U$. S. Department of Agriculture, Agricultural Marketing Service. Stocks in commercial storage include domestic grain in public elevators, as well as Gov-ernment-owned stocks at principal terminal markets ( 45 markets in 1954) and grain afloat in vessels or barges in harbors of lake or seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other processing facilities, or private stocks of grain intended for local use. Figures are as of Saturday nearest the first of the month following that for which they are shown.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. Earlier monthly data are on p. 19 of the June 1936. Survey. The figures as shown in the 1938 Supplement and earlier issues have been revised for some months from data for the Saturday nearest the end of the indicated month to the Saturday nearest the first of the following month; revisions for montns affected by this change are available upon request.
${ }^{7}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are as of the first of the month following that for which they are shown. June figures represent old crop only; new grain is not reported in the stock figures until the beginning of the crop year.

Annual averages shown here are quarterly averages throughout. Quarterly data for 1949-50 are published in the 1953 Statistical Supplement; for 1941-43, in the 1947 issue. Quarterly figures for $1944-48$ and 1940 , June and December figures for 1934-38, and June, September, and December figures for 1939 are available upon request.
${ }^{8}$ Compiled from source indicated in note 4 for this page, using the conversion factor indicated for malt. Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto (see note 1 , p. 104); such shipments in 1947 amounted to $24,152,000$ bushels.

Monthly data for 1945-50 are published in the 1953, 1951, and 1949 editions of the Statistical Supplement. Revised monthly data prior to 1945 are available upon request (such revisions reflect a minor change in the conversion factor for malt).
${ }^{9}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, from quotations given in daily trade papers, and represent the average price per bushel weighted by the number of carlots sold.

Monthly data for 1936-50 are published in the following editions of the Statistical Supplenient: 1953; 1951; 1949; 1947; 1942; and 1940. Monthly data beginning July 1934 for No. 2, malting, are shown in the 1938 SUPPLEMENT; those prior to 1936 for No. 3, straight, are available upon request.
${ }^{10}$ Compiled by Price, Waterhouse and Co., beginning 1946; previously, by the Corn Refiners Statistical Bureau. Data are reported by 11 companies, representing complete coverage of the industry. They include grindings by the wet process for both domestic consumption and export.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{11}$ Data are furnished by the Chicago Board of Trade and represent receipts at 12 interior primary markets. The markets included are as follows: Chicago, Duluth, Kansas City, Indianapolis, Milwaukee, Minneapolis, Onaha, Peoria, St. Joseph, St. Louis, Sioux City, and Wichita. The month1y figures are reported calendar-month totals.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Comparable monthly data for 1929-40 are available upon request.
${ }^{12}$ Data prior to 1939 are available only for June and December; in 1939 for June, September, and December. See note 7 for this page.
${ }^{13}$ Average for 6 months, July-December.
${ }^{14}$ Average for 10 months; no quotation for March and April.
${ }^{15}$ Average for 9 months, April-December. See 2d paragraph of note 3 for this page.

Page 137
${ }^{\text {i See note }} 6$ for p. 136.
${ }^{2}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are as of the first of the month following that for which they are shown. September figures for corn and June figures for oats represent old crop only; new grain is not reported in the stock figures until the beginning of the crop year.

Annual averages shown here are quarterly averages throughout. Quarterly data for 1949-50 are published in the 1953 Statistical Supplement; those for 1941 -June 1944, in the 1947 issue. Quarterly data for 1929-40 and from September 1944 through 1948 are available upon request.
${ }^{3}$ See note 4 for $p$. 136 for source of data and for factors used in converting meal to grain equivalent. Beginning 1947, exports include shipments under the Army Civilian Supply Program; such data were not available prior thereto; amounts included in 1947 were $45,644,000$ bushels of corn and $8,803,000$ bushels of oats. For general explanation of for-eign-trade data, as well as explanation of sampling procedures instituted July 1, 1953 , see note 1 for p. 104.

Monthly data for 1945-50 are published in the following editions of the Statistical Supplement: 1953; 1951; and 1949 (revision for corn, December $1946,1,744,000$ bushels). Monthly data prior to 1945 for corn are shown in the 1947, 1942, 1940, 1938, 1936, and 1932 volumes (revision for March 1932, 494, 000 bushels); those for oats are available upon request (revisions were due to a slight change in the conversion factor for oatmeal).
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average price per bushel weighted by the number of carlots sold. The weighted average price of all grades of corn at 5 markets covers cash sales in the Chicago, St. Louis, Omaha, Kansas City, and Minneapolis markets. Prior to November

1938, data are included for Cincinnati; however, the volume and variation are not sufficient to affect the comparability of the series.

Monthly data for 1938-50 are published in the following editions of the STatistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data prior to 1938 are available as follows: Corn, No. 3 yellow, p. 18 of the April 1940 SURVEY; corn, weighted average, 5 markets, $p$. 18 of the August 1939 Survey; and oats, No. 3 white, in the 1940, 1938, 1936, and 1932 volumes of the Supplement.
${ }^{5}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); estimates for 1954 are preliminary.
© See note 11 for $p .136$.
${ }^{7}$ Average based on months for which quotations are available.

## Page 138

${ }^{1}$ Compiled by the $U . S$. Department of Agriculture, Agricultural Marketing Service. Data cover the movement of domestic rice at all mills in California. Brewers' rice is not included. The stock figures relate to mill stocks only; they include both milled rice and rough rice in terms of cleaned (converted on the basis of 162 pounds of rough to 100 pounds of clean through 1938 and 162 pounds of rough to 105. 3 pounds of clean subsequently).

Monthly data for $1947-50$ for all series are shown in the 1953 and 1951 editions of the STATISTICAL SUPPLEMENT; those for October 1933-46 for receipts and shipments appear in the 1949, 1947, 1942, 1940, 1938, and 1936 volumes. Monthly data for 1934-38 for stocks are available in the 1942, 1940, and 1938 Supplements; revised monthly data for October-December 1933 and for 1939-46 are available upon request. Data in the 1942 SUPPLEMENT and earlier editions are expressed in bags of 100 pounds instead of thousands of pounds.
${ }^{2}$ Compiled by the Rice Millers Association beginning August 1952; prior thereto by the U. S. Department of Agriculture, Agricultural Marketing Service, from reports of the Rice Millers Association for association mills and reports of nonassociation mills reporting directly to the Department. Statistics cover the movement of domestic rice at all mills in Louisiana, Texas, Arkansas, ard Tennessee. Brewers' rice is excluded from all figures. The stock figures include both milled rice and rough rice in terms of cleaned (converted on the basis of 162 pounds of rough rice to 105.3 pounds of milled); they do not include rice in store in other positions than at mills.

Monthly data for 1947-50 for all series are published in the 1953 and 1951 editions of the Statistical Supplement; those prior to 1947 for receipts and shipments appear in the 1949, 1947, 1942, 1940, 1938, 1936, and 1932 volumes. Monthly data prior to 1932 for stocks are shown in the 1932 SUPPLEMENT; revised monthly data for 1932-46 are available upon request.

Receipts are shown in barrels of 162 pounds in the 1949 STATISTICAL SUPPLEMENT and earlier issues; data for shipments, in the 1942 volume and prior issues, are expressed in thousands of pockets of 100 pounds instead of in thousands of pounds. The heading in the 1932 SUPPLEMENT should read "shipments from mills" rather than "to mills." Revisions: Heceipts (in barrels) - 1929, August, 508, 000; 1930, August, 480,535; 1931, August, 234, 237; 1932-July 233, 071; August, 262,675; September, 839,693; November, 1,210,908; December, 713,110; 1934-February, 931,932; April, 192,786; shipments (in pockets) - 1932 , July 489, 716; August, 615, 848; September, 686,775; November, 1,022,289; December, 859,137; 1934March, 738,091; April, 444,508; May, 408, 753.
${ }^{3}$ Reported by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Figures are on a clean equivalent basis, with rough rice reduced on the basis of 162 pounds of rough rice to 105.3 pounds of clean. In the Statistical SUPPLEMENTS prior to the 1951 issue, rough rice is converted
to clean on the basis of 162 pounds of rough rice to 100 pounds of clean. Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. In 1947, 15, 373,000 pounds of such exports were included. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1947-50 are shown in the 1953 and 1951 editions of the Statistical Supplement. Revised data for 1933-46 are available upon request. Monthly figures for 1932 appear in the 1936 SUPPLEMENT; those for earlier years, in the 1932 volume. (Revisions for 1931, in pockets: January, 369,214; November, 382,898; December, 195,350.)
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1946 represent the price of rice, blue rose, head, clean, medium to good, New Orleans; beginning 1947, prices are for zenith, extra fancy, miller to first distributor. Through 1951 the annual averages are of weekly quotations for Tuesday and the monthly data are averages of prices for the 4 or 5 weeks in each month. Beginning 1952, the prices are for 1 day of the week containing the 15 th of the month.

Monthly data for 1929-46 and for 1949-50 are published in the following editions of the Statistical Supplement 1953; 1949; 1947; 1942; 1940; 1938; and 1936. Revised monthly data for 1947-48 may be obtained upon request.
${ }^{5}$ Compiled by the $U$. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); estimates for 1954 are preliminary.
${ }^{6}$ Compiled by the Chicago Board of Trade beginning 1948 and by the $U$. S. Department of Agriculture, Agricultural Harketing Service, prior thereto. Data through 1947 represent receipts at Chicago, Duluth, Milwaukee, and Minneapolis. These data were furnished on a weekly basis and the monthly series was computed (by the U. S. Department of Commerce) from weekly totals by prorating data for weeks falling in 2 months. Beginning 1948, data represent receipts at 12 interior primary markets, and are based on reports for the calendar month. The markets included are as follows: Chicago, Duluth, Kansas City, Indianapolis, Milwaukee, Minneapolis, Omaha, Peoria, St. Joseph, St. Louis, Sioux City and Wichita.

Monthly data for 1949-50 are published in the 1953 STAtistical Supplement. Data for 1948 for the 12 markets are as follows (thousands of bushels): January-December, re-spectively-532; 562; 1,039; 915; 879; 654; 1,679; 4,441; 2,$578 ; 1,893 ; 2,341 ; 1,925$. Monthly data for 1932-48 (4market series) are shown in the 1951, 1949, 1947, 1942, 1940, 1938, and 1936 issues of the Statistical Supplement. (Revisions, thousands of bushels: 1939-March, 1,241; May, 1,044; July, 1,473; 1932-July, 332; 1933-July, 1,473.) For monthly data prior to 1932, see p. 20 of the November 1932 SURVEY (revisi on for December 1931, 383, 000 bushels).
${ }^{7}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Stocks in commercial storage include domestic grain in public elevators, as well as Gov-ernment-owned stocks at principal terminal markets ( 45 markets in 1954) and grain afloat in vessels or barges in harbors of lake and seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other process ing facilities, or private stocks of grain intended for local use. Figures are for the Saturday nearest the first of the month following that for which data are shown.

Monthly data for 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. Earlier monthly data are on p. 20 of the November 1932 Sunvey. The figures as shown in the 1938 Supplement and earlier issues have been revised for some months from data for the Saturday nearest the end of the indicated month to the Saturday nearest the first of the following month. Revisions for months affected by this change are available upon request.
${ }^{8}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent average prices
per bushel of reported cash sales, weighted by the number of carlots sold.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{9}$ Average for 3 months, October-December.
${ }^{10}$ Average for 11 months; no quotation for June.
${ }^{11}$ Beginning January 1948, data include receipts at 8 additional markets; see note 6 for this page. The 1948 monthly average comparable with earlier data is $1,288,000$ bushels.

## Page 139

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); data for 1954 are preliminary estimates.
${ }^{2}$ Data are furnished by the Chicago Board of Trade and represent receipts at 12 interior primary markets. The markets included are as follows: Chicago, Duluth, Kansas City, Indianapolis, Milwaukee, Minneapolis, Omaha, Peoria, St. Joseph, St. Louis, Sioux City, and Wichita. The monthly figures are reported calendar-month totals.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Comparable monthly data for 1929-40 are available upon request.
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the disappearance of domestic wheat as used for flour, feed, seed, alcohol production, and for export. The figures shown on the monthly-average lines are quarterly averages.

Quarterly data for 1949-50 are published in the 1953 Statistical Supplement; those for 1941-43, in the 1947 volume. Quarterly data for 1934-40 and for 1944-48 are available upon request.
${ }^{4}$ Compiled by the U.S. Department of Agriculture, Agricultural Marketing Service. Stocks of Canadian wheat in Canada include practically all Canadian wheat held within Canadian borders exclusive of farm stocks. Subsequent to April 1932, "in transit" lake stocks are included. Through July 1947, stocks shown for a given month are those as of Friday nearest the first of the following month; thereafter, as of the nearest Thursday.

Stocks of United States wheat reported as of April l, July 1, October 1, and January 1 are shown here as of the end of March, June, September, and December. Data for wheat on farms and stocks in interior mills, elevators, and warehouses are estimates of the Crop Reporting Board based on reports of crop reporters as of the first of each quarter. The series on commercial stocks includes domestic grain in storage in public elevators, as well as Governmentowned stocks at principal terminal markets ( 45 markets in 1954) and grain afloat in vessels or barges in harbors of lake or seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other processing tacilities, or private stocks of grain intended for local use. Figures for commercial stocks are as of Saturday nearest the first of the month following that for which data are shown. Through April 1945, stocks in merchant mills (including wheat in elevators and stored for others) are estimated totals based on wheat stocks as reported by the Bureau of the Census and raised to a 100 -percent basis by the Agricultural Marketing Service; subsequently, the data are as supplied to the latter office and represent complete coverage.

Stocks of domestic wheat on farms and in interior mills, elevators, and warehouses for July 1 (shown here as June) include only old wheat. Any new wheat which comes into stock position is not reported until the new crop year begins. Beginning 1937 this is also true of the commercial and merchant mills series. Prior to 1937 an indeterminable amount of new wheat is included in the latter two se-
ries. (See note 1 for $p .121$ in the 1942 SUPplement for amounts of new wheat originally included in the July ligures for 1937-41 but excluded from the figures shown in that volume and in later issues.) Total United States stocks beginning June 1942 include wheat owned by the Commodity Credit Corporation and stored off farms in its own bins, as well as CCC-owned grain in transit and in Canadian elevators.

Annual data are quarterly averages with the exception of commercial stocks which are monthly averages. Monthly or quarterly data for 1949-50 for all series are published in the 1953 Statistical Supplement (January 1950 figure for Canadian wheat should read $152,065,000$ bushels).

Monthly data for 1947-48 for Canadian wheat stocks and United States commercial stocks are shown in the 1951 STAtistical Supplement. Quarterly data for 1945-48 for total United States domestic stocks and "on farms" may be obtained upon request. Monthly or quarterly data for 1945-46 (except for the United States total and on farms) are available in the 1949 Statistical Supplement; those for 1941-44 appear in the 1947 volume (revision-total domestic, March 1944, 544,275,000 bushels).

Monthly figures for 1932-40 for stocks of Canadian wheat are shown in the 1942, 1940, 1938, and 1936 Supplements. For monthly or quarterly figures for 1936-40 for United States stocks (commercial and merchant mills only), see also the 1942 and 1940 volumes (the June 1937 figure for merchant mills should read $40,399,000$ bushels). Revisions prior to 1941 for United States stocks (total, on farms, and in interior mills, etc.) are available upon request.
${ }^{5}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). In the total for wheat and flour, wheat flour is converted to a grain equivalent as follows: For data through 1943, on the basis of 4.7 bushels to a barrel of 196 pounds of flour; January-June 1944, on the basis of 2.398 bushels of wheat per 100 pounds of flour; July 1944-February 1946 and July 1949-December 1954, 2.33 bushels of wheat per 100 pounds; for March 1946-June 1949, the factor varies from month to month (ranging from 2.172 to 2.33 bushels per 100 pounds), being a weighted average based on the proportion of higher extraction flour sent to certain destinations. The foregoing conversion factors are those supplied by the U. S. Department of Agriculture and take into account changes in milling practices.

Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior chereto. Such shipments in 1947 amounted to $158,751,000$ bushels of wheat and flour and $102,129,000$ bushels of wheat only. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note l for p. 104.

Monthly data for 1934-43 and 1945-50 are available in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Revised data for 1944 are available upon request. Other revisions are as follows, in thousand of bushels: Total-1946, July, 24,755; 1947-August, 55,455; September, 45,810; November, 36,238; December, 37,519; 1948-April, 34,857; September, 48,958; October, 46,565; November, 30,988; December, 39,192; wheat only-1946, July, 17,090; 1947, September, 29, 824.

Monthly data prior to 1934 for "wheat only" and for wheat flour appear in the 1936 and 1932 SUPPLEMENTS. There have been many revisions in the data shown in those volumes for "wheat including flour." (Revisions for "wheat only" for 1931-May, $6,494,000$ bushels; August, $8,911,000$; for wheat flour for June 1931, 792,000 barrels.)
${ }^{6}$ Data are as of July 1.
${ }^{7}$ Average for last 2 quarters of the year.

## Page 140

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Harketing Service. Data are average prices per bushel of reported cash sales, weighted by the number of carlots sold. Data for No. 2, hard winter, represent the price for hard and dark hard winter beginning July 1947.

The weighted average price of wheat in 6 markets represents the reported cash sales of all classes and grades combined at the following markets: Chicago, Minneapolis, Kansas City, St. Louis, Omaha, and Duluth.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data prior to 1938 are available as follows: All series (except wheat, No. 1, dark northern spring), in the 1940, 1938, 1936, and 1932 volumes; wheat, No. 1, dark northern spring, in the 1940, 1938, and 1936 Supplements and on p. 20 of the June 1935 Survey.
${ }^{2}$ Compiled by the U.S. Department of Commerce, Bureau of the Census. Data through 1938 represent wheat-flour production and the actual grindings of wheat as reported by approximately 1,100 commercial mills, including those with a daily 24 -hour capacity of 400 sacks or less (the reporting mills accounted for about 95 percent of total wheat-flour production in 1929-38). Data beginning 1939 represent complete coverage and, through June 1947, are revised estimates based on the assumption that small mills not covered by the monthly survey operated at a lower rate of capacity than reporting mills. Since July 1947, reports have been obtained only from mills with a 24 -hour capacity of 400 sacks and over. Data, representing 97 percent of the totals, are reported by 375 large mills since September 1950 ( 400 prior thereto) and the balance estimated; the estimated portion is based on the 1950 annual summary of flour milling products.

The series on percent of total capacity operated is derived by multiplying the daily 24 -hour capacity in wheat flour (as reported) by the number of working days in the month (based on a 6 -day week through 1948 and a 5 -day week thereafter). The result is known as the maximum rated output. This figure is then divided into the total wheat flour produced during the month, giving the percent of total capacity operated.

All data relate to regular-grind flour only. In addition, from 1943 through February 1946, some mills produced granular flour, which was flour coarsely ground for the production of alcohol to be used in the manufacture of synthetic rubber. Monthly averages of data relating to granular flour for 1943-45 are as follows: Grindings of wheat (thousands of bushels)-1943, 3, 301; 1944, 3,720; 1945, 2,442 ; production of granular flour (thousand of sacks) 1943, 1, 270; 1944, 1,591; 1945, 1,039; offal (tons)-1943, 35, 613; 1944, 31,992; 1945, 21, 380 . Operations as a percent of capacity for regular and granular flour combined are as follows: 1943, July-December (percentage not computed for earlier months of 1943), 72.0; 1944, 73.2; 1945, 80.0 . Data by months for January 1944-February 1946 are available in the December 1944 to May 1946 issues of the monthly SURVEY.

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Statistical Supplement. Revised monthly data for 1945-46 are available upon request; comparable estimates by months for 1939-44 have not been compiled. Monthly figures for 1929-38 (comparable with italicized figures) appear in the 1942, 1940, 1938, 1936, and 1932 SupPLEMENTS. (Offal production for November 1933 should read $653,276,000$ pounds.) Data for wheat flour are shown in the 1942 and earlier Supplements in barrels and should be multiplied by 1.96 for comparison with figures given here; offal is shown in pounds and should be converted to tons of 2,000 pounds.
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data are based on reports from merchant mills reporting wheat-flour production (see note 2 above). The number of mills reporting stocks (around 900 to 1,000 ) has been somewhat smaller than the number reporting wheat-flour production. However, some mills reported that no stocks were held and others that did not report on stocks also may have held no stocks. Data cover total stocks held by reporting mills at the end of each quarter.

The figures shown on the monthly-average lines are averages of end-of-quarter figures. Quarterly data for 1947-50 are shown in the 1953 and 1951 editions of the Statistical Supplement. Revised data for 1945-46 (1st-4th quarters, respectively) are as follows, in thousands of sacks: 19456,$730 ; 6,114 ; 5,251 ; 6,775 ; 1946-4,773$; 1,$813 ; 4,412$;

6,436. Quarterly data prior to 1945 are available in the 1947, 1942, 1940, 1938, 1936, and 1932 volumes. Data are shown in the 1942 and earlier SUPPLEMENTS in barrels and should be converted to sacks by multiplying by 1.96 for comparison with data shown in the later issues.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. In 1947, $24,770,000$ sacks ( 100 pounds) of such exports were included. For general explanaation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note $l$ for p. 104.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932 (revision, June 1931, 792,000 barrels). Data are shown in the 1942 and earlier SUPPLEMENTS in barrels and should be converted to sacks by multiplying by 1.96 for comparison with data shown in the later issues.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Prices are for carlots, miller to wholesaler, baker, or chain store. Since May 1943, prices are quoted per sack of 100 pounds; earlier data, quoted per barrel of 196 pounds, have been converted to price per sack by the Department of Commerce. Through 1951 the monthly quotations are averages of the 4 or 5 weekly prices (Tuesday price for Minneapolis and Saturday for Kansas City) for each month; the annual data, except for 1943 and 1946, are averages of the weekly quotations rather than averages of the monthly figures. Beginning 1952 the monthly prices are as of 1 day near the middle of the month.

Monthly data for 1949-50 are published in the 1953 STATISTICAL SUPPLEMENT; monthly data prior to 1949 are available upon request.
${ }^{6}$ Data for 1939-48 are based on unrevised production figures.
${ }^{7}$ Average based on months for which prices are available.
${ }^{8}$ See note 5 for this page.
${ }^{9}$ Average for 6 months; comparable prices for March to August (the period for which a higher extraction rate of flour was required by War Food Order No. 144) are not available.
${ }^{10}$ Beginning 1949, operations are based on a 5-day week (see also 2 d paragraph of note 2 for this page).
${ }^{11}$ No sales.

## Page 141

${ }^{1}$ Reported by the U. S. Department of Agriculture, Agricultural Marketing Service, from compilations of the Meat Inspection Branch. Data are based on calendar months and represent the number of animals slaughtered under Federal inspection. Government-relief slaughter is included between June 1934 and August 1936 as follows: 1934, June-De-cember-cattle, $3,333,600$; calves $1,376.600$; 1934, Septem-ber-December-sheep and lambs, 1, 356, 400; 1935, January-May-cattle, 186,700 ; calves, 39,$400 ; 1936$, August and Sep-tember-cattle, 3,500 ; 1936, August-calves, 136 . Government purchases for the Emergency Hog Production Control Program in 1933 are not included; such purchases were about 14 percent as large as federally inspected slaughter of hogs.

In 1954, slaughter under Federal inspection accounted for approximately 57 percent of all calves slaughtered, 71 percent of the cattle, 87 percent of the sheep and lambs, and 73 percent of the hogs. While the proportions of total slaughter vary from year to year, the differences generally are not large. However, in 1946 the proportion was substantially lower for cattle ( 58 percent), for calves and hogs in 1945 and 1946 ( 51 and 48 percent and 57 and 58 percent, respectively), and the proportion for sheep and lambs increased from around 80 percent in 1940 to 89 percent in 1947-53.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data were shown in the 1942 and earlier SUPPLEmENTS under the "leather and leather products" section as an indication of the output of hides and skins.

Monthly data beginning 1907 for calves and 1900 for the other classes are shown in a bulletin issued by the U. S. Department of Agriculture entitled "Livestock Market News, Statistics and Related Data, 1947."
${ }^{2}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. These data represent the total receipts at practically all public stockyards (between 60 and 70 in number; 64 in 1954), including through shipments and direct shipments to packers when such shipments pass through the stockyards.

The data for June 1934-February 1935 and August and September 1936 for cattle and calves and for September-December 1934 for sheep and lambs include animals purchased for the Federal Surplus Relief Corporation. The August and September 1933 data for hogs include many pigs and sows received for sale on Government account in the Emergency Hog Production Control Program.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Monthly data beginning 1915 are shown in a bulletin issued by the U. S. Department of Agriculture entitled "Livestock, Meats, and Wool Market Statistics and Related Data, 1943."
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data are based on reports obtained from offices of State veterinarians in the various corn-belt States. The figures beginning 1951 cover 9 States as follows: Illinois, Indiana, Iowa, Michigan, Minnesota, Nebraska, Ohio, South Dakota, and Wisconsin. Those for 1940-50 cover 8 States (South Dakota is excluded) and for 1938-39, 7 States (Illinois and South Dakota are excluded).

Data include stockers and feeders bought at public stockyard markets and stockers and feeders coming from other States from points other than public stockyards, some of which were inspected at public stockyards while stopping for feed, water, and rest enroute. They represent total shipments to the States included. These data were not collected prior to 1938.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly data for 1940 are available upon request; those for 1938-39 are shown in the 1942 SUPPLEMENT.
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Prices for beef steers are for native (from the corn belt) sold out of first hands for slaughter at Chicago. Western steers are excluded. Monthly and yearly prices are weighted averages of all grades (choice and prime, good, medium, and common). Prices are weighted by the number sold in each grade.

The price of stocker and feeder cattle shipped from Kansas City is the average price of all weights of such cattle, weighted by the number shipped for each weight group. The annual average for these series is the average of the monthly figures weighted by the quantity of all grades (or weights) shipped within each month.

Monthly data for 1938-50 are published in the following issues of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data for 1936-37 for beef steers may be found in the 1940 SUPPLEMENT; earlier monthly figures are on p. 18 of the August 1939 Survey. Monthly data prior to 1938 for the price of stocker and feeder cattle are available upon request.
${ }^{5}$ Compiled by the U.S. Department of Labor, Bureau of Labor Statistics. Data beginning January 1946 represent the price per 100 pounds of good and choice grades (all weights), based on quotations as of Monday. These prices are essentially a continuation of the series designated as "good to choice" (see 1947 Statistical Supplement and earlier issues), but are taken from a different source and reflect a slight change in specifications.

Through 1951, the monthly quotations are averages of the Monday price in the 4 or 5 weeks of each month and the an-
nual figures are arithmetic averages of weekly data rather than averages of the monthly figures. Beginning 1952, the monthly prices are for 1 day of the week containing the 15th of the month.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Monthly data prior to 1934 are shown on p. 18 of the September 1938 SURVEY.
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. The wholesale price represents the average price of packer and shipper purchases at Chicago weighted by the number of hogs purchased. The prices do not include the processing tax effective from November 1933 through January 6, 19.36.

The hog-corn price ratio represents the number of bushels ( 56 pounds) of shelled corn equal in value to 100 pounds of hog (live weight); it is based on average prices received by farmers on the 15 th of each month for all grades of corn and all grades of hogs.

Monthly data for 1941-50 are published in the following. editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly data for 1938-40 for the price of hogs are available in the 1942 SUPPLEMENT; earlier monthly data for this series and monthly data prior to 1941 for the hogcorn ratio are available upon request (the latter series has been revised since publication in the 1942 SUPPLEMENT).
${ }^{7}$ Data for 1940-50 cover 8 States. Monthly averages for 1940 for 7 States (comparable with earlier data) are as follows: Cattle and calves, 170,000 ; sheep and lambs 278,000 .
${ }^{8}$ Data beginning 1951 cover 9 States. Monthly averages for 1951 for 8 States (comparable with data for 1940-50) are as follows: Cattle and calves, 280,000; sheep and lambs, 292,000.

## Page 142

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Monthly data are averages of weekly figures which are based on the mean of the daily range of quotations. Prices through July-September are quotations for spring lambs; during May and June, marketings of lambs include both wooled and shorn lambs from the preceding year's crop and spring lambs from the current year's crop. From October through early spring, prices are for wooled lambs.

The average price of lambs at Chicago is based on the bulk of sales prices from data of the livestock and meat reporting service. The price of feeder lambs is for range stock, good and choice, $50-75$ pounds.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. (The average price at Chicago for May 1948 should read $\$ 26.25$.) Monthly data prior to 1938 are available upon request.
${ }^{2}$ Reported by the U. S. Department of Agriculture, Agricultural Marketing Service. Data for meat production, except for pork production excluding lard, represent the total dressed carcass weight of livestock slaughtered under Federal inspection, exclusive of meats from condemned animals. Edible offal is not included. Total production is obtained by multiplying the average dressed weight (obtained from concerns accounting for 75 to 85 percent of the total Federally inspected slaughter) by the total Federally inspected slaughter. For 1954, production of meats under Federal inspection accounted for 83 percent of all meats (that is, meats including wholesale, retail, and farm production); for the proportion of animals slaughtered under Federal inspection to the total slaughter see note 1 for p. 14l. Data do not include meats from slaughter of animals purchased by the Federal Surplus Relief Corporation during June 1934-February 1935 and in August and September 1936.
"Pork production excluding lard" includes all of the dressed hog carcass, exclusive of head bones and feet and after an allowance for all carcass fat rendered into lard. Lard data beginning 1937 represent the actual production of rendered lard and rendered pork fat in Federally inspected
plants as reported by the Meat Inspection Service (see p. 143 for figures). Prior to 1937, lard production was estimated by applying an average yield per hog to the number of hogs passed for food. Production from Federally inspected slaughter accounted for 53-68 percent of the total production of lard, as estimated by the U. S. Department of Agriculture, for 1930-41, 1945, and 1946; about 72 percent for 1929, 1942, 1943, 1947, and 1948; and 76-78 percent for 1944 and 1949-54. Rendered lard and rendered pork fat are estimated to be about 70 percent of raw fat obtained from hogs.

Monthly data for 1938-50 are published in the 1953, 1951 1949, 1947, and 1942 issues of the Statistical Supplement. For earlier monthly data for total meat production and for beef and veal, lamb and mutton, and pork (including lard), and lard (through 1936), see the 1940, 1938, 1936, and 1932 SUPPLEMENTS. (Revised 1937 monthly figures for lard are on p. 18 of the January 1941 Survey.) Monthly data prior to 1938 for pork production (excluding lard) are available upon request. Data beginning 1921 for all series are available in the publication of the U. S. Department of Agriculture, "Livestock, Meats, and Hool Market Statistics and Related Data, 1943."
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. Stocks in space owned or leased and operated by the Armed Forces are not included. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

The total for all meats is the sum of the individual meat items as shown on this page and on p . 143 ; the total also includes edible offal and, beginning June 1944, canned meats and meat products and sausage and sausage-room products (these items were shown separately under "miscellaneous meats" in the 1949 and earlier issues of the SUPPLEMENT). The content of the various items is as follows: "Beef and veal"--beef frozen, in cure, cured and smoked, and (beginning June 1944) frozen veal which amounted to $8,517,000$ pounds for that month (veal was not reported until June 1944, although prior to that month some may have been held as beef or included in data formerly reported as "trimmings and edible offal"); "lamb and mutton"-frozen; "pork"-frozen, dry salt, in cure and cured, and other in cure, cured, and smoked. All stocks of beef, pork, and mutton trimmings, formerly included under "miscell aneous meats," have been distributed to the individual meat items beginning June 1944; see note in the 1949 Statistical SUPPLEMENT. Stocks of meat purchased under the Emergency Hog Control Program and meats from "drough-stricken livestock" purchased by the Federal Surplus Relief Corporation in 1934 and 1935 are not included in the figures.

Monthly data prior to 1951 for total meat stocks, excluding lard; are available upon request (the data shown in the 1953 and earlier issues of the Statistical Supplement include stocks of lard). Monthly data for 1929-50 for the other series on stocks of meats are published in the following editions of the STatistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. The comparable item for pork is designated in the 1940 and earlier SUPPLEMENTS as "fresh and cured" pork; the series for total stocks of pork (including lard) shown in those SUPPLEMENTS has been discontinued. Monthly data prior to 1923 are avail available in a publication of the $U$. S. Department of Agriculture, "Livestock, Meats, and Wool Market Statistics and Related Data, 1943."
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted in July 1953, see note 1 for p. 104.

The trade figures comprise fresh meats and chilled or frozen, canned, pickled, cured, and other prepared and processed meats. Data for total meats (both exports and imports) include beef and veal, pork, mutton and lamb, canned meats, fresh poultry and game, edible offal, sausage, sausage ingredients, and casings; for exports, the data also include lard, horse meat, and tushonka (contains about 90 percent
canned pork). Imports of lard are not included; they were small in the earlier years covered and, recently, have been practically nil.

Exports of lard (p. 143) include neutral lard. Shipments under the Army Civilian Supply Program are included in the export figures beginning 1947; data were not reported prior thereto. In 1947, such shipments were as follows (thousands of pounds): Total meats (including lard), 141,846; beef and veal, 941; pork (excluding lard), 759; lard, 28,079.

The Statistical Supplements referred to in this paragraph contain monthly data prior to 1951 for "exports." (Monthly figures prior to 1951 for imports, shown for first time in the present volume, are available upon request.) The 1938-50 monthly export figures will be found in the 1953, 1951, 1949, 1947, and 1942 volumes. (Exports of total meats for December 1946 should read $51,000,000$ pounds.) For 1936-37 data for total meats (including lard) and for lard separately, see the 1940 SUPPLEMENT; for figures prior to 1936, the November 1939 Survey, p. 16. Monthly data prior to 1938 for beef and veal appear in the 1940, 1938, 1936, and 1932 SUPPLEmENTS (revisions of earlier figures are given in the appropriate note in the 1940 volume). Monthly data prior to 1938 for pork exports may be derived by subtracting data for lard (on p. 16 of November 1939 Sunvey) from those for pork, including lard, shown in the 1940, 1938, 1936, and 1932 SUPPLEMENTS.
${ }^{5}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the wholesale price for beef, fresh, steer carcasses, choice (600-700 pounds). Monthly data are averages of weekly prices which are based on the mean of the daily range of quotations of the market news service; annual figures are simple averages of monthly data.

Monthly data for 1945-50 are published in the 1953, 1951, and 1949 issues of the Statistical Supplement; monthly data prior to 1945 are available upon request.
${ }^{6}$ Average based on months for which quotations were available.

## Page 143

${ }^{1}$ See note 2 for p. 142.
${ }^{2}$ See note 3 for p. 142.
${ }^{3}$ See note 4 for p. 142.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The price of hams is a composite for Chicago, New York, and San Francisco beginning 1947; prior thereto, data are for Chicago only. Quotations are for smoked, loose hams at Chicago through November 1946. This series was discontinued by the compiling agency after that month. Prices beginning 1947 are for smoked, No. 1, skinned (12-15 pounds), wrapped. The lard prices are for refined lard in tierces, bulk, at Chicago.

Through 1951 the monthly data are the averages of the Tuesday price for hams and the Thursday price for lard in the 4 or 5 weeks for each month; the annual averages are averages of the weekly quotations. Beginning 1952 the prices are for 1 day of the week containing the 15 th of the month.

Nonthly data for 1949-50 are published in the 1953 STAtistical Supplement; those for 1947-48 for lard, in the 1951 volume. (Data for 1947-48 for hams are available upon request.) For monthly data for 1932-46, see the following editions of the Statistical Supplement: 1949; 1947; 1942; 1940; 1938; and 1936. Monthly data prior to 1932 for hams may be found in the 1932 Supplement; for lard, on p. 18 of the January 1934 Survey.
${ }^{5}$ Compiled by the U.S. Department of Agriculture, Agricultural Marketing Service. Monthly data are based on the mean of the daily range of quotations. Prices are for 8 - to 10 -pound average loins through 1946 and for 8 to 12 pounds thereafter; this minor change does not affect the comparability of the series.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data beginning July 1919 are shown in the publication of the U. S. Department of Agriculture, "Livestock, Meats, and Wool Market Statistics and Related Data, 1941."
${ }^{6}$ Compiled by the U.S. Department of Commerce, Bureau of the Census. Data represent stocks in refrigerated and dry storages of factories and warehouses (except amounts in hands of retailers) of rendered lard, neutral lard, rendered pork fat, and, beginning January 1949, refined lard. (Figures prior to 1949 may include a certain quantity of the refined product, as no distinction was made between rendered and refined in the collection of data.)

Monthly or quarterly data prior to 1951 are available upon request.
${ }^{7}$ Average is based on end-of-quarter stocks.
${ }^{8}$ Average based on months for which data are available.
${ }^{9}$ Data beginning 1947 represent a composite of quotations at Chicago, New York, and San Francisco; they are not comparable with earlier quotations which are for Chicago only. The 1947 average price for Chicago is $\$ 0.580$ per pound.

## Page 144

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the receipts of processed poultry at Boston, New York, Philadelphia, Chicago, and San Francisco.

Monthly data for 1929-50 are published in the following editions of the Stati stical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{2}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. Stocks in space owned or leased and operated by the armed services are not included. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

Stocks of poultry are for frozen poultry only. Shell eggs are for cases of 30 dozen each, weighing about 45 pounds. The amount of frozen eggs (whites, yolks, whole, and/or mixed) obtained from a case of shell eggs has increased from 35.5 pounds per case in 1921 to 38.5 beginning January 31, 1951.

Monthly data for 1929-50 are published in the following editions of the Stati Stical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics, with the exception of data for cocoa prior to 1943 . The poultry price through 1946 is the Chicago price for live fowls, small to heavy hens, general run; thereafter, data are for heavy type, No. 1. The cocoa price beginning 1943 is for beans, Accra, bulk, f.o.b. New York, from importer; prior to 1943 the prices are averages of daily quotations compiled by Scarburgh Company, 90-96 Wall Street, New York, N. Y.

For 1943-5l the monthly data are averages of Tuesday prices for the 4 or 5 weeks of each month; the annual averages, except for the price of cocoa prior to 1943 and in 1948, are averages of the weekly quotations. Beginning 1952 the prices are as of one day of the week containing the 15 th of the month.

Monthly data for 1949-50 are published in the 1953 STAtisti cal Supplement. Monthly data for poultry for 1938-46 are available in the 1949, 1947, and 1942 volumes; those for 1947-48 and 1929-37 are available upon request. Mon thly data for 1929-48 for cocoa are published in the following editions of the STATISTICAL SUPPLEMENT: 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.

[^4]to, by the U. S. Department of Labor. Data through 1943 are averages of Monday prices at Chicago; quotations included for July-December 1943 are for fresh firsts instead of extras, large, but the prices for the two grades are close. Beginning 1944, data represent averages of daily low and high quotations for extras (minimum 60 percent A quality).

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Stati stical Supplement. Monthly data for 1945-46 (Department of Agriculture series) appear on p. 24 of the June 1950 Surver. Comparable figures for 1944 (January-December, respectively, in dollars per dozen) are as follows: $0.368 ; .351 ; .342 ; .344 ; .329 ; .355 ; ~ .388 ; ~ .387 ;$ .440; . $470 ; .492 ; .480$; monthly average, . 395. Monthly data for 1941-43 (Department of Labor series) are available in the 1947 Statistical Supplement. Prices for 1914-40, shown in the 1942 SUPPLEMENT, are approximately comparable with the 1941-43 figures.
${ }^{5}$ Compiled by the $U . S$. Department of Agriculture, Agricultural Marketing Service. Data represent eggs produced by farm flocks and by commercial flocks. Monthly estimates of total eggs produced are based on returns from crop correspondents (about 30,000 in recent years) who report for the first day of each month the number of layers on hand and the number of eggs produced. The total monthly egg production is obtained by multiplying the estimated total number of layers by the number of eggs produced per layer.

Annual estimates of layers on January 1 of each year are based on a survey covering about 150,000 flocks, in addition to the returns from the regular monthly crop correspondents. At the end of the year adjustments are made in the number of layers on the first of each month so that they will be in agreement with the annual estimates. The monthly rates of lay are then applied to the adjusted number of layers to secure the adjusted total egg production for each month. Data for all years have been so adjusted. The estimates are also adjusted every 5 years to data reported in the Census of Agriculture; they have now been adjusted to data from the Census of 1950 .

Monthly data for 1949-50 are published in the 1953 edition of the Statistical Supplement; those for 1941-44, in the 1947 volume; for 1938-39 in the 1942 issue; and for 1940, on p. 24 of the June 1947 Survey. Monthly data for 1945-48 and 1929-37 are available upon request.
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Data represent dried egg production from fresh and storage shell eggs and from frozen eggs. The yield of dried eggs from a case of eggs ( 30 doz en, weighing about 45 pounds) is approximately 10.2 pounds beginning January 31, 1952, and 10 pounds prior thereto. Data are available separately for whole, albumen, and yolk production from the Department of Agriculture reports.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT; those prior to 1941 are available on p. 20 of the March 1945 SurVEY.
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of the Census beginning 1947 and the Office of Domestic Commerce prior to that time. Data represent estimates of sales of confectionery and competitive chocolate products by manu-facturer-wholesalers, manufacturer-retailers, and chocolate manu facturers making consumer-type confectionery items such as chocolate bars, etc. The figures do not include sales of chocolate coatings or cocoa by the latter group of manufacturers and also do not include sales of retail confectioners with a single business location. The reported data are raised to represent complete industry totals.

For 1947, the annual total used is that from the 1947 Census of Manufactures. Monthly estimates for 1947 were first calculated from the January 1947 dollar sales of a group of companies by applying month-to-month percentage changes indicated by reporting companies. These estimates were then raised to the level indicated by the 1947 Census total. Beginning January 1948, estimated industry totals are derived from the sales reported by approximately 400 manufacturing companies, which in 1953 accounted for about 85 percent of the total dollar value of confectionery sales.

The annual estimates of manufacturers' sales of confectionery through. 1946, compiled by the Office of Domestic Commerce, were developed by a method differing from that used by the Census Bureau and are not strictly comparable with the data for the succeeding years.

Monthly data for 1949-50 are published in the 1953 edition of the Statistical Supplement; those for 1947-48 are available upon request. (Data are not available by months prior to 1947.)
${ }^{8}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). Data beginning 1934 represent imports for consumption; prior thereto, general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1 , 1953, see note 1 for p. 104.

Monthly data for 1929-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions (in long tons): 1931-May, 22,513; July, 17, 542; December, 15,369.
${ }^{9}$ Reported by the New York Coffee and Sugar Exchange, Inc. Data on clearances from Brazil cover total exports from the ports of Rio de Janeiro, Santos, Bahia, Victoria, Pernambuco, Paranagua, and, beginning 1933, Angra dos Reis.

The visible supply represents stocks of green coffee in "first hands" stored in Exchange licensed warehouses and on the docks of such warehouses. It includes stocks at the ports of New York, New Orleans, and San Francisco, the arrivals at other ports being considered by the Exchange as stocks that pass more or less immediately into consumption channels. Data do not include any stocks afloat in transit to the United States. Stocks, reported as of the first of the month, are shown here for the preceding month.

Data prior to July 1949 are in bags of original weights as reported. Beginning July 1949, the data represent bags of approximately 132 pounds. The original weight of the Brazilian bag of coffee is about 132 pounds; bags of "other kinds" of coffee are of various original weights, usually averaging about 154 pounds. Beginning with July 1949, however, original weights of "other kinds" of coffee have been converted by the compiling agency to 60 kilo bags (i.e., bags of about 132 pounds).

Monthly data for 1929-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Figures for visible supply in November 1933 and January 1935 should read 936,000 bags and 705,000 bags.
${ }^{10}$ Data beginning 1944 represent averages of daily quotations and are not strictly comparable with prices for earlier periods which are Monday quotations; see also note 4 for this page.
${ }^{11}$ The 1947 average price comparable with data for earlier years is $\$ 0.252$.
${ }^{12}$ Data beginning 1947 are not comparable with earlier figures. (See note 7 for this page.)
${ }^{13}$ Average for 10 months; no quotation for July and August.
${ }^{14}$ Comparable data not available; prices not computed on account of insufficient price data for 60 percent A quality eggs during these months. (See note 4 for this page.)

Page 145
${ }^{1}$ See note 8 for p. 144.
${ }^{2}$ Data on imports of coffee and exports of refined sugar are compiled by the $U$. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1, 1953, see note l for p. 104. Data for imports cover general imports through 1933 and imports for consumption thereafter. Exports of sugar beginning 1947 include shipments under the Army Civilian Supply Program
( 43,876 short tons in 1947); data for such shipments are not avalable for earlier years.

The figures are shown in the original reports in pounds; sugar is converted to short tons, and coffee to bags on the basis of 132 pounds to the bag (see note 8 for this page). Exports of sugar beginning 1943 cover both raw and refined (including cane, beet, maple, brown, granulated, powdered, cubes, etc., but not including corn, grape, or flavoring sugar); prior thereto, the amounts represent refined sugar only.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data for sugar in the 1942 and earlier issues of the SUPPLEMENT are in long tons and should be converted to short tons for comparison with figures shown beginning with the 1947 SUPPLEment.
${ }^{3}$ Compiled by the $V$. S. Department of Labor, Bureau of Labor Statistics. Data are for green coffee, f.o.b. New York. Through 1951 the annual averages are averages of the weekly quotations for Tuesday and the monthly data are averages of quotations for the 4 or 5 Tuesdays in each month. Beginning 1952 the prices are those prevailing on 1 day of the week containing the 15 th of the month.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data prior to 1938 are shown on p. 22 of the April 1942 Survey.
${ }^{4}$ Compiled by the U. S. Department of the Interior, Fish and Wildlife Service (prior to 1945, data were collected by the $U$. S. Department of Agriculture). These data represent the total holdings of fish (including shellfish), both freshwater and salt-water species, in cold-storage warehouses in the United States and Alaska; stocks of salted and smoked fish are not included. The figures through 1942 cover stocks as of the 15 th of the month; for 1943-53, as of the lst of the month following that for which data are shown; thereafter, as of the end of the month. The monthly reports give details as to holdings and the amount of fish frozen each month.

Monthly data for 1929-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions (thousands of pounds): 1930-September, 85,358; October, 88, 603; November, 91, 872; December, 85, 323; 1931-June, 39, 384 ; July, 48, 445; October, 73,144.
${ }^{5}$ Compiled from the Weekly Statistical Sugar Trade Journal, published by Willet and Gray, Inc. Data represent all stocks on the island as of Saturday nearest the end of the month. A Spanish ton (the unit of measurement) is equivalent to $2,271.64$ English pounds.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Data shown in earlier issues of the SUPPLEMENT have been revised and are available upon request.
${ }^{6}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service, from reports by cane-sugar refiners, beet-sugar processors, importers of direct consumption sugar, and continental cane-sugar mills. Data represent both raw and refined sugar in terms of raw sugar ( $96^{\circ}$ equivalent). One ton of raw sugar $96^{\circ}$ test is assumed to be equivalent to 0.9346 ton of refined.

Production represents production of domestic cane and domestic beet sugar. Deliveries for domestic consumption include deliveries for U. S. military forces at home and aborad. Deliveries for export include deliveries for lendlease and deliveries for liberated areas and military relief during periods when such shipments were made.

Data on entries from offshore areas are secured from reports from the importers and represent the amounts charged against quotas, except for the periods September 11 to December 31, 1939, and April 13, 1942, to December 31, 1947, when the quotas were suspended. The data include shipments from Puerto Rico, Hawaii, Virgin Islands, Cuba and other foreign countries, and, through March 1942 and beginning 1948, from the Philippine Islands. Invert molasses, produced and shipped in lieu of raw sugar at the request of the
U. S. Government, is excluded as follows (annual totals, in terms of sugar equivalent, short tons): $1942,316,466$; 1943, 260,977; 1944, 700,914.

The data on entries from offshore areas differ from the imports of raw and refined sugar for consumption (on p. 146) compiled by the Bureau of the Census, largely in that the latter are as reported (without conversion to equivalent raw sugar of uniform polarization) and since 1935 do not include receipts from Virgin Islands.

Stocks include refiners' raw and refined stocks, stocks of beet processors and of importers of direct-consumption sugar, stocks of mainland cane mills beginning January 1939, and importers' raw stocks beginning January 1940.

Monthly data for 1941-50 (except production for 1941-50 and entries from Hawaii and Puerto Rico for 1941-44) are shown in the 1953, 1951, 1949, and 1947 issues of the STAtistical Supplement. Monthly figures prior to 1941 are available upon request. The figure for stocks for January 1949 should read $1,347,617$ tons.
${ }^{7}$ Data through 1941 are actual exports, as reported by the U. S. Department of Commerce, converted to raw value.
${ }^{8}$ Prior to July 1949 the data for visible supply include, for "coffee other than Brazilian," the amounts as reported in bags of original weights (see 3d paragraph of note 9 for p. 144).
${ }^{9}$ Monthly average computed from annual total; monthly figures not available.
${ }^{10}$ Excludes importers' raw stocks and, prior to 1939; also stocks of mainland cane mills. Monthly averages for 1939 and 1940 excluding stocks of mainland cane mills and importers' raw stocks, comparable with averages for 1935-38, are as follows (short tons): 1939, 1,874,532; 1940, 1,974,696. The 1940 average comparable with the average for 1939 (excluding importers' raw stocks but.including stocks of mainland cane mills) is $2,033,633$ short tons.

## Page 146

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the. Census (by the Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Data for sugar are for canesugar only and represent imports for consumption for all years. Raw sugar represents all sugar testing not above $98^{\circ}$ by the polariscope, while refined sugar is sugar testing above $98^{\circ}$. The data for sugar, originally reported in pounds, have been converted to short tons.

Monthly data for sugar for 1936-50 (except for 1947) are published in the following editions of the Statistical SupPLEMENT: 1953; 1951; 1949; 1947; 1942; and 1940. (Revisions, short tons: Raw sugar, March and June 1946, respec-tively-total, 320,906 and 194,523; Cuba, 320,906 and 184,771; refined sugar, October 1945, total, 35,029 .) Monthly data for 1929-35 and revised monthly figures for 1947 are available upon request. Data in the 1942 and 1940 SUPPLEMENTS are in long tons and should be converted to short tons for comparison with figures shown in later volumes.

Data for tea are imports for consumption beginning 1933; prior thereto, general imports. Monthly imports of tea for 1929-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (The figure for December 1946 should read $11,641,000$ pounds.)
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The wholesale price for raw sugar is for cane, $96^{\circ}$ polarization, Cuban, duty paid, bulk, no quantity specified, market price, importer to refiner, c.i.f. New York (the note in the 1940 SUPPLEMENT erroneously states that duty was excluded). The wholesale price for refined sugar is the quotation for domestic, in 100 -pound paper bags, excluding excise tax, f.o.b. New York.

Through 1951 the annual averages are averages of weekly quotations for Tuesday and the monthly data are averages of
the quotations for the 4 or 5 Tuesdays in each month. Beginning 1952 the prices are as of one day of the week containing the 15 th of the month.

The retail price of sugar is for cane sugar, granulated; prices are collected from virtually all food chains and a sample of independent retail food dealers during the first 3 days of the week containing the 15 th of the month. Prices prior to November 1937 (shown in italics) are based on a lpound bag of sugar, while quotations for November 1937 through 1949 are from quotations on 10 -pound bags of sugar. The annual average for 1937 is based on the l-pound quotations through October and the 10 -pound quotations for November and December. (The October 1937 price for 5 pounds based on 10 -pound bags is $\$ 0.275$; on 1 -pound bags, $\$ 0.285$. ) The price is quoted for 5 pounds beginning 1950 (data shown in the 1951 SUPPLEMENT and earlier issues should be converted to this basis for comparison with figures shown in later volumes). See note 8 with regard to a change in the series in January 1946.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (Revisions: refined sugar, retail price-June 1933, $\$ 0.054$; July 1933, $\$ 0.052$.)
${ }^{3}$ Data for January-June 1953 represent prices for New York, N. Y., and Newark, N. J.; prices beginning July 1953 are for New York, N. Y., and northeastern N. J. (the price for June 1953 on this basis is $\$ 0.497$ ).
${ }^{4}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. The totals shown represent the latest revised estimate (not monthly averages) of the year's total crop. The Departiment of Agriculture issues preliminary estimates as of the first of the month for July-December, and revised estimates in the following spring.
${ }^{5}$ Compiled by the $U . S$. Department of Agriculture, Agricultural Marketing Service. Data represent stocks of tobacco in the United States and Puerto Rico (on a farm-salesweight basis) owned by all leaf tobacco dealers, manufacturers, quasi-manufacturers, growers' cooperative associations, warehousemen, brokers, holders, and owners (except manufacturers manufacturing less than 35,000 pounds of tobacco, less than 185,000 cigars, or less than 750,000 cigarettes during the first three quarters of the preceding calendar year). Growers are not required to report their stocks under the law. Data are on an ownership basis, i.e., they include stocks actually owned by those enumerated above.

All data on domestic stemmed tobacco have been converted to an unstemmed basis and the unstemmed is further converted to a farm-sales weight by allowing for normal shrinkage and losses of dirt, sand, and moisture in handling. Each type of tobacco has a different yield; the conversion factors used in these computations are shown in circular No. 435, "Tobacco Shrinkages and Losses in Weight in Handling and Storage," issued in July 1937 by the Department of Agriculture. Foreign data are converted to an unstemmed basis, and, since the weight at time of entry is analogous to the farmsales weight of domestic types, they can be combined directly with the data for domestic types on a farm-salesweight basis. Data for the total and cigar leaf have been revised for January l936-April 1940 by deducting 5,550,000 pounds on the basis of discovery of errors in returns for one large dealer. It is known that a similar error occurred over a longer period of years but no definite records are available on which to base revisions earlier than 1936. Data are reported as of the first of April, July, October, and January, and have been moved back to the last day of the preceding month for presentation in the Surver.

Quarterly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Quarterly data prior to 1938 are correct as shown in the 1940 SUPPLEMENT and on p. 15 of the March 1940 SURVEY, except for the total and cigar leaf for 1936 and 1937 which have been revised to exclude $5,550,000$ pounds for each quarter (see preceding paragraph). Data for fire-cured and dark air-cured, flue-cured and light aircured, and miscellaneous domestic (given separately in the 1947 and earlier issues of the SUPPLEMENT) should be com-
bined for comparison with the data shown in subsequent volumes.
${ }^{6}$ See 3d paragraph of note 2 for this page.
${ }^{7}$ Averages based on months for which prices are available.
${ }^{8}$ Data beginning January 1946 reflect a change in the sample and in the method of summarizing reports; January 1946 price per 5 pounds on old basis is $\$ 0.320$ compared with $\$ 0.335$ on new basis. The 1946 average is for 11 months.
${ }^{9}$ See note 5 for this page.

## Page 147

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Fore ign and Domestic Commerce through April 194l). Data for leaf tobacco represent total exports or imports of unmanufactured tobacco, including stems, trimmings, and scrap. Exports include shipments under the Army Civilian Supply Program beginning 1947; data were not reported prior thereto. In 1947, leaf tobacco included 110,000 pounds of such shipments and cigarettes, 405 million. Imports represent imports for consumption beginning 1934 and general imports prior thereto. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions (leaf tobacco, in thousands of pounds; cigarettes, in thousands): Leaf tobacco exports-1931-April, 46.,829; August, 23,107; September, 44,958; October, 49, 155; 1939-January, 28,013; 1946-March, 52,219 ; December, 60,164 ; leaf tobacco im-ports-1931, March, 10,417; cigarette exports-1930-November, 251,514; December, 338,916; 1931-March, 338,308; November, 219, 328; 1932-January, 190,833.
${ }^{2}$ Compiled by the U. S. Treasury Department, Internal Revenue Service. Data represent the production of all manufactured tobacco. Scrap chewing, fine cut, plug, and twist are combined for the column designated "chewing, plug, and twist." The monthly averages, except for 1954, are based on revised annual totals and differ from averages of the monthly figures which are from current reports and are not revised. The differences, however, are small.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; and 1938. Data for snuff were not reported monthly prior to 1941 and monthly figures through 1940 for the total therefore exclude this item; also, snuff is not included in the monthly averages for the total as shown in the 1940 and 1938 SUPPLEMENTS. (Data for scrap chewing, fine cut, plug, and twist, shown in the 1947 and earlier SUPPLEMENTS, may be added for comparison with the data shown here.)
${ }^{3}$ Compiled by the U.S. Treasury Department, Internal Revenue Service. Tax-free withdrawals include withdrawals of small cigarettes (those weighing not more than 3 pounds per thousand) for the following purposes: For shipments outside continental United States, including exports and shipments for the use of the United States military forces (except shipments to Alaska and Hawaii for the use of military forces beginning January 1, 1946, which are tax-paid); for use as sea stores on vessels on the high seas beyond the jurisdiction of the internal revenue laws (does not apply to coastwise shipping) ; for purchases by agencies such as the Veterans Administration, the Public Health Service, and the Red Cross for distribution in hospitals, etc.; for personal consumption by employees in tobacco factories.

Monthly data for July 1943 through December 1950 are shown in the 1953, 1951, 1949, and 1947 issues of the StaTISTICAL SUPPLEMENT. Data by months are not available prior to July 1943; monthly averages, except for 1954 , are based on annual totals and differ slightly from averages of the monthly figures, which are from current reports and are not revised.
${ }^{4}$ Compiled by the $U$. S. Treasury Department, Bureau of Internal Revenue Service. Data represent tax-paid withdrawals from domestic factories and are based on the number of stamps used by manufacturers. Small cigarettes, weighing not more than 3 pounds per thousand, represent over 99 percent of the total production of cigarettes; large cigars, weighing 3 pounds per thousand, have accounted for 94 to 98 percent of the total production of cigars during the period covered here. The figures for manufactured tobacco and snuff comprise plug, twist, fine-cut, and smoking tobacco, and snuff. The monthly statements of the Internal Revenue Service give statistics of tax-paid withdrawals of tobacco products from Puerto Rico and, through 1942, withdrawals from Philippine Islands, which are not included in the figures shown here

The monthly averages, except for 1954 , are based on revised annual totals and differ from averages of the monthly figures which are from current reports and are not revised.

Monthly data for 1944-50 for cigarettes are published in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data prior to 1951 for cigars and manufactured tobacco and snuff are available upon request (data shown in the 1953 and earlier issues of the Supplement are estimates compiled on the basis of stamps sold by collectors' offices).
${ }^{5}$ Compiled by the U.S. Department of Labor, Bureau of Labor Statistics. The price is a composite price, f.o.b. destination, from manufacturer to wholesaler and jobber. Data beginning 1947 exclude excise taxes; prior thereto, excise taxes are included.

Through 1951 the monthly prices are averages of Tuesday prices for the 4 or 5 weeks of each month and the annual averages àre averages of the weekly quotations. Beginning 1952 the prices are as of one day of the week containing the 15th of the month.

Monthly data for 1929-46 are published in the following editions of the Statistical Supplement: 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Monthly data for 1947-50 are available upon request.

6 "Scrap chewing" is included with "chewing, plug, and twist" beginning 1931; prior thereto, with "smoking." See note 2 for this page.
${ }^{7}$ Data beginning 1947 are not comparable with earlier figures, because of the exclusion of excise taxes. The monthly average for 1947 comparable with earlier data is $\$ 6.51$.

## Page 148

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. Data represent general imports through 19.33 and imports for consumption thereafter. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p . 104.

In addition to the four items shown separately in the table, total imports of hides and skins inclade buffalo hides, India water-buffalo, horse, colt, ass, and mule hides, cabretta, kangaroo, and wallaby skins, deer and elk skins, fish and shark skins, reptile skins (excluded from January 1936-December 1940 when they were reported in pieces only), and seal (nonfur) skins. Prior to January 1936, other hides and skins not specified above were also included; since that date these have been excluded, as amounts are small and data in pounds are not available. Data for the four types shown separately are given here in pieces so that they will be of more value for use with the other leather series. They were shown in the 1940 and earlier SUPPLEmENTS in pounds.

Monthly data for 1938-50 are shown in the 1953, 1951, 1949, 1947, and 1942 issues of the Statistical Supplement (minor revisions for 1946 and 1950 are available upon request). Monthly data prior to 1938 for the total are available in the 1940, 1938, 1936, and 1932 Supplements. Minor revisions have been made in figures for 1931. Monthly data (in pieces) for the four other series prior to 1938 are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The series on calfskin prices is for northern, heavy, 9 l/2-15 pounds, f.o.b. Chicago. Steer-hide prices are for heavy native, over 53 pounds, f.o.b. Chicago. Monthly figures for 1947-51 for both series are the simple arithmetic averages of the 4 or 5 weekly prices in each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those prevailing on a particular day of the month, usually within the week containing the 15th.

Monthly data for 1949-50 are available in the 1953 issue of Business Statistics; monthly data for 1947-48 are available upon request.
${ }^{3}$ Compiled by the Tanners' Council of America, Inc. Data are based on reports received from practically the entire industry and are adjusted to an industry basis. Data for production of sheep and lamb leather include, for all years, the flesh side leather of split sheepskins (fleshers) and exclude the grain leather (skivers); figures prior to 1940 as shown in the 1942 and earlier Statistical Supplements include skivers instead of fleshers and therefore differ slightly from the data in subsequent volumes.

Monthly data for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly figures for 1932-40 are shown in the 1942, 1940 , 1938, and 1936 volumes. Monthly data for 1925-31 for calf and kip and cattle-hide leather are available on p. 19 of the June 1933 Sunvey and data for 1922-31 for goat and kid and sheep and lamb leathers are on p .19 of the June 1935 issue. Data prior to 1940 for sheep and lamb leathers shown in those volumes differ slightly from figures published beginning with the 1942 STATISTICAL Supplement (see above paragraph); revised figures prior to 1939, including fleshers instead of skivers, are available upon request.
${ }^{4}$ Compiled by the U.S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. The series on soleleather offal, including welting and belting offal, covers data reported as "other sole leather, including offal" prior to 1936, as "other sole leather" and "sole and belting leather offal" for 1936-40, and as "sole and belting leather of fal" for 1941-44. These data appear to be approximately comparable. Exports of cut soles are not included in any of the data.

Upper-leather exports comprise cattle and kip side upper (grain and splits); calf and whole kip (grain and other); sheep and lamb; goat and kid; other upper leather not elsewhere specified; and patent upper leather (cattle side and other).

Monthly data for 1941-50 are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (revision for upper leather, April 1947: 4,049,000 square feet); monthly data for 1938-40 will be found in the 1942 Supplement. The unit for upper leather is erroneously stated in that volume as 1,000 pounds instead of the correct unit of 1,000 square feet. Earlier monthly data for sole leather are available upon request; combined figures for the two series prior to 1936 appear in the 1938 SUPPLEMENT. Monthly figures beginning 1922 for exports of upper leather appear in the 1940 and 1938 Supplements and on p. 20 of the January 1938 Survey.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Prices for sole leather cover cattlehide bends, light, under 8 iron, vegetable tan, tannery run; those for upper cover calf, chrome tan, full grain, black, men's weight, B and C grades. Data prior to 1952 for upper leather are not entirely comparable with later figures.

Monthly figures for 1947-5l for both series are the simple arithmetic averages of the 4 or 5 weekly prices in each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those prevailing on a particular day of the month, usually within the week containing the 15 th.

Monthly data for 1949-50 are available in the 1953 issue of Business Statistics; monthly data for 1947-48 are available upon request.

#### Abstract

${ }^{6}$ Based on the official annual total including revisions not distributed by months. ${ }^{7}$ Average computed by Office of Business Economics. The 1951 average for sole leather is based on data for 7 months (June-December); the 1952 average for upper leather, on 11 months (February-December). ${ }^{8}$ No quotation.

## Page 149

${ }^{1}$ Compiled by the IV. S. Department of Commerce, Bureau of the Census, from reports of manufacturers representing approximately 95 percent of the total production for 1929,98 percent for 1930-33, 99 percent for 1934-36, 98 percent for 1937-42, practically the entire production for 1943-49, and the complete industry thereafter. Reports cover all known factories which use conventional shoe machinery. The 1953 figures are industry totals based on monthly reports filed by approximately 900 manufacturing establishments and on annual reports filed by some 350 smaller firms. Annual totals for 1950-52 and the 1954 data are adjusted to the 1953 benchmark. Monthly averages for 1950-54 are based on the adjusted totals; the adjustments, however, have not been distributed to the monthly figures for $1950-52$.

Data for leather shoes made under Government contract were reported separately for 1941 to 1946 ; these shoes are included in total shoe production for this period but are not included in the breakdown by kinds (for monthly data, 1941-46, and further detail on military production, see the 1947 Statistical Supplemfnt).

The data through 1943 by kinds for shoes, sandals, and play shoes (except data for infants' and babies') include only those with leather uppers. Data for all categories beginning 1944, and earlier figures for infants' and babies' shoes, include also those with part leather and nonleather uppers. Beach sandals were reported in the classification for shoes, sandals, and play shoes beginning 1945 and are distributed by kinds for 1945-54. For 1936-44, production of beach sandals was reported separately and is included here in the totals only; prior thereto, beach sandals were reported with "Other footwear." The number of beach sandals included in the grand total and total shoes, sandals, and play shoes, but not distributed by kinds, is as follows (annual totals, thousands of pairs): 1936, 3,745; 1937, 3,929; 1938, 4,496; 1939, 4,571; 1940, 4,324; 1941, 6,874; 1942, 7,294; 1943, 2,578; 1944, 2,747.

Beginning with 1945, data for athletic shoes include shoes with all types of uppers; prior thereto only those with all-leather uppers are included. Figures for "total production" cover all types of athletic shoes.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STatistical Supplement; monthly figures prior thereto are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. The data cover exports of new boots, shoes, and other footwear, with leather uppers (including men's, youths' and boys', women's and misses', infants' and children's, and slippers and moccasins for housewear; but excluding, beginning July 1950, exports of mili-tary-type shoes, etc.). The figures do not include exports of footwear with nonleather uppers, nor discontinued models, old styles, and second-hand shoes.

Beginning 1947, data include shipments under the Army Civilian Supply Program; such shipments amounted to 73,400 pairs of boots and shoes in that year. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; monthly averages for 1913-34 and monthly data for 1938-40 are in the 1942 SUPPlement. For monthly figures for 1913-37, see the 1940 and 1938 volumes and p. 18 of the January 1938 Survey.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data are based on prices covering speci-
fications as follows: Men's and boys' class-dress shoes, oxfords, cattle hide (side) upper, corrected grain, Goodyear welt, rubber or synthetic outsole, medium quality; women's and misses' class-(1) oxfords (nurses'), side upper, Goodyear welt, composition outsole, low-medium quality; (2) pumps, suede split, side or patent upper, cemented, leather outsole, low-medium quality.

The prices used in the index through 1951 are the simple arithmetic averages of the 4 or 5 weekly prices for each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those prevailing on a particular day of the month, usually within the week containing the 15 th.

Monthly data for 1949-50 are shown in the 1953 issue of Business Statistics; monthly data for 1947-48 are available upon request.
${ }^{4}$ Includes moccasins for housewear.
${ }^{5}$ Includes barefoot sandals and play shoes not shown separately.
${ }^{6}$ Includes barefoot sandals not shown separately.
${ }^{7}$ Beach sandals, included with "other footwear" in 1935, are included under "shoes, sandals, and play shoes" beginning 1936.
${ }^{8}$ Includes some men's, youths' and boys', women's, and misses' and children's shoes not reported by kinds.
${ }^{9}$ Includes shoes produced under Government contract; these data, reported separately in 1941-46, are not included in the breakdown by kinds (see 2d paragraph of note 1 for this page).
${ }^{10}$ The monthly average and the corresponding monthly figures for 1944 include 2,747 (monthly average 229) thousand pairs of beach sandals not distributed by kinds.
11 Data for 1944 comparable with those for earlier years, which represent only shoes with leather uppers, are as follows (monthly averages, in thousands of pairs): Men's, 5,510 ; youths' and boys', 1,355 ; women's, 9,752 ; misses' and children's, 2,970.
${ }^{12}$ Morithly average production of athletic shoes with leather uppers only, comparable with earlier data, is 234 thousand pairs.
${ }^{13}$ Camp moccasins, loafer-type shoes, strollers, and sportswear, formerly included with athletic, are included with shoes, sandals, and play shoes beginning September 1946.
${ }^{14}$ Monthly averages for 1948 and 1949 and monthly data for 1951 and 1952 include the production of establishments identified through the 1947 Census of Manufactures and not covered in previous years.
${ }^{15}$ Monthly averages for 1950-52 include revisions correcting the undercoverage of data, but not distributed by months.
${ }^{16}$ Beginning 1950, data exclude military-type shoes, etc.

## Page 150

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Exports of sawmill products include all types of hardwood and softwood lumber (rough-sawed, dressed, and worked or patterned) and flooring; small hardwood dimension stock; and beginning 1939, railroad cross ties (also mine ties in recent years). The figures from 1948 forward exclude exports of box shooks (averaging 1,244, 000 board feet monthly in 1948); this exclusion is in accordance with the 1949 revision of the export schedule. Data on laths and shingles are excluded for all years. Beginning 1947, figures include
shipments under the Army Civilian Supply Frogram (not previously available); in that year such shipments amounted to 580,000 board feet.

Imports of sawmill products are general imports through 1933 and imports for consumption thereafter. The data include softwood and hardwood sawed boards (rough and dressed), flooring, planks, deals, and sawed timber plus sawed hardwoods not further manufactured than planed, tongued, and grooved. The classification of sawmill products covers boards and lumber through 1937; clapboards were added beginning January 1938 (these amounted to 3.8 percent of total imports in 1937, 1.1 percent in 1936, and were negligible prior to that year); beginning January 1939, box shooks and sawed railroad ties are included but were not separately classified before that date. Laths, shingles pickets, and palings, included in the sawmill products classification in the original reports through 1938, are excluded from data shown here for all years.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL Supplement to the Survey of Curhent Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition. Import data for years 1929-1937 inclusive appear on page 18 of the October 1939 Sunvey; export data for years 1929-1938, on page 18 of the March 1940 Survey. Minor revisions in the monthly data for 1946 are available upon request.
${ }^{2}$ Compiled by the National Lumber Manufacturers Associa$t i o n$. Data for all years are estimated industry totals based on monthly reports from regional associations. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for $1932-33$ and for 1948-1951 inclusive. The Census Bureau made no annual survey in 1948; for the years 1949-1951, although data for the eastern regions are adjusted to Census figures, data for some of the western regions, for total softwood and total lumber production, are not so adjusted. Figures for 1954 are subject to revision when data from the 1954 Census of Manufactures become available.

Coverage of reports by mills varies widely from region to region and, for the country as a whole, has declined from around 75 percent of estimated total lumber production in 1935 to an average of 37 percent in 1954; coverage of reports on stocks is less inclusive than for production and shipments. Separate data for three of the principal softwood regions (Douglas fir, Southern pine, and Western pine) included in the national totals are shown on pages 151 and 152 and described in the corresponding notes.

Shipments include both domestic and foreign shipments. Stocks represent those at mills and, for the Southern pine region, also those at concentration yards; data are gross stocks (except, as explained below, for years prior to 1936 and 1938).

There is considerable undercoverage in the Census data for lumber production prior to 1942 which is reflected in the NLMA data adjusted to Census totals. Estimates of lumber production for years prior to 1942 , prepared by the U. S. Forest Service are believed to approximate more nearly to total lumber production and to give a better picture of trends than the Census totals used by the Association.
Monthly averages for 1929-1941 based on these estimates are as follows (in millions of board feet): Total lumber-1929, 3,229; 1930, 2,447; 1931, 1,666; 1932, 1,127; 1933, 1,429; 1934, 1,569; 1935, 1,912; 1936, 2,302; 1937, 2,417; 1938, 2,069; 1939, 2,396; 1940, 2,597; 1941, 3,045; hardwoods1929, 659; 1930, 511; 1931, 343; 1932, 209; 1933, 268; 1934, 321; 1935, 396 ; 1936, 467; 1937, 488; 1938, 406; 1939, 455; 1940, 461; 1941, 556; softwoods-1929, 2,570; 1930, 1,936; 1931, 1,324; 1932, 918; 1933, 1,161; 1934, 1,248; 1935, 1,$516 ; 1936,1,835 ; 1937,1,929 ; 1938,1,663 ; 1939,1,941$; 1940, 2, 135; 1941, 2,489. Similar estimates are available for earlier years.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STA-
tistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 193435, the 1938 Edition; quarterly data for 1932-33, the 1936 Edition; quarterly data for 1929-31 are available on request.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous Supple MENTS referred to above (revisions available on request).

Production and shipments data: 1939 revised to include New England lumber salvaged from 1938 hurricane (totaling 173 million board feet for the year); 1941 revised slightly to include output of mills cutting less than 50 thousand board feet; other minor revisions of less than 1 percent affected 1950, 1948, and 1946.

Stocks data: Minor revisions of less than half of 1 percent are reflected in the monthly averages carried in this volume for 1946, 1948, and 1950, causing them to differ slightly from the monthly data published in the earlier SUPPLEMENTS referred to. More substantial revisions are described under (a) and (b) following. (a) Figures for total and for softwood stocks, for 1940 and prior years, were revised upward by a constant adjustment of 798 million board feet per month to include stocks in concentration yards in the Southern pine region comparable with later years.
(b) Two additional upward adjustments were made in the estimated stocks data in the years 1936 and 1938 because of changes in the reported figures substantially affecting comparability with earlier years. Beginning January l936, gross stocks were reported for the Southern hardwood region in place of previously reported net (unsold) stocks raising the level of reported data about 8 percent for total stocks, hardwood stocks about 32 percent, and softwood stocks less than 1 percent. Beginning January 1938, stocks in the Appalachian region were expanded to include "green"' as well as the "dry" stocks previously reported, thus again lifting the level as compared with previous years-this time by about 2 percent for total stocks, 6 percent for hardwood stocks, and only a negligible change in softwood stocks.
${ }^{3}$ Stocks data for the indicated years reflect changes in coverage that affect comparability with earlier years. See note 2, (b), for this page.
${ }^{4}$ Beginning 1948, figures exclude exports of box shooks which were included in earlier data; see note $l$ for this page.

## Page 151

${ }^{1}$ Source: National Lumber Manufacturers Association. Data are estimates representing total softwood operations for the Douglas fir region and are compiled by the West Coast Lumbermen's Association from monthly reports received from mills covering between 50 and 60 percent of total output. Coverage of reports for stocks and unfilled orders is less inclusive than for production and shipments. Although Douglas fir predominates, output of the region also includes West Coast hemlock, Western red cedar, and Sitka spruce.

For all years through 1953, with exceptions noted below, production and shipments data were adjusted by the West Coast Lumbermen's Association to trends indicated by annual production figures reported by the Bureau of the Census. No such adjustments were made in 1932-33, 1948, 1949, and 1950. In 1948 the Census Bureau made no production survey, while for 1949 and 1950 the Association estimated total industry operations on the basis of mill reports to the regional association.

The region (designated as West Coast Woods in SuppleMENTS prior to the 1951 edition) comprises those portions of the States of Washington and Oregon west of the Cascades except for the pine production of Josephine and Jackson counties in Oregon which is included in data for the Western Pine region.

Shipments include both domestic and export shipments. Stock figures are gross mill stocks; changes from month to
month are computed from differences between production and shipments adjusted to reported inventory figures.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40 the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; quarterly data for 1932-33 for all series except new orders, the 1936 Edition. However, most of the data published in the 1949 SUPPLEMENT and earlier editions, covering the years 1929 through 1946, have been revised in varying degrees. These revised data are available on request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted in July 1953, see note 1 for p. 104. Exports of Douglas fir (including "Oregon pine") sawmill products include rough-sawed, dressed and, in recent years, treated lumber. Because of revisions in the export schedule, data beginning 1949 also include flooring and other worked or patterned wood products as well as sawed timber treated with preservative (exports of treated products in 1949 and 1950 amounted to $1,945,000$ and $1,040,000$ board feet, respectively) and, beginning 1952, exports of treated boards, planks, etc. This series does not cover logs or unsawed and hewn timber, nor laths, shingles, and other manufactured wood products.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Curbent Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; and 1929-31, the 1932 Edition.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous Supplements referred to above. For 1948, the figures for total sawmill products shown in the 1951 SUPPLEMENT are incorrect for several months; correct totals may be obtained by adding the published data for sawed timber to those for boards, etc. For 1947, data for September were revised as follows (thousand board feet): Total, 93,450; sawed timber, 19,641; boards, etc., 73,809. For 1946, revised data are: May-total, 29, 301; sawed timber, 14, 386; boards, etc., 14, 915; Julytotal, 22, 460; sawed timber, 9, 445. For years 1929 through 1935, figures for total sawmill products may be obtained by adding the published data for sawed timber to those for boards, etc. (in the 1938 and prior SUPPLEMENTS, these categories were designated as "timber" and "lumber," respectively).
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1947, detailed specifications for these two types of Douglas fir lumber are as follows: Di-mension-No. 1, $2^{\prime \prime}$ by $4^{\prime \prime}$, random length, dried, S4S (surfaced on 4 sides) mixed dimension, carlot, f.o.b. mill, rail shipment; Flooring-B and better, $1^{\prime \prime}$ by $4^{\prime \prime}$, random length, flat grain, plain end, dried, mixed carlot, f.o.b. mill, rail shipment. Quotations through 1946 are for similar specifications except that the dimension No. 1 was quoted for $16^{\prime}$ lengths, SlE (surfaced on 1 edge) or rough, but the 1947 changes in the reporting sample and/or specifications rendered prices from that year forward not precisely comparable with prior years. Monthly averages for 1947 comparable with earlier years are: Dimension No. 1, \$63.78; flooring, $\$ 100.24$. Beginning 1952, data are average prices on one day of the month, usually within the week containing the 15 th day; in prior years, quotations were averages of prices on one day a week for 4 or 5 weeks.

Monthly data for past years corresponding to the monthly averages contained in this issue will be found in earlier editions of the Statistical Supplement as follows: 1949-50, the 1953 Edition; 1947-48, not published in the Survey but available on request; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; and 1929-40, p. 17, May 1941 Survey.
${ }^{4}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total national output of Southern yellow pine compiled by the Southern Pine Association from monthly reports of mills representing in recent years about one-sixth of total output; coverage of reports on stocks and unfilled orders is somewhat less. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for 1932-33 and for 1948-in the latter year the Census Bureau made no annual survey. Figures for 1954 are subject to revision when data from the 1954 Census of Manufactures become available.

Undercoverage is known to affect Census data for lumber production prior to 1942 but the extent to which Southern yellow pine output was understated is not clear (see paragraph 4 of note 2 for p. 150). Because the Association's data are adjusted to Census totals, the data for years prior to 1942 are understated in an unknown degree.

Shipments include domestic and export shipments. Stock figures are estimated gross stocks at mills and concentration yards; monthly stock changes are computed from the difference between total production and shipments. Unfilled order changes are similarly computed from differences between total orders and shipments.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1948 data for new and unfilled orders, production, and shipments (revised since publication) are available on request; 1945-47, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 193637, the 1940 Edition; 1934-35, the 1938 Edition; monthly or quarterly data for 1932-33, the 1936 Edition; revised data for 1929-31 are available on request.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous SuppleMENTS referred to above. For 1948: All series except stocks revised since publication; monthly average revisions for new orders, production, and shipments, 3 percent downward, and for unfilled orders, 8 percent downward. Unfilled orders: Data for all years prior to 1941 have been revised since publication by adding a constant adjustment factor of 111 million board feet to the previously published figures. Stocks: Data for all years prior to 1941 have been revised since publication by adding a constant adjustment factor of 798 million board feet to the previously published figures to include-as in later years-stocks in concentration yards which previously had not been counted (see note 2 for p. 150). An additional minor revision was made in 1932 stock figures (revisions available on request).
${ }^{5}$ Not comparable with earlier data; see note 3 for this page.
${ }^{6}$ Beginning 1949, data include exports of fl ooring and other worked or patterned wood products as well as treated or otherwise preserved timber; see note 2 for this page.
${ }^{7}$ Beginning 1952, data include exports of treated or otherwise preserved boards, planks, etc.; see note 2 for this page.

Page 152
${ }^{1}$ See note 4 for $p .151$.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-
trade data as well as an explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Export data comprise rough-sawed and dressed lumber and timber, that treated with preservative as well as untreated. Beginning 1949, flooring and other worked or patterned wood products were included as a result of revision of export schedule; beginning 1952, another export schedule revision included for the first time boards, planks, etc., treated with preservative. Neither hewn or unsawed wood nor wood manufactures such as lath or shingles are included. The following species of pine are covered: Southern yellow, Georgia, loblolly, long leaf, pitch, short leaf, and slash.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; quarterly data for 1932-33, the 1936 Edition; monthly data for exports of boards, etc., (designated as "lumber" in the 1938 and earlier editions of the Supplement) for 1929-31, the 1932 Edition.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous SuppleMENTS referred to above. Revisions (in thousands of board feet): Total sawmill products-July 1948, 8,797; April 1948, 8,668; March 1948, 7, 235; September 1947, 9,070; January 1946, 9, 036; timber-April 1948, 1, 195; September 1947, 1,464; boards, etc. -September 1947, 7,606; January 1946, 6,768. The annual totals for 1942 contain revisions not distributed by months. For years 1934-35, data for total sawmill products can be obtained by adding the two published components. For years 1929-33, inclusive, monthly data for total sawmill products and for sawed timber are available on request.
${ }^{3}$ Compiled by the $l$. S. Department of Labor, Bureau of Labor Statistics. Prices beginning 1952 are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; through 1951, data are averages of prices on one specific day of each of 4 or 5 weeks. Beginning 1947, detailed specifications for these two types of Southern pine lumber are as follows: BoardsNo. 2 and better, $l^{\prime \prime}$ by $6^{\prime \prime}$, random length, surfaced on 4 sides, dried, short leaf, carlot or mixed car, f.o.b. mill; Flooring-B and better, 1" by 4", standard length, flat grain, plain end, dried, bundled, short leaf, carlot or mixed car, f.o.b. mill.

In earlier years, specifications were for generally similar types but underwent changes which introduced some degree of incomparability at two points. In 1947 and 1948 , prices based on the new specifications (given above) bore the following average relationship to prices based on the previous ones: Boards-0.9 percent higher; Flooring-2.7 percent higher. From August 1942 through January 1945, noonthly data published in the 1947 and 1949 Supplements are estimates computed by the U. S. Department of Commerce, Office of Business Economics, from slightly different series compiled by the U.S. Department of Labor, Bureau of Labor Statistics. For the overlapping period August-December 1942, the substituted board prices averaged 3.7 percent lower than the preceding price data published through July 1942 and the substituted flooring prices averaged 5.2 percent lower.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STAtistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, revisions not published in Survey but available on request; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1929-37, p. 22, the April 1942 Survey
${ }^{4}$ Source: National Lumoer Manufacturers Association. Data for all years are estimates of total softwood production
in the Western pine region compiled by the Western Pine Association from monthly reports of mills representing in recent years about three-quarters of total output; coverage of reports on unfilled orders and stocks is somewhat less. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for 1932-33 and for 1947-5l, inclusive. In 1948 the Census Bureau made no annual survey, while in 1947 and 1949-51 the figures are based on regional association estimates and do not agree with Census data. Figures for 1954 are subject to revision when data from the 1954 Census of Manufactures become available.

Undercoverage is known to affect Census data for lumber production prior to 1942 but the extent to which Western pine output was understated is not clear (see paragraph 4 of note 2 for p. 150).

Shipments include domestic and export shipments. Stocks figures are estimated gross stocks at mills with month-tomonth changes based on the difference between production and shipments and adjusted to inventory data of reporting mills.

Data comprise all softwood production in the Western pine region defined as follows: Washington and Oregon east of the Cascades; Jackson and Josephine counties in Oregon (pine production only); California (except in the ten northwestern coastal counties); Arizona; Colorado; Idaho; Montana; Nevada; New Mexico; South Dakota; Utah; and Wyoming. The softwood species included and their approximate percentage of total output in the Western pine region in 1947 are as follows: Ponderosa pine, 59 percent; sugar pine, 4 percent; Idaho white pine, 4 percent; lodgepole pine, 2 percent; larch and Douglas fir, 25 percent; white fir, 3 percent; Englemen spruce, Western red, and incense cedar, 3 percent.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; revised monthly data for 1929-40 are available on request.

The following average monthly revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous SUPPLEMENTS referred to above (revisions available on request). For 1950: shipments, revised 3 million board feet upward; stocks, l percent downward. For 1948: production and shipments, revised 1 percent upward. For 1947: production and shipments, revised 2 percent downward. For 1944: production and shipments, revised 3 percent downward. For 1943: new orders, production, and shipments, revised 3 percent downward; stocks, $1 / 2$ percent upward. For 1942: production, revised 1.6 percent downward; shipments, 1.3 percent downward. For 1941: new orders, revised 3.4 percent upward. Data for 1940 and prior years, mostly revised since publication, are available on request.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics, from information furnished by the Western Pine Association. Complete specifications are as follows: Pine, Ponderosa, boards, No. 3 common, $l^{\prime \prime}$ by $8 "$, random length, surfaced on 2 or 4 sides, carlot or mixed car, f.o.b. mill.

Monthly data for past years corresponding to the monthly averages contained in this issue will be found in earlier editions of the Statistical Supplement to the Survey of Current business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 194144, the 1947 Edition; 1938-40, the 1942 Edition; 1932-37, p. 22, the April 1942 Survey; monthly data for 1931 and earlier years are not available.
${ }^{6}$ Average for 5 months, August-December. New series not exactly comparable with earlier data. See 2d paragraph of note 3 for this page.
${ }^{7}$ New series not exactly comparable with earlier years. See 2d paragraph of note 3 for this page.

## Page 153

${ }^{1}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total industry output compiled by the Maple Flooring Manufacturers Association from monthly reports by mills representing in recent years about 90 percent of total production; coverage of unfilled orders and stocks data is somewhat less. Reliability of the estimates has increased as the coverage has risen from about 65 percent in years prior to 1934.

Data include all species of flooring produced in the Maple Flooring region, but maple predominates; during 195154, beech and birch each averaged about 2 percent of total output.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistrcal Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; quarterly data for 1932-33, the 1936 Edition; quarterly data for 1929-31 for all series except new orders are available on request.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous SuppleMENTS referred to above. Revised stocks data: March 1941 , 17, 850; September 1939, 15,800. Revised unfilled orders: September 1939, 14, 150.

Data for the years 1929-31 inclusive shown in the 1932 edition represented 15 mills only and differ from the estimated industry totals published in later editions.
${ }^{2}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total industry output compiled by the National Oak Flooring Manufacturers Association from monthly reports by mills representing in recent years about two-thirds of total industry output; coverage has declined somewhat since 1929-34 when 95 to 100 percent of the industry was included.
"Oak flooring" usually includes a small portion (totaling approximately 5 percent) of maple, beech, birch, and pecan.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; 1929-31 the 1932 Edition. Revised data for 1929-33 (as shown in this volume) are available on an annual basis only.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to above (revisions available on request). For 1940-46 inclusive, new orders, production, and shipments data were revised to include prefinished flooring and relatively small amounts of heavy hardwoods other than oak; production of these additional products averaged 41 million board feet per year for this period. September 1946: revised unfilled orders, 25,575. March 1944: revised stocks, 7,940. Years 1934-35: monthly data for all series revised since publication in the 1938 SUPPLEMENT.
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data cover all known producers of hardwood plywood except container and packaging types. Comparable data earlier than 1953 are not available.
${ }^{4}$ Data are compiled by the Douglas Fir Plywood Association and are estimates of total industry output based on reports from plants controlling on the average approximately 90 percent of the industry's capacity. Monthly totals are derived from weekly reports of the Association by prorating data for split weeks on the basis of a 5-day workweek with
allowance for the following holidays: January 1, May 30, July 4, Labor Day, Thanksgiving, and Christmas.

Monthly figures on a comparable basis are not available prior to January 1953. Monthly averages for 1952 and earlier years are based on annual totals as published in "The Timberman," Plywood Section.
${ }^{5}$ End-of-year data.
${ }^{6}$ See 2 d paragraph of note 4 for this page.
${ }^{7}$ Comparable monthly data for years prior to 1953 are not available.

## Page 154

${ }^{1}$ Compiled by the U. S. Department of Commerce, Office of Business Economics, from data collected by the Bureau of Census ( Bureau of Foreign and Domestic Commerce through April 1941). For exports, iron and steel products cover all commodities (for which tonnage figures are available) which are classified in the January 1952 edition of the export schedule as pig iron; ferroalloys; iron and steel scrap; iron bars, skelp, and pipe; steel-mill products, semifinished; steel-mill products, rolled and finished; castings and forgings; and railway car and locomotive wheels, tires, and axles (rolled and forged). For imports, the items covered are those classified in the January 1954 import schedule as iron and steel semimanufactures (including pig iron, granular or sponge iron, and iron and steel scrap); steelmill products (manufactures); and ferromanganese, ferrochromium, ferrosilicon, and certain other ferroalloys. The figures for both exports and imports do not include advanced manufactures of iron and steel.

In the 1952 edition of the export schedule, certain items (pipe fittings, welding rods, bolts, fabricated structural, and other shapes) were transferred from the steelmill products to the metal manufactures category. Data beginning 1952 exclude exports of these items which totaled 322,000 tons in 1952 and 258,000 tons in 1953. Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July l953, see note 1 for p. 104.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942. (Revision for total exports for November 1950, 283,137 tons.) Monthly data for 1947 for total exports, revised to cover army civilian supply shipments (included in later years), are shown on p. 274 of the 1953 STATISTICAL SUPPLEMENT. The revised 1948 monthly averages for imports shown in this SUPPLEMENT and in the 1953 issue are based on annual totals which include revisions not available by months. (It should be noted that data in the 1942 and earlier SUPPLEMENTS are in long tons.) Monthly figures prior to 1938 are available in the 1940 , 1938, and 1936 SUPPLEMENTS as follows: Total exports and total imports, 1932-37 (monthly figures for 1919-31 for total imports are on p. 20 of the November 1932 SURVEY); scrap exports, 1936-37 (the 1940 SUPPLEMENT includes minor revisions of data shown in the 1938 volume); scrap imports, 1934-37 (revision-March 1935, 2,387 long tons).
${ }^{2}$ Includes also tin-plate scrap, terneplate scrap and clippings, and rerolling rails. Figures beginning 1951 exclude exports of tinplated circles, strips, cobbles, etc. (which totaled 14,610 tons in 1951); these items were previously included in scrap exports.
${ }^{3}$ Compiled (beginning 1951) by the J. S. Department of the Interior, Bureau of Mines, and the U. S. Department of Commerce, Bureau of the Census, from a combined survey covering 1,300 iron and steel foundries and steel-ingot producers. The estimated industry totals from 1951 forward are not strictly comparable with earlier data because of changes in coverage and in sampling and estimating procedures. For prior years, the monthly data (compiled by the U. S. Department of the Interior, Bureau of Mines) are estimated industry totals based on reports from consumers accounting for 96
to 99 percent of the industry total from the latter half of 1941 through 1945 and 90 to 95 percent in 1946-50. The monthly averages for the years 1935-50 for consumption are computed from annual totals compiled by Bureau of Mines, and are based on actual reports from all consumers; for 1929-34, the monthly averages are based on annual estimates published in The Iron Age. The year-end stock figures for 1938-40 are also from the annual surveys by Bureau of Mines.

Home scrap produced is scrap produced by the consuming mills (such as revert or recycled scrap, comprising runs, spills, risers, and croppings, etc., discarded and defective products, and old scrap); the figures do not include hammer, scale, and cinder. Purchased scrap consists of scrap purchased from outside sources, as well as scrap transferred from other plants under the same control and scrap received under exchange contracts or conversion agreements.

Figures for production and receipts are not available prior to 1953. Monthly data for 1941-50 for consumption and stocks are shown in the 1953, 1951, 1949, and 1947 Statistical Supplements. Quarterly data for December 1939. December 1940 for consumption and September 1939-December 1940 for stocks are shown in a footnote on p. S-29 of the November 1942 SURVEY. (It should be noted that the 1939-40 figures for consumption given in that note relate only to the last month of each quarter.)
${ }^{4}$ Compiled by the U. S. Department of Interior, Bureau of Mines. Monthly data (available beginning January 1943) are based on reports from practically all mines in the U. S.; they include estimates for a number of very small mines in the southeastern area (output of which is only a few thousand tons per month). Monthly averages through 1950 for production and shipments are computed from annual totals based on actual reports from all mines. The year-end stock figures (stocks at mines) for 1929-42 are also from the annual surveys and for $1929-41$ are not entirely comparable with data for later years (see note 5). All figures exclude ore containing 5 percent or more manganese.

The iron ore producing districts, and the percentage of total production in each for 1947-54, are: Lake Superior District-Michigan, Minnesota, and Wisconsin, 78-82 percent; Southeastern States-Alabama, Georgia, and Virginia, 7-9 percent; Northeastern States-New Jersey, New York, and Pennsylvania, 4-6 percent; Western States-California, Missouri, Nevada, Texas, Utah, and Wyoming, 5-8 percent. About $l$ percent of production consists of byproduct ore (iron cinder and sinter obtained from the pyrites industry), produced chiefly in the Southeastern States.

Monthly data for 1943-50 are shown in the 1953, 1951, 1949, and 1947.Statistical Supplements.
${ }^{5}$ Data are as of December 31 and are based on reports from all mines; they exclude stocks of byproduct materials (pyrites cinder and sinter at plants that produce these products for consumption in iron and steel furnaces) which are included in data for later years; the December 31, 1942, stock figure excluding byproduct material, comparable with earlier data, is $3,367,000$ long tons.
${ }^{6}$ See note 3 for this page regarding change in source of data beginning 1935.
${ }^{7}$ Stocks as of December 31.
${ }^{8}$ Average for 8 months-March and June through December.
${ }^{9}$ Stock data were not collected for January; average for 11 months, February-December.
${ }^{10}$ Based on annual total including revisions not incorporated in the monthly data.
${ }^{11}$ Total exports beginning 1952 exclude certain items included in earlier data; see second paragraph of note 1 for this page. (In the 1953 Statistical Supplement, such items were included in the 1952 data.)

## Page 155

${ }^{1}$ Compiled by the Lake Superior Iron Ore Association; data, for the most part, cover Lake Superior ore only. Consump-
tion by furnaces includes interior furnaces in central and eastern districts, lake-front furnaces in the United States, furnaces receiving ore by rail, and lake-shore Canadian furnaces. Beginning in November 1936, consumption includes tonnages at eastern plants which use only a small proportion of lake ore. Total stocks and stocks at furnaces are similarly affected beginning April 1937. Stocks at furnaces include stocks at both United States and Canadian furnaces. Stocks on Lake Erie docks are those on U. S. docks only. The number of furnaces principally dependent on Lake Superior ores has varied from 341 to 186 (205 at the end of 1954), the large reduction resulting from the dismantling of furnaces and from the elimination of furnaces which no longer use lake ore. Shipments represent movement of lake ore through the upper lake ports, including not only tonnage passing through the Sault Ste. Marie Canals but also that from ports on Lake Michigan; they do not include direct rail shipments. Comparatively small amounts shipped from Canada are included beginning August 1939. In recent years the Lake Superior region has accounted for approximately 78-83 percent of the total iron ore shipments in the country. Because navigation is closed, no shipments are made during January and February and usually during March (in 1944 and 1953 there were also no shipments during December); monthly averages, however, are based on 12 months. Tonnages for the upper lake ports are railroad weights, whereas those at other ports are bill-of-lading weights.

Monthly data for 1929-50 are published in the following editions of the STatistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. Revised monthly figures for consumption for May-December 1948 are shown on p. 274 of the 1953 Statistical Supplement. There have been other minor scattered revisions.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Iron ore imports include concentrates; figures for imports of manganese ore and concentrates represent manganese content.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. Revisions (thousands of long tons): Iron ore-November and December 1950, 729 and 429, respectively; manganese ore-July 1950, 91. The revised 1947 monthly average for manganese ore shown in the present SUPPLEMENT and the 1953 issue is based on an annual total which includes revisions not available by months.
${ }^{3}$ Compiled (beginning 1951) jointly by the U. S. Department of Commerce, Bureau of the Census, and the U. S. Department of Interior, Bureau of Mines; by the Bureau of the Census for the period October 1945-50; for earlier periods data are from reports to the War Production Board. All data are estimated industry totals. Figures for 1943 have been raised to industry totals by the Office of Business Economics (for percentage of industry coverage represented by reported data, see note 3 on p. 267 of the 1949 STATISTICAL SUPPLEMENT). Data for 1944-46 and 1950-53 are based on annual reports from all known foundries for those years. Revised annual totals for the years 1947-49 take into account differences shown by comparing estimated 1950 totals (from monthly reports from a selected sample of foundries) with actual 1950 totals (from a complete canvass of all ferrous foundries). Revised monthly estimates for 1947-48 for all series and 1947-50 for unfilled orders were computed by the Office of Business Economics. The monthly estimates beginning 1951 are derived from a combined survey of approximately 1,300 iron and steel foundries and steel-ingot producers.

The term "gray-iron castings" relates to all iron castings (except malleable), including semisteel, alloy iron, and white iron castings. Tonnages represent the weight of rough castings before machining. Total shipments include shipments for use by the same company (or an affiliate, subsidiary, or parent company) and shipments for sale to other companies, shown separately beginning November 1944. Simi-
lar data were not collected prior to 1943. Production figures for 1937 and 1939, compiled from reports of the biennial Census of Manufactures, are as follows (annual totals): 1937, $7,818,000$ tons; 1939, $7,125,000$ tons; these figures include estimated tonnage for a small quantity reported by value only.

The original reports give separate monthly figures beginning January 1943 for cast-iron soil pipe and fittings, and cast-iron pressure pipe and fittings, and beginning July 1944 for chilled-iron railroad car wheels and molds for heavy steel ingots. Annual reports for 1944-46 and 1950-53 also include State data on iron-foundry activity.

Monthly figures for 1943-50 (except revised 1947-48 data, as noted above, which are available upon request) are published in the following editions of the Statistical SupPLEMENT: 1953; 1951; 1949; 1947.
${ }^{4}$ Compiled (beginning 1951) jointly by the U. S. Department of Commerce, Bureau of the Census and the U. S. Department of Interior, Bureau of Mines, representing estimates of the total industry derived from a combined survey of approximately 1,300 iron and steel foundries and steel-ingot producers. Data prior to 1951 were compiled by the Bureau of the Census. Annual data for 1947-50 and monthly data for 1949 and 1950 , as shown in the 1951 STatistical SUPPLEMENT, have since been revised to adjust for undercoverage indicated by the complete canvass in 1950 covering shipments by 128 establishments.

Data for the years 1929-40 cover reports from 112 to 102 manufacturers operating 121 to 113 plants; for the years 1941-46, from 99 to 107 manufacturers operating 110 to 116 plants. The reduction in the number of reporters through 1941 in most. cases resulted from discontinuance of operations. Beginning May 1944, the coverage of the industry is virtually complete; for September 1942 through April 1944 the estimated coverage was 97-98 percent; and the manufacturers reporting prior to September 1942 produced about 93 percent of the total value of the output of the industry as reported in the Census of Manufactures for 1939 and 1937 and about 88 percent of the value of the output as reported in the 1935 and 1933 censuses. Total shipments by the 103 manufacturers included beginning September 1942 were 4.1 and 5.5 percent higher in September and November 1942, respectively, than shipments of the 99 manufacturers reporting previously, while shipments for sale were only 0.1 percent higher in both months, and new orders for sale, 0.2 and 0.3 percent higher. These are the only months for which data are available for both 99 and 103 manufacturers.

Monthly data for 1941-50 (except revised 1947-48 fig-ures-computed by the Office of Business Economics-which are available upon request) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947. Figures for unfilled orders begin with 1945 only. Monthly figures for total shipments for 1929-40 appear in the $1942,1940,1938,1936$ SUPPLEmENTS and on p. 20 of the April 1933 Survey. Monthly figures for 1936-40 for shipments for sale are available upon request.
${ }^{5}$ Monthly average computed from estimated total shipments for sale in 1944, based on the distribution between shipments for sale and shipments for own use during November and December 1944.

## Page 156

${ }^{1}$ Compiled by the American Iron and Steel Institute beginning January 1942 and by The Iron Age prior to that date. The Institute data cover blast-furnace production of pig iron and ferroalloys (including ferromanganese, spiegel, and ferrosilicon) and also include production by charcoal furnaces (such production was reported separately through 1945; subsequently, the small amount has been combined with coke pig iron). The Iron Age data through 1941 exclude charcoalfurnace production, but since this represents only a small fraction of the total (two-tenths of 1 percent in 1941, according to the Institute) the two series may be considered as comparable. For 1941, total production reported by the Institute was $56,071,000$ short tons, as compared with $55,904,000$ reported by The Iron Age. Both series represent
substantially complete coverage; according to the Institute, its coverage of total blast-furnace production was 99.5 percent in 1943, 99.8 percent in 1942 and 1944, and 100 percent thereafter. Both series exclude the production of electric furnaces.

Most of the monthly averages for 1942-54 are based on revised annual totals which include small year-end adjustments not distributed by months.

Monthly data for 1938-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942. (Note that figures in the 1942 issue are in short tons instead of in long tons as indicated.) Monthly data for 1913-37 are shown on p. 14 of the October 1940 SurVEY.
${ }^{2}$ Compiled (beginning 1951) jointly by the U. S. Department of the Interior, Bureau of Mines, and the U. S. Department of Commerce, Bureau of the Census, representing estimated industry totals derived from a combined survey covering approximately $l, 300$ iron and steel foundries and steel-ingot producers. Earlier data, compiled by the Bureau of Mines, are estimated industry totals based on reports from consumers accounting for 96 to 99 percent of the industry total from the latter half of 1941 through 1945 and 93 to 96 percent from 1946. through 1950. Prior to 1941, data were collected only for the last month of each quarter. Consumers' stocks include suppliers' and producers ${ }^{2}$ stocks.

Monthly averages for consumption for 1935-50 are based on annual data. Figures for 1931-34 are monthly averages of annual shipments; for 1935 and 1936 shipments averaged 1,977, 000 and $2,875,000$ tons, respectively. Year-end stock figures for 1938-40 are also from annual surveys. Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 Statistical. Supplements.
${ }^{3}$ Compiled by the American Metal Market. Data represent averages of daily prices of pig iron, computed from 10 tons distributed through 1952 as follows: 1 ton each of Bessemer, valley; No. 2 foundry, valley; No. 2 foundry at Philadelphia, at Buffalo, at Cleveland, and at Chicago (No. $2 \times$ foundry prior to 1938 for Philadelphia and Buffalo and, prior to 1935 , for Cleveland); 2 tons each of basic, valley, and No. 2 southern foundry, Cincinnati.

The composite price beginning January 1953, first published in the March 1953 Survey of Current Business, is computed from 10 tons as follows: 1 ton each of basic, Neville Island; Bessemer, Neville Island; malleable, Swedeland; No. 2 foundry at Buffalo; at Chicago; at Cleveland; at Sharpsville; at Youngstown; and 2 tons of No. 2 foundry at Birmingham. This composite does not relate to delivered prices, as formerly; to compare the new composite with that compiled prior to 1953 , an arbitrary figure of $\$ 1.58$ should be added to the new composite plus a very slight adjustment for any freight rate increases after December 1952.

Effective July 1948, the basis of quotation was changed from basing point to f.o.b. mill or shipping point.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{4}$ Compiled by the $U$. S. Department of Labor, Bureau of Labor Statistics. Basic pig iron prices are f.o.b. Valley furnace producing points. The foundry prices, No. 2, northern, f.o.b. Neville Island area producing points, replace the Pittsburgh delivered prices, shown in Supplements prior to the 1947 issue. Effective July 1948, quotations for both series were changed from basing point prices to f.o.b. producing points. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

Monthly data for 1941-50 for basic (furnace) and foundry pig iron are shown in the 1953, 1951, 1949, and 1947 Statistical Supplements. Monthly data for 1923-40 for basic pig iron are published in the 1942, 1940, 1938, 1936, and 1932 volumes.
${ }^{5}$ Compiled (beginning 1951) jointly by the U. S. Department of Commerce, Bureau of the Census, and the U. S. Department of Interior, Bureau of Mines, representing esti-
mates of the total industry derived from a combined survey of approximately 1,300 iron and steel foundries and steelingot producers. Data prior to 1951 were compiled by the Bureau of the Census. Data beginning October 1945 represent shipments of total steel castings and of commercial steel castings (castings made for sale); prior thereto, the figures relate to "production" of commercial steel castings only.

The annual data for 1947-50 and monthly data for 1949 and 1950 , as shown in the 1951 Statistical Supplement, have since been revised to adjust for undercoverage indicated by the complete canvass in 1950 of all ferrous foundries ( 330 establishments reported shipments of steel castings in that year). Beginning 1945 the data, including the series on total shipments, are estimated industry totals, the monthly reports from larger firms being augmented by annual data from the smaller firms. Data include in 1945, 347 foundries, of which 18 discontinued production of steel castings during the year, and in 1946, 334, of which 6 discontinued production of steel castings by the end of the year; in both years 273 firms accounted for the total shipments for sale. Although data prior to October 1945 represent production rather than shipments, comparability of the series is not significantly affected, since this industry usually ships its production quickly; this was particularly true during the war years when for any month production and shipments were practically the same. In the original reports, total shipments are shown by grade of steel and production of steel castings and ingots by type of furnace.

Figures for 1929-44 cover reports from a varying number of manufacturers as follows: 1929-32, 128-132; 1933-34, 164; 1935-37, 180; 1938, 183; 1939-44, 187-193. Monthly averages for 1933 for 128 manufacturers, comparable with the data for 1932, are as follows: Production-total, 21, 146 tons; railway specialties, 4,340 tons. For January 1935, the only month for which data for both 164 and 180 companies are available, the change in the number of reporting companies increased total production 1.8 percent and did not affect the figures for railway specialties. It is believed that changes in the number of firms reporting in the 1929-32 and 1935-44 periods did not materially affect the comparability of the series. The 187-193 firms reporting for 1939-44 produced approximately 96 percent of the total value of steel castings made for sale as reported in the Census of Manufactures for 1939; this percentage appears to be approximately correct for total production for sale for later years through 1944. Throughout the .period 1935-44, the producticn of railway specialties was substantially complete, and as far as is known all production was shipped for sale. The 183 manufacturers reporting for 1938 represented practically the entire industry, according to data from the 1937 Census of Manufactures; the manufacturers reporting for 1935-37 represented 95 percent of the total value as reported in the 1935 Census and 90 percent of the total shown by the 1933 Census of Manufactures. Prior to 1935, the coverage was about 80 percent.

Steel castings reported as railway specialties comprise bolsters, side frames, couplers, yokes, draft-gear castings, snubbers, hopper doors, and hopper-door frames. Beginning 1952, the shipments for sale include small quantities for own use which cannot be excluded from the shipments for sale.

Monthly data for 1949-50 are shown in the 1953 Statistical Supplement. Revised monthly data for 1947-48 (as noted above) computed by the Office of Business Economics are available upon request. Monthly data for 1941-46 for shipments for sale and railway specialties are shown in the 1949 and 1947 issues of the STATISTICAL SUPPLEMENT; monthly data for 1935-40, and also for 1926-34 for the smaller number of companies (as noted above) are available in the 1942, $1940,1938,1936$, and 1932 volumes.
${ }^{6}$ Production for sale prior to 1945 (see note 5 for this page).
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. The estimated industry totals beginning 1947 are based on reports from producers reporting monthly shipments (for sale and/or for own use) of 300 tons or more (except for the period from May 1951 to July 1953 when reports were received from producers shipping 50 tons or more per
month). These forge shops represented the following approximate percentages of the 1947 total industry shipments of commercial steel forgings: July-December 1954, 89 percent; August 1953-June 1954, 90 percent; May 1951-July 1953, 98 percent; January 1947-April 1951, 80 percent. Averages for 1946 are computed from totals derived from a complete canvass of producers. The estimates for the May 1951-July 1953 period are not strictly comparable with earlier and subsequent data because of the change in the factors used as a basis for the estimates.

The forge shops covered by these data include only those producing forgings for sale to the trade. The forgings not included in "for sale," i.e., those for own use, are forgings which are further processed or machined in the same plant in which the forgings were produced; in other plants of the same company; or in affiliated, subsidiary, or parent companies. All other forgings are considered as commercial forgings, and are included in "for sale." The term "drop and upset forgings" includes all steel products whose final forming operations are completed on a steam drop hammer, board drop hammer, upsetter, or mechanical press. "Press and open-hammer forgings" are steel products whose forming operations are completed on a flat die, either on open hammer or press. The tonnages reported for shipments and unfilled orders represent the weight of the forgings before machining.

Monthly data for 1946-50 are shown in the 1953, 1951, and 1949 Statistical Supplements.
${ }^{8}$ Average for 4 months, Sep tember-December.
${ }^{9}$ Data prior to 1935 represent monthly averages of annual. shipments of pig iron.
${ }^{10}$ Stocks as of December 31.
${ }^{11}$ Average for 8 months, March and June-December.
${ }^{12}$ Average for 11 months, February-December.
${ }^{13}$ Average for 6 months, July-December; see note 3 for this page.
${ }^{14}$ Average for 6 months, July-December; see note 4 for this page.
${ }^{15}$ Prices beginning January 1953 are not strictly comparable with earlier data; to compare the new composite with that compiled prior to 1953 , an arbitrary figure of $\$ 1.58$ should be added to the new composite. See note 3 for this page.

Page 157
${ }^{1}$ Compiled by the American Iron and Steel Institute. Steel production includes, in addition to the ingot production by the open-hearth and Bessemer processes, electric ingots and steel for castings, except steel for castings produced in foundries operated by companies which do not produce ingots. Crucible steel production, which has been negligible during the period shown here, is not included in the figures through 1945; beginning with 1946 the very small amount produced (not reported separately) is included with production of electric furnaces. Monthly figures, which are not available from all companies, are calculated to 100 -percent production on the basis of the ratios of the annual production of the reporting companies to the total production of all companies. In the latest year, before the total annual production of all companies becomes available, the monthly figures of the reporting companies are calculated to 100 -percent production according to the ratio applied in the preceding year; they are later revised when the final total production for the year is available. Data for 1941-46 are based on reports by companies which accounted for 98 percent of the open-hearth, 100 percent of the Bessemer, and 86-98 percent of the electric ingots and steel for castings produced by the industry; for 1947-54, the coverage was 100 percent for all types of furnaces.

Percent of capacity shown here is the ratio of average weekly production in a given month to average weekly capacity calculated on annual capacity as of the end of the pre-
ceding year (with the exception of percentages for JulyDecember 1937, 1941-44, and 1950 which are based on capacity as of the middle of the given year), no allowance being made for Sundays or holidays. The annual capacity as of December 31 of each year, on which the percent of capacity for the following year is based, is as follows (in thousands of short tons): 1928, 69,554; 1929, 71, 011; 1930, 75,299; 1931, 76,875 ; 1932, 76,$744 ; 1933,78$, 110 (revised); 1934, 78,440 ; 1935, 78, 152; 1936, 78, 137; (July 1, 1937, 78, 464); 1937, 80,176; 1938, 81,824; 1939, 81,614; 1940, 84, 148 (June 30, 1941, 86, 145) ; 1941, 88, 566; (July 1, 1942, 89, 195); 1942, 90, 289; (July 1, 1943, 90, 877); 1943, 93,648; (July 1, 1944, 94,051); 1944, 95,501; 1945, 91,891; 1946, 91,241; 1947, 94, 233; 1948, 96, 121; 1949, 99, 393; (July 1, 1950, 100, 564); 1950, 104,230; 1951, 108,588; 1952, 117,547; 1953, 124, 330; 1954, 125, 828.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data for 1917-40 for production and 1926-40 for percent of capacity appear in table 9, p. 16, of the March 1941 Survey, and the 1942 Supplement.
${ }^{2}$ Compiled by the American Metal Market. Data represent the average price of finished steel products, excluding rails, based on daily prices of 10 pounds of steel products weighted according to the importance of their production. The composite since 1933 includes the following: 2 pounds of bars; $1-1 / 2$ pounds each of plates, pipe (1-3), and sheets; 1 pound each of shapes, wire nails, and strips H.R. and $1 / 2$ pound of tin plate. Prior to 1933 , the composite was weighted as follows: $2-1 / 2$ pounds of bars; $1-1 / 2$ pounds each of plates, shapes, pipe, and wire nails; l pound of sheets; and $1 / 2$ pound of tin plate. Beginning July 1948 the basis of quotation was changed from the basing point system to quotations at the mills of leading producers.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. All series are f.o.b. Pittsburgh prior to July 1948; at that time the basis of quotation was changed (except for the scrap price) from basing point to f.o.b. producing points. The scrap price for the entire period is f.o.b. Pittsburgh basing point.

Steel-billet prices cover primarily those of rerolling carbon steel. Prices beginning May 1953 represent a substituted series described as follows: Billets, rerolling, carbon steel, $4^{\prime \prime} \times 4^{\prime \prime} \times 10 / 15^{\prime}$ long, chemistry-. 10C, . $30 / .50$ $\mathrm{MN}, .05$ Max. S, . 04 Max. P, base quantity, mill to user, per net tons, f.o.b. mill. Beginning February 1949, the compiling agency has published the price per short ton; for comparability with earlier data, all figures as shown here represent prices per short ton.

Structural-steel prices beginning May 1953 represent a substituted series described as follows: Structural shapes, carbon steel, $6^{\prime \prime} \times 4^{\prime \prime} \times 1 / 2^{\prime \prime}$ angles, $30^{\prime}$ long, ASTM spec. A-7, base quantity, mill to user, f.o.b. mill. Earlier data cover structural shapes, standard, carbon steel, I-beam, ASTM (A-7-46), Pittsburgh area. For the period February 1948-May 1953, the specifications were revised from $3^{\prime \prime}-15^{\prime \prime}$ depth up to $80^{\prime}$ length to $12^{\prime \prime}$ up to $60^{\prime}$, but the January 1948 price for both series was $\$ 0.028$ per pound.

The scrap price replaces the series for steel scrap, Chicago, shown in SUPPLEments prior to the 1947 issue.

Beginning 1952, the prices for all series are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month. Data for 1947-51 are averages of prices on one specific day of each of 4 or 5 weeks.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949 , and 1947 is sues of the STATISTICAL SUPPLEMENT. Monthly data for 1935-40 for the steel-scrap price are available upon request. Monthly data for 1929-40 for the other series are available in the following editions of the Statistical Supplement: 1942; 1940; 1938; 1936; 1932.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data for 1933-42 cover reports of 30 to 34 manufacturers, accounting for approximately 90 percent of production of heavy steel barrels and drums, according to the 1939 Census of Manufactures. From 1943 through 1947 the number decreased from 29 to 23 , largely as a result of consolidations; in 1948-54, figures cover reports of 24-21 active manufacturers. Beginning 1943, the reporting companies include all plants, both commercial and captive, known to be producing steel shipping barrels and drums. However, no heavy-type barrels and drums were reported "for own use."

The figures comprise steel barrels and drums of 19-gauge or heavier steel of welded-side seam construction, and steel barrels and drums made wholly or partly of 20 -gauge, when of other than open-head construction; also grease drums of 100pound capacity when made of 20 -gauge or heavier steel. Excluded are terneplate oil containers, gas cylinders, beer barrels, reconditioned barrels and drums, and containers not commercially useable in the transportation of commodities. Data for light types (lighter than 20-gauge) and, since June 1944, steel packages, kegs, and pails, are also available in the same report of the Bureau of the Census.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. (Revised July 1948 shipments, 2,084, 000 barrels, etc.) Data shown in 1936 and earlier SUPPLEMENTS are not comparable, since they are for a smaller number of companies. Comparable monthly data for 1933 are available upon request.
${ }^{5}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, from reports received from all known producers in the industry. Shipments are reported in terms of number of base boxes of steel sheets consumed. These base boxes are converted to short tons by means of standard conversion factors which differ according to type of can. A metal can is defined as a single-walled container made wholly from tin plate, terneplate, black plate, or waste plate, of 29 gauge or lighter. (This definition does not cover ice cream cans or fluid milk shipping containers.) Food cans include those used for fruits and vegetables, evaporated and condensed milk, other dairy products, fish and other sea food, coffee, lard and shortening, meat and poultry, and miscellaneous food cans; nonfood cans include those for beer, oil (open top, 1 and 5 quarts), pet food, and miscellaneous nonfood cans. Beginning August 1954, data for shipments of softdrink metal cans (which totaled 5,600 tons in August) are included in the food class; prior to August 1954, shipments of this type were distributed to both food and nonfood classes.

The data are total shipments, i.e., shipments for own use (defined as those for use by the same company, or an affiliate, subsidiary, or parent company) and shipments for sale. Separate data for shipments for sale are not available prior to October 1945.

Monthly data for 1943-50 on total shipments are shown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT; no similar data were collected prior to 1943.
${ }^{6}$ Data beginning 1943 not comparable with those for earlier years; see note 4 for this page.
${ }^{7}$ Average for 3 months, October-December.
${ }^{8}$ Beginning July 1948, the basis of quotation was changed from the basing point system to quotations at the mills of leading producers.
${ }^{9}$ Average for 6 months, July-December (computed by OBE); see note 3 for this page regarding change in basis of quotation.
${ }^{10}$ Average for 8 months, May-December (computed by OBE); see note 3 for this page regarding the substituted series beginning May 1953.
${ }^{11}$ Prices beginning May 1953 are for a substituted series and therefore not comparable with earlier data; see note 3 for this page.

## Page 158

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, beginning September 1945; the reporting companies, numbering over 70 in 1948-49 and from 61 to 83 in 1950-54, represent the entire industry. Data prior to September 1945 were compiled from reports submitted to the War Production Board.

Commercial closures cover both the metal and plastic types (except caps for collapsible tubes) and include those for both food and nonfood containers; they exclude production of milk-bottle closures which averaged 13.0 million units per year in 1953-54. Of the total production of closures in 1947-54, the metal type accounted for $80-83$ percent. For $1946-48$, crowns produced for beverage containers were 99 percent of the total; this information is not available for later years.

Monthly data for July 1945-December 1950 are shown in the 1953, 1951, and 1949 Statistical Supplements
${ }^{2}$ Compiled by the American Iron and Steel Institute, from reports of companies representing 98.5 percent of the production of the industry for $1952-54$, $99.0-99.5$ percent for 1944-51, 98.0.percent for 1941-43, and 95-97 percent for 1933-40. The industry includes only those processors which are also primary producers of steel. Data beginning 1944 are net shipments (excluding shipments to members of the industry for conversion into further finished products or for resale). Earlier data represent production for sale outside the industry. Shipments to members of the industry for further conversion, shown separately in reports of the Institute, are excluded.

The items which are not self-explanatory are as follows: The classification "hot rolled bars-all grades" (covering carbon and alloy bars through 1949 and also stainless steel bars thereafter) is approximately comparable to the item referred to in the 1942 and earlier Supplements as "merchant bars," which also includes hoops and bailing bands, and alloy bars; data for reinforcing bars (including new billet and rerolled) and semimanufactures (ingots, blooms, slabs, billets, tube rounds, sheet bars, and, through 1949, tin bars) were shown for the first time in the 1949 Statistical SUPPLEMENT; plates include sheared and universal; pipes and tubes include standard and line pipe, oil-country goods, mechanical and pressure tubing; sheets include hot rolled, galvanized, cold rolled, electrical, and all other coated sheets, also electrical strip (beginning 1950); wire and wire products comprise wire rods, drawn wire, nails and staples, barbed and twisted, fence wire, bale ties, all other wire products, and fence posts (prior to 1937). Total steel products include, in addition to the items shown, data on steel piling, skelp, joint bars and tie plates, cold finished bars, black plate, wheels, axles, track spikes, and other products.

The annual totals include small revisions that cannot be allocated to the separate months because some companies make adjustments in their yearly figures which are not available on a monthly basis. Monthly averages are based on the annual totals.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (except for hot rolled bars and semimanufactures as noted above). Monthly data for 1940 (the earliest available) and quarterly data for 1933-39 appear in the 1942 Supplement and table 45, p. 14 of the November 1940 Survey; the data shown for tin plate cover both tin and terneplate; see 2d paragraph of this note regarding data shown for merchant bars.
${ }^{3}$ Data through 1949 cover carbon and alloy hot rolled bars; beginning 1950 they also include shipments of stainless steel bars (totaling 28,598 tons in 1950 and 42,938 tons in 1951).
${ }^{4}$ Monthly average computed from annual total.

## Page 159

${ }^{1}$ Compiled by the U. S. Department of the Interior. Bureau of Mines, covering reports of all producers. The monthly
averages are based on totals from annual surveys which differ slightly in some years from the sum of the monthly figures.

Monthly data for 1941-50 are published in the following editions of the Stati stical Supplement: 1953; 1951; 1949; 1947. In addition to scattered minor revisions in other years, the monthly data for 1945-46 have been revised (since publication in the 1949 volume) in line wi th annual totals, such revisions are available upon request. Monthly data prior to 1941 are not available.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data cover crude bauxite and calcined bauxite, when imported for use in the manufacture of fire brick, or other refractories. Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Monthly data for 1923-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{3}$ Compiled by the American Metal Market, representing averages of dealers' daily buying prices at New York for aluminum scrap castings consisting chiefly or entirely of automobile crank cases.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, and the War Production Board. (Beginning January 1954, shipments of mill products are compiled jointly by the U. S. Department of Commerce, Business and Defense Services Administration and the Bureau of the Census.) The data cover aluminum and aluminum-base alloy castings and aluminum mill products.

Beginning 1944, the castings data cover all types of castings; the categories "sand," "permanent mold," and "die," and "all other" are shown separately in the monthly releases of the compiling agency. The castings data for 1942 and 1943 do not include figures for the "all other" types and thus are not strictly comparable with those for later years; however, this lack of comparability is not serious, since the "all other" group is a negligible part of the total (monthly average shipments for this group in 1944 were 233,000 pounds).

The shipments of castings represent estimates of industry activity, including amounts shipped for sale and for own use. Prior to 1945 , the estimates are based on reported shipments representing about 98 percent of the industry total. Monthly averages for 1946 and 1950 are based on annual totals of actual figures reported by all foundries. Monthly estimates for 1946-50 (shown in the 1951 and 1949 Statistical SUPPLEMENTS) were based on monthly reports from the larger foundries and annual reports from the smaller ones; the coverage ratio of the larger foundries (derived from the complete canvass in 1946) was used to estimate the total monthly shipments. Annual totals for 1947-50 and monthly figures for 1949-50 have been revised by the compiling source to adjust for the difference shown by the previously estimated 1950 total and the actual total. Beginning September 1952, the monthly data are based on a more reliable sample of 550 foundries. Monthly data beginning 1951 have been revised in order to bring the previously published data into closer agreement with the estimates obtained for September-December 1952 from the new sample.

The coverage of mill products is essentially complete. Total mill products comprise - in addition to plate and sheet - rolled structural shapes, rod, and bar; wire and cable; extruded shapes; drawn tubing; powder and paste; and for 1942-44, also ingots. Shipments represent net shipments (derived beginning 1954 by subtracting the sum of producers' domestic receipts of each mill shape from the industry's gross shipments of that shape; prior thereto, by subtracting from total shipments the shipments to other metal mills for further fabrication into other forms of mill products). The series beginning 1954 for mill products
(compiled jointly by Census and BDSA) differs from that shown here through 1953 which is according to Census reports (and WPB prior to 1945). Differences between the two series are due to differences in the types of establishments canvassed, the types of products covered, and the methods of deriving net shipments. Net shipments for January-December 1953 comparable with data beginning 1954 are as follows (millions of pounds): Total -- 185.4; 180.8; 205.0; 209.9; 201.3; 201.3; 196.5; 184.7; 181.2; 182.7; 148.8; 150.7; plate and sheet - 104.9 ; 103.8; 118.2; 120.2; 116.9; 115.3; 114.9 ; $110.0 ; 107.0$; 108.2; 88.0; 90.9. Data for plate and sheet for the period October 1945-December 1953 include weight of foil stock; prior to October 1945, shipments include weight of the foil. This change does not materially affect the comparability of the data.

Monthly data for 1946-50 (for all series) and 1942-50 for castings (1947-48 unadjusted for undercoverage as noted in second paragraph above) and plate and sheet are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly data for 1942-45 for total mill products are available upon request.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Quotations beginning June 1954 are for cartridge brass sheet, $8^{\prime \prime}$ wide, . $0159^{\prime \prime}$ thick ( 26 B\&S gage), mill lengths, in quantity lots of 5,000 to 10,000 pounds, manufacturer to distributor's warehouse, f.o.b. mill, freight allowed. No dollar prices are available for January-June 1954 for this description. The prices through December 1953 are for yellow brass sheets, manufacturer to user, base sizes, wider than 2 inches and including 8 inches, No. 16, B \& S gage, f.o.b. mill, freight allowed. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the l5th of the month; data from 1947 to 1951 are averages based on quotations on a specific day of each week.

Monthly figures for 1923-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949 ; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{6}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data are in terms of recoverable metal from domestic mines (including Alaska). Monthly data are on an estimated 100 -percent-coverage basis and are adjusted after the year-end to final annual figures. The monthly figures through 1944 are based largely on smelter receipts; beginning January 1945 they represent actual mine output. The monthly averages prior to 1944 are based on annual surveys of mine output.

Monthly figures for 1941-50 are shown in the 1953, 1951 , 1949, and 1947 issues of the Statistical Supplement.
${ }^{7}$ Compiled by the Copper Institute. Crude production for all years comprises material originating in the United States, Cuba, and the Philippines (copper from Cuba and the Philippines is duty-free into the U. S.), as well as purchases of domestic scrap materials by the custom smelters and/or refiners.

The tariff on copper was suspended in April 1947. Effective with January 1947, the figures shown here for refined production, deliveries, and stocks include copper from all sources (including that which would have been dutiable if the tariff were still effective); prior to 1947, the foreign copper represented is only that which was duty-free.

Refined production covers the output of primary refineries (beginning 1947, tonnage physically refined in the U. S. regardless of origin; prior thereto, tonnage refined from domestic raw material and from duty-free foreign material). Deliveries represent deliveries to fabricators, including for pertinent periods such anounts as were released from the Government stockpile. Since March 1952, deliveries also include copper imported from nonmembers of the Institute.

Refined stocks include electro and/or casting copper in cathodes, shapes, rejects, and in refining furnaces; also, in some cases, moulds, a portion of which is necessary for operating and is therefore not available for immediate consumption. Refined stocks exclude copper held in Government stockpile and copper at consumers' plants or warehouses.

Effective with May 1951, title to some foreign copper has passed to buyers at foreign ports. Such copper is included in stocks until its arrival in the United States or the completion of its refining in U. S. refineries.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949 ; 1947; 1942; 1940; 1938. (Revisions for September and October 1938 domestic deliveries are 53,804 and 70,010 short tons, respectively.) Data for the last 6. months of 1933 are available upon request; no earlier data are available.
${ }^{8}$ Average for 6. months, July-December.
${ }^{9}$ Not available; no data for August-November (average for 7 months, January-July, is 321,771 short tons; the December figure is 159,485 ).
${ }^{10}$ Average for 11 months; no quotation for March 1941.
${ }^{11}$ Average for 3 months, October-December. Data from October 1945 forward are not comparable with earlier figures, primarily because the earlier figures include shipments of aluminum ingots.
${ }^{12}$ Data beginning 1947 represent copper from all sources; see note 7 for this page.
${ }^{13}$ Not comparable with earlier data; see 4 th paragraph of note 4 for this page.
${ }^{14}$ Data are for a substituted series and are not comparable with earlier quotations; see note 5 for this page. Monthly average for 1954 is based on prices for June-December.

## Page 160

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Exports cover refined copper (in ingots, bars, and other forms), old and scrap copper, pipe and tubing, plates, sheets, strips, rods, bars, wire and bare cable (prior to 1949, also insulated wire and cable), and, beginning 1952, certain primary forms. (Beginning 1949, data for insulated wire and cable are excluded in accordance with the 1949 commodity classification schedule. In 1948, exports of these items averaged 2,940 tons monthly.) Data beginning 1947 include shipments under the Army Civilian Supply Program; in that year such shipments amounted to 55,230 tons.

Imports, include the metal content of copper in all forms (ore, concentrates, regulus, un refined, black, blister, refined, scrap, etc.). Both exports and imports exclude a small amount of copper manufactures for which no quantity data are available. Data beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104. The import data "for smelting, refining, and export" (shown separately in SUPPLEMENTS prior to the 1949 issue) have been included with the series for "unrefined, including scrap" since suspension of the excise tax on copper in April 1947 ; subsequent to that date, only a part of the copper for smelting, refining, and export has been reported separately from copper for domestic consumption.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942. Revisions (short tons): August 1947 exports, 21,619; December 1950 total imports, 54,792 , and unrefined copper imports, 26,897. The 1950 averages for imports shown in this volume are based on totals including additional revisions not allocated by months. Minor revisions for total and unrefined copper imports for 1947-48 are available upca request. For monthly data prior to 1938 for exports, total imports, and imports for smelting, refining, and export, see the $1940,1938,1936$, and 1932 SUPPLEMENTS. Data relating to exports published in the 1932 volume do not include insulated copper wire and cable. Revised data for August 1932-December 1937 for the breakdown of imports into refined and unrefined copper are available upon request.
${ }^{2}$ Compiled by the Engineering and Mining Journal. Data are based on weighted averages of domestic sales for both prompt and future delivery, and represent averages of daily quotations for copper in the form of ordinary wire bars and ingot bars. Cathodes in standard sizes are sold at discounts prevailing at the various refineries at time of shipment. Other shapes are subject to premiums currently in force at the refineries.

In the trade, copper prices are quoted on a delivered basis, i.e., delivered to consumer's plant. Since delivery and interest charges vary with the destination, as well as shipping point, the figures here are net prices at refineries on the Atlantic seaboard. Most of the refineries on the Atlantic seaboard are located in the New York tidewater area so that, for all practical purposes, f.o.b. refinery, New York, is the same as f.o.b. Atlantic seaboard.

Monthly data for 1929-50 are published in the following editions of the Stati Stical Supplemen t: 1953; 195l; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{3}$ Compiled by the U. S. Department of Interior, Bureau of Mines. Data are in terms of recoverable metal from domestic mines, including Alaska. Monthly reports are on an estimated 100 -percent-coverage basis and are adjusted after the year-end to final annual figures. Through 1944 the data were based largely on smelter receipts; beginning January 1945, the figures represent actual mine output.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{4}$ Compiled by the American Bureau of Metal Statistics. Data, representing the lead content of domestic ore received by United States smelters, are computed on the basis of estimated recoverable lead. According to the reporting source, these monthly totals probably, underrun the actual production of pig lead because of the estimational factor and the possibility that some lead receipts may escape attention.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{5}$ Compiled by the American Bureau of Metal Statistics. The data cover boih soft and hard (antimonial) lead. Production represents the refined lead produced from both domestic and foreign ore as reported by all primary refiners, except that there is some inclusion of secondary material with ore insofar as it enters into base bullion and loses its identity. These data on primary lead output are available only beginning January 1946.

Beginning in the April 1950 issue of the Survey of CURment Business, the data are revised to exclude figures for secondary refineries. The production series (corresponding to that formerly designated as primary) includes some secondary lead produced by primary refineries.

Shipments represent the total reported shipments of domestically refined lead from domestic and foreign ore (including antimonial) for consumption in the United States, but do not include lead for domestic consumption shipped from stocks of imported refined lead. Stocks (including antimonial) comprise those of primary refineries only; they exclude refined lead produced from ore or base bullion of foreign origin.

Monthly data for 1947-50 are shown in the 1953 and 1951 Statistical Supplements; monthly production for January-December 1946 are as follows (tons): 49,795; 40,070; 24, 179; 22,$726 ; 18,393 ; 17,450 ; 32,622 ; 33,994 ; 39,012 ; 41,217$; 38,287 ; 38,943. Monthly data (on the old basis, which includes reports by some secondary refiners) for 1930-48 are published in the following editions of the Statistical SupPLement: 1949; 1947; 1942; 1940; 1938; 1936; 1932. Note that figures for production of primary lead are available only beginning 1946. (Revisions: Shipments, 1948-July, 39, 853; October, 39,375 ; December, 44,456 short tons.)
${ }^{8}$ Compiled by the Engineering and Mining Journal, representing arithmetic averages of daily prices of desilverized common grade pig lead. Prices are based on weighted averages of sales (reported by producers and their agencies) of domestically refined metal sold to domestic consumers. The
quotations are on the basis of cash, New York, on sales for both prompt and future deliveries.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revision: June 1950, \$. 1188.)
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of Census (by Bureau of Foreign and Domestic Commerce through April 1941). Imports comprise the lead content of lead ores and of bullion and base bullion, pigs, bars, scrap and old, as well as the lead content of babbitt metal, solder, etc. type metal, and antimonial lead; they exclude a small amount of imports of lead manufactures for which no quantity data are available. Data beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note $l$ for p. 104.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 195l; 1949; 1947; 1942; 1940; 1938. (Revision: December 1950, 114,696 short tons.) The revised 1948 monthly average shown in the present SUPPLEMENT and the 1953 issue is based on an annual total which includes revisions not available by months. Figures shown in the 1936 and 1932 SUPPLEMENTS do not include data for babbitt metal, solder, etc., type metal, and antimonial lead; monthly data prior to 1934, revised to include these items, are available upon request.
${ }^{8}$ Average based on 6 months, July-December.
${ }^{9}$ Stocks as of December 31, 1946.
${ }^{10}$ Data beginning 1949 are not strictly comparable with earlier figures, because of the exclusion of exports of insulated wire and cable (see lst paragraph of note 1 for this page).
${ }^{11}$ Based on annual total which includes revisions not available by months.

## Page 161

${ }^{1}$ Compiled by the $U . S$. Department of Interior, Bureau of Mines (except estimates of primary pig tin consumption for 1929 and 1931-34. which were compiled by the American Bureau of Metal Statistics). Monthly data are based on reports from companies estimated to account for over 90 percent of tin consumption and stocks.

Production represents pig tin produced in the United States from both primary sources (imported tin ore or concentrates) and secondary sources (principally from tin recovered from detinning tin plate, scrap, and used cans); the figures exclude production of copan (first produced in 1950). Copan production totaled 700 long tons in 1951; 252 in 1952; and 477 long tons in 1954 (no production in 1953). Tin derived from reworking scrap originating in plants is not included in the production and consumption figures. The tin content of materials derived from re-treatment of materials in home plants and returned to the system is considered merely as a step in the manufacturing process.

Domestic mine production of tin is virtually nil; only 180 tons were produced in 1954 and 75 tons in 1953. Figures for production beginning 1942 include pig tin produced from imported tin concentrates by the Federal Facilities Corporation which manages the Government-owned smelter plant located in Texas City, Texas. Since 1945 this smelter has accounted for more than 90 percent of the total production. Data beginning 1953 for total consumption include tin content of imported tin-base alloys not included in earlier data; such alloys used in 1953-54 averaged about 300 tons per month. Total stocks represent the sum of Government and industrial stocks of pig tin. Government stocks represent those owned by the Office of Tin and Fiber (available for industrial use) and located within the bounds of continental United States; the figures exclude stocks held in the national stockpile. Industrial stocks represent stocks held by private smelters, fabricators, and distributors but do
not include tin in process, tin afloat to the U. S., and secondary pig tin.

Monthly averages for 1929-50 for production and 1929-54 for consumption are based on annual totals; stock figures for 1929-50 represent stocks as of December 31. Averages for 1951-54 for production and stocks are based on the monthly data. Monthly figures were not compiled by the Bureau of Mines prior to 1951. Monthly data for 1942-50 for the series as compiled by the U. S. Department of Commerce and the Civilian Production Administration, are available in the $1953,1951,1949$, and 1947 issues of the STATISTICAL SUPPLEMENT.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). The data comprise the tin content of ore, cassiterite, and black oxide of tin; and bars, blocks, pigs, grain, or granulated.

Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Monthly data for 1938-50 are published in the following editions of the Stati stical Supplement: 1953; 1951; 1949; 1947; 1942. Revised monthly imports of ore for January-December 1947 are as follows (long tons) : 2,$932 ; 1,654 ; 0$; 4,359 ; 1, 187; 949; 2, 314; 7,014; 2,987; 1,840; 1, 364; 2,578. Monthly data for 1929-38 for bars, blocks, pigs, etc., are available in the 1940, 1938, 1936, and 1932 SUPPLEMENTS.
${ }^{3}$ Compiled by the American Metal Market, representing averages of daily prices of Straits tin in New York.

In August 194 l a ceiling price of $\$ 0.5200$ a pound was established by the Government and this price was in effect through October 1946. From November 1946 through December 1949, the prices are quotations offered by the Reconstruction Finance Corporation. Data for January 1950 through July 1951 are open-market quotations (January 1950 RFC quoted price, $\$ 0.7614$ ). The selling price from August 1951 through August 1952 was maintained by the RFC (at $\$ 1.03$ from August 1, 1951, to January 21, 1952, and at $\$ 1.215$ from January 22, 1952, to the end of the year). Resumption of private importing for resale was permitted beginning August 1 , 1952. The open-market price was nominal until mid-August.

Monthly data for 1929-50 are published in the following editions of the STATI STI CAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{4}$ Compiled by the $U$. S. Department of Interior, Bureau of Mines. Data represent mine production of recoverable metal (including that made into zinc pigments and salts) in the United States and Alaska. Monthly data are on an estimated 100 -percent-coverage basis and are adjusted after the yearend to final annual figures. Monthly averages for 1929-40 are computed from annual totals. Through 1944, data were based largely on smelter receipts; beginning January 1945, the figures represent actual mine output.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{5}$ Compiled by the American Zinc Institute, representing the production, shipments, and stocks of slab zinc as reported by all producers represented in the membership of the Institute. Beginning January 1948, date include reports from some secondary smelters not previously reporting; production by these few plants averaged about 1,200 short tons monthly in 1947. Prior to 1940 , the data represent virgin zinc produced from domestic ore only, plus secondary zinc produced by primary smelters. Beginning January 1940, production from foreign ores is included in the figures which reflect total output at smelters of slab zinc of all grades. Production from foreign ores was quite small prior to 1940. According to data compiled by the U. S. Bureau of Mines, production from foreign ores averaged only $1 / 2$ percent of total smelter production of primary zinc for the 1929-39 period ( 3.2 percent for 1939). The revision to include production of foreign ores accounts for the increase in stocks beginning 1940. Monthly averages for 1940 based on
data excluding production from foreign ores are as follows (short tons): Production, 53,616 ; shipments, total, 58,041 , and domestic, 56,973 ; stocks, $51,523$.

Total shipments include both domestic shipments and shipments for export; beginning 1940 they also include drawback shipments and beginning December 1945, shipments for Government account. Stock figures beginning January 1943 include significant amounts not previously reported and, therefore, are not comparable with earlier data (December 1942 stocks comparable with succeeding data, 89,275 short tons).

Monthly data for 1929-50 are published in the following editions of the Stati stical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{6}$ Stocks as of December 31.
${ }^{7}$ Data not available.
${ }^{6}$ Beginning January 1 , 1943, stock figures include some stocks not previously reported (see 2d paragraph of note 5).
${ }^{9}$ Excludes 9,800 tons of tin (brought to the United States from Japan for the account of occupation authorities) purchased by the RFC in 1947 and first reflected in stock data as of December 31, 1947.
${ }^{10}$ See lst paragraph of note 5 for this page.
${ }^{11}$ Beginning January 1953, date include consumption of imported tin-base alloys not included in earlier data; see note 1 for this page.
${ }^{12}$ Production by detinners only.

## Page 162

${ }^{1}$ Compiled by the Engineering and Mining Journal. Data represent averages of daily prices for common grades of slab zinc (usually described as ordinary prime western brands) based on weighted averages of sales reported by producers. Common grades of slab zinc are reported on the basis of St. Louis, although relatively little slab zinc is actually delivered at that point. Sales are made for delivery at the places where required, and prices are figured back to a St. Louis basis or are made on St. Louis basis and figured up to points of delivery, with allowance for freight differentials either way.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data for blocks, pigs, etc., include old, dross, and skimmings (not available separately prior to 1934) and, beginning 1934, sheets. Zinc dust is not included. Data beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures, instituted July 1953 , see note 1 for p. 104. Imports for smelting, refining, and export are not shown separately in statistics of general imports; for years prior to 1934 , such imports are included in the figures shown for ores under imports for domestic consumption.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942. (Revisions: October 1950-total imports, 39,361 tons, ore for domestic consumption, 20,35l tons. Revised monthly averages for the years 1947, 1948, 1950, and 1952, shown in the present SUPPLEMENT, are based on annual totals which include revisions not allocated by months.) Monthly data for 1929-38 are available upon request except, as noted above, for imports for smelting, refining, and export prior to 1934.
${ }^{3}$ Compiled by The Institute of Boiler and Radiator Manufacturers (except for the period January 1946-May 1953 when estimates were compiled by the $U$. S. Department of Commerce, Bureau of the Census). In addition to ordinary-type-castiron radiators, the figures cover (for the reporting firms)
also cast-iron convectors and convector-radiators (but not nonferrous-metal convectors). Prior to 1940, however, data reported for convectors were incomplete. Convectors are represented by thousands of square feet of equivalent radiation. Monthly date are not available for the period September 1942-December 1945; annual estimates of production of radiators and convectors for 1942-45, compiled by the War Production Board, are as follows (millions of square feet of heating surface): $59.6 ; 31.0 ; 17.4 ; 17.7$.

According to the Institute, the estimates beginning June 1953 represent substantially complete coverage of shipments of the specified items. For the period 1942-May 1953 the data are based on reports of 22-20 companies - all the known producers of these products. In 1940 and 1941, the reporting firms were estimated by the Institute to account for nearly 99 percent of all cast-iron radiators and convectors produced; in the earlier years back to 1930, for 90-95 percent.

Monthly data for 1932-50 (except for the period September 1942-December 1945) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936. The radiation figures are designated "ordinary-type radiators" in the Supplements prior to the 1942 issue, but, according to the Institute, include some data for cast-iron convectors and radiators.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data are from reports by manufacturers numbering as follows: 1933-35, 160 ( 8 of these, however, discontinued business during 1935); $1936-39,178$; 1940, 170 ; 1941, 159; 1942, 148; 1943, 137; 1944-45, 124; 1946, 150. For the period 1947-52, the number of active companies ranged from 165 to 142 . The 26 companies added during 1936. were newly established concerns except for a few small ones not reporting prior to 1936. For the period January-June 1936, the additional manufacturers represented in the 178 -company series account for about 2.1 percent of total shipments reported by the 178 companies and for 0.3 percent of total stocks. The changes between 1939 and 1941 resulted from firms going out of business or becoming inactive and from the addition of 2 manufacturers before the close of 1940. The changes from 1942 through 1946. reflect the temporary decline in activity in the industry during the war and the resumption of activity in 1946.

The manufacturers covered in the 1937 and 1939 data shown here produced approximately 90 percent of the total value of output reported in the Census of Manufactures for those years. For the period 1944-May 1953, the reported data represent virtually the entire industry, i.e., all known manufacturers. Beginning June 1953, the monthly data are estimated industry totals based on reports from a selected group of large firms whose shipments represent about 91 percent of the total industry.

These statistics relate to oil burners and oil-burner units designed for use in conjunction wi th the following types of equipment: Central heating plants for homes, apart ments, office buildings, churches, theaters, and similar buildings; residential water heaters; industrial-process equipment such as heat-treating furnaces, industrial ovens, etc.; and equipment for generation of steam for power. The figures do not include burners of the so-called distillate type used in ranges, stoves, water heaters, and space heaters.

Data included for furnace-burner units, boiler-burner units, and (through 1944) for water-heating units cover only those units produced by manufacturers of oil burners; units produced by firms which purchase oil burners for installation in furnaces, boilers, and water heaters of their own manufacture are excluded. Beginning 1945, data for waterheating units are excluded (prior to 1945, water-heating units were not called for on the schedule but were usually reported in data for residential burners shipped separately).

Monthly data for 1933-50 are published in the following editions of the Stati stical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936.
${ }^{5}$ Compiled by the U. S. Department of Commerce, Bureau of the Census; prior to October 1945, data were compiled by the War Production Board. For the period September 1943May 1953 monthly reports were received from all known manu-
facturers (ranging in number from 130 to 106 for 1946-52). Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose shipments represent over 95 percent of the total industry. The original reports also show inventories on hand at the end of each month.

Combination ranges (those designed to use two different fuels interchangeably) are shown separately in the original reports but are here included with gas stoves, since gas is one of the fuels used in most of such ranges. The gas-stove catego ry also includes bungalow ranges, which are designed to use more than one fuel but may employ the fuels for different purposes, such as, one for cooking and another for heating water, etc. Miscellaneous cooking appliances (gas hot plates, needle-valve stoves, portable ovens, and other liquid-fuel types) are not included.

Monthly figures for 1945-50 are shown in the 1953, 1951, and 1949 Statistical Supplements. Monthly data for September 1943-December 1944 are available upon request. Note that data shown in the 1947 Statistical Supplement are for production; publication of production data was discontinued by the compiling agency.
${ }^{6}$ Prior to 1934, imports of zinc for smelting, refining, and export are included in the figures for imports of ore for domestic consumption.
${ }^{7}$ Average for 8 months, January-August.
${ }^{8}$ Average for 4 months, September-December.
${ }^{9}$ See 2d paragraph of note 4 for this page.
${ }^{10}$ Based on total shipments (from annual survey of all known manufacturers) published by the U. S. Department of Commerce, Bureau of Census.
${ }^{11}$ Based on annual total which includes reports from smaller firms; the monthly figures (which include estimates for these firms) were not revised.

## Page 163

${ }^{1}$ Compiled by the U.S. Department of Commerce, Bureau of the Census; data for the period January 1943-September 1945 are based on reports to the War Production Board. For the period September 1943-May 1953, monthly reports were received from all known manufacturers (ranging in number from 157 to 119 for 1947-53). Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose shipments represent over 92 percent of the total industry. The original reports also show inventories on hand at the end of each month.

Monthly figures for 1945-50 are shown in the 1953, 1951, and 1949 STatistical Supplements; those for September 194344 are available upon request. Note that data shown in the 1947 Statistical SUPPLEMENT are for production; publication of these data was discontinued by the compiling agency.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, from reports received directly beginning January 1945, and from reports to the War Production Board for 1944. Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose shipments represent over 95 percent of the total industry. For the period January 1947-June 1953, monthly reports were received from all known manufacturers (ranging in number from 148 to 166 for those years). Prior to 1947, the data were compiled from reports of manufacturers numbering from 100 to 133 in 1944-46; these manufacturers accounted for almost the entire production of warm-air furnaces. Changes in the number reporting represent for the most part the postwar expansion of the industry by the entrance of new firms. The data cover forced-air and gravity-air-flow furnaces made of cast iron and of steel. The original reports also show separate figures for forced-air furnaces and gravity-air-flow furnaces by type of fuel consumed and inventories of furnaces on hand at the end of each month.

Monthly data for 1944-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{3}$ Compiled by the Gas Appliance Manufacturers' Association beginning June 1953, and by the U. S. Department of Commerce, Bureau of the Census, prior to that time. The association's figures are based on reports from manufacturers whose shipments represent 98 percent of total shipments; figures compiled by the Bureau of the Census represent substantially complete coverage of the industry. The figures cover direct-fired water heaters, comprising underfired storage and sidearm types. The original reports also show inventories on hand at the end of each month.

Monthly data for September 1945-December 1951 for all water heaters of the nonelectric type (including directfired heaters for use with gas, oil, or coal and wood, and also indirect-fired types) are shown in the 1953, 1951, and 1949 Statistical SUPPLEments. Note that data shown in the 1947 SUPPLEMENT are for production publication of these data was discontinued by the compiling agency.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data for blowers and fans and the unit-heater group represent orders booked by manufacturers accounting for almost complete coverage beginning 1948 and for at least 90 percent of the production of the industry in prior years. After reviewing the returns for the 1947 Census of Manufactures, the Bureau of Census revised previously published figures (beginning 1948) to incorporate data for a number of companies not formerly included. For 1948, these added companies shipped fans, blowers, unit heaters, and accessory equipment valued at approximately $\$ 10$ million. The number of manufacturers reporting in 1949-54 is as follows: 167; 193; 187; 193; 225; 225. The additional manufacturers covered in 1950 accounted for about 4 percent of the total value of shipments of the specified items in that year.

In 1942-46, of the 101 manufacturers reporting at the beginning of this period, a number discontinued production for the duration of the war, and others reported no orders booked. The number reporting orders decreased to a low of 62 in the first quarter of 1944 and increased to 90 in the last quarter of 1945; 85-87 manufacturers reported orders booked in 1946, and 78-84 in 1947. For 1941 the data are as reported by 105 manufacturers, of which 4 discontinued these products in 1942; for 1940, a few additional manufacturers which had gone out of business or ceased working on this type of equipment by 1941 were included. Data for 1936-38 are from monthly reports of 125 manufacturers and, for 1939, from reports of 267 manufacturers, covering both these products and also air-conditioning and heating systems and equipment; the number reporting blowers and fans and unit heaters is not available separately. Available information indicates that there was no appreciable change in the coverage between 1939 and 1940 but a substantial increase from 1938 to 1939 (data for companies added in 1939 increased the value of new orders for blowers and fans in that year by about 6 percent and for unit heaters by 8 percent). Data prior to 1936 for unit heaters cover 56 companies ( 2 of which discontinued business in. December 1935). The coverage of the data for unit heaters was not materially changed between 1935 and 1936 as most of the new companies added in 1936 produced primarily air-conditioning systems and equipment.

Figures for blowers and fans relate almost entirely to commercial and industrial equipment (but also include household attic fans and kitchen exhaust fans); they include centrifugal blowers and fans and blowers or fans for mechanical draft and axial fans, including bearings, pulleys, or other equipment for installation when furnished. Blower-filter units (furnace blower) were not included prior to 1939 but production prior to that year was probably small. Data beginning 1953 include new orders for positive displacement blowers and turbo-blowers not included in earlier figures. In 1953, new orders for these additional items averaged $\$ 2,620,000$ per quarter. The unit-heater group covers indus-trial-type unit heaters and unit ventilators, including heating element and motors when furnished, and heat transfer coils. Data beginning 1947, for both blowers and fans and the unit-heater group, include also spare parts which, with the exception of some wheels and housings for blowers and fans, were not included prior to 1947. However, the change did not significantly affect comparability of the 1947 figures with those for 1946 and earlier years shown here.

The original reports provide information in detail for individual items, including the dollar value of shipments. Figures for air washers, available in the reports, are not included in the present volume.

Quarterly data for 1938-47 (as noted above) and for 1948-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942. Monthly data for 1936-37 appear in the 1940 SUPPLEMENT, and 1933-35 monthly data for unit heaters are available in the 1938 and 1936 volumes.
${ }^{5}$ Compiled by the Foundry Equipment Manufacturers Association. Data represent net (total, less cancellations) new orders received for new equipment from, or sales to, the foundry trades. The indexes are based on reports of 28 or 29 members estimated to account for a major part of the total dollar sales of the foundry-equipment industry. The principal products are molding machines, sand-cutting machines, sand-blast machines, material handling and processing equipment, tumbling barrels, sand-mixing machines, cupolas, ladles, core-making machines, etc.

Monthly indexes for May 1940-December 1952 (based on a different reporting panel of companies and constructed on the base years 1937-39) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942.
${ }^{6}$ Quarterly average.
${ }^{7}$ Average for 4 months, September-December.
${ }^{8}$ Data beginning 1948 are not comparable with preceding figures; see first paragraph of note 4 for this page.
${ }^{9}$ Data beginning 1950 are not strictly comparable with preceding figures; see first paragraph of note 4 for this page.
${ }^{10}$ Average based on annual total which includes reports from small firms; the monthly figures (which include estimates for these firms) were not revised.
${ }^{11}$ Beginning 1953, figures include new orders for positive displacement blowers and turbo-blowers not included in the earlier data. In 1953, new orders for the added items averaged $\$ 2,620,000$ per quarter.

## Page 164

${ }^{1}$ Compiled by the Industrial Heating Equipment Association, Inc. Data, representing new orders (less cancellations) for industrial electric-processing furnaces and fuelfired processing furnaces for the heat treatment and processing of metals and materials, are based on reports of member companies. The combined new orders for these furnaces, as reported by member companies, account for about 75 percent of those for the entire industry. The original reports also give the number of furnaces ordered.

Monthly data for electric furnaces for 1936-50 are published in the following editions of the Statistical SuppleMENT: 1953; 1951; 1949; 1947; 1942; 1940. Monthly figures for fuel-fired furnaces for 1946-50 are available in the 1953 and 1951 volumes.
${ }^{2}$ Compiled by the National Machine Tool Builders' Association. Indexes are based on the dollar volume of shipments in 1945-47 as reported by Association members estimated to account for $90-85$ percent of orders and shipments of the entire industry.

Machine tools included in the index are machine tools of the metal-cutting type, defined as power driven, complete metal-working machines, not portable by hand, used for progressively removing metal in the form of chips. The index does not include data for machine tools of the type that form metal, such as presses and forging machines.

The index of shipments has been substituted for estimates of total dollar shipments which are not available for publication. Monthly data for 1945-50 for the shipments index are shown in the 1953, 1951, and 1949 Statistical SupPLEMENTS; figures for 1937-44 are available upon request. Monthly data for 1937-50 for the new orders index appear on
p. 24 of the April 1951 SURvey. Total dollar shipments for the period 1939-47 are available as follows: 1940, see note on P. S-30 of the November 1942 SURVEY; monthly data for 1941-46 are shown in the 1947 Statistical Supplement; data for 1947 are published in the February and March 1948 issues of the Survey Of Current Business; data for 1939 are available upon request.
${ }^{3}$ Compiled by the Hydraulic Institute from reports of companies as follows: For the period 1929-37, 34-36 companies; 1938-44, 32-25; 1945-54, 31-33. The value of new orders shown here for 1929-44 represents about 70 percent of the industry total; thereafter, approximately 80 percent. Data reported are new orders booked. The classes of pumps included are single steam pumps, duplex steam pumps, simplex and duplex power pumps, triple and multiplex power pumps, close-coupled centrifugal pumps (including motors), all other centrifugal pumps (single and multi-stage), and rotary pumps.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. For comparable monthly figures for 1919-30, see the April 1937 SuRVEY, p. 19. Figures beginning 1931 shown in the April 1937 Survey have been revised to cover the addition of a new company and to exclude data for a company previously reporting; this change does not affect the figures prior to 1931. The revised monthly data for 1931-33 are available upon request.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of Census, from quarterly reports received from active manufacturers of complete tractors; data represent total shipments reported by all producers of the specified types, excluding garden tractors. For years prior to 1947, the figures represent sales, but these data do not differ significantly from shipments.

The total shipments include wheel-type contractors' of $f$ highway tractors (used extensively as excavating and earthmoving equipment). Shipments of this type are also included in the wheel-type category shown for the years 1929-50, but are excluded thereafter. In 1951, shipments of wheel-type contractors' off-highway tractors averaged $\$ 13,800,000$ per quarter. (Beginning in the May 1955 Survey Of Current BusiNESS, all series exclude this type of tractor.)

The original quarterly reports show quantity and value of shipments by type of tractor and horsepower rating. Annual reports also provide additional statistics by type of fuel used, domestic shipments for farm and nonfarm use, and total exports.

Quarterly data are not available prior to the 4th quarter of 1951. Annual totals beginning 1922 are available upon request except that comparable data were not collected for 1932, 1933, and 1934.
${ }^{5}$ Compiled for The Association of American Battery Manufacturers, Inc., by the Marketing Services Company, Dun $\mathcal{E}$ Bradstreet, Inc. The data are estimated industry totals derived from reports of jobbers, dealers, mail-order houses, and chain stores, reporting monthly shipments. Beginning 1947, the estimates are benchmarked to the 1947 Census of Manufactures; for 1939-46, to the 1939 Census.

Monthly data for 1947-48 adjusted to the benchmark indicated by the 1947 Census of Manufactures are shown on p. S-35 of the July 1952 Survey. Monthly data for 1941-46 and 1949-50 are shown in the 1953, 1949, and 1947 issues of the Statistical Supplement. Monthly figures for 1937-40 are available upon request.
${ }^{6}$ Compiled by the National Electrical Manufacturers Association. The index is based on unit sales of electric household refrigerators, complete with high and low side and cabinet of the types generally used in residences. There were 11 companies reporting to the Association in 1946-47; 11-14, 1948; 12-13, 1949; and 13-18 companies in 1950-54. The current sample is comparable with the prewar sample; however, the percentage of the industry represented by the sample is estimated to have declined from nearly 95 percent in prewar years to around 85 percent at the end of 1948. Estimated coverage for the years 1949-54, represented by the additional reporting companies, is not known. Suf-
ficient data are not available to complete the index for 1942-45. The index does not include an adjustment for seasonal variation nor does it include export sales.

Monthly data for 1934-50 (except for 1942-June 1946) appear on p. 28 of the February 1955 Survey. The indexes as shown in earlier issues of the Statistical Supplement are constructed on the base $1936=100$.
${ }^{7}$ Compiled by the Vacuum Cleaner Manufacturers Association. Data are based on reports of members of the Association and several nonmember companies, and cover practically the entire industry. They represent manufacturers' sales to all outlets, including export and domestic sales. Figures shown beginning 1935 cover standard floor-type vacuum cleaners only; for earlier years, data also include shipments of reconditioned or rebuilt models. (Monthly average for 1935 comparable with earlier years is 75,300 units.)

Monthly data for 1941-42 and 1946-50 are shown in the 1953, 1951, and 1947 Statistical Supplements. (Revision: December 1949, 268, 517 units.) Monthly figures for 1936-40 are available upon request. Monthly data for 1929-35 for standard-size (floor-type), including reconditioned models, are available in the 1936 and 1932 volumes. (Revision: November 1931, 55,000 units.)
${ }^{8}$ Compiled by the American Home Laundry Manufacturers' Association. For the period 1945-54, the data represent manufacturers' domestic sales (i.e., excluding export sales) compiled from reports of members of the Association estimated to account for at least 97 percent of the total industry sales. For 1947-52 and January-June 1953, the figures include sales of small or midget-type washers. Total sales of such types for the indicated years are as follows (thousands of units): $336.8 ; 287.6 ; 99.2 ; 100.9 ; 79.5 ; 73.5$; 30.8 (for January-June 1953).

The data through 1942, as shown here, represent estimated industry totals (including export sales) and are based on reports from members accounting for approximately 98 percent of total sales. Figures for the war period are not available.

Sales of gasoline-engine washers are included for the entire period, but for recent years represent a negligible part of the total.

Monthly sales for 1946-50 comparable with monthly figures shown here beginning 1951 are as follows (thousands):

| Mon th | 1946 | 1947 | 1948 | 1949 | 1950 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Januar | 116.1 | 258.7 | 355.4 | 165.7 | 275.8 |
| February. | 89.3 | 271.3 | 356.5 | 195.0 | 343.7 |
| March. | 104.3 | 300.2 | 409.3 | 237.9 | 423.2 |
| April. | 166.1 | 320.2 | 410.7 | 182.3 | 332.8 |
| May.. | 178.2 | 314.1 | 350.9 | 199.9 | 307.0 |
| June. | 172.2 | 312.8 | 351.2 | 246.3 | 325.8 |
| July.. | 166.6 | 283.0 | 309.2 | 192.1 | 286.2 |
| August... | 187.0 | 285.4 | 327.1 | 325.1 | 386.0 |
| September | 184.2 | 348.7 | 391.5 | 356.9 | 425.3 |
| Oc tober. | 247.4 | 388.9 | 379.9 | 335.9 | 443.8 |
| November. | 216.6 | 359.7 | 309.5 | 302.2 | 382.4 |
| December. | 196.0 | 344.8 | 169.2 | 239.1 | 379.0 |

Monthly data for 1933-June 1942, as described above, appear in the 1947 and 1942 Stati stical Supplements and on p. 17 of the October 1939 Survey.

## ${ }^{9}$ Quarterly average.

${ }^{10}$ Quarterly averages for 1929 and 1930 for tracklaying and total tractors cover domestic sales only; data for total sales and export sales cannot be published without disclosing operations of individual companies. Export sales of tracklaying tractors in 1935-36 averaged $\$ 7,800,000$ per year; for total tractors, $\$ 15,700,000$.
${ }^{11}$ Not comparable with earlier years; see note 7 for this page.
${ }^{12}$ Average for 6 months, January-June.
${ }^{13}$ Not strictly comparable with earlier data; see note 8 for this page.
${ }^{14}$ Beginning 1951, data exclude shipments of contractors' off-highway wheel-type tractors which are included in the earlier figures. In 195l, shipments of this type averaged $\$ 13,800,000$ per quarter.
${ }^{15}$ Average based on annual total which includes revisions not allocated to the quarterly figures.

## Page 165

${ }^{1}$ Compiled by the Radio-Electronics-Television Manufacturers Association. Data represent industry totals based on reports from both members and nonmembers of the association. Both private and company brands are included. Radio production comprises home, portable battery, automobile, and clock models; television sets include combination models and exclude industrial and commercial types. The monthly data for all years represent 4 - and 5 -week periods as follows: March, June, September, and December cover 5 weeks; other months, 4 weeks, except for December 1952 which represents a 6 -week period.

Monthly data for 1947-50 for radio and television sets are shown on p. 20 of the October 1952 Survey.
${ }^{2}$ Compiled by the National Electrical Manufacturers Association. The indexes cover the following products: Electrical insulating materials-laminated products, electrical; manufactured electrical mica; special dry process electrical porcelain; varnished fabric and paper; vulcanized fiber, and, beginning May 1952, varnished tubing and saturated sleeving; integral horsepower motor and genera-tors-A.C. generators, engine and belt driven, all sizes (excluding waterwheel and turbogenerators); integral horsepower motors, polyphase induction, l-200 horsepower, inclusive; integral horsepower motors and generators, D. C., 1-200 horsepower, $3 / 4$ to 150 kilowatts, inclusive; synchronous motors, 1 horsepower and larger; integral horsepower motor generator sets, all types, $3 / 4$ to 150 kilowatts, inclusive, beginning August 1940; and integral horsepower motors, single phase, l horsepower and larger, beginning January 1944. Data for fractional horsepower motors are not included.

Basic data for the component series are compiled from reports of both nonmember and member companies of the Na tional Electrical Manufacturers Association; the reports do not include all manufacturers of these products but are stated by the compilers to be fairly representative of the industry. The indexes are based on dollar figures of billed sales for electrical insulating materials and of orders received for motors and generators.

The method of computation of the electrical insulating materials index is as follows: (1) A separate index is computed for each of the components of the series; (2) each of the indices is multiplied by the weight assigned to it; (3) These weighted indices are then combined for each month and the aggregate for each month is related to the average aggregate monthly figure for the base years, 1947-49.

The method of computation of the motors and generators index is as follows: First the value reported quarterly to the Association for each component product is inflated to represent 100 percent of the industry, based on estimates of the coverage of the reports prepared by the Association from available data; the inflated dollar figures for all products covered by the index are then combined for each quarter and the aggregate for each quarter is related to the average aggregate quarterly figure for the base years, 1947-49. The 1942-45 data for motors and generators have been adjusted for cancellations reported through December 1945; in making this adjustment the cancellations are deducted from data for the quarter in which the original order was reported. Similar adjustments have not been made in the earlier data nor in the data since 1945.

No adjustments have been made for renegotiations of contracts nor for accidental fluctuations due to extremely large orders. The indexes are not adjusted for seasonal
variations nor for differences in the number of working days in the month.

Monthly and/or quarterly data for 1934-50 for the insulating materials index and the motors and generators index are shown on p. 28 of the February 1955 SURVEY. The series as shown in earlier volumes of the Statistrcal Supplement are based on the year $1936=100$.
${ }^{3}$ Compiled by the National Electrical Manufacturers Association from data furnished voluntarily by its members. It should be noted that the statistical coverage of the industries is not altogether comprehensive. The Association states that the figures shown are not necessarily complete nor are they necessarily comparable; users of the data are therefore cautioned to avoid misinterpretation. For some items the number of reporting companies has varied only slightly. References to earlier monthly figures and information relating to the individual series are given below.

Monthly or quarterly data for 1929-50 (except monthly figures prior to 1932 for polyphase induction motors) are published in the following editions of the STATISTICAL SupPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. Monthly data for July 1929-31 for polyphase induction motors, as well as revisions in the 1931 data for laminated products and in the 1934 and 1935 figures for shipments of vulcanized fiber, are available upon request.

Laminated products. - For the period November 1932-October 1934, data for laminated products cover from 8 to 11 companies (the number of reporting firms was not shown for earlier years); for November 1934-December 1950, 10 identical companies plus one additional company for June-December 1940, October 1944-June 1946, and June 1948-December 1950. For 1951 and 1952, 14 companies are represented (except for September-December 1951, 15 companies); for 1953-54, from 17 to 19 companies. The figures relate to domestic sales billed (excluding intercompany and intracompany sales) for items as follows: Airplane pulleys, molded gears (automotive), refrigerator doors, breaker strips, bearings, decorative (including translucent, excluding engraving), and all other products including commercial gears and commercial gear stock.

Vulcanized fiber.-Data for vulcanized fiber cover 5-6 companies. Shipments, which are domestic and exclude intercompany shipments, comprise shipments of vulcanized fiber sheets, rods, specialties, and beginning 1934, tubes, but exclude hollow ware (other than tubes). (The note in the 1953 SUPPLEMENT incorrectly states that shipments of hollow ware are included.) Data for consumption of vulcanized fiber paper include total consumption of paper (both sheets and tubes), including consumption in hollow ware.

Motors and generators.-Billed sales and gross new orders of electric motors and generators cover domestic business only; that is, sales to organizations in continental United States, Alaska, Hawaii, and Canal Zone. Included are rails, pulleys, and parts sold with motors and generators (but not spare parts sold separately), V-belts and other transmission units, and switchgear. Data for direct current integral motors and generators (i.e., motors and generators $1-200$ horsepower $-3 / 4$ to $150 \mathrm{k} . \mathrm{w}$. -except mill-type motors) include also direct connected exciters sold with generators, belted or motor generator exciters, and field rheostats and discharge resistors sold with generators.

Data for polyphase induction motors are as reported by 23-27 companies for 1933-40, 24 for 1941, 21-24 for 1942, 25-27 for 1943-44, 27-29 for 1945-46, 34-36 for 1947, and 34-31 for 1948-54. Data for direct current motors and generators cover 17-21 companies for 1933-42, 23-24 for Jan-uary-May 1943, and 26-30 from June 1943 through December 1954. (The number of participating companies was not reported prior to 1933.)
${ }^{4}$ Compiled by the National Electrical Manufacturers Association from the reports of 11 manufacturers ( 13 beginning July 1954) representing approximately from 70 to 80 percent of the industry. The figures comprise shipments of galvanized and black enameled rigid steel conduit and cover both the domestic and export market, including sales from consigned stock.

Comparable figures are not available prior to July 1952. Tonnage shipments of rigid steel conduit and fittings for 1937-52 (as compiled by Dun and Bradstreet, Inc., for the Rigid Steel Conduit Industry) are shown in the 1953 Statistical Supplement.
${ }^{5}$ Average for 6 months, July-December.
${ }^{6}$ Quarterly average.
${ }^{7}$ Average for 4 months, January-April. Civilian production was suspended in April 1942.
${ }^{8}$ Average based on 53 weeks; averages for other years
cover 52 weeks.
${ }^{9}$ Data cover 6 weeks' production.

## Page 166

${ }^{1}$ Compiled by the U.S. Department of the Interior, Bureau of Mines. Data represent the output of Pennsylvania anthracite only; the small amount of anthracite mined outside of Pennsylvania is included with bituminous coal production. Figures are derived from weekly data on carloadings of anthracite as reported by the Association of American Railroads, prorated to a monthly basis. A census of mine operators is taken annually and the monthly data are then adjusted to the reported total. Figures include coal loaded at mines for shipment (product of breakers, washeries, and dredges), including shipments by truck from authorized operations, coal used at collieries for power and heat, and coal sold to local trade and used by employees. Illicit operations are not included through 1940. Beginning 1941, data include bootleg coal purchased by legitimate operators and prepared at their breakers. Annual total amounts of bootleg coal included are as follows (thousands of short tons): 1941, 1,902; 1942, 2,617; 1943, 1,266; 1944, 507; 1945, 260; 1946, 352; 1947, 604; 1948, 544; 1949, 443; 1950, 601. (The 1941-46 figures for bootleg coal as shown in the 1949 and 1947 SUPPLEMENT notes represent total production, not amounts purchased by legitimate operators.) Beginning 1951, data include output of small independent producers, many of whom were formerly classed as bootleg operators.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Revisions of the 1931 data are available upon request.
${ }^{2}$ Compiled by the Anthracite Committee of the Department of Commerce of the Commonwealth of Pennsylvania beginning June 1941; by the Anthracite Institute from the middle of 1932 through May 1941; and by the Anthracite Bureau of Information prior to the middle of 1932. Data represent, primarily, prepared coal in ground storage. Excluded is coal on cars at breaker sidings, enroute, at piers, and in boats at piers. Data cover domestic and steam sizes of coal and run-of-mine and its various steam coal derivatives. Variation in the size and homogeneity of the sample affect the strict comparability of the series. Thus, data on broken coal have been included intermittently since the beginning of compilation, but they represent less than one-tenth of one percent of the total.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data prior to August 1934 are not strictly comparable with succeeding figures (see note 5 for p. 153 in the 1942 Supplement).
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census; prior to May 1941, by the Bureau of Foreign and Domestic Commerce: Bunker coal on vessels engaged in foreign trade is not included.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. (Revisions, in thousands of short tons are as follows: 1946-April, 378; December, 942; 1947-September, 866; monthly average, 710.) For monthly figures prior to 1938, refer to the 1940, 1938, 1936, and 1932 Supplements; data in those volumes are expressed in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Laoor Statistics. Quotations for anthracite cover Pennsylvania anthracite, white ash (chestnut size through 1952; stove thereafter); those for bituminous coal are for various sizes. Data are average retail prices as of the 15 th of the month and are based on cash sales of coal (l-ton lots) for residential use delivered at the curb, or into the bin if no extra charge is made. Taxes are included where applicable.

Beginning 1953, the anthracite prices cover 6 cities; the bituminous prices, 26 cities. The 1951 and 1952 prices for anthracite are based on 11 cities and for bituminous on 29 cities; earlier quotations for the former cover $10-25$ cities and for the latter, 21-38 cities. Prior to July 1944 for anthracite and prior to September 1940 for bituminous coal, the number of cities covered was constant ( 25 for anthracite and 38 for bituminous). Thereafter the city representation was gradually reduced until, at the end of 1950 , the anthracite price covered 10 cities and the bituminous, $2 l$ cities. In most cases the average was not materially affected by the change in number of cities.

Effective with 195l, the prices for both anthracite and bituminous are weighted by "cost-population" in each city surveyed in 1950. The anthracite series prior to l95l is a weighted average of prices in the cities covered (weights used were based on distribution by rail, or rail and tidewater, to each city during the 12 -month period from Augustl, 1935, to July 31, 1936). The bituminous prices prior to 1951 are unweighted averages of quotations.

Monthly (or quarterly) data prior to 1951 for the various price composites as described are available in earlier issues of the Statistical Supplement as follows: 1941-50 figures, in the 1953, 1951, 1949, and 1947 volumes; 1938-40, in the 1942 volume (minor revisions for bituminous coal for 1939 and 1940 are available upon request). Monthly data for anthracite for 1929-37 appear in the 1940 SUPPLEMENT and on p. 20 of the February 1937 SURVEY. For monthly figures prior to 1937 for bituminous coal, see the 1940,1938 , 1936, and 1932 SUPPLEMENTS.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1947, prices are for Pennsylvania anthracite, chestnut, f.o.b. car at mine; prior to 1947 the quotations are for coal on tracks, destination.

Monthly data for 1949-50 are shown in the 1953 Statistical Supplement. Monthly data for 1932-46 for the series in italics are published in the following editions of the Statistical Supplement: 1949; 1947; 1942; 1940; 1938; and 1936. Monthly data for 1947-48 and for 1929-31 (series in italics) are available upon request.
${ }^{6}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. The monthly figures as originally compiled and reported in the SURVEY are estimates based on daily and weekly statements of cars of coal loaded by the principal railroads and of shipments over the more important originating rivers, supplemented by direct reports from a number of mining companies, local coal operators' associations, and detailed monthly production statistics compiled by the State Mine Departments of Colorado, Illinois, Pennsylvania, Washington, and West Virginia. Allowance has been made for commercial truck shipments, local sales, and colliery fuel, and for small truck or wagon mines which produce over 1,000 tons a year. These estimates are later revised to agree with the results of the annual statistical reports from the coal producers. Data include lignite and anthracite mined outside of Pennsylvania, coal used at collieries for power and heat, and coal made into coke at the mines. Data exclude production from small mines which have an output of less than 1,000 tons a year and sell their product by wagon or truck; such production was also excluded from data for 1919, 1921, 1924, and thereafter as published in earlier volumes. In 1944 there were approximately 1,821 of these small mines with a total production of 756,000 tons (later information is not available).

Monthly data for 1929-38 and 1941-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data for 1939-40 (in the 1942 SUPPLEMENT) have been revised and are available upon request.
${ }^{7}$ Reported by the U. S. Department of the Interior, Bureau of Mines. (The data for several of the separate categories are obtained from various original sources; for specific information, see notes 8 to 11 following.)

The data on consumption and stocks of bituminous coal and lignite are based on complete coverage of all consumers in each class with the exception of "other industrial" and "retail" (shown on p. 167). The figures for each of these two categories are based on a monthly sample approximating 35 -percent coverage. In each case a benchmark, based on 95 -percent coverage, was established in 1943 to represent complete coverage. Since 1943, the monthly figures for the aforementioned categories have been derived by the matching of identicals for the last two months, calculating the percentage change of these identicals for the last month from the month previous and applying this percentage change to the published figure for the month previous. The results obtained have been reasonably reliable over a period of years.

The approximate total consumption of bituminous coal (including lignite), as shown in reports of the Bureau of Mines, is obtained by adding to total industrial consumption and retail deliveries the data for bunker fuel (shown on p. 167). It is not appropriate to calculate consumption from production, imports, exports, and changes in stocks because certain significant items of stocks are not included. These items are: Stocks on Lake and Tidewater docks, stocks at other intermediate storage piles between mine and consumer, and coal in transit.

Monthly data for September 1942 through 1950 are published in the following editions of the Statistical Supple MENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936. (It should be noted that, for the following items, most of the monthly averages prior to 1951 are based on annual totals which contain revisions not allocated to the monthly figures: Total industrial consumption and retail deliveries; total industrial consumption; cement mills; electricpower utilities; and "other industrial".)

Monthly averages for total "industrial consumption and retail deliveries" as shown in the 1949 Supplement and earlier issues do not include revisions for consumption by electric-power utilities (see note 9 for this page); also, the data for coal-mine fuel are shown separately and not included in the industrial consumption totals. Revisions of data are indicated in notes $8-11$ for this page.
${ }^{8}$ Compiled by the $U$. S. Department of the Interior, Bureau of Mines. See also note 7 for this page. Data for cement mills include a small amount of anthracite. Earlier data shown in the 1942 SUPPLement and previous issues are substantially correct; there have been some revisions (chiefly in the consumption data).
${ }^{9}$ Compiled by the Federal Power Commission (prior to July 1936, by the U. S. Geological Survey). Data represent bituminous coal consumed and stocks held by public-utility power plants. Data on consumption include a small quantity of coke amounting to approximately 100,000 tons annually. Annual data for all years and monthly figures beginning January 1945 have been adjusted to exclude coal consumed by plants generating electric energy for electric railways and railroads and by manufacturing plants generating electric energy for public sale (coal consumed by these plants in 1944 amounted to $2,231,000$ tons).

Monthly data for 1945-50 are shown in the 1953, 1951, and 1949 issues of the Statistical Supplement; those for September 1932 through 1944, in the 1947, 1942, 1940, 1938 , and 1936 volumes. (It should be noted that the monthly data prior to 1945 as shown in the 1947 Supplement and earlier issues do not exclude coal consumed by plants mentioned in last sentence of above paragraph.)
${ }^{10}$ Consumption by class I railways is based on the average daily consumption of coal as reported by the Association of American Railroads to the $U$. S. Department of the Interior, Bureau of Mines. Data relating to stocks held by class I railways are reported by the same source. Figures represent coal consumption for all purposes, including locomotive, power-house, shop, and station fuel. Data for switching and terminal companies are not included.

Monthly data for September 1932 through 1950 are published in the following issues of the Statistical SuppleMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; and 1936 (the figure for consumption for March 1933 should read $6,030,000$ short tons). Data published in the 1932 SUPPLEMENT represent consumption in road train service only and are not comparable with subsequent figures.
${ }^{11}$ Estimates are based largely on reports from a selected list of representative manufacturing plants. Coal consumed by coal-gas retorts and as fuel in coal mines, formerly shown separately, is now included in this group.

Monthly data for 1947-50 are shown in the 1953 and 1951 Statistical Supplement. In the 1949 and 1947 editions of the SUPPLEMENT, the figures for consumption of coal mine fuel should be added to those for "other industrial"; in the 1942 and earlier volumes, data for both coal-mine fuel and coal-gas retorts should be added to those for "other industrials."
${ }^{12}$ Average for 4 months, September-December.
${ }^{13}$ Data for "railways" are included with "other industrial."
${ }^{14}$ Average for 4 months (January, April, July, and October).
${ }^{15}$ Average for 5 months (January, April, July, September, and December).
${ }^{16}$ Beginning January 1947, prices are quoted f.o.b. car at mine instead of on tracks, at destination. Monthly average for 1947 comparable with data in italics is $\$ 14.108$.
${ }^{17}$ Data beginning 1951 are based on quotations in 11 cities; see note 4 for this page. Monthly average for 1951 comparable with data in italics is $\$ 23.16$.
${ }^{18}$ Average computed by Office of Business Economics.
${ }^{19}$ Beginning 1953, data represent the weighted average price of anthracite (stove) based on quotations in 6 cities as follows: Baltimore, Boston, Laconia (N.H.), Madison (Wis.), Middletown (Conn.), and New York.

## Page 167

${ }^{1}$ Compiled by the $U$. S. Department of the Interior, Bureau of Mines. Data are obtained from a selected list of representative retail dealers (including some small manufacturing plants) : and estimates of total retail deliveries and stocks are made from this sample. (See also note 7 for p. 166.) Data on consumption include some coal shipped by truck from mine to final destination.

Monthly data for 1938-50 are shown in the 1953; 1951; 1949; 1947; and 1942 issues of the Stati stical Supplement. Monthly data for 1933-37 for consumption are available upon request; monthly stock figures for September 1932 through 1937 appear in the 1940, 1938, and 1936 Supplements.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census; prior to May 1941, by the Bureau of Foreign and Domestic Commerce. Data cover coal (of both domestic and foreign origin) laden in U. S. ports on ships of U. S. and foreign registry which are engaged in foreign trade and also on Canadian ships passing from one U. S. port to another in the trade on the Great Lakes.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data in the 1940 SUPPLEMENT and earlier issues are shown in long tons; these can be converted to short tons by multiplying by 1.12.
${ }^{3}$ See note 7 for page 166 .
${ }^{4}$ See note 8 for page 166.
${ }^{5}$ See note 9 for page 166 .
${ }^{6}$ See note 10 for page 166.
${ }^{7}$ See note 11 for page 166 .
${ }^{8}$ See note 1 for this page and note 7 for page 166.
${ }^{9}$ Compiled by the U. S. Department of Commerce, Bureau of the Census; prior to May 1941, by the Bureau of Foreign and Domestic Commerce. Beginning 1947, data include shipments under the Army Civilian Supply Program which were not reported previously; in that year, such shipments amounted to 102,200 short tons. (For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.)

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (Revisions, in thousands of short tons: 1946-April, 1,753; December, 1,701; 1947-February, 3, 191; September, 7,593.) Data in the 1940 SUPPLEment and earlier issues are reported in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{10}$ See note 4 for page 166.
${ }^{11}$ Compi Yed by the U. S. Department of Labor, Bureau of Labor. Statistics. Data beginning 1947 are quotations f.o.b. mine; prior thereto they represent prices on tracks, destination. Prices through 1951 are averages based on quotations on one specific day of each week; thereafter, prices are those prevailing on a particular day of the month, usually within the week containing the 15th. Data beginning May 1954 are not comparable with those for earlier periods; see notes 20 and 21 for this page.

Monthly data for $1949-50$ are shown in the 1953 StatistiCAL SUPPLEMENT; those for 1947-48 are available upon request. The figure for "mine run" for February 1950 should read \$6.959. Data for 1929-46 for the italicized series appear in the following editions of the Statistical Sup plement: 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{12}$ Average for 4 months, Sept ember-December.
${ }^{13}$ Average for 4 months (January, April, July, and October).
${ }^{14}$ Average for 5 months (January, April, July, September, and December).
${ }^{15}$ Average for 4 months (March, June, September, and December).
${ }^{16}$ See note 11 for this page. Monthly averages for 1947 for the series in italics are as follows: Mine run, $\$ 6.873$; prepared sizes, $\$ 7.132$.
${ }^{17}$ Data for 1951 and 1952 are based on quotations for 29 cities. See note 4 for p. 166.
${ }^{18}$ Average computed by Office of Business Economics.
${ }^{19}$ Beginning 1953, data represent weighted averages based on quotations in 26 cities for all sizes of bituminous coal.
${ }^{20}$ Beginning May 1954, the price is for screenings for industrial use, to industrial consumers; not comparable with data through April 1954. Averages computed by Office of Business Economics are as follows: January-April for mine run, $\$ 5.509$; May-December for screenings, $\$ 4.502$.
${ }^{21}$ Beginning May 1954, the price is for large domestic sizes; not comparable with data through April 1954. Averages computed by Office of Business Economics are as follows: Janu-ary-April for prepared sizes, \$6. 550; May-December for domestic sizes, $\$ 6.735$.
${ }^{22}$ The comparability of the data is somewhat affected by substitutions in the reporting companies.

## Page 168

${ }^{1}$ Compiled by the $0 . S$. Department of the Interior, Bureau of Mines. Data are based on reports from plants accounting for practically the entire output of beehive and oven coke, including public-utility plants having coke ovens. The figures exclude screenings, coke produced by medium- and lowtemperature carbonization plants and by coal-gas retorts, and coke made from coal-tar pitch. The coke trade is concerned primarily with beehive and oven coke, since only such
coke is adapted to blast furnaces and foundries, which consume the bulk of all coke produced. Data on petroleum coke (the residue from the petroleum-refining process) are also given here, since this product has some importance as a pe-troleum-refinery fuel. as a household fuel, and for industrial uses.

Data relating to stocks at plants are here restricted to oven (byproduct) and petroleum coke, since beehive plants as a rule carry only small stocks. Stocks of oven coke at furnace plants relate to those at plants whose main business is the production of furnace coke which has an assured outlet either through financial affiliation with, or direct ownership by, an ironworks, or through long-time contracts. Merchant plants, as the name implies, refer to those plants producing coke for sale. Included are a few plants affiliated with local iron furnacee which produce more coke than the furnaces can abso:b and which therefore sell in competitive markets; plants affiliated with alkali and chemical works; and a number of plants (though constructed primarily to supply city gas) which must dispose of their coke in the usual trade channels.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data for 1930 and 1932-37 for production of beehive and oven coke (byproduct) and for 1929-37 for stocks of petroleum coke are shown in the 1940, 1938, 1936, and 1932 volumes.

Production figures for beehive and oven coke (byproduct) for 1927, 1929, and 1931 have been revised and are available upon request. For monthly data beginning 1932 for stocks at oven-coke plants (furnace plants and merchant plants separately) see the 1940, 1938, and 1936 Supplements. (Total stocks at oven-coke plants for December 1936 should read $1,699,000$ short tons and for December 1939, 2,570,000.)
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941).

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data in the 1940 SUPPLEMENT and earlier issues are in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{3}$ Compiled (through 1951) by the U. S. Department of Labor, Bureau of Labor Statistics; beginning 1952, data are from "Steel" magazine. The series represents averages of weekly quotations for beehive coke for blast-furnace use, f.o.b. Connellsville ovens.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{4}$ Reported by the U. S. Department of the Interior, Bureau of Mines, from data supplied by the Oil and Gas Journal. Prior to 1947, California data were furnished by the American Petroleum Institute. Also prior to 1947, data as originally released covered 4- or 5 -week periods but were later revised, according to the compilers, to cover calendar months.

Monthly data for 1929-37 and 1939-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Monthly data for 1938 in the 1942 volume have been revised and are available upon request.
${ }^{5}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Production data are for crude oil (including some condensate which is mixed with crude) and represent oil transported from producing properties plus that remaining on properties and consumed on leases. Refinery operations are based on the ratio of the daily average crude runs to stills to the total rated capacity per day of operating refineries. Consumption (runs to stills) includes consumption of both domestic and foreign crude oils, but does not include reruns of unfinished oils and unfinished gasoline.

Monthly data for 1929-50 (except 1931 revised production figures) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. The 1931 revised production figures
are available upon request. (Consumption for July 1939 should read $106,899,000$ barrels.)
${ }^{6}$ Barrels of 42 gallons.
${ }^{7}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; figures include some fuel oils (principally residual oil) which were formerly reported as transfers from crude oil; 1948 monthly average on the new basis is $170,696,000$ barrels.
${ }^{8}$ In recent years, data have included increasing quantities of nonmarketable catalyst coke; the quantity included in 1954 totaled $1,901,000$ short tons.

## Page 169

${ }^{1}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Stocks of gasoline-bearing crude petroleum represent stocks of refinable crude oil.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. The latter three volumes also include monthly figures for 194l-48 for heavy crude oil in California.
Monthly data for 1938-4.0 for all series are available in the 1942 volume; note that gasoline-bearing oil is shown as "refinable in the United States." (Total stocks for March 1940 should read $50,194,000$ barrels.) As explained in note 1 for p. 156 of the 1942 Supplement, data prior to 1933 for each of the following classifications are stocks east of California only: Stocks at refineries, at tank farms and in pipelines, and on leases. Although data for stocks of light crude petroleum in California are not available by location, they are included in the figures for total stocks. The figures beginning January 1949 (and for 1922-23) for total stocks also include heavy crude stocks in California, which for 1924-37 are included with stocks of residual fuel and for 1938-48 are available separately. (The monthly average for heavy crude in California for 1948 is $8,020,000$ barrels.)

For references to monthly data prior to 1938 , see the 1953 Statistical Supplement, p. 286 (last paragraph of note 1 for p. 171).
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data for imports are imports for consumption beginning 1934; prior thereto, general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note l for p. 104.

Monthly data for 1938-50 for exports and for 1929-50 for imports are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Data for exports were first shown in the 1942 volume. (Revisions for imports-December 1946 and October 1950-6,719,000 and 15,526,000 barrels.)
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureaur of Labor Statistics. Prices through 1951 are averages based on quotations on 1 day of each week; thereafter, the data relate to 1 day of each month (usually in the week containing the 15th). From 1935 forward, the quotations are for crude petroleum, $36^{\circ}-36.9^{\circ}$ gravity; prior thereto, $33^{\circ}-33.9^{\circ}$ gravity. (Monthly average for 1935 for crude, $33^{\circ}-33.9^{\circ}$ gravity, is $\$ 0.94$ per barrel.)

Monthly data for 1947-50 for crude petroleum, $36^{\circ}-36.9^{\circ}$ gravity, appear in the 1953 and 1951 editions of the Statistical Supplement; those for 1935-46, on p. 20 of the March 1951 Survey. The 1949 Statistical Supplement and earlier issues contain monthly data through 1948 for crude, $33^{\circ}-33.9^{\circ}$ gravity.
${ }^{4}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. See notes 20 and 23 for this page regarding changes in January 1949 and January 1952 affecting comparability of the data.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Monthly data for 1932-40 are available in the

1942, 1940, 1938, and 1936 volumes (distillate fuel oil is shown as "gas oil and distillate fuel oil"). For monthly data for 1930 and 1931 see p. 20 of the February 1933 Survey.
${ }^{5}$ Compiled by the U. S. Department of the Interior, Bureaw of Mines. Data represent apparent consumption as computed from production plus imports, minus exports, plus or minus the change in stocks. The export data used differ from those shown separately for the items, since the former include shipments to noncontiguous territories.

Comparability of the series has been affected at various times as follows: Beginning 1939, by the inclusion of net transfers of crude oil east of California and by the change in method of computing stocks (see note 14 for p. 170); beginning 1951, by a revised definition of "bulk terminals". which is reflected in the stock data used in computing domestic demand; beginning 1953, by the exclusion of data for jet fuel, now separately available (see note 23 for this page).

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942.
${ }^{0}$ Compiled by the Federal Power Commission (prior to July 1936 by the U. S. Geological Survey). Data represent fuel oil consumed by privately and publicly owned electric utilities. The public group comprises municipal electric utilities, Federal plants, rural electrification cooperatives, power districts, and State power projects.

Monthly data for 1945-50 are available in the 1953, 1951, and 1949 issues of the Statistical Supplement. The monthly figures prior to 1945, shown in the 1947 SUPPLEMENT and earlier issues, are not comparable with figures in subsequent volumes, since the earlier issues include also consumption by plants operated by electric and steam railroads and by certain industrial plants which sold some energy for public use.
${ }^{7}$ Compiled by the Interstate Commerce Commission. Data beginning with 1937 cover all quantities of fuel oil and diesel fuel purchased by class I railways (including switching and terminal companies), whether for locomotive, station, shop, or other use. Figures prior to 1937 cover consumption of fuel oil by steam locomotives in road train service of class I steam railways; they exclude consumption of gasoline by motor-car trains, diesel fuel by locomotives and motor-car trains, and fuel oil used in yard switching service.

Monthly data for 1937-50 for the series currently used are available upon request.
${ }^{8}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 194l). Data cover oil of both domestic and foreign origin laden, in U. S. ports, on ships of U. S. and foreign registry which are engaged in foreign trade, and also on Canadian ships passing from one U. S. port to another in the trade on the Great Lakes.

Monthly data for 1929-50 are published in the following editions of the STATISTICAL Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. The following revisions have been made (thousands of barrels): 1946-July, 5, 514; 1940-June, 2, 925; July, 3, 008; August, 2, 681; 1931September, 3,068. Other minor revisions appearing in the 1932 SUPPLEMENT are available upon request.
${ }^{9}$ Barrels of 42 gallons.
${ }^{10}$ Revised basis. Additions made at beginning of indicated years are as follows (thousands of barrels): 1931, 3, 073; 1933, 160.
${ }^{11}$ Revised basis. Deductions made at beginning of indicated years are as follows (thousands of barrels): 1932, 725; 1934, 1,089; 1938, 993; 1939, 793; 1944, 1,374.
${ }^{12}$ Not comparable with earlier data; see note 1 for this page.
${ }^{13}$ Not comparable with earlier data; see note 3 for this page.
${ }^{14}$ Revised basis; $11,615,000$ barrels transferred at the beginning of the year from refinery to tank-farm and pipeline stocks.
${ }^{15}$ Not comparable with earlier data; see note 7 for this page. Monthly average for 1937 for earlier series is 4,453,000 barrels.
${ }^{16}$ Revised basis. See note 5 for this page and note 14 for p. 170 for explanation of a change affecting comparability of the data, and for 1939 figures comparable with those for earlier years.
${ }^{17}$ Excludes substantial August shipments which were omitted because of incomplete information on original documents.
${ }^{18}$ Revised basis; 199,000 barrels transferred at the beginning of the year from crude-oil stocks to natural-gasoline stocks.
${ }^{19}$ Beginning January 1949, data for heavy crude in California are not separately available, but are included with gas-oline-bearing stocks. Figures for gasoline-bearing stocks from January 1949 forward are, therefore, not strictly comparable with those for earlier periods.
${ }^{20}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; figures exclude some fuel oils (principally residual oil) which have been transferred to crude runs to stills; 1948 monthly average on new basis is $31,612,000$ barrels for distillate and $39,999,000$ barrels for residual oil.
${ }^{21}$ Data beginning January 1951 are not comparable with those for earlier periods; see note 5 for this page. Monthly averages for 1951 comparable with earlier data are as follows (thousands of barrels): Distillate, 37,425 ; residual, 47,027.
${ }^{22}$ Based on annual total which includes revisions not available by months.
${ }^{23}$ Beginning January 1953, data for jet fuel are excluded. Monthly averages for 1952, excluding jet fuel, are as follows (thousands of barrels): Production, 43,160; domestic demand, 39,749 . See also notes 4 and 5 for this page.

## Page 170

${ }^{1}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data include all refinery stocks of distillate and residual fuel oils, bulk-terminal stocks in California, and (beginning 1939) bulk-terminal stocks east of California. Data prior to 1938 for residual oil include al so heavy crude oil in California; for 1938-48, heavy crude in California was reported separately. Comparability of the series is materially affected by the aforementioned changes, as well as by changes at the beginning of 1949,1951 , and 1953; for details, see notes $14,16,18$, and 19 for this page.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly figures for 1932-37 for distillate appear in the 1940, 1938, and 1936 Supplements; data for residual as shown in those volumes are for "east of California" only.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Separate data for distillate fuel oil and residual fuel oil are not available prior to 1932. Data for lubricants include all lubricating oils. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1, 1953, see note 1 for $p$. 104.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Revisions are as follows (thousands of barrels): Distillate fuel oil, 1947--July, 3,016; September, 3, 134; 1948-January, 1, 392; April, 1,642; October, 1,329; residual fuel oil, January 1948, 454; kerosene,

October 1947, 627; lubricants, 1947-June, 1,339; September, 894; October, 1,080; December, 1,130.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are averages based on prices on a specific day of each week; thereafter the prices are those prevailing on a particular day in the week containing the 15 th of the month. Data represent prices of distillate fuel oil, bulk lots, f.o.b. refineries or terminals, and exclude all fees and taxes. These prices replace the former series for fuel oil, Pennsylvania, $36^{\circ}-40^{\circ}$ gravity, shown in the 1949 Statistical Supplement and earlier issues.

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Statistical Supplement; those for 1935-46 are available on p. 20 of the March 1951 Survey.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are averages based on prices on a specific day of each week; thereafter the prices are those prevailing on a particular day in the week containing the 15 th of the month. Data represent prices of residual fuel oil, Oklahoma (group 3), No. 6 fuel, bulk lots, and exclude all fees and taxes.

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Statistical Supplement. Monthly data for 1935-46 are available on p. 20 of the March 1951 Survey; prices were inadvertently shown there as dollars per gallon instead of dollars per barrel.
${ }^{5}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Domestic demand represents apparent consumption as computed from production plus imports, minus exports, plus or minus the changes in stocks. The export data used in this computation differ from those shown separately on this page, in that the former include shipments to noncontiguous U. S. territories. Beginning January 1951, the comparability of data on kerosene is affected by a revised definition of bulk-terminal stocks (see note 18 for this page). Comparability of the kerosene series is again affected beginning 1953 by the exclusion of data for jet fuel (see note 19 for this page).

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{8}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Stocks of kerosene includes stocks held at refineries and, beginning January 1942, bulk-terminal stocks. Prior to January 1942, the data cover refinery stocks only (see note 11 for this page). See also notes 16,18 , and 19 for this page for further changes materially affecting the comparability of data for kerosene stocks. Stocks of lubricants exclude distributors' stocks in California beginning January 1948 (see note 12 for this page).

Monthly data for 1929-30 and 1932-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. Monthly data for 1931 shown in the 1932 volume for both kerosene and lubricants have been revised and are available upon request.
${ }^{7}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are averages based on prices on a specific day of each week; thereafter the prices are those prevailing on a particular day in the week containing the 15 th of the month. Data represent prices of kerosene, New York Harbor, No. 1 fuel, bulk lots, f.o.b. refineries or terminals, and exclude all fees and taxes. These prices replace the former series for kerosene, water white, Pennsylvania, shown in the 1949 Statistical SuppleMENT and earlier issues.

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Statistical Supplement. Monthly data for 1935-46 are available on p. 24 of the August 1950 SURvey.
${ }^{8}$ Compiled by thè U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are averages based on prices on a specific day of each week; thereafter the prices are those prevailing on a particular day in the week con-
taining the 15 th of the month. Data represent prices of lubricants, midcontinent, bulk lots, bright stock, conventional, $150-160$ viscosity $D, 0-10$ pour point, and exclude all fees and taxes. These prices replace the series for lubricants, cylinder, refinery, Pennsylvania, shown in the 1949 Statistical Supplement and earlier issues.

Monthly data for 1947-50 are published in the 1953 and 1951 editions of the Statistical Supplement. Monthly data for 1935-46 are available on p. 20 of the March 1951 SurVEY.
${ }^{9}$ Barrels of 42 gallons.
${ }^{10}$ Revised basis. Deductions at the beginning of indicated years are as follows (thousands of barrels): Distillate1934, 710; 1941, 29; 1942, 596; residual-1931, 2,638; 1938, 13,512 ; 1941, 1, 278; 1942, 236. (For 1938 , see also note 1 for this page.)
${ }^{11}$ Revised basis. Additions at beginning of indicated years are as follows (thousands of barrels): 1931, 62; 1933, 59; 1942, 4,916. (See also note 6 for this page.)
${ }^{12}$ Revised basis. Deductions at beginning of indicated years are as follows (thousands of barrels): 1931, 144; 1932, 26; 1937, 460; 1948, 923. In 1933, 229, 000 barrels were added.
${ }^{13}$ Revised basis. Additions at beginning of indicated years are as follows (thousands of barrels): Distillate, 1933, 167; residual-1933, 705; 1934, 214.
${ }^{14}$ Revised basis. Stock data include bulk-terminal stocks east of California beginning January 1939. (Bulk-terminal stocks in California have been included since 1924.) The domestic demand data, in addition to including changes in bulk-terminal stocks east of California, include net transfers of crude oil east of California beginning 1939. (Transfers of crude oil in California have been included with residual fuel oil statistics beginning 1932 and with distillate fuel oil beginning 1938.) Monthly averages for 1939 comparable with data for 1938 are as follows (thousands of barrels): Domestic demand-distillate fuel oil, 11,560 ; residual fuel oil, 26,645 ; stocks-distillate fuel oil, 25,807 ; residual fuel oil, 92,948 . Stock figures for December 3l, 1938, comparable with those for 1939 are as follows (thousands of barrels): Distillate fuel oil, 36,224 ; residual fuel oil, 101,971.

## ${ }^{15}$ No quotation.

${ }^{16}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; data for distillate and residual fuel oils exclude cracking stocks (formerly included with finished stocks in California) and data for fuel oils and kerosene exclude stocks held by distributors in California (formerly included with bulk-terminal stocks). December 1948 figures on new basis comparable with succeeding data are as follows (thousands of barrels): Distillate, 71,429 ; residual, 64,021 ; kerosene, 23,941 .
${ }^{17}$ Beginning January 1950, coverage was increased to include one East Coast terminal not previously reporting; December 1949 figure on the new basis, $75,435,000$ barrels; on old basis, 75,207,000 barrels.
${ }^{18}$ Beginning January 1951, data are on a revised basis, due to a change in the definition of "bulk terminals." December 1950 data for stocks on the revised basis are as follows (thousands of barrels): Distillate, 76,021; residual, 41,700 ; kerosene, 21,430 . Monthly averages for 1951 on the old basis are as follows (thousands of barrels): Stocksdistillate, 71,512 ; residual, 42,619 ; kerosene, 23,594 ; domestic demand, kerosene, $10,308$.
${ }^{19}$ Figures beginning January 1953 exclude data for jet fuel. Comparable figures for 1952 are as follows (thousands of barrels): Distillate stocks (December), 98, 688; kero-sene-production (monthly average), 10,731; domestic demand (monthly average), 10,$104 ;$ stocks (December), $27,216$.
${ }^{20}$ Figures beginning January 1953 exclude data for $j$ et fuel.

## Page 171

${ }^{1}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data represent total gasoline production, including aviation gasoline (shown separately on p. 172) and benzol. Sales of liquefied petroleum gases are excluded beginning 1941 and transfers of cycle products, beginning 1943. The figures beginning 1953 do not include production of jet fuel. (Reports on jet fuel were initiated in 1952 . Jet fuel fuel production totaled 20,929,000 barrels in 1952; 35, 747, 000 barrels in 1953; and 46, 550,000 barrels in 1954.)
"Gasoline and naphtha from crude oil" covers refinery production and, beginning 1953, is derived by adding to finished gasoline and naphtha the net production of unfinished gasoline. (The net production is a minus quantity if the unfinished gasoline derived from the current month's crude runs exceeds the amount of finished gasoline derived in that month from unfinished gasoline produced in a prior period. In other words, the total amount of gasoline and naphtha from crude is the amount produced from the current month's crude runs.)
"Natural gasoline used at refineries" represents that portion of the production of this item consumed in blending at refineries; "natural gasoline sold to jobbers, etc.," is a net figure after stock adjustments and, beginning 1951, includes losses and exports.

It should be noted that, prior to 1953, the figures for the component items shown here do not add to those for total gasoline production. The difference is accounted for by changes in the method of reporting stocks and, prior to 1951, also by losses, exports, etc.

Monthly data for 1936-50 (except for natural gasoline sold to jobbers) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; and 1940. (Gasoline and naphtha from crude oil is shown in the 1942 and 1940 volumes in two separate categories, i.e., straight run and cracked gasoline.) For earlier monthly data on gasoline and naphtha from crude oil and natural gasoline used at refineries, see table 41 on p. 19 of the October 1937 Survey.
${ }^{2}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data represent the apparent consumption in continental United States of refinery and natural gasoline (including aviation gasoline), naphtha used for industrial purposes, and, through 1952, the low-grade gasoline blend in jet fuels. Domestic demand is computed from production plus imports, minus exports, plus or minus the change in stocks. Figures beginning January 1951 reflect adjustment to a new basis of reporting bulk-terminal stocks and, therefore, are not comparable with earlier data (see note 15 for this page). The export figures used in computing domestic demand differ from those shown in column 10 in that the former include shipments to noncontiguous U.S. territories. Natural gasoline losses are included beginning 1932; in that year such losses represented about 1 percent of total motor fuel consumed. Comparability is again affected in 1953 by the exclusion of data for jet fuel (see note 16 for this page).

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly data for 1923-37 are correct as shown in the $1940,1938,1936$, and 1932 SUPPLEMENTS, except for minor revisions which are available upon request.
${ }^{3}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Finished gasoline stocks are those held at refineries, at bulk terminals, and in pipelines. A change in the definition of "bulk terminals" is reflected in data for finished gasoline beginning January 1951; the figures from 1951 forward, therefore, are not comparable with earlier data (see note 15 for this page). Comparability is again affected in 1953 by the exclusion of data for jet fucl (see note 16 for this page). Stocks at refineries and terminals also include domestic shipments of gasoline consigned to them and in transit by water or rail. Unfinished aviation gasoline, most of which is probably held at refineries, is included in the finished gasoline stocks. Unfinished gasoline is held only at refineries. Stocks of natural gasoline and allied products are those held at natural gasoline plants, at refineries, and at bulk terminals. Stocks of
natural gasoline at bulk terminals have been included only beginning 1935 and stocks at refineries beginning 1930; previously, only those at natural gasoline plants were counted. Stocks of liquefied petroleum gas are included with data for natural gasoline beginning in 1942; prior to that time only stocks of natural gasoline and cycle products were represented. (See notes $9,10,12,13,15$, and 16 for this page for details on changes in the basis of reporting.)

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. (The November 1939 figure for unfinished gasoline should read 5,171,000 barrels.) Monthly data prior to 1938 for total stocks of finished gasoline, stocks at refineries, and stocks of natural gasoline are correct as shown in the 1940, 1938, 1936, and 1932 Supplements except for the 1930 and 1931 data which have been revised and are available upon request. Monthly figures for stocks of unfinished gasoline from 1930 through 1937 are also available upon request.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Data cover commercial and lend-lease exports, but motor fuel sent to the Armed Forces abroad during the war is excluded. Beginning 1947, data include shipments under the Army Civilian Supply Program; such shipments were not previously reported. For 1947 these shipments amounted to 879,000 barrels of benzol. The figures comprise motor fuels (including jet fuel beginning 1953) and refinery gasoline; natural gasoline; blending agents (beginning 1940); and, prior to 1953, also benzol, naphtha, mineral spirits, solvents, and other finished light products.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Revisions are as follows (thousands of barrels): 1947-April, 3,356; July, 4,014; September, 3,130; 1948-December, 2,976. Monthly data prior to 1938 are shown in table 54, p. 16, of the December 1940 SURVEY.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are averages based on prices prevailing on a specific day of each week; beginning 1952, quotations are for a particular day in the week containing the 15 th of the month. Data represent prices of motor gasoline, Oklahoma (group 3), regular grade, f.o.b. refineries or terminals, excluding all fees and taxes.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932.
${ }^{6}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Data beginning 1947 represent prices of motor gasoline, New York Harbor, regular grade, 85 octane research, bulk lots, f.o.b. refineries or terminals, excluding all fees and taxes. Through 1951, quotations are averages based on prices prevailing on a specific day of each week; beginning 1952, prices are for a particular day in the week containing the 15 th of the month. The figures prior to 1947 (shown in italics) are prices of motor gasoline, tank wagon, New York, delivered to undivided dealers (i.e., those who handle only gasoline of a single company); figures exclude the New York State and Federal taxes. The comparable average for 1947 for this series is $\$ 0.118$.

Monthly data beginning 1947 for the current series are available upon request; those for 1949 and 1950 are published in the 1953 Statistical Supplement. Monthly figures for 1935-46 for the italicized series appear on p. 24 of the January 1951 Survey.
${ }^{7}$ Reported by the American Petroleum Institute, according to data compiled by the Texas Co. The prices are simple averages of service-station prices (exclusive of taxes) on the lst of each month for regular-grade gasoline in 50 representative cities. The 50 cities include 2 in the State of New York and 1 in each of the other 47 States and the District of Columbia. The prices for the lst of the month are shown here as of the end of the preceding month.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; and 1942. Monthly figures prior to 1938 are shown in table 10, p. 16, of the March 1941 Survey.
${ }^{8}$ Barrels of 42 gallons.
${ }^{9}$ Revised basis. Deductions at the beginning of indicated years are as follows (thousands of barrels): At refineries1931, 643; 1932, 7,850; total-1935, 674; 1942, 254.
${ }^{10}$ Revised basis. Additions at the beginning of indicated years are as follows (thousands of barrels): "Natural gasoline and allied products"-1931, 723; 1934, 369; 1935, 476 (represents stocks of natural gasoline at terminals); 1942, 162 (beginning January 1942 includes liquefied petroleum gases at natural gasoline and cycle plants); "total finished gasoline"-1933, 1,703 (includes transit and pipeline stocks not previously included); 1934, 3, 639; "at refineries" - 1933, 135 (bulk terminal, transit, and pipeline stocks included beginning 1933); 1934, 5,334.
${ }^{11}$ Reflects natural gasoline losses beginning 1932. Monthly average for 1932 excluding losses is $31,158,000$ barrels.
${ }^{12}$ Revised basis; 1, 100,000 barrels transferred from refinery to unfinished gasoline at the beginning of the year.
${ }^{-13}$ Revised basis; 199, 000 barrels of California condensate transferred from crude-oil stocks at the beginning of the year.
${ }^{14}$ See note 6 for this page.
${ }^{15}$ Beginning 1951, data are on a revised basis reflecting a change in the definition of "bulk terminals." The December 1950 figure for stocks of finished gasoline on the revised basis is $116,347,000$ barrels. Monthly averages for 1951 on the old basis are as follows (thousands of barrels): Domestic demand, 90,996 ; stocks of finished gasoline, 117, 381.
${ }^{16}$ Excludes jet fuel beginning January 1953 (see also notes 1, 2, and 3 for this page). Comparable 1952 monthly averages are as follows (thousands of barrels): Total produc-tion-98,169; gasoline and naphtha from crude oil (including unfinished net), 86,464; domestic demand, 95,249; stocks (December 31)-total stocks, 126,501; at refineries, 69, 290.
${ }^{17}$ Not comparable with earlier data; see 2d paragraph of note 4 for this page regarding change in coverage beginning January 1953.

## Page 172

${ }^{1}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data cover total output and stocks held at all refineries. Aviation gasoline is distinguished from ordinary motor fuel chiefly by its higher octane rating but also by additional components blended into it for various purposes. In addition to the " 100 -octane and above" classification, there is also 90 but under 100 -octane and some under 90 -octane aviation gasoline produced. Stocks cover finished gasoline and, prior to 1949, also unfinished aviation gasoline (see note 11 for this page). Unfinished aviation gasoline is included in the finished gasoline stocks on p. 171 (see note 3 for that page). Stocks other than those held at refineries but still in the production stage, such as stocks in transit, are believed to be negligible.

Data for total production and stocks are not available prior to October 1939; separate data for 100 -octane and above are not available prior to 1942. Monthly data for 1941-50 are published in the following editions of the STAtistical Supplement: 1953; 1951; 1949; and 1947.
${ }^{2}$ Compiled by the U. S. Department of the Interior, Bureau of Mines. Data cover only asphalt and wax made from petroleum. Asphalt production includes that produced at refineries from both domestic and imported petroleum. Stocks of asphalt represent amounts held at petroleum refineries only; beginning January 1948, data exclude distributors'
stocks in California (see note 10 for this page). Wax data refer to output and stocks of petroleum refineries only.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. In those volumes, data for asphalt are in short ton (l ton $=5.5$ barrels) and data for wax are in thousands of pounds ( 280 pounds $=1$ barrel).
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data cover all known manufacturers of the specified asphalt and tar roofing and sidings products and include direct shipments (export and domestic) from the producing plants and from warehouses served by or operated in conjunction with these plants. To avoid duplication, shipments of the listed products to other manufacturers of these products are not included. Only those products which have a base of dry felt or other organic binder are included; products which are made with an asbestos base are excluded. The number of reporting plants is as follows: September 1943, 109 (this represented complete coverage of the industry); 1944, 108 ; 1945, 102 ; 1946, from 102 plants in January to 96 in December; 1947-48, 95; 1949, 102; 1950, $105 ; 1951,105 ; 1952,103 ; 1953,113 ; 1954,119$. When some of the plants in any month fail to report, estimates are included for those nonreporting plants; hence the data as reported by the Census Bureau represent virtually complete industry coverage.

For some time prior to September 1943 when the Bureau of the Census began publication of the present series on asphalt products, roofing shipments statistics had been received from 33 manufacturers operating 78 plants estimated to represent the following percentages of complete industry coverage as of September 1943. Smooth-surfaced roll roofing and cap sheet, 94.7 percent; mineral-surfaced roll roofing and cap sheet, 94.5 percent; strip shingles, 95.1 percent; individual shingles, 99.4 percent. On the basis of these percentages, the asphalt roofing data from April 1939 through August 1943 were expanded to represent industrywide coverage, to compare with the present series beginning in September 1943 which represent, as nearly as possible, complete industry coverage. Reported annual data for total roofing shipments for 1936-38 and figures for January-March 1939 represented about 92 -percent coverage on the basis of data from the 1935 Biennial Census of Manufactures, but were expanded to represent complete coverage.

Shipments data for asphalt sidings and saturated felts, available only beginning September 1943, also represent practically complete coverage of the industry, including estimates for nonreporting plants in various months. For 1949-51, however, the monthly figures for saturated felts do not account for shipments of one producer whose data are covered in the annual totals on which the monthly averages are based.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. Asphalt roofing data shown in the 1942 and earlier volumes are not comparable with the present series.
${ }^{4}$ For motor fuel, 1 barrel equals 42 gallons; asphalt, 5.5 barrels equal 1 short ton; wax, l barrel equals 280 pounds.
${ }^{5}$ Revised basis ( 34,000 barrels deducted at beginning of 1932 and 17,000 barrels deducted at beginning of 1937).
${ }^{6}$ Average for 3 months, October-December.
${ }^{7}$ Average for 9 months, April-December.
${ }^{8}$ Includes some gasoline of 98-99 octane rating.
${ }^{9}$ Average for 4 months, September-December.
${ }^{10}$ Revised basis; 250,000 barrels deducted at the beginning of the year.
${ }^{11}$ Beginning January 1949, data exclude stocks of unfinished aviation gasoline. December 1948 figures on the new and old bases, respectively, are as follows (thousand barrels): Total-5,915; 6,068; 100-octane-2,504; 2,603.

[^5]${ }^{13}$ Beginning 1954, data for stocks exclude stocks of components not of petroleum origin. Comparable figures for December 1953 are as follows (thousands of barrels): Total, 9,055; 100-octane and above, 5,239 .

## Page 173

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the War Production Board for 1941 through August 1945). Data include both domestic and imported pulpwood and, beginning 194l, represent total receipts, consumption, and stocks at all wood pulp mills with estimates for a few mills that do not report regularly. For years through 1940, annual data only are available for consumption; monthly averages are computed from those totals. Prior to 1941, consumption data exclude mills producing wholly defibrated, exploded, asplund fiber, and similar grades of pulp, but it is believed that the exclusion of such mills does not materially affect the comparability of the data. Further details as to softwood and hardwood and geographic regions are available in the original reports.

Monthly data for past years corresponding to the monthly averages contained in this issue will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition. No monthly data are available prior to 1941.

Since the monthly data were published in the Supplements referred to above, minor revisions which were not distributed by months were made in the annual totals for some years as indicated by note 4 for this page.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (for the war period through August 1945, by the War Production Board). Data beginning 1941 cover all mills producing paper and paperboard except that all 1943 data and receipts and stocks figures for 1944 include reports from a few mills producing other products; in order to raise totals to an industry basis, estimates are included for a few mills not reporting in some months or years.

Monthly consumption averages computed from annual totals for 1940 and earlier years are not exactly comparable with those for later years due to exclusion of some mills not classified in the industry prior to 1941. Their inclusion in 1941 raised the total for that year by 3.5 percent (see note 2 for p. 175).

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1943-44, the 1947 Edition. Monthly data are not available for years prior to l943. Since publication of the monthly data, revisions which were not distributed by months have been made in the annual totals for some years as indicated by note 4 for this page.
${ }^{3}$ Compiled by the U. S. Pulp Producers Association. Production data are estimates of total industry output of all wood pulp based on reports from mills representing about nine-tenths of U. S. production and are adjusted to approximate the industry-wide annual figures published by the U.S. Department of Commerce, Bureau of the Census. Grades of pulp included in the production total in all years but not shown separately are as follows: Currently and for recent. years, semichemical, screenings, and off-quality; for 1949 and prior years, dissolving and special alpha grades; for years prior to 1946, defibrated, exploded, asplund fiber, and similar grades. Tonnages are converted to an air-dry weight basis ( 10 percent moisture).

Dissolving and special alpha pulp is the term commonly used to designate a special grade of bleached sulphite and/or sulphate pulp destined primarily for the manufacture of such nonpaper products as rayon, cellophane, photographic film, and other plastics, explosives, etc. Prior to 1950 , production and stocks data are included with figures for bleached sulphite. Production tonnages of dissolving and special alpha included with sulphite pulp (monthly averages based on annual totals) for 1935 and successive years
through 1949 are, respectively: 15,$795 ; 25,633 ; 29,470$; 19,022 ; 16,$118 ; 27,227$; 21,724; 33,$644 ; 32,535$; 37,291 ; 31,$885 ; 26,381 ; 33,949 ; 34,974$; and 31,171 .

Stocks data cover only holdings of own production at pulp-producing mills and exclude purchased (both domestic and imported) pulp and the much larger stocks at paper and paperboard mills.

Data changes at several points which have affected comparability of the stocks series should be noted. Beginning 1947, stocks data are estimated own pulp holdings of all pulp mills including those grades not shown separately and estimates for nonreporting mills; prior to 1947, stocks of defibrated, exploded, etc., pulp were excluded; prior to 1940, stocks of semichemical and miscellaneous pulp not shown separately were also excluded.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; and 1934-35, the 1938 Edition. No comparable monthly data are available for 1933 and earlier years.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to above. For the years 1940 to 1945 inclusive, output of defibrated, exploded, etc. pulp, formerly excluded, was added to the previously published figures bringing them up to Census level. For the same period, production tonnages of about 120,000 tons a year were transferred from the defibrated, exploded, etc. grade to the groundwood class in conformance with a Census reclassification of reported data. In addition, other revisions of a minor sort were made in the 1940 data. For the years 1934 to 1936 inclusive the figures for total output have been raised to Census levels without affecting other published figures by including data for grades of pulp not shown separately. Most of these revisions were in annual totals and monthly averages and were not distributed by months. In the publistied stocks data for 1934-35, the totals included holdings of grades not reported separately while the sulphate figures have subsequently been revised downward.
${ }^{4}$ Based on slightly revised annual totals; the revisions were not distributed by months.
${ }^{5}$ See $2 d$ paragraph of note 3 above regarding classification of dissolving and special alpha grades prior to 1950.

## Page 174

${ }^{1}$ See note 3 for $p .173$.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data cover imports and exports of all grades of wood pulp. Pulpwood, rags and rag pulp, and other paper base stocks are not included. Data relate to imports for consumption beginning 1934; in earlier years they cover general imports. Tonnages of imports for all years and of exports beginning 1936 are air-dry weights.

Several changes in reporting methods affecting the comparability of the series should be noted. For the period beginning with 1937, imports of dissolving and special alpha pulp are reported separately; since for prior years they were included with sulphite pulp imports, the import data for sulphite for years through 1936 are not comparable with those for subsequent years. Furthermore, beginning with 1940, screenings-which were formerly included with paper grade pulps-were reported separately; thereafter, al though included in the totals for all years, they have not been shown separately. In 1940 when first reported separately, screenings averaged 677 tons a month of which 627 tons were sulphite and 50 tons groundwood.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL

Supplement as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition. In the 1940 and earlier Supplements, however, no export data were published nor import totals, but the latter can be obtained by adding the chemical and groundwood classes. Nor did these earlier SUPPLEMENTS show separately the dissolving and special alpha, sulphate, sulphite, and soda pulps, but lumped them all together under the heading of "chemical." Monthly data for sulphate and sulphite pulp imports were first published in the 1942 SUPPLEMENT, those for soda pulp in the 1947 edition, and those for dissolving and special alpha pulp in the 1953 edition.

Except for minor revisions in previously published data, the monthly averages contained herein for earlier years correspond with the monthly data published in the previous SUPPLEMENTS referred to above, if allowance is made for the classification changes previously mentioned. Thus, addition of dissolving and special alpha to paper grades of sulphite pulp as shown herein yields totals comparable with the monthly figures for sulphite pulp in the 1951 and all prior SUP PLEMENTS.
${ }^{3}$ See note 4 for $p .173$.
${ }^{4}$ Beginning 1950, data exclude dissolving and special alpha grades of pulp. See 2d paragraph of note 3 for p. 173 .

## Page 175

${ }^{1}$ See note 2 for $p$. 174.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (except data for 1941 through September 1945 which were compiled from reports to the War Production Board). Figures for most of the period beginning 1941 are estimates of total industry output based on reports from all known operating mills and include estimates for nonreporting mills.

Production data pertain to primary operations, i.e., those performed on or directly behind the paper machine. All measurements cover finished production or machine production less machine and finishing room waste. The paper production total includes all types reported by the Bureau of the Census plus building paper. The paperboard total includes container and all other types of board reported by the Census Bureau plus wet-machine board. The building board total includes only hardboard and insulating board.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL Supplement to the Survey of Current Business as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 194546 , the 1049 Edition; and 1942-44, the 1947 Edition. Comparable monthly or quarterly data for earlier years are not available; monthly averages for 1941 and preceding years are computed from annual totals.

Two classification and/or coverage changes affecting the comparability of the data should be noted. Beginning in 1946 and for subsequent years, stock for laminated wallboard and other building boards was transferred from the building board class to the paperboard class lowering the 1946 building board output figure reported on the former basis by 51,181 tons or about 5 percent and raising the 1946 level of paperboard output by 0.6 percent. At the same time, liners for gypsum and plaster board were similarly transferred from building board to paperboard but the figures for prior years have been adjusted to make them comparable with 1946 and subsequent data. Another change, beginning in 1941, resulted from the inclusion of output from 35 mills not previously classified in the industry and lifted the level of total production approximately 5 percent.above the basis of the 1940 and prior year data with most of the added output consisting of building paper and board.
${ }^{3}$ Compiled by the American Paper and pulp Association. Data are estimated industry totals based on monthly reports
from mills representing in recent years $80-85$ percent of the total output of all paper except building paper, newsprint, and paperboard, about three-fourths of total output of fine paper, about four-fifths of total production of printing paper, and about nine-tenths of total output of coarse paper output of nonreporting mills is estimated. The Association's output data have been adjusted to annual production data published by the Bureau of the Census for 1935-43 and monthly thereafter. Production figures for the current month published in the monthly Sunvey are preliminary estimates by the Association and are adjusted the following month to the Census figures.

Data for new and unfilled orders, shipments, and stocks on hand at end of month are estimates by the American Paper and Pulp Association or affiliated associations based on reports from mills and expanded to industry totals. The Census Bureau does not publish similar types of data.
"Total paper, excluding building paper, newsprint, and paperboard," in addition to fine, printing, and coarse paper, includes tissue and miscellaneous papers not shown separately in the SuRVEY. "Fine paper" comprises writing, cover, text, Bristol, and thin papers (carbon, cigarette, etc.), with writing paper accounting for about four-fifths of the total. "Printing paper" includes book paper and groundwood printing and specialty paper; book paper constitutes about three-quarters of the total. "Coarse paper" comprises kraft, sulphite, glassine, and greaseproof and vegetable parchment papers, used chiefly for wrapping, shipping, and converting.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical Supplement as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; and 1941-44, the 1947 Edition. Data published in the 1942 and earlier SUPPLEMENTS comprise only reporting mills and, chiefly because they were not raised to industry-wide coverage, are not comparable with subsequent figures. Monthly averages included in this volume for the years 1934-40, inclusive, are based on comparable data computed for those years by the Association but never published in the Survey.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly or quarterly data published in the previous SuppleMENTS referred to above (revisions available on request).

Since publication of the 1941-44 data, which included the "wrapping paper" group, the latter has been revised by excluding special industrial paper and giving it the name "coarse paper" now currently used. For the years 1941-44, the coarse paper series averaged about 8 percent less than the former wrapping paper series, but this shift between classes did not affect the other published figures. Other very small revisions have been made in the 1942-43 data for total and fine paper shipments with more appreciable revisions in new and unfilled orders and stocks. In 1954, the method of estimating industry-wide unfilled orders and stocks from the data furnished by reporting mills was changed with the result that the published series for total, fine, printing, and coarse paper were all revised back to January 1947 on the basis of the new method.
${ }^{4}$ Data beginning 1937 exclude dissolving and special alpha pulp; such grades were previously included.
${ }^{5}$ The average for 1941 comparable with earlier years is $1,424,424$ tons (see note 2 for this page).
${ }^{6}$ Beginning January 1946, data for laminated wallboard stock and other building-board stock are classified under paperboard; for the earlier years these data are included in figures for building board (see note 2 for this page).
${ }^{7}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not strictly comparable with those for prior years. However, revisions for the year 1947 were very small, raising the unfilled orders by an average of 0.3 percent and lowering stocks by an average of 0.4 percent.
${ }^{8}$ Based on annual total which includes revisions not available by months.

## Page 176

${ }^{1}$ See note 3 for $p .175$.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. The prices quoted are for 100 pounds of book paper (BLS code number 093121) A-grade, English finish, white sheets untrimmed, cased, standard weights $25^{\prime \prime} \times 38^{\prime \prime} / 500$, carload lots, f.o.b. mill, carload freight allowed, zone 1. Data for 1947-5l are averages of prices on one specific day of each of 4 or 5 weeks; beginning 1952, the prices are those prevailing on one particular day of the month, usually within the week containing the 15 th of the month.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; and 1935, the 1938 Edition.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to above. The price series described above was substituted for a substantially comparable one beginning January 1952 and the replacement was carried back to January 1947, but the 1951 SUPPLEmENT shows 1947-48 monthly prices for the previous series (BLS code number 743.1) of book paper, imperial English finish, grade $B$, uncoated, white sheets, f.o.b. mill. Monthly prices for 1947-48 in the current price series (code number 093121), not published in the SURVEY, are (dollars per 100 pounds): 1947-January, 9.504; February-July, 9.967; August, 10.217; September-December, 10.467; 1948-January-April, 10.467; May, 10.633; June-August, 10.800; September, 11.092; October-December, 11. 300. Data for 1935-46 carried in the 1949 and prior Supplements, back to and including the 1938 edition, are for a closely comparable grade of book paper (BLS code number 743) which, in the January-June 1947 period in which overlapping quotations are available, averaged $\$ 9.695$ compared with $\$ 10.050$ for the series replacing it in 1947. Comparable monthly prices were not published for years prior to 1935.
${ }^{3}$ Data beginning 1941 exclude "special industrial paper" and are not comparable with those for earlier years. See 6 th paragraph of note 3 for $p .175$.
${ }^{4}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not conr parable with prior years.
${ }^{5}$ Data beginning 1947 are not strictly comparable with earlier figures; see note 2 above.

## Page 177

${ }^{1}$ See note 3 for p. 175.
${ }^{2}$ Compiled by the Newsprint Service Bureau and the Newsprint Association of Canada. The reported data cover virtually the entire industry in both Canada, including Newfoundland, and the United States. Judged by the comparison of newsprint production data for the United States with figures published by the Bureau of the Census, the Association's data cover between 96 and 100 percent of total United States newsprint output for each of the years 1929 through 1954-with coverage in the last 4 years at 100 percent. Effective January 1936 for the United States and a year earlier for Canada, shipments data have included tonnage invoiced (whether or not shipped) and stocks at mills have included supplies at destination warehouses not yet invoiced to customers; previously, shipments of U.S. newsprint had represented only paper moved during the period and stocks covered only tonnage at mills.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Eaition; 1934-35, the 1938 Edition; quarterly data for 193233, the 1936 Edition; and 1929-31, the 1932 Edition.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous Supplements referred to above (revisions available on request). Data for Canadian newsprint in the 1949 and prior SUPPlements exclude Newfoundland; monthly data including Newfoundland for 1937-46 are shown on pp. 22-23 of the May 1950 Survey. Monthly data for Canada including Newfoundland prior to 1937 have not been published in the SURVEY; monthly averages for 1934 and earlier years in this volume are computed from annual totals except that stocks are those at year-end. Since publication in the SUPPLEMENTS indicated above, data for stocks of United States newsprint at mills for years 1935-37 were revised upward, the increase averaging 12 percent in 1935, 6 percent in 1936, and 5 percent in 1937. Since publication, the 1938 U. S. shipments total was slightly revised but the adjustment was not distributed by months. For 1929-31, inclusive, the data published in the 1932 SUPPLEMENT for United States newsprint were slightly revised, revisions averaging less than 1 percent. The 1930 monthly average of U. S. newsprint production (based on unrevised monthly figures) shown in the 1932 SUPPLEMENT is incorrect-correct figure, 106,983 short tons.
${ }^{3}$ Compiled by the American Newspaper Publishers Association. Data beginning 1942 are based on reports from 422 publishers representing 525 newspapers which, over the period 1942-54, have accounted for a portion varying from 70 to 78 percent of total United States newsprint consumption. Data for earlier years, based on variable and slightly larger numbers of publishers, represented about 80 percent coverage in 1929-36 and around 75 percent subsequently.

Stocks at publishers are those on hand in city of publication; those in transit represent tonnage billed to the publisher by mills but not received.

Monthly data for past years corresponding to the monthly averages contained in this issue will be found in earlier editions of the Statistical Supplement as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; and 1936-37, the 1940 Edition. Consumption data for 1929-35 were published in the March 1940 SuRvey, p. 10 ; comparable data for stocks at publishers and in transit, 1929-35, are shown in the September 1938 Sunvey, p. 20, table 74. An error in the note of table 74 in the latter issue is explained in the 1942 Supplement note.
${ }^{4}$ Stocks at end of year; comparable figure for end of 1935 is 185,489 short tons.
${ }^{5}$ Data beginning 1941 exclude "special industrial paper" and are not comparable with those for earlier years. See 4th paragraph of note 3 for p. 175.
${ }^{6}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not strictly comparable with prior years.

## Page 178

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data cover standard newsprint paper and imports for consumption (general imports prior to 1934).

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; and 1929-31, the 1932 Edition.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous Supplements referred to above. Revised imports (in short tons): 1931-April, 175, 516; June, 190,919; 1946-December, 319,072; 1948-March, 398, 486; April, 349,828; November, 416, 984.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1952, prices are those prevailing on one particular day of the month, usually within the week containing the 15 th of the month; previously they were averages of prices on one specific day of each of 4 or 5 weeks per month. The price quoted is for a ton of standard newsprint, rolls, contract, delivered to principal ports (BLS code number 093, 201). Data through 1946 as published here and prices in the 1951 and earlier Supplements are on a slightly different basis (BLS code number 744); revised monthly data for 1947-48, never published in the Survey, are available on request.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted above, will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; and 1929-31, the 1932 Edition.
${ }^{3}$ Based on weekly data representing estimated industry totals compiled by the National Paperooard Association from reports of member companies accounting in recent years for approximately 87 percent of total industry output. These are supplemented by estimates for nonmember companies based on annual reports obtained by the Association from practically all mills known to produce paperboard. The monthly figures shown in the SURVEY for orders and production are calendar-month totals computed by the Office of Business Economics from the Association's weekly data by prorating figures for weeks falling in 2 months. Monthly data for percent of activity are averages of weekly percentages for 4- or 5 -week periods, with weeks ending on the lst, 2 d , or 3d of the month being included in the average of the preceding month in accordance with the Association's reports for 4- and 5 -week periods; unfilled orders are stated as of the end of the same 4- or 5 -week periods.

Small differences between the Association's production data and Census data are largely due to differences in definition and classification-such as the inclusion of wetmachine board in Census figures and its exclusion from the Association figures, which cover all production of paperboard machines. Building boards are not included, al though some board is included which is subsequently fabricated into building board (for example, the liner board used in making gypsum plaster board). Percent of activity is computed from inch-hours of machine operation which take into account machine widths (based on last dryer width) and hours of operation. A 6-day week of continuous operation is defined as 100-percent activity.

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the Statistical SUPPLEMENT as follows: 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; and 1938-40, the 1942 Edition. Comparable monthly data for earlier years were never published in the Surver; monthly averages shown herein for earlier years were computed from annual totals.

Percent of activity data for 1938-40 and new orders and production tonnage data for all years prior to 1951 have been slightly revised by the Association but the revisions were not distributed by months. Although the revisions for most years average less than $l$ percent, monthly figures of the above-named series in the SUPPLEMENTS referred to above will not exactly correspond with the monthly averages contained herein.
${ }^{4}$ Compiled by the Fiore Box Association (prior to 1940 by the National Container Association). Data are estimated industry totals based on monthly or weekly reports of member companies covering about four-fifths of the industry and on
estimates of nonreporting companies; these current data are subsequently adjusted to final figures obtained by the Association in an annual survey in which reports in recent years are received from 92-95 percent of the industry and supplemented by estimates for nonreporting companies. Figures measure the surface area of corrugated and solid fibre containers including area of interior packings.

Monthly data are computed by the Office of Business Economics from the reported weekly data on the basis of a $51 / 2$-day week ( 6 days prior to 1953), prorating figures for weeks falling in 2 months (data are distributed on a $4 \mathrm{l} / 2$ week basis when New Year's Day, July 4, Labor Day, and Christmas fall in the week prorated; on a 5 -day basis when Memorial Day is involved).

Monthly data for past years corresponding to the monthly averages contained in this issue, with the exceptions noted below, will be found in earlier editions of the STATISTICAL SUPPLEMENT as follows: 1949-50; the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; and 1934-40, the September 1944 SURVEY, p. 20.

Minor revisions have been made in previously published monthly data for 1940-52 to adjust prorated monthly figures for observance of New Year's Day (affecting December and January data) and for Memorial Day (half-day affecting May and June data); other minor revisions have been made in the annual totals, which were not distributed by months.
${ }^{5}$ Compiled by the Folding Paper Box Association from reports of companies representing from $52-56$ percent of the entire industry in the years 1946-54 (45-50 percent in 193745). Monthly indexes for the current year, with the average of the years 1947-49=100, are computed by the Office of Business Economics from the dollar figures of orders and shipments furnished by the Association and from an expansion factor also provided by the Association to raise the reported figures to industry-wide totals. The monthly indexes are subsequently revised to conform to those published by the Association in its Annual Statistical Report.

Monthly data for past years corresponding to the monthly averages contained in this issue, wi th the exceptions noted below, will be found in earlier editions of the STATISTICAL Süplement as follows: ' 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; and 1941-44, the 1947 Edition. Monthly data prior to 1941 were not published in the Survey.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to above (revisions available on request). Monthly data for the years 1941-48 published in the 1951, 1949, and 1947 SuppleMENTS were on the base, $1936=100$, hence are not comparable with indexes on the 1947-49 basis. They can be shifted to the new base, 1947-49 average $=100$, by dividing each index on the 1936 base by the following 1947-49 averages: New orders-divide by 4.2533; shipments-divide by 4.5523; the resulting quotients will be comparable with the currently computed indexes.
${ }^{6}$ Compiled by the Publishers' Weekly. Data are based on reports from publishers, numbering between 800 and 900 in recent years. In order to assure as complete a coverage as possible, the records of the compilers are checked against book reviews and notices, and also against the card index of the Library of Congress. Only books are included; pamphlets, theses, and reports are excluded. Reprints, in the sense of reprints with no change whatsoever, are not included. However, popularly priced editions in reprint series, usually done by a different publisher from the original, are included.

Monthly data for past years corresponding to the monthly averages contained in this issue, except for a few minor revisions, will be found in earlier editions of the STATISTICAl SUPPLEMENT as follows: 1949-50, the 1953 Edition; 194748, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; and 1923-31, the 1932 Edition.
${ }^{7}$ Data beginning 1947 are not strictly comparable with earlier years; see note 2 for this page.

## Page 179

${ }^{1}$ Compiled by the U. S. Department of Commerce, Business and Defense Services Administration beginning October 1953; (National Production Authority for September 1950-September 1953; and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); by the Civilian Production Administration and predecessor agencies for June 1941-March 1947; and by the U. S. Department of Commerce (Bureau of Foreign and Domestic Commerce) and the Rubber Manufacturers Association, Inc., for the earlier period. The data include crude rubber and natural latex, reported on the basis of estimated dryweight content, and guayule. Gutta balata, gutta-percha, gutta-siak, and gutta-jelutong-pontianak are not included.

Consumption figures represent consumption by all rubber users. For July 1941-June 1947, consumption data are based on complete reports. Beginning July 1947, consumption data are estimated totals based on samples representing almost the entire industry. Earlier consumption figures are based on monthly reports to the Rubber Manufacturers Association, from both member and nonmember companies, adjusted to industry totals on the basis of annual surveys of the rubber industry by the Bureau of Foreign and Domestic Commerce. The reported monthly figures for this earlier period represented 90-98 percent of the totals.

Stock figures relate to total industry stocks on hand and, for the period from December 1939 through June 1947 (shown in the monthly SURVEY), also Government stocks. The figures beginning July 1947 represent estimated total stocks based on reported stocks available to industry, but do not include Government strategic stocks. Stock figures beginning 1941 were calculated from the difference between imports plus a small amount of guayule produced in the United States in 1943-46 (359, 130, 536, and 12 tons) and consumption plus reexports, and were periodically adjusted to reported stocks. Prior to 1941 , year-end stocks were derived from annual surveys by the Bureau of Foreign and Domestic Commerce, and data for other months were calculated from the year-end figures by adding imports and deducting consumption and reexports.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly averages prior to 1929 and monthly data for 1938-40 are available in the 1942 SUPPLEMENT; notes 1 and 11 for $p$. 160 of that volume give information on the coverage of the reported data for individual years prior to 1941 and the method of adjusting the data to industry totals. Monthly data for 1934-37 for consumption and 1924-37 for stocks are available in the $1940,1938,1936$, and 1932 SUPPLEMENTS (revision for stocks, March 1924, 72,576 long tons). Monthly data for consumption shown in the 1936 SUPPLEMENT have been revised and consumption figures in the 1932 volume are reported data instead of industry totals. Monthly consumption figures for 1924-33 raised to industry totals are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941).

The import statistics beginning 1934 relate to imports for consumption; previously, to general imports. (For definitions and other pertinent foreign-trade information, see note 1 for $p$. 104).

Data for imports of natural rubber cover crude rubber and milk of rubber, or latex (dry rubber content), including guayule rubber. Balata, jelutong, pontianak, gutta-percha, and other guttas are not included. Quantities are reported with no allowance for shrinkage which was of negligible importance prior to 1943 and after 1945, but was significant in 1943-45 because of the increase in imports of nonplantation rubber which requires washing. Shrinkage was estimated by the Civilian Production Administration to reduce the 1943-46 totals by the following amounts: 1943, 8.8 percent; $1944,5.5$ percent; $1945,6.7$ percent; $1946,1.3$ percent. Reexports of rubber are comparatively small. Monthly average reexports for 1941-54 are as follows (long tons): 1941, 448 ; 1942, 905 ; $1943,1,882$; 1944, 812 ; 1945, 792 ; 1946, 643; 1947, 343 ; 1948, 556; 1949, 521; 1950, 720; 1951, 217 ; 1952, 252; 1953, 698; 1954, 620.

Monthly figures for 1941-50 for imports of natural and 1943-50 for exports of chemical rubber are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supple ment ( 1946 revisions for natural rubber are as follows, in long tons: August, 45,404; October, 46,339; November, 54,849). Monthly averages for 1913-28 and monthly figures for 1936-40 for imports of natural rubber are available in the 1942 and 1940 SUPPLEMENTS and earlier monthly figures beginning 1913 appear on p. 18 of the May 1940 Survey.

The 1941 and 1942 figures for chemical rubber exports (inadvertently omitted from the 1947 and 1949 SUPPLEMENTS) represent allocations for export as reported by the War Production Board. Imports of chemical rubber, not shown in the table, are as follows (monthly averages, in long tons): 1944 849; 1945, 944; 1946, 626; 1947, 112; 1948, 1,306; 1949, 1,437 ; 1950, 2, 140; 1951, 840; 1952, 1,658; 1953, 1,065; 1954, 1, 408. There were no imports prior to 1944.
${ }^{3}$ Compiled by the Rubber Trade Association of New $Y_{0}$ rk, Inc., through January 1942. Thereafter, through March 1947, the United States Government was the sole purchaser of nat-' ural rubber and the price shown is the Government base selling price. The Government price was fixed at $\$ 0.225$ in 1941 and continued at this figure until January 13, 1947, when it was raised to $\$ 0.2575$. There was a free market after April 1, 1947, and prices shown beginning that month (compiled by the U.. S. Department of Labor, Bureau of Labor Statistics) are spot market prices at New York for No. 1 ribbed smoked sheets. However, the Government continued to sell rubber at $\$ 0.2575$ in April and early May 1947.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (revisions for September 1947, \$0.167; July 1949, \$0.164; January and November 1950, $\$ 0.184$ and $\$ 0.732$ ). Monthly averages beginning 1921 and monthly figures for 1923-40 are available in the 1942, 1940, 1938, 1936, and 1932 Supplements.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Business and Defense Services Administration beginning October 1953; (National Production Authority for September 1950-September 1953; and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); and by the Civilian Production Administration and predecessor agencies prior to April 1947. All data are industry totals and include GR-S, neoprene, butyl, and butadiene-acrylonitrile. Production for the entire period and consumption and stocks through August 1945 are based on complete reports; thereafter, consumption and stocks are based on samples representing almost the entire industry and are adjusted to complete coverage. Stock figures include Government and industry stocks for the entire period. Stocks shipped for export but not cleared are not included. Prior to July 1947, stocks were calculated from new supply (production plus a small amount of imports beginning 1943), consumption, and exports, adjusted periodically to reported inventories. Beginning July 1947, figures represent estimated total stocks based on reported stocks.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (July 1950 figure for production should read 43,820 tons; December 1946 revision for stocks, 115,186 tons).
${ }^{5}$ Compiled by the U. S. Department of Commerce, Business and Defense Services Administration beginning October 1953; (National Production Authority for September 1950-September 1953 and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); by the Civilian Production Administration and predecessor agencies for January 1941-March 1947; and by the Rubber Manufacturers Association, Inc., and the U. S. Department of Commerce (Bureau of Foreign and Domestic Commerce) prior to 1941. Data include only natural rubber reclaim prior to 1944 and both natural and synthetic rubber reclaim subsequently. Consumption and production for April 1942-August 1945 and later production data are as reported by all companies; data for the earlier period and consumption data beginning September 1945 are based on monthly reports, representing a large proportion of the industry, adjusted to complete coverage. The reported data for consumption beginning September 1945 represent over 90 percent of the industry total. For July 1941 to March 1942 reported figures were raised 1 to 2 percent, to allow for nonreport-
ing companies; earlier 1941 figures were estimated from incomplete reports to the Rubber Manufacturers Association. Stock figures for 1941-June 1947 are calculated from consumption, production, exports, and imports and are adjusted periodically to reported inventories, representing complete coverage. Beginning July 1947, stocks represent estimated total stocks based on reported figures.

Consumption and stocks prior to 1941 were based on monthly reports to the Rubber Manufacturers Association, accounting for 70 to 85 percent of the totals, adjusted to complete coverage by the Association beginning May 1938 and by the Bureau of Foreign and Domestic Commerce for the earlier period, on the basis of annual surveys of the industry by the latter agency. Annual production figures prior to 1941 were derived from changes in stocks, amounts consumed, and amounts exported and imported; monthly figures reported to the Rubber Manufacturers Association, representing 95 to 100 percent of the industry, were adjusted to these annual totals. Information on the coverage of the reported monthly data for individual years prior to 1941 and the method of adjusting these data to industry totals are given in the 1942 SUPPLEment in notes 1 and 12 for p. 160.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (January 1950 figure for stocks should read 27,319 tons). Monthly averages prior to 1929 and monthly figures for 1932-40 (except for 1932 revisions in production) are available in the 1942, 1940, 1938, and 1936 Supplements. Data shown in the 1932 SUPPLEMENT are reported data instead of industry totals. Monthly figures prior to 1933 for production and prior to 1932 for consumption and stocks are available upon request.
${ }^{6}$ The monthly averages for 1939-42 for consumption and production are based on annual totals; stock figures for 1940-42 are for December 31. The 1939-41 data, with the exception of production for 1939 and 1940, are estimated.

$$
{ }^{7} \text { Monthly average calculated by the Office of Business }
$$ Economics.

${ }^{8}$ Includes year-end adjustment of $+2,750$ tons.
${ }^{9}$ Includes year-end adjustment of $+3,000$ tons.
${ }^{10}$ Includes year-end adjustment of $-1,150$ tons.
${ }^{11}$ Includes year-end adjustment of $+1,600$ tons.
${ }^{12}$ Includes year-end adjustment of +750 tons.
${ }^{13}$ Includes year-end adjustment of +220 tons.

## Page 180

${ }^{1}$ Compiled by the Rubber Manufacturers Association, Inc. All data are 100 -percent industry totals, based on reports from manufacturers accounting for a large proportion of the industry; estimates are included for nonreporting companies. The estimated industry totals were adjusted by the Association to biennial Census of Manufactures data through 1939. Since 1940, the monthly estimates have been adjusted to reported annual totals. Figures for casings cover automotive casings only; those for inner tubes represent automotive tubes and, beginning 1951, also motorcycle tubes. The figures do not include data for solid rubber tires or pneumatic tires for motorcycles, bicycles, and aviation, industrial, and agricultural equipment.

Total shipments include all shipments to purchasers from factories, regional branches, and sectional warehouses (except shipments to other tire manufacturers, i.e., intermanufacturers' purchases) and, beginning 1944, also transfers to company-owned stores. Tires on consignment are included in shipments at the time they are sold, and contract mileage tires at the time they are shipped to the account or servicing point. Shipments to factory warehouses are not included. Shipments for original equipment represent shipments to vehicle manufacturers for original equipment.

Export shipments are those reported by manufacturers and cover new tires only. From 1941 until the end of the war, the Association reported lend-lease shipments as replacements instead of shipments for export, except that from late

1943 until the end of 1945 orders placed by the Office of Economic Warfare (formerly Foreign Economic Administration) were classified under exports. It is stated by the Association that companies were requested to conform to the export definition of the Government and to consider shipments to Alaska, Hawaii, and Puerto Rico as domestic business but that one or two companies reported shipments to those areas in exports. Inconsistencies in data for export shipments have a bearing on the accuracy of the figures for replacement sales, which represent total shipments less shipments for export and for original equipment. Export shipments as reported by the Association differ from export statistics of the U. S. Department of Commerce shown in the 7th column, which cover total exports to foreign countries (including lend-lease shipments for pertinent periods), based on declarations of all exporters, and include used and retreaded tires as well as new tires and, beginning 1952, also motorcycle tires.

Stock figures include quantities held at factory, regional branches, and sectional warehouses and consigned stocks, as well as those in transit between such points, and, prior to 1944, stocks of company-owned stores. Stocks purchased from other manufacturers are included. The change beginning 1944 in the treatment of transfers to companyowned stores (whereby these transfers were considered sales, and stocks at company-owned stores were excluded from inventories) was made to coincide with the control plans of the OPA Rationing Board.

During 1942, Government restrictions required vehicle manufacturers to return excess stocks and exporters to return some stocks originally intended for shipment to foreign customers. Dealers also made large returns of stocks to manufacturers under a Government-sponsored program. The shipments figures are not adjusted for such returns. As a result, there are distortions in the data and it should be noted that inventories increased in some months out of all proportion to production (see the 1947 Statistical Supplement for 1942 monthly data). The Association cautions that, because of considerable confusion in the industry in 1942, figures for that year should not be used to indicate trends.

Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. Monthly averages prior to 1929 and monthly figures for 193637 and 1939-40 for all series, except shipments of casings for export and for replacement equipment, are available in the 1942 and 1940 SUPPLEments ( 1938 data have been revised and are available upon request); earlier monthly figures for production, total shipments, and stocks are on pp. 16-18 of the May 1939 Survey. Export data shown in the 1942 and 1940 volumes are exports as reported by the U. S. Department of Commerce (see explanation of the data above) plus shipments to Alaska, Hawaii, Puerto Rico and, beginning 1935, Virgin Islands; while replacement shipments are total shipments less these export figures and shipments for original equipment. However, for most years, these data for exports and replacement shipments do not vary significantly from the export and replacement shipments reported by the Association. Annual data back to 1910 and monthly figures beginning 1921 for export shipments and replacement shipments, as reported by the Association, are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by the Bureau of Foreign and Domestic Commerce through April 1941).

Data for exports of tires and tubes cover only automotive tires and tubes, including used and retreaded tires as well as new tires. Motorcycle tires are included beginning 1952. The figures do not include exports of solid and cushion tires, or airplane, bicycle, tractor, and farm implement tires. The data shown beginning with the 1947 SUPPLEMENT cover only shipments to foreign countries and therefore differ from export figures shown in earlier Supplements which include shipments to Alaska, Hawaii, and Puerto Pico and, beginning 1935, Virgin Islands. Monthly figures for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement (revision: May 1948, exports of casings, 142 thousand). Monthly data for 1924-40 comparable with the figures shown here are available upon request.
${ }^{3}$ Data for motorcycle tubes are included beginning 1951.
${ }^{4}$ Data for motorcycle tires are included beginning January 1952.

## Page 181

${ }^{1}$ Compiled by the U.S. Department of the Interior, Bureau of Mines. The coverage of the monthly figures on operations is practically complete, according to annual figures of the compiling agency. Data represent operations in continental United States and, beginning 1940, also in Puerto Rico (one P.R. plant started operation January 1940 and another September 1942). The figures for September 1944 through 1946 also include data for one plant in Hawaii (plant dismantled December 1946).

Clinker cement is unground cement; data for production of clinker cement are available in the original reports.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement; 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. (The December 1929 figure for stocks of finished Portland cement should read 23,701,000 barrels.)
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data comprise unglazed common and face brick and cover virtually all known manufacturers of the specified products. The monthly figures beginning June 1953 include estimates for smaller establishments not required to report on a monthly basis as of that date.

Comparable monthly data for production for 1943-50 and shipments for September 1942 through 1950 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947.

An earlier series for shipments and stocks compiled by the Bureau of the Census for a smaller number of companies is available for January 1941-September 1942; a 1 -month overlap with the present series is thus provided.
${ }^{3}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1947, data represent the wholesale price of common building brick, f.o.b. plant, and are based on approximately 21 quotations, instead of 50 as formerly shown. Prices from 1947 forward are, therefore, not strictly comparable with earlier data. It should be noted that brick prices vary considerably in different parts of the country, and that the series shown here is only indicative of the trend.

Monthly data for 1932-48 for the 50 -price series are published in the following editions of the Statistical SupPLEMENT: 1951; 1949; 1947; 1942; 1940; 1938; and 1936; those for 1949 and 1950 for the 21 -price series appear in the 1953 volume.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. The monthly series through May 1953 are based on reports received from virtually all known manufacturers of the specified product; beginning June 1953, the monthly figures are estimated industry totals which include appropriate allowances for smaller establishments excused from reporting on a monthly basis. The 1929-39 figures for production are from the biennial Census of Manufactures for 1929, 1931, 1933, 1935, 1937, and 1939 and the Census of Clay Products Manufactures for years alternating the biennial census years. The 1940 figures are estimated industry totals based on data (for about 94 percent of the industry) from the 1940 Census of Clay Products Industries. Production figures for 1929-40 are monthly averages computed from annual totals.

Monthly data for production for 1943-50 and shipments for September 1942-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947.
${ }^{5}$ Compiled by the U.S. Department of Commerce, Bureau of the Census. The data cover virtually all known manufacturers of the specified product; they include estimates for small establishments excused in June 1953 from reporting on a monthly basis. There are no comparable data prior to 1942.

Monthly data for production for 1943-50 and shipments for September 1942-50 are published in the following edi-
tions of the STATISTICAL SUPPlement: 1953; 1951; 1949; and 1947.

## ${ }^{6}$ Average for 4 months, September to December.

${ }^{7}$ See note 3 for this page; 1947 average price comparable with the earlier series is $\$ 19.867$.
${ }^{8}$ The 1952 monthly average is based on the revised annual total; this total includes an upward revision not allocated to the monthly figures.
${ }^{9}$ Monthly average calculated by the Office of Business Economics.

## Page 182

${ }^{1}$ Compiled by the D. S. Department of Commerce, Bureau of the Census, since October 1945; prior to that date by the Glass Container Association and the Glass Container Manufacturers Institute through 1944 and the War Production Board during January-October 1945. Data cover all known manufacturers of glass containers but, prior to 1945, include (except for stock figures through 1943) estimates for two small companies that did not report. The omission of stocks of these two companies prior to 1944 does not appreciably affect the comparability of the stock data.

Production figures from 1945 forward include production both for domestic use and for export; prior to 1945, some production for export may not have been included. Shipments exclude those for direct export; such shipments totaled $3,112,000$ gross in 1953 and $2,779,000$ gross in 1954. Beginning 1948, data for the beverage classification cover both returnable and nonreturnable containers; prior thereto, the figures cover returnable containers (except in 1944 when some nonreturnable containers are included). Beer bottles comprise both returnable and nonreturnable iypes.

Current data as reported to the Census Bureau include a breakdown of production and stocks by type of container similar to the classes shown here for shipments. Production and shipments represent a continuation of the revised data published beginning with the 1947 SUPPLEMENT; the revisions were made to include estimates for two small companies and to distribute by separate classifications the shipments data reported by West Coast manufacturers.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; and 1947. In the 1947, 1949, and 1951 SUPPLEMENTS, "fruit jars and jelly glasses" were shown separately but were combined in the 1953 Supplement. Monthly data for stocks for 1934-40 appear in the 1942, 1940, and 1938 issues of the SUPPLEMENT. Revised monthly figures for production and shipments for 1940 and annual data for 1928 are available upon request.

## Page 183

${ }^{1}$ Compiled by the U. S. Department of the Interior, Bureau of Mines, except imports which are compiled by the U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior thereto. Imports represent general imports through 1933 and imports for consumption thereafter. The Bureau of Mines data are based on quarterly and annual reports covering all primary gypsum producing and processing companies. Data on crude gypsum and on calcined gypsum are from quarterly reports beginning 1930 and annual reports for 1929.

Production of crude gypsum covers 97 to 100 percent of the industry, except in 1933 when the coverage was 93 percent; the figures exclude byproduct gypsum. Data on calcined gypsum include production from domestic, imported, and (beginning with 1938) byproduct crude, and represent complete coverage beginning 1938; for the earlier years they cover 98 to 99 percent of the industry.

Data on gypsum products beginning 1938 are based on quarterly reports (except for "industrial plasters" which are based on annual data for 1938) covering total sales of calcined products and 95 to 100 percent of sales of uncalcined products. The quarterly averages for 1929-1937 are
computed from annual totals that represent complete coverage of the market for uncalcined and calcined gypsum products. Sales by processing companies that use byproduct crude or that do not mine or calcine gypsum are included for all years and adjustments are made for changes in the classifications used in the different canvasses to make statistics for the earlier years comparable with data currently reported. Data for 1929-31 for uncalcined products and for 1929-36 for lath, tile, and wallboard are partly estimated.

Uncalcined gypsum products include Portland-cement retarder, agricultural gypsum, gypsum for use as filler and rock dust in brewers' fixe, color manufacture, and for unspecified minor purposes. Industrial plasters include plasters sold to plate-glass, terra-cotta, and pottery works and orthopedic, dental, and all other plasters sold for industrial or manufacturing uses; "other building plasters" include plasters sold to mixing plants, and ready-sanded, gauging, molding, prepared finishes, roof-deck plasters, base-coat plasters for 1929-30, and miscellaneous building plasters. Tile includes partition, roof, floor, soffit, shoe, and all other gypsum tile and planks. Wallboard includes sheathing and all other gypsum board and, beginning September 1942, includes laminated board reported as area of component board. Laminated board was first marketed in 1942.

Quarterly data for 1940-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; and 1942. Quarterly data prior to 1938 published in earlier Supplements are incomplete.
${ }^{2}$ Base-coat plasters included with "all other building plasters."

## Page 184

${ }^{1}$ Compiled by the National Association of Hosiery Manufacturers. Data are estimated industry totals. The estimates are based on monthly reports of member and nonmember concerns which accounted for approximately 80 percent of the total industry shipments in $1935-52$ and for 73 percent in 1953-54. The Association's figures for total production of hosiery in 1947 were approximately in agreement with data reported in the Census of Manufactures for that year, the production of women's full-fashioned hosiery differing by less than 2 percent. Annual reports of production for 1944 were obtained from a large proportion of the nonreporting mills and were used in computing final data for that year During the existence of the Hosiery Code Authority in the years 1934 and 1935, reports were received from 622 concerns operating 807 plants which accounted for 98 percent of the output of the industry. Monthly averages for 1929-34 are estimated from the Census of Manufactures for 1933 and for 1935 and the monthly and annual summaries of the Bureau of the Census.

Data beginning January 1950 include shipments of slipper socks; those beginning January 1952, shipments of men's synthetic (other than nylon and rayon) seamless half-hose and slack socks. The new types included in the respective years accounted for less than 1 percent of the total shipments.

Annual reports of the Association also provide monthly data on production and stocks by type of hosiery, annual shipments by fiber content, as well as a geographic distribution of production.

Monthly data for 1934-52 for production, shipments, and stocks are published in the following editions of the STA. TISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938. (Notice that shipments for 1929-33 have been revised since publication of data in the 1940 and earlier volumes.)
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. The data represent industry totals. Monthly averages for each year are computed from annual reports of all known cutters of men's apparel, including those not represented in the monthly reporting panel. The monthly estimates are based on a sample survey of manufacturers accounting for the following percentages of total industry output: Beginning 1954, 75 percent of total 1953 cuttings; 1953, 85 percent of total 1953 cuttings; 1949-52, 90 percent or more
of total 1950 cuttings; in 1948, on reports from 1,000 firms representing approximately 85 percent of total production. The 1949 figures as shown here have been adjusted to include operations of additional establishments identified in the 1950 canvas as coming within the scope of the survey. In 1950, such establishments accounted for approximately 3 percent of total cuttings of tailored garments and work clothing and about 4 percent of total furnishings.

Cuttings of suits comprise both regular-weight and sum-mer-weight. Shirts, other than work shirts, comprise furnishings made from woven fabrics designed orimarily for dress, street, business, sport, leisure, or utility wear.

The original monthly reports show average weekly cuttings which are raised to 4- or 5 -week totals by the Office of Business Economics and are subsequently revised to the 4- or 5 -week monthly totals as published in the annual reports of the Bureau. The 5 -week periods for the years 1951-54 are as follows: 1951 and 1954-March, June, September, December (except for 1951 in which November instead of December covers 5 weeks); 1952 and 1953-January, April, July, October; for 1953, also December. It should be noted that the figures for 1953 represent 53 reporting weeks, whereas the data for other years cover 52 weeks. The annual reports of the Bureau also include data on cuttings of men's and boys' selected apparel by type of garment, size, and fabric.

Monthly data for 1948-50 are available upon request.
${ }^{3}$ Compiled by the U. S. Dełartment of Commerce, Bureau of Census. Data are estimated total cuttings of the specified types of apparel, except that the statistics do not include the quantities of women's outerwear made by establishments classified in industries other than those listed below. Monthly estimates beginning January 1954 are based on reports from producers that account for approximately 75 percent of the industry. Quarterly estimates for 1949-53 are based on reports from all known establishments classified in the five principal women's outerwear industries (blouse industry, unit-price dress industry, dozen-price dress industry, coat and suit industry, skirt industry), as well as some women's outerwear establishments not specifically classified, but which manufacture the principal products of the five industries mentioned.

Figures for coats include cuttings of both trimmed and untrimmed coats. Cuttings of dresses comprise dresses sold at a unit price and those sold at a dozen price only; they exclude data for firms engaged solely in the manufacture of washable service apparel, aprons, smocks, hoovers, and nurses' and maids' uni forms. Data for suits exclude ski, snow, and slack suits, suit dresses, and uniforms.

The classifications used for women's outerwear are not exactly comparable to the industry classifications appearing in the "Standard Industrial Classification Manual, " the 1947 Census of Manufactures, and Annual Surveys of Manufactures for the years 1949-53. The SIC Manual and the latter surveys classify the noncutting apparel jobber in wholesale trade; whereas the present series includes operations of jobbers owning the materials and employing contractors to produce garments, but omits the operations of the contractors.

The original reports show cuttings of the various items by price and type of fabric, as well as cuttings of skirts and slips and shipments of sweaters.

Quarterly data for 1950 are as follows (thousands of units, except for waists, etc., which are in thousands of dozens): Coats $-7,002 ; 3,812 ; 8,247 ; 5,642$; dresses $-66,133$; 73,795; 56,764; 51,503; suits-5,796; 2,502; 5,055; 4,695; waists, blouses, and shirts-2,531; 2,312; 3,158; 2,763. Quarterly data prior to 1950 are not available on a comparable basis.

[^6]nings for the season are given in both running bales and equivalent 500 -pound bales (gross weight). The latter figures are derived from reported ginnings in running bales. The Consolidated Cotton Report (issued by the Bureau of the Census and the Agricultural Marketing Service of the U. S. Department of Agriculture, August to December inclusive) gives estimated total production in 500 -pound gross bales; these estimates are published in the Survey until total ginnings, converted to equivalent 500 -pound bales, become available in March. As the weight of the running bale varies for different localities, as well as (to a lesser degree) from year to year (see note 5 for this page), running bales are converted to bales of uniform weight in order to measure more accurately the size of the cotton crop. Prior to 1945, bale weights for about half of the cotton crop were obtained from local weighers, merchants, and other handlers of cotton. For the years 1945-54, bale weights of the cotton ginned (obtained directly from ginners) ranged from 15 to 4 percent of the total crop harvested. On the basis of these reports, weighted average bale weights were computed for each county and used to convert running bales to equivalent 500 -pounds gross weight. County totals were added to obtain State and United States totals.

Monthly figures represent cumulative ginnings as of the end of the month specified (except that the December 13 period is given here as of the end of December, and the January 16 period is given as of the end of January) for the cotton-ginning season; the March figure covers total ginnings from the crop grown in the preceding year. Annual figures represent total production (i.e., ginnings) from the crop grown in the year shown.

Annual figures beginning 1913 and monthly data prior to 1951 for ginnings in running bales for selected reporting dates are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revisions for the periods to end of November 1950 and to December 13, 1950, respectively, 8,786, 000 and $9,180,000$ running bales.) Figures for 1913-22 include small amounts of Lower California and Mexican cotton ginned in the United States. Figures for earlier years back to 1899 and also county and State data are given in the original reports of the Bureau of the Census.
${ }^{5}$ Production of lint cotton is expressed in both running bales and equivalent 500 -pound bales (gross weight), as indicated. All other figures for cotton are in running bales, except imports and stocks of foreign cotton which have been converted to bales of 480 pounds net (for the period January 1931-March 1946, bales of 478 pounds net), equivalent to bales of 500 pounds gross. Hound bales (produced prior to 1942), included in running bales of lint cotton, are counted as half bales. The average gross weight of the running bale for recent crop years follows (pounds): 1941-42, 511.8; 1942-43, 515.3; 1943-44, 513.5; 1944-45, 516.5; 1945-46, 511.5; 1946-47, 507.2; 1947-48, 513.0; 1948-49, 509.9; 1949-50, 506.9; 1950-51, 505.2; 1951-52, 502.4; 1952-53, 506.2; 1953-54, 504.5. The average gross weight of bales of lint cotton exported is slightly higher, averaging for crop years ended July 31 as follows (pounds): 1946, 517.7; 1947, 516.1. Part of the difference between these types is due to heavier wrappings and bindings for export and to the fact that the larger portion of export cotton comes from States in which bales average highest in weight. Beginning June 1947, the Bureau of the Census ceased publishing shipping weight statistics for cotton. Data for quantities of cotton exported and imported are after tare (i.e., a deduction is made for weight of wrappings, etc.).
${ }^{6}$ Total ginnings from crop grown in the year shown and not a monthly average.

## ${ }^{7}$ Quarterly average.

${ }^{6}$ Beginning with the 1950 annual canvass, a number of additional firms were added to the survey. For 1950, the additional firms accounted for approximately 6 percent of the total cuttings of the major outerwear industries. Figures for 1949 shown here are adjusted for comparability, whereas the data for 1947 and 1948 omit production of these additional firms.
${ }^{9}$ Average based on 53 reporting weeks; averages for other years are based on 52 weeks.
${ }^{10}$ Total ginnings from crop grown in preceding year.

## Page 185

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census, from reports received from all establishments consuming raw cotton. A bale is considered to be "consumed" when it is opened at the mill. Beginning January 1950, data are for 4- and 5- week periods; earlier data are for calendar months. The 5-week periods for the years 1951-54 are as fol lows: 1954-March, June, September, and December; 1951-53January, April, July, and October, and for 1953, also December.

The monthly reports of the Bureau of the Census show total consumption by cotton-growing States, New England States and "all other" States; separate figures for consumption of foreign cotton (Egyptian and other foreign) and AmericanEgyptian Cotton; stocks in consuming establishments and in public storage; the number of active spindles in operation; imports and exports; and world supply and distribution of cotton.

Monthly data for 1923-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{2}$ Compiled by the New York Cotton Exchange. Total stock figures shown here include ginned stock in all hands, both private and Government controlled, and also, for dates in harvesting periods, the unpicked portions of the current crop. The Exchange uses figures compiled by the Bureau of the Census for stocks of American cotton in consuming establishments and in public storage and at compresses and for stocks of foreign cotton. Beginning 1950, the Bureau's cotton statistics are reported for 4- and 5-week periods; Stock data are for end of period covered, which is generally the Saturday falling nearest the end of the month or the beginning of the following month. Figures are in running bales, counting round bales (produced prior to 1942) as half bales, except foreign cotton which has been converted to equivalent bales of 480 pounds net weight.

Cotton held by the Federal Government on July 31, the end of the crop year, for 1946-54, respectively, is as fol lows (in thousands of bales): Stocks owned and "pooled" (cotton awaiting sale and on which loans have matured)-577; $44 ; 8 ; 0 ; 3,137 ; 76 ; 6 ; 235 ; 128$; (in addition to these stocks, approximately 31,000 bales of extra-long staple cotton were held on July 31, 1953, and July 31, 1954, for the account of the Secretary of Agriculture); stocks held as collateral against loans to producers-209; 11; 33; 3, 819; 403; 3; 279; 1,751; 6,876.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. (Revisions, in thousands of bales, for August and November 1945, respectively, are as follows: Total stocks-18, 928; 16,060; total domestic stocks-18,811; 15,927; stocks on farms and in transit-9,256; 3,242. There are also other revisions of a minor nature.) Monthly data for 1936-40 for domestic cotton are available in the 1942 and 1940 volumes; earlier monthly data beginning August 1925 are shown on $p$. 16 of the August 1939 SURVEY (data for "public storage and compresses" and "consuming establishments" are designated "warehouses" and "mills," respectively). Monthly data prior to 1941 for stocks of foreign cotton in the United States and total stocks including foreign cotton are available upon request.
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Imports beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note $1, \mathrm{p} .104$.

In the original reports, exports are given in detail by countries of destination, and imports by countries of origin. Exports are exclusive of reexports and are expressed in running bales; imports (covering data prior to April 1946) are shown in the original reports in pounds but in this SUPPLEMENT and in the 1953, 1951, 1949, and 1947 issues have been
converted to bales by dividing by 478; they are therefore in bales of 478 pounds net, equivalent to bales of 500 gross weight. Beginning April 1946, the bales (as reported by the Bureau of the Census) are of 480 pounds net. In SUPPLEMENTS prior to the 1947 issue, the data are in bales of 500 pounds net weight. Beginning 1947, data include shipments under the Army Civilian Supply Program (not previously available); such shipments amounted to 30,395 bales in 1947.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. Revisions (bales): Ex-ports-August 1946, 413,095; 1940-March, 426,942; April, 340, 469; May, 212, 323; June; 129, 887; imports-October 1948, 11,820. Data for imports for 1940 and earlier years (as published in the 1942 and prior volumes) should be converted to 500 -pound gross weight bales (by multiplying by 1.046 ) to have figures comparable with those shown here.
${ }^{4}$ Compiled by the IV. S. Department of Agriculture, Agricultural Marketing Service.

In computing the average price received by farmers, State prices received by farmers for all grades of lint cotton, as determined from reports of special price reporters, are weighted by monthly sales in each State (including an allowance for unredeemed loans at estimated average loan value) to obtain a monthly average price for the United States. Prices are taken as of the 15 th of the month. Annual averages beginning 1942 are unweighted averages of calendar-month prices; annual figures for 1929-41 are weighted crop-year average prices.

The average prices received, beginning 1936, are for American upland (short-staple) cotton only. Prices received in 1929-35, as shown here and in SUPPLEMENTS prior to the 1953 issue, include sales of small quantities of AmericanEgyptian and Sea-Island (long staple) cotton. The two prices differ for a few scattered months by one-tenth of 1 cent.

Monthly data for farm prices for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical SuppleMENT. (Note that prices are in dollars per pound in SUPPLEMENTS prior to the 1951 issue.) Monthly data from 1934 through July 1937 are available in the 1940 and 1938 volumes (revised figure for May 1936, \$0.114); monthly figures for August 1937-December 1940 (revised since publication of the 1942 and earlier SUPPLEMENTS) are given in a note on p . S-35 of the June 1944 Surver. Data in the 1936 and 1932 SuppleMENTS and data prior to 1928 in the 1940 and 1938 issues are based on State prices weighted by production and are not entirely comparable with the cur rent series weighted by sales. Monthly averages for all years shown in the 1942 SUPPLEMENT are weighted averages instead of simple averages of the monthly figures as in earlier and later volumes. Monthly data beginning August 1909 are available in the January 1946 issue of "Crops and Markets" published by the U. S. Department of Agricul ture.

The 10 -markets price represents the average spot price of middling 15/16-inch American cotton in the following southern markets: Charleston (this market was substituted for Norfolk beginning August 6, 1941), Augusta, Atlanta (substituted for Savannah beginning December 4, 1950), Montgomery, New Orleans, Memphis, Little Fock, Dallas, Houston, and Galveston. The prices are computed from official daily quotations of cotton exchanges in the designated markets. Beginning August 1939, prices are as quoted on middling $15 / 16$-inch. For August 1930-July 1939, the prices were computed by adding the monthly average premiums for $15 / 16$-inch to the average price of $7 / 8$-inch in the 10 markets, premiums for 4 markets (Norfolk, Augusta, Savannah, and Montgomery) being estimated; for January 1928 to July 1930, average premiums for $15 / 16$-inch in 6 markets were added to the average price of $7 / 8$-inch in the 10 markets.

Effective August 1954, the Department of Agriculture began publishing the average spot price in 14 spot markets. (The four additional markets are Lubbock, Texas; Fresno, California; Greenville, South Carolina, and Greenwood, Mississippi.) Average prices in the 14 markets for August-December 1954 are as follows (cents per pound): 34.1; 34.4; 34.2; 33.7; 33.9.

Monthly data for market prices for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942. (Note that prices are quoted
in dollars per pound in Supplements prior to the 1951 issue.) Monthly data for 1913-37 are available upon request.
${ }^{5}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Linters are the short fiber obtained by the cot-tonseed-oil mills in delinting cottonseed. The quantity of linters obtained from a ton of cottonseed varies considerably. In recent years, the average quantity ottained has varied as follows (years ended July 31): 1939, 154 pounds; 1940, 160; 1941, 171; 1942, 186; 1943, 190; 1944, 184; 1945, 176; 1946, 182; 1947, 191; 1948, 186; 1949, 183; 1950, 176; 1951 and 1952, 185; 1953 and 1954, 184. Beginning 1950, data are for 4- and 5 -week periods; earlier data represent calendar months. The 5 -week periods for the years 1951-54 are as follows: 1954-March, June, September, and December; 1951-53-January, April, July, and October, and for 1953, also December. Production figures are based on reports from all cottonseed-oil mills. It is probable that consumption figures include some motes, sweepings, etc. Production of such items in the 1948-49 season amounted to 54, 129 equivalent 500 -pound bales; in 1949-50, 62,818; 1950-51, 45,256; 195152, 62,714; 1952-53, 66,958; and in 1953-54, 62, 186 equivalent bales.

Data for stocks include stocks held in consuming establishments, in public storage and at compresses, and stocks at cottonseed-oil mills. Data do not include stocks held in private warehouses or by private individuals, stocks held at ports, and linters in transit. Data for the excluded items are available only as of July 31, and are partially estimated. Total stocks, including linters in transit, as of July 31 for recent years are as follows (in running bales): 1941, 787,398; 1942, 637,037; 1943, 739,114; 1944, 567, 166; 1945, 378,551; 1946, 421,613; 1947, 356,986; 1948, 370,137; 1949, 494,502; 1950, 452,339; 1951, 264,024; 1952, 547,710 1953, 1, 110,690; 1954, 1,540,437.

Monthly data for 1938-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942. Monthly data for consumption for 1913-37 and for production and stocks for August 1925-37 are available upon request.
${ }^{6}$ See note 5 for p .184.
${ }^{7}$ Data are in running bales. The average gross weight (in pounds) of the running bale, as computed from returns received from cottonseed-oil mills, for recent years is as follows (years ended July 31): 1942, 628.5; 1943, 629.4; 1944, 617.7; 1945, 621.7; 1946, 621.8; 1947, 615.7; 1948, 613.7; 1949, 617.8; 1950, 613.1; 1951, 582.7; 1952, 603.5; 1953, 596.8; 1954, 603.2.
${ }^{8}$ Monthly averages beginning 1942 are simple averages of calendar-month prices; averages for 1929-41, are weighted crop-year averages. For 1929-35, averages represent prices received for all cotton (including long-staple).
${ }^{9}$ Beginning 1950, data for consumption and production cover 4- and 5 -week periods; stock data are for end of period covered (see notes 1 and 2 for this page).
${ }^{10}$ Average for months for which data are shown.

## Page 186

${ }^{1}$ Compiled by U. S. Department of Commerce, Bureau of the Census. Data for 1937, 1939, and 1947 are from the Census of Manufactures; data for certain later periods were compiled from reports to the Civilian Production Administration and predecessor agencies. Statistics are from reports filed by manufacturers primarily engaged in weaving fabrics over 12 inches in width of cotton, silk, rayon, and other synthetic fiber yarns. All such manufacturers were canvassed and estimates were made for a few manufacturers not filing reports. Averages for the first three quarters of 1942 are estimated in part from data on scheduled rather than actual production. Production of tire cord and fabric is excluded. Beginning 1951, the production of broad-woven goods is classified according to principal fiber content. In the figures prior to 1951, fabrics containing 25 percent or more wool by weight are not classified as cotton, nor are fabrics con-
taining 51 percent or more rayon by weight. In the first quarter of 1951, less than one-half of 1 percent of the total cotton cloth was produced on woolen and worsted looms.

The original reports show production by type of goods for print-cloth yarn fabrics, sheeting and allied coarse and medium yarn fabrics, fine cotton goods, colored-yarn fabrics, and other classes, by type of fabric for these goods. For the sheetings and duck goods, further detail is given for width, thread count, and number of yards per pound. Production is that taken from the looms. The quarterly data cover 13 -week periods (except for the fourth quarter of 1953 which represents 14 weeks).

Quarterly data for 1942-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{2}$ Compiled by the $V$. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Exports comprise cotton cloth (including mixed fabrics, cotton chief weight), duck and tire fabric, both unfinished (in the gray) and finished (bleached, yarn dyed or dyed in the piece, printed, stiffened or otherwise converted). In the period 1947-50 and 1952, exports of cotton cloth, duck, and tire fabric accounted for approximately three-fourths of the value of exports of all cotton finished manufactures; in 1935-46, 1951, and 1953-54, for about two-thirds; and in earlier years for a somewhat larger proportion. Beginning 1947, exports include shipments under the Army Civilian Supply Program (not previously available); such shipments for that year amounted to $12,016,000$ square yards.

Monthly exports for 1936-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940. Minor revisions for 1947 are available upon request. Data published in volumes prior to the 1940 issue have been revised beginning 1927 to include tire fabrics and beginning January 1928 to include also heavy filter cloth, hose, and belting duck; these items had been included in earlier data. The revised monthly figures beginning 1913 may be found in table 48, p. 17, of the November 1939 Survey.

Imports comprise cotton cloth, both unfinished and finished. Figures beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note 1 , p. 104. Monthly imports for 1923-50 are shown in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revisions, in thousands of square yards: 1946-June, 3,629; December 2,273.)
${ }^{3}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Mill margins represent the difference between the price of cloth obtainable from a pound of raw cotton and the price of cotton (includes processing tax for the period August 1933 to December 1935 amounting to about 4 cents per pound when corrected to a gross-weight basis). The mill margin thus includes all manufacturing costs other than raw cotton, and the manufacturer's profit. The cloth prices used in computing the mill margins are generally averages of Thursday spot prices obtained from trade publications for 17 gray-goods constructions ( 6 print cloths, 3 sheetings, 4 drills, 1 sateen, 1 twill, and 2 ducks). Unfinished or gray goods refers to cloth that has not been bleached, dyed, or printed. Prices, quoted on a per-yard basis, have been converted to a price per pound on the basis of the approximate quantity of each cloth obtainable from a pound of cotton, with adjustment for salable waste.

Raw cotton prices used in the revised series beginning August 1950 are monthly average "landed" prices for Memphis territory growths, even-running lots, prompt shipment, delivered at mill points including landing costs and brokerage. Those used in the original series through July 1950 were spot prices at 10 designated markets for cotton in mixed lots, flat, in warehouses (for names of markets, see 5th paragraph of note 4 for $p$. 185). The higher cost of cotton which results from the introduction of "landed" prices is offset to a considerable extent by changes in the qualities of cotton assumed to be used by mills in the manufacture of
the 17 selected constructions. The average margin for the 17 constructions is unweighted. The cotton exchanges did not quote spot prices during February 1951 and, therefore, mill margins were not computed for this month.

Monthly data for 1936-50 are shown in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940. Figures for September 1944-December 1946, published in the 1947 and 1949 volumes, have been slightly revised to incorporate new prices for twill and sateen constructions which were previously included at Office of Price Administration ceiling prices. Monthly data beginning August 1925 are shown in table 51, p. 18 of the November 1939 Survey.
${ }^{4}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Averages beginning 1947 (except sheeting price which begins 1951) represent substituted series and cover cloth prices based on the following specifications: Denim-white back, $28^{\prime \prime}, 8 \mathrm{oz} . / \mathrm{yd}$, after sanforizing, finished, f.o.b. finishing plant; print cloth-39", $68 \times 72$, 4.75 yds./lb., in gray, f.o.b. mill; sheeting-class B, $40^{\prime \prime}$, $48 \times 44$ or $48 \times 48,3.75$ yds. $/ \mathrm{lb}$., in gray, f.o.b. mill. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

Data for 1929-46 (1929-50 for sheeting) cover prices of cloth described as follows: Denim-blue, white-backed, $28-$ inch, 2.20 yards per pound, unsanforized (mill finish); print cloth-38-1/2-inch, 64 by 60, 5.35 yards per pound (except for 1944-45 when prices relate to print cloth, 64 by $56,5.50$ yards to a pound as indicated in note 13 for this page); sheeting- 36 -inch, 56 by 60,4 yards per pound, unbleached, unmercerized (except for the 1944-46 period when prices relate to 56 by 56 sheeting as indicated in note 14). Production of 56 by 60 sheeting and $64 \times 60$ print cloth was discontinued during the war period by War Production Board order, effective April 20, 1943, and looms formerly producing these constructions were required to produce $56 \times 56$ sheeting and $64 \times 56$ print cloth, respectively. Monthly average prices for 1947 for denim and print cloth and 1951 for sheeting (comparable with the series described in this paragraph) are 33.8 cents, 24.6 cents, and 23.0 cents, respectively.

Monthly data for 1949-50 for the current series (except sheeting) are shown in the 1953 Statistical Supplement; those for 1947-48 (except for sheeting) are available upon request. Monthly figures for 1929-48 for the former print cloth and sheeting series (described in foregoing paragraph) are published in the following editions of the Statistical Supplement: 1951; 1949; 1947; 1942; 1940; 1938; 1936; and 1932. For the print cloth price, revisions of 1 or 2 cents have been made in a few monthly figures for the years 1926 31. (Note that prices in the 1951 SUPPLEMENT and earlier issues are quoted in dollars per yard.) Monthly data for 1938-48 for the former denim series appear in the 1951, 1949, 1947, and 1942 Supplements; earlier monthly prices are available upon request.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Carded cotton yarn quotations beginning February 1952 are for weaving, natural stock, $20 / 2$, on cones or tubes, f.o.b. mill. Earlier data for this series are not available for publication. The prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

Data for 1941-51 (in italics) are for carded, Southern, $22 / 1$, cones, white, knitting, f.o.b. mill. Earlier figures are for Northern, $22 / 1$, cones, carded, white, mulespun, f.o.b. mill; the average for 1941 comparable with the earlier data is \% 0.360 . Annual figures through 1951 are averages of the weekly quotations rather than averages of the monthly figures shown.

Monthly data for 1949 and 1950 for the Southern price appear in the 1953 Statistical Supplement; those for 1941 48 for Northern mulespun are shown in the 1951, 1949, and 1947 issues of the Statistical Supplement. For earlier
monthly data for the Northern mulespun price, see the 1942, 1940, 1938, 1936, and 1932 volumes.
${ }^{6}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Combed cotton yarn quotations, beginning February 1952, are for knitting, natural stock, $36 / 2$, on cones or tubes, f.o.b. mill. Earlier data for this series are not available for publication. The prices are those prevailing on a particular day of the month, usually within the week containing the l5th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

Data for the second half of 1946 through 1951 (in italics) are for carded cotton yarn, twisted, 40/1, on skeins, f.o.b. mill; earlier data are for Southern, 40/1, single, carded, f.o.b. mill. (Data for the years 1929-32 represent quotations for this description at New Bedford which have been linked to the series of similar description first quoted at Boston in 1933.) The Southern series was discontinued after October 1946 (quotations for July-October, \$0.672; $\$ 0.756$; 80.804 ; $\$ 0.834$ ).

Annual averages through 1951 are averages of the weekly quotations rather than averages of the monthly figures.

Monthly data for 1947-50 for the 40/1 yarn price and monthly data for $19 ? 6$-June 1946 for the earlier series are published in the following editions of the Statistical Supplement: 1951; 1949; 1947; 1942; 1940. The notes in the 1942 and 1940 SUPPLEMENTS should state that the prices are f.o.b. mill instead of f.o.b. Boston. Monthly data prior to 1936 as shown in earlier issues may be converted to the substituted series by dividing the New Bedford price by 110.7.
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data relate to all cotton-system spindles and, beginning August 1945, include data for spindles spinning synthetic and other fibers and blends; earlier monthly averages and figures shown in Supplements prior to the 1949 issue are for spindles consuming 100 percent cotton.

Figures beginning 1945 for active spindles refer to number of spindles active on the last working day of the period covered; earlier data and figures shown in SUPPLEMENTS prior to the 1949 issue (except where noted for 1946 in the 1947 volume) relate to spindles active at any time during the month. In the first half of 1946, the number of spindles active on the last day of the month averaged 2 percent less than the number active at any time during the month. Beginning 1950, the Bureau's monthly cotton statistics represent operations for 4 and 5 weeks; earlier data are for calender months. The 5 -week periods for the years 1951-54 are as follows: 1954-March, June, September, and December; 1951-53-January, April, July, and October, and for 1953, also December. Other months cover 4 weeks. Data for active spindles are as of the end of the period covered, which for 1954 is the Sunday falling nearest the end of the specified month or the beginning of the following month.

The rate of operations represents the relationship of spindle hours operated to the total spindle hours that would have been worked if all spindles in place had operated continuously for 80 hours each week. In computing the percentages, allowances are made for that portion of total spindles not normally operated on holidays. Beginning with August 1945, the rate is based on the number of cotton-system spindles in place, and on hours of operation of these spindles regardless of type of fiber spun; prior to August 1945, the rate is based on the number of sfindles in place used exclusively for spinning cotton, and on hours of operation of such spindles.

Monthly data for August 1945-December 1950 are shown in the 1953, 1951, and 1949 Statistical Supplements (except for figures on average spindle hours per working day for August 1945-December 1946 which are available upon request). Minor adjustments have been made in the capacity percentages previously published to conform with a revised schedule of holidays observed. Earlier data relating to spindles consuming 100 percent cotton are available as indicated below. Active spindles and spindle hours operated-monthly data prior to July 1945 are published in the following editions of the Statistical Supplement: 1947; 1942; 1940; 1938; 1936; 1932. operations as percent of capacity-monthly figures for Au-
gust 1933-August 1938, p. 18 of the March 1939 Survey (data were not computed on a comparable basis prior to August 1933); monthly data for September 1938-July 1945 as shown in the 1947 and 1942 volumes are not adjusted according to the revised schedule of holidays.
${ }^{8}$ Average for 5 months, August-December.
${ }^{9}$ Quarterly average; 1937, 1939, and 1947 averages are computed from annual totals.
${ }^{10}$ Average for 11 months; no quotation for October.
${ }^{11}$ Not comparable with earlier data; see note 5 for this page.
${ }^{12}$ Average for January-June. The print-cloth average is for $64 \times 60$ cloth and the sheeting average for $56 \times 60$ sheeting. However, it may be noted that the price of the $56 \times 56$ sheeting was also 10.8 cents for May-December.
${ }^{13}$ Price for $64 \times 56$ print cloth (see note 4 for this page); price for this construction for May and June 1943 was 8.7 cents. Price for $64 \times 60$ print cloth for October-December 1945, comparable with later data and with data through June 1943, was 9.9 cents.
${ }^{14}$ Price for $56 \times 56$ sheeting (see note 4); prices for this construction for May-June 1943 and October 1946 were the same as for 56 x 60 sheeting. The average for 1946 is for $l l$ months, January-November; the October and November price included in the average is 18.0 cents.
${ }^{15}$ Not strictly comparable with earlier data; see second and third paragraphs of note 7 for this page.
${ }^{18}$ Average for 6 months, July-December; comparable with later figures (see second paragraph of note 6 for this page).
${ }^{17}$ Not strictly comparable with earlier prices; see note 4 for this page.
${ }^{18}$ Average for 5 months, August-December. Data not strictly comparable with earlier figures; see second paragraph of note 3 for this page.
${ }^{19}$ Average for months for which data are shown.
${ }^{20}$ Not strictly comparable with earlier data; see note 6 for this page.
21 Not strictly comparable with earlier data because of change in number of reporters.

22 Not strictly comparable with earlier data; see note 1 for this page.
${ }^{23}$ Data cover 14 weeks; other quarterly data are for 13 weeks.

## Page 187

${ }^{1}$ Compiled by the Textile Economics Bureau. Inc., and published in the Textile Organon. All series represent industry totals and, since 1941, have been based on actual reports for the entire industry; earlier data are estimated industry totals based on actual reports representing 86 percent or more of the total, adjusted to complete coverage on the basis of data reported in the Census of Manufactures. Rayon waste is not included, nor are the noncellulosic manmade fibers such as acrylic fiber, nylon, polyester fiber, protein fiber, etc.

Producers' domestic shipments represent net shipments (gross shipments less returns) to domestic consumers by U.S. rayon and acetate producers. Monthly averages for 1931-34 for staple shipments represent viscose only; quantities prior to 1931 were negligible. Stock data represent stocks of all finished filament yarn, staple, and tow held by domestic producers.

Monthly data for 1941-50 are published in the following editions of the STatistical Supplement: 1953; 1951; 1949; 1947. Monthly data for 1938-40 for yarn and staple stocks are available in the 1942 SUPPLEMENT; monthly data for

1930-37 for yarn stocks are shown on p. 18 of the Apri1 1940 SURVEY (these data are correct except for scattered revisions in the end figures which are due to more accurate rounding of figures). Consumption (i.e., deliveries) data through September 1941, as shown in the 1942 volume, cover gross domestic shipments by producers plus imports for consumption and are therefore not comparable with data shown in later Supplements. Monthly data for 1923-40 for yarn deliveries, for 1936-40 for staple deliveries, and for 1934-37 for staple stocks are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Rayon imports represent total yarns, threads, filaments, and rayon or other synthetic textile in bands or strips not exceeding $l$ inch in width, suitable for manufacture of textiles. Silk imports are for unmanufactured silk, comprising raw silk (including wild or tussah and doupion), cocoons, silk noils (not exceeding two inches in length), and waste.

Data beginning 1934 are imports for consumption; earlier figures are general imports. For definitions and other pertinent foreign-trade information, see note 1 for p. 104.

Monthly data for 1923-50 are published in the following editions of the STATISTICAL SUPPLEMENT: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. The 1950 monthly averages and the 1951 average for rayon (shown in this issue) are based on annual totals which include revisions not incorporated in the monthly data. Revisions for rayon imports (thous. of pounds): 1946-March, 3,003; September, 2, 431; December, 4, 398; 1926-April, 739; May, 769; June, 858; December, 923; 1930-August, 225.
${ }^{3}$ Compiled by U. S. Department of Labor, Bureau of Labor Statistics. Annual averages beginning 1947 for the yarn price are for a substituted series covering filament yarn, viscose, 150 denier; comparable data for earlier periods are not available. Prior to 1947, the prices are for yarn in skeins; the January 1947 price for the current series is $\$ 0.624$; for the former, $\$ 0.620$. The monthly averages for the years 1947-50 are computed by the Office of Business Economics. More complete specifications for the staple price are as follows: Viscose, $1-1 / 2$ denier, all lengths, bright luster, in bales. (The staple prices for 1952-54 are estimates computed by the Office of Business Economics and are derived by using as a projecting factor the rate of change in the wholesale price index for this series as published by the Bureau of Labor Statistics.) Both the yarn and staple series are f.o.b. shipping point. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the l5th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

Monthly data for 1949-50 for both series appear in the 1953 Statistical Supplement. Monthly prices for 1947-48 for yarn are available upon request. Prices for yarn in skeins for 1938-46 are available in the 1949, 1947, and 1942 STAtistical Supplements; for 1913-September 1941, in the November 1941 Survey (p. 22, table 30). Monthly prices for 1938-48 for staple are published in the following editions of the SUPPLEMENT: 1951; 1949; 1947; 1942. Earlier monthly data for staple are available upon request.
${ }^{4}$ Compiled by the U.S. Department of Commerce, Bureau of the Census. Data prior to 1947 were compiled from reports to the Civilian Production Administration and predecessor agencies. Statistics are from reports filed by manufacturers primarily engaged in weaving fabrics over 12 inches in width of rayon, silk, acetate, nylon, and other synthetic fibers. All known manufacturers were canvassed and estimates were made for a few manufacturers not filing reports. The quarterly data cover 13 -week periods (except fourth quarter 1953 which represents 14 weeks).

Rayon and acetate goods are defined as those containing 51 percent or more rayon and/or acetate by weight. Beginning 1951, all broad-woven goods are classified according to principal fiber content. Figures for earlier years exclude rayon fabrics containing 25 percent (or more) wool. Also, fabric production beginning 1951 includes yardage of rayon and acetate fabrics (amounting to 8 million yards in 1951)
produced on woolen and worsted looms. Data cover fabrics woven from synthetic yarns made by the viscose, cuprammonium, or cellulose-acetate processes. Silk, nylon, glass, plastic, rubber, and other fabrics made of synthetic yarns are not included; nor is rayon tire fabric.

Production is that taken from the looms and is measured in linear yards of varying widths. The original reports show production by type of fabric; yarn consumed by type of yarn; machinery activity (number of looms in place, and aggregate hours operated); and stocks of selected filament yarns at mills.

Quarterly data for the second half of 1943 through 1950 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Laoor Statistics. Prices beginning 1950 are for raw silk, white, Japanese, in bales, $20 / 22$ denier, 87 percent (AA), f.o.b. warehouse. For the earlier series, the description is as follows: Silk, raw, white, Japan, double extra crack, 13/15 denier, 78 percent, New York. Quotations for 1948 and 1949 are for a substituted series of the same description, but represent a composite price; the quotations for 1948 are the same for both the composite price and for the former series.

Prices beginning 1936 are from a trade organization and have been substituted for those based on mill reports. However, the comparability of the series is not seriously affected. The overlapping averages for 1936 and 1937 on the old basis are $\$ 1.766$ and $\$ 1.858$, respectively. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks.

From August 1941 through May 1942 prices represent ceilings established by OPA and predecessor agencies. All stocks of silk were taken over by the Defense Supplies Corporation in July 194l. Prices are not available for the period from June 1942 to June 1946, since silk was not sold for commercial use. When silk imports from Japan were resumed after the war, the United States Commercial Company (RFC) became the exclusive selling agent of Japanese silk. Prices for 1946 represent selling prices of U. S. Commercial Company; in July and August of 1946, prices were on a bid basis and for the balance of the year were auction prices.

Monthly data for 1936-50 (except for the period July 1942-June 1946) are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940. Monthly data for 1923-37, based on mill reports, appear in the 1938, 1936, and 1932 volumes.
${ }^{6}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data cover total mill consumption on the woolen and worsted systems and, prior to 1946, also consumption by all other known manufacturers, including consumption in batting and felt manufactures and on the cotton, silk, etc., systems of spinning. (Wool consumed on the cotton system of spinning for the years 1950-54 is as follows, in millions of pounds: 1950, 4.3; 1951, 2.9; 1952, revised, 3.5; 1953, 1.6; 1954, l.l. Manufacturers of felt, hat bodies, and other miscellaneous products consumed approximately 7.8 million pounds in 1946.) Estimates are included for a few manufacturers from whom reports were not received. The 1946 figures originally published also included data for all known manufacturers using wool. They have been revised to cover consumption on the woolen and worsted system only, so that data will be comparable with figures compiled since the early part of 1947. Total consumption for the year 1946, including all known manufacturers, entirely comparable with earlier data, is as follows (thousands of pounds): Apparel class, 620,241 ; carpet class, 128,056 . It may be noted that consumption on the woolen and worsted systems accounted for 98.3 percent of total consumption of apparel wool in 1946 and practically the entire consumption of carpet wool.

Apparel-class wool comprises wool generally regarded as more or less suitable for apparel purposes, whereas carpetclass wool is foreign wool particularly suitable for the manufacture of floor coverings. Beginning 1942, all domestic and duty-paid foreign wools have been classified as apparel and all free foreign wools as carpet. Apparel-class
wool not finer than $40^{\prime}$ s and all carpet-class wool (if used for floor coverings, press cloth, knit or felt boots, camel's hair belting, or lumbermen's heavy fulled socks) may be imported free of duty. Prior to 1942 , reported amounts of duty-free apparel wool not finer than $40^{\prime} \mathrm{s}$ were included in the apparel-wool classification (this wool was incompletely reported prior to September 1941) and a small quantity of duty-paid wool was included in the carpet-wool classification. The 1941 figures shown here include all duty-paid foreign wool in apparel wool and all duty-free foreign wool in carpet wool, as in figures for later years. Earlier data have not been similarly revised but amounts involved prior to September 1941 were small.

Data on an equivalent scoured (clean) basis are obtained by adding to the wool reported in a scoured condition the wool reported in a greasy condition converted to a scoured basis. Average yields are assumed, varying with origin and grade, except for carpet wool for which yields are reported. The original reports give monthly consumption on a scoured basis by grade and system. They also give consumption on a greasy basis for the carpet wool. The scoured-basis figures reflect more accurately changes in wool consumption, since the greasy-basis figures are affected by shifts to heavier, shrinking wools which do not affect the scoured.

Prior to 1942, wool was considered consumed when carded or otherwise advanced beyond scouring. For the period 1942-46, wool was considered consumed on the worsted system when it entered the scouring bowls and on the woolen and other systems when it was put into process as scoured wool. Beginning August 1948, wool consumption on the worsted system is measured as the sum of top and noil production; consumption on the woolen system is measured at the time the wool is processed in the mixes for spinning.

Data are reported for 4- and 5 -week periods. For 1951-54, the 5 -week periods are as follows: 1951-53, January, April, July, and October, and for 1953, also December; 1954, March, June, September, and December. No data were collected for the week of December 28, 1941, to January 3, 1942. The reporting year covered 51 weeks for 1942 and 53 weeks for 1943, 1947, and 1953; the monthly averages for these years were computed from 52 -week totals based on average weekly consumption for the reporting year.

Monthly data for 1934-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938. (There have been minor revisions in 1935 data for apparel-class wool.) Monthly figures for apparel-class wool for 1932-33 are ayailable in the 1936 issue; for 1918-34, on p. 20 of the July 1935 Surver. Monthly data prior to 1934 for carpet wool are in the September 1935 "Raw Wool Consumption" report of the Bureau of the Census.
${ }^{7}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note 1 for $p$. 104. The figures shown in this volume and total wool imports shown in the 1953 issue represent unmanufactured wool converted to a clean-weight basis. Figures beginning 1953 exclude imports of carbonized wool which is reported in actual weight only; in 1952, imports of this class averaged 52,000 pounds (clean weight) per month. The dutiable wool (including Government imports which are free) covers essentially the apparel class.

Monthly data for total wool imports (clean-weight basis) for 1949-50 appear in the 1953 Supplement. Monthly data for 1923-48 for wool in the condition received (i.e., not converted to a uniform basis) are published in the following editions of the Statistical Supplement: 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revisions for 1931: January, $13,747,000$ pounds; March, $15,358,000$; June, $16,812,000$; July, $13,024,000$.) Monthly imports prior to 1949 for apparel class wool may be obtained from records of the Bureau of the Census.
${ }^{8}$ Average for 1941 is for 7 months, January-July. The Office of Price Administration fixed the price of raw silk at $\$ 3.080$ in August 1941. For 1942, the average is for 5 months, January-May.
${ }^{9}$ Average of data for the third and fourth quarters.
${ }^{10}$ Less than 500 pounds.
${ }^{11}$ Quarterly average.
${ }^{12}$ Average for 6 months, July-December.
${ }^{13}$ Excludes consumption on cotton, silk, and other systems; comparable with succeeding data (see note 6 for this page).
${ }^{14}$ Not comparable with earlier data; see note 3 for this page.
${ }^{15}$ Average for 10 months; no sales reported in April and September.
${ }^{16}$ Not comparable with earlier data; monthly average for 1950 comparable with earlier data, $\$ 3.106$; see note 5 for this page.
${ }^{17}$ Average computed from 52 -week totals based on average weekly consumption for the reporting year.

## Page 188

${ }^{1}$ Compiled by the U. S. Department of Agriculture, Agricultural Marketing Service. Prices are from the reporting service of that agency and are based on the mean of weekly ranges of quotations from the Weekly Review of the Boston Wool Market. More complete descriptions of the series are as follows: Territory wool-raw, graded, territory, 64's, $70^{\prime} \mathrm{s}, 80$ 's, fine, good French combing and staple, clean basis; fleece-raw wool, bright, graded fleece, 56's-58's ( $3 / 8 \mathrm{blood}$, good French combing and staple), clean basis; Australian wool-raw, 64's-70's, good top-making, clean basis, in bond, Boston market, excluding duty.

Beginning in April 1943, practically all domestic wools were purchased by the Commodity Credit Corporation and sold to mills at Office of Price Admiñistration ceiling prices. These purchase and sale prices were identical through November 1945, after which the Commodity Credit Corporation cut its selling price below its purchase price. Beginning June 1947, for the territory wool, data are for wool sold on the open market (the figures through August 1948 are based on information obtained from trade and government sources) instead of the Commodity Credit Corporation selling price; the June 1947 price comparable with data for prior months is $\$ 1.225$ per pound. For the bright fleece series, the openmarket quotations began in August 1948 and, for that month, the prices from both sources were identical.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949 , and 1947 issues of the Statistical Supplement. (Revised January 1948 quotation for the Australian wool price, \$1.292.) Note that bright fleece prices shown in SuppleMENTS prior to the 1953 issue are quoted as the grease equivalent of the clean-basis price (based on arbitrary shrinkage of 47 percent); monthly data for 1924-48 for bright fleece on the clean basis are available upon request. Monthly data for 1939-40 for the two domestic series appear on $p .24$ of the February 1945 Survey. Monthly data for domestic wool for 1913-38 and for Australian wool for 1936-40 are available upon request.
${ }^{2}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1952, the prices are those prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are averages of prices on one specific day of each of 4 or 5 weeks. Quotations beginning 1947 are for a substituted series specified as follows: Worsted yarn, Bradford system, machine knitting, $2 / 20^{\prime} \mathrm{s}-50^{\prime} \mathrm{s} / 56^{\prime} \mathrm{s}$, undyed, in oil, on skeins, f.o.b. mill. Prior to 1947, data are for worsted yarn, $2 / 32$ 's, crossbred stock, white, in skeins; the price for January-August 1947 for that specification averaged $\$ 1.95$ per pound.

Monthly data for 1949-50 are shown in the 1953 Statistical Supplement; monthly prices for 1947-48 for the current series are available upon request. Monthly data for the former series for 1923-48 are published in the following editions of the STATISTICAL SUPPLEMENT: 1951; 1949; 1947;

1942; 1940; 1938; 1936; 1932. (Revision, April 1926, \$1.45.)
${ }^{3}$ Compiled by the U. S. Department of Commerce, Bureau of the Census. Data beginning 1948 represent totals for the industry and include estimates (based on loom activity) for about 12 percent of the known manufacturers. Earlier data are based on reports of manufacturers which account for 98 percent or more of the total production of woolen and worsted woven goods and include estimates for a few manufacturers from which reports were not recieived. The quarterly data are for 13 weeks, except that the fourth quarter of 1953 covers 14 weeks. The quarterly averages for 1937 and 1939 are based on annual totals from reports of the Census of Manufactures. Beginning 1951, the production of broadwoven goods is classified according to principal fiber content by weight. The figures beginning 1951 therefore exclude fabrics containing 25.0-49.9 percent wool which were previously included. For the men's and women's categories, however, such fabrics were excluded beginning 1948. Production for the fourth quarter of 1950, adjusted by OBE to exclude these goods, where possible, is as follows (thousands of linear yards): Total, lll, 671 ; total apparel, 94,039; total nonapparel, 17,632 ; blanketing, 4,932 ; other nonapparel, 12,700.

Beginning 1947, data for the separate classifications under apparel fabrics exclude Government orders; the figures, therefore, are not comparable with those for previous periods. (Due to various other changes in classification, quarterly data for 1947 for the detail by type of apparel fabric are not comparable for that year, nor with data for earlier and subsequent years. See the descriptive note in the 1951 Statistical Supplement.) Total apparel fabrics produced for Government orders in 1946 are as follows (in linear yards): First quarter (estimated), 176,000 ; second quarter, 237,000; third quarter, 377,000 ; fourth quarter, $202,000$. Separate data for blanketing produced for Government orders are not available.

In addition to the exclusion of Government orders from the individual classifications, further changes have been made in the detail under apparel fabrics. Beginning 1947, some materials (classified as "general use and other fabrics" in the 1947 SUPPLEMENT) are distributed to the individual classifications. For the period 1947-50, the data for "total apparel fabrics other than Government orders" include goods (containing 25.0-49.9 percent wool reported by the cotton and rayon weavers) not distributed to the separate classifications. The figures for 1946 and earlier years for men's and women's fabrics include production by these weavers.

Quarterly data for 1942-50 (for series comparable to the extent mentioned above) are available in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement.
${ }^{4}$ For the period 1948 through 1950, data for total apparel excluding Government orders include production by cotton and rayon weavers not distributed to the separate classifications. See third paragraph of note 3 for this page.
${ }^{5}$ Compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1952 the indexes are based on prices prevailing on a particular day of the month, usually within the week containing the 15 th of the month; data through 1951 are based on averages of prices on one specific day of each of 4 or 5 weeks. More complete specifications for the series are as follows: Woolen flannel suitingmen's and boys', stock dyed, 12-13 oz./yd., fine and medium grade, $57^{\prime \prime} / 60^{\prime \prime}$, f.o.b. mill; worsted gabardine suitingwomen's and children's, hard-finished, $10 \mathrm{l} / 2-12 \mathrm{l} / 2 \mathrm{oz} . / \mathrm{yd}$. 54"-58", f.o.b. mill. (Prior to July 1952, the range of width is $56^{\prime \prime}-58^{\prime \prime}$ ', and for data beginning January 1955, shown in the March 1955 and subsequent issues of the SURVEY, the range is $56^{\prime \prime}-60^{\prime \prime}$. However, the index is adjusted to form a continuous and comparable series.)

Monthly data for 1947-50 are shown on pp. 190 and 303 of the 1953 Statistical Supplement; earlier indexes for these constructions are not available.
${ }^{6}$ Yardage is on an equivalent 54 -inch linear yard measure for fabrics other than blankets and a 72 -inch linear yard
measure for blankets. The 1937 and 1939 data were reported in square yards and have been converted to these equivalent linear yards.
${ }^{7}$ Data for woolen and worsted woven goods are quarterly averages.
${ }^{8}$ Not strictly comparable with data for later years; men's wear fabrics made on commission, which represented 2 percent of total men's wear in 1939, are excluded.
${ }^{9}$ Crib blankets included in "other nonapparel fabrics"; crib blankets accounted for less than 1 percent of the total yardage of blankets in 1939.
${ }^{10}$ See second paragraph of note 3 for this page.
${ }^{11}$ Average for 7 months, June-December; see note 1 for this page.
${ }^{12}$ Not comparable with earlier data; see note 2 for this page.
${ }^{13}$ Beginning 1948, figures exclude production of fabrics containing 25.0-49.9 percent wool. See note 3 for this page.
${ }^{14}$ Average for 6 months, July-December.
${ }^{15}$ Beginning 1951, figures exclude production of fabrics containing 25.0-49.9 percent wool. See note 3 for this page.

## Page 189

${ }^{1}$ Compiled by the U. S. Department of Commerce, Civil Aeronautics Administration through 1945; thereafter compiled jointly by that agency and the Bureau of the. Census. Data beginning 1946 are shipments (both domestic and export) as reported by all plants active in the manufacture of complete civilian aircraft. Prior thereto, the figures represent production and, through 1941, are for civil aircraft produced for domestic use only. There was no output for civilian use in 1942-44 and the 1945 data include planes for export as well as for domestic use. At the end of 1954, reports were received, from 23 companies operating 26 plants.

Monthly data for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement; the 1949 and earlier volumes also show data on military aircraft. The 1942 monthly average for civil aircraft, as shown in the 1949 and 1947 volumes, represents civilian production requisitioned by the Armed Forces. Publication of data for military shipments wàs discontinued by the Civil Aeronautics Administration after July 1948. For aircraft production in earlier years, see the $1942,1940,1938,1936$, and 1932 SUPPLEMENTS; monthly data for 1940 have been revised and are available upon request.
${ }^{2}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data represent airplanes actually exported with no consideration given to date of production. Beginning January 1940, exports of landplanes minus engines are included. Prior to 1940 , these were reported with data for parts, accessories, etc., and were not available separately, but were so small in number that their inclusion beginning with that year does not affect the comparability of the series. Figures include both military and civil aircraft through 1950; they exclude gliders and lighter-thanair craft. Data beginning May 1949 exclude "special category" exports not shown separately for security reasons and beginning 1951, exclude exports of all military-type aircraft. Demilitarized or converted planes and "used" commercial and civilian aircraft are included in the total.

Monthly data for 1947-50 are shown in the 1953 and 1951 Statistical Supplements. (Figures for 1947-48 exclude exports of rotary-wing aircraft which totaled 35 and 47 planes in 1947 and 1948, respectively.) Monthly data for 1941 and 1943-46 are shown in the 1949 and 1947 issues of the STAtistical Supplement; monthly figures for 1942 are not available. Export data for earlier years are shown in the 1942, 1940, 1938, 1936, and 1932 volumes.
${ }^{3}$ Compiled by the Automooile Manufacturers Association. Prior to 1940 , the series was compiled by the U. S. Department of Commerce, Bureau of the Census, in cooperation with the Automobile Manufacturers Association (formerly known as the National Automobile Chamber of Commerce). Data shown are factory sales and represent complete coverage of the industry. Although commonly referred to and sometimes interpreted as being identical with production, factory sales for a given period obviously exclude some units produced in that period but not yet sold and include others produced in earlier periods. In addition to domestic sales, the totals include as foreign sales in a given month the number of complete units or vehicles that can be assembled abroad from the parts exported in that same month. These foreign sales account for the difference between domestic and total sales. Since military vehicles are not shown separately, it should be noted that the data include many military vehicles during 1941-45.

The passenger-car classification includes-in addition to passenger cars-taxicabs and station wagons; it also includes any school buses, ambulances, and funeral cars made with passenger-car chassis. The truck classification includes trucks, truck tractors, road tractors (excluding highway-construction machinery), and any school buses, station wagons, and fire apparatus made with truck chassis by truck manufacturers. A substantial part of the truck classification comprises chassis only, without bodies. Fire apparatus made by companies specializing in that line is excluded. The coach classification includes all buses, primarily those of the integral type, sold to for-hire transportation companies whether for city or intercity service. The coach classification also covers special types of coaches, including. integral school buses if made with coach chasis (nonintegral school buses are excluded). Trolley coaches are excluded, since these are built by companies not covered by the Association reports.

The passenger-car, truck, and motor-coach classifications as defined above reflect a postwar revision of data by the Automobile Manufacturers Association affecting all data back to January 1940. Hence the factory sales data shown beginning with the 1947 Statistical SUPPLEMENT differ somewhat in comparability from those in previous volumes. In earlier Supplements, for instance, all station wagons, ambulances, funeral cars, school buses, and all other buses were reported as trucks; moreover, foreign assemblies from parts manufactured in the United States were reported in the month in which they were actually assembled abroad, although the parts going into the assembled vehicles might have been manufactured months previously. These changes in the definitions of the units counted have affected the passenger-car data only slightly but have had the effect of lowering factory sales of trucks for 1940 and 1941 on the present basis about 4 percent below the data shown in the 1942 SUPPLEMENT for those years. See note 6 for p. 170 in the 1942 volume for a description of the data as reported prior to 1940.

Annual totals for motor vehicles, passenger cars, and trucks have been revised by the Automobile Manufacturers Association for the years 1928-39 in order to make the classifications of all vehicles comparable with the figures beginning 1946. In addition, other adjustments have been made beginning 1928 for greater accuracy and comparability. Monthly averages for 1928 (number): Total vehicles, 363,230 ; passenger cars-total, 314,618; donestic, 280,543; trucks total, 48,612; domestic, 34,128. Monthly data for 1941 and 1946-50 are shown in the 1953, 1951, 1949, and 1947 issues of the Statistical Supplement. (Revisions for 1946-49 for total vehicles and trucks-total and domestic-are available upon request. Revisions for December 1950: Total vehicles, 640,935; trucks-total, 118,899; domestic, 103,531.)
Monthly figures are not available for 1942-45. Monthly statistics of factory sales for years prior to 1940 , as described in third paragraph above, will be found in the 1942, 1940, 1938, 1936, and 1932 SUPPLEMENTS; revised monthly figures for 1940 are shown on P. 24 of the June 1947 Survey. Monthly data from 1921 to 1939 are available in a release entitled "Automobiles," published by the Bureau of the Census on August 1, 1941.
${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data include exports of domestic new and second-hand motor trucks, buses, and chassis (including truck tractors), and new and second-hand passenger cars and chassis. Chassis are included in order to give representation to exports of "unassembled" cars. Quarterly reports (Quarterly Summary of Foreign Commerce of the United States) give details for trucks, by capacity, as well as details for exports of parts and accessories.

During the war years, exports include shipments under Lend-Lease and UNRRA but exclude shipments for U. S. overseas armed forces. Beginning 1947, data include shipments under the Army Civilian Supply Program. Such shipments were not reported previously (see third paragraph of note 1 for p. 104); for 1947, they totaled only 45 trucks. Data beginning July 1949 for motor trucks exclude "special category" exports not shown separately for security reasons. Figures beginning 1952 for all series exclude all militarytype exdorts.

Monthly data for 1929-50 and prior years are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Revisions: June 1948-total, 29, 964; trucks, 14, 976; November 1948-total, 20, 566; trucks, 9,824; December 1948-total, 42,486 ; trucks, 23,664 ; March 1940-total, 26,094 ; trucks, 15, 231.)
${ }^{5}$ Includes 90 planes completed during 1937 but not reported until January 1938 and, therefore, not included in the 1937 production report.
${ }^{6}$ Data exclude sales of military trucks. Monthly averages of total military truck sales are: 1940, 5, 176; 1941, 17,175 (revised); 1942, 52,806 ; 1943, 56,237 ; 1944, 51,780 ; 1945, 30, 351; monthly averages of domestic military truck sales-available for 1940-41 only-1940, 2,913; 1941, 14,193 (revised).
${ }^{7}$ Coaches are included with trucks; data are not available separately during the war period.
${ }^{8}$ Data beginning 1946 represent shipments; earlier figures relate to production.
${ }^{9}$ Beginning May 1949 for aircraft exports and beginning July 1949 for trucks and buses, data exclude "special category" exports not shown separately for security reasons. Exports for aircraft beginning January 1951 and for all motor vehicles (including passenger cars) beginning January 1952 exclude all military types.

## Page 190

${ }^{1}$ Compiled by the U. S. Department of Commerce, Bureau of the Census from reports to that agency beginning September 1945; prior to that date, by the War Production Board. Beginning September 1953, monthly estimates of total production are based on reports from plants accounting for 99 percent of total output of specified types of trailers. The monthly estimates are subsequently revised where necessary when annual reports are received from plants not included in the monthly reporting panel. The number of plants reporting activity during the period 1946-50 varied between 80 and 120 ; beginning July 1950 , reports were obtained from a number of additional companies and the industry coverage was increased about 6 percent ( 122 to 133 companies reported for July-December). In 1951, the number of reporting companies ranged from 118 to 161 and for 1952, from 162 to 145 . Beginning January 1952, the data are defined as truck trailers having one or more axles with a rating of 10,000 pounds or more per axle. Earlier figures are described as truck trailers with a rated capacity of 5 tons or more. This change in specification, however, apparently has no appreci-able effect on comparability of the data as shown here.

Figures represent the total production of truck trailers (covering the trailer only, and not the truck, i.e., engine or cab) for both civilian and military use (except for 1939-

41 and July and August 1945, when only civilian production was reported). Beginning September 1945, data are reported as total production, and show no breakdown for civilian and military use. It is known, however, that the production of military trailers tapered off rapidly after the war, becoming negligible during the last quarter of 1945. The sizable increase in production of trailers in 1953 reflects in part a substantial increase in Defense Department procurement in that year of small-capacity trailers of special construction. Data for these trallers for both 1952 and 1953 are included in "other" complete trailers. "All other" complete trailers (total unit of chassis and body) include tanks; pole, pipe, and logging trailers; platforms; lowbed heavy haulers; dump trailers; off-highway trailers; auto transport trailers; and converter dollies.

Available monthly figures for 1945-50 for total production are shown in the 1953 , 1951, and 1949 Statistical Supplements. Monthly data for civilian, military, and total production are available separately for January 1942-June 1945 in the 1947 Supplement. The annual data for 1939-41 are shown beginning in the 1949 volume as complete trailers, since the figures on the original reports apparently exclude "trailer chassis."
${ }^{2}$ Figures are for trailer chassis only, for sale separately; production is estimated as equal to shipments.
${ }^{3}$ Compiled by $R$. L. Polk \& Company (except for the period March 1942 through December 1945). Data represent the number of new passenger and commercial cars registered each month and are complete for all States and the District of Columbia. The figures through 1939 for commercial cars and through 1940 for passenger cars include deliveries to the Federal Government which are excluded thereafter (except for nonmilitary Federal Government vehicles reported to the compilers by the manufacturers). For 1940, the monthly average number of commercial cars delivered to the Federal Government, as reported by the compiling agency, was 1,430 . Deliveries of passenger cars to the Government were small prior to 1941 and were not reported separately. The original reports of $R$. L. Polk \& Company show the statistics by make of car and by States.

Data for the period March 1942 through July 1945 are from the Office of Price Administration for passenger cars and from the War Production Board and the Office of Defense Transportation for commercial cars. For this period, the data represent rationed deliveries of cars to civilian users. Data from August through December 1945 are estimates by the Automobile Manufacturers Association. The large excess of new registrations of passenger cars over factory sales during the war period is accounted for by the stocks of cars in the hands of manufacturers, dealers, and distributors on January 1, 1942, which were taken over by the Government and released for essential uses only. The War Production Board estimated that on January 1, 1942, the industry's stocks of new passenger cars in all hands totaled about 538, 000 .

Monthly data for 1941-50 are shown in the 1953, 1951, 1949 , and 1947 issues of the Statistical Supplement. Monthly data for 1938-40 are available in the 1942 SUPPLE. MENT; the 1940 figures for commercial cars shown in that volume include Federal Government deliveries and therefore differ from the 1940 figures shown here. Monthly data beginning 1932 are correct as shown in the 1940, 1938, and 1936 SuPplements except for minor revisions in 1938 for commercial car registrations; earlier data for passenger-car registrations appear on p. 19 of the August 1933 SURVEy; earlier data for commercial cars are available upon request.
${ }^{4}$ Reported by members of the American Railway Car Institute. The figures cover all car builders (both equipment manufacturers and railroad shops), including the Pullman Company. Passenger-car data for railroad shops are given in the next paragraph. Annual passenger-car data shown beginning in the 1947 Statistical Supplement are higher than those published in previous issues because of the inclusion of cars manufactured by the Pullman Company; revised monthly figures are available beginning 1934. For freight cars,
railroad-shop data are domestic shipments only; monthly figures are available beginning 1941.

The total shipments of passenger cars built in railroad shops (as shown in the 1953, 1951, and 1949 SUPPLEMENTS) for the years 1934-5l are as follows: 95; 5; 40; 72; 82; $0 ; 6$; $0 ; 31 ; 4 ; 8 ; 3 ; 8 ; 191 ; 124 ; 18 ; 10 ; 34$. No such shipments have been reported for the years 1952-54. Monthly averages for 1947-5l of unfilled orders of passenger cars in domestic railroad shops (number): $115 ; 57 ; 1 ; 33 ; 9$. Data for deliveries of passenger cars by equipment manufacturers, both total and domestic, include troop hospital cars, troop kitchen cars, and troop sleepers as follows: 1941, 7; 1942, 24; 1943, 678; 1944, 995; 1945, 905; 1946, 878.

Monthly data for 1945-50 for all series (except unfilled orders of passenger cars) are shown in the 1953, 1951, and 1949 Statistical Supplements. Monthly data for 1947-50 for unfilled orders of passenger cars are available upon request. Monthly figures for 1941-44 (except total passengercar shipments and unfilled orders) are available in the 1947 volume. For monthly data for 1932-40 for shipments of freight and passenger cars (excluding the Pullman Company) by equipment manufacturers only, see the $1942,1940,1938$, and 1936 Supplements. Revisions for 1939 freight-car shipments are as follows: January-total, 1,186; domestic, 1,186; February-total, 1,961; domestic, 1,951; June-total, 2,152; domestic, 2, 151; November-total, 2, 617; domestic, 2,617; December-total, 4,516; domestic, 4, 286.
${ }^{5}$ Figures exclude "chassis shipped as such" as in succeeding periods; see third paragraph of note 1 for this page.
${ }^{6}$ Includes military production; see $2 d$ paragraph of note 1 for this page.
${ }^{7}$ Average for 4 months, September-December.
${ }^{8}$ Beginning July 1950, the industry coverage has been increased by approximately 6 percent; see lst paragraph of note 1 for this page.
${ }^{9}$ Based on annual total including revisions not distributed to the monthly data.

## Page 191

${ }^{1}$ Compiled by the Association of American Railroads. The data cover class l roads only, which for the period shown have accounted for 90 to 95 percent of all equipment owned by the railroads. "Number owned" includes leased freight cars, but not privately owned cars or railroad-owned private refrigerator cars. To obtain the percent undergoing or awaiting repairs for 1935-48, the number undergoing or awaiting classified repairs is related to "total cars on line," rather than to total owned, which is shown here. Total cars on line include all railroad-owned cars on class 1 lines, regardless of the class of the originating road; this figure is usually slightly less than the total owned, because more class I cars are on class II and class III lines than the reverse. Beginning 1949, data represent cars awaiting repairs as a percent of total owned; the comparability of the series, however, is not affected by more than 0.3 percent.

The freight-car ownership report includes data on car installations and retirements, by districts and for the individual roads, by type of car. It also includes capacity figures. The condition report gives the ownership of cars undergoing or awaiting heavy and light repairs, by districts, by individual roads, and by type of car.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947; 1942; 1940; 1938; 1936; 1932. (Minor revisions have been made in some of the figures appearing in the volumes prior to the 1947 issue.) In consulting the 1942 volume, it should be noted that annual data shown for unfilled orders are as of the end of December; annual figures in other issues are monthly averages.
${ }^{2}$ Compiled by the Association of American Railroads. Data are for class 1 roads only and cover locomotives assigned to freight service, passenger service, and switch, yard, and company service. The percentage of steam locomotives undergoing or awaiting repairs is based on the total on line (both owned and leased from others). The original ownership and condition report gives-for steam, diesel-electric, and electric locomotives - the number (and aggregate tractive effort) owned or leased, number serviceable, number held for classified repairs, and number installed and retired (also for diesel-electric and electric, new units on order); all data are shown by type of locomotive, by districts, and for individual roads.

Data beginning January 1952 for unfilled orders for die-sel-electric and electric locomotives are shown in terms of power units; figures prior to 1952 represent complete locomotives as operated. Figures for January-December 1952 for unfilled orders in terms of complete locomotives, comparable with averages for earlier years, are as follows: 1,$594 ; 1,573 ; 1,441 ; 1,463 ; 1,347 ; 1,156 ; 1,186 ; 976 ; 841$; 864; 777; 817.

Monthly data for all series for 1941-50 are shown in the 1953, 1951, 1949, and 1947 issues of the STATISTICAL SUPPLEMENT. (In the 1951, 1949, and 1947 volumes, unfilled orders of diesel-electric and electric locomotives are referred to as "other locomotives.") Monthly data for 192940 for steam locomotives undergoing or awaiting repair are published in the following editions of the Statistical SupPLEMENT: 1942; 1940; 1938; 1936; 1932. For monthly data prior to 1941 for unfilled orders of diesel-electric and electric locomotives, as compiled by the Bureau of the Census, see the 1942 Supplement.

Figures shown on the monthly average lines for the years 1929-35 for unfilled orders of diesel-electric and electric locomotives represent the number on order as of September 1. Monthly data are available beginning March 1936.
${ }^{3}$ Beginning 1952, data represent number of power units; monthly averages prior to 1952 are in terms of complete locomotives as operated.
${ }^{4}$ Compiled by the U.S. Department of Commerce, Bureau of the Census (by Bureau of Foreign and Domestic Commerce through April 1941). Data represent exports of new rail-road-service locomotives, including switching types (comprising steam, straight electric, diesel, nonelectric, dieselelectric, and other types); industrial, including surface mine; underground mine; as well as used and rebuilt locomotives.

Monthly data for 1941-50 are published in the following editions of the Statistical Supplement: 1953; 1951; 1949; 1947. (Revised total exports, September 1946, 115 locomotives.)

Because of the reclassification of items in the revised export schedule of January 1, 1952, exports of all locomotives beginning 1952 are not summarized by type of power for each class. Monthly exports of steam locomotives for 1923-5l are published separately in earlier SUPPLEMENTS. (There have been a few scattered minor revisions for data appearing in the 1940 issue.)

Figures for total and "other" locomotives as shown in the 1942 and earlier SUPPLEMENTS have been adjusted to include railway, industrial, and mining locomotives of the electric, gasoline, and diesel types. Revised monthly data for 1929-40 and prior years, to include these additional classes, are available upon request.
${ }^{5}$ Compiled by the Industrial Truck Association; prior to July 1941 by the $U$. S. Department of Commerce, Bureau of the Census. Data as reported by the Bureau of the Census covered the entire industry and comprised 10 manufacturers through 1938 and 9 beginning 1939 (one of the 10 reporting prior to 1939 discontinued business). Data as reported by the Association are stated to cover the following percentages of the industry total: For the period 1941-49, 75 to 80 percent; 1950, 85 percent; beginning 1951, 95 percent. Figures cover electric rider-type trucks and include both
the platform type (fixed, low lift, and high lift) and the cantilever type (fork, ram, and crane), as well as some special models.

Monthly data for 1929-50 are published in the following editions of the Statistical Supplement: 1953; 195l; 1949; 1947; 1942; 1940; 1938; 1936; 1932.
${ }^{6}$ Data represent number of locomotives on order as of September 1.
${ }^{7}$ One car was reported on order at end of January 1933.
${ }^{8}$ Average for 10 months, March-December.
${ }^{9}$ See note 5 for this page regarding coverage.
${ }^{10}$ Earlier data represent percent of total freight cars on line and, therefore, are not strictly comparable with percentages from 1949 forward; see note 1 for this page.

[^0]:    ${ }^{9}$ As of December 31.

[^1]:    ${ }^{2}$ Reported by the Board of Governors of the Federal Reserve System. Annual data represent rates in force on December 31 of each year. Monthly data are for rates in force at end of month. Data cover rates to member banks on all advances secured by Government obligations and on discounts of the advances secured by eligible paper under Sections 13 and 13a of the Federal Reserve Act (except that a preferential rate of 0.50 percent on advances secured by Government obligations maturing or callable in 1 year or less was in effect from October 30, 1942, to April 24, 1946, inclusive). Rates also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.

    For monthly data prior to 1951 see the 1953, 1951, 1949, 1947, 1942, 1940, 1938, 1936, and 1932 issues of the Statis-

[^2]:    ${ }^{4}$ Compiled by the l. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. Data are general imports through 1933 and imports for consumption thereafter. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Substantial quantities of copra and coconut oil are reexported in some years; such data for 1935-52 appear in the 1953 STATISTICAL SUPPLEMENT.

    Monthly data for 1929-50 are published in the following editions of the STATISTICAL SuPplement: 1953; 1951; 1949;

[^3]:    ${ }^{7}$ Prohibition period; data available during those years are not comparable with data shown.
    ${ }^{8}$ Average for 6 months, July-December.
    ${ }^{9}$ Stocks as of June 30.
    ${ }^{10}$ Production of distilling materials included in figures for production of still wines; see note 3 for this page.
    ${ }^{11}$ Average of stocks as of June 30, September 30, and December 31.

[^4]:    ${ }^{4}$ Compiled (beginning 1944) by the U. S. Department of Agriculture, Agricultural Marketing Service; prior there-

[^5]:    ${ }^{12}$ Monthly averages for 1949-5l are based on annual totals containing revisions not allocated to the monthly data.

[^6]:    ${ }^{4}$ Compiled by the U. S. Department of Commerce, Bureau of the Census; based on reports obtained from ginners. The Bureau of the Census reports cumulative ginnings in running bales for 12 specified dates during the cotton year-August. 1, August 16, September 1, September 16, October I, October 18, November 1, November 14, December 1, December 13 , January 16 , and total ginnings (preliminary figures) on March 20. A final report on total ginnings from the crop grown in the preceding year is issued in May. Total gin-
