Explanatory notes to the statistical series ..... 197
Sources of data ..... 329, 330
General index ..... 331-344

## Foreword

This 1957 edition of BUSINESS STATISTICS is the eleventh volume in a series initiated twenty-five years ago. Designed to provide the businessman and others with a wide-ranging array of facts about the economic situation since 1929, it represents the most useful arrangement of background information which the Office of Business Economics can devise to meet the need long since expressed by the business community for a handy reference book supplementing the up-to-date economic indicators issued monthly in our Survey of Current Business.

There are more than 2,600 individual statistical series shown in the present volume, corresponding to those for which current data appear regularly in the 40 -page Monthly Business Statistics section of each issue of the Survey of Current Business. Here will be found monthly or quarterly data from January 1953 through December 1956, with annual averages from 1929 through 1956. When this volume is used as intended--in combination with the magazine which it supplements--there becomes available a consecutive line of data for each series covering a period of almost 30 years.

Keyed to each page of statistics is a section of explanatory notes. These furnish additional information essential to the proper use of the data, as for example definitions of the statistical units employed, methods of collection, adequacy of samples, and names and addresses of the original compilers.

Demand for previous editions of the biennial BUSINESS STATISTICS supplement has largely exhausted the supply available from the Superintendent of Documents, U. S. Government Printing Office, except in the case of the more recent issues. Where earlier editions are out of print, recourse may be had to the reference copies to be found in the Field Offices of the Department of Commerce or in the hundreds of depository and other libraries maintaining files throughout the Nation.

To locate monthly data for most series prior to 1953 the user can be guided by the following allocation of time periods to earlier editions of BUSINESS STATISTICS. Unless otherwise indicated in the descriptive notes the 1955 edition should be consulted for monthly data covering 1951-52; the 1953 edition for 1949-50; the 1951 edition for 1947-48; the 1949 edition for 1945-46; the 1947 edition for 1941-44; the 1942 edition for 1938-40; the 1940 edition for 1936-37; the 1938 edition for 1934-35; the 1936 edition for 1932-33; and the 1932 edition for previous years.

Many private organizations and Government agencies have contributed generously to the compilation of statistical series assembled here, and to the preparation of the explanatory notes requisite to their authoritative application in economic analysis. The Office of Business Economics well appreciates that without their untiring work on the basic series and their cooperation in furnishing materials regularly to the Survey of Current Business neither the present volume nor its predecessors could have been published. A list of the data sources to which we are indebted precedes the General Index.

The 1957 edition of BUSINESS STATISTICS was prepared by the Current Business Analysis Division, of which Dr. Charles A. R. Wardwell is Chief. K. Celeste Stokes, Chief of the Statistical Series Section, was in immediate charge of its preparation. Staff members contributing were: Leo V. Barry, G. Alva Carrier, Lucille E. McClarren, Jean M. Plass, Edith M. Robinson, Sylvia D. Serafin, Anne Taeves, and Myrtis E. Wright.

M. JOSEPH MEEHAN

# Explanatory Notes to the Statistical Series 

DATA REFERENCE NOTE. --For the available monthly figures prior to 1953, as mentioned in the main note for individual series, consult earlier editions of BUSINESS STATISTICS (the STATISTICAL SUPPLEMENT to the SURVEY OF CURRENT BUSINESS) as follows: 1951-52 figures, the 1955 Edition; 1949-50, the 1953 Edition; 1947-48, the 1951 Edition; 1945-46, the 1949 Edition; 1941-44, the 1947 Edition; 1938-40, the 1942 Edition; 1936-37, the 1940 Edition; 1934-35, the 1938 Edition; 1932-33, the 1936 Edition; 1931 and prior years, the 1932 Edition.

The use of italic versus roman type in printing the statistics for certain series indicates a break in comparability. However, if more than one change in type occurs, this does not necessarily mean that the various groups of figures in similar type are comparable with each other (see pertinent notes).

## MEANING OF SEASONAL ADJUSTMENT

Many of the series of data contained in this volume are labeled as "seasonally adjusted," or simply "adjusted." This means that adjustments have been made to eliminate the effects of seasonal variations. Seasonal variations are those which follow the calendar and tend to occur in about the same way at about the same time year after year-largely because of weather or custom. Some grow out of the round of the season--such as the harvesting of many crops in late summer or the slackening of construction activity in the winter in northern latitudes --while others are largely due to social conventions such as the observance of certain holidays or the closing of schools for summer vacations, and still others are based on legislation such as the peak load of income-tax payments in March or April.

The purpose of the seasonal adjustment is to remove, as far as possible, the effects of these regularly recurring movements of the sort indicated above, so that the underlying trend of developments can be observed without interference. Thus by adjusting December retail sales for the customary Christmas buying rush, one is better able to determine whether December sales registered more or less than the usual gain from November; similarly, by adjusting October cash income from farm marketings for the usual heavy movement of crops to market in that month, one can tell better what the trend of cash farm income would have been if farm products were marketed evenly throughout the year.

Because the usual way of deriving a seasonal pattern is to base it upon data of a broad group of firms representing an entire industry, it will not, of course, necessarily apply to any individual firm. Data are adjusted for seasonal effects by dividing the unadjusted datum for a given month by a constant percentage factor whose deviation from 100 registers the extent to which that period of the year is typically above or below some measure of "normal" because of seasonal influences.

Adjusted data are better indicators than are unadjusted data of the underlying trends of business activity in cases where strong seasonal movements tend to obscure the cyclical movements.

## PAGE 2

${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. "National income" is the aggregate earnings of labor and property which arise from the current production of goods and services by the Nation's economy. The Nation's economy refers to the labor and property supplied by residents of the Nation. Earnings are recorded in the forms in which they accrue to residents of the Nation, inclusive of taxes on those earnings. They consist of compensation of employees, the profits of corporate and unincorporated enterprises, net interest, and the rental income of persons.
"Compensation of employees" is the income accruing to persons in an employee status as remuneration for their work. It is the sum of wages and salaries and supplements to wages and salaries.
"Wages and salaries" consist of the monetary remuneration of employees commonly regarded as wages and salaries, inclusive of executives' compensation, commissions, tips, and bonuses, and of payments in kind which represent income to the recipients.
"Supplements to wages and salaries" represent the compensation of persons in an employee status not commonly regarded as wages and salaries. They consist of employer contributions for social insurance, employer contributions to private pension and welfare funds, compensation for injuries, directors' fees, pay of the military reserve, and other minor items of labor income.
'Proprietors' income" (shown separately for business and professional enterprises and farm enterprises) measures the monetary earnings and income in kind of sole proprietorships, partnerships, and producers' cooperatives from their current business operations-other than supplementary income of individuals derived from renting property. As with corporate profits, capital gains and losses are excluded and no deduction is made for depletion.
"Inventory valuation adjustment" measures the excess of the value of the change in the volume of nonfarm business inventories, valued at average prices during the period, over the change in the book value of nonfarm inventories. This adjustment is required since, as is customary in business accounting, corporate profits and income of unincorporated enterprises are taken inclusive of inventory profit or loss, whereas only the value of the real change in inventories is counted as current output in the national product. Inventory valuation adjustment is shown separately only for corporations; this adjustment is included, however, in the data shown for unincorporated enterprises, as indicated in note 3 .
"Rental income of persons" consists of the monetary earnings of persons from the rental of real property (except those of persons primarily engaged in the real estate business), the imputed net rental returns to owner-occupants of nonfarm dwellings, and the royalties received by persons from patents, copyrights, and rights to natural resources.
"Corporate profits before tax" are the earnings of corporations organized for profit which accrue to residents of the Nation, measured before Federal and State profit taxes, without deduction of depletion charges and exclusive of capital gains and losses.
"Corporate profits tax liability" comprises Federal and State taxes levied on corporate earnings. Disbursements of tax refunds are deducted from tax liability in the year in which the tax liability was incurred.
"'Net interest" measures the monetary interest and imputed interest accruing to the Nation's residents from private business and from abroad, minus government interest disbursements to business. Imputed interest consists of the value of financial services received by persons without explicit payment and property income withheld by life-insurance companies and mutual financial intermediaries on the account of persons. As government interest paid to business appears as part of business incomes, it is deducted in computing net interest to prevent its inclusion in the national income.

The quarterly data for national income represent interpolations of annual totals (the methods employed in calculating the annual
estimates are beyond the scope of this descriptive note). For the most part, the interpolating data used are components of the personal income series (described in some detail in note 1 for p. 4) supplemented by special studies on corporate profits, which utilize publicly reported quarterly corporate-earnings data. In the computations of seasonally adjusted corporate profits, separate indexes were constructed for individual industries by a variety of methods: Ratio to moving averages, interpolation by seasonally adjusted receipts data, and by graphic techniques.

Quarterly data for 1939-51, as well as more detailed annual data back to 1929, are shown in the NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS, 1954 edition. Quarterly data for 1952 appear in the July 1957 issue of the SURVEY OF CURRENT BUSINESS. The NATIONAL INCOME SUPPLEMENT includes annual data by industrial origin for total national income and for the various components (other than rental income of persons) and a breakdown of total national income by legal form of organization. The annual series on salaries and wages are supplemented by data on employment and average annual earnings of employees, by industries.
${ }^{2}$ Includes the pay of employees of government enterprises and of permanent United States residents employed in the United States by foreign governments and international organizations.
${ }^{3}$ Data for business and professional income include inventory valuation adjustment. Farm income is measured exclusive of inventory profits; therefore no valuation adjustment is required.
${ }^{4}$ Less than $\$ 50,000,000$.

## PAGE 3

${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. "Gross national product or expenditure" is the market value of the output of goods and services produced by the $\mathrm{Na}-$ tion's economy, before deduction of depreciation charges and other allowances for business and institutional consumption of durable capital goods. Other business products used up by business in the accounting period are excluded. The Nation's economy in this context refers to labor and property supplied by residents of the Nation. Gross national product comprises the purchase of goods and services by consumers and government, gross private domestic investment, and net foreign investment.
"Personal consumption expenditures" consist of the market value of purchases of goods and services by individuals and nonprofit institutions, and the value of food, clothing, housing, and financial services received by them as income in kind. They include the rental value of owner-occupied homes, but do not include the purchase of new dwellings. A breakdown of personal consumption expenditures by groups is shown on p. 44; note 1 for that page describes the statistical sources and methods used in deriving the series.
"Gross private domestic investment" consists of acquisitions of newly produced capital goods by private business and nonprofit institutions, and the value of the change in the volume of inventories held by them. It covers all private new dwellings, including those acquired by owner-occupants.
"New construction" consists of total private new construction as given on p. 33, plus estimated construction expenditures for crude-petroleum and natural-gas drilling. An explanation of the former series is to be found in note 1 for $p .33$. The petroleum and natural-gas drilling estimates are based primarily upon reports in "Oil Weekly" and "Oil and Gas Journal" of number of new wells drilled, and upon Census studies of average costs per well in 1939, with appropriate allowances in subsequent periods for changes in labor and equipment costs, differences in average depth of wells, and deepening of old wells. Monthly seasonal factors for private new construction are computed, by components, and applied to yield seasonally adjusted monthly totals, from which quarterly summations are then obtained. Quarterly seasonal factors are applied to the unadjusted quarterly estimates for petroleum and gas drilling to produce an adjusted series.
'Producers' durable equipment" for 1939 and prior census years was generally estimated from commodity production data in the biennial "Census of Manufactures" combined into various groups and raised from the manufacturers' value of production to a value representing final prices paid by ultimate users by allowing for transportation charges from the factory, governmen
purchases, wholesale and retail markups, wholesale and retail inventory changes, and net exports. Chief sources of data for these adjustments included Interstate Commerce Commission freight commodity statistics; Temporary National Economic Committee, "Study of Government Purchasing;" Departments of the Navy and Air Force tabulations of Federal purchases; Census of Business, "Distribution of Manufacturers' Sales," "Wholesale Trade," and "Retail Trade;" Bureau of the Census, "Wholesalers' Sales, Inventories, and Credits;"' Dun and Bradstreet, "Survey of Sales and Inventories, 1935-1939;" U. S. Department of Commerce, "Foreign Commerce and Navigation of the United States." For intercensal years, manufacturers' values of production or sales were interpolated by groups by series derived chiefly from the Internal Revenue Service, "Statistics of Income," and from Securities and Exchange Commission, "Survey of American Listed Corporations." The interpolated series were raised to the value representing final prices paid by ultimate users by the adjustments indicated above.

A similar procedure was followed for 1947. Shipments data were derived from the Census of Manufactures for that year, and reliance was placed largely on the 1948 Census of Business and Internal Revenue Service data for computation of wholesale and retail markup rates. In the main, the Federal Government purchase estimates were made by the Bureau of Labor Statistics from data of the various departments concerned; and Census, Office of Education, and Bureau of Public Roads reports were the primary basis of the estimates of State and local government expenditures.

For 1942 through the first half of 1946, the estimates were based on manufacturers' commodity shipments data reported by Bureau of the Census in "Fabricated-Metal-Products Plant Operations," and combined by groups comparable to those based on the "Census of Manufactures." Estimates of the portion of total shipments of each commodity destined for private domestic use were based largely on priorities data reported in the same source, on Departments of the Army and Navy procurement data, and on defense plant data as reported in Census-Civilian Production Administration releases and by the War Assets Administration. In addition, Interstate Commerce Commission data on railroad purchases of equipment, Office of Defense Transportation figures on motor-vehicle sales, and other data were used.

For 1940 and 1941, individual groups were interpolated by series derived chiefly from "Statistics of Income" and Bureau of Foreign and Domestic Commerce, "Industry Survey" and "Survey of Current Business."

For the second half of 1946 and the period 1948-49, group benchmarks of manufacturers' commodity shipments were interpolated chiefly by industry sales reported in the "Industry Survey" and Census data on wholesalers' sales, with deductions for exports based on data obtained from export worksheets from the Foreign Trade Division of the Bureau of the Census. For 1950-52, shipments were derived by computing new semi-benchmarks on the basis of Census sample surveys of manufactures. Government purchases were estimated from unpublished tabulations of the Army, Navy, and National Production Authority, and other Federal departments, and from Census reports. Additional data used include the Interstate Commerce Commission figures on railroad expenditures for equipment; manufacturers' reports on truck sales; automobile and truck registrations; Bureau of Customs reports of additions to the merchant marine; Maritime Administration records of new vessel construction; current Census data relating to aircraft, construction machinery, farm machinery, and tractors; and information from private trade associations.
"Change in business inventories" measures the change in the physical volume of inventories valued at average prices of the period. To ascertain the net physical change in the stocks of nonfarm inventories, year-end book values are expressed in terms of constant prices by means of selected Bureau of Labor Statistics wholesale price indexes appropriate to each industry. The increments in the constant dollar inventory series are converted to current prices by multiplying them by index ratios of current prices to base-period prices. Quarterly data are obtained by adjusting the results of similar quarterly calculations made in less detail to the annual estimates. The change in farm inventories is estimated by the Agricultural Marketing Service from physical-quantity data.

The book values of year-end inventories held by corporations are obtained from the "Statistics of Income, Part 2." Noncorporate inventories are mainly derived from benchmark data obtained from the "Censuses of Manufactures, Wholesale Trade, and Retail Trade," and from Internal Revenue Service special tabulations of the tax returns of sole proprietorships and partnerships.

The interpolations of the noncorporate data for years before 1939 are based on estimates of noncorporate sales derived in estimating noncorporate business income, on inventory-sales ratios developed from census and tax return data, and on corresponding corporate inventory-sales ratios. The interpolations and extrapolations of the noncorporate data for years after 1939 are based on the movement of the noncorporate components implicit in the inventory estimates published monthly in the SURVEY OF CURRENT BUSINESS. These estimates are based on industry surveys compiled by the Office of Business Economics.

The year-end estimates of the book value of inventories for years after 1954 and the quarterly estimates of the book value of inventories, starting in 1939, are also based, for the most part, on inventory data obtained from these samples.
"Net foreign investment" is the net change in international as sets and liabilities, including the monetary gold stock, arising out of the current international flows of goods and services, factor incomes, and cash gifts and contributions. Thus it measures the excess of (1) domestic output sold abroad over purchases of foreign output, (2) production abroad credited to United States-owned resources over production at home credited to foreign-owned resources, and (3) cash gifts and contributions received from abroad over cash gifts and contributions to foreigners. The net transfer of cash gifts and contributions offsets corresponding entries in "personal consumption expenditures" and "Government purchases of goods and services."

As a measure of net foreign investment, the United States balance of international payments on current account, rather than the sum of known capital transactions (including gold), is accepted. While the implied assumption that statistical errors and omissions shown in balance-of-payments statements consist entirely of capital items is inaccurate, there exists no reliable basis for estimating what portion of the error occurs in the current account. For information on the principal items (merchandise trade estimates, freight and shipping earnings, travel expenditures, U. S. Government expenditures and receipts, income on investments, etc.) in the current account of the balance of payments, see note 1 for p. 102.
'Government purchases of goods and services' measure purchases of goods and services by government bodies, exclusive of acquisitions of land and used depreciable assets and of current outlays of government enterprises. They consist of general government expenditures for compensation of employees, purchases from business (net of sales by government of consumption goods and materials), net government purchases from abroad and international contributions, and the gross investment of government enterprises. Therefore, "government purchases of goods and services" exclude transfer payments, government interest, and subsidies, as well as loans and other financial transfers outside the scope of income and product transactions.
"Federal purchases of goods and services" are based essentially on the Treasury Daily and Monthly Statements of Receipts and Expenditures of the U. S. Government. However, since the total of budgetary expenditures as reported in those publications includes amounts not representing purchases of goods or services and excludes other items which do constitute purchases according to the definition of gross national product, and reflects still others with timing different from that of the actual purchases, numerous adjustments must be made.

The procedure is to treat the Treasury total of budget expenditures as a benchmark, adding or subtracting appropriate amounts so as to derive purchases of goods and services as a residual. The principal deductions are transfers to trust accounts, net expenditures of Government enterprises, subsidies, purchases of existing assets, tax refunds, grants-in-aid to State and local governments, transfer payments, interest, and loans and other capital transactions not included under any of the above captions. Chief additions are the acquisition of fixed assets and inventories by Government enterprises, general Government contributions to social-insurance funds, and purchases of goods or services reflected in trust accounts rather than in general and special ac-
counts of the Treasury. It will be noted that some of the additions involve restoration, with different timing, of items previously deducted. Adjustments for renegotiation of war contracts, for Government purchases on credit, and for advances and prepayments are made. Still further adjustments grow out of technical peculiarities in the accounting practices followed in compilation of the Treasury Statements.

Many of the necessary adjustments are found explicitly in the Treasury Statements, but for the others resort must be had to the Budget, the Treasury's Combined Statement of Receipts, Expenditures, and Balances, financial reports of Government corporations, a wide variety of other documents, and contacts with officials of Government agencies.

From the gross Federal purchases of goods and services to which the above comments relate must be subtracted all foreign sales by the Government, as well as its domestic sales of surplus consumption goods and materials. Data on the foreign sales come from the U.S. balance-of-payments statistics, while the domestic sales are based on reports of the War Assets Administration for some years and on the Budget for others.
'State and local purchases of goods and services' are derived primarily from the "State Finances," "City Finances," "County Finances," "Summary of Governmental Finances," and other reports of the Governments Division of the Bureau of the Census. As in the case of the Federal estimates, expenditures, other than for goods and services (such as transfer payments, interest, transfers to sinking funds, grants to other governments, and transfers to public-service enterprises) are omitted, and excluded goods-and-service expenditures (such as the capital outlay of government enterprises) are added. Interpolation or extrapolation of data for the intercensal periods is accomplished primarily through the use of independent State and local payroll and public-construction data.

Quarterly data for 1939-51 are shown in the NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS, 1954 edition. Quarterly data for 1952 appear in the July 1957 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{2}$ National-security purchases series for the 1939-46 period conforms in general to the Daily Treasury Statement classification of expenditures between war and nonwar activities; for 194756 the series conforms, in general, to the "major national security programs" classification in "The Budget of the United States Government for the Fiscal Year Ending June 30, 1954," P. 1090.
${ }^{3}$ Consists of sales to abroad and domestic sales of surplus consumption goods and materials.

4 Data for "national security" included with "other."
${ }^{5}$ Less than $\$ 50,000,000$.

PAGE 4
${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. "Personal income" is the current income received by persons from all sources, inclusive of transfers from government and business, but exclusive of transfers among persons. Not only individuals (including owners of unincorporated enterprises) but nonprofit institutions, private trust funds, and private pension and welfare funds are classified as "persons." Personal income is the sum of wage and salary disbursements, other Iabor income, proprietors' and rental income, dividends and interest, and transfer payments, less personal contributions for social insurance.
"Wage and salary disbursements" are equal to wages and salaries, except that retroactive wages are counted when received rather than when earned. They include income in kind as well as monetary receipts in the form of wages, salaries, commissions, etc. For information on the several components of employer disbursements, see note 3 below. An explanation of "other labor income" is given in note 4.
"Proprietors' and rental income" is the sum of income of unincorporated enterprises and inventory valuation adjustment and rental income of persons as given in the components of national income (see description in note 1 for $p .2$ ).
"Personal interest income" measures the monetary interest and the imputed interest accruing to individuals and nonprofit institutions.
"Transfer payments" consist of monetary income receipts of individuals from government and business (other than government interest) for which no services are currently rendered, of govment payments and corporate gifts to nonprofit institutions, and of individuals' bad debts to business. The contents of this item are given in detail in note 5 .

Personal income differs from national income in that it includes transfer payments and government interest, while it excludes both employee and employer contributions for social insurance, corporate profits tax liability and inventory valuation adjustment, and undistributed corporate profits. A minor difference also appears in the wage and salary components in that retroactive wage payments are included in personal income when received and in national income when earned.

The sources and methods used in compiling the monthly series are given in paragraphs following. In the quarterly series showing disposition of personal income, total personal income is the sum of the monthly totals.

For interpolating the annual series and for extending the series currently, monthly data from various governmental and private agencies are employed. Monthly reports of the U. S. Bureau of Labor Statistics, Interstate Commerce Commission, Bureau of Employment Security, Census Bureau, and other agencies are used to estimate wages and salaries.

Estimates for wages and salaries are prepared individually by industries, and for the period 1939-53 these are based mainly on payroll indexes of the Bureau of Labor Statistics, payroll indexes constructed from wage and employment data from the Bureau of Employment Security, reports by carriers to the lnterstate Commerce Commission, and payroll estimates of the Maritime Administration and Agricultural Marketing Service. In only a few instances were indirect methods of estimate employed. Since there is a considerable lag in the publication of Employment Security data, current estimates are less detailed, and resort is more frequently made to indirect methods of estimate. Nevertheless, the total payroll of groups for which no current information is available amounts to only about 5 percent of total wages and salaries.

Seasonal indexes for the wage and salary data were constructed separately for individual industries. For those industries in which the seasonal fluctuations are relatively minor, and for others where no adequate current information is available, no seasonal correction is applied. During the World War II years it was necessary to modify the existing seasonal factors and in some cases abandon them entirely. In the durable-goods manufacturing industries, the seasonals were set at 100 beginning with January 1941 for metals and metal products, except automobiles, and for those nondurable-goods industries in which payrolls were markedly out of line with prewar patterns. For the automobile industry, seasonal adjustments were abandoned beginning with January 1942. In addition, during the war period, the amplitude of seasonal factors used to adjust construction payrolls was considerably dampened. During the postwar period, seasonal correction was again applied to the manufacturing industries when indicated.

Transfer payments, for the most part, are reported directly by various governmental agencies such as the Veterans Administration, Bureau of Employment Security, and U. S. Civil Service Commission. For some of the components of transfer payments (such as State and local government employees' retirement pensions and business transfer payments), no monthly information is available. The procedure used in constructing monthly estimates is to plot the annual averages at the midpoint of each year and to draw a smooth curve through these annual averages. It is necessary to use this procedure for about 15 percent of total transfer payments currently.

Dividend payments are currently estimated from a sample of publicly reported dividends which is maintained by the Department of Commerce and embraces approximately 5,500 corporations. It has not been found feasible to adjust dividends for seasonal variation except on a quarterly basis, as this is the shortest time period for which any regularity can be established. Ratios to moving averages yield seasonal factors which are applied to quarterly totals. The seasonally adjusted quarterly totals are assumed to be representative of the midpoint of the quarter, and straightline interpolation between the midpoints of the quarters provides seasonally adjusted estimates for the other months.

Although the monthly estimates of proprietors' income and rental income are prepared in considerable detail, they are based on less adequate data than are wages and salaries. Farm proprietors' income is based mainly on cash income from farm marketings data provided by the Agricultural Marketing Service. Business and professional proprietors' income estimates are based, for the most part, on annual regressions of receipts to proprietors' income. Since the monthly receipts data which are employed have already been corrected for seasonal variation, no further seasonal correction is necessary.

The rent estimates are based largely on information on residential rents collected by the Bureau of Labor Statistics for its Consumer Price Index.

Interest estimates are in part based on current information, as in the case of the large Federal Government component, and on assumptions as to monthly pattern for the remainder of the category. Since a good deal of the interest consists of imputed interest, which represents the value of financial services received without explicit payment, it is assumed that these services flow regularly throughout the year and consequently this portion of interest is smoothed. The seasonally adjusted interest series represents a smoothing of the annual data. The resulting monthly data reflect, therefore, only trend and cyclical fluctuations.

Other labor income represents a series obtained by plotting annual averages and drawing a smooth curve through these averages.

Monthly estimates of employee contributions for old age and survivors insurance, railroad retirement insurance, and Federal civilian employee retirement systems are based on relevant wage and salary data, taking account of changes in contribution rates. Contributions to Federal government life insurance funds and State cash sickness compensation funds are based on receipts reported by the various funds. Monthly contributions to State and local retirement systems represent a smooth curve drawn through annual totals. Estimates of annual contributions of self-employed persons to the old age and survivors insurance fund, which are payable in the first quarter of the year, are obtained from the Bureau of Employment Security and smoothed through the year to approximate sea sonal adjustment.

Quarterly data for 1939-51 for disposition of personal income and monthly data for 1929-51 for personal income by source are available in the NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS, 1954 edition. Quarterly and monthly data for 1952 appear in the July 1957 issue of the SURVEY OF CURRENT BUSINESS.

2 "Personal tax and nontax payments" consist of taxes levied against individuals, their income, and their property that are not deductible as expenses of business operations, and of other general government revenues from individuals in their personal capacity. They include payments for such specific services as are provided within the framework of general government activities but exclude purchases from government enterprises. Tax refunds are deducted from payments at the time of refund,

Federal personal tax payments are derived from individual income, estate, and gift tax collection data as reported by the Internal Revenue Service. In the years of their operation, the victory tax, the tax on use of noncommercial boats, and a share (based on an estimated ratio of personal vehicles to total registrations) of the motor-vehicle use tax are also included. Collections of withholding tax (including the victory tax) are lagged so as to reflect the timing of actual withholding; after January 1951, estimated contributions of both employers and employees for old age and survivors insurance are deducted. Seasonal adjustment of the quarterly series is accomplished by distributing such lagged calendar-year totals through four quarters in accordance with the movement of seasonally adjusted payrolls subject to withholding. Appropriate allowances are made for changes in tax rates. Payments of other individual income taxes (declaration, end-of-year, and back payments), estate and gift taxes, and the personal share of motor-vehicle use taxes in any calendar year are accepted as an expression of the annual rates prevailing in each quarter of that year; estimated contributions of the selfemployed for old age and survivors insurance are deducted beginning in 1952. Similarly, the annual rate of personal tax refunds netted out in each quarter of any year is the amount of individual income, estate, and gift taxes actually refunded during that calendar year. These amounts are determined from

Annual Reports of the Commissioner of. Internal Revenue and adjusted, together with indirect business and corporate profits tax refunds, to the annual totals of all tax refunds as shown in the Daily Treasury Statement prior to 1954, and in the Monthly Treasury Statement beginning in 1954. Federal personal nontax payments are determined principally from detailed analysis of Budget data on miscellaneous receipts of the Treasury.

State and local personal tax payments (which consist of income, death and gift, motor vehicle, personal property, and poll taxes, and miscellaneous personal licenses) are based on the "State Finances," "City Finances," "County Finances," "Summary of Governmental Finances," and other reports of the Governments Division of the Census Bureau, with appropriate interpolation or extrapolation of intercensus years. State and local personal nontax payments, consisting largely of fines, penalties, and charges for current services (other than by government enterprises), are obtained from the same sources and by the same methods. Seasonally adjusted quarterly data at annual rates are calculated by graphic interpolation or extrapolation, except in the case of individual income taxes, where calendar-year collections are taken to reflect the annual rate in each quart er of any year.
"Total disposable income" is the income remaining to persons after deduction of personal tax and nontax payments to general government.
"Personal saving" is obtained by deducting, from total disposable income, personal consumption expenditures which are not given separately here but are shown as a component of gross national product or expenditure on p. 3 (see second paragraph of note 1 for that page). Personal saving is therefore the excess of personal income over personal consumption expenditures and taxes and other payments to general government. It consists of the current saving of individuals (including owners of unincorporated businesses), nonprofit institutions, and private pension, welfare, and trust funds. Personal saving may be in such forms as changes in cash and deposits, security holdings, indebtedness, and reserves of life-insurance companies and mutual-savings institutions, the net investment of unincorporated enterprises, and the acquisition of real property net of depreciation.

Quarterly data for 1939-51, as well as more detailed annual data back to 1929, are shown in the NATIONAL INCOME SUPPLEMENT to the SUR VEY OF CURRENT BUSINESS, 1954 edition. Quarterly data for 1952 are shown in the July 1957 issue of the SURVEY.

3 "Commodity-producing industries" consist of agriculture, forestry and fisheries, mining, contract construction, and manufacturing. "Distributive industries" consist of wholesale and retail trade, transportation, communications, and other public utilities. "Service industries" comprise finance, insurance and real estate, and services. "Government" comprises Federal, State, and local government and government enterprises and pay of permanent United States residents employed in the United States by foreign governments and international organizations.
${ }^{4}$ Includes compensation for injuries, employer contributions to private pension and welfare funds, pay of military reservists (except pay of reservists on full-time active duty which is included in Government wages and salaries), and the following miscellaneous items: Directors' fees, jury and wimess fees, compensation of prison inmates, Government payments to enemy prisoners of war, marriage fees to justices of the peace, and merchant marine war-risk life and injury clairns.
${ }^{5}$ Consists largely of monetary income receipts of individuals for which no services are rendered currently, as follows: Benefits under the unemployment compensation and old age insurance provisions of the Social Security Act and the Railroad Retirement Act; Federal civilian pensions; Government life insurance benefits; Federal military pensions, disability, and retirement payments; adjusted compensation benefits; mustering-out payments to discharged servicemen; readjustment, self-employment, and subsistence allowances to veterans; Federal, State, and local government direct relief; and State and local government pensions, cash sickness compensation, and veterans' aid and bonuses The item includes also government payments and corporate gifts to nonprofit institutions, individuals' bad debts to business, and other business transfers to individuals.
${ }^{6}$ Includes contributions of employees and of self-employed persons (beginning in 1952) to old age and survivors insurance
and employee contributions to State unemployment insurance, railroad retirement insurance, Federal civilian and State and local employee retirement funds, and cash sickness compensation funds, and premium payments to Government life insurance fund and national service life insurance fund.
${ }^{7}$ Equals personal income exclusive of net income of unincor-porated farm enterprises, farm wages, agricultural net interest, and net dividends paid by agricultural corporations.

## PAGE 5

${ }^{1}$ Sources: Securities and Exchange Commission, U. S. Department of Commerce (Office of Business Economics), and Interstate Commerce Commission. Data are available on an annual basis for the years 1939 and beginning 1945, and quarterly beginning 1947. The estimates relate to the whole of American private industry, exclusive of agriculture, professionals, and institutions. Annual estimates are based on reports from all corporations registered with the Securities and Exchange Commission, reporting to the Commission, a sample of transportation firms under Interstate Commerce Commission jurisdiction, reporting to that Commission, and a large sample of unregistered companies, unincorporated and incorporated, reporting to the Department of Com merce. The quarterly data are based on the Department of Commerce sample, the Interstate Commerce Commission sample, and a sample consisting of most corporations registered with the Securities and Exchange Commission.

The figures here do not agree precisely with the totals included in the gross national product estimates of the Department of Commerce on p. 3. The main difference lies in the inclusion in the latter data of investment by farmers, professionals, and institutions, and of certain outlays charged to current account.

Quarterly data for 1947-52 for the unadjusted and seasonally adjusted series appear on pp. 6-7 of the June 1956 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{2}$ Averages for the years 1939 and 1945-55, and quarterly data for 1953-55 for the unadjusted series include trade, service, finance, and construction; data for 1956 also include communications. Seasonally adjusted data include trade, service, finance, communications, and construction.
${ }^{3}$ Data for communications are included under "commercial and other."

## PAGE 6

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Monthly estimates of cash receipts from farm marketings are derived from estimates of monthly sales and prices received by farmers for the various farm commodities. Estimates of monthly marketings for most of the important farm products are valued by midmonth prices. Average prices received during the month are used in computing income from truck crops. Cash receipts for a few crops are computed by applying a season average price.

Where farm products are placed under loan to the Commodity Credit Corporation, receipts through loans are counted as income during the month the loan is made and, if the product is later redeemed, the cost of redemption is subtracted from receipts at the time of redemption. Government payments, which are added to cash receipts from marketings to obtain total cash receipts from farming, comprise all payments made directly to farmers under the various programs-that is, rental and benefit, cotton option, conservation, Sugar Act, price adjustment, parity, dairy production, other production, Wool Act, and soil bank payments. Government aid that is reflected in prices received by farmers for their products is not included in this item since it is covered in the estimates of receipts from marketings.

Current estimates of marketing (1956) are based on estimated production, the normal disposition of the product, and the usual seasonal movement to market, supplemented by available current data on market receipts, marketing, and processing of farm products. These estimates will be subsequently revised as more complete data on production, crop-year sales, and monthly marketings become available.
lndexes of cash receipts from farm marketings and CCC loans are computed by dividing the estimates of the relevant total of cash receipts for each month by the monthly average of the cor-
responding total in the base period 1947-49. The indexes shown here are not adjusted for seasonal variation.

Annual totals for 1910-28 and monthly data for 1952 for dollar figures for farm marketings appear on p. 19 of the March 1957 issue of the SURVEY OF CURRENT BUSINESS. Monthly data for indexes of cash receipts for back years will appear in a forthcoming "Agricultural Handbook."
${ }^{2}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are the revised series, superseding the indexes published in earlier issues of BUSINESS STATISTlCS and in monthly issues of the SURVEY OF CURRENT BUSINESS through June 1956. The revised index differs from the old in the following major details: (1) the base period is shifted from 193539 to 1947-49; (2) more up-to-date price weights are used for the period beginning with 1940; (3) the commodity coverage is increased; and (4) annual index numbers are extended back to 1910.

The index measures changes in the physical volume of marketings of all the commodities included in cash receipts from farm marketings, with the exception of those for which neither quantity nor price data are available. The monthly estimates of sales of individual farm commodites used in computing the estimates of cash farm income provide the basic material for calculating the index.

The index is based on marketings of about 150 agricultural products which, based on 1950 prices, quantities, and values, accounted for 97.2 percent of total cash receipts from all farm marketings. It is calculated by the weighted aggregate method, i.e., quantities for each year are multiplied by fixed prices as weights; then price-quantity aggregates for individual periods are expressed as percentages of the appropriate average pricequantity aggregates in the base period (1947-49). Average prices for the period 1935-39 are used as weights for the period 191039, while 1947-49 average prices serve as weights for subsequent years. The 1910-39 price-quantity aggregates based on the older weights were adjusted or "spliced" to the levels indicated by the newer weights on the basis of overlapped calculations for the single year 1940.

Data on monthly marketings of some items included in the index are not available currently and it is necessary to estimate monthly marketings from estimated production, the normal percentages sold, and the usual seasonal movement to market. The estimates are subject to revision as more complete data on marketings become available. The indexes for 1950-56 include only partial adjustments to levels indicated by data collected in the 1954 Census of Agriculture.

The index of physical quantity of farm products sold and the index of prices received by farmers shown on p. 25 provide measures of the causes of fluctuations in cash receipts from marketings but do not measure exactly the movement in cash re-ceipts, and in some months changes in the indexes may seem somewhat inconsistent. Such inconsistencies as may exist can be explained in part by the fact that although the marketings index and the prices received index are comparable in their commodity coverage, they are not comparable in their weighting systems. As previously stated, the marketings index uses 193539 average prices as weights through the year 1939, and 1947-49 prices thereafter. The prices received index is based on average quantity weights for the 6 years 1924-29 in the period 191034, and on 1937-41 quantity weights from 1935 to date. Prices used in the price index do not reflect loan rates of commodities placed under CCC loan. In addition, they represent U.S. prices in which State prices are weighted by production rather than marketings, and hence do not reflect seasonal variations among States, which do affect the monthly index of marketings. Another source of possible discrepancy is the inclusion in cash receipts of such items as forest, nursery, and greenhouse products which, for lack of data, are included neither in the volume index nor in the price index.

For a more complete description of the index see Agricultural Handbook No. 109, 'New Index Numbers of Farm Marketings and Home Consumption," issued in July 1956 by the U. S. Department of Agriculture. That handbook contains annual indexes back to 1910 and monthly indexes back to January 1947. The indexes for these earlier periods are also published on $p .20$ of the April 1957 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{3}$ Includes data for items not shown separately.
${ }^{4}$ Revisions for 1955 and 1956 are in preparation and will be published in a forthcoming issue of the SURVEY OF CURRENT BUSINESS.

## PAGE 7

${ }^{1}$ Source: Board of Governors of the Federal Reserve System, Division of Research and Statistics. The index measures changes in the physical volume of output of manufactures and minerals. It reflects output changes at all stages within manufacturing and mining industries, including intermediate as well as final products. The index does not cover production on farms, in the construction industry, in the utilities, in transportation, or in various trade and service industries. The manufacturing and mining sectors in recent years have accounted for about onethird of national income and are of particular importance in the analysis of business fluctuations.

The index includes production at Government arsenals and shipyards (both Navy and private). Atomic energy manufacturing activity is represented beginning with 1947. A number of groups and subgroups include data for individual series not published separately, and metal fabricating contains the ordnance group in addition to the groups shown. Production of certain types of combat matériel is included in major group totals but not in individual indexes such as those for autos and some other products.

The index as published in this volume and in the 1955 issue of BUSNESS STATISTICS is the completely revised series introduced the latter part of 1953. The revised index reflects the following improvements: (1) the development of an independent set of annual indexes from the more comprehensive and detailed data available at yearly intervals; (2) the incorporation of a large number of new or revised series in the monthly index; (3) the revision of weights to bring them up to date; (4) the revision of seasonal adjustment factors and working-day allowances; (5) the adoption of a more recent comparison base period, or 100 level; and (6) the use of an improved industrial classification structure.

Detailed revisions have been confined for the present to the period beginning January 1947. The old total index and the old indexes for manufactures, durable and nondurable manufactures, and minerals from January 1919 to December 1946 have been converted to the new 1947-49 comparison base and adjusted to benchmark levels based mainly on Census of Manufactures data for 1939 and 1947. Since the 1939 Census of Mineral Industries was the latest available, a corresponding census index could not be calculated for this sector. For consistency with the treatment of manufactures, the old pre-1947 index for minerals has been adjusted to a benchmark measure calculated from Bureau of Mines data for 1939 and 1947. (It should be noted that the indexes shown in this volume have not been revised to levels of the 1954 Censuses of Manufactures and Mineral Industries.)

The general concepts and methods used in calculating the index are the same as before the 1953 revision, except for the changes mentioned above and certain changes in the treatment of seasonal adjustments and working-day allowances. (For detailed descriptions and data as previously revised, see the Federal Reserve Bulletin, issues of October 1943, September 1941, August and September 1940, and February and March 1927.) The following paragraphs concern primarily the features of the index according to the 1953 revision.

A set of comprehensive and detailed annual indexes based on about 1400 separate product and industry series now affords a reliable measurement for review and adjustment of the individual monthly index levels. The relationship between the monthly and annual measures may be stated in two ways: (1) the annual index for a particular industry or combination of industries, as the more complete and reliable measure, provides the basis for periodic review and, where necessary, for adjustment of the levels of the monthly series for the corresponding area of activity; and (2) the monthly series for a particular area provides the means for indicating monthly movements around the annual indexes and for extrapolating these movements until annual data become available.

About 62 percent of the new annual index and 45 percent of the monthly index are based on figures relating to quantities produced or shipped. Figures on quantities of material consumed by, delivered to, or produced mainly for certain industries account for about 12 percent of the annual measure and 8 percent of
the monthly. The remaining 26 percent of the annual index is represented by estimates based on several types of data, deflated value figures, and man-hour figures with adjustments for estimated changes in output per man-hour. Man-hour figures account for only 4 percent of the annual index, whereas such figures are used for about 45 percent of the monthly index.

In the revised index the component series have been classified in terms of 26 major industry groups as defined in the most recent Standard Industrial Classification Manuals and, where feasible, this classification also has been followed for more detailed categories. The number of basic monthly series in the index has been increased from 100 to about 175 and about half of the old series have been revised substantially.

The component series of the index are combined with weights, or measures of relative importance, based largely on the value added to purchased materials in the process of fabricating them into finished or more nearly finished goods. The weights of the new index for manufacturing, for the period starting in 1947, were developed mainly from value-added data from the 1947 Census of Manufactures; those for mining industries were based largely on estimates for 1947 prepared by the Bureau of Labor Statistics (Department of Labor) in their input-output studies.

As indicated earlier, the total index and the indexes for major divisions for the period 1939 through 1946 are adjusted to benchmark measures with average valuations from 1939 and 1947. For the indexes before 1939 the old weight periods are unchanged, with 1937 valuations used from 1930 through 1938, 1923 valua tions from 1923 through 1929, and average 1919 and 1923 valuations from 1919 through 1922.

The method used in combining the individual series is the weighted average of relatives. This consists of (1) reducing each series into relatives with the average for the base period, 194749 , as 100; (2) multiplying each series of relatives by a baseyear weight factor; and (3) adding the products (series of relatives multiplied by weights) for any one month to obtain the total index number for the month. Since the weights used are percentage weight factors and since the total of the percentage weight weight factors is equal to 100 , the sum of the products for all series for a particular period gives the total index of industrial production for that period. The multiplication of each series by the corresponding weight gives a figure which is the number of "points" contributed by the particular series to the total index. Indexes for any desired combination of series are obtained by adding the appropriate points and dividing their sum by the total of the corresponding weights.

Components of the index are adjusted for two kinds of shorttime recurring fluctuations, i.e., for differences in the number of working days from month to month and for seasonal variations. In the working-day adjustment, reported quantity figures used for the monthly index are put on a daily-average basis. The base used for calculating index numbers for the resulting daily-average figures is the daily-average output in the 1947-49 period. No adjustment is required for monthly series based on man-hour data because they relate to a payroll period in the middle of the month and are not affected by calendar variations.

In adjusting for differences in the number of working days each month, only regular weekend closings (where in effect) are treated as nonworking days. Since in the new index the working-day adjustment is confined to weekend closings, any effect that holiday shutdowns have on monthly output are reflected in the set of indexes unadjusted for seasonal variation. The effects of holiday shutdowns, however, are taken account of in the seasonally adjusted data together with those of other seasonal influences. In the old index (and for data shown here prior to 1947) holidays observed by individual industries were treated as nonworking days, together with weekend closings, and the total number of days involved in both was subtracted from the number of calendar days in the month.

For determining seasonal factors in the index, the "ratio to freehand curve" method is used. (This method is described fully in the Federal Reserve Bulletin for June 1941.) In the new index, seasonal adjustments are determined directly for each of the 21 manufacturing and 5 mineral major-industry-group indexes, and the adjusted indexes for the major divisions and the total are obtained by aggregating the adjusted group indexes. Seasonal ad justment factors have been reviewed for the period since the publication of the revised indexes in 1953. Pending a complete review
of the indexes before seasonal adjustment based on the 1954 Censuses of Manufactures and Mineral Industries, and other more comprehensive data, the revised seasonal factors for the period prior to January 1956 have not been incorporated in the published indexes. (Seasonal adjustment factors for the entire period since January 1947 are available upon request from the Federal Reserve Board.)

A complete description of the revised industrial production index with seasonal factors and weights for the series used in the index and the number of working days for each industry are available in the December 1953 issue of the Federal Reserve Bulletin. That volume contains also monthly data for all series, beginning January 1947, and monthly data beginning January 1919 for total industrial production, total manufactures, durable and nondurable manufactures, and total minerals. A brief description of the revised seasonally adjusted indexes beginning January 1956 appears on pp. 277-278 of the March 1957 Federal Reserve Bulletin.

Monthly data for 1951-52, comparable with the indexes shown in this volume, appear in the 1955 edition of BUSINESS STATISTICS.

## PAGE 12

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. The index measures output of durable goods of the types produced primarily for sale to consumers. Such output includes not only the units produced for consumers but also the units produced for business and Government use (including military use) and for export. Imports of finished consumer durable goods are not included.

These data are a combination of the revised index of "major" consumer durable goods and the new indexes developed for "other" consumer durable goods, the latter covering automobile parts and tires and miscellaneous home and personal goods. The revised index of major consumer durables incorporates information developed in revising the index of industrial production. (Revision of the industrial production index was completed December 1953.) Weights used for combining individual series into indexes for the subgroups and the total are based on gross factory value of output, not value-added data as are used for the industrial production index. The weight data are drawn chiefly from the Census of Manufactures for the year 1947. (Pending a complete review of the indexes before seasonal adjustment based on the 1954 Census of Manufactures and other more comprehensive data, the revised seasonal factors for the period prior to January 1956 have not been incorporated in the indexes published here.)

As in the industrial production index, annual measures calculated in greater detail or from preferable types of data are used for the purpose of periodically checking and correcting the levels of most of the monthly indexes.

In general, the indexes for individual series are based on quantities produced (or shipped) and on man-hours. Monthly indexes are adjusted for differences in the number of working days from month to month and for seasonal variations. In 1952, a survey of trade associations was made by the Federal Reserve to ascertain the length of the workweek in individual industries. A 5-day workweek was found to be generally observed in consumer-dura-ble-goods industries and this information has been used as a basis for determining the number of working days each month for computing daily average output from monthly totals. An exception is the auto-tire industry where the workweek indicated was
$51 / 2$ days. A daily average computation is not required for series based on man-hour data, since they are reported as weekly rates rather than monthly totals.

Allowances for output fluctuations due to holiday shutdowns are included in the seasonal adjustment rather than in the workingday adjustment. In general, the seasonal adjustments have been made to subgroups and not to individual series. Thus a seasonally adjusted series is calculated for refrigeration appliances, but not for refrigerators separately. The method used in making the seasonal adjustment follows closely that described in the December 1941 issue of the Federal Reserve Bulletin.

For more complete details on the index (including description of series included and seasonal factors used) and for monthly data back to January 1947, see the May 1954 and March 1957 issues of the Federal Reserve Bulletin, pp. 438-452 and pp. 277-278, respectively. The May 1954 Bulletin also explains the important respects in which the index of output of consumer durable goods differs from the Department of Commerce estimates of personal consumption expenditures for durable goods.

Monthly data for 1951-52 are shown in the 1955 edition of BUSINESS STATISTICS.

## PAGE 13

${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. Sales are estimated aggregate dollar values and inventories are estimated book values at the end of the year or month. Business sales and inventories are here defined as the sum of data for manufacturing and wholesale and retail trade. These figures are smaller than the nonfarm business statistics used in gross national product computations by the amount of sales (or revenues) and inventories for construction, utilities, and other nonindustrial sectors.

The term "sales" as here used signifies essentially sales or shipments for retail and wholesale trade and billings or shipments for manufacturing. In wholesale trade, however, some respondents probably report orders (bookings) as sales.

Trade inventories are valued at cost of merchandise on hand, while manufacturers' inventories are, in general, valued at the lower of cost or market price. About 15 percent of manufacturers' inventories are valued on a last-in-first-out (LIFO) basis; the use of LIFO is much less prevalent in trade generally (though it is used extensively by department stores).

Changes in the book value of business inventories reflect movements of replacement costs as well as changes in physical volume. In measuring inventory investment as part of the gross national product, the data are adjusted to remove the effect of changes in replacement costs. (See explanation of "inventory valuation adjustment" in note 1 for p. 2.)

Monthly data for 1951-52 for the manufacturers sales and inventories segments of this series appear in the 1955 edition of BUSINESS STATISTICS; those prior to 1951 are available upon request. Monthly data for wholesale sales and inventories (19391947) and retail inventories (1939-52) are available upon request. Monthly data for retail sales for 1951-52 (new series) appear in the June 1957 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{2}$ See note 4 for p. 14 for description of the manufacturing series.
${ }^{3}$ See note 3 for p. 55 for description of the wholesale trade series for the period shown in this volume.
${ }^{4}$ See note 2 for p .45 for description of the retail trade series.
${ }^{5}$ Monthly averages for business sales are based on annual totals for the unadjusted series; data for inventories are end-ofyear figures, not averages of end-of-month data.
${ }^{6}$ Monthly averages for 1929 and 1933 for retail trade are based on annual totals from the Census of Business for those years.
${ }^{7}$ Data incorporate the new series beginning January 1951 for retail sales, and beginning December 1950 for retail inventories; they are not comparable with earlier figures. For comparative purposes, the 1951 monthly average for retail sales and the December 1950 retail inventories on the old basis are shown (in italics) above the corresponding figures on the new basis. Information on the new retail sales and inventory series is provided in note 2 for p. 45 and note 2 for p. 49 , respectively.

PAGE 14
${ }^{1}$ See note 1 for p. 13.

${ }^{3}$ See note 2 for p. 49.
${ }^{4}$ Source: U. S. Department of Commerce, Office of Business Economics. The manufacturing data on this page and on pp. 13 and 15-22 are estimates based on a sample of reporting companies which account for more than 45 percent of total manufacturing sales.

The sales and inventory figures in the present volume and in the 1955 volume supersede those in earlier issues of BUSINESS STATISTICS. The revised estimates shown here are based on annual corporate data through 1954 published by the Internal Revenue Service in Statistics of Income, Part 2, and on Internal Revenue Service noncorporate data for alternate years 1945 through 1953 and for 1954. For a detailed description of the procedures used in compiling the series, see the following issues of the SURVEY OF CURRENT BUSINESS: August 1957; June 1955, p. 21; May 1955, p. 20; January 1954, p. 17; December 1953, p. 21; October 1952, p. 14; October 1951, p. 15; October 1950, p. 16; October 1949, pp. 12-14.

Sales are net, i.e., less discounts, returns, and allowances, and are adjusted for renegotiation of war contracts in the relevant years. The figures represent sales and receipts involved in any activity of a manufacturing company, including those activities that do not pertain strictly to manufacturing. They include sales from one manufacturer to another and, therefore, do not measure changes in the net flow of goods from the manufacturing industry as a whole. Sales for export as well as those for domestic use are included. However, data are not included for foreign subsidiaries of the manufacturing companies.

Inventory data are book values of stocks on hand at the end of the period and comprise purchased materials, goods-in-process, and finished goods. All inventories owned by a company are covered, including not only those located in factories but also goods-in-transit, in warehouses, in manufacturers' sales branches, etc. For further explanations regarding methods of valuing inventories, see the 3d and 4th paragraphs of note 1 for p. 13.

Monthly data for 1951-52 appear in the 1955 edition of BUSINESS STATISTICS. Monthly data for 1948-50 for sales and inventories appear on pp. 21-24 of the May 1955 SURVEY OF CURRENT BUSINESS; those for stages of fabrication (unadjusted for 195152 and seasonally adjusted for $1939-52$ ), on pp. 22-24 of the June 1955 SURVEY. Monthly data for 1939-47 are available upon request.
${ }^{5}$ Data for inventories are end-of-year figures, not averages of end-of-month data.

${ }^{4}$ Source: U. S. Department of Commerce, Office of Business Economics. Data for new and unfilled orders are dollar aggregates directly comparable with the sales and inventory series. Unfilled orders were obtained by estimating the aggregate value as of December 1947, and then computing the movements forward and back from that point. To derive the level, the reporting sam ple was stratified by industry and size in the same way as for es timating sales, and in each stratum, the sample ratio of unfilled orders on December 1947 to sales for 1948 was applied to total sales for 1948.

The sample of companies reporting orders data is smaller than that reporting sales, because of the number of companies for which new orders were equal to sales and also because of those which have backlogs but do not report. However, the sample accounts for more than 25 percent of unfilled orders for all manufacturing.

The month-to-month percentage changes in unfilled orders shown by the sample were used to obtain the monthly movements of total backlogs in each stratum. Then net new orders were computed from the estimated monthly sales added to the change in unfilled orders.

Monthly data for 1951-52 appear in the 1955 edition of BUSINESS STATISTICS (correction for seasonally adjusted new orders for machinery, including electrical: February 1951, $\$ 4,018 \mathrm{mil}-$ lion). Monthly unadjusted data for 1950 are shown on p. 23 of the December 1953 SURVEY OF CURRENT BUSINESS; for 1949 and 1948 , on p. 17 of the November 1952 SURVEY. Monthly seasonally adjusted data for new orders for 1950, 1949, and 1948 are shown on p. 25 of the December 1953 SURVEY. Monthly data for 1939-47 for unadjusted new and unfilled orders are available upon request.
${ }^{5}$ Data for inventories are end-of-year figures, not averages of end-of-month data.

PAGE 23
${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. The data on operating businesses and new, discontinued, and transferred businesses refer to number of "firms" as opposed to the number of "establishments." A firm is defined as
a financially responsible business organization under one management with an established place of business and may control one or more plants or outlets. However, firms are on an unconsolidated rather than a consolidated hasis, i.e., each corporation and each corporate subsidiary is separately counted. All nonfarm businesses are included, regardless of size; however, professional practices such as those of physicians, lawyers, etc., are not considered business firms.

Discontinued businesses include closures of all kinds without reference to the reason for going out of business-e.g., retirement, failure, illness, etc. A firm which is maintained as a business entity but which undergoes a change in ownership is not a discontinuance but is counted among the business transfers. Transfers also include firms which have undergone a change in legal form of organization-e.g., from partnership to corporation. New businesses include only firms that have been newly established, since going businesses which have been purchased are considered transfers.

The data on number of operating businesses and number of new, discontinued, and transferred businesses are estimates of the Office of Business Economics. Estimates are based primarily on statistics compiled by the Bureau of Old Age and Survivors Insurance. Breakdowns by industry are presented according to the Standard Industrial Classification as of May 1949, except for the manufacturing division for which the 1945 revision of the Standard Industrial Classification was used. Firms engaged in more than one industry are classified according to the industry of greatest employment.

A description of the sources and methods and definitions of terms used in preparing the estimates is presented in the January 1954 SURVEY. In the January 1954 issue of the SURVEY may be found annual average number of firms in operation (1929-June 30, 1953) by industry divisions and semiannual data (December 1944June 1951) by industry divisions and major groups for manufacturing, retail trade, and service industries; also the number of new and discontinued businesses (1940-June 30, 1953) and number of transferred businesses (1944-June 30,1953 ) by industry divisions and (for 1945-50) by industry divisions and ma jor groups for manufacturing, retail trade, and service industries. Revised quarterly data by industry division are available upon request as follows: Number of firms in operation, 1939-50; number of new, discontinued, and transferred businesses, 1944-50.

Special articles in the SURVEY have also presented business population estimates by age of firm (December 1955 issue), by legal form of organization (April 1955 issue), by size of firm (May 1954 issue), and by State and region (November 1954 issue).
${ }^{2}$ Data through 1952 for operating businesses are averages of end-of-quarter estimates centered at June 30. The figures for new businesses and discontinued businesses are quarterly averages through 1952. The 1956 data for operating and discontinued firms are preliminary.

PAGE 24
${ }^{1}$ See note 1 for p. 23.
${ }^{2}$ Source: Dun \& Bradstreet, Inc. Figures for new business incorporations represent the total number (for the 48 States, excluding the District of Columbia) of stock corporations issued charters under the general business corporation laws of the various States. The statistics include completely new businesses which are incorporated, as well as changes in existing businesses from the noncorporate to the corporate form of organization, existing corporations which have been given certificates of authority to operate also in another State, and the transfer of an existing corporation to a new State.

Monthly data for July -December 1945, formerly pubIished for 47 States (exclusive of Louisiana), are revised to include Louisiana as follows (number): 4,213; 4,578; 4,826; 7,027; 7,120; 8,350. Monthly data for 1946-48 appear on p. 21 of the May 1950 SURVEY; those for 1949-52 appear in the 1955 and 1953 editions of BUSINESS STATISTICS.
${ }^{3}$ Source: Dun \& Bradstreet, lnc. During the period for which data are shown, there have been two major revisions of the failure statistics resulting in material changes in the coverage between 1932 and 1933 and between 1938 and 1939, and also revi-
sions in the industry classifications, so that no data are available prior to 1939 comparable with the present series.

A failure is defined as "a concern that is involved in a court proceeding or a voluntary action that is likely to end in loss to creditors." All industrial and commercial enterprises which are petitioned into the Federal Bankruptcy Courts are included in the failure records; also included (but incompletely prior to 1939) are concerns which are forced out of business through such actions in the State courts as foreclosure, execution, and attachments with insufficient assets to cover all claims, as well as voluntary discontinuances with known loss to creditors and voluntary compromises with creditors, where obtainable.

Data for all years shown herein exclude railroad failures. Through 1932, the data include real estate and financial companies. Beginning 1933, the records are confined strictly to industrial and commercial enterprises; they exclude, in addition to railroads, such activities as banks, financial companies, holding companies, real estate and insurance brokers, amusement enterprises, shipping agents, tourist companies, transportation terminals, etc. The revisions incorporated in the 1933 data reduced the number of failures in that year from 20,307 to 19,859 and the liabilities from $\$ 502,830,000$ to $\$ 457,520,000$.

The series shown for liabilities represent approximately current liabilities (i.e., all accounts and notes payable, and all obligations, whether secured or not, known to be held by banks, officers, affiliated companies, supplying companies, or the Government). They do not include long-term publicly held obligations. Offsetting assets are not taken into account. A relatively small amount of mortgages held by individuals is included prior to 1934.

The comparability of the data is affected between 1938 and 1939 by more complete coverage (beginning the latter year) of voluntary discontinuances with loss to creditors and of small concerns forced out of business by such actions as attachment, execution, or foreclosure, with insufficient assets to cover all claims. Inclusion of the additional cases in 1939 increased the total number of failures for that year by 29 percent and the current liabilities by 9 percent. (Monthly averages for 1939 comparable with earlier years are as follows: Total number of failures, 951; liabilities, $\$ 14,017,000$.) Practically all of the additions were small concerns with liabilities under $\$ 25,000$, and a majority of these had debts of less than $\$ 5,000$.

The classification of the failure records by industries was revised, beginning January 1940, to conform to the "Standard Indus trial Classification Manual," in order to facilitate direct comparison between failures and any other series of data based on the same official code. This revision resulted in the shifting of bakeries with retail outlets from manufacturing to retail trade. The monthly average number of bakery failures transferred from the manufacturing to the retail group for 1940 was 14 and monthly average amount of liabilities, $\$ 65,500$. Similar revisions have not been made in the 1939 figures for manufacturing and retail trade which are shown in italics.

Monthly data for 1939-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions for 1945 are as follows: Number of failures for December-grand total, 41; commercial service, 4; amount of liabilities for December and monthly average, respectively -grand total, $\$ 1,654,000, \$ 2,519,000$; commercial service $\$ 202,000$, $\$ 423,000$. Revisions for 1946 are as follows: Number of failures for November-grand total, 103; commercial service, 12 ; amount of liabilities for November and monthly average, respectively -grand total, $\$ 9,511,000, \$ 5,612,000$; commercial service, \$202,000, \$531,000.

Comparable data prior to 1939 for the industry groups are not available because of revisions in the series in 1939 and 1940 referred to above. Monthly figures for 1936-39 on the old basis are available in the 1940 SUPPLEMENT and earlier monthly figures on the same basis appear on pp. 17 and 18 of the December 1938 SURVEY.
${ }^{4}$ Data for 1929-32 are not comparable with figures for later years; see 3d paragraph of note 3 above for explanation of revision beginning 1933.
${ }^{5}$ Data for 1933-38 are not comparable with figures for later years; see 5th paragraph of note 3 above for an explanation of revision beginning 1939.
${ }^{6}$ Not entirely comparable with data for later years; see 6th paragraph of note 3 above.
${ }^{7}$ The figures for discontinued businesses and business transfers are quarterly averages through 1952. The 1956 data for operating and discontinued firms are preliminary.
${ }^{8}$ Average for 6 months (July-December).

PAGE 25
${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Mar keting Service. Indexes are based on prices (about the 15 th of month) received by farmers for their products sold at local markets or at the point to which farmers deliver their products in their own conveyances or in local conveyances they hire for the purpose.

The reported prices received by farmers are tabulated and averaged by crop-reporting districts. These district averages are weighted by district sales or production estimates to obtain weighted State averages. The State averages are weighted by State marketing or production estimates to arrive at national averages.

In computing the subgroup indexes, the weights applied to the U. S. average prices to obtain aggregates for individual commodities for 1910 through 1934 were average quantities sold by farmers for the 6-year period, 1924-29; beginning with 1935, weights are 5-year averages of sales by farmers during 1937-41. For livestock and livestock products, calendar-year sales were used in computing the averages; for crops, the corresponding cropyear sales were used.

For combining the various subgroup indexes into an all-crop, an all-livestock and livestock products, and an all-farm-products index, weights are percentages based on average cash receipts of farmers (with adjustments to reflect imputed weights for items not included in the index) for the two periods, 1924-29 and 193741.

There are 52 commodities now represented in the index. These items accounted for about 92 percent of the total cash receipts from farm marketings in 1937-41. Data for some commodities are not available all the way back to 1910 (the earliest year for which the index was computed). Thus strawberries were added to the index in January 1919, eleven commercial vegetable crops in January 1924, soybeans, grain sorghums, turkeys, cantaloups, cucumbers, and watermelons in January 1935, broccoli in January 1939, and sweet corn in January 1949. Grapes were dropped from the index as of January 1935 and green peas as of January 1949. (Indexes for October 1943-June 1946 reflect wartime-subsidy payments made on butterfat, milk, beef cattle, and lambs during that period.)

A major revision of the indexes was made in January 1950; there were further revisions in January 1954; and in May 1955, 1956, and 1957 the indexes were revised for the preceding 3 cal endar years to incorporate the latest revisions in the price series for the individual commodities. In January 1954, in addition to incorporating price revisions in individual price series, the index was revised to reflect in the basic weight data for 1937-41 the latest sales and income estimates. The net effect of these revisions was to raise the 1944-53 average of the "all farm products" index by 1 point, or 0.4 percent.

The most important revision made in January 1954 was in the commercial vegetable index beginning 1935 , which for the period 1944-53 was raised 32 points or 15 percent. This change consists of the inclusion of broccoli, cantaloups, sweet corn, cucumbers, and watermelons; also, in the fall of 1952 of revising the estimates relating to commercial vegetables for fresh market so as to include all commercial fresh market production rather than only commercial truck crop production in well-recognized commercial areas, mainly producing for shipment to distant markets.

The second most important revision was in the fruit index, which lowered the 1944-53 average for that index 11 points. There was a change in prices used for citrus fruits, peaches, and pears; strawberry prices were revised and grapes were dropped from the index.

The revisions raised the feed grains and hay index several points beginning 1939; the potato price series was revised beginning 1909; and the poultry and egg index was revised upward a few points in most months from 1934 through 1951. The index for to-
bacco was unchanged and there were only minor revisions in the other series.

The items represented in each group and the percentage weights of the groups based on average cash receipts in 1924-29 and 1937-41, respectively, are as follows: Food grains (wheat, rye, rice), 8.9 and 7.0 ; feed grains and hay (corn, oats, barley, grain sorghums, hay), 7.5 and 6.7 ; cotton, 13.9 and 8.3 ; tobacco, 2.6 and 3.7; oil-bearing crops (cottonseed, soybeans, peanuts, flaxseed), 2.3 and 3.1; fruit (apples, oranges, lemons, grapefruit, pears, peaches, strawberries), 6.0 and 5.8 ; commercial vegetables for fresh market-formerly truck crops-(snap beans, cabbage, carrots, cauliflower, celery, onions, lettuce, green peppers spinach, broccoli, cantaloups, sweet corn, cucumbers, watermelons, tomatoes), 3.5 and 4.8; other vegetables (potatoes, sweetpotatoes, dry edible beans), 3.3 and 2.8 ; meat animals (cattle, calves, sheep, lambs, hogs), 26.1 and 28.6 ; dairy products (milk, wholesale and retail, butterfat), 15.1 and 17.7 ; poultry (chickens, turkeys, and eggs), 9.9 and 10.2; wool, . 9 and 1.3 .

The indexes shown here are not adjusted for seasonal variation. The original reports include also adjusted indexes for five sub-groups-fruit; commercial vegetables; potatoes, sweetpotatoes, and dry edible beans; dairy products; and poultry and eggs.

Monthly data for the period January 1910-December $1952 \mathrm{ap}-$ pear in Supplement No. 1, "Agricultural Prices, May 1956" (available from the U. S. Department of Agriculture). A brief description of the revisions of the indexes made in January 1954 is included in "Supplement No. 2, Agricultural Prices, January 1954" (available from the U. S. Department of Agriculture). A complete description of the major revisions of the indexes in January 1950 appears in the April 1950 issue of "Agricultural Economics Research," published by the U. S. Department of Agriculture.
${ }^{2}$ Includes sweetpotatoes and dry edible beans.

## PAGE 26

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. The index of prices paid by farmers is a meas ure of the changes that occur in the level of prices paid by farmers and their families for commodities and services used in living and farm production. In addition to commodities, the combined index (Parity lndex) includes data for interest per acre on farm indebtedness secured by farm real estate, taxes per acre on the farm real estate, and cash wage rates paid hired farm labor.

Prices paid by farmers are compiled primarily from data reported presently (1957) by about 28,000 independent retail merchants and chain stores. The data were collected quarterly from 1923 to 1936 for most groups of items, annually before 1923 , and monthly from 1937 to date. Most independent store surveys are made quarterly, some semiannually, and others seasonally. Feed prices and chain-store reports on nearly all family living items are collected each month of the year. Prices paid for individual commodities are estimated by individual States, and then weighted by estimates of purchases of the commodity by farmers in each State to obtain an average for the country as a whole.

The index of prices paid includes 192 family living items (commodities and services) and 201 commodities used in production.
For the period 1910-March 1935, indexes for the several commodity groups were constructed by weighting prices of individual commodities by the average quantities estimated to have been purchased per farm during 1924-29. Since March 1935, prices of individual commodities have been weighted by average quantities estimated to have been purchased per farm during 1937-41. The commodity-group indexes have been combined into an index representing commodities used in both living and production, together with interest, taxes, and wage rates paid hired farm labor, by weighting the several group indexes in proportion to the percentage of total expenditures represented by the commodities and services in the corresponding groups in the respective periods.

Percentage weights used in deriving the combined index are as follows (1924-29 and 1937-41 weight bases, respectively): Commodities in living, 41.2 and 44.0 ; commodities in production, 36.4 and 41.2; taxes, 5.7 and 3.8 ; interest, 6.5 and 3.0 ; cash wage rates, 10.2 and 8.0.

The Parity Ratio is obtained by dividing the Index of Prices Received by Farmers for All Farm Products by the Index of Prices Paid, including Interest, Taxes, and Wage Rates.

The Parity Ratio was revised to reflect the January 1954 revision in the Index of Prices Received by Farmers and also a change in the interest and tax indexes. Monthly data prior to 1952 for Indexes of Prices Paid (all commodities, interest, taxes, and wage rates) and for the Parity Ratio appear on p. 24 of the April 1954 issue of the SURVEY OF CURRENT BUSINESS. Monthly data for 1952 appear in the 1955 edition of BUSINESS STATISTICS (revisions of data in that volume for Parity Ratio for March and December 1952 are 101 and 96).

A description of the index of Prices Paid by Farmers (including interest, taxes, and wage rates) is contained in "Supplement No. 1, Agricultural Prices, October $1956^{\prime \prime}$ and the method of computing Parity prices is described in Supplement No. 1 to the January 1957 issue of "Agricultural Prices." A complete description of the major revision of the indexes in January 1950 appears in the April 1950 issue of "Agricultural Economics Research." All of these publications except the latter, which is out of print, are available from the U. S. Department of Agriculture.
${ }^{2}$ Source: U. S. Department of Commerce, Office of Business Economics. The series represents the movement of prices at retail stores and is designed for use in connection with the Department's estimates of sales of retail stores. The price index is based on data collected by the U. S. Department of Labor, Bureau of Labor Statistics, the U. S. Department of Agriculture, Agricultural Marketing Service, and other agencies. It differs from the consumer price index compiled by the Bureau of Labor Statistics by the omission of rents and other service prices and the inclusion of prices for building materials, farm machinery, and other nonconsumer goods sold through retail stores.

The combined index is built up from eleven component indexes, one for each major group of retail stores, by the use of constant weights-namely, the dollar sales in the period 1935-39 of the group of stores to which the index applies. Where component indexes are obtained by combining several series, weights are based on an analysis of sales by commodity groups from the 1939 Census of Retail Trade.

For some of the groups adequate price data are not available, and the choice of representative series was necessarily arbitrary. For example, in the case of eating and drinking places, for lack of more adequate figures, the Bureau of Labor Statistics retail food price index is used. Hence, considerable caution must be exercised in the use of the retail-store price index, even in normal times. Furthermore, the effect of the disappearance during World War II and the subsequent reappearance of certain lower-price lines and, in some cases, of complete lines of goods, as well as changes in the quality of products, cannot be measured. Some appraisal of these and other qualifying factors must be made before the price series can be used as deflators in determining changes in the physical volume of goods sold at retail tores.

Monthly data for 1939-40 are available on p. 31 of the February 1946 SURVEY OF CURRENT BUSINESS. Monthly data for 194152 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The Consumer Price Index measures the effect of price change in the living costs of city wage-earner and clerical-worker families. It is calculated by comparing, from one period to the next, the cost of a "market basket" of goods and services usually purchased by this particular population group.

The quantity and quality of items contained in the market basket are held constant over the measurement period. The Consumer Price Index reflects, therefore, only "changes in prices;" it tells nothing about changes in the kinds and amounts of goods and services families buy, or the total amount families spend for living, or the differences in living costs in different places. Data are compiled separately for the individual cities in which prices are collected and are combined by population weights to obtain the index for the United States.

The index is of the weighted aggregative type. When it was first issued in 1919 (with index data going back to 1913), the time-to-time changes in retail prices were weighted according to expenditures of wage earners and clerical workers in large cities during 1917-19. The index numbers as presently in effect utilize the 1917-19 expenditure weights for the 1913-25 period; 1934-36
expenditure weights for the 1930-49 period; and the average of the two sets of weights for the intervening period of 1926-29. Weights for 1950-52 represent 1949-50 spending patterns, and those used beginning January 1953 have been adjusted to 1952 spending patterns.

At three different times it has been necessary to modernize the samples and methods of calculation of the index and to bring up-to-date the "market basket" of goods and services included. Pending completion of the latest major revision (completed in January 1953), certain interim adjustments were made in 1951 and the indexes were recalculated back to January 1950 (except data for "all items" and "rent" which were revised back to January 1940 wherever necessary).

In the latest major revision a new "market basket" for the index was developed, many important improvements in pricing and calculation methods were introduced, and prices were obtained from a sample of 46 cities instead of 34 as formerly. All features of this revision were incorporated into the index beginning with data for January 1953. A continuous series going back to 1913 was obtained by linking (splicing) the new indexes beginning January 1953 to the adjusted series through December 1952. The revision beginning with data for January 1953 affected the adjusted series indexes previously published through December 1952 only to the extent that the base period was shifted from 1935 $39=100$ to $1947-49=100$ and a different classification of items was used.

The description in the following paragraphs applies primarily to the revised index for the period beginning January 1953. (For details relating to the indexes through December 1952, see references given in the final paragraph of this note。)

The goods and services covered by the index are those customarily identified as "consumption" items. For the index beginning January 1953, about 300 items were selected for regular periodic pricing. Detailed specifications are used for the 300 items so that, insofar as possible, prices are obtained for articles of the same quality in successive price periods. Revisions in the individual specifications are made from time to time, as former descriptions become obsolete.

The items covered are those which are relatively important in the spending pattern of moderate-income urban families, which are distinctive in price movement, and which are representative of price trends of groups of related items. Among the important additions to the pricing list effective with 1953 are used cars, home purchase and maintenance, and restaurant meals. Federal, State, and city taxes are added to the retail prices for the items on which they are imposed. Automobile taxes are added; property taxes are included in the cost of homeownership, and implicitly included in rental costs. Neither income taxes nor social-security taxes are included.
The food component includes both food at home and food away from home (restaurant meals and other food bought and eaten away from home). Prior to January 1953, prices for "food away from home" were estimated to move like prices for "food at home," but since that date have been measured by prices for restaurant meals.

The housing index measures changes in items of expense connected with the acquisition and operation of a home. (Detailed information on the housing component of the consumer price index is available in the February and April 1956 issues of the Monthly Labor Review: Reprint No. 2188.)

The private transportation index includes prices paid by urban consumers for new and used automobiles, gasoline, motor oil, tires, repairs, insurance, and registration fees. City bus, streetcar, and subway fares, as well as railroad coach fares, comprise the public transportation index. Parking fees, taxi fares, intercity bus fares, and airline fares are not priced. All of the items in the private and public transportation subindexes, except used car prices (which were introduced into the revised index in January 1953), have been priced for the index since 1935. Additional information may be found in the August 1956 Monthly Labor Review (Reprint No. 2202).

Foods, fuels (including gas and electricity), rents, and a few other items are priced monthly in all cities. Prices of most other goods and services are obtained on a regular rotating pricing cycle-monthly in the 5 Iargest cities, every 3 months in 25 Iarge and medium-sized cities, and every 4 months in the 16 smallest cities.

As previously stated, the quantity weights currently used represent the average purchases of urban wage-earner and clericalworker families in the year 1952. The basic information for this weight calculation was obtained from the 1950 Survey of Consumer Expenditures in 91 ci ies, and from surveys made for other cities in earlier postwar years. The survey data were adjusted to 1952 spending patterns by taking account of changes in prices and income between 1950 and 1952.

Samples for the surveys included over 8,000 wage-earner and clerical-worker families. The average family size was about 3.3 persons and the 1952 family income after taxes averaged about $\$ 4,160$. Many of the families have two or more wage or salary workers; thus average family incomes are higher than average individual earnings. On the other hand, single workers living alone, and families whose 1950 total family income after taxes exceeded $\$ 10,000$, were excluded. In 1952 the "index" families represented about 64 percent of all people living in urban places and about 40 percent of the total U. S. population.

Price changes for all items in each city are combined in accordance with their importance in the "market basket" for that city. Price changes for the 46 cities are combined for the United States with the use of 1950 population data. Each city is given an importance or weight proportionate to the wage-earner and cleri-cal-worker population it represents in the index. The 12 largest cities, each weighted by its own population, when combined have about two-fifths of the total weight in the national index. Each of the 3 other city-size groups has about one-fifth of the total weight; i.e., the 9 other large cities, the 9 medium-sized cities, and the 16 small cities.

In December 1956, the relative importance of the major groups of goods and services priced for the Consumer Price Index was as follows: Food, 28.7 percent; housing, 33.1; apparel, 9.2; transportation, 11.2; medical care, 5.4; personal care, 2.2 ; reading and recreation, 5.1 ; and other goods and services, 5.1 percent.

For a description of the interim adjustment of the index for the 1950-52 period, see the 1953 issue of BUSINESS STATISTICS. Monthly data for 1949-52 (except for the private and public segments of the transportation index) appear in the 1955 and 1953 issues of BUSINESS STATISTICS.

Monthly releases of the U. S. Department of Labor contain (in addition to the national average) indexes for the major groups for the following 20 cities: Atlanta, Baltimore, Boston, Chicago, Cincinnati, Cleveland, Detroit, Houston, Kansas City, Los Angeles, Minneapolis, New York, Philadelphia, Pittsburgh, Portland, Ore., St. Louis, San Francisco, Scranton, and Washington, D. C. Releases on "Retail Food Prices by Cities" cover food prices in the same 20 cities.

Additional information on the uses and limitations of the index may be found in the following publications of the U.S. Department of Labor:
"The Consumer Price Index, A Short Description of the Index as Revised, 1953"-a multilith statement issued by BLS in January 1953.

${ }^{1}$ See note 3 for p. 26.
${ }^{2}$ Includes tobacco, alcoholic beverages, and miscellaneous services (such as legal services, banking fees, burial services, etc.).
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The index is designed to show the general rate and direction of the composite of price movements in primary markets and the specific rates and directions of price movements for individual commodities or groups of commodities. It is designed to measure "real" price changes between two periods of time, i.e., to measure price changes not influenced by changes in quality, quantity, terms of sale, etc. The term "wholesale" refers to sales in large lots, not to prices paid by or received by wholesalers, jobbers, or distributors. The prices used in constructing the index represent the first important commercial transaction for each commodity. Most of the quotations are the selling prices of representative manufacturers, or prices quoted on organized exchanges or markets.

A general revision of the wholesale price index was completed in early 1952. The principal changes from the old series are as follows: (1) increase in the commodity coverage from about 900 to about 2,000 items; (2) change in the basis for weights from average sales for 1929-31 to 1947 sales (through 1946, the index weights were based on average sales in the years 1929, 1930, and 1931 for farm products, and on average sales in 1929 and 1931 for all other commodities); (3) change in the base period from 1926 to 1947-49; and (4) a modification of the classification system.
The revised series was worked back to January 1947 and was linked to the old series as of that date to provide a continuous index. The "linked" series does not supersede the former index as the "official" Federal Government series for the period prior to 1952. The only official series are the former series (1926= 100) through the end of 1951 and the revised series from 1952 forward.

The prices used in the index through 1951 are the simple arithmetic averages of the 4 or 5 weekly prices for each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those which prevail on a particular day of the month - in most cases, Tuesday of the week containing the 15th. Usually the prices selected are f.o.b. production or central marketing points. Delivered prices are included only when it is the customary practice of the industry to quote prices on this basis.

The individual price series are combined into the index by multiplying the value weight assigned each item by its current price relative, and summing to obtain the current aggregate. The current index is obtained by dividing this aggregate by the aggregate for the base period. The weights used in the index from 1947 through 1954 are based on the total value of primary market transactions for commodities in 1947, a year for which a complete Census of Manufactures was taken. Beginning with 1955, weights are based on an average of the dollar value of primary market transactions in 1952 and 1953. The weights for the 194754 period are based on 1947 data, shifted to a 1947-49 base (i.e., weights adjusted by change in item prices from 1947 to 1947-49 average). Within product classes, the total 1947 adjusted weight has been allocated among items to reflect more recent or "normal" conditions. Each commodity price series in the index has its own direct weight (i.e., the value of the sales of that commodity on primary markets in 1947) plus an imputed weight for other commodities not priced for the index, but for which it is known, or assumed, that prices move like the commodity priced.

The economic sector index describes changes in commodity prices at various levels of production and in various sectors of the economy. It permits more effective analysis of the underlying and divergent movements of commodity prices during periods of economic readjustment. The economic sector classification comprises all commodities included in the BLS detailed wholesale price index series; this classification supplements, but does not replace, the regular classification of the wholesale price index by product industry groupings. The price series used in the economic sector index are the same as those used for the wholesale price index. Whereas the wholesale price index meas-
ures price movements for individual commodities and groups of commodities, the economic sector index combines wholesale prices in accordance with selected economic criteria to facilitate analysis of price behavior and the interpretation of widely used indicators of the Nation's output, income, and spending.
The assignment of commodities to the various sectors is based primarily on the amount of processing, manufacturing, or assembly to which the commodities are subjected at various stages before they reach the ultimate consumer. Commodities in the index are divided among three major categories: (1) raw or crude materials for further processing (approximately the same as the formerly published "raw materials" series); (2) intermediate materials, components, and supplies (roughly comparable to the former grouping of "semi-manufactured articles"); and (3) finished goods (generally comparable to the former series, "manufactured products," the principal difference arising from the inclusion in finished goods of many commodities not formerly priced).
Crude materials for further processing (such as raw cotton) include materials which are entering the economy for the first time, having undergone no processing other than that required to obtain them in their original form and prepare them for marketing. Intermediate materials, supplies, and components are those commodities which flow between manufacturing industries before finally reaching the ultimate consumer after further changes in form; included here are the subgroups, (1) supplies, which are those commodities consumed in the normal course of production or distribution of other goods but not physically incorporated in those other goods, and (2) components, which include products that are completely finished except for installation or assembly and not usually delivered to the final consumer without such installation or assembly. Finished goods are commodities in their final state ready for use by the consumer; this general category includes producer goods (frequently called capital equipment), i.e., those commodities used in industry or commerce to produce or transport other commodities.

The basic weights used for the economic sector indexes are the same as those used generally in the wholesale price index. In the classification by economic sectors many commodities must be considered as falling into more than one category; this has been taken into account in the relative importance imputed to each commodity in each sector index. Wherever required, the base weight for the commodity as used in the wholesale price index was distributed among the economic sectors on the basis of the percentage distribution by end use derived from BLS interindustry studies for the year 1947. In December 1954, the relative importance of the major groups for the economic sector index was as follows: Crude materials for further processing, 12.48; intermediate materials, supplies, and components, 42.71 ; and finished goods, 44.81. (The aforementioned ratios were the latest available as of June 1957.)
For a more detailed description of the economic sector indexes, and monthly data for 1947-52, see BLS "Wholesale Price Index Series-Economic sector indexes, January 1947 -July 1955," issued October 1955, available upon request from the U. S. Department of Labor. Additional information may be found in the U. S. Department of Labor Monthly Labor Review, December 1955.

The Department of Labor also issues a weekIy index based on actual prices for a small sample (about 200) of the commodities included in the monthly index, and on an estimate of the prices for all other commodities. The current weekly indexes for all commodities, farm products, processed foods and "all other" are published regularly in the Weekly Supplement to the SURVEY OF CURRENT BUSINESS. The weekly index is computed as an estimated percentage change from the latest published monthly index and represents the best estimate of what the monthly index would be if it were computed each week. The weekly index, however, is not the official index and is not maintained as a continuous historical series. As soon as a monthly index is published, all weekly indexes falling in that month are superseded.

For a more detailed description of the revised wholesale price index and methods of calculation, see the February 1952 Monthly Labor Review (reprint Serial No. R2067) and BLS Bulletin No. 1168, Techniques of Preparing Major BLS Statistical Series (chapter 10 of that Bulletin has been reprinted). Both of these reprints are available upon request from the U.S. Department of Labor.

Monthly data for 1949-52 are published in the 1955 and the 1953 editions of BUSINESS STATISTICS (August 1951 index for fruits and vegetables, canned and frozen, should read 103.4); those for 1926-46 for "all commodities" and "all commodities other than farm products and foods," on p. 24 of the June 1952 SURVEY OF CURRENT BUSINESS. Monthly data for 1947-48 for all groups (except "miscellaneous") and subgroups (except "prepared paint") included in the present volume appear on pp. 22-24 of the March 1952 SURVEY (1948 indexes for concrete products should read 99.7 for June and 100.5 for July).

${ }^{2}$ The data from January 1947 through January 1953 for total tobacco manufactures, etc., and from January 1947 through December 1952 for cigarettes differ from the official series because of a change in the method of eliminating excise taxes and discounts.
${ }^{3}$ Includes data for items not shown separately.
${ }^{4}$ Includes small arms and ammunition.
${ }^{5}$ Source: U. S. Department of Commerce, Office of Business Economics; computed from indexes compiled by the U. S. Depart ment of Labor, Bureau of Labor Statistics. The series are obtained by computing the reciprocals of the Department of Labor wholesale price index and consumer price index (formerly called "cost of living index"). These reciprocals are expressed as percentages with the average of the base period 1947-49 inclusive equal to 100 . The original indexes from which these series are computed are shown on pp. 26 and 27.

Since the purchasing-power indexes are based on the reciprocals of the corresponding price indexes, percentage changes in the former are not numerically equivalent to percentage changes in the latter. For example, if prices rise one-third during a period, at the end of it they are $4 / 3$ of prices at the beginning; since the reciprocal of $4 / 3$ is $3 / 4$, it is obvious that a one-third price rise results in a one-fourth decline in purchasing power; or if prices at the end of a period are $2 / 3$ those at the beginning, then purchasing power at the end of the period is $3 / 2$ that at the beginning. Hence if it is desired to adjust a given dollar value for changes in purchasing power between two dates, the simplest adjustment factor is identical with the percentage change in the corresponding price index over the period; the same adjustment is obtained by expressing the change in the purchasing-power index over the period as a percentage of the purchasing power at the end of the period.

Monthly data for 1949-52 appear in the 1955 and 1953 issues of BUSINESS ST ATISTICS. Monthly data for 1926-48 for purchasingpower indexes based on wholesale prices and for 1913-48 for those based on consumer prices are available upon request.

## PAGE 33

${ }^{1}$ Source: U. S. Department of Commerce, Business and Defense Services Administration (Building Materials and Construction Division) and its predecessor organizations, and the U.S. Department of Labor. Statistics on private nonresidential, farm, and public utilities construction are compiled by the Business and Defense Services Administration (Building Materials and Con-
struction Division) and its predecessor organizations in the Department of Commerce. Residential and Federally owned construction statistics are compiled by the Department of Labor. State and local construction statistics are jointly compiled by the two Departments.

Estimates represent the monetary value of construction work performed within the continental United States during the stated period of time. This monetary value is equivalent to the cost of the materials put in place or otherwise consumed, the wages of workers who placed the materials, and appropriate charges to the work for overhead and profit. In these estimates, "new construction" includes the production of all fixed works and structures, whether by contract or force account. Major additions and alterations are included for all types of building, but maintenance and minor repair work are excluded. Figures include the installed value of equipment generally considered an integral part of a structure and commonly included in the contract price, such as plumbing and heating equipment and elevators; they exclude separable equipment, such as production machinery, power-generating equipment, and furnishings.

The estimating procedure for each type of construction follows one or more of three general patterns: (1) All types of private construction, except farm and public utility, and all types of State and local public construction, except those which are federally aided, are estimated from contract awards or building permits; (2) construction by privately owned public utilities is estimated basically from financial data; and (3) most types of Federal construction are estimated from progress reports on individual projects.
"Private nonfarm residential construction" estimates are based on the number and value of new dwelling units for which building permits are issued each month, covering at the present time approximately 7,000 places. Adjustments for undercoverage, abandonments, undervaluation, and delays in starting construction are made. Approximately 15 percent of all dwelling units started in recent years have been located in rural nonfarm areas of the country where building permits are not required. Estimates for this segment are derived from field surveys in a sample of non-permit-issuing locations.
"Private nonresidential construction" estimates are based principally on the contract awards in 37 States east of the Rocky Mountains, as compiled by F. W. Dodge Corporation. Several adjustments are made for cancellations, undercoverage in the 37 States, expansion to cover all States, and duplication of data on public utilities. Relevant timing patterns are applied to convert the data to a work-in-place basis. The following classes are included: (1) Industrial, which covers manufacturing buildings, as sembly plants, and factory warehouses, also refrigeration, ice, and cold-storage plants of such warehouses, industrial grain elevators and storage silos, dry-cleaning plants, laundries, and miscellaneous light manufacturing buildings; (2) commercial, which includes commercial warehouses and storage buildings (except cold storage, grain elevators, and storage silos), office and loft buildings (including banks, building and loan associations, etc.), stores, restaurants, and garages; and (3) other types, covering religious, educational, hospital and institutional, social and recreational, and miscellaneous construction.
"Farm construction" annual estimates are prepared by the Agricultural Marketing Service, U. S. Department of Agriculture. Current monthly estimates are prepared by the Department of Commerce by projecting annual estimates for the preceding year on the basis of the trend of farm income and applying a seasonal pattern to the annual totals. This item includes both residential and nonresidential farm construction.

Data for "public utilities" are estimates of value of new construction by privately owned railroads, local transit, petroleum pipelines, electric light and power, gas, and telephone and telegraph companies. The expenditures of municipally owned utilities are included in "other types" of public construction.

Included in total private construction, but not shown separately, are data for dams and reservoirs, filtration plants, mains and buildings, private roads and bridges, and miscellaneous nonstructural items such as private parks and playgrounds.
"Public nonresidential building" estimates are derived from contract-awards data of the F. W. Dodge Corporation, other construction contract news sources, and from reports of Federal agencies.
"Military facilities" estimates are based on reports of the Department of Defense.
'Highway construction" estimates are derived from reports of the Bureau of Public Roads.
"Other types of public construction' includes expenditures for residential construction, conservation and development, sewer systems, sewage disposal plants, incinerators, drainage ditches (other than in connection with highway or conservation work), water supply systems, filtration and treatment plants, reservoirs for municipal water supply, water towers, aqueducts, and other transmission and distribution facilities, publicly owned electric light and power plants, gas facilities, central heating plants, local transit systems, waterfront development, and all construction work at airports (except administration, terminal, hangar, and other buildings), public parks and playgrounds, ball parks, tennis courts, football fields, street and other lighting, landscaping and roads and paths in parks, retaining walls, memorials, and other public work not elsewhere classified.

The seasonally adjusted activity estimates (compiled by the Business and Defense Services Administration) are derived for the earlier years from the application of seasonal indexes computed by use of the ratio-to-moving-average method. In order to arrive at a typical ratio for each month, the highest and lowest ratio values obtained for each of the 12 calendar months were excluded in averaging the ratios of the actual monthly figures to the 12 -month moving average.

For all series, except farm and public utilities, the seasonal indexes since 1947 are derived by the use of the "univac" method in which the application of the basic ratio to moving average is modified by refined smoothing adjustments and in which extreme ratio values are handled by objective statistical control techniques.

For individual types of construction, seasonally adjusted values have been derived by dividing the unadjusted estimates by corresponding seasonal indexes. Seasonally adjusted series for total new construction, total private construction, and total public construction have been obtained by adding the seasonally adjusted figures for the various components.

For additional information, see Construction Volume and Costs, 1915-1956, a "Statistical Supplement" to Construction Review, published jointly by the U. S. Department of Commerce and U. S. Department of Labor. That source also contains monthly data from 1939 through 1956 and annual estimates beginning with 1915.

## PAGE 34

${ }^{1}$ See note 1 for p. 33.
${ }^{2}$ Source: F. W. Dodge Corporation; based on field reports of individual project contracts in the 37 States east of the Rocky Mountains. Reports include all areas other than farm, although coverage is generally less complete on low-cost projects in rural nonfarm areas than in urban areas. (The reader is reminded that, effective with the January 1957 report, the Dodge Corporation introduced a new series covering nationwide construction contracts and including changes in techniques; the present note, however, applies to the old series. Figures for the new series appear in the SURVEY OF CURRENT BUSINESS beginning with the April 1957 issue.)

Data include new construction, additions, and major alteration projects. No maintenance work is included. A negligible volume of farm building construction is included. In general, forceaccount work is included only when executed with materials earmarked for specific projects at the time of purchase. The per centage of all contract construction represented by the $F$. W. Dodge Corporation data is not known. An approximate indication of the coverage of the Dodge data may be obtained by comparing them with the total value of all new construction (both contract and force account) in the 48 States, as compiled by the U. S. Departments of Commerce and Labor. The two series are not strictly comparable, however, in part because the former measures the value of contract awards and the latter the value of construction put in place. For the entire period 1929-56 the Dodge 37 States data probably represent about one-half of the estimated 48 States total, fluctuating in individual years from about twofifths as a minimum to somewhat over three-fifths as a maximum.

The comparability of the figures for number of residential building projects and total projects is seriously affected between

1936 and 1937 by a change in the method of counting residential projects. Beginning with 1937, data for residential projects represent the number of individual buildings, each house or apartment building in a housing development or project being counted separately. The earlier data represent the actual number of projects whether a project covered a single building or a group of buildings. Monthly averages for 1937 comparable with the earlier data shown in italics are as follows: Total number of projects, 12,039 ; number of residential projects, 7,614 .

Some minor changes were made in project classification beginning in 1937. Floor area and valuation figures for the affected series (total and miscellaneous, nonresidential building, educational and science, social and recreational buildings, public works, and utilities) have been revised for earlier years. Data on number of projects have not been revised but the differences are not sufficient to affect seriously the comparability of the series involved.

The classifications of public works and utilities include certain types of projects which cannot be measured in terms of floor area, such as highways, pipelines, subways, etc. It should also be noted that, for security reasons, Atomic Energy Commission projects are entered only in the valuation figures.

Monthly data for 1936-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note above-mentioned changes affecting comparability and revisions following). Revisions: June 1948-total public construction, $\$ 338,226,000$; total private construction, $\$ 596,972,000 ; \mathrm{De}-$ cember 1944-total construction, total projects, 7,141; and residential buildings, projects, 3,093 .
${ }^{3}$ Excludes number of projects in the category "miscellaneous nonresidential buildings."
${ }^{4}$ Not comparable with earlier data. See 3d paragraph of note 2 for this page.

## PAGE 38

${ }^{1}$ Source: Board of Governors of the Federal Reserve System, Division of Research and Statistics. The index of the value of construction contracts awarded is derived from monthly figures reported by the F. W. Dodge Corporation for the 37 States east of the Rocky Mountains and the District of Columbia. (The reader is reminded that, effective with the January 1957 report, the Dodge Corporation introduced a new series coverìng nationwide construction contracts and including changes in techniques; the pres ent note, however, applies to the old series.)

Two separate indexes are compiled-"'residential" and "all other" types of construction. These are combined to obtain an in dex of total construction contracts awarded. The indexes are based on a 3 -month moving average of actual monthly total awards, centered at the middle month. Seasonal adjustments are computed separately for the two individual indexes by the "ratio to moving average" method. The adjusted value aggregates are then combined to obtain the seasonally adjusted total of contracts awarded.

For further information relative to the basic data upon which these indexes are computed, see note 2 for p. 33.

Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATlSTlCS as indicated at top of p. 197 of this volume. Monthly data for 1929-48 are available upon request.

1957 STATISTICAL SUPPLEMENT TO THE SURVEY OF CURRENT BUSINESS
${ }^{2}$ Source: Engineering News-Record from reports published in Construction Daily. Data cover heavy engineering construction contracts awarded for public (Federal, State, and municipal) and private projects. The published figures, however, do not represent the value of all contracts let, but those above a certain amount. According to the compilers, they probably account for 60 percent of the total new construction market other than small residential. Larger housing projects (both public and private), apartments, and hotels are included. Maintenance and operation expenditures are not included. There have been several changes in the minimum-cost limit of projects inçluded, as construction costs have declined or increased. The minimum cost of construc tion projects included for the years 1929 forward, is as follows: For waterworks, excavation, drainage and irrigation-1929 through June 1932, $\$ 15,000$; July 1932 through $1935, \$ 10,500 ; 1936, \$ 14,-$ 000; January 1937 to April 1946, \$15,000; May 1946 to November $1947, \$ 22,500$; December 1947 to November 1950, $\$ 28,000$; December 1950 to December 1954, \$34,000; beginning January 1955, $\$ 44,000$; other public works (not specified above) - 1929 through June 1932, $\$ 25,000$; July 1932 through $1935, \$ 17,750 ; 1936, \$ 23,-$ 000; January 1937 to April 1946, \$25,000; May 1946 to November 1947, \$40,000; December 1947 to November 1950, \$50,000; December 1950 to December 1954, \$60,000; beginning January 1955, $\$ 73,000$; industrial buildings -1929 through June 1932, $\$ 40,000$; July 1932 through 1935, $\$ 28,500$; 1936, $\$ 37,000$; January 1937 to April 1946, $\$ 40,000$; May 1946 to November 1947, \$55,000; December 1947 to November 1950, \$68,000; December 1950 to December 1954, $\$ 82,000$; beginning January 1955, $\$ 93,000$; other buildings -1929 through June 1932, $\$ 150,000$; July 1932 through 1935, $\$ 105,000 ; 1936$, $\$ 140,000$; January 1937 to April 1946, \$150,000; May 1946 to November 1947, \$205,000; December 1947 to November 1950, \$250,000; December 1950 to December 1954, $\$ 300,000$; beginning January 1955, $\$ 344,000$. The reports of the Engineering News-Record show, in addition to total awards, a breakdown by classes of construction and each class by States and geographic divisions. Weekly data are also available.

The data shown here as monthly totals are combinations of 4and 5 -week periods. The reporting week ends on Tuesday, but in computing the 4 - and 5 -week totals, the compilers have combined the weekly figures on the basis of the weeks ended on Thursday within the month. This procedure results in some slight distortion in the figures for certain months.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions for 1931 -July, $\$ 223,248,000$; November, $\$ 138,758,000$; December, $\$ 125,131,000$.)
${ }^{3}$ Source: Portland Cement Association (Chicago). Data represent the yardage of concrete pavement awards for roads, streets and alleys, and airports in continental United States. The monthly data shown in this volume and also in earlier STATISTICAL SUPPLEMENTS cover 4- and 5-week periods, except that December figures include awards through December 31 and January figures begin January 1. Beginning 1947, the monthly figures include weeks ended on Friday nearest the end of the month (exceptions were made in the case of weeks ended Thursday, September 1, 1949, Saturday, July 28, 1951, and Monday, November 30, 1953); 1939-46 monthly figures include weeks ended on Saturdays within the month unless a week ended on the 1 st or 2 d of the month when it was included in figures for the preceding month (exceptions were made in the case of weeks ended April 3, 1943, and February 3 and March 3, 1945, which were included in the preceding month and August 1946 which ended on Friday). In general, the same method of combining the weekly data was followed in years prior to 1939 except that weeks ended on the 3d were usually, but not always, included in the preceding month.

Month-to-month reports are, in general, received only from the States in which the Association has district offices, except that from the latter part of 1940 through 1949 and in 1954, 1955, and 1956 monthly reports were generally received for Northern California (in which the Association has no office) through another agency. During the period for which monthly data are shown here the States (or parts of States) in which the Association has no offices (other than Northern California) and for which data are included irregularly are as follows: Southern Idaho, Montana prior to November 1952, part of Nevada, New Mexico prior to 1950 ,

Oregon, South Dakota, Utah prior to 1949, New Jersey prior to February 1943, and Colorado and Wyoming prior to May 1946. Data for these States are obtained once or twice a year and are not allocable by months. While the data are included somewhat irregularly, they are for the most part included in the December figures; this accounts for the relatively high awards in that month.

In some instances the initial yardage of an award is increased or decreased or an award is rescinded some time after the award of the original contract. Such changes reported to the Association throughout the year are accounted for by increasing or decreasing the figures for the month in which the reports are received. Additional adjustments for changes in yardage not reported currently and other corrections which are not allocated by months may be made in the annual figures when the district offices adjust their final totals to yardage actually awarded. The monthly averages shown here are based on these final annual totals which differ in some cases from the sum of the monthly figures. Since 1941, adjustments included in the annual totals have been relatively small. For 1941 approximately 901,000 yards was added to total awards and 731,000 of this amount to roads.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The 1939 monthly data for airports are too incomplete to be of value and are shown merely to indicate the amounts included in the totals. Monthly data back to 1929 for roads and the total and beginning 1934 for streets and alleys are shown in the 1940, 1938, 1936, and 1932 SUPPLEMENTS (there have been some slight revisions in the figures published in the latter volume).
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning January 1954, data are based on revised techniques for estimating the number of new permanent nonfarm dwelling units started each month; the revised techniques take into account the sweeping changes in population distribution since 1940, as well as changing building rates in various sections of the country. This expanded coverage includes localities containing about 80 percent of the nonfarm population, 93 percent of the metropolitan nonfarm population, and 95 percent of the total urban population based on 1950 Census figures. It is estimated that about 85 percent of nonfarm housing is built in these permit-issuing places.

The seasonally adjusted annual rate of private starts is derived by applying to the monthly estimates of actual private starts a moving seasonal index (i.e., the index changes from year to year) and then multiplying by 12 . The moving seasonal index utilizes basically the "ratio to moving average" method, but avoids any abrupt changes in adjustment factors. Previously, the seasonal indexes were computed by the "ratio to 12 month moving average" method from data for selected base periods, and thus were changed only periodically.

The dwelling unit, the unit of measurement of the volume of housing construction, is defined as a permanent dwelling place containing permanent cooking facilities, i.e., the minimum builtin facilities essential to housekeeping. The dwelling-unit count represents the number of families planned for in the construction of new permanent-type housekeeping dwellings and reflects the extent of new housing activity.

The series, therefore, excludes temporary units and units without housekeeping facilities and such dwellings as trailers, houseboats, sheds, and shacks. Excluded also are the temporary dwellings built during the period of defense and World War II, and the temporary structures erected at large Federal industrial facilities and on military posts. Accommodations in transient hotels, dormitories, and clubhouses are not counted in the dwelling-unit figures since they are usually nonhousekeeping quarters; however, apartment hotels are included when most of the space in the structure is devoted to housekeeping units. Restriction of coverage to new units automatically excludes units provided by the remodeling of existing residential structures or the conversion of nonresidential buildings into housing.

Monthly data for 1945-52 for the total new dwelling units started and 1951-52 for the privately owned (unadjusted) and publicly owned, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1946-52 for seasonally adjusted starts at annual rate (privately owned) appear on p. 20 of the March 1957 issue of the

SURVEY OF CURRENT BUSINESS. Monthly figures for 1939-50 for total privately owned (unadjusted) and for 1950 for publicly owned (unadjusted) are available upon request.
${ }^{5}$ Prior to 1933, data for airports were included with streets and alleys.
${ }^{6}$ Based on annual total; no monthly data available.
${ }^{7}$ Not presently available.
${ }^{8}$ Less than 50 units.
${ }^{9}$ December data include some contracts awarded in prior months but not reported; see 2 d paragraph of note 3 for this page.

## PAGE 39

${ }^{1}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data beginning 1954 reflect expansion of coverage to include nonfarm residential construction authorized in all localities (both urban and rural) that require building permits. The total of about 7,000 permit-issuing places, represented from 1954 forward, includes approximately 95 percent of all the nonfarm population in the 168 standard metropolitan areas defined in the 1950 Census, and 80 percent of the total nonfarm population based on the 1950 Census.

Data prior to 1954 (shown in italics and not comparable with later figures) cover new dwelling units authorized in all places defined as urban in the 1940 Census (i.e., all incorporated places with a 1940 population of 2,500 or more, plus a small number of unincorporated civil divisions classified as urban by special rule). Figures for January-June 1954 comparable with the italicized figures through 1953 are as follows (thousands of dwelling units): Total authorized-35.0; 39.0; 55.6;58.0; 53.5; 63.1; total privately financed $-33.2 ; 37.8 ; 53.7 ; 56.9 ; 52.7 ; 59.5$; units in 1family structures $-23.3 ; 29.8 ; 43.4 ; 47.1 ; 44.3 ; 49.9$; units in 2 family structures $-1.5 ; 1.9 ; 2.5 ; 2.6 ; 2.3 ; 2.4$; units in multifamily structures $-8.4 ; 6.1 ; 7.7 ; 7.8 ; 6.1 ; 7.2$; total publicly financed$1.8 ; 1.1 ; 2.0 ; 1.1 ; .8 ; 3.6$.

Estimates for pirvately financed dwelling units are based on building permits issued; for publicly financed dwelling units, the estimates are based on notifications of contract awards and reports provided by Federal and local public agencies. Separate data for privately financed and publicly financed dwellings and the breakdown by type of privately financed structure are not available prior to 1939 and 1940, respectively.

Building-permit information was first collected by the Bureau in 1921 and covered about 250 large cities. This number was gradually increased as smaller cities and villages were included. By 1940, about 2,500 places (accounting for over 85 percent of the urban population) were reporting, and by 1952, when the current revision began, almost 6,000 .

No adjustment has been made to allow for canceled permits or for the elapsed time between the issuance of the building permit or contract and the start of construction, both of which factors were of importance in 1945 and in certain later years because of material shortages, limiting orders, and other construction difficulties. The data from 1945 should, therefore, be considered as number of new dwelling units for which permits were issued or contracts were awarded. Prior to 1945 they are considered to represent the estimated number of new family dwelling units upon which construction work was started.

Family units gained by alterations and conversions, trailer units, and dormitory accommodations are not included. (For definition of "dwelling unit," see 2d paragraph of note 4 for the preceding page; and exception to this general definition, however, is that temporary public housing is included in the urban estimates for 1941-53, as well as in the estimates beginning 1954 for all permit-issuing places.)

From the middle of 1942 through 1946 most of the public housing was temporary. The monthly average number of temporary and demountable units included in the figures for publicly financed and total dwelling units, beginning 1941, is as follows: 1941, 443; 1942, 4,455; 1943, 7,085; 1944, 1,556; 1945, 841; 1946, 7,525; 1947, 138. After 1947, the volume of temporary housing was negligible, totaling only 440 units for the seven years 1948-54 (none for 1953-54 in urban places), 109 for 1955, and none for 1956.
${ }^{2}$ Source: U. S. Department of Commerce, Building Materials and Construction Division (BDSA) and predecessor divisions.

These data represent a combination of various construction cost indexes weighted by the relative importance of the major classes of construction. They are implicit indexes computed by dividing the total estimate of new construction activity in current prices by the total expressed in 1947-49 prices. Since the total in 194749 prices is obtained by adding the estimates for the separately deflated classes of construction, the composite cost index is the equivalent of a variably weighted index, reflecting changes not only in the component indexes, but also in relative importance of the major classes of construction which are used as weights. In the computation of the monthly composite cost index, the shift in the relative importance of the major classes of construction due to their different seasonal movements is eliminated through the use of seasonally adjusted activity estimates. Beginning in 1945 the annual composite index is an average of 12 monthly indexes.

The cost indexes used for calculating the construction activity series in 1947-49 prices and thus entering into the composite index are as follows: E. H. Boeckh and Associates (residential building, except farm); The American Appraisal Company (nonresidential building, selected types, and military facilities); Turner (nonresidential, selected types, and military facilities); Fuller (nonresidential, selected types, and military facilities); U. S. Department of Agriculture (farm building); Interstate Commerce Commission (public utilities, selected types); Handy (public utilities, selected types); U. S. Department of Commerce, Bureau of Public Roads (military facilities and highway); Associated General Contractors (sewer and water, conservation and development, miscellaneous); Engineering News-Record (sewer and water, conservation and development, miscellaneous).

For additional information, see Construction Volume and Costs, 1915-1956, a "Statistical Supplement" to Construction Review, published jointly by the U. S. Department of Commerce and U. S. Department of Labor. That source also contains monthly data from 1951 through 1956 and annual indexes beginning with 1915.
${ }^{3}$ Source: Aberthaw Construction Company. Beginning 1946, the index measures changes in costs of 36 major items entering into the construction in the New England area of five types of industrial buildings-three four-story types (wood frame, brick walls; steel frame, wood floors; reinforced concrete flat slab) and two one-story types (steel frame, monitor roof; reinforced concrete, monitor roof). New England prices of material items and labor rates are weighted on the basis of estimated quantities of materials and amounts of labor required for the types of buildings included. Labor rates are current New England union rates for all trades. The index includes all building-construction expense, with the exception of home-office expense and architects' or engineers' fees.

The index prior to 1946 , to which the current series is linked, is based on changes in the cost of constructing an eight-story reinforced concrete industrial structure originally built by the company in Connecticut in 1914, in which cement, steel, sand, gravel, lumber, and glass constituted the major items. The index is confined to labor, materials, and other construction costs actually required for construction of the building, and excludes data for home-office overhead and profit on the job, as in the current series. The data were brought up to date at the end of each quarter by preparing a completely new estimate of the cost of the original structure as of that date, which took into account changes in prices of building materials, variations in labor rates (standard union rates), and, as far as could be determined, labor efficiency. Any improvements in the design of the original building were not considered, nor were any substitutions made for materials which formed a part of the building.

Quarterly data for 1929-52 comparable with quarterly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

The figures were reported as of the first of each month through March 1929 and as of the first of April, July, October, and January thereafter through January 1931, and are shown in the SURVEY as of the end of the preceding month.
${ }^{4}$ Source: The American Appraisal Company. The indexes are based on a detailed bill of quantities of materials and labor entering into the structural portion of four representative types of buildings-frame, brick, concrete, and steel-in 30 cities throughout the United States, with allowance for contractors' overhead and profits.

Building fixture items such as plumbing, heating, Iighting, sprinkler system, elevators, etc., are not included. Workmen's compensation and liability insurance and old-age pension factors are included in the labor portion.

The indexes reflect changes in average price levels with no allowance for the extreme costs resulting from overtime wages, premium on materials, or sacrifice prices and omissions of over head costs and profits during depression periods. The material and labor costs are recomputed monthly in accordance with normal average prices and wages for the various kinds and grades of materials and classes of building trades, as verified or adjusted to normal from personal investigation of appraisers and information as to actual costs from clients and others. These computations automatically result in weighted averages for the individual buildings. Arithmetic averages are computed for the individual buildings and cities to obtain the city and national average. The latter covers 30 cities. The original reports give indexes for each of 22 typical cities, 4 of which are presented here. Since these index figures are based on 1913 as 100 for each individual location, they thus indicate the trend in each city and not the trend among the various locations. Actual costs vary widely among different buildings and different regions, and the indexes therefore are not applicable to specific buildings.

Monthly data for 1939-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Source: Associated General Contractors of America, Inc. Data are computed by combining indexes of wages and materials in the proportion of 40 percent for the former and 60 percent for the latter, which, according to data collected in the Census of the Construction lndustry for 1929, 1935, and 1939, is approximately correct. According to these censuses, combined labor and material costs accounted for around 75 percent of the total of all expenditures for building construction. Wages used in computing this index are for hodcarriers and common laborers combined, and the material prices are those for sand, gravel, crushed stone Portland cement, common brick, lumber (all weighted equally), hollow tile ( $1 / 2$ ), and structural and reinforcing steel (both together weighted $1 / 2$ ). Wages and prices are reported as of the 15th of each month by the 12 district offices of the association located in New York, Chicago, St. Louis, Cleveland, Cincinnati, San Francisco, Los Angeles, Atlanta, Detroit, Baltimore, Philadelphia, and Boston. The value of the material items included in the index represented about 45 percent of the total cost of all building materials used in 1929, according to the 1930 Census of the Construction Industry.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Quarterly averages.
${ }^{7}$ Data beginning 1954 are not comparable with earlier data (see note 1 for this page).
${ }^{8}$ Includes revisions not distributed by month.

## PAGE 40

${ }^{1}$ Source: E. H. Boeckh and Associates, consulting valuation engineers, Cincinnati, Ohio, and Washington, D. C. Indexes are simple averages of indexes for 20 major pricing areas as follows: Atlanta, Baltimore, Birmingham, Boston, Chicago, Cincinnati, Cleveland, Dallas, Denver, Detroit, Kansas City, Los Angeles, Minneapolis, New Orleans, New York City, Philadelphia, Pittsburgh, St. Louis, San Francisco, and Seattle.

Basic cost data on materials are obtained from local buildingmaterial dealers, in connection with the company's cost-pricing service. Prevailing rates of wages are obtained primarily from contractors and building-trade associations. Actual wage rates are used, rather than nominal rates, and rates of both common and skilled labor are included. An arbitrary labor-efficiency correction is used, based on the organization's study of labor conditions in each area. Weights are based on studies of actual building costs by the organization and vary with the different types of structure.
Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein will be found in earlier
editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the 1934-44 period appear in the September 1949 issue of the SURVEY OF CURRENT BUSINESS. (Revised index for October 1945 for frame commercial and factory buildings is 152.4.)
${ }^{2}$ Source: Engineering News-Record. (The indexes shown here have been shifted to the 1947-49 base by the U. S. Department of Commerce.)

The construction cost index and the building cost index each has four components, three material items and labor. The material items for both indexes are: (1) the base price of structural steel shapes, which from 1913 (the ENR base period) through July 1938 is at Pittsburgh only and since then is a 3 -mill average for Pittsburgh, Gary, and Birmingham; (2) consumers' net price of cement exclusive of bags, f.o.b. Chicago, from 1913 through June 1948 and since then is a 20 -city average of f.o.b. bulk prices; (3) lumber, which in 1913 and through 1935 was $3^{\prime \prime} \times 12^{\prime \prime}$ to $12^{\prime \prime} \times 12^{\prime \prime}$ long leaf yellow pine, wholesale, at New York, and beginning 1936 is $2^{\prime \prime} \times 4^{\prime \prime}$ S4S pine and fir in carload lots (ENR 20 -city average). The labor component of the construction cost index, which is designed to show the movement of construction cost in general, is the common labor rate, ENR 20 -city average, while the labor component of the building cost index is the ENR 20 -city average for skilled labor. The labor rates are shown herein on p .78.

The component series are weighted according to their relative importance as determined by the compilers. As a step in arriving at proper weights, the average production of steel and cement in the years 1913, 1916, and 1919, average production of lumber for 1913 and 1916, and the number of common industrial laborers, according to the 1910 Census, were placed on a dollar-value basis using 1913 average prices as compiled by ENR wherever possible. These data are shown in the following table:

|  | Value | Percent |
| :---: | :---: | :---: |
| 33,000,000 short tons steel at \$30. | \$990,000,000 | 24 |
| $90,000,000$ barrels cement at $\$ 1.19 \ldots \ldots$. | 107,100,000 | 3 |
| $42,000,000 \mathrm{M}$ board feet lumber at $\$ 28.50$ | 1,197,000,000 | 29 |
| 1,200,000,000 man-davs at \$1.52 (8 hours) | )1,822,000,000 | 44 |
| Total........................................... | \$4,116,100,000 | 100 |

It should be noted that these data represent total production in the United States and not amounts used in the construction indus try. According to the Engineering News-Record, they were used as a guide, but the proportions of the items were adjusted to their importance in the construction industry with the aid of experienced construction men. An expenditure of approximately $\$ 100$ on the four items in these proportions was assumed for 1913 (the ENR base period) and the quantities of the three materials and the man-hours of labor that could be purchased for these amounts were computed. Purchases of similar quantities of these four items were assumed to be made at each successive period.

The expenditure of $\$ 100$, at 1913 prices, for the proper quantities of each item in the construction cost index is given below, and it may be noted that the "adjustment" mentioned above is an important factor.
2,500 pounds of structural steel at $\$ 0.015$ (Pittsburgh base) (see next paragraph below). \$37.50
6 barrels of cement at $\$ 1.19$ (net barrel, f.o.b. Chicago) (see 2d paragraph below)
600 board feet, Southern pine, $3^{\prime \prime} \times 12^{\prime \prime}$ to $12^{\prime \prime} \times 12^{\prime \prime}$ at
$\$ 28.50$ per M ft. (New York base) (see 3d paragraph below)
17.10

200 man-hours at $\$ 0.19$ (common labor, average for country). 38.00

Total.
$\$ 99.74$
The adoption of the 3 -mill average for structural steel shapes in August 1938 did not necessitate any change in the weighting of this component.
In July 1948, when cement went off basing point pricing, the 20city average cement price was substituted; no adjustment in the weight factor was necessary.
For the Southern pine lumber series prior to 1936 the weight was 600 board feet. In linking this series with the series for $2^{\prime \prime}$ x 4 " pine and fir, the 1936 average value of lumber of the old
type as included in the index was first determined (quantity weight, 600 board feet times the average price for the year). The equivalent 1936 average value of the new type was represented by 1,088 board feet of lumber, which quantity is now used as the weighting factor.

The building cost index is computed in the same manner as the construction cost index, except that the skilled labor trend is substituted for common labor. Since the skilled rate is considerably higher than the common rate, a weight of 68.38 man-hours was substituted for the common labor weight of 200 man-hours used in the construction cost index, as shown in the table above, in order to have the same labor component in the base period when the rate was multiplied by the weight. The computation for labor in 1913 for the building cost index is $68.38 \times \$ 0.555$, which gives approximately $\$ 38.00$. The trends of the two indexes reflect the divergent movements of wage rates for common and skilled labor; since 1932, rates for the former have increased more rapidly than those for the latter.

The indexes are computed as of the first of the month and are shown here and in the SURVEY as of the end of the preceding month. Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions for building cost for August-November 1950-116.0, 117.5, 115.4, 115.8; for construction cost for August-December 1950-117.2, 118.4, 117.0, 117.2, 117.5, respectively.) Monthly indexes back to 1929 are available upon request.
${ }^{3}$ Source: U, S. Department of Commerce, Bureau of Public Roads. The index of highway construction costs (covering Feder-al-aid construction) is based on average contract unit bid prices for common excavation, concrete pavement, reinforcing steel for structures, structural steel, and structural concrete, weighted by average quantities during 1925-29 for each type of work or material involved per average mile of construction. Figures subsequent to 1940 are corrected for increased design requirements. Prior thereto, increased design requirements had a negligible effect on the index.

Average quantities used in weighting are as follows: 17,491 cubic yards of excavation; 3,726 square yards of paving; 16,000 pounds of reinforcing steel; 4,325 pounds of structural steel; and 68 cubic yards of structural concrete.

Quarterly data for 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Quarterly data for 1931-48 are available upon request.
${ }^{4}$ Quarterly average.

## PAGE 41

${ }^{1}$ Source: U. S. Department of Commerce, Business and Defense Services Administration. The materials represented in these new indexes were valued at $\$ 5.5$ billion in 1947, or roughly 45 percent of the construction materials produced in that year. The materials represented in the previous indexes had a production value of only $\$ 1.9$ billion in 1947.
The index for each group of construction materials represents the production, sales, or shipments of one or more specific materials. The source data consist of monthly or quarterly production, shipments, or sales for each item. Wherever feasible, shipment and sales data are converted to physical production. The monthly or quarterly physical output of each material is multiplied by its 1947 price to provide the value of such a quantity of materials had it been produced or shipped in 1947. The resulting values of all materials constituting each group are added together to yield aggregates for the group. The aggregates are converted to index numbers by equating the 1947-49 monthly or quarterly average to 100 .

The individual materials comprising the group indexes are largely longstanding, stable types. Many recently developed materials and others of longstanding use are not covered because no usable production statistics are available. The usefulness of these new series has been limited by the fact that current output information is not available for such important materials as aluminum roofing and siding, asbestos cement products, asphalt
tile, builders hardware, concrete products, flat glass, nonrigid insulation, and metal windows and doors.

Monthly data for 1947-52 are available upon request.
${ }^{2}$ Source: Federal Housing Administration. Data relate to the monthly or monthly average volume of home mortgages insured under the provisions of Title I-Sections 2 and 8, Title II-Sections 203, 213, 220, 221, 222, and 225, Title Vl-Sections 603, 603-610, and 611, Title VIII-Section 809, and Title 1X-Section 903 of the National Housing Act.

Section 203 was approved June 27, 1934, as part of the original Act. No mortgages were insured under this section until January 1935.

The amendments of February 3, 1938, provided for the insurance of new home loans under Section 2. The first such loans were reported insured in April 1938. No insurance has been written under this section since March 1, 1950.

Section 603 approved March 28, 1941, provided for the insur ance of mortgages on war housing, and was amended May 22, 1946, as part of the Veterans' Emergency Housing Program. Mortgages were insured under the WH Program beginning in June 1941 and under the VEH Program beginning in July 1946. No insurance has been written under this section since April 30, 1948, except pursuant to commitments outstanding on that date or on mortgages given to refinance existing Section 603 insured mortgages.

Section 603-610 approved August 5, 1947, provided for mortgage insurance in connection with the disposition of publicly owned housing. The first such insurance was reported in December 1947.

The amendments of April 20, 1950, provided for mortgage insurance under Section 8 on houses for families of low and moderate income, and for the insurance as single-family housing of site-fabricated projects under Section 611 and of sales-type cooperative housing under Section 213. Mortgage insurance under Section 8 was initially reported in August 1950 and the insurance of single-family home mortgages under Section 213 and Section 611 in February 1951 and July 1951, respectively.

No insurance has been written under Sections 8, 603, 603-610, or 611 since August 2, 1954, except pursuant to commitments outstanding on that date.

Section 903 was enacted September 1, 1951, to supplement the existing systems of mortgage insurance in providing adequate housing in defense areas. The first mortgage insurance under this section was reported in February 1952. No insurance has been written under this section since August 11, 1955, except pursuant to comitments outstanding on that date.

The amendments of August 2, 1954, provided for mortgage in surance under Section 220 to assist in financing the rehabilitation of existing housing and the construction of new housing in slum clearance and urban renewal areas where Federal aid to slum clearances or urban renewal is being extended under the provisions of Title I of the Housing Act of 1949 , or where the community has an approved workable program for the prevention and elimination of slums and blight. The 1954 amendments also authorized the FHA to insure under Section 221 mortgages on lowcost housing for families displaced by reason of governmental action in a community that has a workable program for the elimination and prevention of slums and urban blight, or where a Federally aided slum clearance and urban redevelopment project is being carried out.

Section 222, also added to Title II of the Act of 1954, establishes a system of mortgage insurance to aid in the provision of housing for servicemen in the Armed Forces and the Coast Guard, subject to certification by the Secretary of Defense (or the Secretary of the Treasury) to the effect that the serviceman requires housing, that he is serving on active duty, and has been on such duty for more than two years. The first mortgage insurance under Section 222 was reported in November 1954.

Section 225 , added by the same amendments, authorized the insurance under other operating programs of "open end" mortgages containing a provision allowing the outstanding balance on the mortgage to be increased to the original face amount to pay for repairs or improvements, or to an amount exceeding the original face amount by the cost of any additional living space.

Finally, Section 809 was added by legislation approved June 13, 1956, to assist in financing the production of civilian owner-
occupied housing for employees of a research or development installation of one of the military departments of the United States, upon certification by the Secretary of Defense.

The series includes only those mortgages on properties on which inspection of the completed home has been made and the mortgage endorsed for insurance by the Federal Housing Administration. The data represent the aggregate face amount of the insured mortgages.

In addition to monthly and cumulative totals for the home mortgage series shown here, the monthly releases of the Federal Housing Administration provide data on the insurance of project mortgages on rental-housing projects under Sections 207, 220, and 221 and cooperative-housing mortgages under Section 213 of Title II; on the insurance of rental-housing mortgages, manufac-tured-housing loans, public-housing-disposition mortgages, and site-fabricated-housing mortgages under Section 608, 609, 608610, and 611, respectively, of Title Vl ; on mil tary-housing mortgages insured under Title VIII; and on defense-housingproject mortgages insured under Section 908 of Title 1X. The FHA releases also show data on property-improvement loans insured under Section 2 of Title I of the National Housing Act.

Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: Veterans Administration. Data represent the principal amount of home loans guaranteed or insured under the authority of the Servicemen's Readjustment Act of 1944, as amended. The act was approved June 22, 1944, but loan-guaranty operations did not get under way until November 1944. All monthly figures cover month ending the 25th day.

Title IIl, Section 501, of the act provides for the guaranty of loans to veterans, the proceeds of which are to be used for pur chasing residential property or constructing a dwelling to be occupied as the veteran's home or for the purpose of making repairs, alterations, or improvements in property owned by him and occupied as his home. Originally, only veterans of World War II were eligible. An amendment to the Act in July 1952 extended eligibility to veterans with service since June 27, 1950, the start of the Korean conflict.

Originally, first mortgage home loans carried a guaranty of 50 percent of the loan, up to a maximum of $\$ 2,000$; the maximum guaranty was increased to $\$ 4,000$ in December 1945. An amendment to the act in 1950 provided, under certain conditions, that the amount guaranteed may be 60 percent of the loan and not over $\$ 7,500$. Private lending institutions make the loans, with the Government guaranteeing 50 or 60 percent of the loan, but in no case to exceed the above amounts. Under certain conditions the Veterans Administration is authorized to lend up to $\$ 10,000 \mathrm{di}-$ rectly to the veteran when private sources are not available.

Further details regarding veterans' loans are contained in the pamphlet GI Loans: The First 10 Years (Veterans Administration Pamphlet 4A-11).

Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1946 are available upon request. Prior monthly figures are not available. The total amount of home loans guaranteed from November 1944 through December 1945 was $\$ 192,240,000$.
${ }^{4}$ Source: Federal Home Loan Bank Board. Data represent the amount of Federal Home Loan Bank advances to member institutions, excluding interbank transactions. Member institutions comprise savings associations (i.e., building and loan associations, cooperative banks, homestead associations, and similar institutions), mutual savings banks, and insurance companies.

Monthly data for 1939-52 comparable with monthly averages for corresponding years contained herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Comparatively small revisions have been made in monthly data beginning 1933; revised figures are available upon request.

5 Estimated by the Federal Home Loan Bank Board from data reported monthly by insured savings and loan associations. The
combined assets of these associations represent about 90 percent of the total assets of all savings and loan associations in the United States.

Statistics presented are estimates of the amount of mortgage loans closed during the periods specified by all institutions of the savings-and-loan type (including building and loan associations, cooperative banks, homestead associations, and similar institutions). In general, these estimated totals are derived by expanding mortgage loans made by insured associations on the basis of the relationship between assets of insured institutions and total assets of all such associations.

Only loans on homes (1- to 4-family residential properties) are included in the construction and purchase loan-purpose categories. Loans on homes for any other purpose (e.g., refinancing, repairs and reconditioning, taxes and insurance), loans on residential structures with 5- or more-family units, and all nonhome loans are grouped in the miscellaneous category.

All federally chartered associations are required to be members of the Federal Home Loan Bank System, while membership is optional for State chartered associations.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Source: Federal Home Loan Bank Board. Data are estimates of the total amount of nonfarm mortgages of $\$ 20,000$ or less recorded in the United States during the periods indicated. Estimates beginning 1946 are based on reports covering approximately 450 areas containing over one-half of the nation's 1 - to 4 -family dwelling units; the reporting sample was somewhat larger in earlier years. Data are limited to nonfarm mortgages of $\$ 20$,000 or less in order to relate the series as closely as possible to financing activity in the home-mortgage field. It should be noted, however, that all nonfarm mortgages within the size limitation are included.

Monthly data for 1941-43 and 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1939-40 appear on p. S-5 of the November 1942 issue of the SURVEY OF CURRENT BUSINESS; and for 1944-46, on p. 21 of the May 1950 issue.
${ }^{7}$ Source: Federal Home Loan Bank Board. Data represent the estimated total number of nonfarm real estate foreclosures in the United States and are based on reports from approximately 1,400 counties, cities, townships, and other governmental divisions; they indicate the number of properties acquired by mortgage lenders through foreclosure proceedings. Approximately threefifths of all nonfarm 1 - to 4 -family dwelling units are included in the sample used.

Monthly data for 1951-52 comparable with monthly averages for corresponding years shown herein will be found in the 1955 edition of BUSINESS STATISTICS. Monthly data for 1934-50 are available upon request.
${ }^{8}$ Source: National Board of Fire Underwriters. Data represent estimated direct incurred fire and lightning losses for buildings and contents reported to the agency to which is added an allowance for unreported and uninsured losses. Data do not include losses for automobiles and other classes of property written under marine forms, tornado, inland-marine, earthquake, sprinkler-leakage, explosion, war-risk, tourist-floater, registered-mail, parcel-post, riot, and civil-commotion insurance. Reinsurances in National Board companies also are excluded. The monthly figures are estimates based on reports by agents at the time fires occur. Monthly averages through 1953, however, are computed from data on aggregate property losses (including final adjustments) as indicated by annual surveys which, in some years, vary substantially from totals of the monthly figures. The 1954-56 monthly averages are computed from the monthly figures shown.

Monthly data for 1929-52, on the basis mentioned above, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revised figure for October 1941, $\$ 30,833,000$.)
${ }^{9}$ As of December 31.

## PAGE 42

${ }^{1}$ Source: Data are compiled by McCann-Erickson, Inc., Central Research Department, and published monthly in Printers' Ink. All series are based on national advertising and cover expenditures for media, talent, and production. The indexes, therefore, are sensitive to both rate and volume changes.

The annual indexes given for years 1935-56 are not based on a simple 12 -month average of the monthly indexes, since the accuracy of these monthly estimates is limited. The 1956 annual index is derived from preliminary dollar figures for the year; and the monthly indexes for 1956 used as benchmarks are derived from this later, more accurate series of dollar figures. All indexes prior to 1956 are derived from final dollar figures which become available approximately 6 months from the end of the year under consideration.

The base for all indexes, except the television index, is the average monthly expenditure for the particular medium under consideration during the years 1947-49. Television is based on the average for the years 1950-52. Each monthly index is seasonally corrected, the seasonal factors being determined by the method of $12-$ month moving averages. Since the seasonal patterns are subject to change, they are recomputed annually on the basis of monthly records of the particular medium during the latest 3 years.

The business paper index is computed by converting page-volume figures to a dollar basis by means of a page-rate index computed from a representative sample of business papers in all classifications. (January 1948 is taken as the base month for this page-rate index.)

The index of magazine advertising is based on the reports provided by the Publishers' Information Bureau, Inc.; it includes advertising in national farm magazines, but excludes advertising in Sunday Supplements. An adjustment is made each month to take into account the variation in number of issues of weekly magazines in a month.

The index for newspaper advertising is based on monthly linage reports for 52 cities obtained from Media Records, Inc. These data are converted to 110 -city estimates by means of a linear relationship between the two groups of cities, and then converted to dollar figures by means of a rate index computed from a representative sample of newspapers throughout the country. The average month in 1946 is taken as the base month for this rate index.

The radio and television indexes are derived from gross national network billings reported by Publishers' Information Bureau; national spot billings, included in the old index, are now excluded. Dollar figures for television are adjusted for production costs and incorporated into the total expenditures. The television index is seasonally adjusted beginning with January 1953.

In order to insure proper weighting of the various components in the general index, each classification is adjusted to include art, mechanical, and talent costs, estimated at a fixed proportion of expenditures for that medium each month, so that the final adjusted expenditures represent all types of expenditures for the various media. The revised expenditures are totaled, seasonally adjusted, and related to the 1947-49 base to obtain the general index.

Separate monthly data prior to 1953 are not available, except for the television index for which such data go back to January 1952 (available in the 1955 edition of BUSINESS STATISTICS).
${ }^{2}$ Not sea sonally adjusted prior to January 1953.
${ }^{3}$ Source: Tide Magazine, from a statistical method developed by J. K. Lasser \& Co. The combined index, representing national advertising only, comprises the following media: Newspapers; magazines; network radio (because of rate complications, network radio actual figures have not been used since mid-1955, but an estimate is included in the index for consistency); network television (included beginning 1949); outdoor advertising; farm publications; and business publications. Separate indexes are computed for each medium; no adjustment is made for seasonal variation.

The newspaper advertising component is based on general and automotive advertising linage in newspapers in 52 cities, as reported by Media Records, multiplied by the rate listed by Standard Rate and Data Service. The magazine index is based on
gross magazine billings and the radio and television indexes on gross radio and television network billings of the National Broadcasting Company, the American Broadcasting Company, and the Columbia and Mutual Broadcasting systems, as reported by the Publishers' Information Bureau (see 1st paragraph of this note regarding network radio). The data for outdoor advertising are monthly revenues of members of the Outdoor Advertising Association which comprises about two-thirds of all outdoor advertising, and for farm papers, advertising in 11 national farm papers as reported by Farm Publication Reports, Inc. The data on business publications are compiled by J. K. Lasser \& Company from a list of 122 business papers; monthly advertising pages are multiplied by the one-time page rate for each of the 122 papers to obtain monthly revenue figures.

For monthly data for 1950-52, see the 1955 and 1953 editions of BUSINESS STATISTICS.
${ }^{4}$ Source: Publishers' Information Bureau, Inc. Data represent gross time charges for network advertising on the following major television networks: ABC; NBC; Columbia; and Du Mont. Du Mont is not included in data for 1950, and beginning with data for October 1955, when the Du Mont television network changed from a national network to a local operation.

The figures exclude studio, production, wire, and talent costs. Net time charges-i.e., after application of size and frequency charges-in recent years have been about 25 percent less than the gross charges.

For monthly data for 1952 , see the 1955 edition of BUSINESS STATISTICS,
${ }^{5}$ Data for Du Mont network not included in 1950, and beginning with data for October 1955.

## PAGE 43

${ }^{1}$ Source: Publishers' Information Bureau, Inc. (Data have been revised since publication in the 1953 issue of BUSINESS STAT1STICS and in the monthly SURVEY prior to the October 1954 issue.) Data represent advertising revenue of general magazines and national farm magazines. Space cost is based on the onetime rate; special rates are used where applicable. Retail adver tising and direct-mail advertising are not distributed according to individual classes, but are included in "all other" advertising. Figures for certain publications, not shown separately by industry classes for 1948, are also accounted for in "all other."

Basic data for industry class totals are reported on a cumulative basis only; therefore, monthly data are derived by subtraction. Figures from year to year may not be strictly comparable, as minor publications are added or deleted. Comparability of both the annual and monthly data may also be affected by shifts in the classifications of products. Comparable data prior to 1948 are not available.

For monthly data for 1951-52, see the 1955 edition of BUSINESS STATISTICS.
${ }^{2}$ Source: Printers' Ink Publishing Company, Inc. Data represent magazine advertising linage for the United States. The data have been estimated to include from 80 to 85 percent of all magazine linage and are regarded by the compilers and leading advertisers as a satisfactory measure of the trend of total advertising effort. The series does not cover identical magazines. It includes all linage currently reported to the compilers, including new magazines as reports become available, and thereby gives recognition to changes in advertising preference. For the monthly magazines represented, the data for each month are based on linage included in magazines dated the following month.

Monthly averages for 1913-28 and monthly data for 1932-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data and averages for 1912-31 are shown on p. 20 of the October 1933 issue of the SURVEY.
${ }^{3}$ Averages based on reported totals which include slight differences not reflected in monthly data.

## PAGE 44

${ }^{1}$ Source: Media Records, Inc. Data represent newspaper linage in all newspapers, daily and Sunday, in the following 52 cities:

Akron, Albany, Albuquerque, Atlanta, Baltimore, Birmingham, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Columbus, Dallas, Dayton, Denver, Detroit, El Paso, Fort Worth, Hartford, Houston, Indianapolis, Jacksonville, Knoxville, Los Angeles, Memphis, Milwaukee, Minneapolis, Nashville, New Orleans, Oakland, Oklahoma City, Omaha, Pittsburgh, Portland (Oreg.), Reading, Richmond, Rochester, Salt Lake City, San Antonio, San Diego, San Francisco, Seattle, South Bend, Spokane, St. Louis, Syracuse, Tacoma, Toledo, Tulsa, Washington, Worcester, and Youngstown. The list of cities is unchanged throughout the period covered by the data. General advertising is the advertising of specific products on general sale, as distinguished from the advertising of retail stores, and automotive or financial advertising. A series on department-store advertising, shown as a separate component of retail-store data, is also available from the original source.

Monthly data for 1928-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The July 1952 figure shown in the total column in the 1953 edition should be 175,447 instead of 175,477 (thous. lines) and the figure for number of cities given in the total column in the 1932 volume is transposed and should be " 52 cities" instead of " 25 cities."
${ }^{2}$ Source: U. S. Department of Commerce, Office of Business Economics. These data represent selected series on personal consumption expenditures shown as a component of gross national product on p .3.

The classifications shown are a regrouping of the detailed estimates published on an annuảl basis in table 30 of the NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS (1954 edition) and the National Income numbers of the SURVEY OF CURRENT BUSINESS, July 1956 and July 1957. The combinations, by group numbers as listed in that table, are as follows: Durable goods-automobiles and parts (VIII, la, b); furniture and household equipment (V, 1-4; IX, 5); also included in the total (II, 7; VI, 2; IX, 1,4); nondurable goods-clothing and shoes (II, 1, 3, 4); food and alcoholic beverages (I, 1-4); gasoline and oil (VIII, 1d); also included in the total (I, 5; III, 1; V, 5-7, 8d; VI, 1; IX, 2, 3, 7; XII, 2); services-household operation (V, 8a-c, 9-11); housing (IV); transportation (VIII, 1c, e, f, 2, 3); also included in the total (II, 2, 5, 6, 8; III, 2; VI, 3-8; VII; IX, 6, 8-12; X; XI; XII, 1, 3, 4).

In distributing the annual estimates on a quarterly basis, monthly and quarterly data prepared by governmental and nongovernmental agencies are employed. Among the sources used for estimating the movement of expenditures for goods are the retail-sales series of the Department of Commerce, departmentstore sales, by departments (Board of Governors of the Federal Reserve System), motor fuel taxed (Bureau of Public Roads), new car sales (Department of Commerce), retail prices (Bureau of Labor Statistics), farm-marketings data (Agricultural Marketing Service). For services, the principal sources used are as follows: Selected price series, such as rents and domestic service (Bureau of Labor Statistics); local transit revenues (American Transit Association); sales of electric power for residential use (Edison Electric Institute); sales of gas for residential use (American Gas Association); and telephone station revenues (Federal Communications Commission).

In general, the movement of a series, where considered representative of the movement of expenditures in a given group, is applied directly to the base. Where a single series is not considered wholly representative of a specific segment, weighted combinations of several related series are employed to obtain the desired result.

Quarterly data for 1939-51 may be obtained from table 51 of the NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS, 1954 edition (referred to above). Quarterly data for 1952 appear on p. 30 of the July 1957 issue of the SURVEY OF CURRENT BUSINESS.

## ${ }^{3}$ Includes data for items not shown separately.

${ }^{4}$ Personal consumption expenditures data for the years 1929-56 are annual totals, not monthly averages.

## PAGE 45

${ }^{1}$ See note 2 for p. 44 .
2 Sources: U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. The definition of sales of retail stores and the classification of stores by kinds of business are in accordance with the 1948 Census of Business through March 1957 and with the 1954 Census of Business thereafter. (See the monthly magazine, SURVEY OF CURRENT BUSINESS, for 1957 figures.) The breakdown between durable-goods stores and nondurable-goods stores is based on the durability of the commodities accounting for the major portion of the sales of each kind-of-business group.

In 1951 a basic change in the method of estimating retail sales was introduced. As a result the new series which starts in January 1951 is not comparable with the sales figures for earlier periods. In early 1957 the new series was again revised back to January 1951 to exclude data for milk dealers engaged in processing on the premises.

Census of Retail Trade data for the years 1929, 1933, 1935, 1939, and 1948 were used as benchmarks for the old series which is available for the period 1929-1951. Sales estimates in the intercensus years after 1935 were based in large part on changes in sales-tax collections of 20 States. These States accounted for about 40 percent of the total retail sales. Since data from all the States were not available over the entire period, and also since the States differed in the degree of detail shown for the kind-of-business breakdown, the number of States used in deriving the estimates varied in different years as well as for the different sales categories. The sales-tax data were further supplemented by special Internal Revenue Service compilations, business population trends, the Federal Reserve Board index of department-store sales, and data from the Bureau of Public Roads and the American Petroleum lnstitute on the taxable quantity and the average price of gasoline.

The monthly estimates of retail sales were derived from the monthly movement of sales as reported to the Bureau of the Census by a constant sample of large independent retailers and of chain stores.

Beginning with January 1951, a new procedure for estimating retail sales directly from blown-up sample data was introduced. The new estimates are not linked to a Census of Retail Trade base as were the old, a factor that accounts for most of the difference between the levels of retail sales for the year 1951 indicated by the old and new series.

The new monthly estimates are prepared by the Bureau of the Census from a sample which through March 1957 consisted of about 30,000 organizations controlling and operating about 100,000 stores, each of which has been chosen with a known probability of selection. All organizations which in 1948 operated 11 or more retail stores are included in the sample. The sample also includes all department stores with sales of $\$ 5$ million or over in 1948. The remaining retail stores are represented by organizations located in 230 areas chosen at random, one from each of 230 primary strata. The sample within these areas is constituted as follows: For retail organizations which operated 1 to 10 stores in 1948, the sample consists of (a) all "large" stores located in the area and (b) all small stores located in a sample of land segments selected at random within the sample areas. All new stores, regardless of size, which have come into existence within these samples of land segments are enumerated. Beginning April 1957 this sample was revised to include all organizations which operated 11 or more retail stores in 1954; all stores with sales of over $\$ 5$ million in 1954 were included in the sample. The sampling procedure for the remaining stores was not changed.

The estimates from this sample of reporting firms are derived essentially by weighting the reported sales of each member of the sample by a value dependent upon its probability of selection. A more detailed description of the sample entitled "Description of the Sample for the Monthly Retail Trade Report, Revised" may be obtained upon request from the Bureau of the Census.

The monthly estimates so derived are further adjusted for seasonal factors and trading-day variations by the Office of Business Economics.

Monthly data (old series) for 1949-50 appear in the 1953 edition of BUSINESS STATISTICS; those for 1951 appear on p. 17 of the September 1952 issue of the SURVEY OF CURRENT BUS1NESS. Revisions of data in the 1953 volume are as follows: Total retail sales for December 1949 on p. 44 should read $\$ 13,154$ million; March 1949 figure for grocery stores on p. 45 should read $\$ 2,056$ million; and March 1949 figure for total automotive group on p. 46 should read $\$ 1,930$ million. Monthly data for the old series prior to 1949 are available upon request. Monthly data for the new series for 1951-52 (for all components with the exception of unadjusted and seasonally adjusted total retail store sales, total sales of nondurable-good stores, and sales of the food group), comparable with monthly averages for corresponding years shown herein, appear in the 1955 edition of BUSINESS STATISTICS (revisions for total general-merchandise group on p. 48 for August and October 1951, respectively: $\$ 1,519$ million and $\$ 1,516$ million). Total retail sales, total sales of nondurablegoods stores, and sales of the food group, unadjusted and seasonally adjusted, for 1951-52 (new series) appear in the June 1957 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{3}$ Includes data for items not shown separately.
${ }^{4}$ Includes data for kinds of business not shown separately.
${ }^{5}$ Data for personal consumption expenditures are annual totals.
${ }^{6}$ Monthly averages for 1929 and 1933 are based on annual totals from the Census of Business for those years.
${ }^{7}$ Beginning with 1951, the monthly data presented are on the new basis. For comparative purposes, the 1951 average monthly sales on the old basis (italicized figures) are given above the averages for the new series.

## PAGE 49

${ }^{1}$ See note 2 for p. 45.
${ }^{2}$ Source: U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. These data represent estimated book values of nationwide retailers' inventories. For an explanation of methods of valuing inventories, see the 3d and 4th paragraphs of note 1 for p. 13.

The data shown are estimates of inventories held at the various kinds of stores and are not on a commodity basis. The breakdown into durable and nondurable inventories is based on the durability of the commodities accounting for the major portion of the retailers' sales. Thus nondurable items carried by retailers dealing primarily in durable goods would be reported in durablegoods inventories.

A new Department of Commerce series on retail-store inventories has replaced the series previously compiled. The new series begins with December 1950. The old estimates for 1938 through 1950 are based on the Census of Business for 1939 and 1948 and are not comparable with the series described below.

The new estimates are comparable in concept and coverage to the new series on retail-store sales (see the description of this series in note 2 for p. 45). The new series of retail inventories involves a basic change in methodology adopted by the Bureau of the Census. Direct annual estimates of retail inventories starting with December 31, 1951, are now derived by the Bureau of the Census from blown-up sample data. The new estimates are not linked to a "Census of Retail Trade" base as were the old estimates.

Retail-inventory estimates for the year-end 1950 were derived by the Office of Business Economics by applying to the inventory estimate for December 31, 1951, the percentage change from 1950 to 1951 shown by the Census sample for those establishments reporting inventories both at the beginning and end of the year. These estimates were subsequently revised to conform with data for 1951 and 1952 published by the Bureau of the Census in the Annual Retail Trade Report for 1952. The year-end figures so derived were interpolated for the months of 1951 and 1952 by estimates derived by procedures essentially the same as used in the previously published series. A revision of retail inventories beginning January 1953 was not completed in time for publication in this volume. The revised data will be published later.

The sample of establishments from whose inventory reports the new values for the year-end 1951 and 1952 were derived consisted of over 100,000 establishments, each of which was chosen with a known probability of selection. The estimates were derived from this sample of reporting firms by weighting the reporting inventories of each sample observation by a value dependent upon its probability of selection.

Other major sources for the annual estimates are as follows: Census of Business for 1939 and 1948 (providing year-end inventories for $1938,1939,1947$, and 1948); annual surveys of the Bureau of the Census (for inventories of independent stores); the Internal Revenue Service's Statistics of Income, Part 2 (annually 1938-50) for corporate year-end data; the Internal Revenue's compilations of noncorporate year-end data for 1938, 1939, 1944, 1945, 1946, and 1947; and Federal Reserve data on departmentstore stocks.

Monthly estimates are based on sources as follows: Bureau of the Census data for multiunit retail organizations; Federal Reserve monthly data on stocks at furniture and department stores; other private and governmental sources.

For a more detailed description of the new series which begins in December 1950, see pp. 14-16 of the November 1952 SURVEY and p. 18 of the January 1954 SURVEY. The latter issue also provides estimates of inventories for December 1950, 1951, and 1952 on the new basis and for December 1949 and 1950 on the old basis. For descriptions of the series published before the basic change in methodology adopted by the Bureau of the Census, see pp. : 6 and 17 of the October 1951 SURVEY and "Revised Estimates of Retail Inventories" in the June 1948 SURVEY.

Monthly data for 1951-52 (new series) appear in the 1955 edition of BUSINESS STATISTICS; monthly data prior to 1951 (old series) are available upon request.
${ }^{3}$ Includes data for kinds of business not shown separately.
${ }^{4}$ Figures beginning December 1950 represent the new series of retail inventories. For comparative purposes, data for the old series for December 1950 are also shown (see figures in italics).

## PAGE 50

${ }^{1}$ See note 2 for p. 49.
${ }^{2}$ Sources: U. S. Department of Commerce, Office of Business Economics and Bureau of the Census. The definition of sales of retail stores and the classification of stores by kinds of business are in accordance with the Census of Business, 1948.

In the 1948 Census of Business the term "chain stores" was not used as a Census designation. Organizations of two or more retail stores engaged in the same general kind of business and centrally controlled and operated were designated as "multiunits." The sales of these multiunits were further broken down into various groups of store units.

In 1951 a basic change in the method of estimating retail sales was introduced by the Bureau of the Census. As a result, the new series beginning with January 1951 is not comparable with the sales figures for the earlier period which are shown in italics.

The old series (designated by the Department of Commerce as "Retail Sales of Chain Stores and Mail-Order Houses") is available for the period 1929-51 and represents sales of firms with 4 or more stores. The Census of Business data for the years 1929, 1933, 1935, 1939, and 1948 were used as benchmarks. The values for the intercensus years after 1935 were based on changes in
sales of sample groups of organizations with 4 or more stores. Sample coverage of the individual lines of trade ranged from 30 to 90 percent of total sales of such stores in the year 1939. A detailed description of the sample and procedures is contained in the article "Retail Sales of Chain Stores and Mail-Order Firms" in the February 1944 issue of the SURVEY OF CURRENT BUSINESS.

After 1951 the series representing sales of firms with 4 or more stores was discontinued and replaced by the new series beginning with January 1951. Because of sampling problems that could not be resolved, estimates of sales of multiunit organizations made by the Bureau of the Census cover only those organizations with 11 or more stores. The figures are not linked to the 1948 Census of Business. The sample design includes all firms which in 1948 had 11 or more units. A detailed description of the procedures may be obtained by request from the Bureau of the Census.

Monthly data (old series) for 1951 appear on p. 19 of the September 1952 issue of the SURVEY OF CURRENT BUSINESS; data for 1949-52 appear in the 1955 and 1953 editions of BUSINESS STATISTICS. Monthly data prior to 1949 are available upon request.
${ }^{3}$ Includes data for kinds of business not shown separately.
${ }^{4}$ Data for retail inventories are end-of-year figures, not monthly averages.
${ }^{5}$ Monthly average based on annual data from the Census of Business.
${ }^{6}$ See note 4 for p. 49.
${ }^{7}$ Beginning with 1951 , the data presented represent sales of organizations operating 11 or more stores. For comparative purposes, the 1951 average monthly sales on the old basis (representing firms with 4 or more stores; italicized figures) are given above the averages for the 11 -or-more stores series. A comparison of the two series by months for the year 1951 is presented in the September 1952 issue of the SURVEY OF CURRENT BUSINESS. After the 1954 Census of Business became available, estimates of sales of the 11 -or-more-stores group were revised beginning with January 1956. The panel of firms on which the estimates are based was changed to cover those organizations which reported as operating 11 or more retail stores in the Census of 1954; the kind-of-business classification and changes in definition also conform to the 1954 Census reports. Estimates of sales on this new basis are not available prior to January 1956. No adjustment is made for firms with 11 or more stores entering or leaving the universe of this size group until the next Census is taken. The sales of the 11 -or-more group, therefore, should not be subtracted from the estimates of sales of all retail stores to yield, as a residual, the sales of firms operating 1 to 10 stores.
${ }^{8}$ Monthly averages and monthly data for 1956 shown in this volume are not comparable with data for earlier years; monthly data for 1956 on a basis comparable with the 1955 and earlier figures appear on p. S-10 of the March 1957 issue of the SURVEY OF CURRENT BUSINESS.

## PAGE 51

${ }^{1}$ See note 2 for p. 50 . Seasonally adjusted data on an index basis for firms with 4 or more stores (old series) are available for the period 1935-51 and may be obtained upon request from the U. S. Department of Commerce, Office of Business Economics.
${ }^{2}$ Catalog mail-order sales of all general-merchandise organizations were included in the old series. The later series include these sales for firms with 11 or more units only. Total sales of catalog mail-order sales are now shown separately in the Department of Commerce series "Sales of AIl Retail Stores."

${ }^{2}$ See note 2 for p. 51.
${ }^{3}$ Includes data for kinds of business not shown separately.
${ }^{4}$ Source: Board of Governors of the Federal Reserve System, with the exception of the collection ratios prior to 1940 which were computed by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The data on sales by type of payment, the indexes of accounts receivable, and the collection ratios are computed from data reported to the Federal Reserve banks by the larger department stores located in all sections of the country and, in recent years, accounting for approximately 75 percent of total department-store business in the United States. The sample currently includes about 700 stores, more than 500 having charge accounts and about 425 having installment accounts. Collection ratios represent the ratio of total collections during the month to total amount of accounts outstanding at the beginning of the month. Collection ratios (installment accounts) were revised beginning January 1940 to exclude downpayment and tradein data; the figures for January 1940 and later months are not strictly comparable with earlier data. Indexes of accounts receivable were revised beginning January 1940.

Monthly data for 1940-52 for accounts receivable and collection ratios (installment accounts) are available upon request. Monthly data for collection ratios for 1933-39 (installment accounts) and 1933-52 (charge accounts), and for 1941-52 for sales, comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ See note 8 for p. 50.

## PAGE 53

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. The index measures changes in daily average sales and, for both the unadjusted and adjusted series, is computed by combining indexes of department-store sales for the 12 Federal Reserve districts described in note 2 following. The component indexes are combined with weights based on the relative importance of department-store sales in each district in total United States department-store sales in the base period 1947-49.

The district indexes are based on sample reports which in 1956 included, for all districts combined, approximately 1,650 stores which were estimated to account for about 91 percent of total department-store sales in the United States. Department-store sales account for approximately 6 percent of sales of all retail stores.

Annual averages of monthly indexes for 1919-28 appear on p. 32 of the February 1952 issue of the SURVEY OF CURRENT BUSINESS; monthly data for 1919-45 also appear in that issue. Monthly data for 1946-52 appear on p. 24 of the October 1955 issue of the SURVEY.

A weekly index of department-store sales, available back to the beginning of 1937, is also compiled by the Board of Governors, and is published regularly in the Weekly Supplement to the SURVEY OF CURRENT BUSINESS. This index, computed on the basis of the 1947-49 average as 100, is based on a smaller number of stores but shows changes closely similar to those indicated by the monthly index. The weekly index is not adjusted for seasonal variation, or for the number of trading days. A more complete description of the weekly series is published in the Federal Reserve Bulletin for April 1952.
${ }^{2}$ Source: Computed by the Federal Reserve Banks for the specified districts, following a general method worked out by Federal Reserve System representatives. The indexes are based on monthly reports of cooperating stores, including independent and chain department stores and retail outlets (but not catalog sales) of two large mail order houses. The reporting samples in 1956 were estimated to account for more than 90 percent of total department-store sales in the Atlanta, Chicago, Minneapolis, New York, St. Louis, and San Francisco districts, and from 80 to 90 percent in the other six districts. The samples include stores in virtually every department-store trading area of importance.

The majority of the district indexes are computed directly from the daily average sales of the reporting sample, believed to be representative of total department-store sales in the district. For five of the districts, the district index is obtained by combining separate indexes for various parts of the district. For the Atlanta and 'San Francisco districts, individual city and area indexes are combined for Richmond, the combined index is obtained from separate State indexes and, for Philadelphia and Minneapolis, from a ma jor city and an 'all other district' index. In each case the component indexes are combined with weights. In computing the district indexes, or the component parts of a district index, the monthly sales of the stores included in the index sample are summed and these monthly totals are then divided by the number of trading days in the month to obtain daily average sales. The daily average sales are converted to index numbers by dividing each by the daily average sales during the base period 1947-49. Where necessary, this base is adjusted for changes in the number of reporting stores. The indexes have been adjusted to 1939 and 1948 Census levels where necessary. (It should be noted that the data shown in this volume have not been revised to 1954 Census levels.) Seasonal adjustment factors are computed by the method described in the Federal Reserve Bulletin for June 1941. A special adjustment is made in the March and April seasonal factors to allow for changes in the date of Easter. In most cases where the total district indexes are obtained by combining separate indexes for various cities or a reas within the district, each of the component series is adjusted for seasonal variation before being consolidated into a district index.

In computing the number of trading days, Sundays, New Year's Day, Memorial Day (except in the Atlanta and Dallas districts), Independence Day, Labor Day (except in the Dallas district), Thanksgiving, and Christmas are considered nontrading days. Allowance is made also for February 22 in the Boston, New York, and San Francisco districts. In the Boston, Chicago, Kansas City, Richmond, St. Louis, and San Francisco districts, special allowances are made for differences in the relative importance of particular days in the trading week.

Annual averages of monthly indexes prior to 1929 and monthly data prior to 1953 for individual districts are available upon request.

PAGE 54
${ }^{1}$ See note 2 for $p .53$ for all items except seasonally adjusted sales for total United States.
${ }^{2}$ See note 1 for p. 53.

## PAGE 55

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. The index is computed by combining district indexes, compiled by the respective Federal Reserve banks in cooperation with the Board of Governors, on the basis of the relative importance of the retail value of stocks in each district in the base period (1947$49=100$ ). The indexes are computed from end-of-month figures on retail value of stocks held in the stores or warehouses, as reported by a sample group of stores. Most of the stock indexes are based on somewhat smaller samples than the corresponding sales indexes described in note 2 for p. 53 . In 1955 , reports were received from around $\mathbf{1 , 0 5 0}$ stores, including a representative number of retail outlets of mail-order companies, which accounted for about 70 percent of estimated total department-store stocks. The stock indexes have been tied to sales indexes which are adjusted to levels indicated by 1939 and 1948 Census data. (It should be noted that the data shown in this volume have not been revised to 1954 Census levels.) Whenever necessary, because of a change in sample, the base of the index is adjusted for changes in the number of reporting stores by a procedure similar to that used in the computation of the index of department-store sales. For a more detailed description of the indexes see the Federal Reserve Bulletin for December 1951. The indexes are adjusted for customary seasonal movements by the method described in the Federal Reserve Bulletin for June 1941. It was found that no special adjustment for the changing date of Easter was necessary as in the case of department-store sales.

Annual averages of monthly indexes for 1919-28 appear on p. 32 of the July 1952 SURVEY; monthly data for 1919-45 also appear
in that issue. Monthly data for 1946-52 appear on p. 24 of the October 1955 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{2}$ Reported to the U. S. Department of Commerce, Office of Business Economics, by the two companies. Sales shown are gross sales for calendar months, and include both catalog and store sales (see note 5 for qualification of February-December 1956 data for Montgomery Ward and Co.). The number of stores has increased very considerably in the period covered.

Monthly averages and monthly data for the period prior to 1929 and monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Commerce, Office of Business Economics. The series, which begin with 1939 , represent sales and inventories of all wholesalers and are based on the definitions and classifications in the 1948 Census of Business (except as noted in the following paragraph) and on the 1939 Census of Business data which have been recast to conform to the 1948 Census. Groups of wholesalers represented in the series are as follows: Merchant wholesalers (designated "service and limitedfunction" wholesalers in censuses prior to 1948); manufacturers' sales branches and offices; agents and brokers; assemblers (mainly of farm products); petroleum bulk stations; and wholesalers' administrative offices and auxiliary units for which data were collected for the first time in the 1948 Census. Revised data for wholesale sales and inventories beginning 1948 (not completed at press time of the present volume), based on the definitions and classifications in the 1954 Census of Business, will be published later.

The exceptions to the definitions and classifications shown in the 1948 Census of Business are as follows: (1) Operations of corporate manufacturers' sales branches and offices and marketing stations of petroleum refiners have been excluded, since sales and inventories of these branches are covered in the manufacturing series of the Office of Business Economics; (2) sales of agents and brokers are included on the basis of actual receipts of the agents and brokers rather than as the total value of goods sold as reported in the Census of Business.

Wholesalers' inventories are valued at cost of merchandise on hand. Thus the data represent changes in costs as well as in physical volume. In deriving the gross national product, these data are adjusted to remove the effects of changes in replacement costs (see explanation of "inventory valuation adjustment" in note 1 for $p .2$ ).

The major sources of information used in estimating statistics of wholesale trade are as follows: Census of Wholesale Trade for the years 1939 and 1948; the Internal Revenue Service's Statistics of Income, Part 2 (annually 1938-47), for corporate data; the Internal Revenue Service's compilations of noncorporate data on sales in 1939, 1945, and 1947 and of year-end inventories for $1938,1939,1944,1945$, and 1947; and for monthly estimates, "identical firm" sample of merchant wholesalers reporting stocks and sales to the Bureau of the Census.

In addition to the sources named above, data are utilized from various other Government agencies (including the Bureau of Mines, the Bureau of Labor Statistics, and the Agricultural Marketing Service) and from private research agencies. For a more detailed description of the sources used in compiling the series, see pp. 17 and 18 of the October 1951 SURVEY OF CURRENT BUSINESS and p. 13 of the October 1952 issue.

Monthly data for the period 1939-47 are available upon request.
${ }^{4}$ Data for wholesale inventories are end-of-year figures, not averages of end -of-month data.
${ }^{5}$ In order to provide monthly data comparable with data for prior years, the February-December 1956 data for Montgomery Ward \& Company shown here are on a "gross sales" basis. How ever, in March 1957, the Company stated that, beginning with data for February 1956, the reporting of sales would be on a "net sales" basis instead of gross sales as previously reported. Net sales available to this office at press time for February-April 1956, respectively, are as follows: $\$ 57,040,000 ; \$ 76,252,000$; and \$88,754,000.

## PAGE 56

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. Data represent the latest published estimates for the specified dates. These estimates are based on the 1930, 1940, and 1950 censuses, taken as of April 1 of these years; on statistics and estimates of births and deaths, provided by the National Office of Vital Statistics, United States Public Health Service; statistics on the movement of civilian citizens and aliens to and from continental United States, provided by the Immigration and Naturalization Service, Department of Justice; and data on the size of the armed forces, obtained from the Department of Defense. Census figures were obtained by complete enumeration of the population in continental United States, information generally being secured by personal interview. The intercensal and postcensal estimates given here are consistent with the Census figures in that they imply the same general level of net understatement that quite likely occurs in the censuses.

The figures for births and deaths used in making these estimates include allowances for underregistration. Monthly figures on nonimmigrant and nonemigrant aliens and on citizens traveling abroad, as reported, have been adjusted to eliminate seasonal variation. In addition, figures on immigration for recent years were supplemented by data on travel between continental United States and Hawaii and Puerto Rico provided by the local governments. Data on such movements are not completely reported to the INS. Allowances were made for the influx of Hungarian refugees in the latter months of 1956.

Estimates relate to the first day of the specified month. Estimates in this series for months other than January and July are not available except for the period January 1950 to date. Monthly data for January-December 1950 are as follows (thousands): 150,552; 150,759; 150,945; 151,132; 151,292; 151,477 (revised); 151,$683 ; 151,921 ; 152,174 ; 152,416 ; 152,647 ; 152,860$. Monthly data for 1951 and 1952 are shown in the 1955 edition of BUSINESS STATISTlCS. Note that data for 1935-39 as shown in the BUSlNESS STATISTICS prior to the 1953 issue are here revised to include the overseas armed forces.

These estimates are not comparable with those for the noninstitutional population and the labor force given in the adjacent columns. The former figures take account of more recent data relating to births, deaths, and immigration than do the estimates of the noninstitutional population shown here and used in process ing the labor-force data obtained in the sample surveys. Moreover, the labor-force data refer primarily to the survey week (currently, the calendar week containing the 12 th day of the month).
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (beginning 1940); see note 3 below for source and description of earlier data. The estimates (beginning January 1953) are based on the 1950 census and the compiling agency's cross-section survey which provides information on the employment characteristics of the population 14 years of age and over. This information is obtained through personal interviews each month involving a sample currently of about 35,000 dwelling units and other living quarters throughout the country, selected by scientific sampling methods. The figures, beginning July 1955, relate to the calendar week (Sunday to Saturday) which contains the 12 th day of the month (for December 1955, the week ending Dec. 10, 1955); estimates prior to July 1955 relate to the week containing the 8th day of the month.

In preparing the estimates, the sample results are inflated to independent estimates of the population derived by projecting the results of the most recent census for which data are available at the time. The sample figures from 1953 forward were inflated to population data based on the 1950 census, whereas those for 1952 and earlier years were inflated to population projections based on the 1940 census. This change in the population base starting in 1953 had the effect of raising the labor-force level by roughly 400,000 and the agricultural and nonagricultural employment levels by roughly 250,000 and 150,000 , respectively. Appropriate allowances should be made in comparing the statistics for 1953 and later years with those for the earlier period. The upward adjustment of the labor-force level was introduced gradually over the period January-March 1953. In comparing monthly estimates prior to January 1953 with subsequent data, the rough adjustment factors shown below could be added to the pre-1953 figures.

|  | Total |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{aligned} & \text { Agricul- } \\ & \text { tural } \end{aligned}$ | Nonagricultural | not in the labor force |
| January | 130,000 | 80,000 | 50,000 | 70,000 |
| February.. | 260,000 | 160,000 | 100,000 | 140,000 |
| March-December. | 400,000 | 250,000 | 150,000 | 200,000 |

The statistics for 1953 have been revised to link the series more closely to the estimates for 1954, which are based on a different sample introduced in January 1954 covering 230 areas (both surveys covered 25,000 sample units). Data prior to 1954 were based on a sample which covered 68 areas. Beginning May 1956, the estimates are derived from an expanded sample of about 35,000 households in 330 areas. Figures from the 230 -area sample up through April 1956 can generally be used as a continuous series with the data from the 330 -area sample, starting May 1956. Some allowance for the sample differences should be made in interpreting April-to-May net changes. Estimates for May 1956 comparable with figures shown through April are as follows (thousands): Total labor force, 70,604; civilian labor force, 67,739; employed-total, 65,159; agricultural, 7,160; nonagricultural, 57,999; unemployed, 2,580 ; not in the labor force, 47,933 .

The population covered by these estimates, referred to as the "noninstitutional population" 14 years of age and over, comprises all civilians living within the continental limits of the United States (except inmates of penal and mental institutions, tuberculosis sanitariums, homes for the aged, infirm, and needy, and during 1942 to 1945-War Relocation Camps) and persons in the armed forces. These estimates may not be fully consistent with other estimates of population published by the Census Bureau. The inconsistency results in part from the fact that other estimates of the population, published in reports specifically devoted to that subject, revised as more data relating to births, deaths, immigration, and other factors affecting population. size become available. The estimates shown here are included primarily to permit computation of labor-force rates and similar statistics and are not intended to be used as precise estimates of the population itself.
Definitions of the major categories within which the noninstitutional population is classified are given below. The reader is reminded that for estimates beginning January 1957 (as published in the March 1957 SURVEY and subsequent issues) changes have been made in the ciefinitions for two small groups of persons formerly classified as employed (i.e., with a job but not at work) as follows: Persons in the two groups - (1) on layoff with definite instructions to return to work within 30 days and (2) waiting to start new jobs within the following 30 days-are now classified as unemployed, except for persons in school during the survey week and waiting to start new jobs; this latter small subgroup is now classified as not in the labor force.

Labor force. -The civilian labor force includes all persons who are either employed or unemployed, in accordance with the criteria given below. The total labor force also includes the armed forces, for which monthly estimates are obtained from official records of the Department of Defense. The armed-forces figures include those stationed abroad. The total labor-force figures prior to 1953 in this volume and in the 1955 issue have been adjusted to include some 150,000 members of the armed forces stationed outside the United States at the time of the 1940 census who were excluded from the series shown in the 1953 edition of BUSINESS STATISTICS and earlier volumes.

Employed. - Employed persons comprise (through December 1956) those who, during the survey week, were either (a) "At work" - those who did any work for pay or profit, or worked with out pay for 15 hours or more on a family farm or business; or (b) "With a job but not at work" - those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of vacation, illness, labor-management dispute, bad weather, or temporary lay-off with definite instructions to return to work within 30 days of layoff; also included are persons who had new jobs to which they were scheduled to report within the following 30 days.

Unemployed, - Unemployed persons include (through December 1956) those who did not work at all during the survey week, and who were looking for work. Also included as unemployed are
"inactive unemployed" persons who would have been looking for work except that (a) they were temporarily ill, (b) they expected to return to a job from which they had been laid off for an indefinite period, or (c) they believed no work was available in their line of work in the community. During the period in which public emergency work projects were being conducted by the Works Project Administration, the National Youth Administration, the Civilian Conservation Corps, and State and local work relief agencies (this period ended about June 1943), persons at work on, or assigned to, such projects were also included among the unemployed. Of the two NYA programs, only the out-of-school program was considered as emergency work; youths in the NYA Student Work program were classified as "in school" and not in the labor force.

Not in the labor force. - All persons 14 years of age and over in the noninstitutional population who are not classified as employed or unemployed are defined as "Not in the labor force." The group includes (through December 1956) all persons reported as keeping house, in school, retired, too old or permanently unable to work, seasonal workers for whom the survey week fell in an "off" season, and the voluntarily idle. Also included are those doing only incidental unpaid family work (less than 15 hours) during the survey week.

The estimates of nonagricultural employment obtained by direct household interview differ appreciably from those compiled by the Bureau of Labor Statistics (p. 57) based on reports from business establishments. The differences are accounted for principally by the fact that the BLS figures do not include domestic service workers, the self-employed, and unpaid family workers. The remaining differences are due to several factors of which the most significant are (1) the BLS estimates, based on employment and payrolls reported by a sample of business establishments, may include some persons under 14 years of age, and some who, by holding two or more jobs or by changing jobs in the reported week, are counted more than once; (2) both estimates are based on samples and thus are subject to sampling error; (3) the Census estimates include employed persons temporarily away from work, who will not be reported in the BLS sample by their employers during the corresponding payroll period unless they received pay; and (4) the Census estimates prior to July 1955 relate to employment in the week including the 8th of the month, while the BLS estimates refer, in general, to employment in the payroll period ending nearest the 15 th of the month, so that the BLS figure will, for some periods, represent a later week than the Census figure.

Monthly data for 1941-52, comparable with monthly averages for corresponding years shown herein (with exceptions mentioned), will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (as noted above, data in volumes prior to the 1955 issue do not include 150,000 members of the armed forces overseas; they also exclude detail by sex for "unemployed" and "total labor force'"). The series shown in the 1953 edition of BUSINESS STATISTICS exclude armed forces.

Monthly data are available only beginning March 1940 (figures shown on monthly average lines prior to 1940 are annual estimates). March 1940 data were based on revised decennial census data covering the week of March 24-30. Estimates for April 1940 were interpolated from the data for March and the sample survey estimates for May. The 1940 averages include an allowance for January and February. The March-December 1940 monthly figures are available upon request.

More complete descriptions of these data and additional detail by age and sex, hours worked, duration of unemployment, etc., are given in the following publications of the Bureau of the Census: Issue of the Labor Force Bulletin entitled 'Labor Force, Employment, and Unemployment in the United States, 1940 to $1946^{\prime}$ and "Current Population Reports-Labor Force, Series P-57 " published monthly.
${ }^{3}$ Estimates of the labor force for years prior to 1940 were constructed by the U. S. Department of Labor, Bureau of Labor Statistics, to provide a historical series comparable in concept to the estimates issued by the Bureau of the Census beginning that year. The population censuses of 1930 and 1940 were used as benchmarks, after adjustments for comparability with the current labor-force concepts and enumeration procedures of the Bureau of the Census, and a further adjustment of the 1940 census data to include 150,000 members of the armed forces who
were stationed outside the United States at the time of the 1940 census, as stated in note 2 above.

Intercensal estimates were constructed as follows: Total labor force-Estimates were based on a straight-line int erpolation of age-sex specific worker rates (i.e., percentages of the population in each 5 -year age sex group who were in the labor force) between the adjusted Census benchmarks, extended backwards to 1929. The worker rates were then applied to Census population estimates, by age and sex, for each year, to yield the estimates of the total labor force. Civilian labor force-Estimates of the armed forces, including those outside of the continental United States, were obtained directly from the armed services, and were subtracted from the total labor force to provide estimates of the civilian labor force. Total employment-Agricultural employment was estimated on the basis of the movement of the farm employment series of the Bureau of Agricultural Economics. The estimates of nonagricultural wage and salary workers, excluding domestics, were based on the movement of the revised estimates of employees in nonagricultural establishments, prepared by the Bureau of Labor Statistics. Independent estimates of the nonagricultural self-employed and of domestics were developed on the basis of data from the Censuses of Manufactures, Business, and Construction, and from other available sources. Unemployment-Estimates of unemployment were derived by subtracting the estimated total employment from the civilian labor force.
${ }^{4}$ Data represent midyear estimates, not monthly averages.
${ }^{5}$ Not strictly comparable with earlier data; see 3d paragraph of note 2 for this page.

## PAGE 57

${ }^{1}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning September 1954, the estimates are also adjusted for seasonal variation by the BLS; prior to that time, the adjus ted data were compiled by the Board of Governors of the Federal Reserve System. The estimates of nongovernmental employees include all full-time or part-time workers in nonagricultural establishments who worked during, or received pay for, the pay period or any part of the pay period ending nearest the 15 th of the month. Employment in Federal Government establishments relates to persons who worked on, or received pay for, the last day of the month. Persons who worked in more than one establishment during a single reporting period are counted more than once. "All employees" include production and related workers (for definition see note 3 for p. 59) and workers engaged in the following activities: Executive, purchasing, finance, accounting, legal, personnel (including cafeterias, medical, etc.), professional and technical activities, sales, sales-delivery, advertising, credit collection, installation and servicing of own products, routine office functions, factory supervision (above the working-foreman level), and forceaccount construction work. Proprietors, self-employed persons, unpaid family workers, domestic servants, and personnel of the armed forces are excluded. For an explanation of the difference between these estimates of employees in nonagricultural establishments and estimates of nonagricultural employment by the Bureau of the Census, see note 2 for p. 56 .

In preparing employment estimates, the Bureau of Labor Statistics establishes a benchmark or level of employment, representing a complete count or an estimate with a satisfactory degree of accuracy, which is carried forward on the basis of monthly reports from a sample group of establishments. Estimates prepared since the last benchmark are reviewed and revised if any adjustment in the level is required. Currently, the benchmark period is the first quarter of the year; the estimates shown in the present volume have been adjusted to the first quarter 1956 benchmark.

Prior to 1939 the various industrial censuses taken by the $\mathrm{Bu}-$ reau of the Census were used as sources of benchmark data for private employment. Since that time, the primary source for benchmark materials has been the employment covered under the social-security program: (1) Employment in firms liable to contributions to the State unemployment compensation funds; (2) data from the Bureau of Old-Age and Survivors Insurance on employment in firms exempt from State unemployment insurance laws because of their small size. Information from these two sources
covers a substantial number of the persons engaged in nonfarm employment in each State. Special benchmarks are used for industries not covered by the social-security program. Services for Federal, State, and local governments, and services performed for religious, educational, and charitable organizations are among the more important exclusions from the social-security program. State and local government benchmarks are based on data reported to the Bureau of the Census, and the data on Federal Government employment are made available by the U. S. Civil Service Commission. The Interstate Commerce Commission is the source for railroads.

In general, month-to-month changes reflect fluctuations in employment shown by establishments in many different industries reporting to the Bureau of Labor Statistics. The national esti mates are not of uniform quality. Since 'cut off' sampling rather than a probability design is used, it is not possible to calculate sampling variability of the monthly estimates. Some industries tend to have an increasing bias for the successive months between two benchmarks. In general, estimates for manufacturing indus tries are most reliable. On a current basis, average adjustment is made through the use of bias adjustment factors. Also, because the existence of new firms is not readily ascertainable, such firms are frequently introduced into the reporting samples after they have been in operation for some time. The lapse of time in taking account of new firms produces a consistent understatement. This bias is corrected in the periodic adjustments to benchmark data. Approximately 155,000 cooperating establishments now furnish employment (and for most industries, payroll and man-hours) schedules, by mail, to the State agencies for the BLS.
Since publication of the 1955 edition of BUSINESS STATISTICS the employment and the hours and earnings series have been revised beginning 1955 to adjust to levels indicated by the first quarter 1956 benchmark. (Estimates on the revised basis were first published in the June 1957 SURVEY OF CURRENT BUSINESS.)

Basic revisions for all series (including the adoption, for manufacturing industries, of the 1945 Standard Industrial Classitication and the reclassification of reporting establishments according to annual sales volume of their major postwar product) have resulted in a lack of historical continuity, prior to 1947, for many industries and in a substantial change in the list and definitions of the industries for which statistics are prepared. These data were first published in the October 1949 SURVEY and were more fully explained in the 1951 edition of BUSINESS STATISTICS.

The methods and sources used in preparing the estimates are described in detail in the monthly "Employment and Earnings" report of the Bureau of Labor Statistics. Estimates of all employees and of production workers for over 140 mining and manufacturing industries, and estimates of nonagricultural employment by industry divisions, by States, and for selected areas are published monthly in that report.

Beginning with the 1955 edition of BUSINESS STATISTICS, the data reflect revisions made beginning 1939 in the finance, Government, and total nonagricultural employment divisions, and beginning 1945 in the service and miscellaneous division. Monthly data for 1951-52 (except for employment in the trucking and warehousing industry) appear in the 1955 edition of BUSINESS STATISTICS; monthly data for 1947-50 for all series are available from the compiling source. Monthly figures for 1939-46 (comparable with data shown in this volume) are available for all major industry divisions, and are published in part (except for the revisions for finance, Government, etc., mentioned above) as follows: In the 1949 and 1947 editions of BUSINESS STATISTICS1941 -August 1946 monthly figures for manufacturing, mining, construction, and transportation and public utilities divisions (use the 1949 volume for monthly figures beginning 1945); in the December 1950 SURVEY, p. 22-1939-46 monthly figures for trade; in the November 1949 SURVEY, p. 24-September-December 1946 figures for the aforementioned divisions except trade; in the May 1947 SURVEY, p. 22-1939-40 monthly figures for the aforementioned divisions except trade.
Monthly data for the subgroups of mining and trade are available beginning 1939. Monthly data prior to 1947 are not available for the subgroups of transportation and public utilities; service, and the industry groups of retail trade (except for general merchandise stores for which data are available beginning 1939).
${ }^{2}$ The manufacturing division includes privately operated estab lishments engaged in the mechanical or chemical transformation of inorganic or organic substances into new products; such es tablishments are usually described as plants, factories, or mills which characteristically use power-driven machines and materials-handling equipment. Establishments engaged in as sembling component parts of manufactured products are also considered manufacturing if the new product is neither a structure nor other fixed improvement. Governmental manufacturing operations such as arsenals and navy yards are excluded from manufacturing and included with the Government division.
${ }^{3}$ The mining division includes establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; as well as various contract services, such as removal of overburden and tunneling and shafting in surface or underground mining and the drilling or acidizing of oil wells. Also included are establishments engaged in dressing, beneficiating, or concentration of ores. Smelting and refining of ores and production of coke from coal are included in manufacturing industries; transportation of petroleum products by common-carrier pipelines is included in the transportation and public utilities division.
${ }^{4}$ The contract construction division includes only those private firms engaged in the construction business which work on a contract basis for others. There are three major types of contractors included: General contractors who ordinarily assume responsibility for an entire construction project and may subcontract those portions of the job requiring special skills or equipment; special trade contractors, specializing in such activities as plumbing, painting, electrical work, carpentry, etc., installation of prefabricated building equipment and materials, etc., who may not only work under a subcontract for the general contractor, but may also work directly for the owner; and nonbuilding contractors primarily engaged in heavy construction, such as highways, bridges, airports, water-power projects, and marine construction. Excluded from this division is force-account construction which is classified according to the principal activity normally carried on in the establishment.
${ }^{5}$ The transportation and public utilities division covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services (except that radio and television broadcasting are classified in the service and miscellaneous division); or providing electricity, gas, steam, water, or sanitary service. Similar Government establishments are included with the Government division.
${ }^{6}$ Includes data not shown separately.
${ }^{7}$ Data refer to privately operated lines only. Note that the hours and earnings series prior to January 1953 (shown on pp. 67, 73 , and 77) pertain to both privately operated and government-operated establishments.
${ }^{8}$ The trucking and warehousing industry relates to establishments primarily engaged in local or long-distance trucking, transfer and draying services, or in the storage of farm products, furniture and other household goods, or commercial goods of any nature. The operation of fixed facilities for highway freight transportation is also included in this group.

PAGE 58
${ }^{1}$ See note 1 for p. 57.
${ }^{2}$ See note 5 for p. 57.
${ }^{3}$ The wholesale- and retail-trade division, includes establishments primarily engaged in the buying, selling, and rendering of services incidental to the sale of tangible goods as distinct from securities and from services.

The wholesale-trade subdivision includes all establishments engaged in selling merchandise to retailers; to other wholesalers; to institutions, restaurants, and hotels; and to other industrial users. Also included are full-service and limited-function wholesalers, agents and brokers, commission merchants, manufacturers' sales branches with or without stocks, sales
agents, assemblers and country buyers of farm products, and lumber and building-material wholesalers.

The retail-trade subdivision includes all types of establishments engaged in selling merchandise for personal or household consumption, and rendering services incidental to the sale of goods. (Note that hours and earnings data for retail trade, shown on pp. 67, 73, and 78, relate only to nonsupervisory employees in all retail trade industries except eating and drinking places.)
${ }^{4}$ Data for the wholesale- and retail-trade and service and miscellaneous divisions, beginning with 1939, are not comparable with data for earlier years because of the shift of the automotive repair service industry (involving 92,800 employees in 1939) from the trade to the service division.
${ }^{5}$ Includes data not shown separately.
${ }^{6}$ The finance, insurance, and real-estate division includes private establishments operating in the fields of finance (banks, security dealers, loan agencies, holding companies, and other finance agencies); insurance (insurance carriers and independent agents and brokers); and real estate (real-estate owners, including speculative builders, subdividers, and developers, and agents and brokers).
${ }^{7}$ The service and miscellaneous division includes establishments rendering services to individuals and business firms, such as hotels and other lodging places; personal, business, repair, and amusement services; medical, legal, engineering, and other professions; educational institutions, nonprofit membership organizations, and various other services. Agricultural services, forestry, fishing, and service establishments, not elsewhere classified, are also included. All governmentoperated establishments (such as hospitals, museums, and schools, etc.) and all domestic-service employees are excluded.

8 The govemment division includes Federal, State, and local governmental establishments performing legislative, executive, and judicial functions, as well as all government-operated establishments and institutions (arsenals, navy yards, hospitals, etc.), government corporations, and government force-account construction. The figures relate to civilian employment only. Federal government employment excludes employees of the Central lntelligence Agency.
${ }^{9}$ Not comparable with preceding data; see note 4 for this page.

10 Not comparable with earlier data; average for 1947 comparable with preceding figures in italics, 582,000 employees.
${ }^{11}$ Data reflect work stoppage.

## PAGE 59

${ }^{1}$ Sources: U. S. Department of Labor, Bureau of Labor Statistics (beginning September 1954); Board of Governors of the Federal Reserve System (prior to September 1954). The seasonal adjustment allowances have been computed on an overall basis for each major industry division with the exception of the manufacturing and the transportation and public-utilities divisions. For manufacturing, separate adjustments have been made for the salaried workers and the production workers by major industry groups. For the transportation and public-utilities divisions, separate adjustments have been made for transportation, communications, and other public-utilities groups. The seasonal adjustments have been brought in line with the Bureau of Labor Statistics data for all of the major industry groups beginning 1939.

The monthly estimates have been revised periodically to adjust to more recent benchmarks of actual employment. Since publication of the 1953 edition of BUSINESS STATISTICS, revisions have been made beginning 1939 in the finance, Government, and total nonagricultural divisions, and beginning 1945 in the service division. (See 8th paragraph of note 1 for p. 57.) Revised monthly figures are available upon request to the compiling source. Published figures for the following series may be found as noted: Monthly data for all series for 1951-52 appear in the 1955 edition of BUSINESS STATISTICS (revision for May 1951 for service, $5,237,000$ ); 1949-50 monthly data for construction, transportation and public utilities, and trade, in the 1953 volume ( 1950 revisions
for trade-October, 9,781,000; December, 9,831,000). Monthly data for 1939-46 for manufacturing and trade are shown on p. 23 of the December 1950 SURVEY; monthly data for 1946 for mining, contract construction, and transportation and public utilities, on p. 22 of the May 1950 SURVEY. Monthly figures for 1945 for all of the aforementioned series are shown in the 1949 STATISTICAL SUPPLEMENT.
${ }^{2}$ Data for the wholesale- and retail-trade and service divisions, beginning with 1939, are not comparable with data for earlier years because of the shift of the automotive repair service indus try (involving 92,800 employees in 1939) from the trade to the service division.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statis tics. The employment estimates and the employment indexes on p. 63 relate to all full-time and part-time production and related workers (prior to 1945, wage earners) in private manufacturing industries, who worked during, or received pay for, the pay period ending nearest the 15 th of the month. The weekly payroll index, also on p. 63, relates to the amount of payroll for the identical week. Governmental manufacturing operations such as arsenals and navy yards are excluded. "Production and related workers" include working foremen, and all nonsupervisory workers (including leadmen and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and watchman services, products development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with the above production operations. The term was substituted for wage earners in 1945 to conform to the terminology and standard definition of classes of workers in manufacturing industries formulated by the Division of Statistical Standards, U. S. Bureau of the Budget. The change has no appreciable effect on the comparability of the data, since there is very little difference in the definitions.

Effective September 1949, the production-worker employment series was revised as explained in the 6th paragraph of note 1 for p. 57. The descriptions of the industries within the manufacturing division are based on the 1945 Standard Industrial Classification, and generally adhere to the basic definitions. The series shown here include all major industrial groups, and selected principal industries included in the original reports.

In preparing employment estimates, the Bureau of Labor Sta tistics establishes a benchmark or level of employment, representing a complete count or an estimate with a satisfactory degree of accuracy, which is carried forward on the basis of monthly reports from a sample group of cooperating establishments. Estimates prepared since the last benchmark are reviewed and revised if any adjustment in the level is required. Currently, the benchmark period is the first quarter of the year.

Because the existence of new firms is not readily ascertainable, they are not introduced into the monthly sample until they have been in operation for some time. The lapse of time in taking into account new firms causes a downward bias. This bias is corrected in the periodic adjustments.

The level of the employment estimates beginning with 1939 is determined mainly by employment covered under the social-security program, relating to workers covered by State unemployment compensation programs, and data from the Bureau of OldAge and Survivors lnsurance on employment in firms exempt from State unemployment insurance laws because of their size. Prior to 1939, the estimates for individual industries were based on data from the Census of Manufactures for various years. Employment estimates for the individual industries and the employment and weekly payroll indexes, as well as data for the major groups and the totals, have been adjusted to first quarter 1956 benchmark levels.

Approximately 40,400 cooperating manufacturing establishments furnish monthly employment and payroll schedules, by mail, to the Bureau of Labor Statistics. The current employment statistics program is an integrated Federal-State project which provides industrial employment information on a national, State, and area basis.

Monthly data for 1949-52 are shown in the 1955 and 1953 editions of BUSINESS STATISTICS; monthly data for 1939.-46 (or 1941-46) for total manufacturing and the durable-goods industries are given on pp. 17 and 24 of the September 1950 SURVEY (cor-
rection: Monthly average employment for 1941 -primary metal industries and fabricated metal products combined, $1,688,000$; ordnance and accessories, 57,000 ); similar data for nondurablegoods industries appear on pp. 23-24 of the October 1950 SURVEY. For unrevised monthly data for 1939-40 not republished in the September and October 1950 SURVEYS, see p. 22 of the December 1945 SURVEY.

Monthly data beginning 1939 (or 1947) for the selected indus tries shown here and additional industries are available in separate summary sheets from the Division of Manpower and Employment Statistics, Bureau of Labor Statistics, U. S. Department of Labor.
${ }^{4}$ Not comparable with earlier data; average for 1939 comparable with preceding figures in italics, $3,611,000$ employees.

## PAGE 60

${ }^{1}$ See note 3 for p. 59.
${ }^{2}$ Data for 1939-46 for lumber and wood products include figures for furniture and fixtures.
${ }^{3}$ Data for 1939-46 for primary metal industries include figures for fabricated metal products.
${ }^{4}$ Includes data not shown separately.
${ }^{5}$ The italicized production-worker figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1939 on old basis comparable with italicized figures are as follows: Machinery, except electric, 529,000 ; electrical machinery, 259,000; transportation equipment (total), 561,000.
${ }^{6}$ Monthly data for September 1945-December 1948 have been revised since publication of the 1953 edition of BUSINESS STATISTICS and are available upon request.

## PAGE 61

${ }^{1}$ See note 3 for p. 59.
${ }^{2}$ Data for 1939-46 for miscellaneous manufacturing include figures for instruments and related products.
${ }^{3}$ lncludes data not shown separately.
4 Data beginning 1947 are not comparable with earlier figures; 1947 monthly average on old basis is 220,000 for canning and preserving and 235,000 for bakery products.
${ }^{5}$ Data beginning 1947 reflect the adoption of the most recent Standard Industrial Classification for manufacturing and, therefore, are not compa rable with earlier figures.
${ }^{6}$ Not comparable with earlier data; average for 1939 comparable with preceding figures in italics, $4,581,000$ workers.

## PAGE 62

${ }^{1}$ See note 3 for p. 59.
${ }^{2}$ The italicized production-worker figures represent data on old basis and are not comparable with succeeding figures on new basis. Overlapping monthly averages on old basis comparable with italicized figures are as follows: Pulp, paper, and paperboard mills, 1947-199,000; chemicals and allied products (total), 1939-288,000; products of petroleum and coal (total), 1939-106,000; petroleum refining, 1939-73,000; rubber products (total), 1939-121,000. For tires and inner tubes, the December 1938 figure on the old basis and the January 1939 figure on the new basis are the same, 52,000 .
${ }^{3}$ See notes 1 and 3 for p. 59.
${ }^{4}$ Not comparable with earlier data; average number of workers for 1939 comparable with preceding figures in italics-durablegoods, 3,611,000; nondurable-goods, 4,581,000.
${ }^{5}$ Data beginning 1947 reflect adjustments to the first quarter 1951 benchmark and are not strictly comparable with earlier figures.

PAGE 63
${ }^{1}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The production-worker employment index is computed from the production-worker employment estimates using the average for the years 1947-49 as a base. It is the number of production workers expressed as a percentage of the average employment in the base period 1947-49. The basic revisions (beginning 1939) made by the Bureau of Labor Statistics in the employment data a re reflected in these figures; see note 1 for p. 57. The earlier figures were correspondingly revised so as to provide a continuous series of monthly data back to 1919 for the unadjusted series.

Monthly data for 1947-52 are shown in the 1955 and 1953 editions of BUSINESS STATISTICS (for 1947-48, see footnote in the 1955 volume); monthly data for 1919-46 are shown on p. 20 of the October 1952 SURVEY.
${ }^{2}$ Sources: U. S. Department of Labor, Bureau of Labor Statis tics (beginning September 1954); Board of Governors of the Federal Reserve System (prior to September 1954). The indexes adjusted for seasonal variation are derived from the unadjusted production-worker series (see note 1 above and note 3 for p. 59). Monthly data for 1951-52 are shown in the 1955 edition of BUSINESS STATIST1CS; monthly data for 1919-46 are shown on p. 20 of the October 1952 SURVEY. Revised figures for 1947-50 are. available upon request to the Division of Manpower and Employment Statistics, Bureau of Labor Statistics.
${ }^{3}$ Source: U. S. Civil Service Commission. Data represent the number of civil employees in the executive branch of the Federal Government, including, for pertinent periods, administrative personnel paid from emergency relief appropriations. Figures include both permanent and temporary employees (full-time and part-time basis) and occupants of classified positions (subject to competitive examination under civil-service law) and unclassified positions (excepted from competitive examination by law and Executive Order). Figures do not include project personnel paid from emergency relief appropriations, enrollees of the Civilian Conservation Corps, military (uniformed) personnel, employees of the judicial and legislative branches of the Federal Government, the employees of the District of Columbia Government, or (because of security reasons) employees of the Central Intelligence Agency.

The data prior to 1937 represent the number of persons having Federal appointments on the last day of the month regardless of whether or not they received any pay in the month in which they were reported; data for 1937 through May 1943 relate to the number of employees who received pay during the last payroll period of the month. Beginning June 1943, the data relate to the number of persons in active-duty status on the last day of the calendar month (plus intermittent workers who worked at any time during the month) and who are paid for personal services rendered for the Federal Government, regardless of the nature of appointment or method of payment, and cover employees in continental United States only (excluding Alaska and Canal Zone); earlier data include some off-continent employees. Beginning June 1937, data exclude persons serving without compensation, persons on leave without pay for scheduled periods longer than 30 days, persons in leave status after reduction-in-force, casual workers, and trainees or workers whose pay is in the nature of an allowance. (There is no satisfactory overlap between the figures prior to June 1937 and those beginning that month.) Temporary substitute Post Office employees hired during the Christmas rush are included; for the years 1953-56, respectively, estimates for the month of $\mathrm{De}^{-}$ cember for such employees hired in all areas are as follows (thousands): 289; 304; 284; 285.

Monthly data beginning January 1939 have been revised by the compiling source to include third-class postmasters, special delivery messengers, and other part-time workers of the Post Office Department not reported previously; in January 1939, there were approximately 19,800 such employees. For monthly figures beginning January 1941, further adjustments have been made to incorporate the following changes in coverage: (1) Employees of the General Accounting Office and the Government Printing Of fice, formerly counted as personnel of the executive branch, were transferred to the legislative branch (the number transferred in January 1941 totaled 12,200 persons); (2) employees of Howard

University and Gallaudet College (Columbia Institute for the Deaf), not now classified as Federal employees, were omitted (January 1941 employment, 500 persons); (3) approximately 17,100 employees of the National Youth Administration were included in January 1941 for the first time. In addition to the aforementioned adjustments, other small groups of employees now classified as Federal employees, aIthough paid from funds appropriated to the District of Columbia, are included in the totals shown here. Also, see note 4 for this page regarding the expansion of the Washington, D. C., metropolitan area. The comparability of the data was further affected in June 1943 (by approximately 2 percent) by the exclusion of employees on terminal leave.

Monthly data for 1951-52 are shown in the 1955 edition of BUSINESS STATISTICS (revision: September 1952, Wash., D. C., metropolitan area, 234,000.)

Revised monthly data for both series for 1939-50 are available upon request; monthly figures for 1938 (not adjusted for the changes in coverage previously noted) are available in the 1942 SUPPLEMENT. Revised monthly figures for 1933-37 and monthly data back to 1929 are available upon request.
${ }^{4}$ Beginning December 1949, the Washington, D. C., metropolitan area comprises the District of Columbia; Alexandria and Falls Church Cities, Arlington and Fairfax Counties, Virginia; and all of Montgomery and Prince Georges Counties, Maryland. For the period December 1941-November 1949, only parts of these counties were included; prior to December 1941, the figures cover employment in Washington, D. C., only.
${ }^{5}$ Source: Interstate Commerce Commission. Data for number of employees represent the number of persons (except executives, officials, and staff assistants) employed by class 1 railways, including the switching and terminal companies of these railways. Figures are for those on the payroll at the middle of the month. lt should be noted that these data differ from the data used in computing the indexes shown on p. 63 and described below.

Monthly data for the series on number of employees for 192952 will be found in earlier editions of BUSINESS STATISTICS (back to the 1936 volume) as indicated at top of p. 197 of this volume, and on p. 20 of the November 1936 SURVEY. The monthly averages include, in some years, comparatively small revisions that cannot be allocated by months.

The indexes of railway employees are based on data for all employees (including executives, officials, and staff assistants) of class 1 railways, excluding switching and terminal companies. The figures are for the number on the payroll at the middle of the month. The base period for the unadjusted series is the average for the 36 months of $1947-49$; the adjusted index is computed by relating the data for each month to the average for 1947-49 for the corresponding month.

Monthly data prior to 1953 , comparable with the present series, are not available. Monthly indexes for 1941-52, based on the years 1935-39, will be found in earlier editions of BUSINESS STATISTICS (see p. 197 for reference note mentioned above).
${ }^{6}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The index represents the production-worker average weekly payroll expressed as a percentage of the average weekly payroll for the 1947-49 period. Payrolls are the private, weekly payrolls of both full- and part-time production and related workers who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month, before deductions for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues. The data include pay for sick leave, holidays, and vacations taken, but exclude cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, contributions to welfare funds and insurance or pension plans, and bonuses, unless earned and paid regularly each pay period. For the definition of production workers, see note 3 for p. 59.

Monthly data for 1947-52 are shown in the 1955 and 1953 editions of BUSINESS STATISTICS (figures for 1947-48 appear in the pertinent footnote in the 1955 volume). Monthly data for 1919-46 are shown on p. 19 of the October 1952 SURVEY.
${ }^{7}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. See the 6 th paragraph of note 1 for $p .57$ for a description of the basic revisions made in the hours and earnings series beginning 1947. The estimates for hours and earnings beginning

April 1955 (as shown in the present volume and first published in the June 1957 SURVEY) have been revised to adjust to the 1st quarter 1956 benchmark.

The current series on gross average hourly and weekly earnings and average hours per worker for the manufacturing and the nonmanufacturing industries are based on monthly reports from over 150 thousand cooperating establishments employing over 20 million workers (as of end of 1956); figures cover both full- and part-time employees who worked during, or received pay for, any part of the pay period ending nearest the 15 th of the month. The data for the series are reported on the same schedules as those used to obtain employment and payroll information described in note 3 for p. 59. However, hours and earnings estimates are based on a slightly smaller sample than that for employment estimates because some establishments which report employment do not furnish payroll and man-hour information. The data relate to nonsupervisory employees and to production workers only. The reporting establishments are classified into significant groups on the basis of product or activity as determined from annual sales data. The number of establishments reporting varies from month to month and the averages are therefore not strictly comparable. The sample, however, is believed to be adequate in virtually all instances to indicate the general movement of hours and earnings.

Average earnings do not represent full-time earnings since they are based on data for both part-time and full-time employment. They include premium pay for overtime and late-shift. work and sick leave and vacation pay, but exclude special bonuses, cash payments for vacations, and other items. (See note 8 for this page relating to average overtime hours worked, and note 2 for p .74 for average hourly earnings excluding overtime.) Earnings are reported prior to deductions for old-age and unemployment insurance, withholding tax, bonds, union dues, and special clothing allowances. The number of nours reported represents hours worked or paid for, including hours paid for holidays, sick leave, and vacation taken; if employees elect to work during a vacation period, only actual hours worked by such employees are included. Where reporting firms use a two-week or longer pay period, reports are edited to reduce the payroll and man-hour aggregates to their proper equivalents for a weekly period.

The average hourly earnings are on a "gross" basis; that is, they reflect not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive basis. Also, the changing employment of workers as between relatively high-paid and low-paid work affects the general average of hourly earnings. The fact that large establishments predominate in the BLS sample may affect somewhat the levels of the average earnings figures for some industries, but this has no measurable effect on the trends in average hourly earnings. Averages of hourly earnings should not be confused with wage rates, which represent the rates stipulated for a given unit of work or time, while earnings refer to the actual return to the worker for a stated period of time. Owing to the exclusion of irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and of earnings for those employees not covered under the production-worker or nonsupervisory employees definitions, the average earnings series should not be interpreted as representing total labor costs on the part of the employer.

Average weekly hours for an individual industry are computed by dividing the sum of the man-hour totals (reported by plants classified in that industry) by the total number of production workers (reported for the same establishments). Similarly, average hourly earnings are obtained by dividing the reported payroll total by the reported man-hour total. Estimates for both series for major industry groups are weighted averages of the figures for individual industries. Beginning 1951, the hourly earnings data have been rounded to the nearest cent, rather than to the nearest mill as formerly.

Gross average weekly earnings are computed by multiplying gross average hourly earnings by average weekly hours. In addition to the factors mentioned above, which exert varying influences upon gross average hourly earnings, gross average weekly earnings are affected by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism. Weekly earnings, although sometimes incor-
rectly termed "take-home pay" are not the same as the amount that is actually available to workers for spending, since no deduction has been made for income and social-security taxes, group insurance, occupational supplies, and union dues.

The series shown in the SURVEY and in this volume include data for all major manufacturing groups, selected manufacturing industries, and nonmanufacturing groups; for 1951 and 1952 monthly data for these series, see the 1955 edition of BUSINESS STATISTlCS. The monthly "Employment and Earnings" report of the U. S. Department of Labor includes separate data for additional industries. Continuity of the various series has been maintained on a monthly basis as follows: Hours worked and hourly earn-ings-beginning 1932 for total manufacturing, durable-goods industries, and nondurable-goods industries; weekly earnings-beginning 1919 for total manufacturing and beginning 1923 for dura-ble-goods and nondurable-goods industries. Monthly data prior to 1947 for the above-mentioned series are available in the 1949 edition of BUSINESS STATISTICS and earlier issues. Revisions for September to December 1946 and 1946 monthly average, respectively: Total manufacturing-weekly earnings, \$45.54; \$45.97; \$ 46.07; \$ 47.32; \$ 43.82; hourly earnings, \$ 1.130; \$ 1.135; \$ 1. 146; \$ 1.157; \$ 1.086; nondurable-goods-weekly earnings, \$ 42.52; $\$ 42.73 ; \$ 43.32 ; \$ 44.84 ; \$ 41.14$; hourly earnings, $\$ 1.055 ; \$ 1.063$; \$ 1.075; \$ 1.091; \$ 1.015; durable-goods-hourly earnings, December 1946 only, \$ 1.215.)

Data for the industry groups and the individual industries of the manufacturing and nonmanufacturing divisions are available on the old basis through 1948 in the 1949 edition of BUSINESS STATISTICS and earlier issues. The revisions described in note 1 for p. 57 have resulted in a lack of historical continuity prior to 1947 for many industries. Comparable monthly data prior to 1947 are available for the following manufacturing industries: Blast furnaces, steel works, and rolling mills; primary smelting and refining of nonferrous metals; automobiles; ship and boat building and repairing; canning and preserving; bakery products; pulp, paper, and paperboard mills; petroleum refining; tires and inner tubes; footwear, except rubber.

For nonmanufacturing, comparable monthly data prior to 1947 are available for the following series: Metal mining; anthracite mining; bituminous-coal mining; nonmetallic mining and quarrying; petroleum and natural-gas production (except contract services); building construction; local railways and bus lines; telephone; telegraph; retail trade; hotels (year-round); and laundries.
${ }^{8}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Overtime hours are those for which premiums are paid because the hours are in excess of the number of hours of either the straight-time workday or the workweek. Weekend and holiday hours are included only if premium wage rates are paid. Hours for which only shift differential, hazard, incentive, or other types of premiums are paid are excluded.

The concept covers only hours worked at a rate higher than straight time and thus includes premium hours worked even when the weekly total is below 40 . This may occur in industries where the normal workweek is under 40 hours (such as printing or apparel) or where employment falls under the provisions of the Walsh-Healey Public Contracts Act of 1936 , which requires (on work done under Federal Government contract) the payment of premium rates when more than 8 hours are worked on any 1 day, regardless of the weekly total. On the other hand, hours paid for at double time for holidays actually worked, when straight time is paid for holidays not worked, are not within the concept. Also excluded are hours worked beyond the normal workweek which are not compensated at premium rates. This may occur in manufacturing under exemptions granted under the Fair Labor Standards Act.

Monthly data prior to January 1956 are not available.
${ }^{9}$ The italicized weekly hours figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Lumber and wood products, except furniture (total), 42.2; sawmills and planing mills, 41.8.

10 The method of reporting employees was changed in June 1937 (see 2d paragraph of note 3 for this page); the average shown is for 7 months, June-December. Averages for January-

May (in thousands), strictly comparable with earlier data are as follows: United States total, 856; Washington, D. C., 115.
${ }^{11}$ The method of reporting employees was changed in 1939; see 3 d paragraph of note 3 for this page.

12 See 3d paragraph of note 3 for this page relating to changes in employees covered, and note 4 for this page regarding expansion of the Washington, D. C., area.
${ }^{13}$ The monthly data included in the averages are not entirely consistent; see note 3 ( 2 d and 3d paragraphs) for this page.

## PAGE 64

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized weekly hours figures represent data on old basis and are not strictly comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Furniture and fixtures, 41.7 ; stone, clay, and glass, 40.5 ; machinery (except electrical), 41.3; electrical machinery, 40.2.
${ }^{3}$ Includes data not shown separately.

## PAGE 65

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ See note 8 for p. 63.
${ }^{3}$ The italicized weekly hours figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Food (total), 43.0 (same as new series); tobacco, 38.6; textile-mill products, 39.5 .

4 Includes data not shown separately.
${ }^{5}$ Data beginning 1951 represent a new series and are not comparable with those for earlier periods. Figures for JanuaryMarch 1951 comparable with data through 1950 are as follows (hours): Bakery products $-41.3 ; 41.5 ; 41.5$; apparel, etc. -36.9 ; 37.5 ; 37.4. Figures for January-March 1951 for new series comparable with data beginning 1951 are as follows (hours): Bakery products $-41.4 ; 41.5 ; 41.0 ;$ apparel, etc. $-36.8 ; 37.5 ; 37.3$.
${ }^{6}$ Annual averages for 1932-38 relate to the fabric subgroup; average for 1939 for the fabric subgroup is 36.6 hours (same as for the textile-mill products group).

## PAGE 66

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized weekly hours figures represent data on old basis and are not strictly comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows (hours): Chemicals and allied products (total), 41.2; products of petroleum and coal (total), 40.5; rubber products (total), 39.7; leather and leather products (total), 38.7.
${ }^{3}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. Average for $1939 \mathrm{com}-$ parable with italicized figures is 40.0 hours.
${ }^{4}$ Data are for petroleum and natural-gas production, excluding contract services.

## PAGE 67

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Data beginning January 1953 include only privately operated establishments; prior to 1953 the figures relate to both privately operated and government-operated lines. Data for Janu-ary-March 1953 comparable with earlier averages are as follows (hours): 44.5; 44.8; 44.9. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{3}$ The italicized figures (not comparable with succeeding data) relate to all employees except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures (through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 194.5 are based on revised and improved procedure for reporting (April 1945 figure on new basis is 40.6 hours and on old basis, 42.9 hours).
${ }^{4}$ Data through 1951 relate mainly to all land-line employees, excluding employees compensated on a commission basis, general and divisional headquarters personnel, trainees in school, and messengers. Beginning 1952, figures relate to domestic employ ees, except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are as follows (hours): 43.8; 43.7; 43.8. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January-March and June-December.
${ }^{5}$ Data beginning 1938 are not strictly comparable with earlier data (in italics) which include figures for corporation officers, executives, and other employees whose duties are mainly supervisory. Figure for December 1937 comparable with the average shown for the year 1938 is 42.7 hours.
${ }^{6}$ Includes data not shown separately.
${ }^{7}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly average for 1939 on old basis is 38.8 hours.
${ }^{8}$ Average for 7 months, June-December.
${ }^{9}$ Average for 9 months, April-December. See also note 3 for this page.

10 Average for 11 months, February-December. Data not available prior to February 1946.
${ }^{11}$ Data beginning 1948 relate to both publicly and privately financed projects and to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and only on-site workers. Data for JanuaryMarch 1948 comparable with earlier figures are as follows (hours): Total-37.3; 36.9; 37.4; nonbuilding-37.8; 38.5; 38.9; building-37.2; 36.6; 37.1 .

## PAGE 68

${ }^{1}$ Source: U. S. Department of Labor, Bureau of Labor Statis tics. Data include all known work stoppages arising out of labormanagement disputes involving six or more workers and continuing a full day or shift, or longer, whether initiated by the workers or by the employers. In addition, jurisdictional and sympathy strikes involving work stoppage are also covered. The data are based on notices or leads regarding labor disputes appearing in daily papers and trade journals, as well as records from Federal and State agencies that deal with employer-employee disputes, various employers and employer associations, international unions, and construction firms doing work for the Atomic Energy Commission. Questionnaires are sent to representatives of parties in the disputes asking for detailed and authentic information to substantiate these published reports.

The figures on "man-days idle" and "workers involved" cover all workers made idle in establishments, even though they may not be active participants or supporters of the controversy. They do not measure the indirect or secondary effects on other establishments or industries whose employees are made idle as a result of material or service shortages. The figures for 'in effect during the month" include data for stoppages beginning in the specified month and those continuing from the preceding months.

Monthly data for 1934-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. Monthly figures for 1927-33 are available upon request.
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Employment Security (formerly from the Federal Security Agency, Social Security Administration). A placement represents a verified entry
of a worker on a job as a direct result of employment service activities. Data prior to 1939 relate to continental United States, Alaska, and Hawaii; for 1939-49 to continental United States only. Beginning 1950, the figures refer to total nonagricultural placements in the United States and Territories (monthly average for 1949 comparable with subsequent years, 372,000 persons). The forestry and fishing industry is excluded for 1936-39.

Monthly data for 1941-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision for July 1952, 556,000.) Monthly figures for nonagricultural placements for 1935-40 are available upon request. The data shown in the 1942 edition of BUSINESS STATISTICS include agricultural as well as nonagricultural pIacements and, therefore, are not comparable with figures in later volumes. Beginning in 1943, agricultural placements were made by the U.S. Employment Service only in cooperation with the U. S. Department of Agriculture Extension Service.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Employment Security (formerly from the Federal Security Agency, Social Security Administration). Data cover operations under State unemployment insurance laws and, beginning January 1955, also cover operations under the program of Unemployment Compensation for Federal Employees (Title XV of the Social Security Act as amended). Thus, unemployment insurance programs under the Veterans' Readjustment Assistance Act of 1952, the Servicemen's Readjustment Act of 1944, and the Railroad Unemployment Insurance Act are excluded. The figures, except as noted, include operations in all States in which benefits were payable, as well as in the District of Columbia, Alaska, and Hawaii (latter two not included in figures for number of insured unemployed persons). For data prior to 1939 , it should be recognized that the States initiated benefit payments at varying times. Benefits were payable first in Wisconsin, and in 1936 and 1937 that was the only State making such payments. The total number of States paying unemployment benefits in later years is as follows: 23 States in January 1938; 25 in April 1938; 29 in September 1938; 31 in December 1938; and in January 1939, all States (except Illinois and Montana) and the District of Columbia, Alaska, and Hawaii. Benefits were first payable in Illinois and Montana in July 1939. The South Dakota agency suspended operations in 1939 from July 28 to September 26.

A direct comparison of insured unemployment statistics with estimates of total unemployment (as compiled by U. S. Department of Commerce, and shown on p. 56) cannot be made because of differences in coverage and definition. The main groups of workers excluded from the insured unemployment series are agricultural, domestics in private homes, employees of nonprofit organizations, unpaid family workers, self-employed, and railroad workers. Also, many State unemployment insurance laws exclude workers in firms with fewer than 4 workers, even though such firms are in a "covered" industry. Insured unemployment for a given month is the average weekly number of persons filing for one or more weeks of unemployment under State and UCFE programs during that month. At the end of 1956, approximately $42,000,000$ workers were covered by State unemployment insurance laws and the program of Unemployment Compensation for Federal Employees.

It should also be noted that unemployed persons who have exhausted their benefit rights are not covered; in times of prolonged unemployment, the loss of benefit rights could cause a marked divergence between the trends of insured unemployment and total unemployment.

An "initial claim" is the first claim in a benefit year filed by a worker after losing his job, or the first claim filed at the beginning of a second or subsequent period of unemployment in the same benefit year. A "benefit year" is usually a 1 -year or a 52 week period within which a worker may receive his annual benefits, if eligible. Initial claims as such do not result in benefit payments but are just the first step in the process; i.e., they establish the starting date for any insured unemployment which may result if the claimant is unemployed for 1 week or longer. The data through 1948 for initial claims include transitional claims (i.e., claims filed by a person, already in a claimant status, for determination of benefit rights in a new benefit year). Effective with July 1949, transitional claims are excluded and the data, therefore, represent more closely instances of new unemploy-
ment. (Note that the figures in the 1953 edition of BUSINESS STATISTICS include transitional claims for all years.)

The insured unemployment series (covering continental U. S. only; Alaska and Hawaii excluded) is derived by adjusting the number of weeks of unemployment for the lag between the week of unemployment and the time the claim is filed, so that the adjusted series refers to the week in which unemployment actually occurred. The monthly figures are averages of weekly data adjusted for split weeks in the month on the basis of a 5 -day week.

Data for weekly average number of beneficiaries receiving benefit payments are estimated for 1938; for 1939 they relate to the number of claimants receiving benefits during the week ended nearest the middle of the month. Monthly figures represent the average weekly number of beneficiaries, computed from weeks compensated in the calendar month. With the exception of the 1938 and 1939 averages (which are based on estimated data for some months), the annual averages represent the average weekly number based on weeks compensated in the calendar year rather than averages of the monthly figures.

Monthly averages for amount of benefit payments for 1936 and 1937 represent gross amount of benefit payments and contain no adjustment for voided benefit checks; monthly averages beginning 1938 are based on net amounts adjusted to exclude such checks.

Monthly data for 1951-52 for all series are shown in the 1955 edition of BUSINESS STATISTICS; monthly data for average weekly insured unemployment (for 1947-50) and monthly figures for initial claims, excluding transitional claims (for July 1949-December 1950) are available upon request. Monthly data for benefit payments for 1939-50 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Employment Security. Data relate to benefits payable from Federal funds under the Veterans' Readjustment Assistance Act of 1952 and operating in all States, the District of Columbia, Alaska, Hawaii, Virgin Islands, and Puerto Rico (except as noted); they do not include veterans receiving benefits under the Servicemen's Readjustment Act of 1944. Effective October 15, 1952, readjustment allowances were available to veterans with military service on or after June 27, 1950. Benefit payments are made in accordance with the provisions of the employment-security laws of the States insofar as those laws are applicable. The maximum allowance for any week of total unemployment is $\$ 26$, payable for 26 weeks. If the veteran receives less than $\$ 26$ per week under this program as a supplement to State benefits or because of partial unemployment, he may continue to receive benefits, when eligible, for more than 26 weeks until a maximum of $\$ 676$ has been received.

Data for "initial claims" relate to the first claim filed by a veteran following his discharge from the Armed Services and to additional claims (those filed in a second or subsequent period of unemployment) but exclude, through June 1956, the number of transitional claims so as to represent more closely instances of new unemployment. No waiting period is required. Figures for initial claims and insured unemployment (covering continental U. S. only) exclude claims from veterans which were filed to supplement benefits under State or railroad unemployment insurance programs; this is done to avoid duplication of claims counted under State programs (shown also on p. 68). The number of beneficiaries and the amount of payments include all veterans receiving unemployment compensation payments under the VRA Act of 1952 , whether or not the payments supplement benefits under either State or railroad insurance programs. Monthly figures for "amounts of payments" are gross and are not adjusted for voided checks; the monthly averages, however, represent "net" payments.

The Federal-State unemployment insurance program was expanded during 1952 with the enactment by the $82 d$ Congress of Public Law 550-Veterans' Readjustment Assistance Act of 1952providing funds for unemployment benefit payments to eligible unemployed veterans who had service on or after June 27, 1950. This program is administered by the 48 States, Alaska, Hawaii, Puerto Rico, Virgin Islands, and the District of Columbia under agreements with the Secretary of Labor. The program is financed with Federal funds which are advanced to each of the States listed above to cover the benefits paid to veterans under the Act. These benefit payments are made in accordance with
the provisions of the employment-security laws of the States insofar as those laws are applicable.

The veteran under Title IV is entitled to receive $\$ 26$ for each week of total unemployment until a maximum of $\$ 676$ has been paid. If the veteran has benefit rights under the State Unemployment Compensation Law or a Railroad Unemployment Insurance Law, he must exhaust those benefits before being eligible to receive Title IV payments; or if his benefit rights under those Acts are less than $\$ 26$ per week, he is entitled to a supplement to make up the difference between his State benefit right and the $\$ 26$. If a veteran receives less than $\$ 26$ per week under this program (either as a supplement to other benefits or for partial unemployment) he is entitled to benefits, if otherwise eligible, for more than 26 weeks, i.e., until the maximum of $\$ 676$ has been received.

Statistics for the veterans' unemployment insurance program under the Servicemen's Readjustment Act of 1944 for the period 1944-52 are shown in the 1949 and 1953 issues of BUSINESS STATISTICS. Figures for 1945-52 for the number of claims paid to veterans receiving self-employment allowances and the monthly average amount of payments under the Servicemen's Readjustment Act of 1944 are shown on p. 222 of the 1953 edition of BUSINESS STATISTICS.

## ${ }^{5}$ Average for 6 months, July-December.

${ }^{6}$ Average based on estimates for 11 months, February-Decem ber.
${ }^{7}$ Average for 1939 relates to persons receiving benefits during week ended nearest the middle of the month.
${ }^{8}$ Average for 6 months, July-December. Beginning July 1949, figures exclude transitional claims; for the last 6 months of 1949 transitional claims averaged less than one percent of total initial claims including transitional claims. (The revised monthly average for January -December 1949, including transitional claims and thus comparable with earlier averages, is $1,470,000$ claims.)
${ }^{9}$ Beginning August 1950, the average weekly number of beneficiaries is based on a 5-day workweek rather than the calendar week; data, therefore, are not strictly comparable with those for earlier periods.
${ }^{10}$ Average for 3 months, October-December.
${ }^{11}$ Average for 2 months, November-December.
${ }^{12}$ Beginning January 1955, the figures (except for insured unemployment) include Federal employees; such employees were not covered in previous years. The figures for insured unemployment cover Federal employees beginning March 1955; experience for January and February shows scattered data, not valid for comparison with later figures. Monthly data, comparable with earlier figures, i, e., excluding Federal employees, are as follows: January 1955-initial claims, 1,490,000; average weekly beneficiaries, 1,668,000; payments, $\$ 170,575,000$; March 1955 -insured unemployment, 1,657,000. The 1955 average for insured unemployment is based on 12 months.

13 Beginning July 1956, figures for initial claims include transitional claims; such claims are excluded from earlier data. In June 1956, the number of transitional claims totaled 267. The monthly average for 1956 is based on total claims including transitional claims.

## PAGE 69

${ }^{1}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The rates are derived from monthly reports from a varying number of representative manufacturing establishments. "Labor turnover," as used in this series, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms. All groups of employees, i.e., both full- and part-time and both permanent and temporary, are included. Personnel actions of each type are cumulated on an industry basis and expressed as a percentage of employment in the industry. Data are obtained each month from a representative sample of establishments by means of a mail questionnaire.
In June 1929, the first month for which comparable data are available, the estimates were based on approximately 400 man-
ufacturing establishments employing about 700,000 workers. The scope of the survey has been gradually broadened and in December 1956 the reporting sample included 10,200 manufacturing establishments which employed approximately 5,994,000 workers. The major industries excluded from the sample are as follows: Canning and preserving; printing and publishing (since April 1943); women's and misses' outerwear; and fertilizer. The data represent a general rate for each month for all manufacturing industries combined, weighted by estimated employment in major industry groups. Separate data for 91 individual manufacturing industries and 8 nonmanufacturing industries (in mining and communications) are included in the original monthly report, "Employment and Earnings." The rates beginning 1943 relate to all employees, whereas earlier data relate to factory workers, or wage earners, only.
In December 1949 the labor-turnover series were revised to use the Standard Industrial Classification (1945) coding structure. As a result, changes were made in the definitions of some industries and new industrial groupings were provided. From 1943 through 1949, the industry definitions used were in accordance with the Social Security Board classification system (1942). Prior to 1943, firms were coded in accordance with the Census of Manufactures industrial classification system. Also, in December 1949, weighting was introduced in the computation of industry-group rates. The rates for each industry group are obtained by weighting the rate of each component industry in proportion to employment in these industries. The comparability of the data with previous data for manufacturing as a whole (shown here) is not affected.

A brief statement of the method of computation is as follows: For each item of labor turnover the total number of personnel changes reported during a month by establishments in the sample for each industry is divided by the total number of employees who worked during or received pay for any part of the pay period ending nearest the 15 th of the month. The result so obtained is multiplied by 100 . For example, in an industry sample, the total number of employees who worked during or received pay for the week of January $12-18$ was reported as 25,498 . During the period January 1-31, in all the reporting firms a total of 284 employees quit. The quit rate for the industry is:

$$
\frac{284}{25,498} \times 100=1.1
$$

Labor turnover rates from month-to-month are based on comparable but not necessarily identical samples. The rates for each industry group are obtained by weighting the rates for each component industry in proportion to employment in these industries. The rate for all manufacturing industries is weighted by employment in the major industry groups. In compiling the rates, the actual numbers for the several establishments are added and the general rates computed from the grand total. The definitions adopted by the Bureau of Labor Statistics for the various captions used in this table are as follows:
"Accessions" are all additions (permanent and temporary) to the work force during the calendar month, whether of new or rehired employees. Returns to work after lay-offs or after any unauthorized absence of at least 7 calendar days are considered accessions.
"Separations" are all terminations of employment during the calendar month which last at least 7 consecutive calendar days. (Persons on paid or unpaid authorized leave of absence are not counted as separations until it is definitely determined that such persons will not return to work.) Separations are further classified according to cause-i.e., quits (or voluntary separations); and discharges, lay-offs, and miscellaneous separations (collectively called involuntary separations).
"Discharges" are terminations of employment during the calendar month initiated by the employer for such reasons as incompetence, violation of rules, dishonesty, insubordination, laziness, and habitual absenteeism. Discharges also include terminations because of employees' inability to meet an organnzation's physical standards.
"Lay-offs" are terminations of employment during the calendar month (lasting or expected to last 7 consecutive calendar days) initiated by the employer, without prejudice to the workers, for such reasons as lack of orders or materials, conversion of plants, release of temporary help, and introduction of labor-
saving machinery or processes. A termination of employment with definite instructions to return to work within 7 days is not regarded as lay-off. Vacations or suspensions of operations during inventory periods are likewise not considered lay-offs.
"Quits" are terminations of employment during the calendar month initiated by employees for such reasons as acceptance of a job elsewhere, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement (except on company pension). Unauthorized absences of more than 7 consecutive calendar days are considered quits. Quits for the purpose of entering the Armed Forces are reported under miscellaneous separations. Prior to September 1940, miscellaneous separations are included with quits.
"Miscellaneous separations (including military)" are terminations of employment during the calendar month because of permanent disability, death, retirement on pension, or entrance into the Armed Forces. Prior to September 1940, miscellaneous separations are included with quits. Beginning September 1940, workers leaving to enter the Armed Services of the United States (and expected to serve more than 30 consecutive calendar days) are included. Transfers from one plant to another of the same company are not considered accessions or separations.

Month-to-month changes in total employment in manufacturing industries as indicated by labor-turnover rates are not precisely comparable with those shown by the compiling agency's reports on employment and payrolls, as the former are based on data for the entire month, while the latter, for the most part, refer to a 1 -week period ending nearest to the middle of the month. The turnover sample is not so extensive as that of the employment and payroll survey (proportionally fewer small plants are included) and certain industries are not covered, as indicated above. In addition, employment and payroll reports relate to production and related workers (wage earners prior to 1945) for all years.

Monthly data prior to 1952, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume, and on p. 20 of the April 1935 SURVEY. Revised data for February 1948 for lay-off rate and total separation rate are 1.7 and 4.7, respectively.
${ }^{2}$ See note 7 for p. 63.
${ }^{3}$ The italicized weekly earnings figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Lumber and wood products (except furniture)-total, $\$ 43.35$; sawmills and planing mills, $\$ 42.28$; furniture and fixtures, $\$ 44.36$; stone, clay, and glass products, $\$ 48.18$.
${ }^{4}$ Includes data not shown separately.
${ }^{5}$ Average for 7 months, June-December.
6 "Quits" and "miscellaneous separations" combined prior to January 1940.

PAGE 70
1 See note 7 for p. 63.
${ }^{2}$ The italicized figures represent data on old basis and are not strictly comparable with succeeding figures on new basis. Monthly averages on old basis comparable with italicized figures are as follows: Electrical machinery - 1947, \$51.40; automobiles-1934, $\$ 23.31$; food and kindred products (total) - 1947, \$48.27.
${ }^{3}$ Includes data not shown separately.

## PAGE 71

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Data beginning 1951 represent a new series and are not comparable with those for earlier periods. Figures for JanuaryMarch 1951 comparable with data through 1950: $\$ 54.68$; $\$ 55.49$; $\$ 55.32$. (Figures for January-March 1951 for new series comparable with averages beginning 1951: $\$ 56.30 ; \$ 56.86 ; \$ 55.76$. )
${ }^{3}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Tobacco manufactures, $\$ 36.67$; textile-mill products (total), $\$ 40.94$; paper and allied products (total), $\$ 50.15$; printing, publishing, and allied industries, $\$ 59.77$; chemicals and allied products (total), \$50.59.
${ }^{4}$ Includes data not shown separately.
$5^{5}$ For apparel and other finished textile products, there are three "breaks" in the continuity of the data. Figures for JanuaryMarch 1951 comparable with data for the period 1947-50 are $\$ 47.42, \$ 48.38$, and $\$ 47.27$; monthly ave rage for 1947 comparable with figures for 1939-46, \$37.29; monthly average for $1939 \mathrm{com}-$ parable with figures for 1932-38, \$18.10.

## PAGE 72

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Products of petroleum and coal (total), \$59.32; rubber products (total), \$55.97.
${ }^{3}$ There are two "breaks" in the continuity of the data for leather and leather products. Monthly average for 1947 comparable with data for $1939-46, \$ 40.73$; monthly average for 1939 comparable with data for 1932-38, \$19.09.
${ }^{4}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. The average for 1939 comparable with italicized figures is $\$ 28.05$.

5 Data are for petroleum and natural-gas production, excluding contract services.
${ }^{6}$ Data beginning 1948 relate to both publicly and privately financed projects and to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and on-site workers only. Data for January-March 1948 comparable with earlier figures are as follows: Total- $\$ 65.72$; $\$ 65.95$; \$66.65; nonbuilding - \$63.28; \$65.42; \$65.85; building - \$66.26; \$66.04; \$66.80.
${ }^{7}$ Average for 11 months, February-December. Data not available prior to February 1946.

## PAGE 73

## ${ }^{1}$ See note 7 for p. 63.

${ }^{2}$ Data beginning January 1953 relate to privately operated establishments; prior to 1953 the figures include both privately operated and government-operated lines. Data for January-March 1953, comparable with earlier averages, are as follows: $\$ 76.01$; $\$ 76.61 ; \$ 76.78$. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{3}$ The italicized figures (not comparable with succeeding data) relate to all employees except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures (through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 1945 are based on revised and improved procedure for reporting (April 1945 figure on new basis is $\$ 37.60$ and on old basis, $\$ 40.84$ ).
${ }^{4}$ Data through 1951 relate mainly to landline emplyees, excluding employees compensated on a commission basis, general and divisional headquarters personnel, trainees in school, and messengers. Beginning January 1952, figures relate to domestic employees except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are $\$ 70.52, \$ 70.36, \$ 70.52$, respectively. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January -March and June-December.
${ }^{5}$ Figures beginning 1938 are not strictly comparable with those for earlier periods which include data for corporation officers, executives, and other employees whose duties are mainly supervisory. (December 1937 figure comparable with the average shown for the year 1938 is $\$ 29.21$.)
${ }^{6}$ Includes data not shown separately.
${ }^{7}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly average for 1939 on old basis is $\$ 17.80$.
${ }^{8}$ Average for 7 months, June-December.
${ }^{9}$ Average for 9 months, April-December. See also note 3 for this page.

PAGE 74
${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Based on application of adjustment factors to gross average hourly earnings, the adjusted data eliminate only the earnings due to overtime paid for at one and one-half times the straight-time rates after 40 hours a week. The adjustment factors are used where overtime for individual workers typically consists of hours in excess of 40 per week paid at the rate of time and a half. These factors yield only approximate results and therefore may not be appropriate when exact figures are required. However, a rough approximation of the changes in earnings resulting from changes in wage rates may be derived from these data, after adjustment for interindustry shifts. No adjustment is made for other premium-payment provisions-for example, holiday work, late-shift work, and overtime rates other than time and one-half.

Monthly data prior to 1941 derived from these adjustment factors would not be strictly comparable with succeeding data because of varying provisions with regard to payment of overtime in the Fair Labor Standards Act prior to 1941. Monthly data for 1941-1952 are available upon request.
${ }^{3}$ The italicized figures are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Lumber and wood products, except furniture, $\$ 1.027$; sawmills and planing mills, $\$ 1.010$; furniture and fixtures, $\$ 1.063$; stone, clay, and glass products, $\$ 1.189$; machinery (except electrical), \$1.353; electrical machinery, \$1.279.
${ }^{4}$ Includes data not shown separately.

${ }^{2}$ The italicized hourly earnings figures are not comparable with succeeding figures on new basis. Monthly averages for 1947 on old basis comparable with italicized figures are as follows: Textile-mill products (total), $\$ 1.035$; paper and allied products (total), \$1.164; printing, publishing, and allied industries, \$1.491;
chemicals and allied products (total), $\& 1.228$; products of petroleum and coal (total), \$1.464; rubber products (total), \$1.409; leather and leather products (total), $\$ 1.054$.
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ For apparel and other finished textile products there are two "breaks" in the continuity of the data. Figures for January-March 1951 comparable with data for the period 1947-50 are $\$ 1.285$, $\$ 1.290$, and $\$ 1.264$; monthly average for 1947 comparable with figures for 1939-46, \$1.028.

## PAGE 77

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Data in italics are unweighted averages and are not strictly comparable with figures beginning 1939. Average for 1939 comparable with italicized figures is $\$ 0.705$.
${ }^{3}$ Data are for petroleum and natural-gas production, excluding contract services.
${ }^{4}$ Data beginning 1948 relate to both publicly and privately financed projects to both on- and off-site construction workers. Earlier figures through 1947 refer to privately financed projects and on-site workers only. Data for January-March 1948 comparable with earlier figures are as follows: Total- $\$ 1.761$; \$1.788; \$1.784; nonbuilding-\$1.676; \$ 1.700; \$1.692; building\$1.781; \$ 1.805; \$1.803.
${ }^{5}$ Data beginning January 1953 relate to privately operated establishments; prior to 1953 the figures include both privately operated and government-operated lines. Average hourly earnings for January, February, and March 1953, comparable with earlier averages shown, $\$ 1.71$. Employment figures (shown on p. 57) refer to privately operated lines only.
${ }^{6}$ The italicized figures (not comparable with succeeding data) relate to all employees, except corporation officers, executives, and other employees whose duties are mainly supervisory, whereas succeeding figures through May 1949) relate to all employees subject to the Fair Labor Standards Act. Beginning June 1949, data refer to nonsupervisory employees. Moreover, data subsequent to March 1945 are based on revised and improved procedure for reporting (April 1945 figure on new basis is $\$ 0.926$ and on old basis $\$ 0.952$ ).
${ }^{7}$ Data through 1951 relate mainly to landline employees, excluding employees compensated on a commission basis, general and divisional headquarters personnel, trainees in school, and messengers. Beginning January 1952, figures relate to domestic employees except messengers and those compensated on a commission basis. Figures for October-December 1951 comparable with later data are $\$ 1.610, \$ 1.609, \$ 1.609$, respectively. Figures are not available for April and May 1952 because of work stoppage; the average for 1952 is based on 10 months, January-March and June-December.

## ${ }^{8}$ Average for 7 months, June-December.

${ }^{9}$ Data beginning 1945 are not strictly comparable with earlier figures; January 1945 figure on old basis is $\$ 1.171$ and on new basis, $\$ 1.184$.
${ }^{10}$ Average for 9 months, April-December. See also note 6 for this page.
${ }^{11}$ Average for 11 months, February-December. Data not available prior to February 1946.

## PAGE 78

${ }^{1}$ See note 7 for p. 63.
${ }^{2}$ Figures beginning 1938 are not strictly comparable with those for earlier periods which include data for corporation officers, executives, and other employees whose duties are mainly supervisory. (December 1937 figure comparable with the average shown for the year 1938 is $\$ 0.684$ 。)
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ The italicized figures represent data on old basis and are not comparable with succeeding figures on new basis. Monthly averages on old basis comparable with italicized figures are as follows: General-merchandise stores, 1939-\$0.454; cleaning and dyeing plants, 1936-\$0.442.
${ }^{5}$ Source: Engineering News-Record. Figures represent the hourly wages of both common and skilled labor in the construction industry as of the 1 st of each month. The data are compiled from monthly reports of correspondents in 20 cities as follows: Atlanta, Baltimore, Birmingham, Boston, Chicago, Cincinnati, Cleveland, Dallas, Denver, Detroit, Kansas City, Los Angeles, Minneapolis, New Orleans, New York, PhiladeIphia, Saint Louis, San Francisco, and Seattle. Both the skilled and common rates are arithmetic averages of wages actually paid in the 20 cities and cover take-home pay plus fringe benefits including welfare fund, pension fund, and others. The skilled rates are averages for three principal trades (bricklayers, carpenters, and structural ironworkers); the common rates, averages for building and heavy construction.

Monthly data for 1932-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATIST1CS as indicated at top of p. 197 of this volume. Earlier figures appear on p. 19 of the September 1933 SURVEY. Revisions of the published data are as follows: Common rates-August 1930, \$0.562; February 1932, $\$ 0.452$; July 1932, $\$ 0.411$; skilled rates-July 1925, $\$ 1.22$; September 1929, \$1.37; May 1933, \$0.998; July 1936, \$1.159; August 1946, $\$ 1.824$.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average farm wage rate per hour without board and room for hired farm workers, and are based on information received by the regional offices in mailed questionnaires from 20,000 to 25,000 farmers reporting quarter ly. The farmer is asked to report the average wage rates being paid "at this time" in his locality. The "at this time" on the average probably refers to a date two or three days before the end of the month. Data are compiled as of the 1st of January, April, July, and October. To obtain quarterly rates for the country as a whole, quarterly rates for each region are weighted by estimates of the number of hired farm employees in the region. To obtain the annual averages, five quarterly rates (the 4 quarters of the year pius the first quarter of the following year) are weighted by the total number of hired farm employees reported for each of the quarters (except that for January of the specified year, the weight is an average based on half of the number of employees for the preceding December plus the number of employees in January, and, for January of the following year, an average of the number of employees in November plus half of the employees in December).

Quarterly data for 1948-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Comparable data prior to January 1948 are not available.
${ }^{7}$ Source: Interstate Commerce Commission. The data represent average hourly earnings of persons employed by the class I railroads, including the switching and terminal companies of these railroads. These data were computed from the number of persons (excluding executives, officials, and staff assistants) on the payroll at the middle of the month. Back pay resulting from retroactive wage agreements is not included in the monthly figures but is included in computing the monthly averages. The figures shown as monthly averages therefore may differ substantially in some years from the average of the monthly figures. The figures for 1932 reflect the 10 -percent wage cut made in that year. Restoration of $1 / 4$ of the wage cut was made effective July 1, 1934; an additional $1 / 4$ was restored on January 1, 1935; and the remainder, April 1, 1935. It should be borne in mind that the average hourly earnings are affected by changes in the proportion of employees in each wage group, as well as by changes in wage rates.

Monthly figures for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume and on p. 20 of the November 1936 SURVEY.
${ }^{8}$ Source: U. S. Department of Commerce, Bureau of Public Roads. Data, except for September 1932-December 1936, xepresent average hourly wage rates for unskilled (common) labor
in roadbuilding on Federal-aid projects. Since during the aforementioned period the number of Federal-aid projects was at a low level, wage rates based on such data are not representative. For that period, therefore, the wage rates shown are based on reports from projects of the following types: For October 1932September 1933, Emergency Highway Construction; October 1933December 1935, Public Works Highway projects; and JanuaryDecember 1936, Works Program Highway and Grade-Crossing Elimination projects.

The wage rates vary considerably in different geographic divisions. Changes in the United States average shown here are affected by the relative number of men employed in areas with higher or lower wage rates. The annual averages through 1946 are computed by the compiling agency from total hours and wages for the 12 months and are not averages of the monthly figures. Beginning July 1947, data are reported quarterly instead of monthly, and the annual average (after 1947) is computed from the quarterly reports.

Monthly or quarterly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised monthly figures for 1932, 1933, 1936, and 1937 are available upon request.
${ }^{9}$ Quarterly average beginning 1948. For 1947, the average is based on monthly reports for 1 st half of the year and quarterly reports thereafter.
${ }^{10}$ See note 5 for this page (last sentence of 1 st paragraph).

## PAGE 79

${ }^{1}$ Source: Federal Reserve Bank of New York since July 1936; prior thereto, the American Acceptance Council. The figures represent the total acceptance liability outstanding on the last day of the month of banks and bankers in the United States and agencies of foreign banks in this country. Data comprise acceptances based on (a) imports, (b) exports, (c) goods stored in or shipped between points in the United States and foreign countries, and (d) dollar exchange. Data by classes of acceptances are available in the Federal Reserve Bulletin.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Source: Federal Reserve Bank of New York; published in the Federal Reserve Bulletin. Data represent the volume of paper outstanding as reported by the principal dealers in the country; some finance-company paper sold in open market is included. Twenty-three dealers reported for January-October 1929; 22 for November and December 1929; 21 for January -October 1930; 20 for November 1930-April 1931; 21 for May-September 1931; 20 for October-December 1931; 19 for January 1932; 18 for February 1932; 17 for March 1932; 16 for April and May 1932; 15 for June 1932-February 1933; 14 for March-May 1933; 13 for June 1933January 1937 (except for May-August 1934 when 12 reported); 12 for February 1937 -November 1941 (except for March 1940 when 15 reported); 11 for December 1941-February 1943; 10 for March 1943-August 1953 (except for June 1945 when 11 reported); 11 for September 1953-July 1956 (year-end data for 11 firms for 194852 are as follows, in millions of dollars: 277; 270; 345; 449; 552; respectively); and 10 beginning August 1956.

Monthly data for 1929-52 comparable with year-end data for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Minor revisions for 1929 and May 1931-April 1932 are available upon request.)
${ }^{3}$ Source: Farm Credit Administration. Data provide a comprehensive picture of the farm credit activities under the supervision of this agency as of the specific periods covered, except that no data are included here for loans of joint-stock land banks and for emergency crop and drought-relief loans. The Farm Credit Administration currently supervises the activities of the Federal land banks, the national farm loan associations, the Federal intermediate credit banks, the production credit corporations the production credit associations, and the banks for cooperatives. The Agricultural Marketing Act revolving fund was supervised by FCA; however, during August 1953 the outstanding balance of loans from this fund was fully repaid.

The Farm Credit Administration formerly supervised also the lending activities of the Federal Farm Mortgage Corporation, an emergency institution on whose behalf the Land Bank Commissioner made loans (the authority to make Land Bank Commissioner loans expired July 1, 1947, and on June 30, 1955, the outstanding loans totaling $\$ 10,635,000$ were sold to the 12 Federal land banks). The liquidation of the regional agricultural credit corporations was under the supervision of the Farm Credit Administration prior to April 16, 1949; as of that date the assets of such corporations were transferred by law to the Farmers Home Administration.

Also under the direction of the Farm Credit Administration was the liquidation of the joint-stock land banks, which were privately capitalized institutions organized under the Federal Farm Loan Act. Liquidation of these banks was completed in July 1949. (Data for loans of the joint-stock land banks through June 1945 are available in the 1942 and earlier SUPPLEMENTS and the 1943-45 issues of the monthly SURVEY; figures for 1946July 1949 aire available upon request.) Prior to November 1, 1946, the emergency crop and drought relief loan offices were supervised by the Farm Credit Administration; as of that date, jurisdiction over these offices was transferred to the Farmers Home Administration. Data for loans of joint-stock land banks and emergency crop and drought-relief loans have been excluded from the figures shown here for all years.

District units of the Farm Credit Administration are located in each of the 12 Farm Credit districts coinciding geographically with the Federal land bank districts. The offices are located in Springfield (Mass.), Baltimore, Columbia (S. C.), Louisville, New Orleans, St. Louis, St. Paul, Omaha, Wichita, Houston, Berkeley, and Spokane. In each district organization there are four permanent credit institutions--a Federal land bank, a Federal intermediate credit bank, a production credit corporation, and a bank for cooperatives - in addition to local national farm loan associations and production credit associations. In addition to the district units located in the above-mentioned cities, there is a Central Bank for Cooperatives located in Washington, D. C.

Data on agricultural loans included in the summary table on Federal business-type activities on p. 87 include, for pertinent periods, the agricultural loans of the Commodity Credit Corporation, Reconstruction Finance Corporation, Farmers Home Administration and predecessor agencies, and the Rural Electrification Administration, as well as loans of agencies under the supervision of the Farm Credit Administration. In addition, data for loans of agencies under the supervision of the Farm Credit Administration included in the summary table differ from data shown here in that the summary table includes Federal intermediate credit bank loans to and discounts for production credit associations, which are not included in the totals shown here, and excludes loans by production credit associations which are here included.

Data in greater detail and descriptions of the lending institutions in the system may be found in the annual reports of the Farm Credit Administration.

Monthly or quarterly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1932-40 are shown in the 1942, 1940,1938 , and 1932 editions of the SUPPLEMENT, and, except for a few minor revisions in the 1932-33 figures, are correct and comparable with data in subsequent volumes after adjusting the "grand total" and "total short-term credit" to exclude emergency crop loans and drought-relief loans. Figures for Federal land banks published in the 1932 SUPPLEMENT are substantially correct.
${ }^{4}$ Loans to cooperatives include loans (direct) by Federal intermediate credit banks, loans by the district banks for cooperatives and the Central Bank for Cooperatives (excluding advances in connection with CCC programs), and, prior to August 1953, loans from the Agricultural Marketing Act revolving fund.
${ }^{5}$ Data for other loans and discounts include Federal intermediate credit bank loans to and discounts for financing institutions (exclusive of loans to other Farm Credit Administration agencies), loans by production credit associations (beginning December 1933), and by regional agricultural credit corporations (for period October 1932-March 1949). Federal intermediate credit bank loans to and discounts for other Farm Credit Administration
agencies (regional agricultural credit corporations, production credit associations, and banks for cooperatives) are omitted from the total for other loans and discounts and total loans for all agencies to avoid duplication. Emergency crop loans and drought-relief loans, which were formerly under the supervision of the Farm Credit Administration and are included in the totals for short-term credit (other loans and discounts) shown in the 1942 and earlier SUPPLEMENTS, have been excluded for allyears covered in subsequent volumes.
${ }^{6}$ Source: Board of Governors of the Federal Reserve System. The series as presently constituted, covering data back to January 1943, comprises 345 centers from January 1943 through March 1955 and 344 centers thereafter. (The decrease of 1 center was the result of centralized accounting for 2 cities formerly reporting separately.) The "6 other centers," for which data are separately shown here, are Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.

The present series (1943 to date) measures the extent to which depositors are using their checking accounts. The figures cover only debits or charges to demand deposit accounts of individuals, partnerships, and corporations, and of State and local governments, and payments from trust funds on deposit in the banking department.

The old series shown here, covering data through 1942, comprises 141 centers. Figures for the old series include, in addition to the above-mentioned debits to demand deposit accounts, also debits to time deposit accounts and to U. S. Government deposit accounts. Comparability between the old and present series is also affected by increased coverage of banks within the reporting centers.

Both the old aad the present series exclude payments of certified and officers' checks, payments in settlement of clearinghouse balances, charges to expense and miscellaneous accounts, corrections and similar charges, and debits to the accounts of other banks (i.e., to interbank accounts).

For further details regarding the revision of the series beginning with data for January 1943, see the Federal Reserve Bulletin for April 1953.

Monthly data for 1929-42 and 1951-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the $1943-50$ period appear in the September 1954 issue of the SURVEY OF CURRENT BUSINESS.
7 Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.
${ }^{8}$ Source: Board of Governors of the Federal Reserve System. Data represent the condition of the 12 Federal Reserve banks as reported at the end of the month.

In addition to total Reserve bank credit outstanding and gold certificate reserves, total assets include Federal Reserve notes of other banks, other cash, bank premises and other assets, and deferred availability cash items. Total Reserve bank credit outstanding also includes the following items not shown separately: Amounts due from foreign banks, industrial loans, acceptances, and Reserve bank float (i.e., uncollected cash items minus deferred availability cash items).

The composition of reserves has varied with changes in the law. Effective June 12, 1945, only gold certificates have been eligible as reserves. Prior thereto, cash was reported in total reserves. However, the figures for reserves as shown herein, for the entire period covered (1929 forward), are for gold certificate reserves only, comprising the gold certificate account and the redemption fund for F. R. notes. (For year-end figures 1935-44 and monthly data 1941-May 1945 for total reserves, including cash, see the 1947 STATISTICAL SUPPLEMENT, p. 72.)

Total liabilities include -in addition to deposits and Federal Reserve notes--deferred availability cash items, other liabilities and accrued dividends, and capital accounts. Total deposits, which are mainly member-bank reserve accounts, also include the U. S. Treasurer's general account and foreign and other deposits. Member-bank excess reserves are member-bank deposits maintained at Reserve banks in excess of the minimum reserves required by law to be held.

Federal Reserve notes constitute the major part of the country's circulating medium and are liabilities of the Reserve banks
that issue them. They are a prior lien on all assets of the Reserve banks and are specifically secured by the pledge of collateral at least equal to the amount of the notes issued. This collateral may consist of gold certificates, United States Government securities, and eligible short-term paper discounted or purchased by the Reserve bank. The amount of notes which may be issued is subject to an outside limit in that a Reserve bank must have gold certificate reserves of at least 25 percent ( 40 percent prior to June 12,1945 ) of its Federal Reserve notes in actual circulation.

The Reserve ratio is the percentage of the combined deposit and Federal Reserve note liabilities represented by gold certificate reserves (by total reserves prior to June 12, 1945).

Monthly data for 1929-52 comparable with the end-of-year data for corresponding years contained herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions in millions of dollars: March 1945 for total reserve bank credit outstanding, 20,311; March 1930 for member bank reserve account, 2,367.) Monthly figures prior to 1929 for some items have been revised since publication.
${ }^{9}$ Includes data not shown separately.
10 Includes direct and guaranteed securities.
${ }^{11}$ Data for all items except bank debits are as of the end of the year, not monthly averages.

12 Average for eleven months.
13 Data prior to 1943 are for 141 centers and include debits to U. S. Government deposit accounts and debits to time deposit accounts. Monthly figures for 141 centers are available on p . S14 of the March 1943 SURVEY OF CURRENT BUSINESS.

## PAGE 80

${ }^{1}$ See note 9 for p. 79.
2 Includes data not shown separately.
${ }^{3}$ Source: Board of Governors of the Federal Reserve System. Data cover the condition of weekly reporting member banks in leading cities as of Wednesday nearest the end of the month or year. The weekly reporting banks are commercial banks, which in general are distinguished from other banking institutions by the fact that they accept deposits subject to check or withdrawal on demand.
The series is designed to reflect current banking conditions in (but not outside) the larger cities and, effective with data for July 1946, includes all branches of reporting banks, regardless of location. The weekly reporting banks (chiefly large-city banks) are most affected by short-time money market factors and are especially significant in showing current changes in the credit situation.

As of the end of December 1956, the weekly reporting member banks accounted for about 56 percent of total commercial bank deposits and about 66 percent of total member bank deposits.

The series has been revised at various times to extend the coverage and to reflect other improvements. For data shown in this volume, there are two overall breaks in coverage of the series: (1) a major break, effective with figures beginning July 1946, to incorporate results of the revision announced in mid1947; and (2) a break of lesser significance, effective with figures beginning January 1952, to incorporate the revision announced in early 1953.

In the 1953 revision (covering figures for 1952 forward), the principal change was to expand the coverage of the series by making a net addition of 8 banks ( 441 banks in prior series). The number of cities, however, was unchanged from the 94 covered beginning with data for July 1946 (only the head-office cities of branch systems are counted in this number). The 1953 revision resulted in an increase (as of end of January 1952) of 1.3 percent in total loans adjusted and investments, as well as in adjusted demand deposits.

The results of the major revision announced in 1947 are reflected in data shown here from 1946 forward. As part of this revision, a major change was to include consolidated figures for all branches of all reporting banks, regardless of location. The total number of cities, including only the head-office cities of branch systems, was reduced from 101 to 94 and the number of
banks reporting was increased from 371 to 441 . In the 1947 revision, the percentage of total commercial bank deposits at the end of December 1946 was increased to 57 for the new series from 49 for the old series, and the percentage of total member bank deposits was increased to about 67 as compared with 57 percent for the old series.
ln the figures shown here for the years prior to 1946, the number of cities represented is 101 . However, some substitutions of cities were made from time to time, and the number of reporting banks was not constant. Numerous mergers of reporting banks, while not materially affecting the relative size of the sample for the country as a whole, gradually reduced the number of reporting banks to 422 just before the banking holiday in March 1933 and to 374 immediately afterwards. Reopenings and reorganizations increased this number to 403 by September 1934, but mergers later reduced it to 385 banks in December 1941. As stated above, the number of reporting banks was 371 in 1946.
ln addition to the aforementioned changes in coverage, comparability of the statistics has also been affected by changes in classifications and in the reporting forms. Such changes, as well as certain definitions of items, are as stated below or in separate footnotes to the pertinent items or figures.

Effective June 30, 1948, figures for individual loan items are reported gross (i.e., before deduction of valuation reserves) instead of net as previously; therefore, they are not entirely comparable with prior figures and do not add to total loans, which continue to be reported net. (Data for July 1947-May 1948 for the various loan items, adjusted to a gross basis, are available upon request.)

Effective February 1939, data for time deposits, demand deposits, and investments in U. S. Government direct obligations were subdivided and new classifications were brought out. A relatively small amount of U. S. Government time deposits (\$2 million on February 8) was shifted from the U. S. Government demand deposit series and included in the time deposit total. Minor changes were also made in the composition of several items of loans and investments. Certain amounts which previously had been classified as loans or securities, but indirectly representing bank premises or other real estate owned, are classified as "other assets" (not shown in this tabulation). These amounts on February 8, 1939, were $\$ 47$ million for loans and $\$ 53$ million for securities. A transfer of a small amount of loans theretofore classified as "commercial, industrial, and agricultural" to "other loans" was also made at that time.

Adjusted demand deposits (covering figures shown here from 1935 forward) represent deposits other than interbank and U. S. Government, less cash items reported as in process of collection. Data through 1934 as shown herein are the reported 'net demand deposits;" they represent deposits against which reserves were required to be held and are computed by adding to all demand deposits other than U. S. Government deposits the excess of balances due to banks over balances due from banks.

Total loans (adjusted) represent loans exclusive of loans to banks and after deduction of valuation reserves; individual loan items are shown gross beginning June 30, 1948. Data for "total loans" prior to September 1934 are "net" and include loans to banks. (Notice that data for total loans shown in BUSINESS STATISTICS prior to the 1955 edition include loans to banks.)

The available monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of $p$. 197 of this volume. These data are not exactly comparable with monthly averages for corresponding years shown in the present volume, in that the earlier published data are affected by the 1946 and 1953 major revisions in coverage. In addition, data for total loans shown in BUSINESS STATISTICS prior to the 1955 edition include loans to banks and monthly data for individual loan items prior to June 1948 published in the 1951 and earlier editions are "net" (i.e., after allowance for valuation reserves).

Detailed descriptions of the March 1953 and July 1946 revisions may be found in the April 1953 and July 1947 issues of the Federal Reserve Bulletin. Information for earlier periods is contained in "Banking and Monetary Statistics," published in 1943 by the Board of Governors of the Federal Reserve System.
${ }^{4}$ Adjusted demand deposits represent deposits other than interbank and United States Government, less cash items reported as on hand or in process of collection. Data for adjusted demand
deposits include certified and officers' checks in addition to other demand deposits shown here.
${ }^{5}$ IncIudes U. S. Government and postal-savings deposits not shown separately.
${ }^{6}$ Data represent net demand deposits, against which reserves were required to be held; computed by adding to all demand deposits other than U. S. Government deposits the excess of the balance due to banks over the balance due from banks.
${ }^{7}$ Data are for 441 reporting member banks; not comparable with preceding data nor with data subsequent to 1951 (see note 3 for this page).
${ }^{8}$ Revised basis; includes a net of 8 additional banks; not comparable with preceding data (see note 3 for this page).

## PAGE 81

${ }^{1}$ See note 3 for p. 80.
${ }^{2}$ For separate data on guaranteed obligations (1935 through June 1946), see the 1947 STATISTICAL SUPPLEMENT, p. 74.
${ }^{3}$ Exclusive of loans to banks (except data for 1929-33) an after deduction of valuation reserves; individual loan items are shown gross beginning June 30, 1948. (Notice that data in the 1953 and earlier editions, of BUSENESS STATISTICS include loans to banks.)
${ }^{4}$ Direct obligations only.
5 Net loans, including loans to banks.
${ }^{6}$ Guaranteed obligations only.
7 Data are for 441 reporting member banks; not comparable with preceding data nor data subsequent to 1951 (see note 3 for p. 80).
${ }^{8}$ Beginning June 30, 1948, data are reported gross; see note 3 (paragraph 9) for p. 80.
${ }^{9}$ Revised basis; includes a net of 8 additional banks; not comparable with preceding data (see note 3 for p. 80).

## PAGE 82

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. Data represent averages of rates charged on short-term loans (those maturing in 1 year or less) to business in the specified cities.

Figures through 1938, shown in italics and not comparable with succeeding data, are weighted averages of the prevailing rates (i.e., rates for the bulk of loans) for the week ending the 15 th of each month that banks reported as charging customers for loans represented by prime commercial paper eligible for rediscount at the Federal Reserve Banks under the provisions of the Federal Reserve Act.

Figures beginning 1939 are a revised series of interest rates adjusted for changes in the size composition of loans and, therefore, more accurately reflect variations over time in the level of interest rates. The revised report form (introduced June 1948) calls for the amount of the loans and the interest rate actually charged for each new loan or renewal made in the first half of March, June, September, and December by a selected sample of banks (mainly large ones) in 19 leading cities. To afford a comparison between rates beginning June 1948 and earlier data, the old interest-rate reports have been reworked back to March 1939 to provide estimates of average rates charged using a constant system of weights derived from the size-of-loan data reported since June 1948. The reworked data, therefore, eliminate certain erratic fluctuations and long-run trends formerly introduced by shifts in the size composition of loans.

To adjust for size-of-loan differences, averages of rates paid on each size group of loans in each area are computed. This is done by dividing the dollar amount of interest charged, figured at an annual rate, by the dollar amount of loans made in each group of loans. The resulting rate averages for the minor size groups for each area are then combined into four major size groups of loans for the area. The weights used for this computation are
based on the importance in each area of the minor size groups in the loan portfolios of reporting banks, as of November 20, 1946

Major size categories of loans, for which weighted average rates are computed, are as follows:
$\$ 1,000-\$ 9,999$
$\$ 10,000-\$ 99,999$
$\$ 100,000-\$ 199,999$
$\$ 200,000$ and over

For each of the three geographic areas and for all 19 cities taken together an average rate is computed as a summary measure of movements in rates on all sizes of loans. The overall average, in each case, is obtained by combining the average rates for the four major size groups of loans. The weights used in making each average reflect the relative importance of the loan size groups in the business-loan volume outstanding as of November 20, 1946, at reporting banks in the area concerned.

Quarterly data back to June 1948 comparable with quarterly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Further details regarding the current series may be found in the March 1949 Federal Reserve Bulletin, pp. 228 ff.

Monthly figures prior to April 1939 (except for the 19 cities), comparable with data shown here through 1938 appear on p. 17 of the March 1940 SURVEY. For a complete description of this series, see Banking and Monetary Statistics (pp. 426 ff.), published by the compiling agency.

2 Reported by the Board of Governors of the Federal Reserve System. Annual data represent rates in force on December 31 of each year. Monthly data are for rates in force at end of month. Data cover rates to member banks on all advances secured by Government obligations and on discounts of the advances secured by eligible paper under Sections 13 and 13a of the Federal Reserve Act (except that a preferential rate of 0.50 percent on advances secured by Government obligations maturing or callable in 1 year or less was in effect from October 30, 1942, to April 24,1946 , inclusive). Rates also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.
Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revised data for November 1929 is 4.50 percent.)
${ }^{3}$ Source: Farm Credit Administration and the predecessor agency, the Federal Farm Loan Board. The figures represent interest rates charged by the Federal intermediate credit banks for direct loans only. During the February 1934-February 1947 period, except in February 1939, the 12 banks had the same rate. When the banks have different rates, as in periods other than the aforementioned, the loan rates of the 12 banks are averaged. If a change of rate occurs during a monih the bank's average rate for that month is obtained by weighting each rate by the number of business days it was in force. No weight is given to the number of loans closed at the various rates.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS ST ATISTICS as indicated at top of p. 197 of this volume. (Revisions: May 1930, 4.82 percent; August 1930, 4.13; June 1933, 3.12.)
${ }^{4}$ Source: Farm Credit Administration and the predecessor agency, the Federal Farm Loan Board. The figures are averages of the 12 banks' contract rates, or rates charged on new loans closed by the 12 Federal land banks on loans made through national farm loan associations. The law limits the rate to 6 percent. While the Federal land banks are authorized to make direct loans in areas where the facilities of national farm loan associations are not available, none have been made in current years. Loans made directly carry an interest rate $1 / 2$ of 1 percent higher than those made through the associations. When the banks have different loan rates, the rates of the 12 banks are averaged. When a change of rate occurs during a month, the bank's average rate for that month is obtained by weighting each rate in effect during the month by the number of business days it was in force. No weight is given to the number of loans closed at the various rates.

A temporary interest rate of $41 / 2$ percent was established by legislation on installments maturing during the period July 11, 1933, through June 30,1935 , on loans made through the national farm loan associations; on installments maturing from July 1, 1935, through June 30,1944 , the rate was further temporarily reduced to $31 / 2$ percent. On expiration of this reduced rate on June 30, 1944, the banks voluntarily reduced the interest rate to 4 percent on all loans outstanding, some of which bore a contract rate as high as 6 percent. On August 1, 1948, the Columbia bank raised its rate to $41 / 2$ percent on association loans; on January 1,1949, the Springfield bank raised its rate to $41 / 2$ percent; on July 1, 1951, the Columbia bank again raised its rate to 5 percent; and on October 1, 1951, the Baltimore bank raised its rate to $41 / 2$ percent. No further changes were made until 1956, when on Jume 1, the Baltimore bank raised its rate to 5 percent and the Berkeley and Spokane banks raised their races to $41 / 2$ percent; on July 1, the Springfield bank raised its rate to 5 percent; on September 1, the New Orleans, St. Louis, and St. Paul banks raised their rates to $41 / 2$ percent; on November 1, the Spokane bank again raised its rate to 5 percent, and on December 1, the Louisville, Omaha, and Wichita banks raised their rates to $41 / 2$ percent. By the end of 1956 interest rates were 4 percent for Houston, $41 / 2$ percent for Louisville, New Orleans, St. Louis, St. Paul, Omaha, Wichita, and Berkeley, and 5 percent at Springfield, Baltimore, Columbia, and Spokane.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in eariler editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the 1917-34 period appear in the April 1935 issue of the SURVEY OF CURRENT BUSINESS (p.20).
${ }^{5}$ Source: Board of Governors of the Federal Reserve System from data collected by the New York Federal Reserve Bank. Beginning with 1951, the data for bankers' acceptances and commercial paper represent averages of daily quotations; prior thereto the figures are averages of weekly prevailing rates.

Monthly data for 1938-52 (also prior to 1938 for call loans) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1938 for bankers' acceptances and commercial paper are available upon request.
${ }^{6}$ Source: Board of Governors of the Federal Reserve System. Data through 1946 represent average rates on issues announced within the period; thereafter, on new bills issued within the period. Beginning with data for December 17, 1937, the rates are on 3 -month Treasury bills. For earlier periods, they are on bills of the following maturities; Three months, to February 16, 1934; six months, from February 23, 1934, to February 23, 1935; nine months, from March 1, 1935, to October 15, 1937; bills maturing about March 16, 1938, from October 22 to December 10, 1937. The rates cover tax-exempt bills prior to March 1, 1941, and taxable bills thereafter.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{7}$ Source: Board of Governors of the Federal Reserve System. Data are averages of daily figures. Each daily figure is an unweighted average of the yields of the issues included. From early 1953 forward, the yields are based on daily closing bid prices; prior thereto, on the mean of daily closing bid and asked prices.

Data through September 14,1945 , include taxable Treasury notes only (taxable notes were first issued in December 1940). Each issue with a maturity of more than 3 years was included until its period to maturity reached 3 years. Beginning September 15, 1945, the series includes notes and/or selected bond issues. Substitutions of issues are made from time to time in order to provide, in general, a continuous and representative series. For some periods, the data are based on a single issue.

Monthly data for 1941-52 (for the taxable series as shown here) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. For data through March 1942 on 3- to 5-year tax-exempt Treasury notes, see the 1947 STATISTICAL SUPPLEMENT and earlier editions.
${ }^{8}$ Source: The Savings Bank Association of the State of New York. Data cover deposits in all member savings banks in New York State - numbering 128 since October 1955. For December figures prior to 1947, reports of the New York State Banking Department were used. Since January 1935, the coverage of the monthly reports has been complete and, except for minor differences, data are comparable with the December figures from the State Banking Department.

Monthly data for 1924-52 are available in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. It should be noted that the 1924-31 figures appearing in the 1932 SUPPLEMENT include small amounts of estimated data and that the December figures in the 1932, 1936, and 1938 volumes differ somewhat from the December figures in later volumes which are from the State Banking Department.
${ }^{9}$ Source: U. S. Post Office Department. Through June 1956, the figures presented are as of the end of the year or month indicated; thereafter, as of end of consecutive 4 -week periods ending in month indicated. Data on postal savings are shown in greater detail in the annual reports of the Postmaster General.

Balance to credit of depositors represents outstanding principal as evidenced by certificates of deposit and unclaímed deposits (accounts inactive over 20 years) .

Comparable monthly data for 1923-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. It should be noted, however, that some of the figures appearing in the 1932 SUPPLEMENT have since been revised; such revisions are of minor importance.
$1^{10}$ Data for bank rates on business loans for 1929-47 are an nual averages; beginning 1948, quarterly averages. Data for discount rate, New York Federal Reserve Bank, and for savings deposits (except beginning July 1956 for U. S. postal savings) are as of the end of the year.
${ }^{11}$ Average for 5 months; February, April, May, August, and November.

12 Revised series; comparable with succeeding data (see note 1 for this page). Averages of rates for January and February 1939 comparable with series shown through 1938 are as follows: 19 cities, 2.58 percent; New York City, 1.72 percent; 7 other northern and eastern cities, 2.83 percent; 11 southern and western cities, 3.29 percent.

13 Average for 8 months; February, April-September, and November. Rates were negative for January, March, October, and December.

14 Beginning January 1947, series reflects yields on new bills issued within the period rather than issues announced.

15 Bank rates beginning 1948 are averages of quarterly data.
${ }^{16}$ Beginning 1951, data represent averages of daily quotations; prior thereto, averages of weekly prevailing rates.
${ }^{17}$ Data are as of December 14.
18 Beginning in July 1956, data are as of end of consecutive 4week periods ending in month indicated.

## PAGE 83

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. These data represent consumer credit outstanding and consumer installment credit extended and repaid which are consistent with the data on credit outstanding.

Consumer credit represents all short-and intermediate-term credit used to finance the purchase of commodities and services for personal consumption or to refinance debts originally incurred for such purposes. Because of certain difficulties, some credit that is really consumer credit cannot be included in the data here shown. On the other hand, it is impossible to exclude all the nonconsumer credit that the definition requires. The amount of consumer credit omitted from the series far exceeds the amount of nonconsumer credit that still remains in the series.

The term "credit" means an advance of purchasing power which could be used to obtain goods and services, or an advance of goods or services in exchange for a promise to pay at a later date. The term "consumption" means the process of using up
goods and services as an end in itself rather than as a stage in production. Credit extended to governmental agencies and nonprofit or charitable organizations, as well as credit extended to businesses, is excluded.
lnstallment credit includes all consumer credit held by financial institutions and retail dealers which is scheduled to be repaid in two or more installments. Revolving credit and budget and coupon accounts are treated as installment credit rather than as charge accounts because they involve scheduled repayment on a monthly basis.

Descriptions of the four principal classes of installment credit follow. "Automobile paper" and "other consumer-goods paper" represent credit extended for the purpose of purchasing automobiles and other consumer goods and, in most cases, secured by the items purchased. "Repair and modernization loans" include both FHA insured and noninsured loans made to finance the maintenance and improvement of owner-occupied dwelling units. "Personal loans" include all loans, not covered in the previous categories, made by financial institutions to individuals for consumer purposes, such as consolidation of consumer debts, payments of taxes and of medical, educational, or travel expenses, etc. Some personal loans are used for the purchase of consumer goods but, since they are not secured by the goods, they are not reported as commodity paper under automobile or other consumer goods.

Noninstallment credit is subdivided according to single-pay ment loans, charge accounts, and service credit. "Single-payment loans" are loans made to individuals for consumer purposes and scheduled to be repaid in one payment. While some credii of this type is used for the purchase of consumer goods, most is for meeting short-term needs such as the payment of personal taxes or life-insurance premiums. "Charge accounts" are the outstanding balances owed to retail dealers for purchases made by individuals for consumer purposes. "Service credit" is the amount owed by individuals to professional practitioners and service establishments.

Like most economic statistics, the consumer-credit series is based on comprehensive benchmark data which become available periodically. Current monthly estimates are projected from the latest benchmarks in accordance with changes indicated by sample data. The estimated totals are adjusted as necessary whenever new benchmark data become available. Classifications are made on a "holder" basis. Thus installment paper sold by retail outlets is included in figures for the banks and sales-finance companies that purchased the paper.

Estimates of installment credit extended, repaid, and outstand ing represent summaries of accounting records. Conceptually the amount of outstanding credit represents the sum of the balances in the installment receivable accounts of financial institutions and retail outlets on any given date. Credit extended covers all debit entries to these accounts during a given period and credit repaid covers all of the credit entries except chargeoffs. The difference between credit extended and credit repaid during any given period is thus equal to the change in the outstanding balance during the period, if allowance is made for losses and chargeoffs. In these estiniates, chargeoffs are included as repayments in most of the components of the series. Information is not available to make separate estimates of the amount of chargeoffs and under most circumstances the amounts involved are relatively small.

The estimates of the amount of credit outstanding and those of installment credit extended include any finance and insurance charges included as part of the installment contract. Similarly, installment-credit repayments include the payments on these charges. The inclusion of finance charges is general for most types of installment contracts, since they are usually written on a discount basis. The inclusion of insurance charges is of importance primarily in the case of automobile installment credit.

Another fact to consider in using figures on installment credit extended and repaid is the inclusion of loans to refinance or consolidate other installment obligations or to renew existing loans. The items simultaneously add to both credit extended and credit repaid with no net effect on the amount outstanding. Little is known of the exact amount of such refinancing, but it is not believed to be sufficiently large most of the time to have any significant effect on the totals of installment credit extended and repaid.

The adjusted data for installment credit extended and repaid reflect adjustments for differences in the number of trading days and for seasonal variation. The seasonal factors used are de ${ }^{-}$ rived by the modified ratio-to-moving-average method (for details of this method, see article in Federal Reserve Bulletin, June 1941).

There is a necessary relationship between credit extensions and repayments which is determined by the nature of the installment contract. Once a contract is made, the schedule of repayments is determined. Because repayments on installment contracts are distributed evenly over a number of months, data on repayments show much less seasonal variation than data on extensions. Moreover, the seasonal movements that do occur in repayments are related to some extent to the seasonal movements in extensions.

Detailed information regarding the compilation of data on consumer credit outstanding and figures for 1929-1947 for total short- and intermediate-term consumer credit, installment credit, and noninstallment credit outstanding, by type, and for December 1939-1947 for all other series on outstanding credit are published in the April 1953 issue of the Federal Reserve Bulletin. Revised data back to January 1948 for all series and back to January 1940 for extensions and repayments are shown in the October 1956 issue of the Bulletin. For a detailed description of the series on extensions and repayments, see the January 1954 Federal Reserve Bulletin.
${ }^{2}$ Includes all consumer installment credit extended for the purpose of purchasing automobiles and other consumer goods and secured by the items purchased, whether held by retail outlets or financial institutions. Includes credit on purchases by individuals of automobiles or other consumer goods that may be used in part for business.
${ }^{3}$ Includes only repair and modernization loans held by financial institutions; such loans held by retail outlets are included in "other consumer-goods paper."

4 '"Consumer finance companies" are included with "other" financial institutions until September 1950.
${ }^{5}$ Includes mail-order houses.
${ }^{6}$ Includes only automobile paper; other installment credit held by automobile dealers is included with "other" retail outlets.

## PAGE 84

${ }^{1}$ See note 1 for p. 83.
${ }^{2}$ Estimates of installment credit extended and repaid are based on information from accounting records of retail outlets and financial institutions and include finance, insurance, and other charges incurred under the installment contract. Renewals and refinancing of loans, repurchases and resales of installment paper, and certain other transactions may increase the amount of both credit extended and credit repaid without adding to the amount of credit outstanding.
${ }^{3}$ Data for noninstallment consumer credit are end-of-year figures, not monthly averages.

## PAGE 85

${ }^{1}$ See note 1 for p .83.
${ }^{2}$ See note 2 for $p .84$.
${ }^{3}$ Includes adjustment for differences in trading days.
${ }^{4}$ Source: U. S. Treasury Department. Data cover only budgetary operations of the Federal Government, excluding from expenditures the amounts for public-debt retirement which are chargeable to the sinking fund, etc., under special provisions of the law.

All monthly averages shown in the present volume are based on calendar-year totals. The monthly averages through 1953 and the monthly figures through June 1953 are on the basis of the "Daily Statement of the U. S. Treasury," compiled from the latest daily reports received from Government depositaries, Treasury disbursing offices, the Departments of the Army and Air Force, and other agencies. The monthly averages for 1954 and the
monthly figures beginning July 1953 are on the basis of the "Monthly Statement of Receipts and Expenditures of the U. S. Government," compiled from reports received from all Government collecting and disbursing agencies and the Treasurer of the United States. The Monthly Statement shows receipts of taxes and customs duties on a collection basis, while various other receipts are reported partially on a collection basis and partially on a deposit basis, and expenditures (except interest on the public debt) are reported on the basis of checks issued or cash payments made by disbursing officers. The Monthly Statement contains all receipts and expenditures of the Government, including those of agencies which maintain cash accounts outside the U. S. Treasury.

Budget accounts include general accounts (which are credited with receipts not designated by Congress for specific purposes and cover most appropriations and expenditures), special accounts (or funds earmarked by Congress for specific purposes), and operations in checking accounts of wholly owned Government corporations and credit agencies, other than transactions of these agencies on account of borrowings or repayments. Budget accounts exclude trust account receipts and expenditures and related items.
Information on the content of various items of expenditures is given in notes 2-4 for p. 86. Items under receipts are explained as follows (see also note 5 for this page): "Individual income taxes" include taxes both withheld and not withheld; "corporation income and profits taxes" also include unjust enrichment taxes (through June 1946) and victory taxes (withheld pursuant to the Revenue Act of 1942 and repealed after 1943); "employment taxes" include taxes for old-age insurance, for unemployment insurance, and for railroad retirement (except as otherwise noted, the data exclude railroad-unemployment-insurance contributions, which are included in "other internal revenue and receipts"). Beginning with data for January 1957 (see monthly SURVEY OF CURRENT BUSINESS), "employment taxes" also include taxes for disability insurance.
"Other internal revenue and receipts" include revenues from alcohol taxes, tobacco taxes, manufacturers' and retailers ${ }^{\text { }}$ excise taxes, estate and gift taxes, capital-stock taxes, stamp taxes, and other miscellaneous taxes; they also include receipts from proceeds from the sale of surplus property (Act of October 3,1944 ) and from Government-owned securities, deposits resulting from renegotiation of war contracts, repayments on credit to United Kingdom, Panama Canal tolls, seigniorage, railroad-unemployment-insurance contributions for administrative expenses through 1953, and miscellaneous receipts. Deposits resulting from the renegotiation of war contracts represent a large proportion of the "receipts" in certain years. Separate figures for such deposits are not available on the basis of the daily or monthly Treasury statements; on the basis of covering warrants, such amounts (including so-called voluntary returns) for fiscal years ended June 30 were as follows (in millions of dollars): 1943, $558 ; 1944,2,235 ; 1945,2,041 ; 1946,1,063 ; 1947,279 ; 1948,162$; 1949,$76 ; 1950,27 ; 1951,28 ; 1952,13 ; 1953,39 ; 1954$, 36; (data not shown separately after June 30, 1954).

5 "Net receipts" represent total budget receipts less refunds of receipts (beginning with fiscal year 1931); and less appropriations of receipts to the Federal old-age and survivors' trust fund (beginning with June 1936), to the railroad retirement account (beginning with 1942 for the monthly averages and with 1952 for the separate monthly data), and to the Highway trust fund as required by the Highway Revenue Act of 1956 (after June 30, 1956, and before July 1, 1972).
${ }^{6}$ Social-security taxes were first collected in June 1936 (total for 7 months, June-December, is $\$ 206,000$ ). Railroad-unemploy-ment-insurance contributions are included in data for 1936 (as stated in note 7 below) but the amount is offset by transfers to the Old-Age Reserve Account.
${ }^{7}$ Prior to July 1, 1939, figures include railroad-unemploymentinsurance contributions (paid under Title IX of the Social Security Act) amounting to $2.7,5.3$, and 6.8 million dollars, respective$l y$, for the calendar years 1936,1937 , and 1938 , and 2.9 míllion for January-June 1939. Similar contributions under the "Railroad Unemployment Insurance Act," effective July. 1, 1939, are largely deposited directly in the trust-fund account for railroad unem-
ployment insurance; the portion included in receipts is credited to funds for administrative expenses and is not classified as an employment tax under the Internal Revenue Code.
${ }^{8}$ The monthly averages beginning 1942 and the monthly figures beginning January 1952 for net budget receipts and budget expenditures reflect the exclusion of appropriations of receipts to the railroad retirement account.
${ }^{9}$ New reporting basis (see 2d paragraph of note 4 for this page).
${ }^{10}$ Effective July 1956, the figures reflect deductions from total budget receipts of amounts appropriated to the Highway trust fund; see also note 5 for this page.

## PAGE 86

${ }^{1}$ See also note 4 for p. 85. Expenditures are "net," after allowance for reimbursements to appropriations, receipts of re-volving-fund appropriations, and receipts credited to disbursing accounts of corporations and agencies having authority to use collections without formal covering into the Treasury. The figures include transfers to trust accounts, transactions of the Foreign Economic Cooperation Trust Fund, established under the Economic Cooperation Act of 1948, and transactions of wholly owned Government corporations and agencies. Beginning November 1950, investments by these corporations and agencies in public-debt securities are excluded from budget expenditures and included with other such investments under "trust account and other transactions." Corresponding adjustments were made in November 1950 and January 1951 for net investments classified as budget expenditures in the period July through October. Budget expenditures exclude also amounts for public-debt retirement which are chargeable to the sinking fund, etc., under special provisions of law. Effective July 1, 1948 payments to the Treasury, principally by wholly owned Government corporations, for retirement of capital stock and disposition of earnings are excluded from both receipts and expenditures.
${ }^{2}$ Includes expenditures by the Veterans Administration for education, training, other readjustment benefits, compensation and pensions, insurance and servicemen's indemnities, and for hospitals and medical care, as well as transfers (in pertinent periods) to the adjusted service certificate fund and to the National service life-insurance fund. Also includes expenditures of other agencies for veterans, viz., American Battle Monuments Commission, the Department of the Army, and the Department of Labor (for veterans reemployment rights, from July 1955 through June 1956, and for unemployment compensation).
${ }^{3}$ Expenditures for "major national security" include those for the direction and coordination of defense, for Air Force, Army, and Naval defense, other central defense activities, development and control of atomic energy, stockpiling and defense production expansion, and military assistance; prior to July 1955 they also include expenditures for direct forces support, payments under Armed Forces Leave Act (these are included in "all other expenditures" from July 1952 through June 1955), as well as expenditures of the U. S. Maritime Administration prior to July 1, 1949 (thereafter, data are included with "all other expenditures"), UNRRA, surplus property disposal agencies, the Reconstruction Finance Corporation (after July 1, 1947, expenditures of RFC for national defense and related activities were not segregated from other expenditures of the Corporation and its affiliates, which are included for the pertinent period under "other" expenditures), and expenditures for various other purposes related to national defense.

4"All other expenditures" include, in recent years, expenditures for the following purposes: International affairs and finance; social security, welfare, and health; housing and community development; agriculture and agricultural resources; natural resources; transportation and communication; finance, commerce, and industry; executive departments and other agencies not included elsewhere; and for legislative and judicial functions.
${ }^{5}$ Source: U. S. Treasury Department. Figures represent gross debt at the end of the year or month specified. Beginning July 1942, data are on the basis of the Daily Statement of the Treasury, compiled from daily reports received from Government depositaries and Treasury offices holding Government funds. Owing to
the distance of some of the offices from the Treasury, their reports may be somewhat delayed. The figures do not include delayed reports for the month concerned and include reports of the preceding month received too late for inclusion in the figures for that month. Prior to July 1942, the figures are from Public Debt Statements which take into account delayed reports. Data include matured debt on which interest has ceased and debt bearing no interest, in addition to interest-bearing debt.
"Public issues-interest bearing" consist of bonds, Treasury notes, certificates of indebtedness, and Treasury bills, and include both marketable and nonmarketable issues. "Special issues to Government agencies and trust funds-interest-bearing" consist of notes or certificates issued to the following trust funds or accounts: Retirement funds, unemployment trust fund, Federal old age and survivors insurance trust fund, adjusted service certificate fund, Postal Savings System, Federal Deposit Insurance Corporation, Federal Savings and Loan Insurance Corporation, Federal home loan banks, housing insurance funds, National service life-insurance fund, farm tenant mortgage insurance fund (through March 1956), Veterans' special term insurance fund and Government life-insurance fund. "Noninterest-bearing debt" consists of matured debt on which interest has ceased, special notes of the United States for International Monetary Fund, U. S. savings stamps, excess profits tax refund bonds, United States notes (less gold reserve), national bank and Federal Reserve bank notes assumed by the United States on deposit of lawful money for their retirement, and other debt bearing no interest.

The public debt reflects debt incurred to finance expenditures of the Federal business-type activities for which obligations are held by the Treasury. Debt so incurred amounted to $\$ 21,027,000$,000 on December 31, 1956.

Monthly data for 1936-52 for all series and 1929-35 for total gross debt will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Source: U. S. Treasury Department. (Data through 1941 were compiled by the Board of Governors of the Federal Reserve System from reports of the U. S. Treasury Department.) Data are as of end of the year or month specified and represent the principal amount of obligations issued for the Federal business-type activities which are guaranteed as to principal and interest. Obligations of the Home Owners' Loan Corporation, issued July 1, 1933, guaranteed as to interest only, which were called for redemption JuIy 1, 1935, are not included. Only public issues are included; excluded throughout are obligations held by the United States Treasury and reflected in the public debt. Data include in-terest-bearing debt and matured debt on which interest has ceased beginning 1939; earlier data are interest-bearing debt only.

Since October 1941 funds needed for Federal business-type activities have been provided by the Treasury instead of by sale of guaranteed securities in the open market, except in the case of certain transactions involving the Commodity Credit Corporation (through February 1953) and the Federal Housing Administration. As a result of this policy, there has been a large decrease in guaranteed obligations outstanding. Securities held by the Treas ury for debt incurred to finance the expenditures of Federal busi-ness-type activities and reflected in the public debt totaled $\$ 21$,027,000,000 on December 31, 1956.

Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{7}$ Source: U. S. Treasury Department. U. S. savings bonds were first offered in March 1935 and began to mature in March 1945. Data cover all issues of U. S. savings bonds, on sale as follows: Series A-D, between March 1935 and end of April 1941; E, beginning May 1941; F and G, between May 1941 and end of April 1952; J and K (which replaced F and G ), beginning May 1952; and series $H$ (a current-income bond), put on the market June 1 , 1952.
(The reader is reminded that the present note applies to data through 1956 only. Legislation enacted April 20, 1957, increased the maximum interest rate on series $E$ and $H$ bonds purchased on or after February 1, 1957, from 3 to 3.26 percent.)

Sales figures included for series A-F and J represent issue price of bonds and total redemptions and amounts outstanding
represent current redemption values (i.e., sales price plus accrued discount). All data included for series $G, H$, and $K$ are at face value. The figures for redemptions include bonds redeemed before maturity and matured bonds turned in for redemption. Matured bonds not turned in for redemption are reflected in amounts outstanding.

Sales of series E included in the combined figures are as follows (monthly averages in millions of dollars): 1941 (average for May-December), 143; 1942, 499; 1943, 862; 1944, 1,032; 1945, 819; 1946,$372 ; 1947,340 ; 1948,352 ; 1949,351 ; 1950,306 ; 1951,266$; 1952,283 ; 1953, $326 ; 1954,335 ; 1955,349 ; 1956,345$.

When series $E$ began to mature on May 1, 1951, owners of the matured bonds were offered three options: To redeem the bonds in cash in accordance with the original terms; to retain them with an extended maturity of 10 years at specified rates of interest accrual; or to exchange them for series $G$ bonds. A number of changes became effective May 1, 1952. The principal ones were: The rate of interest accrual on series $E$ was increased, especially for the near term, with corresponding changes in extended series $E$; and, as noted above, series $F$ and $G$ were replaced by two new issues, series J (revised series F) and K (revised series G), also at higher interest rates. On May 1, 1953, series F and G bonds began to mature. Prior to the maturity of these bonds the owners of bonds maturing from May 1 through December 1953 were offered for exchange $31 / 4$ percent fully marketable longterm Treasury bonds, dated May 1, 1953, maturing June 15, 1983, and callable on or after June 15,1978 . Eligible $F$ and $G$ bondholders not wishing to accept the new marketable bond in exhcnage for their maturing bonds would have the opportunity of reinvesting the proceeds in other series of savings bonds currently on sale, or to receive cash payment.

Series A-D and E (prior to May 1, 1952) bonds are 10 -year dis count bonds sold at 75 percent of maturity value, and yield 2.90 percent per annum if held to maturity. Beginning May 1, 1952, series E bonds yield approximately 3.00 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier date. Series $F$ bonds are 12 -year discount bonds sold at 74 percent of maturity value, and yield 2.53 percent per annum if held to maturity. Series G bonds are 12 -year current income bonds, sold at $\mathrm{pu}_{\perp}$, bearing interest at $21 / 2$ percent per annum, and redeemable at par at maturity or at stated prices less than par before maturity. Series J bonds are 12 -year discount bonds sold at 72 percent of maturity value, and yield approximately 2.76 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier dates. Series $K$ bonds are sold at par value, with interest paid semiannually at the rate of 2.76 percent per annum; redemption values at less than par to provide lesser yields if redeemed at earlier dates; but redeemable at par in event of death of owner or if issued in exchange for matured series $E$ bonds. Series $H$ bonds mature 9 years and 8 months from issue date. Interest is paid semiannually by checks of varying amounts to provide an investment yield of approximately 3.00 percent per annum compounded semiannually if held to maturity; lesser yields if redeemed at earlier dates.

Purchases of series A-D bonds were limited $\$ 7,500$ issue price in any one calendar year. These bonds were available to all subscribers prior to April 1, 1940, and to individuals only beginning that date. Purchases of series $E$ bonds are now limited to $\$ 15,000$ issue price in any one calendar year, and may be made only by individuals; from 1948 through 1951, the limitation on such bonds was $\$ 7,500$, and prior to $1948, \$ 3,750$. The limit for series $F$ and $G$ combined was $\$ 100,000$ issue price in any one calendar year ( $\$ 50,000$ in calendar year 1941). However, special offerings were made to certain classes of institutional investors in excess of regular limitations; and at specified times in 1944, investors could buy series $F$ and $G$ bonds combined up to a total of $\$ 1,100,000$ in excess of the $\$ 100,000$ existing limit. Series $F$ and $G$ bonds were available to all subscribers except commercial and industrial banks. Commercial and industrial banks, however, were permitted to purchase these bonds during certain periods and with certain restrictions. The annual limit is $\$ 200,000$ (issue price) for series $J$ and $K$ combined, excluding series $K$ bonds issued in exchange for matured series $E$ bonds. They are available to all except banks which accept demand deposits. A $\$ 20,000$ maturity value is the annual limit for series H bonds; such bonds are available to individual persons only.

Monthly figures for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume; those for 1935-40 are available upon request.
${ }^{8}$ Data for public debt and guaranteed obligations outstanding are as of the end of the calendar year, not monthly averages.
${ }^{9}$ Average for 6 months, July -December.
${ }^{10}$ Average for 8 months, May-December. Receipts from sales in March and April first appeared in funds received in May.

11 See note 8 for p. 85.
${ }^{12}$ Reported on budgetary basis (see 1 st paragraph of note 4 for p .85 ).
${ }^{13}$ Effective June 30, 1955, interest on the public debt is reported on an accrual basis; prior thereto, on a due and payable basis.

## PAGE 87

1 Source: U. S. Treasury Department. Data are compiled from reports received from agencies and published in the Treasury Bulletin. Interagency items are excluded from most of the data shown in the present volume; however, prior to 1944 they are excluded only partially and they are not excluded from trust revolving funds (such funds included beginning 1956). Comparability of the statistics has been materially affected at various times by changes in coverage of agencies and activities and by changes in the reporting form. The latter changes were made effective with data for September 30, 1944, and again with data for March 31, 1956.

Data beginning with the 1 st quarter of 1956 are based on reports submitted under Treasury Department Circular No. 966 and reflect expanded coverage and new classification of agencies whose data are now reported in the Treasury Bulletin. The aforenamed circular requires submission of financial statements by all wholly owned and mixed-ownership Government corporations specifically included in the Government Corporation Control Act, as amended; and all other activities of the Government operating as revolving funds for which business-type public enterprise or intragovernmental fund budgets are required by the Bureau of the Budget.

The expanded coverage resulting from new reporting requirements in 1956 nullified comparability, in most instances, with earlier data. Moreover, comparability was affected from quarter to quarter in 1956 by further changes in coverage, since the accounting systems of additional business-type activities were continually being developed to meet the prescribed reporting requirements. Figures for the end of June 1956 include data for a few major activities and several minor ones not included in preceding and succeeding quarters; the agencies involved are not yet reporting on a quarterly basis (total assets of those agencies, included in figures for end of June 1956, amounted to $\$ 11,880$ million).

A mong the more important changes in coverage prior to 1956 are: (1) Exclusion of the following agencies after repayment of U. S. Government interest-Federal land banks after 1946 and Home Owners' Loan Corporation after June 1951; (2) exclusion of U. S. Maritime Commission (including War Shipping activities) after 1947, when this agency ceased to report to the U.S. Treasury; and (3) inclusion of Mutual Security Agency (superseded by Foreign Operations Administration and later by the International Cooperation Administration) beginning June 1952 and of Federal Maritime Board and Maritime Administration beginning June 1953.

After adoption of a revised reporting form in September 1944, the data as of June 30, 1939-44, were revised by the Treasury Department, insofar as possible, in accordance with that form, and the figures as shown herein reflect such revisions. It should be noted, however, that beginning with September 1944 all interagency items have been excluded from the data in this volume (except from trust revolving funds beginning 1956; see 1st paragraph), whereas it was possible to exclude them only partially for earlier periods. Moreover, effective with data for September 1944, assets (except the detail under loans) are shown on a net basis, i.e., after reserves for losses. In the earlier figures, however, reserves were reported as "other liabilities" rather
than as suspended credits to the respective asset items, and no adjustment has been made for this difference in reporting. (The total amount of reserves deducted from assets for September 30, 1944 , is $\$ 772,000,000$, including $\$ 432,000,000$ reserves against loans, $\$ 184,000,000$ for land, structures, and equipment, and $\$ 156,000,000$ for "all other assets.' $)$
${ }^{2}$ Total loans prior to September 1944 and the detail under loans (for all periods) are amounts before reserves (see note 1 above). Reserves against loans are not completely segregated as to type of loans to which they are applicable; however, most of the reserves are held against agricultural loans. Beginning September 1944, loans include those guaranteed by the Commodity Credit Corporation, amounting to $\$ 378,000,000$ as of that month.
${ }^{3}$ Data through 1943 are as of June 30; thereafter, as of December 31 .
${ }^{4}$ A mounts are before reserves; see note 2 for this page.
${ }^{5}$ lncludes data for commodities, supplies, and materials.
${ }^{6}$ Not comparable with earlier data; see note 1 for this page regarding change in reporting form, etc.
${ }^{7}$ Figures reflect major change in coverage; see 4 th paragraph of note 1 for this page.
${ }^{8}$ Beginning June 1953, outstanding loans of the Federal Maritime Board and Maritime Administration are included.
${ }^{9}$ Not comparable with data for preceding and succeeding quarters; see 3 d paragraph of note 1 for this page.

## PAGE 88

${ }^{1}$ Source: Institute of Life Insurance, Division of Statistics and Research. The portfolios in the end-of-year data are at annual statement asset value, with bonds carried on an amortized value basis, and stocks at market value. The portfolios in the end-ofmonth data are at book value with total adjustments to annual statement asset value appearing in the category "other assets." The monthly data are estimates of 100 percent of the assets of all United States legal reserve life-insurance companies and are currently estimated on the basis of monthly reports received from 150 to 160 companies accounting for 87 to 99 percent of the totals on various items.

Assets for the accident and health departments of life-insurance companies are distributed by type and included in the assets of all companies.
"U. S. Government bonds" include both direct Government obligations and bonds of Federal agencies fully guaranteed as to principal and interest by the U.S. Government. Bonds of Federal agencies not guaranteed by the U. S. Government are included in "industrial and miscellaneous bonds." Shares of institutions insured by the Federal Savings and Loan Insurance Corporation are included under "preferred stocks" to the extent they are insured by that agency. The balance is included in "common stocks."

The classification "real estate" includes real estate sold on contract but does not include real estate owned subject to redemption. Foreclosed liens subject to redemption are included in "mortgage loans" and are not transferred to "real estate" until the redemption period is past. "Other assets" include collat" eral loans, bills receivable, due and deferred premiums, and transportation equipment.

Monthly data for 1949-52 for total assets and 1951-52 for all other series will be found in the 1955 and 1953 editions of BUSINESS STATISTICS. Monthly data back to 1947 for total assets, preferred and common stocks, policy loans and premium notes, cash, and other assets and back to 1944 for all other series are available upon request.
${ }^{2}$ End-of-year data represent annual statement asset value, with bonds carried on an amortized value basis, and stocks at market value; end-of-month figures represent book value of ledger assets.
${ }^{3}$ Includes data for foreign bonds (State, provincial, and local).

## PAGE 89

${ }^{1}$ Source: Life Insurance Agency Management Association. Data represent the estimated total volume of new paid-for life insurance sold in the United States, exclusive of revivals, increases, dividend additions, reinsurance acquired, and credit insurance. (The latter is a type of insurance that insures borrowers to cover payment of loans in case of death.) The estimated totals are projected from monthly company reports which at the end of 1956 accounted for around 87 percent of the new ordinary insurance ( $80-88$ percent in earlier years), 62 percent of the new industrial insurance, and 92 percent of the new group and wholesale contracts.

For ordinary insurance, the reported data for each State are raised to a 100 -percent basis and the State figures summed to obtain United States and regional totals. A ratio of the sales of the reporting companies to annual sales of all companies in each State, based on 4 years' aggregate experience, was used to raise the reported monthly figures through 1944. From January 1945 through 1949 , the ratios for raising the data are based on the average of only 2 years' experience, since it was found that use of a longer period tended to make the figures inaccurate in a State when the contributing companies showed a definite upward or downward trend. Beginning in 1950, a 1-year basis has been used. These ratios are calculated each year on the basis of the latest year for which data are available. Details by States are given in the regular monthly reports of the compiling agency.

States comprising the geographic areas shown here are: New England-Maine, New Hampshire, Vermont, Massachusetts, Rhode 1sland, and Connecticut; Middle Atlantic-New York, New Jersey, and Pennsylvania; East North Central-Ohio, Indiana, Illinois, Michigan, and Wisconsin; West North Central-Minnesota, lowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas; South Atlantic-Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida; East South Central-Kentucky, Tennessee, Alabama, and Mississippi; West South Central-Arkansas, Louisiana, Oklahoma, and Texas; Mountain-Montana, ldaho, Wyoming, Colorado, New Mexico, Arizona, Utah, and Nevada; Pacific-Washington, Oregon, and California.

Group and wholesale and industrial insurance are estimated for the United States only, using a raising factor based on the percentage of sales of reporting companies to all companies during a 1 -year period. Prior to 1951 a 2 -year basis was used.
"Group life insurance" is that issued, usually without medical examination, on a group of persons under a master policy. It is usually issued to an employer for the benefit of employees, the individual members of the group holding certificates as evidence of their insurance.
"Industrial life insurance" is that issued in small amounts, usually not over \$500. Premiums are payable on a weekly or monthly basis and are generally collected at the home by an agent of the company.
"Ordinary life insurance" is that usually issued in amounts of $\$ 1,000$ or more with premiums payable on an annual, semiannual, quarterly, or monthly basis. The term is also used to mean a plan of insurance for the whole of life with premiums payable until death.

Monthly data for 1951-52 and 1941-45 for all series and 1946 for group and wholesale and ordinary insurance (see exceptions mentioned in this paragraph and in note 2 following) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision for ordinary insurance for July 1945-Mountain area, $\$ 23,888,000$.) The 1947-50 monthly averages for total insurance and ordinary insurance (as shown in the present volume) are based on annual totals which include revisions not allocated to the monthly data. Monthly data for 193840 for ordinary insurance are available in the 1942 SUPPLEMENT; for monthly data for 1930-37 see the 1940 volume and pp. 18 and 19 of the September 1937 SURVEY.
${ }^{2}$ Includes a year-end upward adjustment not allocated by months. Adjustments are as follows (in thousands of dollars): Total, 201,000; group and wholesale, 154,000; industrial, 47,000.
${ }^{3}$ Beginning in 1954 ordinary insurance written excludes the lifeinsurance business in savings banks. In earlier years the following amounts were included (thousands of dollars): 1947, 54,716;
$1948,54,211 ; 1949,49,312 ; 1950,50,006 ; 1951,47,398 ; 1952,58,-$ 759; 1953, 63,170.
${ }^{4}$ Data for the latter part of 1954 and thereafter include life insurance written under the Federal Government employee program. Under this program, $\$ 6,738,000,000$ went on the books in November 1954 and $\$ 1,925,000,000$ in April 1955.

## PAGE 90

${ }^{1}$ Source: Institute of Life Insurance. The data represent estimated total payments to policyholders and beneficiaries in the United States, including payments by Canadian companies. They do not include payments made outside the United States by American companies. The estimated totals are based on reports covering 93 to 97 percent of all payments. Data for death-benefit payments include additional accidental death benefits. For the years 1941 to 1947 the monthly averages for annuity payments and surrender values have been revised to include all annuity surrender values under the annuity payments data (monthly revisions are not available).

Monthly data for 1948-52 for annuity payments and surrender values and for 1941-52 for all other series, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Source: Life Insurance Association of America. Data are compiled from reports of 39 companies which collected 70 percent of the premium income of all United States legal reserve life insurance companies in 1955. The figures include both new and renewal premiums and considerations for annuities. Data for accident and health premiums were not collected by the compiling agency prior to January 1948.

Monthly data for 1938-52 (with exceptions mentioned), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Annuities are shown separately only beginning January 1930 but are included for all years. Data shown in the 1940 and earlier SUPPLEMENTS cover 40 companies but differ only slightly from data shown here for 39 companies. Monthly figures prior to 1938 are available upon request.
${ }^{3}$ See note 1 for this page (last sentence of 1 st paragraph).
${ }^{4}$ Figures beginning 1948 include accident and health premiums (not previously available) and, therefore, are not comparable with earlier data shown in italics.
${ }^{5}$ Effective with 1955, data are compiled on a quarterly basis; however, the averages shown for 1955 and 1956 are monthly averages.

## PAGE 91

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. Data are compiled from the "Circulation Statement of United States Money," issued monthly by the Treasury. Figures are the gold stock at the end of the months and years indicated.

Until January 30, 1934, the gold stock of the United States consisted of gold coin in circulation in the United States and gold held by the Treasury and the Federal Reserve Banks, except gold held under earmark for foreign account. On that date, title to all gold owned by Federal Reserve Banks was transferred to the United States Government, while by a series of Executive Orders in 1933 gold coin was retired from circulation. Since January 30, 1934, the regular gold-stock figures for the United States have represented only gold held by the Treasury, exclusive of relativeIy small amounts held since April 1934 in the Exchange Stabilization Fund, the figures for which are reported quarterly and on a delayed basis. The Federal Reserve Banks now hold gold certificates, or gold certificate credits on the books of the Treasury, which have been issued against the bulk of the Treasury's gold holdings. The reported gold stock also includes gold against which no certificates or certificate credits have been issued; i.e., the inactive portion of the Exchange Stabilization Fund's holdings (liquidated February 26, 1947), gold held against certain Treasury currency issues, and gold in the Treasury's General

Fund, including from December 24, 1936, through April 13, 1938, amounts set aside by the Treasury in a special Inactive Account.

According to the original estimates of gold coin in circulation, based on payments of gold coin into circulation and withdrawals from circulation, reported imports and exports of gold coin, mintings, meltings, and gold coin used in the arts, the circulation figure on January 30,1934 , was $\$ 287,000,000$. However, this amount was excluded from the gold stock and from money in circulation for all years shown in this volume. This was done primarily because private holdings became illegal in early 1934; but there was also reason to believe that much of the computed amount of gold coin in private hands had in fact been lost or taken out of the country by travelers.

The factors accounting for changes in gold stock are domestic production of gold, net gold imports or exports, and changes in the amount of gold under earmark. For several reasons the combined net movement of these factors in any given period may not correspond exactly to the reported change in gold stock in that period. There are usually various lags in the statistics as a result, for example, of delays in refining or assaying newly mined or imported gold; and net domestic consumption of gold in the arts and industry may affect the figures from month to month. There are also less regular influences which, when they occur, are generally of much greater importance. Of this character was the increase in the gold stock in February 1934 attributable to the devaluation of the dollar, the decrease in the gold stock in February 1947 resulting from the payment of the United States gold subscription to the International Monetary Fund, and, since April 1934, net changes in gold held in the United States by the active portion of the Stabilization Fund.

Monthly data for 1936-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197of this volume; earlier monthly data are available upon request. The figures prior to 1934 as shown in the 1942 and 1940 volumes incorporate revisions back to 1913 to exclude the $\$ 287,000,000$ of gold coin which was dropped on January 31, 1934, as explained above, in order to make them comparable with later data. The resulting figures for the earlier years probably understate somewhat the amount of gold coin held by the public but fluctuations in the total are not affected by the revision. The large increase in the figures in 1934 resulted primarily from the revaluation of the gold stock on the basis of the changed gold content of the dollar. The revaluation added $\$ 2,806,000,000$ to the gold stock on February 1, 1934.
${ }^{2}$ Statistics on exports and imports of gold are from the U. S. Department of Commerce, Bureau of the Census (prior to May 1941, from Bureau of Foreign and Domestic Commerce). Data on changes in the amount of gold held under earmark arefrom the Board of Governors of the Federal Reserve System. The amount of net release from earmark represents gold released from earmark at Federal Reserve Banks for foreign account, less gold placed under earmark for foreign account (with allowance when necessary for changes in gold earmarked abroad for account of Federal Reserve Banks). Beginning August 1946, figures include gold held for account of international institutions. The minus sign indicates an increase in earmarked gold. An increase in earmarked gold is the equivalent of net export and a decrease the equivalent of net import.

Monthly data for 1932-52 comparable with monthly averages shown herein (with exceptions mentioned below and in note 11 for this page) will be found in earlier editions of BUSINESS STATIST1CS as indicated at top of p. 197 of this volume. Previously published figures for net release from earmark should be revised to read as follows (in thousands of dollars): December 1931, -22,913; June 1939, -104,846; July 1939, -163,961.
${ }^{3}$ Source: Board of Govcrnors of the Federal Reserve System. Data cover production in countries and areas for which monthly reports are available. Beginning 1934, values are calculated at the rate of $\$ 35$ per fine ounce; prior thereto, at the rate of $\$ 20.67$.

Data for Africa include the Belgian Congo, Rhodesia, Union of South Africa, and Ghana (Gold Coast); since 1944, the figures are for the latter country only. The Canadian data are reported by the Dominion Bureau of Statistics. Beginning with 1949, Canadian production includes production in Newfoundland. The data on production in the United States prior to 1946 include Philippine 1 - lands production received in the United States; monthly figures
are estimates of the American Bureau of Metal Statistics adjusted, through 1955, to accord with the annual estimates published by the United States Mint (in 1951, $\$ 297,000$ was subtracted from each monthly figure for the adjustment). Other monthly reporting areas included in the figures for "total reported monthly" but not shown separately include, when available, reports from Mexico, Colombia, Chile, Nicaragua, India, and Australia. Of the important producers in the group, Mexico is not available monthly from April 1942 through December 1946; and Australia is not available monthly prior to June 1945. Belgian Congo is not available monthly for 1938-46; therefore, monthly data for Africa for 1938-46 have not been revised.

Monthly data for 1947-52 for all series and 1938-46 for Canada and the United States comparable with monthly averages shown herein (with exceptions stated below and in note 11 for this page) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (in thousands of dollars): 1948-United States, May, 5,863; July, 5,965; 1950total production reported monthly-(January-June) 64,000; 60,100; 66,$400 ; 63,200 ; 65,600 ; 66,200$; Africa-(February-June) 36,400; 39,$600 ; 37,700 ; 40,000 ; 39,000$; September, 38,500 ; November, 37,600; December, 37,200. For monthly data prior to 1938, see Pp. 11 and 12 of the March 1940 SURVEY and the 1940 SUPPLEMENT.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (prior to May 1941, from Bureau of Foreign and Domestic Commerce).

Monthly data for 1929-52 comparable with monthly averages shown herein (with exceptions stated in note 11 for this page) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly averages and monthly figures back to 1913 and 1923, respectively, are shown in the 1932 SUPPLEMENT (revisions for imports, in thousands of dollars: 1913 monthly average, 2,989; 1925-January, 7,339; February, 4,929; March, 6,661; April, 4,945; 1930-December, 2,660).
${ }^{5}$ Silver prices are daily averages for the month as compiled by Handy and Harman and reported in "Metal and Mineral Markets," a weekly news service of the Engineering and Mining Jour nal. Quotations are per troy ounce 0.999 fine on the basis of market prices for bar silver in amounts of 50,000 ounces or more for nearby delivery, New York. Quotations prior to July 1946 are for foreign silver or silver not eligible for sale to the U. S. Government. Beginning July 1946, they apply also to domestic and Treasury silver if such silver enters into New York market transactions.

On December 21, 1933, by Presidential proclamation, the U. S. Government price of newly mined domestic silver was established at $\$ 0.6464$ per fine ounce. Subsequent changes in the Government price for silver are as follows: $\$ 0.7111$, April 10, 1935; $\$ 0.7757$, April 24, 1935; \$0.6464, January 1, 1938; \$0.7111, July 6, 1939 (for silver mined after July 1, 1939). On July 31, 1946, the Pres ident approved an act which provided that seigniorage to be deducted for silver (mined after July 1, 1946, and delivered to the Treasury) be reduced from 45 to 30 percent. The effect was to raise the price of domestically mined silver after mid-1946 to $\$ 0.905$ per ounce; since that time, there has been no change in the Government price.

Monthly data for 1929-52 comparable with monthly averages shown herein will be found in earlier editions of BUSINESS STA TISTICS as indicated at top of p. 197 of this volume. Monthly averages and monthly figures back to 1913 and 1923, respectively, are shown in the 1932 SUPPLEMENT (revisions: January 1923, $\$ 0.657$; July 1933, \$0.376).
${ }^{6}$ Source: Department of Trade and Commerce, Dominion Bureau of Statistics. The data cover silver in all forms from Canadian ores, including a small amount of silver in United States ores treated. The accounting is on the basis of either refinery production or silver in base bullion and in blister or converter copper produced, plus silver in ores and concentrates exported. Figures beginning May 1949 include production in Newfoundland."

Monthly data for 1938-52 comparable with monthly averages shown herein (with exceptions mentioned below and in note 11 for this page) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions for 1950 (in thousands of fine ounces): January-May - 1,$247 ; 1,447$;

1,$848 ; 1,528 ; 1,831$; July, 2,286. Monthly figures prior to 1938 shown in earlier SUPPLEMENTS are from the American Bureau of Metal Statistics and are not in agreement with the monthly averages shown in the 1940 SUPPLEMENT and later issues.
${ }^{7}$ Source: American Bureau of Metal Statistics. Data for the United States are based on production (from material of domestic origin) of commercial bars, 0.999 fine, and other refined forms, plus purchases of crude silver by the United States Mint. Refined forms other than bars comprise shot, crystal, etc.; these account for only a small part of the total. Production in the Philippine Islands is included in the United States figures through the year 1943 and for 1945. Reports of the compiling agency give also silver production from foreign material; the separation between silver of foreign and domestic origin is only approximate.

Production for Mexico in general is based on refined silver bullion, plus silver content of ores, etc., exported. The 1942-52 monthly averages are based on the Mexican official figures for these years and differ from the averages of the monthly figures, which are in part estimated. Monthly data are not available for 1942-June 1946; the monthly averages are based on annual totals and, for 1942-45, are partly estinated.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein (with exceptions stated in note 11 for this page) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures beginning 1923 appear in the 1932 SUPPLEMENT. (Revisions for United States, in thousands of fine ounces: 1923-July, 5,986; September, 4,901; October, 5,014; November, 5,249; December, 5,140 ; 1924-December, 5,674.)
${ }^{8}$ Data for U. S. monetary stock are for the end-of-year, not monthly averages.
${ }^{9}$ Beginning 1934, values zre calculated at the rate of $\$ 35$ per fine ounce; prior thereto, $\$ 20.67$.
${ }^{10}$ Less than $\$ 500,000$ increase in earmarked gold.
11 Includes revisions not allocated to the monthly data.
$1^{12}$ Monthly averages for 1942-46 are based on annual totals which include the following amounts not allocated to the monthly figures: Mexican production, 1942, \$2,335,000; 1943, \$1,838,000; $1944, \$ 1,482,000 ; 1945, \$ 1,456,000 ; 1946, \$ 1,226,000$; adjustments in Australian and Nicaraguan production, 1943, $\$ 2,000$ 。
${ }^{13}$ Figures beginning May 1949 include production in Newfoundland.

14 Not presently available.

## PAGE 92

${ }^{1}$ Source: U. S. Treasury Department. Data are as of the end of the year or month indicated. They include all coin and paper currency of the United States, except money held by the Treasury, money held by or for the account of the Federal Reserve banks and agents, and coin estimated to be held outside the continental limits of the United States. Paper currency held outside the continental limits of the United States is included. The figures represent, therefore, not only money held by the public but vault cash held by banks and such United States money as may have been carried abroad, other than silver coin known to have been exported and gold coin. The latter has been excluded for all years shown in this volume, since title to all gold and gold coin was vested in the United States under the Gold Reserve Act of 1934 and private holdings became illegal after January 30, 1934.

Monthly data for 1936-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Year-end data beginning 1914 appear in the 1942 SUPPLEMENT; monthly figures for 1914-35 are available upon request. Figures originally reported for the period through January 1934 have been revised to exclude $\$ 287,000,000$ of gold coin for the reason explained in the 3d paragraph of note 1 for p. 91.
${ }^{2}$ Source: Board of Governors of the Federal Reserve System. Figures represent deposits at all banks in continental United States and currency outside banks, and provide an indication of the total volume of the means of payment outstanding in the country. Data have been adjusted to show as nearly as possible sep-
arate information on the privately held money supply. Foreign bank deposits, net, represent deposits of foreign banks less balance with banks in foreign countries. Figures for U. S. Government balances comprise Treasury cash and deposits at commercial, savings, and Federal Reserve banks. Demand deposits adjusted comprise all demand deposits at commercial banks (except interbank and U. S. Government deposits) less cash items in process of collection, commonly called "float." Time deposits adjusted comprise all time deposits at commercial banks (except interbank time deposits, postal savings redeposited in banks, and U. S. Treasurer's time deposits, open account), at mutual savings banks, and the deposits of the postal savings system (both amounts redeposited at banks and amounts not so redeposited). Data for currency outside banks represent total currency in circulation (i.e., outside the Treasury and Federal Reserve banks) less vault cash held by commercial and mutual savings banks.

Through 1942 the figures for all series are available only for June or June and December call dates. Beginning 1943 for deposits and currency, 1947 for U. S. Government balances, and beginning 1948 for foreign bank deposits, estimates have been made for the other months and are rounded to the nearest 100 million dollars. These monthly estimates are based on end-ofmonth reports for all member banks beginning December 1945. Prior to that month, estimates were based on averages of daily figures reported semimonthly by member banks, averaging reports for the last half of the month and the first half of the following month. Estimates for nonmember banks were based on such reports for country member banks. The monthly data are adjusted to June and December data for all banks based on reports to the Board of Governors of the Federal Reserve System, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

Monthly data for 1947-52 (except that figures for total deposits and currency and foreign bank deposits are available only for June and December in 1947) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (revision for Government balances for March 1951: \$8,800,000,000).

June data for 1941-42 and monthly figures for 1943-46 for total deposits (adjusted) and currency, demand deposits (adjusted), time deposits (adjusted), and currency outside banks are shown in the 1949 and 1947 volumes. The following data are available upon request: June figures for 1892-1940 and December figures for 1923-28 for the aforementioned series; data for June 1929-46 for total deposits and currency, foreign bank deposits (net), and U. S. Government balances.
${ }^{3}$ Source: Board of Governors of the Federal Reserve System. The rate of turnover of demand deposits is computed from data for reporting member banks in leading cities and is exclusive of interbank and U. S. Government accounts. In 1953 the series on bank debits was revised back to January 1943 (see note 6 for p. 79) and the turnover rates were revised accordingly.

To derive the monthly series on the present basis (from January 1943 forward), debits for a given month are divided by the average of month-end demand deposits (for current and preceding month), multiplied by the number of working days in the year, and divided by the number of working (business) days in the month. The number of working days in the year is the number after deducting the 52 (or 53 ) Sundays and the 8 so-called universal holidays: January 1, February 22, May 30, July 4, Labor Day, November 11, Thanksgiving, and Christmas. For the annual turnover (shown here on line designated "monthly average"), total annual debits are divided by the average for month-end deposits (i.e., deposits reported for the two Decembers and 11 intervening month-ends divided by 13 ).

The 1935-42 turnover rates as shown herein for New York City are computed somewhat differently and are not entirely comparable with data for 1943 and thereafter. The method of computing these earlier rates will be found in the descriptive note for the series in the 1947 STATISTICAL SUPPLEMENT to the SURVEY OF CURRENT BUSINESS. That volume also contains monthly figures for 1941-46 on the old basis.

Monthly turnover rates for 1951-52 on the new basis for the three component series as presently shown will be found in the 1955 edition of BUSINESS STATISTICS; those for 1943-50 are available upon request.
${ }^{4}$ Includes Boston, Philadelphia, Chicago, Detroit, San Francisco, and Los Angeles.
${ }^{5}$ For 338 centers prior to April 1955.
${ }^{6}$ Data for money supply are as of December 31.
${ }^{7}$ Minus sign denotes excess of balances with banks in foreign countries over foreign-bank deposits in U. S.
${ }^{8}$ Based on revised data; see 1 st paragraph of note 3 for this page.

## PAGE 93

${ }^{1}$ Sources: Fiederal Trade and Securities and Exchange Commissions. The estimates cover all United States manufacturing corporations (except newspaper publishers). Data beginning with the 3d quarter of 1956 are based on a new sample, and the old es timates for the 1 st and 2d quarters of 1956 have been revised to provide an overlap.

Data through 1950 are based on the original sample and are not entirely comparable with those from 1951 forward. The precision of the figures compiled from the original sample was affected materially by the lack of currency of the sample; i.e., new manufacturing enterprises and firms going out of business were not adequately accounted for. The 2 d and current samples were designed to achieve and maintain currency in the representation of the universe of manufacturing corporations. To maintain current representation more effectively, a sample of corporations in the smaller asset size classes henceforth will be redrawn every two years (or one-half each year).

The current sample on which the estimates are based comprises about 9,000 corporations and is made up as follows: (1) All manufacturing corporations registered with the Securities and Exchange Commission; (2) all nonregistered manufacturing corporations with total assets of $\$ 5,000,000$ and over at the end of 1954; (3) a sample of nonregistered manufacturing corporations with total assets of less than $\$ 5,000,000$ at the end of 1954 ; and (4) a series of quarterly samples of manufacturing corporate births, starting with the first quarter of 1955.

Inasmuch as the published figures are based upon reported information from a cross-section rather than a complete census of corporations, little significance should be attached to small differences between quarters or between groups within a quarter.

The industry classification is in accordance with the latest Standard Industrial Classification Manual, issued by the Bureau of the Budget to provide a standard for the classification of industry data by all Federal agencies.

It should be noted that there are some differences in the concept of profits in this series (which follows the usual accounting definition of profits) and that in the national income statistics compiled by the U. S. Department of Commerce, Office of Business Economics. The national income series is benchmarked on tabulated profits (as reported to the Internal Revenue Service) adjusted by eliminating all depletion charges, capital gains and losses, and dividend receipts. The FTC-SEC series recognizes normal depletion charges and dividend receipts and adjusts for capital gains and losses where significant in amount. Another important difference is introduced because data used in this series are based on consolidated reports, whereas those used in the national income series are partially consolidated.

Quarterly estimates for 1951-52, based on the 2d sample, will be found in the 1955 edition of BUSINESS STATISTICS.
${ }^{2}$ Estimates for 1951-55 and for 1956 are based on new sam ples; see note 1 above regarding effect on comparability of the data.

## PAGE 94

${ }^{1}$ Source: Board of Governors of the Federal Reserve System. Figures relate to income after all charges and taxes and before dividends. These data are for Class $A$ and $B$ electric utilities, including affiliated nonelectric operations. They cover about 95 percent of all electric-power operations.

Quarterly data are available only beginning 1940; data for that year are as follows (millions of dollars): 1st quarter, 148; 2d quarter, 128; 3d quarter, 123; 4th quarter, 149. Quarterly data
for 1941-52 (except for revisions given below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised data are as follows (millions of dollars): 1946, 1st to 4th quarter, respectively - 193; 149; 141; 155; 1948-1st quarter, 185; 4th quarter, 175; 1950, 1st to 3d quarter, respectively $-228 ; 210 ; 172$.
${ }^{2}$ Source: Commercial and Financial Chronicle. Included in the series are all capital issues which are publicly listed as being for sale, except bank loans and United States Treasury issues. Securities sold at private sale are included when the compilers are aware of such a sale. Securities of any character issued to retire other outstanding securities are classified as refunding.
"Domestic issues" include securities sold by all companies incorporated in the United States or its territories, regardless of where the funds may be spent. "Foreign issues" include only that part of an issue of a foreign company which is floated in the United States.

The classification "Federal agencies' includes obligations guaranteed by the United States-such as issues of the Federal Farm Mortgage Corporation, Home Owners' Loan Corporation, and Reconstruction Finance Corporation (latter two now liquidated) and obligations of federally chartered institutions not so guaran-teed-such as issues of the Federal land banks, Federal intermediate credit banks, banks for cooperatives, and Federal home loan banks. In October 1941, however, the United States Treasury Department adopted the policy of providing funds through its own financing to agencies empowered to issue Government -guaranteed securities. Accordingly, in recent years this classification has included no guaranteed issues.

The item "Municipal, State, etc.," contains financing of all political subdivisions in the United States, but does not include temporary loans or loans obtained directly by States and municipalities from Federal agencies. The compilers state, however, that the latter issues are generally absorbed by one of several Federal agencies, and are reflected in these statistics when they are later sold by the original purchaser in the private investment market. Data on long-term State and municipal issues compiled by The Bond Buyer and shown on p. 96 include loans to States and munic ipalities by Federal agencies.
"Foreign" comprises flotations in American markets of bonds of foreign corporations and bonds of foreign governments and their political subdivisions. Issues of United States territories and possessions are included with foreign issues. However, issues of corporations in these places are included with the domestic corporate issues.

Monthly averages are based on annual totals, reported by the compiling agency, which may not include some revisions of the monthly figures.

Monthly data for 1936-52 (except revisions mentioned) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Scattered revisions of monthly data for $1944,1946,1947,1948$, and 1949 are available upon request.) Monthly figures prior to 1936 appear on pp. 14-21 of the February 1938 SURVEY and p. 21 of the April 1938 issue.
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ Data for profits are quarterly averages.
${ }^{5}$ Less than $\$ 500,000$.
${ }^{6}$ Includes issues of the International Bank for Reconstruction and Development not shown separately.

7 Includes revisions not distributed by months.
${ }^{8}$ Data subsequent to May 1956 not available as of press time for the present volume (June 1957).

## PAGE 95

${ }^{1}$ Source: Securities and Exchange Commission. Data cover substantially all new securities offered for cash sale in the United States in amounts over $\$ 100,000$ and with terms to maturity of more than one year. The series include flotations irrespective of whether the issues were publicly or privately placed and regardless of whether they were registered under the Securities Act of 1933. The statistics thus embrace certain corporate and noncorporate issuing groups exempt from registration under the Securities Act of 1933 , by virtue either of the nature of the
transaction or issuer, such as issues placed privately, intrastate offerings securities of railroad companies, Federal, State, and local government issues, issues of banks and eleemosynary institutions, and those between $\$ 100,000$ and $\$ 300,000$ in size offered pursuant to amendment of Regulation A of the Securities Act of 1933.

The data appearing in these tables are based on material filed with the Commission in connection with the various Acts administered and questionnaires received from companies issuing securities without registration under the Securities Act of 1933. Notices of offering are obtained from the financial press, financial manuals, periodicals, and special reports from leading lifeinsurance companies, as well as material filed with the Commission.

Omitted from the statistics are issues which do not appear in the financial press (largely securities sold through continuous offering, such as issues of open-end investment companies and employee-purchase plans), intercorporate transactions, U. S. Government "special issues" and other sales directly to Federal agencies and trust accounts, notes issued exclusively to commercial banks, and parts of issues known to have been sold outside of the United States.

The figures represent offerings, not actual sales. However, the proportion of the total remaining unsold is believed to be quite minor, and is composed chiefly of nonunderwritten issues of small companies.

Estimated gross proceeds are derived by multiplying principal amounts or number of units by offering prices, except for State and municipal issues for which principal amounts are used. Net proceeds represent estimated gross proceeds less estimated cost of flotation.

Definitions of the various classifications which are not selfexplanatory are as follows: The public-utility group, beginning 1948, comprises electric light and power, gas, and water; prior thereto, telephone and telegraph, pipelines, and street railway companies were also included; real estate and financial data excludes investment companies. "United States Government" issues include United States Government direct and guaranteed issues; only issues to the public are included, the United States Government "special issues" (issues to trust funds and government agencies) and other interagency sales being excluded; sales of Treasury bills also are excluded because of their short-term maturity. "State and municipal" issues include all governmental subdivisions and issues of United States territories and possessions and are as compiled by the Commercial and Financial Chronicle through 1951, and The Bond Buyer beginning 1952.

These data compiled by the Securities and Exchange Commission differ in several respects from the series compiled by the Commercial and Financial Chronicle also included in the SURVEY. As stated above, gross proceeds in the former are based on offering price while the Chronicle data are based on offering price in the case of preferred stock of no par value and all classes of common stock, but represent par amount for bonds, notes, and preferred stock of a stated par value. The Chronicle frequently includes entire issues offered in exchange for outstanding securities where only unexchanged balances are offered for cash sale, while the Commission includes only the balances of such issues actually sold for cash. Among the more important differences in coverage are the following: The Securities and Exchange Commission's data include United States Treasury issues excluded from the Chronicle series; the corporate group in the Commission's series includes foreign corporate issues offered in the United States while the Chronicle's series covers only domestic corporate issues. The classification of is sues by purpose also differs in the two series. The Chronicle allocates proceeds either as being for refunding purposes or nonrefunding purposes (new capital), including in the latter category all uses except retirement of funded debt and preferred stock.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1934-40 are available upon request (figures for corresponding period as shown in the 1942 SUPPLEMENT have since been revised).
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ Less than $\$ 500,000$.
${ }^{4}$ See 6th paragraph of note 1 for this page for information regarding change in classification.
${ }^{5}$ Available only beginning 1953; prior thereto, these data were included in "commercial and other" which is not shown separately.

## PAGE 96

${ }^{1}$ See note 1 for $p, 95$.
${ }^{2}$ Source: The Daily Bond Buyer. Data represent sales of securities, including long-term refunding issues, by States and municipalities in the United States and bonds of United States territories and insular possessions and municipalities therein. Included in long-term loans for pertinent years are Public Works Administration loans and Reconstruction Finance Corporation loans to States and municipalities as follows (thousands of dollars): Public Works Administration loans - 1933, 278,060; 1934, 227,121 ; 1935, 20,869; 1936, 18,125; 1937, 50,923; 1938, 48,783; 1939, 19,134; 1940, 2,320; 1941, 1,300; 1942, 1,000; Reconstruction Finance Corporation loans-1932, 130,268; 1933, 206,302; 1934, 61,289 ; 1935, 58,162 ; 1936, 37,648 ; 1937, 57,$625 ; 1938,105,443$; $1939,38,653 ; 1940,12,017 ; 1941,159,109 ; 1942,12,867$; 1943, 1,$000 ; 1944,500 ; 1945,800 ; 1946,13,500 ; 1947,18,420 ; 1948,13,-$ 777 ; 1949, 48,733 ; 1950, 1,624; 1951, 5,$880 ; 1952,4,700 ; 1953$, 2,514 . Also included are U. S. Housing Authority note and bond issues as follows (thousands of dollars): Long-term, bonds -1940 , 21,$569 ; 1941,22,388 ; 1942,88,978 ; 1943,60,558 ; 1944,12,799$; 1945, 2,956; 1946, 18,950; 1947, 4,366; 1948, 65,770; 1949, 143,300; $1950,59,210 ; 1951,389,105 ; 1952,358,485 ; 1953,499,382 ; 1954$, 374,972 ; 1955, 502,260 ; 1956, 198,535; short-term, notes-1939, 50,$671 ; 1940,495,858 ; 1941,392,135 ; 1942,426,298 ; 1943,287,180$; $1944,228,447$; 1945, 249,790; 1946, 329,$039 ; 1947,412,927$; 1948, 495,$540 ; 1949,769,831 ; 1950,886,622 ; 1951,974,420 ; 1952,1,205,-$ $508 ; 1953,2,041,480 ; 1954,2,432,601 ; 1955,1,668,242 ; 1956,1$, 758,867.

A comparison of these figures with those for municipal, State, etc., issues compiled by the Commercial and Financial Chronicle and shown on p. 94 of this volume indicates that the differences between the two series are to a large extent due to the exclusion from the Chronicle data of short-term loans and the Federal-agency loans previously mentioned.

Monthly data for 1929-52 (except 1934-35 figures for shortterm issues) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. Monthly averages back to 1913 and monthly data beginning 1923 are given in the 1932 volume. Revision for April 1927 short-term issues is $\$ 67,252,000$; also, the October and November 1930 figures for long-term issues in the 1932 volume are reversed. Revised monthly data for 1934-35 for short-term issues are available upon request.
${ }^{3}$ Source: Board of Governors of the Federal Reserve System. The data are as of the end of the month or year specified (except data beginning June 1955 for "money borrowed," which are as of the last Wednesday), and are based on the reports of member firms of the New York Stock Exchange carrying margin accounts for customers.
"Customers' debit balances" represent credit extended by the reporting brokers to their customers. Data exclude credit extended to other member firms of the New York Stock Exchange, to member firms of other national securities exchanges, and to the firms' own partners. Figures given are "net," i.e., after deduction of offsetting credit balances in individual accounts. "Cash on hand and in banks" represents the cash resources of reporting brokers, including cash segregated for the benefit of customers. "Money borrowed" includes all borrowings on all types of collateral by member firms of the New York Stock Exchange carrying margin accounts for customers, except borrowings between firms. This series is available only since September 1935. Earlier figures (shown in italics) differ from the present series chiefly in that they represent borrowings on security collateral in New York only by all members of the exchange. A series on loans to brokers by weekly reporting member banks in leading cities appears on p. 81. "Customers' free credit balances" represent cash balances due from brokers to customers who are in no way obligated to such brokers.

Monthly data for 1934-52 (beginning September 1935 for "cash on hand"), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. A detailed description of the data and monthly figures beginning 1931 for some items appear in "Banking and Monetary Statistics" published by the compiling agency.
${ }^{4}$ Data for brokers' balances are as of the end of the year (except data for 1955 and 1956 for "money borrowed," which are as of the last Wednesday).
${ }^{5}$ Data for 1935 forward are not comparable with earlier figures; see note 3 for this page.

## PAGE 97

${ }^{1}$ Source: New York Stock Exchange. Data represent the av erage price of all bonds listed on the exchange as of the end of each month, computed from the data on market value and face value of all listed bonds shown herein on p. 98. Beginning July 1947, averages for total listed bonds include data for bonds of the International Bank for Reconstruction and Development not shown separately. Annual figures are averages of the 12 monthly fig ures.

Monthly data for the period December 1924-52 comparable with monthly averages shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

2 Includes data not shown separately.
${ }^{3}$ Source: Standard and Poor's Corporation. Prices are a composite of data for high-grade corporate bonds (including industrial, utility, and railroad) and are a conversion of yield indexes, based on the yield to maturity of each bond and assuming a 4 -percent coupon with 20 years to maturity. From April 1937 to date, prices are averages of weekly data for $\mathrm{Al}+$ bonds ( 17 to 21 bonds represented); from January 1929 to March 1937, data are based on varying groups of $\mathrm{Al}+$ bonds, one price monthly (first of month) being used.

Monthly data for 1947-52 are shown in the 1955, 1953, and 1951 issues of BUSINESS STATISTICS; monthly figures for earlier years are available upon request.
${ }^{4}$ Source: Standard and Poor's Corporation. Data are based on Wednesday closing prices. An arithmetic average of yields to maturity for the 15 high-grade municipal bonds is first computed (see p. 98 for the yield series). The resulting series is then converted to a price basis using bond yield tables, A 4 -percent coupon with 20 years to maturity is assumed.
Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions-dollars per $\$ 100$ bond: 1948-May, 127.1; July, 126.6; November, 125.0.) Monthly figures for earlier years are available upon request.
${ }^{5}$ Source: Board of Governors of the Federal Reserve System. Monthly data are averages of daily figures. The prices from November 1941 forward are averages of actual market quotations on fully taxable bonds. Beginning with October 1955 the series is composed of fully taxable, marketable bonds due or callable in 10-20 years; for April 1952 through September 1955, of bonds due or callable in 12 years; and for November 1941 through March 1952, of bonds due or callable in 15 years or more. There was only one issue of taxable bonds within the maturity range prior to October 20, 1941 (taxable bonds were first issued in March 1941). The index through October 1941 relates to Iong-term partially tax-exempt bonds; it is calculated to show the approximate trend of prices of a representative bond of unchanging coupon rate and maturity, rather than an average of actual market quotations which varied widely because of differences in coupon rates and maturities of the issues included. The price index for this earlier period is derived from the average yield series of longterm partially tax-exempt bonds due or callable in 15 years and over (shown on p. 92 of the 1947 STATISTICAL SUPPLEMENT) by calculating the price at which the "representative bond" would sell to return the average yield; the calculation for January 1931October 1941 is on the basis of a $2-3 / 4$ percent 16 -year bond; prior thereto, on the basis of a 4 percent 16 -year bond.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1941 (for partially taxexempt 16 -year bonds) are available upon request.
${ }^{6}$ Source: Securities and Exchange Commission. Data are on the basis of trades cleared during the calendar month. Clearances are usually effected 4 days after the actual trading date. The reports are from all registered exchanges, but most of the sales are made on the New York Stock Exchange (for which figures are given separately) and on the American Stock Exchange (formerly the New York Curb Exchange). Data include sales of mortgage certificates and certificates of deposit.

These figures cover all sales on registered exchanges, except that they exclude for October 1934 to March 1935 stopped sales on the New York Stock Exchange and New York Curb Exchange and since March 1944, United States Government issues. Figures for the New York Stock Exchange excluding stopped sales throughout are shown in the series described under note 7 for this page.

Monthly data for October 1934-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (thousands of dollars): Market value, all exchanges, 1935-March, 349,657; April, 319,926; August, 323,441; September, 271,505; face value, March 1937-all exchanges, 494,975; New York Stock Exchange, 442,012.
${ }^{7}$ Source: New York Stock Exchange. Data represent volume (par value) of bond sales on the New York Stock Exchange, as reported on the ticker, computed as of the trading date. Stopped sales and other sales not reported on the ticker are excluded. Beginning July 1947, total sales and the total sales other than U. S. Government include bonds of the International Bank for Reconstruction and Development not shown separately.

Monthly data for 1936-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1913-35, where available, for all series (except domestic and foreign other than U. S. Government, which begins with July 1934) are given on pp. 18-19 of the December 1937 SURVEY.
${ }^{8}$ Average for 3 months, October-December.
${ }^{9}$ Average for 6 months, July-December.
${ }^{10}$ Data beginning July 1947 include bonds of the lnternational Bank for Reconstruction and Development not shown separately.

## PAGE 98

${ }^{1}$ Source: New York Stock Exchange. Data show the price movements of bonds on the exchange and the growth in the securities listed. The market values are based on bid prices as of the close of the last market session of the month or, if bid prices are not available, on asked quotations or last sale prices.

Monthly data for December 1924-52 comparable with monthly averages shown herein will be found in earlier editions of BUSlNESS STATISTlCS as indicated at top of $p .197$ of this volume.
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ Source: Moody's Investors Service. These averages were set up in 1928 to include 10 bonds of each rating (Aaa, Aa, A, and Baa) for each group (railroad, public utility, and industrial), making 120 bonds in all. Since January 1, 1935, however, there has not been a full set of 10 bonds in some rating classifications because of the limited number of suitable issues. At that time the Aaa industrials contained only 7 bonds and the Aa industrials only 6 bonds, compared with 10 bonds in each of the other rating classifications; the total number of bonds was therefore 113. On August 1, 1956, there were 110 bonds used, distributed in each group as follows: Railroad-6 Aaa, $8 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds; public utility- $10 \mathrm{Aaa}, 10 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds; and indus -trial-6 Aaa, $10 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds.

Occasional substitutions in the bond list have been made when ratings have been changed, when a bond has been called, when a bond sold too far above its call price, or because of approaching maturity. Suitable adjustments (usually small), which are gradually amortized, are introduced to prevent such substitutions from impairing the comparability of the series. No convertible
or other unusual issues are included. The average maturity on August 1, 1956 , was 25.75 years.

Averages are computed as follows: A daily yield based on the closing price for each individual bond is first computed and then unwerghted arithmetic averages of these yields are compiled for the different rating classifications. The corporate averages by ratings (Aaa, Aa, A, and Baa) and the group averages (railroad, public utility, and industrial) are compiled by averaging these rating-classification yields. Thus each rating group enters into the overall averages on the same basis whether it contains 10 bonds or less. The overall corporate yield average is the average of the four rating classifications (Aaa, Aa, A, and Baa) and is also the average of the three groups (railroad, public utility, and industrial). The monthly series are averages of daily figures and the annual series are averages of 12 monthly figures. Comparable weekly data for the corporate average are shown regularly in the Weekly Supplement to the SUR VEY.

In addition to the series shown here, averages by ratings are available for the railroad, public-utility, and industrial groups in Moody's Bond Survey.

Monthly data for 1934-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the 1919-33 period appear in the Novernber 1937 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{4}$ Source: The Bond Buyer. Data for the most part relate to bonds of large cities and represent the yield of a representative bond, having a maturity of about 20 years and selling at a price close to par. Originally the series included bonds of the 20 largest cities (excluding Washington, D. C.). Substitutions in the list of cities have been made from time to time, as some cities paid off the bulk of their debts or for many years had no debt outstanding with a sufficiently long maturity. In January 1940, bonds of one State and of the Port of New York Authority and the Metropolitan Water District (long) were substituted for three city bonds. The Port of N. Y. Authority and the Metropolitan Water District bonds were subsequently dropped; however, the latter issue was restored in May 1948. Two State bonds are included for 1941-45, three beginning 1946, and four beginning in 1948. Data were compiled as of the first of each month through December 1, 1946, and are shown as of the end of the preceding month. Subsequently, data have been compiled as of Thursday of each week and the figures shown here are for the Thursday nearest the end of the month (either the Iast Thursday of the given month or first Thursday of the following month).

Monthly data for 1923-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

5 Source: Standard and Poor's Corporation, The series is an arithmetic average of yields to maturity of 15 high -grade domestic municipal bonds. The yields are based on Wednesday closing prices and the monthly figures are averages of the four or five weekly figures for the month. (Prior to 1929 the monthly figures were based on an average of the high and low prices for the month.) The yield series is used to compute the price data for municipal bonds shown on p. 97.

Monthly data for 1923-52 (except revisions given below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions: 1930-January, 4.22; 1931-July, 3.85; August, 3.83; September, 3.91; October, 4.35; November, 4.42; December, 4.64.
${ }^{6}$ Source: U. S. Treasury Department. The data are averages of daily figures computed, beginning with April 1953, on the basis of the closing bid quotations on the over-the-counter market; prior thereto, on the basis of the mean of the closing bid and asked quotations. The series includes bonds as follows: Beginning October 1, 1955, fully taxable, marketable bonds due or callable in 10-20 years; from April 1952 through September 1955, fully taxable, marketable bonds due or first callable after 12 years; prior thereto, bonds due or first callable after 15 years.

Monthly figures for October 1941-December 1952 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data (through December 1945) on partially tax-exempt bonds are shown in the 1947 SUPPLEMENT and earlier volumes.

7 Data beginning July 1947 include bonds of the International Bank for Reconstruction and Development not shown separately.

## PAGE 99

${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. Data represent cash dividends paid by all companies for which reports are included in Moody's Dividend Record. The amount paid by each company is computed by multiplying the divident rate per share as reported in the Dividend Record by the number of shares outstanding as reported in Moody's Manual of lnvestments. Cash dividends paid on both preferred and common stock are included. Data are on a gross basis; that is, intercorporate dividend payments have not been excluded.

Stock dividends are excluded from the series. Liquidating dividends are also excluded, since they represent a repayment of capital investment rather than a disbursement of earnings. Dividend payments by companies incorporated outside the United States and its possessions are eliminated.

The corporations have been classified by industrial groups in accordance with the 1942 edition of the Standard Industrial Classification Code, developed by the Division of Statistical Standards, Bureau of the Budget; the classification is based on the major peacetime activity of the corporations. The miscellaneous group includes agriculture, contract construction, transportation other than railroads, public utilities other than communications and electric light and power, and motion pictures and other services.

The number of corporations included has increased from nearly 4,500 in 1941 to over 5,500 in 1956. Publicly reported dividend payments in 1954, for example, amounted to about 78 percent of cash dividend payments as reported for that year, according to corporation tax returns filed with the Internal Revenue Service. The relationship of the publicly reported series to the totals compiled by the Internal Revenue Service varies considerably from industry to industry. It should be made clear that no attempt is made to maintain a conventional sample, either in the sense of identical firms from year to year, or in the sense of representing a constant proportion of a changing universe. Although the increase in the number of companies included over time is probably due in part to a genuine increase in the number of corporations in the universe, it is likely that improvement in availability of dividend reports to Moody iss an even more important factor.

Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Source: Moody's Investors Service. The 200 stocks used in deriving the averages represent, for the most part, an identical list, except in the public-utility group. Because of the elimination of many utility holding companies and the consequent wider distribution of operating-company shares, a new list of 24 operating electric utilities was included beginning in 1946 and was chained to the average of the old list (revised to reflect the operating companies only, over the years 1942-45). The result is a continuous series, representing combined holding and operating companies prior to 1942 and operating electric companies thereafter.

Dividends are at annual rates (without adjustment for seasonal variation) and are determined at the end of each month on the basis of each company's most recent declaration. These dividends are multiplied by the number of each company's common shares outstanding and the products are added to obtain aggregate values (for the 200 companies and for companies in each subgroup, such as industrial, railroad, utilities, etc.), which are then divided by the total number of shares outstanding, free from. the effects of stock splits and stock dividends, to obtain the pershare figures.

Individual stock prices at the end of each month are used as the basis for deriving per-share prices. Earnings are net after taxes and contingencies less preferred dividend requirements (whether actually paid or not). Data (except for utilities) represent quarterly earnings (partly estimated for industrials) at annual rates, i.e., earnings for a given quarter are multiplied by four; there is no adjustment for seasonal variation. For ucilities, earnings are for 12 months ended each quarter; thus for this group, variations of a seasonal nature are essentially re-
moved. The method of computing per-share data on stock prices and earnings is similar to that used for dividends.

Yields are obtained by dividing per-share dividends by pershare prices.

Monthly data for 1945-52 (except for public utility for 1945-46) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197. Monthly figures for 192944 for the total, industrial, railroad, bank, and insurance stocks and through 1946 for the public-utility stocks are available upon request. Figures for public-utility stocks have been revised since publication in the 1949 STATISTICAL SUPPLEMENT to exclude American Telephone and Telegraph Company stock; this stock, however, is included in the total.

## PAGE 100

1 See note 2 for p. 99.
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ Source: Standard and Poor's Corporation. Yields are computed for each of 14 high-grade noncallable issues ( 15 prior to April 1948), including public utility as well as industrial preferred stocks. The group yield is currently determined from the average of the eight median yields (formerly nine). The indexes are based on one price weekly (as of Wednesday's close) with the monthly index computed from the average of the four or five weekly indexes of the month. Throughout the series the issues are converted to a price equivalent to $\$ 100$ par and a 7 percent annual dividend before averaging.

Monthly averages beginning with 1913 and monthly data for 1938-52 (except revisions given below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the 1928~37 period appear in the January 1942 issue of the SURVEY OF CURRENT BUSINESS. The data prior to February 1928 were computed from the average price of 20 stocks (see note in the 1942 SLPPLEMENT); monthly figures beginning 1923 for this series appear in the 1932 volume. Revisions (percent): 1913 monthly average, 6.57; April 1938, 4.54; 1939-October, 4.47; monthly average, 4.19; November 1941, 4.01; 1948-May, 4.08; June, 4.05; July, 4.13.
${ }^{4}$ Source: Dow Jones \& Co., Inc. Data are compiled from the daily closing quotations furnished by the Wall Street Journal. The figures shown here are averages of the daily figures. The indus trial averages include 30 stocks and the railroad averages 20 stocks over the entire period; the public-utility averages are for 20 stocks until June 1938 when the number was reduced to 15. Changes have been made in the stocks used for the averages at various times. Over the period covered a number of split-ups have occurred, and many large stock dividends have been paid. Adjustment has been made for these changes and the historical continuity of the series has been preserved. A complete description of the methods used in constructing the index, together with daily and hourly indexes, is given in "The Dow-Jones Averages," published by Barron's Publishing Co., Inc., 392 Newbury Street, Boston 15, Mass.

Monthly averages prior to 1929 and monthly figures for 1934 52 for all series and back to 1923 for industrial and railroad will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (dollars per share): May 1938-utility, 19.09, railroad, 22.00; September 1932, railroad, 35.27; November 1929, utility, 78.98. Monthly data for the 1929-33 period for 65 stocks appear in the September 1938 issue of the SURVEY OF CURRENT BUSINESS.
${ }^{5}$ Data from 1929 through March 1948 are based on 15 stocks; thereafter, on 14 stocks.
${ }^{5}$ Deficit.

PAGE 101
${ }^{1}$ See note 4 for p. 100.
${ }^{2}$ Source: Standard and Poor's Corporation. These indexes are the new series introduced by the compilers in early 1957. Currently, the composite index is based on 500 stocks. For the back record, the compilers standardized on the former " 90 com -
posite" index, and the " 500 composite" was linked to the former data to provide continuous historical comparisons.

- The formula used is generally defined as a "base-weighted aggregative" expressed in relatives with the average value for the base period (1941-43) equal to 10 . (The base period now used results in a price index level that can for most purposes be considered as interchangeable into dollars and cents. In other words words, the level of the new index closely approximates the average price level of all the stocks listed on the New York Stock Exchange.) The basic formula is modified as necessary to adjust for arbitrary price changes caused by the issuance of rights, stock dividends, split-ups, etc.

The new price index for bank stocks has not yet been completed. Data for this group are therefore omitted from the present volume.

For a complete description of the indexes see the 1957 edition of "Security Price Index Record," published by Standard and Poor's Corporation. The aforementioned volume and "Current Statistics" published monthly by that agency provide weekly figures also.

Monthly data prior to 1953 are available upon request.
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ Source; Securities and Exchange Commission. Data are on the basis of trades cleared during the month. Clearances occur, for the most part, on the fourth day after the transaction date. Sales of voting trust certificates, American depositary receipts, certificates of deposit, rights, and warrants are included. Data represent the total value and volume of stocks sold on all registered exchanges, except that for the period October 1934 to March 1935 they exclude odd lot and stopped sales on the New York Stock Exchange and the New York Curb Exchange (now the American Stock Exchange).

Monthly data for the period October 1934-December 1952 (except October 1934-March 1935 figures for shares sold) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. There have been a few minor revisions in the 1935 market-value data.
${ }^{5}$ Data on volume of sales excluding odd lot and stopped sales are compiled by the New York Times. Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. Monthly figures for 1923-37 appear in the 1938, 1936, and 1932 SUPPLEMENTS under the total "Stock Sales, New York Stock Exchange."
${ }^{6}$ Source: New York Stock Exchange. Data show price movements of all stocks on the exchange and the trend in the securities listed. Market values are based on bid prices as of the close of the last market session of the month or, if bid quotations are not available, on asked quotations or last sale prices. The figures have been compiled on a monthly basis (as of the end of the month) as far back as December 1924.

Monthly data for 1925-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{7}$ Average for 3 months, October-December.

## PAGE 102

${ }^{1}$ Source: United States Department of Commerce, Office of Business Economics. Exports and imports of goods are based chiefly on the official foreign-trade statistics of the United States as compiled and published by the Bureau of the Census with certain adjustments for valuation, coverage, and timing. Military transfers (not separately available prior to 1946) cover supplies and services transferred under grants; they include loans and returns of military equipment (returns are deducted from exports). Military expenditures (not shown prior to 1940) cover expenditures for both merchandise and services. Such expenditures include those by military personnel in the foreign economies, as well as expenditures by the armed forces, both for their own use abroad and for transfers to our allies.

Income on investments includes all international payments of interest, dividends, and profits. Estimates of receipts are based largely on information furnished by American companies with
foreign branches and subsidiaries, by fiscal agents for foreign dollar bonds, and by recipient Government agencies. Payments to foreigners on private obligations are derived largely from information supplied by foreign-owned companies and income tax returns. Other services consist principally of international payments for shipping and travel, insurance, royalties, fees, and miscellaneous Government expenditures. The shipping estimates are derived from questionnaires sent to domestic and foreign shipping companies and from statistics of international tonnage movements obtained from records of the Maritime Administration. The international movement of persons is recorded by the Immigration and Naturalization Service, United States Department of Justice. The number of travelers is multiplied by average expenditures secured from a questionnaire distributed to a sample of the travel population. Data for other miscellaneous service transactions, such as Government expenditures, motionpicture royalties, insurance, communications, etc., are obtained mainly from the agencies or companies participating in such transactions.

Unilateral transfers consist of all gifts, and other transfers without any immediate "quid pro quo," to (-) or from (+) foreign countries by either private citizens or the Government. Private gifts include personal and institutional remittances. The former are based largely on money-order data and information received from banks and include parcel-post gift packages; the latter are based on data furnished by the institutions making the remittances. Government unilateral transfers consist of the various aid programs of the United States Government, such as Lend-Lease, UNRRA, Interim Aid, European Recovery, Mutual Security, and Technical Assistance Programs, and other transfers such as pensions and payments of war-damage claims.

United States private capital movements include the outward $(-)$ or inward ( + ) flow of capital such as movements of direct investments of American enterprises in foreign branches and subsidiaries, purchases and sales of foreign securities, loans and advances less repayments, and changes in deposits in foreign banks.

United States Government capital movements include loans (less repayments) by the Export-lmport Bank, credits on surplus property and surplus ship sales, credits on postwar lend-lease transfers, the loans to the United Kingdom, various commodity advances, and changes in holdings of foreign currencies.

Foreign long- and short-term capital includes net investments by foreign enterprises in American branches and subsidiaries, foreign purchases and sales of American securities, credits and advances (less repayments) by foreigners to American business, and changes in foreign deposits in U. S. banks. The major part of the movements of foreign capital in the United States is due to changes in foreign dollar reserves, consisting primarily of deposits in U. S. banks and holdings of U.S. Government securities.

Gold sales (+) or purchases (-) represent transactions reducing or increasing the monetary gold stock of the United States. This includes transactions by the Government with foreign countries as well as from purchases of gold mined in the United States and from sales of gold for industrial use. Net purchases (-) from domestic sources or net sales (+) for domestic use are offset by an equal amount with the opposite sign in the merchandise account.

Errors and omissions represent the residual element in the statement and would be zero if complete data on all foreign transactions were available.

More complete information and detailed data on these series are contained in the Department of Commerce publication "Balance of Payments of the United States, 1919-53" (a reprint from the July 1954 SURVEY OF CURRENT BUSINESS). The 1953 data shown therein have been revised. Current quarterly data in detail, together with appropriate analyses, are published in the SURVEY as soon as possible after the close of each quarter. Detailed definitions and methods used in setting up a balance-of-payments statement are published in "Balance of Payments of the United States, 1949-51."
${ }^{2}$ Data for military transfers, separately available since 1946 only, are included for 1941-45 with figures for merchandise and other services.

[^0]
## PAGE 103

${ }^{1}$ See note 1 for p. 102.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of Foreign Commerce; based on foreign-trade statistics compiled by the Bureau of the Census since May 1941 and the Bureau of Foreign and Domestic Commerce prior thereto. (For general explanation of foreign-trade data, see note 1 for p. 104.)

The index numbers have been constructed by the so-called "ideal formula." The quantities of selected articles for each year and the year immediately preceding are used as weighting factors for their unit values in the calculation of unit-value indexes for each economic class (crude materials, crude foodstuffs, manufactured foodstuffs and beverages, semimanufactures, and finished manufactures). Within each such class, it is assumed that the relative price movement for export or import commodities not directly included in the calculation is the same, on the average, as for those selected, or as for a given segment of the selected sample. On this assumption, commodities not covered in the sample for each class are taken into account in the computation of the unit-value and quantity indexes. Indexes for total exports or imports are based on the combined totals of the values used in calculating indexes for the five economic classes. The index numbers for each pair of years are made into a series by the chain method. For imports, the indexes are based on general imports through 1933 and on imports for consumption thereafter.

The selected commodities on which the index calculations are based include most of the leading classes of exports and imports for which quantities are available and which show a reasonable degree of homogeneity. Quantity figures for many articles, particularly finished manufactures, are not available, and for other items the reported data lack homogeneity. Owing to changes in the classification of articles and the inclusion of new items which increased in relative importance, or for which quantity data became available in later years, the number of items and the proportion they bear to the total vary somewhat over the period. The selected commodities, however, are closely comparable from year to year and sufficiently varied to be fairly representative of each economic class of exports and imports. The commodities used in the computation represented 62-67 percent of the total value of United States merchandise exports for 1929 34, 55-60 percent for 1935-39, 40-47 percent for 1940-41 and 1945, 30-35 percent for 1942-44, 47-50 percent for 1946-51, 44 percent for 1952, 35-39 percent for 1953-54, and 42-44 percent for 1955-56. The import commodities represent 68-73 percent of the total value of imports into the United States for all years here reported, except for 1932-33, 1941-42, and 1947-49 when the representation was a little higher; for 1955 it was 66 percent.

Monthly data for 1947-52 appear in the 1955, 1953, and 1951 editions of the BUSINESS STATISTICS. The July 1951 SURVEY OF CURRENT BUSINESS (p. 27) contains data as follows: Annual indexes for 1913 and from 1919 forward; quarterly, 1929-2d quarter 1933; monthly, July 1933-46.
${ }^{3}$ Source: U. S. Department of Agriculture, Office of Foreign Agricultural Relations, from basic data of the U. S. Department of Commerce. (A revised index is in progress and, upon completion, will supersede the data shown here and in the monthly SURVEY OF CURRENT BUSINESS. The description following applies to the present series.)

The index numbers are computed by weighting quantities traded in a given period by average unit values during the 6-year base period. The monthly index numbers are adjusted for seasonal variation by a variant of the simple-average method.

The export index is based on exports of 74 commodity classifications which, during the 1924-29 base period, amounted to 96 percent of the total value of agricultural exports. The cotton classification covers cotton fibers and linters. Separate export indexes not shown in the SURVEY OF CURRENT BUSINESS are available for cotton, tobacco, fruits, wheat including flour, grains and grain products other than wheat, cured pork, and lard. Export indexes include shipments under the various special programs (see note 1 for p. 104). For 1947 and subsequent years, data include shipments under the Army Civilian Supply Program; such shipments for earlier years are not available.

The import index is based on data for imports of 122 commodity classifications which, during the 1924-29 base period,
amounted to 97 percent of the total value of agricultural imports. Separate indexes are prepared for supplementary and complementary imports. Supplementary imports consist of all imports similar to agricultural commodities produced commercially in the United States, together with all other agricultural imports interchangeable to any significant extent with such United States commodities; complementary agricultural imports include all others, about 95 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and spices. Individual import indexes are computed for sugar and molasses, dairy products, hides and skins, grains, tobacco, vegetable oils and oil-seeds, and dutiable wool and are shown in the Department of Agriculture releases.

Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume; monthly data prior to 1938 are available upon request. A complete description and historical data for all series are shown in a special release of the Department of Agriculture is sued April 1941, entitled "New Quantity Indexes of the Foreign Trade of the United States in Agricultural Products."
${ }^{4}$ Data for balance of payments are quarterly averages.
${ }^{5}$ Indexes through 1933 are based on general imports.

## PAGE 104

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Complete details may be found in the "Quarterly Summary of Foreign Commerce of the United States" (formerly Monthly Summary), published by the Bureau of the Census. The Quarterly Summary also contains a general explanation of trade statistics, as well as of sampling procedures introduced in 1953 and 1954 and the effect of the sampling procedures on the trade statistics. (See also last two paragraphs of this note regarding sampling.)

Foreign-trade figures as shown in this SUPPLEMENT incorporate all revisions issued with reports through December 1956; however, for the most recent years, and for 1956 in particular, they are subject to further revision upon release of final data by the compiling agency.

Data are compiled from copies of Export Declarations and Import Entries filed with the United States customs officials. The statistics show trade (except gold and silver in the form of ore, bullion, and coin) between the United States customs area (continental United States, Alaska, Hawaii, Puerto Rico, and for January 1, 1935, through December 31, 1939, the Virgin Islands) and foreign countries but do not include trade between continental United States and the aforenamed noncontiguous territories. The Republic of the Philippines (Philippine Islands prior to July 4, 1946) and the Panama Canal Zone are considered for these statistical purposes as foreign countries for all years. The Virgin Islands are treated as a foreign country prior to 1935; since 1940, their trade both with the United States and with foreign countries is omitted from the statistics shown in this volume.

Exports. - Total exports include exports of United States merchandise plus reexports of foreign merchandise. Export figures cover all merchandise (other than merchandise intransit through the United States) shipped from the United States customs area, with the exception of goods destined to the United States Armed Forces abroad for their own use, and with the further exception of items of relatively small importance (such as low-value or noncommercial shipments by mail, gifts valued less than $\$ 100$, household and personal effects, samples, etc.). Beginning January 1947, goods supplied to civilians in occupied areas through the United States Armed Forces are included in the export figures. These shipments totaled $\$ 908,343,000$ in 1947 and $\$ 901,552,000$ in 1948; separate data for subsequent years are not available. (Army Civilian Supply shipments were also made in 1943-46, but separate information is not available and the data are not included in the export figures shown.) The export figures also include lend-lease shipments and shipments made under the United Nations Relief and Rehabilitation Program and other foreign-aid and relief programs for periods when such programs are effective, as well as relief shipments made through private relief channeIs. In other words, two general types of exports are rep-resented-cash-purchase, or commercial, and foreign aid and
relief. Further details on the Government programs are given in the following three paragraphs.

Amounts of lend-lease shipments included are as follows (in thousands of dollars): 1941 (total for 10 months, March-December), 740,$903 ; 1942,4,932,739 ; 1943,10,357,533 ; 1944,11,297$, 514; 1945, 5,559, 810; 1946, 652,901; 1947, 23,532. Lend-lease shipments were negligible during the first half of 1948 and separate data are not available after June of that year. Lend-lease exports represent merchandise shipped under provision of the Lend-Lease Act of March 1941 which authorized the President to furnish, without compensation, supplies to the Government of any country whose defense he deemed vital to the defense of the United States. Shipments of supplies in lend-lease channels at the close of the war and supplies procured thereafter through lendlease procurement facilities are classified as lend-lease exports, although after the program officially ceased to operate, the recipient nations (with few exceptions) arranged to finance them prior to the exportation of the merchandise. Statistics of lendlease exports are not a measure of the total aid extended to foreign countries under the lend-lease program, but only a measure of that portion of the aid extended in the form of commodities exported from the United States.

Shipments made under the United Nations Relief and Rehabilitation Administration Program are included beginning September 1944; separate data are as follows (in thousands of dollars): 1944, 609 (total for 3 months, September, November, and December); 1945, 357, 047; 1946, 1, 013,383; 1947, 386,622; amounts for Janu-ary-June 1948 are negligible and separate data are not available after June 1948. These UNRRA shipments were made in accordance with the provision of the Act of Congress of March 28, 1944, authorizing United States participation in the work of the United Nations Relief and Rehabilitation Administration.

Other aid and relief shipments, initiated and included during 1947, are the Greek-Turkish aid, International Relief Organization shipments, and exports under the U. S. Foreign- and Inter-im-Aid programs. Beginning April 1948, exports include shipments initiated under the authority of the Economic Cooperation Act of April 3, 1948; this act provides for financial assistance to the 16 nations that met in 1947 to plan the European Recovery Program. Included in the export figures beginning July 1950 are shipments, both military and economic aid, authorized by the Mutual Defense Assistance Program (Mutual Security Program since 1952), an outgrowth of the North Atlantic Treaty signed April 4, 1949. Amounts of "military" shipments and, beginning in early 1956, also "direct forces support" shipments under the program are as follows (millions of dollars): 1950, July-December, $282.2 ; 1951,1,065.1 ; 1952,1,997.2 ; 1953,3,511.4 ; 1954,2$, $255.0 ; 1955,1,256.0 ; 1956,1,757.5$.

Imports.-Imports include private commercial trade, foreign merchandise purchased by United States Government agencies, merchandise owned by foreign governments and entering this country for their official use or for storage, and merchandise transferred to the United States under the reciprocal-aid program (reverse lend-lease). The import statistics, in general, are a complete record of merchandise that moves into the United States from foreign countries (except for in-transit shipments); however, there are some exclusions of items of relatively small importance in terms of total value, such as household and personal effects, gifts valued at less than $\$ 100$, and (prior to 1954) all merchandise reported on informal entries. (See last paragraph of this note regarding raising in September 1953 of the value limit for informal entries and the inclusion, beginning 1954, of value estimates for $\$ 1$ to $\$ 250$ formal and informal import shipments. No quantity data are included for informal entries and, beginning 1954, no quantity data are included for formal entries if valued at $\$ 250$ or less.)

General imports represent total arrivals of imported goods (except for in-transit shipments)-i.e., merchandise released from Customs custody immediately upon arrival, plus merchandise entered (immediately upon arrival) into bonded storage warehouses, bonded manufacturing warehouses, and bonded refining warehouses. Imports for consumption consist of merchandise entered into United States consumption channels-i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into
domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses and withdrawn for consumption or for exportation.

Export and import values. - The values stated are in United States dollars without reference to changes in the gold content of the dollar. (The statutory price of gold- $\$ 20.67$ per ounce-in effect prior to January 31, 1934, was changed on that date by Executive Order to $\$ 35$ per ounce. Between March 10, 1933, and January 31, 1934, the foreign exchange value of the dollar was permitted to depreciate as a result of the restrictions placed on gold shipments to foreign countries.)

Export values are those declared by the shipper at the time of exportation. Values of containers and coverings are included. If the merchandise is produced at an interior place, freight charges to the point of export are included, but freight and other charges from the place of departure in the United States to the destination in the foreign country are not included. The import value, as defined in Section 402 of the Tariff Act of 1930, is usually the "market value or the price at the time of exportation of such merchandise is freely offered for sale to all purchasers in the principal markets of the country from which exported, in the usual wholesale quantities and in the ordinary course of trade, including the cost of all containers and coverings of whatever nature, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." Essentially the same definition was carried in previous tariff acts. Since the import values usually reflect the foreign market value of the merchandise or the selling price f.o.b. the exporting country, they should exclude insurance, transportation, and other charges incident to arrival of the goods in the United States. (Transportation costs to the United States may inadvertently be included in the case of merchandise not subject to an import duty based on value.) United States import duties are excluded. The foreign values of imported merchandise are converted into United States currency at the rate of exchange prevailing on the day the merchandise is shipped to the United States, in accordance with Section 522 of the Tariff Act of 1930. Under the Customs simplification act of 1956, this procedure was revised by granting authority to continue to use the same rate of exchange for each currency for a 3 -month period so long as the rate on any particular day did not vary from it by 5 percent or more.

Sampling. -Effective with statistics for July 1953, sampling procedures for low-value shipments were instituted in compiling export and import statistics. In export statistics beginning July 1953 (except for the period January through June 1956), quantities and values of shipments individually valued $\$ 100$ to $\$ 499$ (representing about 4 to 6 percent of the monthly export value totals) are estimated on the basis of a 10 -percent sample of such shipments. In the export statistics for the period January through June 1956 quantities and values of shipments individually valued $\$ 100$ to $\$ 999$ (representing about 10 to 12 percent of the monthly export value totals) are estimated on the basis of a 10 -percent sample of such shipments.

In the import statistics for July-December 1953, values for under $\$ 100$ shipments (about $1 / 10$ th of 1 percent of total import value) for immediate consumption filed on formal entries are estimated from a 10 -percent sample of such shipments. These estimated values are excluded from the detailed commodity figures but are included in the overall total and country totals and, arbitrarily, in the economic class total for "finished manufactures." Beginning January 1954, values for $\$ 1$ to $\$ 250$ formal and informal entry shipments for immediate consumption (about 1 percent of total import value) are estimated from a 5 -percent sample of such shipments (all informal entries were excluded prior to 1954). Effective September 1953 the value limit for informal entries was raised from $\$ 100$ to $\$ 250$ and beginning January 1954 informal entries have been included in the import statistics of value (but not in the quantity data). These estimated values are excluded from the detailed commodity totals but are included in the overall totals and are distributed, as appropriate, in the commodity-group, country, and economic-class totals.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. The shipping weight represents the gross weight of the shipments including the weight of containers, wrappings, crates, and moisture content. The data cover only water-borne trade,
including traffic through Atlantic, Gulf, Pacific, and Great Lakes ports. They include shipments on all types of watercraft engaged in the foreign trade which are required to make formal clearance and to file manifests of cargoes laden aboard under U. S. Customs Regulations, and also, beginning January 1946, shipments by vessels not required to make formal customs clearances, which include ferryboats and passenger vessels making three or more trips a week between a United States port and a foreign port. Shipments on such passenger vessels and by ferry accounted for 1 to 2 percent of the totals in 1946.

Vessel export figures represent exports of domestic and foreign merchandise laden at the United States Customs area for shipment to foreign countries, and include export shipments to United States civilian government agencies as well as those for-eign-aid program shipments which are not controlled by the Department of Defense.

Elements excluded from the vessel export figures for pertinent periods are as follows: (1) Shipments to United States armed forces of military and naval supplies and equipment for their own use; (2) shipments of "special category" commodities (beginning July 1950); (3) all commodities exported under foreign-aid programs as Department of Defense controlled cargo (Department of Defense controlled cargo consists of those shipments under for-eign-aid programs - such as the Foreign Operations Administration Program, formerly Mutual Security, and the Civilian Supply Program - which are exported from the United States on United States Army or Navy transports or United States flag commercial vessels chartered by the Department of Defense under time, voyage, and space charter arrangements) ; (4) effective with January 1954, except for the period January through June 1956, shipments having a value of less than $\$ 500$ (for the period January through June 1956, shipments having a value of less than $\$ 1,000$ ). (Prior to January 1954, export shipments of less than $\$ 100$ were excluded.)

Vessel import figures are general imports and represent the total of imports for immediate consumption plus entries into Customs bonded storage and manufacturing warehouses made at the United States Customs area from foreign countries. The following elements are excluded from the vessel import figures: (1) American goods returned by the United States armed forces for their own use; (2) import shipments on Army or Navy transports and, effective with April 1952 statistics, on vessels under time and voyage charter to the Military Sea Transportation Service; (3) prior to 1954 , import shipments valued at less than $\$ 100$ where the shipping weight was less than 10,000 pounds; effective January 1954, imports valued at less than $\$ 100$ (irrespective of weight) and those having a shipping weight of less than 2,000 pounds (irrespective of value).

The following types of shipments are excluded from both the vessel export and import data: (1) Shipments of household and personal effects; (2) shipments by mail and parcel post; (3) shipments of vessels under their own power and afloat; (4) merchandise shipped in bond through the United States in transit from one foreign country to another "without having been entered as an import." (Imported merchandise cleared through Customs and subsequently reexported is included in both the import and export statistics.)

Monthly data on shipping weight of both exports and imports, covering trade by all methods of transportation, were compiled by the Bureau of the Census for January 1943 through June 1947; thereafter data have been compiled for water-borne trade only. Data for water-borne trade are not available separately by months prior to January 1946 and the only earlier data available at present are 1943-45 totals for export trade.

Monthly averages for 1950-55 are based on calendar-year totals; for other years, on statistical-year totals. Monthly data are on a statistical-month basis, i.e., they are tabulated from reports received in the month, regardless of when the shipment was made. Adjustments are made at the beginning and end of each year to arrive at a calendar-year total.

Monthly figures for 1951 and 1952 (statistical-month basis) will be found in the 1955 edition of BUSINESS STATISTICS. Monthly figures for 1946-50 (revised since publication) are available upon request.
${ }^{3}$ Export statistics generally show country of ultimate destination; if this is not known, country of consignment. Goods con-
signed to the armed forces or other representatives of any foreign country stationed in another foreign country are credited to the country to which the goods are physically sent. Imports are shown by country of origin, except that where the importer cannot readily obtain information as to the country of origin, the country of shipment is reported. In addition, countries reported as origin may actually represent shipment for merchandise which is transshipped before it reaches the United States. Prewar boundaries are still designated to serve for statistical purposes in foreign-trade schedules but in practice, since the close of the war, de facto boundaries have generally served. However, import commodities that are required to be stamped with the country of origin are credited to the country shown in the foreigntrade schedules rather than to the de facto country.

Monthly averages are based on 12 months in all cases, although during the war period there was no trade with the enemy and blockaded countries in most months.

Monthly figures for 1951 and 1952 appear in the 1955 edition of BUSINESS STATISTICS (the Statistical Supplement to the Survey of Current Business); however, the 1952 monthly averages for Europe, Northern and Southern North America, and South America as shown in that volume are incorrect (see present volume). Monthly figures for 1949 and 1950 appear in the 1953 volume; those for 1947 and 1948, in the 1951 volume (there have been scattered revisions of the published figures). Monthly data for 1941-46 (except revisions mentioned below) are shown in the 1947 and 1949 volumes. Most of the published 1946 monthly figures have since been revised. There have been minor revisions in the 1944 monthly data for general imports for total Latin American Republics; revisions for August and October 1943 for the same series are $\$ 131,401,000$ and $\$ 129,775,000$, respectively. Also there have been revisions for 1942-46 of certain previously published monthly figures for imports, to adjust for revaluation of tin-ore imports; these monthly revisions are available for total general imports and imports for consumption (total and by economic classes).
Monthly averages back to 1913 and monthly figures for 1938-40, except for Colombia and Venezuela, are available in the 1942 SUPPLEMENT. Monthly figures for 1923-37 for total exports, including reexports, total general imports, and exports and imports for geographic regions, and for Argentina, Brazil, Chile, Mexico, Canada, United Kingdom, France, Germany, Italy, and Japan are shown in the 1940, 1938, 1936, and 1932 volumes. The published figures are correct except for minor revisions in the figures in the 1932 volume and two major changes as follows: Total exports, including reexports, August 1929, \$380,565,000; Europe, total, April 1931, $\$ 94,634,000$.
${ }^{4}$ Beginning 1935, data for Union of Soviet Socialist Republics in Asia are included in total for Europe; prior thereto, in Asia and Oceania. (In 1934, exports to U.S.S.R. in Asia totaled \$ 130,000 .) Data for Turkey are included in Europe beginning 1952; previously, in Asia.
${ }^{5}$ Data include Manchuria beginning 1952.
${ }^{6}$ Burma included prior to January 1, 1938.
${ }^{7}$ Based on annual total which includes revisions not distributed by months.
${ }^{8}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see 4th paragraph of note 1 for this page). Beginning 1948, such shipments are included by the compiling agency.
${ }^{9}$ Beginning July 1950, data (except total exports of merchandise) exclude "special category" shipments.
${ }^{10}$ See note 9 above, explaining the difference between the total and the sum of data for geographic regions.
${ }^{11}$ Less than $\$ 500$.

## PAGE 105

${ }^{1}$ See note 1 for p. 104 for a general description of foreigntrade statistics.
${ }^{2}$ See note 3 for p. 104. That note includes references to the availability of monthly data prior to 1953.

3 Japanese Mandated lslands included with Japan prior to January 1, 1942. Exports to Japan in 1942, 1943, and 1945 represent relief shipments, including shipments to prisoners of war in Japan for 1943 and 1945. Figures for 1947 and subsequent years include goods supplied to occupied areas through the United States Armed Forces (these data were not included in earlier years); shipments to Japan under the Civilian Supply Program amounted to $\$ 354,380,000$ in 1947 and $\$ 246,338,000$ in 1948. Separate figures on shipments under this program have not been published for years subsequent to 1948 .
${ }^{4}$ For statistical purposes, trade with Germany was defined to include (insofar as ascertainable) trade with German-occupied areas from the following dates until the close of the war: Austria, May 6, 1938; Sudeten area of Czecho-Slovakia, November 10, 1938; other Czecho-Slovak provinces (Protectorate of Bohemia-Moravia and part of Slovakia), March 18, 1939; and Danzig and the Ger-man-occupied parts of Poland, November 16, 1939. Trade with Germany includes also trade with Memel territory of Lithuania from March 25, 1939, until January 1, 1948. An explanation of the statistical coverage for Germany and other countries after the close of the war is included in note 3 for p. 104 referred to above.

Exports to Germany in the years 1942 through 1948 represent mainly relief shipments; data for 1947 and subsequent years include goods supplied to occupied areas through the United States Armed Forces, amounting to $\$ 456,574,000$ in 1947 and $\$ 586$,521,000 in 1948. Separate figures on shipments under this program have not been published for years subsequent to 1948.
${ }^{5}$ Data for 1947 include goods supplied to occupied areas through the United States Armed Forces, amounting to $\$ 9,108$,000 for that year. No goods were supplied to ltaly through this channel in 1948.
${ }^{6}$ Includes Union of Soviet Socialist Republics in Asia and Europe.
${ }^{7}$ Data for Newfoundland and Labrador, which technically became a province of Canada on April 1, 1949, are included in figures shown here beginning January 1950 only. Exports to Newfoundland and Labrador for January-December 1949 totaled \$18, 515,000 ; the corresponding figure for 1948 is $\$ 32,260,000$.
${ }^{8}$ Includes twenty Latin American Republics and for 1929-37, also Canal Zone.
${ }^{9}$ Less than $\$ 500$.
10 Based on annual total which includes revisions not distributed by months.

11 Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note 1 for p. 104). Beginning 1948, such shipments are included by the compiling agency.

12 See note 9 for p. 104.
${ }^{13}$ See note 7 for this page.

## PAGE 106

${ }^{1}$ See note 1 for p. 104 for a general description of foreigntrade statistics, including information regarding the inclusion beginning 1947 of shipments under the Army Civilian Supply Program.
${ }^{2}$ See note 3 for p. 104. That note includes references to the availability of monthly data prior to 1953.
${ }^{3}$ Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, except as noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. The 1947 and 1948 figures shown in the 1951 volume have been revised. Monthly data prior to 1949 have not been published for tobacco and manufactures, coal and related fuels, and tractors, parts, and accessories. There have been minor revisions in the 1946 data, and in the figures in the 1932 SUPPLEMENT; also, the 1936 figures for unmanufactured cotton have been revised. Data beginning 1935 for machinery, as shown in the 1940 and earlier SUPPLEMENTS, have been revised to include diesel and semi-diesel marine en-
gines. Packing-house products are shown as "meats and fats" in SUPPLEMENTS prior to 1942. Monthly averages for total agricultural and total nonagricultural products shown in the 1942 SUPPLEMENT for years prior to 1919 are for fiscal years ended June 30.
${ }^{4}$ Effective with the statistics for July 1950, all semimanufactures reported under "special category, type 1" commodity classifications have been included under finished manufactures.

Beginning January 1955, private relief shipments of food products are included under manufactured foodstuffs and beverages; prior thereto, they are shown with finished manufactures.

Because of changes in the export schedule, figures for January June 1956 are not entirely comparable with those for other periods. However, the monthly averages for 1956 are based on annual totals which do not reflect the schedule changes and are, therefore, comparable with monthly averages for earlier years (with the exception of data prior to 1955 for manufactured foods and finished manufactures).

5 Includes data not shown separately.
${ }^{6}$ Includes linters.
${ }^{7}$ Beginning January 1948, figures have been adjusted (in accordance with the 1949 commodity classifications) to include fruit juices. Exports of fruit juices in 1948 amounted to $\$ 13,783,000$.
${ }^{8}$ Packing-house products include total meat products, animal oils and fats (edible), and animal oils and greases (inedible), except fish oils. Beginning January 1948, figures have been adjusted (in accordance with the 1949 commodity classifications) to exclude oleomargarine. Exports of oleomargarine in 1948 amounted to $\$ 1,107,000$.
${ }^{9}$ Based on annual total which includes revisions not distributed by months.
${ }^{10}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note 1 for p. 104). Beginning 1948, such shipments are included by the compiling agency.
${ }^{11}$ Adjusted for comparability with succeeding data (see note 7 above for fruits, etc., and note 8 above for packing-house products).

12 See note 4 for this page regarding changes affecting comparability of the figures.
${ }^{13}$ Based on reported annual total, not on sum of monthly figures shown. See 3d paragraph of note 4 for this page.

## PAGE 107

${ }^{1}$ See note 1 for $p .104$ for a general description of toreigntrade statistics, also for information regarding the inclusion beginning 1947 of shipments under the Army Civilian Supply Program.
${ }^{2}$ See note 3 for p. 106 for references to earlier data. The total for nonagricultural products includes data not shown separately.
${ }^{3}$ Excludes automobile service appliances and parts, and trailers. Beginning January 1948, data have been adjusted (to conform to the 1949 revision of the export schedule) to exclude exports of industrial trucks and to include those of electric buses and trackless trolleys.

The figures from January 1951 forward have been adjusted (to conform to the 1952 revision of the export schedule) as follows: Data formerly included for spark plugs and pumps transferred to electrical machinery and industrial machinery, respectively; service machinery and equipment, formerly elsewhere, now included.
"Special category" data are excluded during the period from July 1949 through 1951.
${ }^{4}$ Represents the total "chemicals and related products" group as shown in the original foreign-trade reports; includes chemicals (coal-tar, industrial, medicinal), pigments, paints, and varnishes, fertilizers and materials, explosives, soap, and toilet preparations. Beginning January 1948, data have been adjusted
(in accordance with the 1949 commodity classifications) to include exports of vulcanized fiber sheets and printing ink. Beginning January 1954, jet fuel (totaling $\$ 1,719,000$ in 1953) formerly included with chemicals, etc., is included with petroleum and products.
"Special category" data are excluded beginning July 1950; however, the figures from January 1952 forward now include certain "special category, type II" items which previously were classified as type 1 and, therefore, were omitted for security reasons.
${ }^{5}$ Includes office appliances and printing machinery in addition to the classes of machinery shown separately. See note 7 regarding the inclusion (beginning 1948) of data for copper wire and cable. Beginning May 1949, "special category" data are excluded.
${ }^{6}$ Prior to 1948, exports of tractors, etc., are included with those of agricultural machinery. Data for tractors for May 1949 through 1951 exclude "special category" exports.
${ }^{7}$ Figures beginning January 1948 reflect the transfer of insulated copper wire and cable from the "copper and manufactures" group to the "electrical machinery" group. This transfer was made to adjust to groupings outlined in the 1949 revision of the export schedule. Data beginning with January 1951 have been adjusted in accordance with the 1952 revision of the export schedule. Beginning May 1949, "special category" items are excluded.

8 "Special category" data are excluded beginning July 1950.
${ }^{9}$ Beginning January 1948, data have been adjusted (in accordance with the 1949 revision of the export schedule) to include exports of scales and balances; gasoline, motor, station, warehouse, and factory trucks; push carts and hand trucks; and internal combustion marine engines, Data from 1951 forward have been adjusted to conform to the 1952 revision of the export schedule.
${ }^{10}$ Includes all finished textile products and yarn and other semimanufactures.
${ }^{11}$ Based on annual total which includes revisions not distributed by months.
${ }^{12}$ Data for 1947 for the pertinent series are adjusted to include shipments under the Army Civilian Supply Program (see note 1 for p. 104). Beginning 1948, such shipments are included by the compiling agency.
${ }^{13}$ Adjusted for comparability with succeeding data (see notes $3,4,5,7$, and 9 above on the various items).
${ }^{14}$ Data for the period indicated in the note for the column heading exclude "special category" exports not shown separately for security reasons; the figures, therefore, are not entirely comparable with those for other periods. The "special category" exclusions affect the data through 1951 for all indicated items, as well as data from 1952 forward for the following items: Chemicals and related products; total machinery; electrical machinery; and metalworking machinery. In general, however, the exclusions beginning 1952 are not so significant as formerly, since various commodities were shifted from type 1 to type II special category and, for type II, the publication of data (except by destination) is permissible.
${ }^{15}$ Beginning January 1951, data have been adjusted to conform to the 1952 revision of the export schedule (see also note for column heading).
${ }^{16}$ Beginning January 1954, exports of jet fuel (totaling $\$ 1,719$, 000 in 1953) are included with petroleum and products; formerly, with chemicals, etc.
${ }^{17}$ The 1956 monthly average is based on reported annual total, not on the sum of monthly figures shown; see 3d paragraph of note 4 for p. 106.

## PAGE 108

${ }^{1}$ See note 1 for $p .104$ for a general description of foreigntrade statistics.
${ }^{2}$ See note 3 for p .104 for references to earlier data. See also note 6 below regarding revisions resulting from the revaluation of imports of tin ore.
${ }^{3}$ Beginning 1935, data for Union of Soviet Socialist Republics in Asia are included in total for Europe; prior thereto, in Asia and Oceania. (ln 1934, imports from U.S.S.R. in Asia totaled \$422,000.) Beginning January 1952, data for Turkey have been transferred from Asia to Europe.
${ }^{4}$ Including Manchuria beginning January 1952 and Outer Mongolia beginning January 1953.
${ }^{5}$ See note 3 for this page.
${ }^{6}$ Average based on revised annual total which includes adjustments for revaluation of tin imports. Revised monthly figures for 1942-46 for the United States total are available upon request. Revisions by months are not available for geographic regions and countries. Adjustments made in annual totals for regions and countries are as follows: Africa $-1942,+\$ 17,700 ; 1943,+\$ 411,-$ 000; 1944, $+\$ 1,123,000 ; 1945,+\$ 881,000$; Asia and Oceania - 1942, $+\$ 2,117,000$; Southern North America-1943, $+\$ 14,000 ; 1944$, $+\$ 13,500 ; 1945,+\$ 2,700$; South America $-1942,+\$ 8,897,000 ; 1943$, $-\$ 275,700 ; 1944,+\$ 8,459,000 ; 1945,+\$ 11,201,000$.
${ }^{7}$ Based on annual total which includes revisions not distributed by months.
${ }^{8}$ Less than $\$ 500$.

## PAGE 109

${ }^{1}$ See note 1 for p. 104 for a general description of foreigntrade statistics.
${ }^{2}$ See note 3 for p. 104 for references to earlier data and minor revisions for total Latin American Republics.
${ }^{3}$ Japanese Mandated Islands included with Japan prior to January $1,1942$.
${ }^{4}$ See note 4 for p. 105.
${ }^{5}$ Union of Soviet Socialist Republics in Asia and Europe.
${ }^{6}$ Data for Newfoundland and Labrador, which technically became a province of Canada on April 1, 1949, are included in figures shown here beginning January 1950 only. Imports from Newfoundland and Labrador for January-December 1949 totaled $\$ 38,683,000$; the corresponding figure for 1948 is $\$ 39,707,000$.
${ }^{7}$ Includes twenty Latin American Republics and, for 1929-37, also Canal Zone.
${ }^{8}$ Average based on revised annual total which includes adjustments for revaluation of tin imports. This revision is not available by months. Adjustments made in annual totals are as follows: Indonesia-1942, $+\$ 2,117,000$; Latin American Republics -1942, $+\$ 8,897,000 ; 1943,-\$ 261,600 ; 1944,+\$ 8,472,000 ; 1945$, $+\$ 11,204,000$; Argentína - 1944, $+\$ 13,000$.
${ }^{9}$ Less than $\$ 500$.
${ }^{10}$ Includes minor revisions not distributed by months.
${ }^{11}$ See note 6 for this page.

## PAGE 110

${ }^{1}$ See note 1 for $p .104$ for a general description of foreigntrade statistics.
${ }^{2}$ See note 3 for p. 104. That note includes references to the availability of monthly data prior to 1953.
${ }^{3}$ Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, except as noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Monthly data for 194246 for total imports for consumption and for crude materials have been revised to reflect the revaluation of tin ore; these revisions are available upon request. Minor revisions have been made in the figures published in the 1932 SUPPLEMENT.
${ }^{4}$ Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein, except as noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. The 1947 and 1948
figures shown in the 1951 volume have been revised. No monthly data prior to 1949 for cocoa beans have been published in BUSINESS STATISTICS.

Monthly figures prior to 1938 are available in the "Monthly Summary of Foreign Commerce." The monthly averages prior to 1935 for imports of total agricultural and total nonagricultural products, as shown in the present volume and in the 1955 and 1942 volumes, are based on totals for fiscal years ended June 30.
${ }^{5}$ Includes data not shown separately.
${ }^{6}$ Data for 1929-33, as well as for succeeding years, represent imports for consumption. (Note that figures through 1933 for economic classes and commodities are general imports.)

7 Average based on total for fiscal year ended June 30 .
${ }^{8}$ Averages based on revised annual totals which have been adjusted to include $\$ 14,100$ for 1943 and $\$ 13,500$ for 1944 for revaluation of tin ore imports; these revisions are not available by months.
${ }^{9}$ Includes minor revisions not distributed by months.

## PAGE 111

${ }^{1}$ See note 1 for p. 104 for a general description of foreigntrade statistics.
${ }^{2}$ See note 3 for p. 104 for references to earlier data.
${ }^{3}$ The total includes data not shown separately. Data for 1942 46 represent revised figures which include adjustments for the revaluation of tin-ore imports. Revised monthly data (except for total nonferrous metals for 1943) are available upon request.
${ }^{4}$ Includes all nonferrous ores, metals, alloys, and manufactures, except precious metals, jewelry, and plated ware.

5 Average based on total for fiscal year ended June 30.
${ }^{6}$ Includes adjustments for the revaluation of tin-ore imports.
${ }^{7}$ Based on annual total which includes revisions not distributed by months.

## PAGE 112

${ }^{1}$ Sources: Civil Aeronautics Board (beginning January 1945); U. S. Department of Commerce, Civil Aeronautics Administration and predecessor agencies (prior to 1945). See note 2 for this page regarding source of data for airmail ton-miles prior to 1945.

Data cover scheduled operations of all domestic trunk airlines operating in continental United States and serving primarily the larger communities, according to the latest classification of such lines by the Civil Aeronautics Board. Data for local service carriers, helicopter carriers, and territorial operations are not included. For the period shown here, there have been several mergers of local service carriers with trunk line carriers; the comparability of the data is affected by less than 1 percent by the inclusion of operations of these smaller carriers. Figures for Colonial Airlines, operating from New York to Montreal, are included beginning January 1945, since most of the mileage of this line is in the United States. Earlier data have not been revised to include this company; however, it accounted for only 1.5 percent of the passengers carried in 1945, less than 1 percent of miles flown and passenger-miles, and a negligible percentage of other items. Operations of one line now classified as a localservice line are incIuded prior to 1945, but figures for this line are comparatively small and do not materially affect the comparability of the data.

All data cover revenue traffic only, whereas data relating to passenger traffic shown in SUPPLEMENTS prior to the 1947 issue cover revenue and nonrevenue passengers. There is duplication in the figures for number of passengers where the same passengers are carried by more than one air carrier and also, in the figures prior to 1945 , where some passengers are carried on more than one route of an air carrier. Monthly averages for 1942-44 (based on annual totals) excluding the duplication existing where passengers are carried on more than one route of the same carrier are as follows: 1942, 251,000; 1943, 238,000; 1944, 322,000 . Data excluding this duplication are not available currently, prior to 1942, or by months for 1942-44. It should be
noted that data beginning January 1957 for passengers carried (as shown in the May 1957 SUR VEY and subsequent issues) relate to passengers originating on line of each reporting carrier and exclude layover passengers. It is not known to what extent comparability with earlier data is affected, but it is believed to be small. There is no duplication in the figures for ton-miles and passenger-miles which take into account the distance carried. A "ton-mile" is equivalent to one ton carried one mile and a "passenger-mile" is equivalent to one passenger carried one mile.

Monthly data are available from the Board beginning 1946 for local-service airlines, foreign and overseas, and territorial lines in addition to data for trunk lines shown here.

Monthly data for 1941-52 for all series, for 1932-40 for revenue miles flown, and for 1931-40 for airmail ton-miles will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The data for airmail ton-miles in early editions, as mentioned above, are shown under the heading "postal business" in the Domestic Trade section and are in pound-miles; they should therefore be converted to ton-miles by dividing by 2,000 for comparison with figures shown here. Monthly figures for 1935-40 for express and freight ton-miles and revenue passengers carried, and for 1936-40 for revenue passenger-miles are available upon request.
${ }^{2}$ Data prior to 1945 are from the U. S. Post Office Department and are approximately comparable with later data from the Civil Aeronautics Board. Data for airlines within Hawaii and the U. S. possessions in the Caribbean area, which are excluded from the figures beginning 1945, are included in the earlier figures; while data for Colonial Airlines, which are included beginning 1945, are excluded for earlier years. The 1945 monthly average entirely comparable with earlier figures is $5,405,000$ ton-miles.
${ }^{3}$ Source: Interstate Commerce Commission. Data cover total operations of the Railway Express Agency, lnc. (formerly the American Railway Express Co.) as reported to the Commission and also, through June 1938, operations of the Southeastern Express Co. which was absorbed by the Railway Express Agency in July 1938. The data represent practically complete coverage of the express business on railroads, plus the express operations involved in servicing motor carriers, electric lines, water carriers, and airways.

Transportation revenues represent charges (by the express company) to customers for express service, plus some misceIlaneous transportation charges. Express-privilege payments are amounts paid by the express company to the carriers for the conduct of express operations. Such payments are derived by subtracting from income (i.e., the sum of charges for transportation, revenue from operations other than transportation, other income credits, and profit and loss credits) the following items: Operating expenses, taxes, other deductions from income, and profit and loss debits.

Monthly data for 1949-52, comparable with monthly averages shown herein, appear in the 1955 and 1953 editions of BUSINESS STATISTICS; monthly data beginning 1929 are available upon request. Statistics shown in the 1951 edition of BUSINESS STATISTICS and prior issues cover operating revenues (transportation revenues plus other revenues less express-privilege payments) and express operating income less express privilege payments.
${ }^{4}$ Source: American Transit Association. Data beginning 1945 on average cash fares are based on fares paid in more than 400 cities, each having a population of 25,000 or more, according to the 1950 Census (see next paragraph regarding data prior to 1945). The average fare is unweighted, i.e., the cash fare of the dominant transit company in each city, regardless of size, counts as a unit in the average. Averages are computed as of the last day of the month. No adjustments have been made for token fares or passes. Fares paid to motorbus and trolley -bus operators have been substituted where such services have replaced street railways.

Note that the series on cash fares as shown in BUSINESS STATISTICS prior to the 1955 edition differs from the present series (worked back to 1945) as follows: Figures shown in the 1953, 1951; and 1949 editions are based on fares paid in more than 400 cities, each having a population of 25,000 or more, according to the 1940 census; those in the 1947 and earlier volumes, on fares
paid in 357 cities having a population of 25,000 or more, according to the 1930 census. Monthly data for 1951 and 1952 for the current series on cash fares appear in the 1955 edition of BUSTNESS STATISTICS; comparable monthly data for August 1945December 1950 are available upon request.

Data for revenue passengers carried and operating revenues are estimated totals for all local transit lines, including electric street railways, elevated and subway lines, interurban electric railways, trolley -coach lines, and all common-carrier local motorbus lines. Excluded from the figures are long distance interstate motor carriers, suburban railroads, sightseeing buses, and school buses.

The estimates of passengers and revenues are based on monthly reports from member and nonmember companies whose operations (in terms of revenue or traffic) represent approximately 80 percent of the total transit industry, and on annual reports which include additional companies and which account for about 90 percent of the industry. The current series on revenue passengers and operating revenues differ from similar series published in the 1942 and earlier SUPPLEMENTS, in that the latter include only those bus lines that were affiliated with or were successors to electric railways and exclude so-called independent bus lines which had no historical connection with the old electric railway industry; in addition, data for passengers carried, published in those issues, are reported data and do not include estimates for nonreporting companies. The monthly averages for 1935 for revenue passengers and for 1935-40 for operating revenues are computed from annual totals.

Monthly data for 1941-52 for passengers and operating revenues, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1936-40 for passengers carried are available upon request.
${ }^{5}$ Source: Interstate Commerce Commission. The data are compiled from quarterly reports from a varying number of regulated carriers that furnish complete reports to the Commission. For the carriers of property, data beginning 1955 cover large intercity motor carriers, i.e., those having average annual gross operating revenues of $\$ 1,000,000$ or above. (Overlapping figures for 1954 and 1955, respectively, as reported by 783 large motor carriers of property are as follows-expressed as quarterly averages: Operating revenues $-\$ 696,164,000 ; \$ 804,128,000$; expenses- $\$ 671,818,000 ; \$ 770,639,000$; freight carried $-47,885,-$ 000 tons; $55,266,000$ tons.) For both carriers of property and passengers, the figures beginning 1949 (through 1954 for commodity carriers) cover class I motor carriers, defined as those with $\$ 200,000$ or more of operating revenues; earlier data cover carriers with operating revenues of $\$ 100,000$ or more. Comparison of data for the year 1949 based on the two definitions indicates that there is less than 1 percent difference in terms of operating revenues.

Carriers of freight represent intercity carriers of all types of commodities, comprising common carriers of general and special commodities and intercity contract carriers; data include both common and contract services of these carriers. Tonnage of revenue freight carried includes duplications on account of tonnage received from connecting motor carriers. Intercity revenue passengers carried represent those reported by intercity carriers operating intercity schedules, local and suburban schedules, and charter or special service. Carriers reporting both intercity schedules and local and suburban schedules are classified as intercity carriers if the average revenue per passenger carried is in excess of 20 cents. (The figures shown here do not cover operations of local or suburban carriers.)

Quarterly data for 1949-52 will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (For the carriers of property, statistics shown in the 1953 volume for the period $1945-52$ relate to intercity common carriers of general commodities only; for 1938-44, to carriers of all types of commodities as shown here.) Quarterly data for 1938-48 for carriers of passengers and for 1938-50 for carriers of all types of commodities are available upon request.
6 Data are as of December 31; based on fares paid in 357 cities having a population of 25,000 or more according to the 1930 census.
${ }^{7}$ Does not include $1,720,000$ miles flown by army planes during the period February 20-May 31, 1934.
${ }^{8}$ Data for motor carriers are quarterly averages. These averages are based on annual totals for the number of carriers reporting in the final quarter of the year.
${ }^{9}$ Based on 5 months, August-December.
10 Based on annual total which includes revisions not distributed to the monthly data.
${ }^{11}$ See note 5 for this page regarding change in number of reporting carriers.

PAGE 113
${ }^{1}$ See note 5 for p. 112.
${ }^{2}$ Source: Association of American Railroads, Car Service Division. Data represent cars of revenue freight loaded for all reporting class 1 roads and their subsidiaries. Most class 1 roads are included. The data include all cars of revenue freight originated for initial road haul on reporting roads. In general, figures are placed on a monthly basis in accordance with the number of weeks ending within each month of the year 1956, and this number governs the number of weeks in each month of the years prior to 1956. However, adjustments in the number of weeks are made, when necessary, in order to include 13 weeks in each quarter. The months consist of exactly 4 weeks, with the exception of March, June, September, and December, which cover 5 weeks.

The monthly figures shown in the 1955 edition and earlier issues of BUSINESS STATISTICS cover the weekly data which were combined on the basis of the number of weeks ending in each month of the last year shown in each volume, respectively. Weekly figures for 1937-56 by type of commodity loaded are given in the report of the Association of American Railroads relating to cars of revenue freight loaded (issued January 8, 1957).
${ }^{3}$ Data for class I motor carriers are quarterly averages. These averages are based on annual totals for the number of carriers reporting in the final quarter of the year.

## PAGE 114

${ }^{1}$ Source: The indexes are computed by the Board of Governors of the Federal Reserve System from weekly data compiled by the Association of American Railroads. In computing the indexes, monthly loadings are derived from the weekly data by prorating the figures for weeks not included entirely within a single month according to the number of working days falling in each month. Daily averages for each class of freight are computed and related to the 1935-39 daily average. Allowance is made for Sundays, New Year's Day, Washington's Birthday ( $1 / 2$ day) through February 1942, Memorial Day ( $1 / 2$ day), Independence Day, Labor Day, Thanksgiving Day, and Christmas.

In computing seasonaI adjustment factors for all groups except ore loadings, the ratio-to-freehand curve method is used. For the seasonal factors for ore loadings, the usual procedure has been modified for April and May and, except in 1949, for October and November. The distortion resulting from the very erratic movement of loadings of iron ore in these months is lessened by treating April and May as a single period for seasonal adjustment purposes and treating October and November similarly. A single index for each of these periods has been computed and assigned to each of the 2 months in the period. In maintaining the index currently, preliminary indexes are computed for April and October and these are revised when the succeeding month's figures become available. Similarly for the livestock index, June and July have been treated as a single period for seasonal adjustment beginning 1939, except in 1946. Changes have been made in the seasonal adjustment factors from time to time to reflect changes in the seasonal pattern. The seasonal factor for coal was fixed at 100 beginning May 1941.
Beginning with data for 1931, weights derived from 1935-39 revenues by commodities, published by the Interstate Commerce Commission, have been used in combining the indexes for eight classes of freight into the total index. These weights are as follows: Coal, 21.3; coke, 0.7; forest products, 5.8; grain and grain products, 5.6 ; livestock, 1.8; merchandise, l.c.1., 7.6; ore, 2.4;
miscellaneous, 54.8. Prior to 1931, the following weights (based on 1928 revenues) were used: Coal, 21.4; coke, 0.8; forest products, 5.3; grain and grain products, 7.1; livestock, 1.5; merchandise, 1.c.1., 9.7; ore, 2.2; miscellaneous, 52.0.
Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Note that data for the years 1939-40 are correct except for revisions in the adjusted indexes for grain, livestock (June and July only), ore, miscellaneous, and the total, and a few additional one-point revisions. Monthly indexes for 1931-37 are available on pp. 21 and 22 of the August 1941 SURVEY. For earlier monthly indexes, together with a detailed description of the methods used in computing the index, see the Federal Reserve Bulletins for June 1937, pp. 522 and 523, and for June 1941, pp. 529-533.

## PAGE 115

${ }^{1}$ See note 1 for p. 114.
${ }^{2}$ Source: Association of American Railroads, Car Service Division. Data include only cars on class 1 railroads of the United States. Privately owned cars, except railroad-owned private refrigerator cars, are excluded. The car shortages cannot ordinar ily be filled from idle cars because of the unequal geographical distribution of the latter. The totals include flat, stock, refrigerator, and miscellaneous cars and covered hoppers, not shown separately, in addition to boxcars and gondolas and open hoppers. The item designated as "coal" cars in 1949 and earlier SUPPLEMENTS has been changed to "gondolas and open hoppers," since these types of cars are used for many commodities other than coal. Reports of the Association give additional detail by types of cars.
Beginning June 1941, data represent the daily average freightcar surplus and shortage for 4-and 5 -week periods based on data for weeks ending Saturday within the month; earlier 1941 figures are averages of data reported for four periods of each calendar month. From 1932 through 1940, the averages are based on data for the period from the 15th through the last day of each month; from 1929 through 1931, for the period from the 23d through the last day of each month. The comparability of the series is not affected by the use of varying periods.

Figures as shown on the monthly-average lines covering the period through 1951 represent averages of the derived monthly data; those for 1952-56 are averages of the 52 weekly figures reported by the compiling agency.

Monthly data for 1943-52 for both series (also 1929-42 for car surpluses) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions for car surpluses are as follows (thousands of cars): December 1928-total, 411; boxcars, 199; coal (gondolas and hoppers), 159; August 1930-total, 432; boxcars, 233; coal, 142; in 1932 -minor changes. There were no shortages reported for the 1931-42 period, except for a few months in 1936, 1937, and 1939.
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ Beginning July 1947, data exclude covered hoppers (not shown in current reports) which previously had not been reported separately from other hoppers. The average daily surplus and shortage of covered hoppers for $1947-56$ is as follows (number of cars); Surplus --July-December 1947, 10; 1948, 20; 1949, 247; 1950, 114; 1951, 10; 1952, 108; 1953, 305; 1954, 1,215; 1955, 451; 1956, 155; shortage-July-December 1947, 172; 1948, 69; 1949, $16 ; 1950,112 ; 1951,52 ; 1952,60 ; 1953,28 ; 1954,2 ; 1955,85 ;$ 1956, 124.
${ }^{5}$ Source: Interstate Commerce Commission. Data cover class I railroads only and exclude switching and terminal companies. Effective January 1, 1956, the ICC revised the classification for class I railroads to include carriers having annual operating revenues of $\$ 3,000,000$ or more, averaged over a period of 3 years. (For both line-haul roads and switching and terminal companies, this change eliminated certain former class I railroads, and added a few roads not previously in the class I group. The net effect of the change in classification is to reduce reported total operating revenues of class I railroads by less than one-tenth of one percent.) Monthly data for 1955
shown here are as reported by the revised ICC list of class I line-haul roads. During the 1929-56 period, the operating revenues of class I roads, exclusive of switching and terminal companies, have represented from 98 to 99 percent of the total operating revenues of all roads.

The number of class I railroads varies slightly from year to year. Data given in the Commission's monthly reports for the latest month and for the corresponding month a year earlier are based on the roads reporting in the most recent month. Any revisions made in the figures for the earlier year are included in the SURVEY presentation; hence data for the maximum number of railroads are not always included. For this reason, the data shown here may differ slightly from those appearing in annual reports of the Commission entitled "Transport Statistics" (formerly, "Statistics of Railways in the United States"). In addition, several carriers make their monthly reports on a system basis which does not obtain in the annual reports. This differ ence in reporting, however, has not appreciably affected the comparability of the data. Monthly averages are based on 12month summaries which may include revisions not distributed by months.

Net railway operating income represents operating revenues remaining after deducting operating expenses, railway tax accruals, and equipment and joint facility rents. Net income is the remainder after deducting from total income (net railway operating income plus other income) the fixed charges and certain miscellaneous items. It therefore represents income after all charges and taxes and before dividends. The monthly averages for financial operations, which are based on annual summaries issued in the monthly series, include some revisions not distributed to the monthly figures.

Data for freight carried 1 mile include both revenue and nonrevenue freight. Revenue passengers carried 1 mile relate to all revenue passengers, including commutation and multiple ride.

Monthly data for 1934-52 (except 1934-37 figures for taxes and joint facility and equipment rents) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Earlier monthly data are available as follows: Operating revenues and expenses and net railway operating income, 1922-33--p. 20 of the April 1934 SURVEY; net income, 1932-33-1936 SUPPLEMENT (monthly data for 1931 are available upon request); operating results, 1923-33 (except for minor revisions in 1923-31 figures)-1936 and 1932 SUPPLEMENTS. Monthly data for 1922-37 for taxes and joint facility and equipment rents may be obtained by deducting operating expenses and net railway operating income from operating revenues.

## PAGE 116

${ }^{1}$ See note 4 for p. 115 .
${ }^{2}$ Sources: U. S. Department of Commerce, Bureau of the Census (beginning May 1942) and Bureau of Foreign and Domestic Commerce (prior to July 1936); U. S. Treasury Department, Bureau of the Customs (July 1936-April 1942).
Data represent the carrying capacity (including ships in ballast) of ships clearing ports of the United States, Virgin Islands (beginning 1935), Hawaii, Alaska, and Puerto Rico; they do not relate to the actual weight of cargo carried. A net ton represents $100 \mathrm{cu}-$ bic feet carrying capacity after prescribed allowance for space occupied by crew, engines, and other machinery, etc. All types of watercraft engaged in foreign trade which are required to make formal clearance are included in the statistics. The following types of vessels touching port but not considered to be engaged in foreign trade are excluded: Vessels in distress or for repairs, not lading cargo; to effect crew changes or take on bunker fuel, provisions, etc; in traffic exclusively between the United States and noncontiguous territories; U. S. Army and Navy vessels clearing without commercial cargo, etc. Data for the period July 1951-December 1952 exclude vessels under time and voyage charter to Military Sea Transportation Service.
Monthly data for 1932-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (October 1945 figure for foreign vessels should read 2,776,000 tons.) Monthly figures for earlier periods (revised since publication) are available upon request.
${ }^{3}$ Source: Panama Canal Company (beginning July 1951; office of the Governor of the Panama Canal, prior thereto). Data include traffic both ways and represent cargo carried by ocean-going commercial vessels of 300 net tons or over, Panama Canal measurement. The smaller commercial craft, Government vessels, and certain vessels which are exempt from tolls are not included here (cargo carried by these vessels totaled $1,208,504$ long tons in the fiscal year ended June 30, 1956).

Monthly data for 1923-52 (for total tonnage, 1934-52), comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Revisions for U. S. vessels: 1943November, 352,000 tons; December, 149,000 tons.) For monthly data on total tonnage beginning August 1914, see p. 19 of the September 1935 SURVEY.
${ }^{4}$ For September-December 1945 a number of carriers included, in their charges to operating expenses for amortization of defense projects, amounts in excess of normal accruals and credits to railway tax accruals because of the shortened period of amortization of these projects; the total amounts of such charges to operating expenses and credits to railway tax accruals for 1945 were $\$ 593,885,000$ and $\$ 433,867,000$, respectively. In 1946 a number of carriers included, in their Federal income tax accruals, credits covering refunds of 1944 and 1945 taxes on account of carry-backs in the 1946 unused excess profits credit and net operating loss; these credits totaled $\$ 170,491,000$ for the year 1946.
${ }^{5}$ Data for the period July 1951 -December 1952 exclude vessels under time and voyage charter to Military Sea Transportation Service.
${ }^{6}$ Includes charges to operating expenses in connection with the Guthrie Wage Increase Award (March 18, 1953) as follows: 1953March, \$17,667,000; April, \$2,401,000.
${ }^{d}$ Deficit.

## PAGE 117

${ }^{1}$ Source: Horwath \& Horwath. Data represent a compilation from reports of a large number of hotels, transient and residential, throughout the country. Prior to 1942, reports were received from between 300 and 400 hotels in about 140 cities (both large and smal1) located in 30 States. The number of contributing hotels and the number of cities declined during the war years. For the 1942-46 period, data are based on reports from between 250 and 350 hotels in about 110 cities. Thereafter, more than 300 hotels, located in 190 cities, are represented. Practically all of the hotels included operate throughout the year.

Figures for average sale per occupied room cover room revenue only. An indication of the trend of room sales can be obtained by multiplying average sales per occupied room by the percent of total rooms occupied. The resulting series would represent the average sale per available room. Data beginning 1951 for the occupancy rate have been adjusted to the levels of the 1948 Census of Business. The restaurant sales indexes for each month are related to the corresponding month of the base year 1929. As the sample varies from month to month, it is necessary to compute the index from percentage changes (the given month as compared with the corresponding month in the preceding year) based on the reports received. These indexes include both food and beverage sales. Most large hotels permit the sale of alcoholic beverages and these sales are included in the figures. Data for the principal cities are included in the original Horwath \& Horwath reports.

Monthly data for 1929-52 (beginning 1932 for index of restaurant sales), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1930-31 for the restaurant sales index are available upon request.
${ }^{2}$ Source: U. S. Department of Justice, Immigration and Naturalizatiou Service (under U. S. Department of Labor prior to June 14, 1940). Data are compiled from passenger lists supplied by officers of transportation companies.

Data cover arrivals and departures of aliens and citizens, by sea and by air, between ports of the United States (including out lying areas) and noncontiguous foreign territory. Therefore,
travel between foreign countries and Alaska, Hawaii, Puerto Rico, Virgin Islands, and Guam is covered (for Guam, beginning September 1952 for arrivals and February 1953 for departures). Ex cluded from these data are border crossers, seamen, military personnel, traffic between the continental United States and outly ing areas, and cruise travelers. The Philippine Islands are treated as a foreign country for all periods (except in figures prior to May 1934, which include no data relating to the Islands); hence, citizens of the Islands admitted to the United States are included as alien arrivals.

Since July 1932, passengers making cruises or round trips without change of vessel have been excluded. Figures beginning 1945 for arrivals and departures of United States citizens and aliens exclude all travel via international land borders; for the years prior to 1945, data for permanent arrivals and departures (those involving a period of stay for a year or more) are included. For 1945, land-border arrivals of citizens amounted to about 4 percent of total arrivals and land-border departures, about 2 percent of total departures. Persons habitually crossing and recrossing international land borders are excluded. (In the 1953 and earlier editions of BUSINESS STATISTICS, permanent arrivals and departures of U. S. citizens over international land borders were included in the data through 1950. Also, travel by aliens between U. S. and foreign countries, shown in the aforementioned issues of BUSINESS STATISTICS and in the SURVEY OF CURRENT BUSINESS through March 1954, relates to emigrant and immigrant aliens only.) Monthly data for 1951-52, comparable with monthly averages for those years, shown herein, appear in the 1955 edition of BUSINESS STATISTICS; monthly data for 1945-50 are available upon request.

Figures for 1929-44 represent monthly averages based on fis -cal-year totals of citizens and aliens admitted and departed; for aliens, the arrivals data cover admissions plus arrivals of nonadmitted aliens. Monthly averages from 1945 forward are based on calendar-year totals.

Monthly data for 1929-50, for the former series (as described in 3d paragraph of this note) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The revised January 1951 figure for number of U. S. citizens arrived is 51,650 ; for all other revisions of the published data for the series, see the note in the 1953 volume.
${ }^{3}$ Source: U. S. Department of State, Passport Division. Data represent total passports issued, including renewals, and passports issued to American seamen as required by the State Department from February 1942 to August 1945.

Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions: 1929-September, 9,132; 1930-August, 10,473; September, 8,770; October, 7,826; November, 7,490.)
${ }^{4}$ Source: U. S. Department of the Interior, National Park Service. Data are compiled from reports from all national parks in the United States. The parks covered are Acadia, Big Bend (opened 1944), Bryce Canyon, Carlsbad Caverns, Crater Lake, Everglades (opened December 1947), Glacier, Grand Canyon, Grand Teton, Great Smoky Mountains, Hot Springs, Isle Royale (opened 1940), Kings Canyon (formerly General Grant but ex panded and renamed in 1940), Lassen Volcanic, Mammoth Cave (opened in 1936), Mesa Verde, Mt. Rainier, Olympic, Platt, Rocky Mountain, Sequoia, Shenandoah, Wind Cave, Yellowstone, Yosemite, and Zion. Monthly figures are available for all parks only beginning October 1940. Monthly averages prior to 1941 are for the travel year, October 1 to September 30. The original reports also cover visitors to specified national monuments, historical areas, parkways, recreation areas, and memorial parks.

Monthly data for 1941-52 (except for scattered revisions for 1941-43 and 1946-47 which are available upon request), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Source: Pullman Co. (as reported to the Interstate Commerce Commission). Data are for passenger -miles of paying passengers, exclusive of passenger-miles of chartered-car passengers, and for the revenues (berth and seat) derived therefrom. Data for all United States, Canadian, and Mexican railroads on which the Pullman Company has cars are included.

Monthly data for 1936-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision for passenger revenues, May 1940, $\$ 3,749,000$.) For earlier monthly figures on revenue passenger-miles beginning 1915, and passenger revenues beginning 1913, see p. 18 of the January 1939 SURVEY.
${ }^{6}$ Sources: Federal Communications Commission (beginning 1934) and Interstate Commerce Commission (1929-33). Data cover principal domestic telephone carriers reporting monthly to the Commission; these carriers account for more than 90 percent of the annual gross operating revenues of the telephone industry in the United States. For the period 1952-53, data include operations of four carriers in outlying territories and possessions, and beginning 1954, two carriers outside continental United States.

The figures represent data for the following number of reporting companies: $1929-31,103$ to $106 ; 1932-34,91 ; 1935-48,100$ to 114 ; 1949-53, 53 to $58 ; 1954-56,38$. (Note that data shown for December 1955 and December 1956 include operations of 2 additional carriers that had merged with 1 previously reporting carrier.) The comparability of the series has not been seriously affected by the changes in the number of reporting companies. According to overlapping data for 1932 , the change is less than 0.5 percent for all series. For the period beginning 1949, the comparability of the series, based on annual gross operating revenues, is affected by less than 3 percent. Also, by the mergers in December 1955, total operating revenues in that month were raised by less than 1 percent. Beginning January 1954, only those companies having an annual gross operating revenue of $\$ 1,000,000$ or more are required to report monthly to the Commission; prior thereto, the reporting requirement was $\$ 250,000$ or more of annual revenues. Twelve carriers reporting prior to 1954 were excused from filing, and seven carriers ceased reporting because of reclassification and mergers.

It should be noted that the comparability of the series for operating expenses and for net operating income (operating income prior to 1932) was affected beginning 1932 by changes in the Uniform System of Accounts. Monthly averages for 1932 comparable with the averages shown for 1931 are as follows: Operating expenses, $\$ 58,513,000$; operating income, $\$ 18,672,000$. The effect of the change in the classification on the data for operating revenues was negligible.

Operating statistics for certain months reflect adjustments for refunds which cannot be allocated to the periods in which they properly belong. These refunds are not sufficiently large to seriously distort comparisons, except in June 1934, when a large refund covering a period of 11 years reduced both the revenue and expense accounts by approximately $\$ 16,000,000$.

Figures beginning 1942 for total operating revenues and operating expenses are shown after elimination of major company duplications for the Bell System; the earlier data are based on carriers reporting monthly and are not available exclusive of duplications.

Monthly data for 1934-52 (with qualifications mentioned and exceptions and revisions given below) will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Note the following exceptions: Monthly total operating revenues and expenses through 1946 are unadjusted for intercompany duplications; station revenues prior to 1937 are not available separately. Revisions, in thousands of dollars, are as follows: (1941) January and February, respectively-operating revenues, 114,707 ; 111,232; message tolls, 31,$021 ; 29,177$; operating expenses, 74,$115 ; 70,828$; net operating income, 20,$187 ; 20$,366; (1942) April and September, respectively -net operating income, 19,574 ; 20,066; (1948) January-May-operating expenses, 173,$162 ; 165,402 ; 177,928 ; 174,610 ; 176,313$.
${ }^{7}$ Average for the travel year ending September 30 of the indicated year. Comparable average for the 1941 travel year is 672,000.
${ }^{8}$ See 2 d and 3d paragraphs of note 6 , above, regarding comparability of series as affected beginning 1932 by change in accounting classification; also by change in number of reporting companies beginning 1932, 1949, and 1954.
${ }^{9}$ Beginning 1942, total operating revenues are shown after elimination of major intercompany duplications for the Bell System
and are not strictly comparable with figures for prior years; data for 1929-41 are based on carriers reporting monthly and are not available exclusive of duplications.
${ }^{10}$ Data beginning 1945 exclude all travel via international land borders and are averages based on calendar-year totals. See 3d and 4th paragraphs of note 2 for this page.
${ }^{11}$ Data beginning January 1951 have been adjusted to the levels of the 1948 Census of Business; 1951 monthly average comparable with earlier data, 79 percent.

## PAGE 118

${ }^{1}$ See note 6 for p. 117.
${ }^{2}$ Source: Federal Communications Commission. Data are compiled from the reports of telegraph carriers (wire, oceancable, and radiotelegraph) accounting for practically the entire telegraph industry in the United States. Through December 1947, the reports cover carriers having annual operating revenues of $\$ 50,000$ or more ; thereafter, carriers having annual operating revenues of $\$ 250,000$ or more. The change as of January 1948 in the reporting basis resulted in the omission of one previously reporting radiotelegraph carrier. This carrier, however, accounted for only 0.3 percent of the total operating revenues of radiotelegraph carriers in 1947 and 1948. The landline and cable operations of the Western Union Telegraph Company have been segregated and statistics for the separate categories are shown here under data for wire-telegraph and cable carriers, respectively. Figures for wire-telegraph and radiotelegraph carriers include comparatively small amounts for telephone operations. "Net operating revenues" equals operating revenues less operating expenses and depreciation, operating taxes, and miscellaneous operating revenue deductions. The item includes no deduction for income taxes.

Insofar as possible, certain items of revenue and expenses for years beginning 1935 for wire and ocean-cable telegraph carriers and prior to 1940 for radiotelegraph carriers have been restated in accordance with changes in the accounting systems in those years and to place the data on a basis comparable with current reports. Monthly figures are not available on the restated basis prior to changes in the accounting system; annual statistics have been restated only beginning 1935 .

Monthly data for 1941-52 for radiotelegraph carriers and for 1943-52 for wire-telegraph and cable carriers will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Combined figures for wire and ocean-cable systems shown in the 1942 SUPPLEMENT are not comparable with combined totals of the separate figures shown in subsequent volumes because of the revisions referred to above. For radiotelegraph carriers, operating revenues for 1940 as shown in the 1942 volume are approximately comparable with those shown in later issues.
${ }^{3}$ Annual data are as of December 31.
${ }^{4}$ See second and third paragraphs of note 6 for p. 117 regarding comparability of series as affected beginning 1932 by change in accounting classification; also by change in number of reporting companies beginning 1932, 1949, and 1954.
${ }^{5}$ Beginning 1942, operating expenses are shown after elimination of major intercompany duplications for the Bell System and are not strictly comparable with figures for prior years; data for 1929-41 are based on carriers reporting monthly and are not available exclusive of duplications.
${ }^{6}$ Beginning 1948, data represent carriers having annual operating revenues of $\$ 250,000$ or more; see note 2 for this page. ${ }^{\mathrm{d}}$ Deficit.

## PAGE 119

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of Census (data for sodium sulfate and for sulfuric acid, through 1950 only, were collected in cooperation with the U.S. Department of the Interior). Data cover all known commercial manufacturers of the selected chemicals (except as indicated in the note for sodium
silicate) and represent the primary manufacture of new material, including quantities produced for further processing in the same plant, for intracompany transfer, and for sale. In some cases, data are included for material produced "in process" as an intermediate to the end product.

The figures are believed to be essentially complete except, in some years (primarily the war years), for quantities of various chemicals produced by plants either owned or operated by the Federal Government or operated solely for its account. It should be noted, however, that production of certain chemicals by plants operated by the Tennessee Valley Authority is included; also included, beginning with 1954 , is the production of certain chemicals (such as nitric acid, sodium sulfate, and sulfuric acid) in Govern ment-owned privately operated plants. (See also notes $2,8,10$, and 13 for this page.)

Annual data from the 1947 Census of Manufactures differ slightly from the totals of monthly figures for that year. Monthly averages based on the 1947 Census of Manufactures are as follows (units in short tons, except for oxygen and sulfuric acid which are in millions of cubic feet and thousands of short tons, respectively): Ammonia, synthetic anhydrous, 92,833; calcium carbide, 50,593 ; carbon dioxide, 39,817 ; chlorine gas, 120,268 ; hydrochloric acid, 36,880 ; nitric acid, 99,118 ; oxygen, 1,202 ; phosphoric acid, 84,414; sodium carbonate (soda ash), 377,056 ; sodium bichromate and chromate, 7,524 ; sodium hydroxide, $175,-$ 263; sodium silicate, 41,070 ; sodium sulphate, 74,650 ; sulfuric acid, 898. The 1954 data as shown here were collected as a part of the 1954 Census of Manufactures and thus coincide therewith.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Notice above-mentioned qualifications affecting year-toyear comparability; also qualifications in notes $2,3,7,8$, and 10-13 following). No data were collected in 1940 and none on a monthly basis prior to 1941. Monthly averages for 1939 and earlier years are based on totals from the Census of Manufactures.
${ }^{2}$ Output of Govern ment-owned plants, which was large through 1946 for both anhydrous ammonia and nitric acid and for the most part for military use, is not included (see note 10 regarding plants formerly Government-owned which are included beginning in June or August 1946; also for nitric acid, see note 13, regarding the inclusion beginning 1954 of production in Government-owned privately operated plants).
${ }^{3}$ Excludes quantities of liquid and gas $\mathrm{CO}_{2}$ converted and reported as dry ice and also amounts converted from pure $\mathrm{CO}_{2}$ (liquid or solid) purchased or received from other plants.
${ }^{4}$ Represents total production of gas, including quantities later liquefied for use, shipment, or storage.
${ }^{5}$ Production of sodium carbonate (soda ash) includes quantities used to manufacture finished light and finished dense soda ash, caustic soda, and refined sodium bicarbonate. The production of electrolytic soda ash and of natural soda ash is excluded from these statistics.
${ }^{6}$ Data for sodium hydroxide (caustic soda) include total production of liquid material by the electrolytic and lime-soda processes, including quantities of liquid caustic which are later evaporated to solid caustic.
${ }^{7}$ Data represent total production, except that prior to October 1953 small quantities were excluded for ortho-, meta-, and sesquisilicates when these chemicals were manufactured directly without going through the soluble glass stage. The former exclusions are estimated to represent less than 5 percent of the totals published for periods prior to October 1953.
${ }^{8}$ Data for sulfuric acid are combined totals for sulfuric acid produced by the contact and chamber processes, including spent acid fortified in the contact plants with the simultaneous produc tion of new acid. Production of Government -owned plants, which was large during the war period, is not included for that period; for the most part, this production was available only for military use. However, beginning with 1954, appreciable amounts produced in Government-owned privately operated plants are included. The figures for 1946-50 include monthly estimates based on annual totals of byproduct operations of a few smelters reporting to the

Bureau of Mines; the estimated data included vary from 4 percent in 1946 to 2 percent in 1950. Data for 1929 through 1939 are based on reports of the Census of Manufactures; they are shown in those reports on a $50^{\circ}$ Baume basis but are here converted to 100 percent $\mathrm{H}_{2} \mathrm{SO}_{4}$.
${ }^{9}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data represent the price of sulfuric acid, $66^{\circ}$ commercial, tanks, f.o.b. eastern works. Through 1951, the prices shown are quotation averages for 1 day each week; beginning with 1952, they are quotation averages for 1 day each month (usually in the week containing the 15 th ).

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{10}$ Data for synthetic anhydrous ammonia and nitric acid include operations of two large plants beginning June 1946 and, for the former, one additional plant beginning August 1946 which did not report previously; production at these plants was classified as military prior to the months indicated and was not included.

11 Beginning January 1948, figures are not strictly comparable with earlier data because of the inclusion of additional plants; however, the addition of these plants increased the production of the specified chemical by less than 3.5 percent.

12 Beginning January 1950, data exclude quantities produced and consumed in the same plants manufacturing soda ash. Monthly average for 1950 , comparable with earlier data, is 53,326 short tons.
$1^{13}$ Beginning with 1954 the figures include appreciable amounts produced in Government-owned privately operated plants; they are not strictly comparable with earlier figures.

## PAGE 120

${ }^{1}$ Source: U. S. Tariff Commission, with the exception of data for natural acetic acid which are from U. S. Department of Commerce, Bureau of the Census. Data cover all known commercial manufacturers of the selected chemicals and include production for sale and consumption, if any, in the reporting plants. Data for acetic acid include both synthetic and natural, but exclude recovered acetic acid. Acetic anhydride is produced from ketene, acetylene, ethylene, and from acetic acid by the vapor phase process. All products are reported on the basis of $100-$ percent content of specified material.

Monthly data for 1943-52 for acetic acid, acetic anhydride, and acetylsalicylic acid, and for 1951 and 1952 for DDT, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data back to October 1945 for DDT are available upon request.
${ }^{2}$ Source: U. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the industry, including operations in Hawaii and Puerto Rico. Production figures are net (gross production minus the quantity used in redistillation). Except during part of the war period, production includes comparatively small amounts produced for beverage purposes; production for beverage purposes was reported separately only for the fiscal year 1944-45 and totaled 16,253,000 proof gallons for that year. The amounts withdrawn taxpaid, representing withdrawals from industrial alcohol bonded warehouses upon payment of tax, are largely for use in the rectifying of beverage spirits.
Data through June 1941 and for July 1947 -June 1950 represent withdrawals for denaturation. For July 1941-June 1947 and beginning July 1, 1950, the data represent all products "used" for denaturation (i.e., domestic ethyl alcohol produced by industrial alcohol plants; spirits produced by registered distilleries and regarded upon receipt at denaturing plants as alcohol; and alcohol imported under authority of the Revenue Act of 1942, effective from October 22, 1942). During the latter-mentioned periods denaturing plants were permitted to store ethyl alcohol for purposes other than denaturation; therefore, alcohol used for denaturation was reported in lieu of withdrawals for denaturation.

In addition to the taxpaid withdrawals and withdrawals for denaturation, quantities are withdrawn tax free for hospital, scientific, and educational use; for use of United States and subdivisions; for export; and in Puerto Rico for medicinal, beverage, and other purposes. These transactions, of course, affect the stock figures which represent the amount remaining in warehouses and denaturing plants at the end of each month. Stocks are also affected by losses. Stocks at denaturing plants were comparatively small prior to 1942 and were not reported.

A proof gallon is the alcoholic equivalent of a wine gallon (231 cubic inches) at $60^{\circ} \mathrm{F}$. containing 50 percent of ethyl alcohol by volume. The proof of spirits is twice the percent of the content, by volume, of ethyl alcohol.

During the war period of $1942-45$, spirits produced at registered distilleries and stocks of unfinished spirits at industrial alcohol bonded warehouses were primarily for industrial purposes. For such data by months for 1942-45 (as well as combined data on ethyl alcohol and spirits), see p. 111 of the 1947 STATISTICAL SUPPLEMENT; see also notes 3 and 5 for that page regarding further details on these items.

More complete annual figures for ethyl alcohol, including details by States, are contained in the annual reports of the Commissioner of Internal Revenue.

Monthly data for 1934-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Earlier monthly figures beginning 1932 for taxpaid withdrawals and 1923 for other series are shown in the 1936 and 1932 SUPPLEMENTS and taxpaid withdrawals for 192531 are available on p. 20 of the April 1935 SURVEY; some revisions of the data are given in note 2 for p. 102 in the 1942 SUPPLEMENT, which also explains certain limitations of the data prior to July 1934 (not "July 1933" as stated in the 1942 volume).
${ }^{3}$ Source: U. S. Treasury Department, Internal Revenue Service. The data cover operations of all denaturing plants, including plants in Puerto Rico and Hawaii; they include completely denatured and specially denatured alcohol produced from domestic alcohol and spirits and also from alcohol imported under authority of the Revenue Act of 1942, effective October 22, 1942. Prior to July 1942, the data include small quantities produced from rum. Denatured rum was reported for years ending June 30, as follows (thousands of wine gallons): Production, monthly average $-1943,104 ; 1944,97 ; 1945,98 ; 1946,86 ; 1947$, $86 ; 1948,89 ; 1949,96 ; 1950,90 ; 1951,100 ; 1952,99 ; 1953,103$; 1954, $93 ; 1955,95 ; 1956,89$; consumption, monthly average1943,$104 ; 1944,98 ; 1945,96 ; 1946,88 ; 1947,85 ; 1948,88 ; 1949$, $96 ; 1950,89 ; 1951,100 ; 1952,98 ; 1953,103 ; 1954,95 ; 1955,93$; 1956, 89; stocks, June $30-1943,43$; 1944, 28; 1945, 42; 1946, $21 ; 1947,39 ; 1948,42 ; 1949,42 ; 1950,46 ; 1951,43 ; 1952,49$; 1953,$53 ; 1954,24 ; 1955,51 ; 1956,49$. The consumption figures represent removals from plants and include amounts shipped to bonded dealers.

A wine gallon is a standard United States gallon of 231 cubic inches.

Data by States, withdrawals classified according to formulas, amounts used in manufacturing, etc., are contained in annual reports of the Commissioner of InternaI Revenue.

Monthly data for 1934-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The monthly data through 1933 shown in earlier volumes are substantially correct except for scattered revisions in the consumption figures which are given in note 1 for p. 102 in the 1942 SUPPLEMENT (revision given for July 1936 production is an error; should read $6,122,000$ gallons). Further information regarding the data for 1927-33 is included in the aforementioned note.
${ }^{4}$ Sources: U. S. Tariff Commission (for production by tar distillers) and U. S. Department of the Interior, Bureau of Mines (for production by coke-oven operators). Figures cover creosote oil produced by both of the aforementioned types of operators. Amounts included for tar distillers represent production from purchased coal tar only or from oil-gas or water-gas tar produced or purchased by tar distillers. Beginning with 1956, production is reported on the basis of 100 -percent creosote content;
prior thereto, the amounts reported by coke ovens include some solution. Data cover all known commercial manufacturers of the selected chemicals and include production for sale and for consumption, if any, in the reporting plants.

Monthly data for 1943-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Data are not available for publication.
${ }^{6}$ Based on annual total which includes revisions not allocated to the monthly figures.
${ }^{7}$ Not strictly comparable with earlier data (see 1st paragraph of note 4 for this page); the monthly average is based on revised annual total, not on sum of monthly figures shown.
${ }^{8}$ Data beginning with 1956 are not strictly comparable with earlier data; see 1 st paragraph of note 4 for this page. January 1956 figure on old basis is 9,572,000 gallons.
${ }^{9}$ To avoid disclosing operations of individual companies, data for March, April, and July 1956 are reported on incomplete basis and therefore are not strictly comparable with other monthly data.

## PAGE 121

${ }^{1}$ Source: U. S. Tariff Commission. Data cover all known commercial manufacturers of the selected chemicals and are for production only in the reporting plants. Ethylene glycol and phthalic anhydride are on the basis of 100 -percent content of the specified material.

Monthly data for 1943-52 for ethyl acetate and phthalic anhydride and for 1951 and 1952 for ethylene glycol and formaldehyde comparable with monthly averages for corresponding years shown herein wili be found in earlier editions of BUSINESS STA TISTICS as indicated at top of p. 197 of this volume. Monthly data back to January 1947 for ethylene glycol and to January 1946 for formaldehyde are available upon request.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. Data for production are industry totals and include amounts produced for sale and for consumption in the producing plants. Stock figures include quantities held by and in transit to producers and consumers and in public storage. All figures are on the basis of 100 -percent glycerin content. Monthly data were not collected prior to July 1942; the annual figures for production and consumption are monthly averages for all years.

In earlier editions of BUSINESS STATISTICS, data were shown separately for high gravity and yellow distilled and for chemically pure glycerin; they should be combined for comparability with data in the present volume.

Monthly (or quarterly) data for 1941-52, on separate basis as mentioned above, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. Quarterly figures for 1919-40 are available upon request.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census, with the exception of data beginning October 1945 for synthetic methanol which are from the U. S. Tariff Commission. All data are on the basis of 100 -percent $\mathrm{CH}_{3} \mathrm{OH}$. (The original reports for natural methanol prior to June 1945 were for crude methanol, 80-82 percent strength; however, the data shown here reflect conversion to 100 -percent basis.)

Data beginning 1941 are for all known manufacturers and cover production for sale and for consumption in own plant. Data for 1934-41 for natural methanol are approximately complete and comparable with later data; those for 1930-33 are believed to cover about 80 percent of the industry.

Comparison with data reported in the 1939 Census of Manufactures indicates that figures for synthetic methanol prior to 1941 cover production for sale only; monthly average production for 1939 for consumption and sale, based on annual figures reported for 1939, is as follows (thousands of gallons): Total, 3,877 ; for sale, 2,846 ; for consumption, 1,031 .

Monthly data for 1941-52 (for natural methanol) and for 193052 (for synthetic methanol) comparable with monthly averages for corresponding years shown herein will be found in earlier
editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

4 Source: National Plant Food Institute (formerly National Fertilizer Association). Data are based on tax tag sales and shipments reported to the commissioners of agriculture in 11 southern States (Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Arkansas, Louisiana, Oklahoma, and Texas). For change in coverage of the "monthly" figures beginning 1951, see note 11 for this page.

Monthly records of fertilizer tax tags are kept by State control officials and may be slightly larger or smaller than the actual sales of fertilizer in any particular month. The figures indicate the equivalent number of short tons of fertilizer represented by the tax tags purchased and required by law to be attached to each bag of fertilizer sold in the various States. Beginning July 1949, tonnage figures for a few States represent the shipments of fertilizer for sale or use in these States as reported to State agencies. For some States the reports include cottonseed meal used as fertilizer. Direct distribution of fertilizer by Government agencies (Dept. of Agriculture and TVA) is not included in these data. Such consumption is a relatively small proportion of the total. Sales for the above-named States traditionally have been approximately 50 percent of total consumption in the United States.

Data shown in BUSINESS STATISTICS prior to the 1955 edition cover a varying number of reporting States.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Import figures are imports for consumption beginning 1934; prior thereto, they are general imports (for definitions and other pertinent foreign-trade information, see note 1 for p . 104). The totals for both imports and exports include prepared and miscellaneous fertilizers and fertilizer materials which are not shown separately.

Some imported fertilizer materials are reexported but quantities reexported are in general relatively small, except for sodium nitrate and potash materials in some years.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision for total imports, April 1941, 125, 451 short tons. Revisions for 1946, in short tons: Exports-total, January, 96,947; April, 108,649; June, 96,076; August, 113,721; October, 107,290; November, 91,328; phosphate materials, January, 72,826; April, 81,705; June, 76,385; August, 90,130; October, 97,204; November, 76,444; imports-total, April, 153,692; July 81, 207; nitrogenous materials, April, 138,344; July, 66,859; nitrate of soda, April, 89,092 .)

Monthly figures for 1934-40, except for the series on exports of potash materials, are published in the 1942,1940 , and 1938 editions of the STATISTICAL SUPPLEMENT. The 1937-40 figures for total imports of nitrogenous materials as published in those volumes have been revised to exclude tankage not fertilizer which was erroneously included; these revisions and monthly figures prior to 1941 for exports of potash materials are available upon request. (The September 1940 and November 1940 export figures for total fertilizers, as shown in the 1942 volume, should read 145,902 and 111,916 long tons, respectively; those for nitrogenous materials should read 31,283 and 15,891 long tons.) Monthly data prior to 1934 for most items are available in the 1936 and 1932 volumes as indicated in note 4 for p. 103 in the 1942 SUPPLEMENT; that note explains certain limitations of the earlier data. It should be noted that figures in the 1942 and earlier SUPPLEMENTS are in long tons instead of in short tons as shown in later volumes.
${ }^{6}$ Includes data not shown separately.
${ }^{7}$ Averages are based on end-of-quarter stock figures.
${ }^{8}$ Change in coverage; not strictly comparable with earlier figures. For natural methanol, see 2d paragraph of note 3 for this page; for synthetic, see 3d paragraph of that note.
${ }^{9}$ Monthly average based on annual total containing revisions not distributed by months.
${ }^{10}$ Beginning June 1949 data include synthetic glycerin.
${ }^{11}$ Monthly figures beginning 1951 do not include Virginia (this State now reports on a quarterly basis). The 1951-56 monthly averages, however, are based on annual totals including data for Virginia and thus are comparable with previous monthly averages. Annual totals for Virginia, based on these quarterly reports, are as follows (thousands of short tons): 1951, 802; 1952, $843 ; 1953,801 ; 1954,776 ; 1955,758 ; 1956,735$.

PAGE 122
${ }^{1}$ See footnote 5 for page 121.
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through July 1941 are averages of Friday market lows (Saturday, prior to 1940) for sodium nitrate, crude, imported, in 100 -pound bags, c.i.f. Atlantic, Gulf, and Pacific port warehouses; beginning August 1941, prices are quoted f.o.b. cars, port warehouses. Through 1951, data are quotation averages of Friday (or Saturday) prices; thereafter, they represent quotation averages for 1 day each month (usually around the 15 th).

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The 1942 and earlier SUPPLEMENTS show prices (in dollars per hundredweight) for nitrate of soda, c.i.f. ports.
${ }^{4}$ Source: American Potash Institute. Figures cover deliveries within continental United States and to Canada, Cuba, Puerto Rico, and Hawaii. Data beginning 1940 represent deliveries of material (of domestic origin only) as reported by the major domestic producers. They cover four producers for 1940-42 (one of which began operations in 1940) and five producers for 1943-51. The company added in 1943 began operations in the latter part of 1938. Beginning January 1952, one large new company was added; however, the production of this company was not included until May 1952. In October 1952 and thereafter another producer was included, making 7 companies reporting.

Prior to 1940, data cover salts of foreign and domestic origin as reported by one large importer and three domestic producers. In 1940 the importer, who previously reported monthly, delivered 92,060 tons of potash.

The total volume of deliveries from these primary suppliers is estimated to be between 95 and 98 percent of the total industry prior to 1943 and practically the entire industry beginning that year. Recently, fertilizer manufacturers have absorbed over 90 percent of the total potash produced, while the remaining amount is consumed by chemical manufacturers.

The total bulk potassium salts have been reduced to their $\mathrm{K}_{2} \mathrm{O}$ content because of the variance in the equivalent $\mathrm{K}_{2} \mathrm{O}$ in the salts mined in different parts of the world.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Minor differences between the averages for 1938 and 1939 shown here and in some earlier volumes represent small revisions in the annual totals not allocated by months. In the 1940 volume, annual totals for 1928-35 are shown incor rectly as monthly averages.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census (for data beginning September 1942). Except as otherwise stated, the data cover all plants known to have facilities for the manufacture of superphosphate and other phosphatic fertilizers (the latter included beginning 1956), including Government-owned plants. Data for one company that was producing in 1945 were not included until 1946 and, effective with 1950, data for 11 companies not previously reporting were included. However, the omission of these companies in the earlier years does not appreciably affect comparability of the figures. Stocks relate only to plants which actually produce the items covered.

Quantities shown in this volume are expressed in equivalent short tons of 100 -percent A.P.A. (available phosphoric acid); in the 1953 and earlier editions, they are on the basis of 18 -percent A.P.A. The statistics pertain only to superphosphate and phosphatic fertilizer materials as such, and include no data for tbese products in dry-base or dry-mixed goods. Data cover all grades
of superphosphate (i.e., normal, enriched, concentrated, and wetbase goods). "Other phosphatic fertilizers" include chemically processed materials such as ammonium phosphates, metaphosphates, 'calcium phosphates, etc.

Monthly data for September 1942-December 1950 (on the basis of 18-percent A.P.A.) and for 1951-52 (100-percent A.P.A.) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data in the 1953 and prior editions should be converted to 100 -percent basis (multiply by .18) for comparability with data for corresponding years in the 1955 and present editions.

Comparable monthly data are not available prior to September 1942. The monthly averages for 1929-42 are computed from annual totals compiled by the U. S. Department of Agriculture, $\mathrm{Bu}-$ reau of Plant Industry, Soils, and Agricultural Engineering. The 1940 and 1941 figures are based on a survey (of all plants producing ordinary superphosphate and wet-mixed base) made by the National Fertilizer Association with the cooperation of the Department of Agriculture; data on production of concentrated superphosphate were collected by the latter agency in complete surveys of such production for the years 1929-42. Annual figures for years prior to 1940 and 1942 are based on the surveys of production of concentrated superphosphate and on monthly statistics (collected by the Bureau of the Census) covering production of bulk superphosphate and wet-mixed goods by 52 manufacturers through August 1942 and total production of all grades of superphosphates by all plants for later months of 1942. The monthly series through August 1942 did not cover all manufacturers and also did not include production by the Tennessee Valley Authority. Comparison of monthly figures for 1940 and 1941 with data collected in the surveys of all plants for those years indicated that the Census series through August 1942 represented, approximately, the production of ordinary superphosphate and wet-mixed base. These data, therefore, were combined with figures for concentrated superphosphate to obtain totals for all superphosphates.
${ }^{6}$ Source: Institute of Makers of Explosives from reports of member and nonmember companies for use in the annual reports of the U. S. Department of the lnterior, Bureau of Mines. Data cover black blasting powder and high explosives (including permissibles) produced and sold in the United States, virtually all of which is for industrial purposes. Ammunition and fireworks, and nitroglycerin used as such, are not included. The explosives are used primarily in mining and quarrying and in railway and other construction work. Differences between the annual totals derived from the monthly reports and the annual totals published by the Bureau of Mines represent data for companies which do not report monthly.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data shown in the 1942 and earlier volumes are combined totals for black blasting powder and high explosives. Comparable monthly figures prior to 1941 for the separate items are available upon request.
${ }^{7}$ Source: U. S. Department of the Interior, Bureau of Mines. Data cover total production of native sulfur (Frasch), and producers' stocks (at mines or plants, in transit, and in warehouses) at end of month.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for August-December 1940 are shown on p. 24 of the May 1946 SURVEY.
${ }^{8}$ Monthly average based on annual total containing revisions not distributed by months.
${ }^{9}$ Average for 5 months, August-December.
${ }^{10}$ Average for 5 months, August-Decerrber; see note 3 for this page regarding break in comparability with earlier figures.
${ }^{11}$ Average for 4 months, September-December.
${ }^{12}$ See note 4 for this page regarding coverage prior to 1943.
${ }^{13}$ Includes revisions not incorporated in final Census reports.
${ }^{14}$ See note 5 for this page regarding additional reporting companies.
${ }^{15}$ Increased coverage; see note 4 for this page.
${ }^{16}$ Beginning with 1956 , data for "other phosphatic fertilizers" are included. Production of such fertilizers averaged 15,693 short tons per month in 1956, and end-of-month stocks averaged 23,499 short tons.

## PAGE 123

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. The statistics relate to consumption (crushings) and stocks of raw materials used in producing vegetable oils, and to factory production, factory consumption, and factory and warehouse stocks of animal, fish, and vegetable fats and oils. Except as otherwise stated, the data cover quantities in the crude state. Factories canvassed in order to obtain information on factory production, consumption, and stocks are as follows: (1) factories producing animal and vegetable fats and oils, including expressers, extractors, renderers, and reclaimers; (2) factories consuming fats and oils in the production of other fats and oils products of which fats or oils are a constituent part (such as shortening and margarine), including refineries, mixing and compounding establishments, and other similar establishments; (3) factories consuming fats and oils in the production of soap, paint, varnish, linoleum, oilcloth, lubricants, and other products which contain considerable quantities of the fats and oils; and (4) factories consuming fats and oils as agents in the production of tinplate, textiles, leather and other products.
As considerable equipment is required in producing most oils, the factory profuction reported, to which these statistics are limited, is intended to represent the total crude output in the United States of such oils as cottonseed, peanut, coconut, corn, soybean, olive, palm kernel, babassu, tung, perilla, castor, sesame, fish, and marine mammal. However, in the case of some animal fats, factory production does not represent total production, as considerable quantities of lard (not shown in this section; see p. 143), tallow, and grease are produced on farms and by local butcheries and small renderers not included in the establishments canvassed.
The statistics on factory consumption include only the consumption in factories and do not, therefore, represent total consumption in all instances. Considerable quantities of some fats and oils a re consumed outside of factories, such as in homes, hotels, restaurants, and bakeries, and by packagers; by painter, building contractors, and machine shops; and for lubricating purposes.
Except for five strategic oils mentioned in the next paragraph, fats and oils reported as stocks include the quantities held by and in transit to producers, factory consumers, and public storages, regardless of ownership, including quantities held for the Government. Stocks in the possession of household consumers and stocks held in private storage by retailers, wholesalers, and jobbers are not included. In some instances, stocks may include some imports not withdrawn from bonded warehouses. Raw materials for vegetable oils reported as stocks are confined to the quantities held in crushing mills and mill warehouses.

For security reasons, stocks data for June, July, and August 1950 for five strategic oils (castor oil No. 1, castor oil No. 3, crude palm oil, crude coconut oil, and marine mammal oil) were not published. Beginning with September 1950, stocks data for these oils have been published on a commercial stocks basis; they do not include figures for stockpiles of strategic oils.
Beginning July 1949, data exclude approximately 1,000 producers and consumers of relatively small quantities of tats and oils. Based on reports covering the period July-December 1949, the omission of these companies, in most cases, did not affect the comparability of the data by more than one percent; where the differences were significant, the monthly and annual figures were adjusted accordingly. The number of small companies presently reporting on an annual basis only is approximately 1,500 .

Figures given in the present volume and in the monthly magazine, SURVEY OF CURRENT BUSINESS, apply only to summary totals and selected individual products. Separate data for additional products are included in current reports of the Bureau of the Census and more detailed statistics appear in the monthly and annual reports of the Bureau. Data have been collected monthly since July 1942; prior thereto, they were on a quarterly basis. Annual figures shown beginning with the 1947 issue of the STATISTICAL SUPPLEMENT are monthly averages, unless other-
wise indicated in notes on the figures; annual figures in earlier volumes are quarterly averages.

Monthly (or quarterly) data for 1932-52 (except for tallow and grease and 1932-37 data for soybeans and soybean oil), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume.

2 Production and stocks of edible tallow for all years include refined grades; the consumption figures exclude quantities used in refining except in 1949-54, when such quantities are included.
${ }^{3}$ Beginning January 1949, data include 45 plants producing inedible tallow and 23 plants producing greases which did not previously report. Operations at these plants in January (thousands of pounds): Tallow-production, 3,290; stocks, 3,804; greasesproduction, 953; stocks, 1,949. Prior to 1949, data include certain quantities of refined tallow (in collection of the data, no distinction was made between "rendered" and "refined").
${ }^{4}$ See also note 1 for this page. The fish oil series, except as stated below, include the following products: Cod and cod-liver oil; other liver oil; menhaden, sardine (pilchard), herring, and miscellaneous fish oils (except liver); and marine mammal oil. Since 1952, there has been no reported production of marine mam mal oil and, since 1955, consumption data for cod and cod-liver oils and other liver oils have been unavailable. Also since 1955, the stock figures for cod and cod-liver oils and other liver oils represent quantities held by producing firms only; and the figures for all fish-oil series may include some refined oils (some refined oils also included prior to 1949).

The 1929-45 averages for production and consumption, as shown in the present volume, are monthly averages; quarterly averages were shown in earlier volumes. (Revision: Fish-oil production in the 3d quarter of 1937 should read $129,394,000$ pounds.)
${ }^{5}$ Data for total vegetable oils include the following crude oils: Cottonseed, peanut, corn, soybean, sesame, olive, palm and palm kernel, coconut, babassu, rapeseed, linseed, tung, perilla, castor, and oiticica, and miscellaneous vegetable oils.

Revisions for production of crude vegetable oils are as follows (thousands of pounds): 1944-November, 411,631; December, 369, 097; 1945 (January-December, respectively)-409,538; 371,645; 352,182; 302,321; 311,373; 251,472; 230,323; 254,527; 288,219; 371,$583 ; 427,471 ; 367,033$; 1946, (January-December, respectively) $-403,113 ; 322,882 ; 311,867 ; 283,051 ; 259,161 ; 233,301 ; 261$, $433 ; 252,002 ; 280,025 ; 387,933 ; 408,841 ; 404,296$. There have been minor revisions also in the 1932-33 consumption figures for total vegetable oils; such revisions are available upon request.
${ }^{6}$ Averages are based on end-of-quarter stocks.
${ }^{7}$ For certain periods during 1946-48, the data included for "other fish oil" indicate an excess of consumption over supply. This may be accounted for, in part, by duplication in consumption; oil reported consumed by hydrogenators and pressers was reported again when further processed by fat splitters and other users. Also, for certain periods prior to November 1948, con-sumer-owned stock held at establishments producing fish oil were not reported.
${ }^{8}$ Includes a revision in production of crude coconut oil, not available by months.
${ }^{9}$ Data for 1949-54 for consumption include quantities used in refining.
${ }^{10}$ See note 3 for this page regarding increased coverage beginning with data for 1949.

11 Data for sperm, crude palm, coconut. and castor oil are excluded from the pertinent items for June-August; beginning September 1950, these oils have been reported on a commercial stocks basis, and do not include figures of stockpiles of strategic oils.

PAGE 124
${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce prior to May 1941.

Vegetable-oil exports include cottonseed, linseed, corn, coconut, peanut, and soybean oils, cocoa butter, vegetable soap stock, cooking fats other than lard, and all edible and inedible vegetable oils and fats; also, for some periods, a quantity of cooking fats containing some animal cooking fats which are not reported separately. The series includes, except as noted, all vegetable oils, fats, and compounds thereof, which have substantially related or competitive uses, though not all the items included are strictly oils. Shipments under the Army Civilian Supply Program are included beginning 1947 (see note 1 for p. 104). In that year such shipments amounted to 187,000 pounds; corresponding data for subsequent years are not available.

Beginning January 1948, data include margarine (of animal or vegetable origin), exports of which amounted to $3,408,000$ pounds in that year. Beginning January 1952, data also include mayonnaise, salad dressings, and related products (amounting to $3,179,000$ pounds in 1952), as well as a small amount of refined vegetable waxes.

Monthly data for 1934-52 (except for revisions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Earlier monthly data are on p. 18 of the June 1938 SURVEY. Revisions are as follows (thousands of pounds): 1947-April, 7,330; November, 27,928; 1946 (January), 4,314; 1933 (September), 4,995. Also, there have been a few minor revisions in the figures for 1938.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce prior to May 1941. Data are general imports through 1933 and imports for consumption thereafter. For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Paint-oil imports include tung oil, linseed oil, perilla oil and, beginning 1936, oiticica oil. There have been no imports of perilla oil since 1945. Separate data on oiticica oil are not available prior to 1936, but the quantities imported in those years are believed to have been too small to affect materially the comparability of the series. The classification of "paint oils" is segregated because a large percentage of the domestic factory consumption of these oils is in the paint, varnish, linoleum, and oilcloth industries. Although other vegetable oils, notably soybean oil and castor oil, are used in paint manufacture, their other uses are more important.

It is not possible to make any further classification of vege-table-oil imports by type of use, since most of the vegetable oils imported can be, and are, used interchangeably in the manufacture of vegetable shortenings, margarine, soap, and other edible and inedible compounds, the type of use for any one oil shifting substantially from year to year. "All other vegetable oils" cover all types of edible and inedible expressed vegetable oils, except the paint oils, but exclude vegetable tallow and wax, and essential or distilled oils; the major items covered include coconut, corn, cottonseed, peanut, olive, palm, palm kernel, soybean, sunflower seed, rapeseed oils, and cocoa butter. In recent years, however, imports of some of these oils-notably corn, sunflower, peanut, cottonseed, and sesame-have been small.

Monthly data for 1936-52 (except for revisions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. There have been small revisions in figures for the total and for "all other vegetable oils" for 1937 and 1938, July 1939, and July and December 1940; the revised figures are available upon request. Monthly figures for 1921-35 for paint oils and 1923-35 for "all other vegetable oils" appear on p. 18 of the June 1938 SURVEY.
${ }^{3}$ See note 1 for p. 123. The figures for copra, as shown in the 1942 SUPPLEMENT and earlier volumes, have been revised to include comparatively small amounts of "coconuts and skins"; such data have been included in recent years but formerly were shown separately. The revised data for the earlier years are available upon request.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce prior to May 1941. Data are general imports through 1933 and imports for consumption thereafter. For general explanation for foreign-
trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 p. 104.

Monthly data for 1929-52 (except for revisions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATICS as indicated at top of p. 197 of this volume. There have been some minor revisions in figures shown in the 1932 volume and a few larger revisions as follows: Copra (short tons)-January 1931, 17,028; February 1931, 16,567; November 1931, 22,465 ; coconut oil, August 1930, 28,320,000 pounds.
${ }^{5}$ Averages are based on end-of-quarter stocks.
${ }^{6}$ Beginning January 1948, margarine is included; see 3d paragraph of note 1 for this page.
${ }^{7}$ Based on annual total which includes revisions not allocated to the monthly figures.
${ }^{8}$ Average based on data for 4 months (September-December), covering commercial stocks only; not comparable with data for earlier years. See 5th paragraph of note 1 for $p .123$.
${ }^{9}$ Beginning January 1952, includes additional items; see 3d paragraph of note 1 for this page.
${ }^{10}$ Average for 1952 is based on data for 9 months, March-July and September-December; that for 1956, on data for 10 months, January through October.
${ }^{11}$ Data are not available for publication.

## PAGE 125

${ }^{1}$ Source; U. S. Department of Commerce, Bureau of the Census. Data are collected under an Act of Congress which provides that the Bureau of the Census shall collect from all oil mills monthly reports concerning cottonseed received, crushed, and on hand, and cottonseed products manufactured, shipped out, and on hand; also that information be obtained from the refineries and consuming establishments and from warehousemen concerning crude and refined cottonseed oil. Complete coverage is maintained for cottonseed-oil mills and refineries.

Data for stocks represent quantities held, regardless of ownership. Stocks of refined cottonseed oil exclude quantities held by a number of small occasional consumers; however, the total quantity held by these establishments accounts for only a small part of total stocks and has no significant effect on the statistics.

Receipts of cottonseed at mills represent net receipts, excluding seed reshipped; they include some seed later destroyed. Stocks of crude oil include holdings of crude mills and of refining and manufacturing establishments, and oil in transit to refiners and consumers. Refined stocks include (in addition to stocks held at refineries and consuming establishments) oil held by refiners and warehousemen at places other than refineries and manufacturing establishments, and stocks in transit to refiners and manufacturers.

Monthly data for 1929-52 (with exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions for cottonseed consumption (short tons): 1934-February, 437,274; July, 100,699. Revised monthly figures for 1931 are on p. 20 of the February 1933 SURVEY.
${ }^{2}$ See note 1 for p. 123. There are minor revisions for cottonseed oil in 1932 and 1933.
${ }^{3}$ See note 3 for p. 127.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1948 represent the price of prime summer, yellow, bleachable, tank-car lot deliveries, per pound, New York. Beginning November 1948, the price is for refined, edible, drums, l.c.l., f.o.b. New York. Through 1951, the data are quotation averages for 1 day each week. Beginning with 1952, the prices are quotation averages for 1 day each month (usually in the week containing the 15 th).

Monthly data for 1949-52 for the current series and those for 1929-48 for the former series (italicized figures) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

5 No quotation for August and September; 1946 average is for 10 months.
${ }^{6}$ Data for October-December 1948, comparable with series beginning January 1949, are as follows: $\$ 0.289 ; \$ .275 ; \$ .252$.
${ }^{7}$ Beginning July 1950, data are compiled by the Bureau of the Census; see note 3 for p. 127.

PAGE 126
${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. The figure given for each year is the estimated total United States crop for the year; data for 1956 are preliminary.
${ }^{2}$ See note 1 for p. 123. Quarterly data prior to 1938 for soybeans and soybean oil are available upon request. Prior to 1949, linseed-oil stocks may have included some refined oil.
${ }^{3}$ Sources: U. S. Department of Agriculture, Agricultural Marketing Service (for flaxseed); U. S. Department of Labor, Bureau of Labor Statistics (for linseed oil; based on prices from the Oil, Paint, and Drug Reporter). The flaxseed price is an average of daily prices, weighted by carlot sales, obtained originally from the Minneapolis Daily Market Record. The linseed-oil price through 1951 is the average of the market price (low) for Saturdays for raw, carlots, drums, f.o.b. New York; beginning January 1952, the price is f.o.b. Minneapolis, tank cars, and is a quotation average for 1 day each month (usually in the week containing the 15th).

Monthly data for 1929-52 (except for revisions given below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions are as follows: Flaxseed-(1939) March, \$1.96; August, \$1.53; (September 1932), \$1.13; linseed oil (November 1933), \$0.096.
${ }^{4}$ Averages are based on end-of-quarter data.
${ }^{5}$ Average for 11 months, January and March-December.
${ }^{6}$ No quotation for May and June; average for January-April and July-December.

7 Not comparable with earlier data which represent quotations at New York (see note 3 for this page). New York prices for January-May 1952 are as follows: $\$ 0.210 ; \$ .195 ; \$ .186 ; \$ .176$; \$.178。

## PAGE 127

${ }^{1}$ See note 1 for p. 123. Quarterly data prior to 1938 for soybean oil are available upon request. Data for shortening refer to those products which represent compounded or blended animal fats and oils, or vegetable oils which have been hydrogenated; the figures do not include any of the liquid oils, or butter; and the products do not meet the specification of margarine, since they are usually water churned rather than milk churned. Stocks data for shortening beginning with January 1955 exclude quantities held by consuming factories (comparable December 1954 figure, 119,597,000 pounds).
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The series beginning 1940 is for refined, edible, returnable drums, l.c.l., f.o.b. New York. Earlier data, shown in italics, are for domestic, refined, tank carlots, f.o.b. New York; the comparable average for 1940 is $\$ 0.066$. Monthly figures for January-December 1940 for the current series for edible oil are as follows (dollars per pound): 0.078; .078; .081; .078; .076; .071; .072; .068; .065; .064; .067; .068.

Data through 1951 are quotation averages for 1 day each week; beginning 1952, the prices shown are quotation averages for 1 day each month (usually in the week containing the 15th).

Monthly data for 1941-52 for the current series and for 1938-40 for the former series (data in italics) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1930-37 for the italicized series are available upon request.
${ }^{3}$ Sources: U. S. Department of Commerce, Bureau of the Census (for stocks data; and for data beginning July 1950 for
production of margarine, and consumption of refined cottonseed oil in the production of margarine-the latter shown on p. 125); U. S. Treasury Department, Bureau of Internal Revenue (for production data through June 1949; from returns made for tax purposes). Figures from both sources are believed to reflect entire industry coverage, except that stock figures beginning January 1955 exclude stocks held by consuming factories (stocks on the current basis for December 1954 amounted to $26,960,000$ pounds).

Monthly data for 1929-52 for production of margarine and for refined cottonseed oil consumed in margarine production, also for 1949-52 for margarine stocks, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The following revisions of published data should be noted (thousands of pounds): Production, 1931-July, 11,380; August, 15,999; cottonseed oil consumed in margarine, July 1931, 885.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Through 1946, data represent prices of vegetable fat in one-pound cartons, in cases of 12 and 24 , delivered eastern United States, manufacturer to jobber; beginning 1947, prices are for manufacturer to retailer. Beginning July 1950, the series applies to colored margarine; and, beginning September 1952, entirely to less-than-carlot shipments (earlier quotations are primarily for carlot shipments). Data throligh 1951 are quotation averages for 1 day each week; beginning 1952, the prices shown are quotation averages for 1 day each month (usually in the week containing the 15th).

Monthly data for 1941-46 for the italicized series and for 1949-51 for the later series (as described above; 1947-48 monthly figures available upon request), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Note: In the 1949 volume, the price was erroneously described as "Chicago" instead of "eastern U. S.' ${ }^{\prime}$
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census. Data beginning January 1951 represent estimates of total factory shipments of paint, varnish, and lacquer for the United States. They do not include shipments of whiting, putty, wood fillers, and intermediate paint products such as alkyd resins, turpentine, pigment dispersions, and bleached shellac. The estimates from January 1952 forward are based on data obtained from a sample of approximately 250 companies (comprising about 375 establishments). The estimated totals for 1951 were derived from the 1952 estimates and changes in shipments for those companies for which both 1951 and 1952 information was available. Shipments by firms common to both the new series and the old series ( 680 establishments, as described in next paragraph) accounted for more than 80 percent of the 1952 estimated total shipments. However, because of the method of deriving the 1951 estimates, definite information concerning their reliability is not available.
Data through 1950 represent sales by 680 manufacturing establishments of paint, varnish, lacquer, and filler. Of this number, 580 establishments reported classified sales and 100 reported only total sales; the unclassified sales are not shown separately in this volume but are included in figures for the total. Sales reported by the 680 establishments in 1947 represented approximately 85 percent of the total value of shipments and interplant transfers as reported in the Census of Manufactures for that year. According to available information, the coverage was somewhat higher in earlier years. The averages for 1935 and earlier years are based on reports of 579 establishments, raised to the level of data for 680 establishments on the basis of the relatiouship between the annual totals for 680 and 579 establishments for 1936-41. The ratio for the two series was fairly consistent and was approximately 1.04 .

Monthly data for the 680-establishment series for 1938-50, and those for the 250 series for 1951 and 1952 , comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for the 680 series for 1936-37 are shown on p. 26 of the July 1942 SURVEY.
${ }^{6}$ Averages are based on end-of-quarter stock figures.
${ }^{7}$ See note 2 for this page.
${ }^{8}$ Average is for 11 months, January-August and OctoberDecember 1942.
${ }^{9}$ See note 4 for this page. The monthly average for 1947 for the series in italics is $\$ 0.331$.

10 Data beginning July 1950 are compiled by the Bureau of the Census; see note 3 for this page.
${ }^{11}$ Average for July-December 1950 for colored margarine; the January-June average for uncolored is $\$ 0.254$.

12 Not comparable with earlier data; see note 5 for this page. Averages for 1951 comparable with italicized data are as follows (thousands of dollars): Total shipments, 98,603; industrial sales, 38,117 ; trade sales, 51,328 .

13 Beginning September 1952, the price is based entirely on less-than-carlot shipments; earlier quotations were primarily for carlot shipments. Averages computed by the Office of Business Economics are as follows (dollars per pound): January-August (carlot), 0.264; September-December (1.c.l.), . 283.
${ }^{14}$ See note 1 for this page for data on shortening, and note 3 for margarine.

## PAGE 128

${ }^{1}$ Sources: U. S. Tariff Commission beginning July 1948; prior thereto, U. S. Department of Commerce, Bureau of the Census. Data for all plastics and resin materials, except for vinyl resins, are on a dry basis (defined as total weight of the material, including resin, plasticizers, fillers, extenders, colors, and stabilizers, but excluding the weight of water, solvents, and other liquid diluents). Vinyl resins (with the exception of sheeting and film prior to 1951) are reported on a resin-content basis-i.e., they exclude fillers, plasticizers, extenders, solvents, and liquids.

Data for production of protective coatings (as such) are excluded from the pertinent component items (except as noted for vinyl and polyester resins). Such coatings are produced to a greater extent by paint manufacturers than by the plastics industry; therefore, they are omitted from the series shown here.

Beginning January 1949, data represent production (the total of quantities produced for consumption in the same plant, for trans fer to other plants of the same company, and for sale). The data (except for "alkyd resins" and "miscellaneous") are essentially comparable with the earlier figures for shipments and consumption in producing plants, except for inventory changes (which tend to balance out over a short period) and the inclusion of some companies not previously covered. Data for the entire period shown (beginning August 1933 for cellulose acetate and nitrocellulose sheets, rods, and tubes) represent virtually complete coverage of the industry. Although there have been some changes in reporting companies and in components of the specified items, it is believed that, in most instances, comparability of the figures is not materially affected. To avoid disclosing the operations of individual companies, data for some periods are not available for publication.

Monthly data for 1947-52 (for all categories except polyester resins and polyethylene resins) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated in reference note at top of p. 197 of this volume. See also that note for availability of the following monthly data prior to 1947: Back to August 1933 for cellulose acetate (sheets, rods, and tubes) and for nitrocellulose; to September 1945 for polystyrene; to June 1945 for vinyl resins; and back to January 1946 for other cellulose plastics. It should be noted that data for cellulose a cetate and nitrocellulose for January-July 1933, in the 1936 SUPPL EMENT, are not comparable with later figures. Also it should be noted that in SUPPLEMENTS prior to the 1947 issue, data are designated as "shipments" but cover both shipments and consumption in reporting plants.

Revised monthly data for 1946 are as follows (thousands of pounds): Phenolic resins-January-December, 18,891; 17,913; 19,782; 21,445; 21,990; 22,548; 22,707; 25,145; 16,097; 18,087; 16,612; 20,453; urea and melamine resins - July-December, 4,$858 ; 6,011 ; 3,893 ; 6,215 ; 5,943 ; 5,635$.
${ }^{2}$ Cellulose plastics are derived from natural products; they include fillers, plasticizers, and extenders. "Other cellulose plastics" include data for sheets, rods, and tubes, and molding and extrusion materials derived from ethyl cellulose and other cellulosic materials.
${ }^{3}$ Data cover molding materials (including fillers, plasticizers, and extenders), bonding and adhesive resins, and resins for miscellaneous uses; protective coatings are not included.
${ }^{4}$ Data cover molding materials (including fillers, plasticizers, and extenders), and resins for other uses; protective-coating resins are not included.
${ }^{5}$ Comprises bonding and adhesive resins, textile and paper treating and coating resins, and resins for miscellaneous uses (including laminating and, beginning 1949, molding materials; molding materials are included under miscellaneous resins through December 1948 and are not available separately prior to 1949). Protective-coating resins are not included.
${ }^{6}$ Data cover resins for film, sheeting, molding and extrusion, textile and paper treating and coating, flooring, adhesives, and other uses. Beginning 1951, all items are on a resin-content basis; prior to that time, sheeting and film are on a dry basis; see note 1 for this page. Protective coatings are excluded through 1950 and included thereafter (production not reported separately after 1950).
${ }^{7}$ Alkyd resins are used chiefly for protective coatings. Data include both modified and unmodified phthalic anhydride resins and polybasic acid resins, except phthalic. Beginning 1951, coverage was increased 10 to 15 percent over that in 1950.
${ }^{8}$ Rosin modifications are for protective coatings. Data include unmodified rosin and rosin esters (ester gums, etc.) and modified rosin and rosin esters (hard resins).
${ }^{9}$ Polyester resins are used chiefly in the manufacture of reinforced plastic products; they include small amounts for protective coatings.
${ }^{10}$ Polyethylene resins are mainly for wrapping materials, molded products, and pipe.
${ }^{11}$ Includes fillers, plasticizers, and extenders; data for acrylic, polyethylene (through March 1955), nylon, silicone, and other molding materials; and data for acrylic, rosin modifications, nylon, silicone, and other plastics and resins for miscellaneous uses. All items are on dry basis. Protective-coating resins are not included.
${ }^{12}$ Average for 5 months, August-December 1933.
${ }^{13}$ Excludes data for rods and tubes for June-August; however, this does not appreciably affect the comparability of the statistics.

14 Average for 4 months, September-December.
${ }^{15}$ Average for 7 months, June-December.
${ }^{16}$ Includes only adhesives and textile- and paper-treating resins in September; data for other urea and melamine resins could not be shown in the original reports without disclosing operations of individual establishments; the excluded data averaged about 6.9 percent of the totals for other months.
${ }^{17}$ Average for 5 months, August-December.
${ }^{18}$ Average for 4 months, January-April.
${ }^{19}$ Average for 11 months; data for June are not available.
${ }^{20}$ Beginning January 1949, data represent production; see paragraph 3 of note 1 for this page.
${ }^{21}$ Includes annual revisions not available by months.
${ }^{22}$ The substantial increase in production of miscellaneous plastics and resins beginning January 1949 is due to the inclu-
sion of companies not previously reporting; data, therefore, are not comparable with earlier figures. The increased coverage, however, does not materially affect the comparability of the other series. (Monthly average includes annual revisions not available by months.)
${ }^{23}$ Protective coatings are included beginning 1951; production in that year averaged $1,844,000$ pounds per month.
${ }^{24}$ See note 7 above regarding increased coverage for alkyd resins beginning 1951.
${ }^{25}$ Polyethylene resins are included under "miscellaneous".

## PAGE 129

${ }^{1}$ Source: Federal Power Commission. Total production of electric energy is the sum of energy produced by electric utilities and other organizations producing electric energy for public use and by industrial establishments.

Data for "electric utilities" are according to reports obtained from all electric-supply systems producing for public use. The "electric utilities" series covers plants of both the privately and municipally owned electric utilities, as well as other publicly owned producers. This latter group is composed of Federal projects, cooperatives, power districts, and State projects. Coverage of the electric utilities is substantially 100 percent, comprising at the end of 1955 a total of 3,587 generating plants operated by 1,315 utilities.

The series for "industrial establishments" represents estimated total production by manufacturing (including Government manufacturing) and extractive industries and stationary plants operated for motive power by electric railways and railroads. The figures do not include production where plant capacities are less than 100 kilowatts, where activities are presumably on a temporary basis as in army camps and other nonmanufacturing Government establishments, and where data are not currently available because of the size or character of the business. The reported monthly data for industrial establishments (as defined above) are extended to represent 100 -percent coverage on the basis of reports from about 800 generating plants, which account for approximately 85 percent of the total industrial production of electric energy in the United States. Annual totals on which the monthly averages (except for 1956) are based were obtained by complete canvas. Data for industrial establishments are available annually beginning 1939 and monthly beginning 1945.

Monthly data for 1941-52 for production of electric energy by electric utilities (revised basis) and for 1945-52 for total production and production by industrial establishments will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p .197 of this volume. It should be noted that data for electricpower production on the revised basis, shown beginning with the 1947 SUPPLEMENT, differ from data in former issues of the SUPPLEMENT chiefly because of the transfer of energy produced by electric railways and railroads from the "other producers" category (old basis) to industrial establishments (present series) and the inclusion in the series for industrial establishments of data not previously covered. Monthly figures for 1920-40 for privately and publicly owned utilities are available in the 1942 SUPPLEMENT and on p. 18 of the December 1940 SURVEY. Revised annual totals or monthly averages beginning 1920 and monthly figures for 1936-40 for total production by utilities and production by source are shown on p. 32 of the February 1947 SURVEY; revised figures for the indicated periods may be obtained for "other producers" by subtracting from the revised totals in that issue data for privately owned and municipally owned utilities referred to above.
${ }^{2}$ Source: Edison Electric Institute. Data are estimated totals for the entire electric light and power industry contributing to the public supply of electricity in the United States. The figures comprise operations of all private, municipal, cooperative, governmental, and industrial enterprises engaged in the production or distribution of electricity for the use of the public. The estimated totals are based on reports from enterprises representing in recent years approximately 90 percent of the industry.

Because of changes in the service classifications effective January 1, 1937, to incorporate the System of Accounts of the Federal Power Commission, data for 1936 and prior years are
not strictly comparable with those beginning 1937. The major changes are discussed below.

For the period beginning 1937, the "rural" classification is based on the filed rate schedule and includes rural and farm customers served on a distinct rural or farm rate; it covers, in addition to a limited number of farm customers, the residences and commercial establishments in the smaller communities which are served on "distinct rural rates." A large part of the pumping or irrigation load in the West is on distinct or special rural rates. In the absence of other information, all sales by REA cooperatives are included in residential service. It should be noted that the "rural" classification bears no relationship whatsoever to farm electrification. Many farms and residents of small hamlets are served on the regular residential rate schedules; data for such customers are included in the "residential or domestic" classification beginning 1937. Data prior to 1937 for the latter classification represent a total of residential service (urban-rural nonfarm) and service to farms in the East; whereas data for "rural" (first shown in the 1942 SUPPLEMENT) cover western farms only.

For "commercial and industrial" service, the breakdown distinguishing between large and small customers is not entirely reliable. The unreliability is caused by the various changes in the systems of account and service classifications. The dividing point between small and large light and power is 50 kilowatts of demand or as near to it as rate classifications will permit.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Revised monthly data for all series for 1937 are available upon request. Because of classification changes, monthly figures for 1937 published in the 1940 SUPPLEMENT are not comparable with those shown in later volumes. For total sales, revenue from sales, residential or domestic sales, small light and power (formerly called retail commercial and industrial) sales, and railways and railroads, monthly data (old basis) for the the years 1934-36 are shown in the 1940 and 1938 SUPPLEMENTS; those for the years 1929-33 may be obtained upon request.
${ }^{3}$ Excludes interdepartmental sales, which prior to 1937 were considered as energy used either by the company or by the railway department thereof.
${ }^{4}$ Average based on annual data; no comparable monthly figures available.

5 Data beginning 1937 are not strictly comparable with those for earlier years; see 2d paragraph of note 2 for this page.

## PAGE 130

${ }^{1}$ See note 2 for p. 129.
${ }^{2}$ Source: American Gas Association. Data represent complete coverage of the gas utility industry. Classifications are made according to the kind of gas actually distributed. The data, therefore, pertain to the specific types of gas indicated, not to operations of a comparable group of companies.

For statistical purposes the types of gas are defined as follows: "Natural gas" -any gas of natural origin as produced from or existing in oil or gas wells and consisting primarily of hydrocarbons; "manufactured gas"-a combustible gas produced from coal, coke, or oil, or by the reforming of natural or liquefied petroleum gases (or any mixtures thereof) and including any natural or liquefied petroleum gas if used for "enriching"; "mixed gas"-mixtures of manufactured gas with natural or liquefied petroleum gas, except where the natural or liquefied petroleum gas is used only for enriching or reforming. "Liquefied petroleum gas" is defined as any hydrocarbon mixture in either the liquid or gaseous state, the chief components of which consist of propane, butane, propylene, iso-butane, butylene, or mixtures thereof in any ratio or with air (for AGA statistics, only the aforementioned gases distributed through utility mains are included). Prior to 1945, figures for liquefied petroleum gas are included with those for manufactured gas; separate data for this type of gas have been compiled beginning 1945 (on annual basis only, 1956 not yet available), but they are not included with figures shown here. (Data for total customers, sales, revenues for liquefied petroleum gas for 1945
through 1955, respectively, are as follows: Customers, in thousands, annual average-81; $123 ; 232 ; 315 ; 352 ; 327 ; 309 ; 305 ; 293$; $266 ; 241$; sales, in millions of therms - $23.2 ; 36.5 ; 60.3 ; 86.4$; $90.9 ; 89.9 ; 88.1 ; 84.3 ; 82.8 ; 79.8 ; 81.0$; revenues from sales, in thousands of dollars $-4,026 ; 6,086 ; 11,672 ; 18,655 ; 22,298$; $21,347 ; 20,931 ; 21,129 ; 20,881 ; 20,112 ; 19,689$.

A therm is a unit of heat content representing 100,000 B. t. u. (British thermal units) and is roughly equivalent to 95 cubic feet of natural gas or to 185 cubic feet of manufactured gas.

The number of customers excludes customers purchasing gas for resale. Likewise, the sales and revenue figures exclude data for gas resold.

The various classes of service are based on the primary purpose for which the gas is used or the type of customer to which a stated rate shall apply. The common classes of service as applied to ultimate consumers and as recommended by the AGA for use by utilities, although not uniformly accepted, are defined below.
"Residential" applies to service supplied for residential purposes under individual contracts in a single-family dwelling or building, or in an individual flat or apartment in a multiple-family dwelling or building or portion thereof occupied as the home, residence, or sleeping place of one or more persons.
'Industrial" applies to service supplied for a process which creates a product or changes raw or unfinished materials into another form or product, or which involves the extraction of a raw material from the earth.
"Commercial" service relates to customers engaged in selling, warehousing, or distributing a commodity, in some business activity or in a profession, or in some other form of economic or social activity (offices, stores, clubs, hotels, etc.), and to service that does not come directly in one of the other classifications.
"Other" service (not shown separately in this volume) applies to municipalities or other governmental agencies, sales for street lighting, and interdepartmental sales if made under a definite rate schedule.

Sales to consumers are compiled on both a monthly and quarterly basis, whereas data for other items are compiled quarterly only. The reported monthly or quarterly data are expanded by the Association to represent 100 percent of the gas utility industry; this is done on the basis of annual surveys covering almost the entire industry, supplemented by data from secondary sources. Monthly and quarterly figures through 1955 have been adjusted to final annual totals for the pertinent years; 1956 data are preliminary. The reported 1956 monthly figures on total sales are adjusted to quarterly sales data (based on a larger sample) by applying to the quarterly totals the percentage distribution of the reported monthly figures.

Quarterly data for 1949 and 1951-52 for customers and monthly or quarterly data for 1949-52 for sales and revenues appear in the 1953 and 1955 editions of BUSINESS STATISTICS. (The figure for total revenue for natural gas for the 4th quarter of 1949 should read $\$ 293,085,000$.) Revised data on customers for 1950 are availavailable upon request. Monthly or quarterly data for 1945-48 (compiled on type-of-gas basis and comparable with figures shown in later volumes) are shown in the 1951 and 1949 editions of BUSINESS STATISTICS. (Notice that the sales figures in the 1951 and earlier issues are expressed in cubic feet instead of therms; see 3d paragraph of this note for approximate number of cubic feet per therm.)

## ${ }^{3}$ Includes data not shown separately.

${ }^{4}$ The averages for manufactured and mixed gas sales and revenues, including those for total sales, are quarterly averages and, prior to 1956, are based on revised annual totals. The figures for customers are annual averages for 1932-44 and averages of end-of-quarter figures for 1945-56.
${ }^{5}$ Average based on annual data; no comparable monthly figures available.
${ }^{6}$ Prior to 1937, interdepartmental sales were, in general, considered energy used either by the company or by the railway department thereof. Beginning 1937, such energy is considered as sales.
${ }^{7}$ Data beginning 1937 are not strictly comparable with those for earlier years; see 2d paragraph of note 2 for p. 129 .

## PAGE 131

${ }^{1}$ See note 2 for p. 130.
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ The averages for sales and revenues, including those for total sales, are quarterly averages and, prior to 1956 , are based on revised annual totals. The figures for customers are annual averages for 1932-44 and averages of end-of-quarter figures for 1945-56.

## PAGE 132

${ }^{1}$ Source: U. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the domestic fermented malt-liquor industry, including beer, ale, and other liquor produced from fermented malt. Data for Hawaii and, through June 1942, for Alaska are included. In addition to the taxable withdrawals published here, the original reports also show data for tax-free withdrawals, covering the amount withdrawn for export and for vessels and aircraft, consumed on brewery premises, and used for cereal beverages.

Monthly data prior to April 1933 are not availabIe. Annual data (including statistics for cereal beverages containing less than one-half of 1 percent alcohol, by volume) for the prohibition period are available from reports of the Internal Revenue Service.

Monthly data for 1933-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (March 1950 figure for tax-paid withdrawals should read 6,002,000 barrels.)
${ }^{2}$ Source: U. S. Treasury Department, Internal Revenue Service. The data represent complete coverage of operations of registered distilleries and fruit distilleries, exclusive of production for industrial purposes from January 1942 through September 1945.

In addition to whisky which is shown separately, the totals for distilled spirits include rum, gin, brandy, vodka, and other dis. tilled spirits (comprising spirits-fruit produced at fruit distilleries, and spirits-grain, spirits-cane, etc., produced at registered distilleries). Normally, registered and fruit distilleries are authorized to produce only beverage spirits. Because of the greatly increased demand for industrial alcohol during the war, Congress, by the acts of January 24 and March 27, 1942, made it legal for beverage distillers to engage in production of highproof spirits for industrial purposes. Subsequently, production of spirits (other than brandy and rum) for beverage purposes was prohibited after October 8, 1942, until the end of the war period, except under special authorization during so-called liquor holiday months (August 1944, January 1945, and July 1945). Production figures for January 1942-September 1945 include only amounts of high-proof spirits produced for beverage purposes. Small amounts for industrial purposes are included after September 1945, since such production was not reported separately. (Total production of high-proof spirits by registered distilleries for 1942-45 is shown on p. 111 of the 1947 STATISTICAL SUPPLEMENT and the amounts for beverage purposes included in the totals and duplicated here are given separately in note 5 for that page.) Production figures are net-that is, the original production, by redistillation of distilled spirits, minus the quantity of distilled spirits used in redistillation (previously reported as production).

Stocks are domestic stocks in internal revenue bonded warehouses, based on the original entry gage. Losses are not determined until withdrawal and are therefore not included except for distilled spirits in cases for which losses have already been determined.
Withdrawals represent tax-paid withdrawals (exclusive of withdrawals of alcohol) from registered and fruit distilleries and internal revenue bonded warehouses. Also published in the reports of the Internal Revenue Service, but not included here, are data for tax-free withdrawals of distilled spirits for the following purposes: Fortificațion of wine; denaturation; for export; transfers to Customs manufacturing bonded warehouses; for vessels and aircraft; for use of the United States; and, beginning July 1953, transfers to Foreign Trade Zones.

For statistics relating to ethyl alcohol produced at industrial alcohol plants, see p. 120 of this volume. The amounts of ethyl alcohol withdrawn tax-paid shown on that page are largely for beverage purposes.

A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon (see note 5 following for definition of a standard proof gallon). For spirits of less than 100 proof the tax gallon is equivalent to the wine gallon.

Monthly data for 1933-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: Distilled Spirits lnstitute, lnc. Data are based on sales in all States in which sales of distilled spirits are legal. The number of States permitting such sales has increased since 1934 from 27 States and the District of Columbia to 46 States and the District of Columbia beginning July 1949. The sale of distilled spirits is prohibited in Mississippi and Oklahoma. Figures represent gallonage sales as indicated by sales of tax stamps in the license States and in the District of Columbia (except that since 1947, data for a number of the license States cover gallonage shipments to wholesalers) and by actual wholesale and retail sales reported by State Liquor Control Authorities in the monopoly States.

A wine gallon is the standard U. S. gallon containing 231 cubic inches.

Monthly data for 1945-52, 1941-43, and 1938-39 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1944 are available on p. S-27 of the November 1948 SURVEY and those for 1940 (revised since publication in the 1942 volume) are shown on p. 22 of the July 1946 SURVEY. Monthly data for 1934-37 are available upon request.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data are imports for consumption. They include spirits, cordials, liqueurs, bitters, ethyl alcohol, and compounds containing spirits. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104. For definition of a standard proof gallon, see note 5 following.

Monthly data for 1933-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Minor revisions have been made in the 1943 figures for total distilled spirits as shown in the 1947 volume.)
${ }^{5}$ Source: U. S. Treasury Department, Internal Revenue Service. Data represent complete coverage of the industry. Rectified spirits are spirits changed from their original character, such as blended whiskies, liqueurs, and cordials. Total rectified spirits and wines produced comprise whisky, gin, cordials and liqueurs, small quantities of alcohol, rum, brandy, vodka, and unclassified spirits, and (prior to July 1956) wines and vermouth. Materials used and production by kinds are available in the original reports.

A standard proof gallon is a wine gallon (231 cubic inches) of 100 -proof spirits, the proof being twice the percent of the content, by volume, of ethyl alcohol. In a wine gallon of spirits of more or less than 100 proof, the number of proof gallons is proportionally greater or smaller than 1 proof gallon.
Monthly data for 1934-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Barrels of 31 wine gallons (i.e., gallons of 231 cubic inches).
${ }^{7}$ Prohibition period; data available during those years are not comparable with later data shown.
${ }^{8}$ Average for 9 months, April-December.
${ }^{9}$ Average for 6 months, July-December.
${ }^{10}$ Average for 4 months, September-December.
${ }^{11}$ Average based on annual total which includes revisions not available by months.

## PAGE 133

${ }^{1}$ Source: U. S. Treasury Department, Internal Revenue Service. The data represent complete coverage of the industry. Prior to January 1955, the figures are reported in taxable units and converted to wine gallons on the basis of 20 taxable units (onehalf pint or fraction thereof in bottle or container) per wine gallon; thereafter, the original reports are in wine gallons. Data cover champagne, other effervescent wines, and artificially carbonated wines. In addition to the data on effervescent wines published here, the original reports show data for vermouth and aperitif wines other than vermouth.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for July 1934-December 1935 are shown on p. 16 of the July 1939 SURVEY.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data are imports for consumption. Figures for ef fervescent wines include champagne and all other sparkling wines. Still wines include vermouth, rice wine or sake, and other still wines. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p .104.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for January 1934-December 1935 are shown on p. 18 of the July 1939 SURVEY.
${ }^{3}$ Source: U. S. Treasury Department, Internal Revenue Service. The data represent complete coverage of the industry and include small amounts (stocks only, in recent years) for Hawaii. Production of still wines represents the amount removed from fer menters, exclusive of distilling materials produced at wineries beginning July 1942 in the monthly figures (shown in 1947 STATIS TICAL SUPPLEMENT) and beginning 1943 for the monthly averages. Stock figures also exclude data for distilling materials beginning July 1942. Data for taxable withdrawals and for stocks include vermouth and aperitif wines other than vermouth beginning January 1953; monthly averages for 1953 comparable with earlier data are $10,825,000$ gallons for withdrawals and $182,573,000$ for stocks.

In addition to taxable withdrawals of still wines, as shown here, there are considerable quantities of still wines withdrawn tax free for the following purposes: For production of sparkling wines, vermouth, aperitif wines other than vermouth, and vinegar; for export; for family use; for use of the United States; and for use as distilling materials.

Distilling materials produced at wineries represent substandard wines produced with excessive water or residue materials, which are used as distilling materials in the production of brandy. They were not reported separately from production of still wines prior to July 1942.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for July 1934-December 1935 are shown on p. 17 of the July 1939 SURVEY.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are compiled from factory reports sent directly to the Department (except data for 1929 which are as reported in the Census of Manufactures; data for 1956 are estimates). Data for butter include the production of whey butter. Total cheese production includes American-type cheese (whole milk and part-skim) and foreign and miscellaneous types (Swiss, Brick and Munster, Limburger, Italian, Neufchatel, cream cheese, etc.), but excludes cottage, pot, and bakers' cheese, and American full-skim. The latter is included in data shown in the 1942 and earlier issues of the SUPPLEMENT. The figures shown separately for American cheese include production from whole milk only, which generally accounts for about 99 percent of the total American cheese output; data represent largely Cheddar cheese but include other varieties known as colby, washed curd, high- and lowmoisture jack, Monterey, and granular.

Monthly data for 1938-52 and for 1932-37 (except for total cheese production) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATIST1CS as indicated at top of p. 197 of this volume. Monthly data for 1930-37 for total cheese production (including American full-skim amounting to not more than two-tenths of 1 percent of the total) are shown on p. 17 of the November 1939 SURVEY (revision, August 1930, 44,504,000 pounds). Data prior to 1932 for these series as shown in the 1932 SUPPL.EMENT and on p. 17 of the November 1939 SURVEY have been revised to allow for incompleteness in reports. The revised monthly data are available on pp. 63-65 of Technical Bulletin No. 722, 'Production and Consumption of Manufactured Dairy Products," published in April 1940 by the U. S. Department of Agriculture (for total cheese production, deduct American full-skim cheese as shown on p. 66 from the total factory production).
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are compiled from reports made by coldstorage establishments and are given on a "net weight" basis. They represent stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more.

Stocks of butter and cheese include those held by the various States for relief distribution from April 1938-April 1940 and, since June 1938, Government holdings, which represent stocks held by the U. S. Department of Agriculture and other agencies. They include also stocks owned by the armed services and stored in warehouse space not owned or leased by them; stocks held in space owned or leased and operated by the armed services are not included. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

Monthly data for 1929-52 (except as noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Data for 1929-31 for cheese were revised and are shown on p. 19 of the April 1933 SURVEY; total cheese stocks for July 1939, as shown in the 1942 SUPPLEMENT, revised to $118,809,000$ pounds.)
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are average wholesale prices of creamery butter, grade A, 92-score, bulk in fiber boxes, at New York City, for cash and short-term credit. Prices were under Government control from the latter part of 1942 until July 1946. Temporary price ceilings were established by the Office of Price Administration in October 1942 and specific dollar-and-cents ceilings on December 30, 1942. General price controls were again imposed the latter part of January 1951 and were effective for dairy products until February 18, 1953.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{7}$ Prohibition period; data available during those years are not comparable with data shown.
${ }^{8}$ Average for 6 months, July -December.
${ }^{9}$ Stocks as of June 30.
${ }^{10}$ Production of distilling materials included in figures for production of still wines; see note 3 for this page.
${ }^{11}$ Average of stocks as of June 30, September 30, and December 31 .
${ }^{12}$ See note 3 for this page regarding change in coverage beginning 1953.

13 Average based on annual total which includes revisions not available by months.

PAGE 134
${ }^{1}$ See note 5 for page 133.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April
1941). Data for imports of cheese are imports for consumption beginning 1934 and general imports for earlier years. All classes of cheese are included.

Exports beginning 1947 include shipments under the Army Civilian Supply Program; such data were not reported prior thereto. In 1947, 5,000 pounds of condensed milk and 142,000 pounds of evaporated milk were shipped under this program. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-52 (except as noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (thousands of pounds): Condensed milk, December 1946, 13,515; evaporated milk, December 1946, 48,102; cheese, 1930-October, 6,325; December, 5,237.
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average wholesale price of American cheese, single daisies, at Chicago. Prices were under Government control from the latter part of 1942 until July 1946. The wholesale price ceiling was increased $3-3 / 4$ cents per pound February 1, 1946, to offset the discontinuance of the processors ${ }^{\text { }}$ subsidy of $3-3 / 4$ cents which was in effect from December 1, 1942, through January 31, 1946.

Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1929-44 are available upon request. (The prices shown in the 1947 Supplement and earlier issues are for a different series.)
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent practically the entire industry for unsweetened evaporated milk and for sweetened condensed mi 1 k . The series relate to case goods produced from whole milk (except that a small amount produced from skimmed milk is included in the data for condensed milk prior to 1949). In addition to the monthly series for case goods shown here, which are available currently, monthly data on production of sweetened and unsweetened condensed milk in bulk for industrial users are issued annually by the Department of Agrigulture.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision for evaporated milk stocks for February 1930, 153,202,000 pounds.) The figures for evaporated milk production for 1929-30 given in the 1932 SUPPLEMENT include small amounts produced from skimmed milk which are not included in the present series and, therefore, are not strictly comparable.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are based on the reports made by manufacturers covering actual sales or goods delivered at manufacturers' distributing points on the basis of cash or short-term credit, and represent the average wholesale selling price per case of forty eight 14-1/2 -ounce cans. Prices of evaporated milk through January 1931 were quoted on the basis of 16 -ounce cans and were converted to $14-1 / 2$-ounce cans by multiplying by 0.90625 .

Temporary ceiling prices were established by the Office of Price Administration in October 1942 and specific dollar-andcents ceiling was established effective December 30, 1942. Price control was discontinued in July 1946. General price controls were again imposed the latter part of January 1951 and were effective for dairy products until February 18, 1953.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures for 1929-37 are available upon request.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are estimated total production of milk on farms, based on daily average milk production per cow (from a sample group of farms) and the estimated number of cows on farms.

Monthly data for 1949-50 are shown in the 1953 edition of BUSINESS STATISTICS; monthly data for 1929-48 and 1951-52 as published in various editions have since been revised and are available upon request.
${ }^{7}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the consumption of fluid milk in the manufacture of the principal dairy products, with the exception of ice cream. The items included and the multiplying factors applied to the production figures for these items to compute the milk equivalent are as follows: Creamery butter, 20.3; American wholemilk cheese, 10.1 ; other whole-milk cheese and part skim, 9.6; evaporated milk, 2.16; condensed milk, sweetened and unsweetened (bulk and case), 2.2; and dried whole milk, 7.6. The products included accounted for 94 percent or over of the total whole-milk equivalent of all manufactured dairy products prior to 1941; 92 to 93 percent in 1941-43; 90 percent in 1944-45; 84 percent in 1946, 1952, and 1955-56; 86 percent in 1947 and 1951; 87 percent in 1948-50; and 85 percent in 1953-54.

A decline in the quantity of milk used in creamery butter and evaporated and condensed milk and increased production of ice cream and other frozen products (not included here) account for the decrease in the percentage.

Monthly data for 1941-45 and 1947-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (revision for October $1952,3,151$ million pounds). Monthly data for 1929-40 and revisions for 1946 are available upon request.
${ }^{8}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average price received by farmers as of the 15 th of the month for all milk sold at wholesale to plants and dealers. The series replaces that shown in earlier issues of BUSINESS ST'A'IISTICS, which covered dealers' buying price for standard-grade milk, delivered f.o.b. local shipping point or at country plant.

Monthly data for 1929-52 for the present series are available upon request.

## PAGE 135

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data cover production and stocks of dry whole milk and of nonfat dry-milk solids for human consumption as reported by the principal firms operating dry-milk factories in the United States. Data for nonfat dry-milk solids made by the spray and the roller processes are shown separately in reports of the Department of Agriculture.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1938-40 for production and stocks of nonfat dry-milk solids (designated as "dry skim milk for human consumption") appear in the 1942 SUPPLEMENT; monthly data beginning 1935 (the first year they were reported separately from animal feed) are available upon request. Data for total dry skini milk, which include dry skim milk for animal feed, are shown in the 1942 and 1940 SUPPLEMENTS and on p. 17 of the March 1939 SURVEY. The production of dry skim milk for animal feed has been comparatively small since 1943 , accounting for only 1.1 percent of the total production of dry skin milk in 1956. Earlier monthly data beginning 1929 are available upon request.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data for exports of nonfat dry-milk solids beginning 1944 represent only exports of dry skim milk for human consumption. Earlier data also are believed to represent only that for human consumption, although the data are reported as "dry skim milk" in export statistics and are not specifically stated to exclude exports of dry skin milk for animal feed, if any. Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. In 1947, 10, 164,000 pounds of dry whole milk and $134,950,000$ pounds of nonfat dry milk solids were exported under this program. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data shown in the 1942 and earlier SUPPL EMENTS are combined totals of dry whole milk and dry skim milk; separate monthly figures for 1932-40 are available upon request.
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Prices are based on reports made by manufacturers covering actual sales to jobbers, wholesalers, grocers, and similar buyers, f.o.b. factory, on the basis of cash or shortterm credit. The figures shown here are based on prices of nonfat dry-milk solids made by both the spray and roller processes; separate data are shown in reports of the Department of Agriculture.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Earlier monthly data beginning August 1934 are available upon request.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); the 1956 estimate is preliminary. Quantities unharvested on account of market conditions are included. The estimates through 1933 cover total production; thereafter, they cover production of apples in the commercial apple areas of each State and include fruit produced for sale to commercial processors, as well as that for sale for fresh consumption. The estimated total production for 1934 comparable with the earlier data is 128,203 , 000 bushels.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are compiled from reports of officials and local agents of common carriers. Shipments cover those by rail and water (reduced to car-lot basis) but do not include shipments by truck which have become increasingly important during the period covered here. Data beginning 1934 include shipments for emergency relief and other Government purchases. Shipments of citrus fruits include oranges, lemons, grapefruit, tangerines, and mixed citrus fruits.

Monthly data for 1929-52 (except for revisions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. Revisions for apples, in carloads: 1932-July, 2,593; August, 1,668; September, 8,412; October, 23,736. There have been some revisions in the monthly figures prior to 1932 but, with the exception of the last 6 months of 1931 for all series, revisions are of a minor nature.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. Stocks in space owned or leased and operated by the armed services are not reported. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

The monthly averages for cold-storage holdings of apples are based on figures for 9 months (January-May and September-December) for 1929-42 and for 10 months (January -May and AugustDecember) for 1943 and 1944. Small stocks of apples are carried during the summer months, but reports for such months prior to 1945 were incomplete; hence the reported data are not included in the figures shown here.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Notice that stocks of frozen fruits as shown prior to the 1955 edition of Business Statistics include data for fruit juices and purees.) Monthly data for 1936-37 for cold-storage holdings of apples may be found in the 1940 SUPPLEMENT; monthly data prior to 1936 as shown in the 1938, 1936, and 1932 volumes are reported in barrels and may be converted to bushels by multiplying by 3 . The following monthly data are available upon request: Cold-storage stocks of frozen fruits (including juices and purees), for January 1929-December 1937; frozen fruits and fruit juices and purees (shown separately), for June 1944-December 1950; frozen vegetables, for 1937.
${ }^{7}$ Bushels of 48 pounds.
${ }^{8}$ Data for 1929-34 include figures for animal feed; production and stocks for 1935 comparable with the earlier years are 24,792,000 and $22,250,000$ pounds, respectively. See note 1 for this page.
${ }^{9}$ Data shown for dry whole milk for 1929-31 represent total dried milk; see note 2 for this page.
${ }^{10}$ Stocks of fruit juices and purees are included in the figures for stocks of frozen fruits.
${ }^{11}$ Average for 5 months, August-December.
${ }^{12}$ See note 4 for this page regarding change in coverage begin ning with 1934.

## PAGE 136

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); 1956 estimates are preliminary. Data for potatoes are shown in bushels in earlier issues of BUS1NESS STATISTICS.
${ }^{2}$ See note 5 for p. 135.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The series beginning March 1947 represents the average price at New York for all varieties and types of white potatoes (old and new stock), U. S. No. 1 merchantable quality and condition. Through 1951, monthly quotations are the averages of data for the 4 or 5 weeks in each month; prices are as of Tuesday prior to September 1947 and as of Monday from September 1947 through 1951. Beginning 1952, the prices shown are quotation averages for 1 day each month (usually in the week containing the 15th).

Prices prior to April 1947 are not comparable with succeeding data. They represent New York prices of white potatoes, U. S. No. 1 (old stock only, until new stock became plentiful); data for April and May 1947 are $\$ 3.490$ and $\$ 3.812$. Corresponding prices for the new series are $\$ 3.992$ and $\$ 4.054$.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The prices were incorrectly described in the 1942, 1940 , and 1938 volumes as quotations for Long lsland No. 1 potatoes, whereas only the prices prior to 1933 (shown in the 1936 and 1932 SUPPLEMENTS) covered this classification.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941); conversions from original data are made by the Office of Business Economics. Data include exports of barley, corn, oats, rye, and wheat, plus the grain equivalent of malt, cornmeal, oatmeal, and wheat flour. The conversion factors used to obtain the grain equivalent of the several items are as follows: Malt$9 / 10$ of a bushel to a bushel of barley through 1943 and beginning 1944, 1 bushel of malt per bushel of barley; cornmeal-4 bushels of corn to a barrel of cornmeal through 1945 and 6.194 bushels beginning 1946; oatmeal -5.56 bushels of oats to 100 pounds of oatmeal through 1942 and 7.6 bushels beginning 1943; wheat flour4.7 bushels of wheat to a barrel of flour through 1943; JanuaryJune 1944, 2.398 bushels of wheat per 100 pounds of flour; July 1944-February 1946 and July 1949 -December 1956, 2.33 bushels of wheat per 100 pounds of flour; for March 1946 through June 1949 the wheat factor varies from month to month (ranging from 2.172 to 2.33 bushels per 100 pounds), being a weighted average based on the proportion of higher extraction flour sent to certain destinations. For periods when barley flour and rye flour were exported, these are also included, converted to grain equivalent at 5.5 bushels to the barrel for barley and 6 bushels to the barrel for rye flour. The conversion factors are those used by U. S. Department of Agriculture and take into account changes in milling practices.

The weight per bushel for the various grains included is as follows (in pounds): Barley, 48; corn (shelled) and rye, 56; oats, 32 ; and wheat, 60.

Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. Amounts shipped under this program in 1947 are as follows (thousands of bushels): Barley, 24,152 ; corn, 45,643 ; oats, 8,803 ; rye, 11 ; wheat, 158,751 . For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1945-52 (with the exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, in thousands of bushels: 1946--July, 28,309; September, 23,290;

December, 34,527). Minor revisions in a few monthly figures for 1947-48 and revised monthly data prior to 1945 are available upon request. Revisions of export data as published in the 1947 SUPPLEMENT and earlier volumes are due to minor changes in the conversion factors for malt and oatmeal.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are based on reported weekly receipts (of both malting and feeding barley) at Minneapolis, Milwaukee, Chicago, and Duluth. Weekly figures are reduced to a monthly basis by the U. S. Department of Commerce, Office of Business Economics, by prorating data for weeks falling in two months. Data through January 1953 are for weeks ending Saturday; thereafter, for weeks ending Thursday.

Monthly data for 1932-52 (with the exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, in thousands of bushels: November 1932, 3,254; April 1933, 5,154; July 1933, 5,144.) Monthly data prior to 1932 are on p. 20 of the November 1932 SUR VEY.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Stocks in commercial storage include domestic grain in public elevators, as well as Government-owned stocks at principal terminal markets ( 46 markets in 1956 and grain afloat in vessels or barges in harbors of lake or seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other processing facilities, or private stocks of grain intended for local use. Figures are as of Saturday nearest the first of the month following that for which they are shown.

Monthly data for 1932-52 (with the exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1932 are available on p. 19 of the June 1936 SURVEY, The figures as shown in the 1938 SUPPLEMENT and earlier issues have been revised for some months from data for the Saturday nearest the end of the indicated month to the Saturday nearest the first of the following month; revisions for months affected by this change are available upon request.
${ }^{7}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service, Data are as of the first of the month following that for which they are shown. June figures represent old crop only; new grain is not reported in the stock figures until the beginning of the crop year.
Annual averages shown here are quarterly averages throughout. Quarterly data for 1949 are published in the 1953 edition of BUSINESS STATISTICS; for 1941 -43, in the 1947 issue. Quarterly figures for 1950-52, 1944-48, and 1940, June and December figures for 1934-38, and June, September, and December figures for 1939 are available upon request.
${ }^{8}$ Compiled from source indicated in note 4 for this page, using the conversion factor indicated for malt. Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto (see note 1 for p. 104). Such shipments in 1947 amounted to $24,152,000$ bushels.

Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised monthly data prior to 1945 are available upon request (the revisions reflect a minor change in the conversion factor for malt).
${ }^{9}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are compiled from quotations given in daily trade papers, and represent the average price per bushel weighted by the number of carlots sold.
Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data back to July 1934 for No. 2, malting, are shown in the 1938 SUPPLEMENT; those prior to 1936 for No. 3 , straight, are available upon request.
${ }^{10}$ Sources: Price, Waterhouse and Co., for data beginning 1946; prior thereto, from Corn Refiners Statistical Bureau. Data
are reported by 11 companies, representing complete coverage of the industry. They include grindings by the wet process for both domestic consumption and export.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{11}$ Source: Chicago Board of Trade. Data represent receipts at interior primary markets. The monthly figures are reported calendar-month totals.

The following markets are included: Chicago; Detroit (through January 1935 only); Duluth; Kansas City; Indianapolis; Milwaukee; Minneapolis; Omaha; Peoria; St. Joseph; St. Louis; Sioux City; Toledo (included prior to June 1933 and beginning June 1955); and Wichita.
Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1929-40 are available upon request.
${ }^{12}$ Data prior to 1939 are available only for June and December; in 1939 for June, September, and December. See note 7 for this page.
${ }^{13}$ Average for 6 months, July-December.
${ }^{14}$ Average for 10 months; no quotation for March and April.
${ }^{15}$ Average for 9 months, April-December. See 2d paragraph of note 3 for this page.
${ }^{16}$ Based on annual total which includes revisions not allocated to the monthly figures shown.

## PAGE 137

${ }^{1}$ See note 6 for p. 136.
${ }^{2}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are as of the first of the month following that for which they are shown. September figures tor corn and June figures for oats represent old crop only; new grain is not reported in the stock figures until the beginning of the crop year.
Annual averages shown here are quarterly averages throughout. For quarterly data from 1941 through June 1944, see the 1947 STATISTICAL SUPPLEMENT. Quarterly data for 1929-40 and from September 1944 through 1952, as originally published, have since been revised, These revisions are available upon request.
${ }^{3}$ See note 4 for p. 136 for source of data and for factors used in converting meal to grain equivalent. Beginning 1947, exports include shipments under the Army Civilian Supply Program; such data were not available prior thereto; amounts included in 1947 were $45,644,000$ bushels of corn and $8,803,000$ bushels of oats. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.
Monthly data for 1929-52 for corn and 1945-52 for oats, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. (Revisions for cornMarch 1931, 494,000 bushels; December 1946, 1,744,000 bushels). Revised monthly data prior to 1945 for oats are available upon request (revisions were due to a slight change in the conversion factor for oatmeal).
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the average price per bushel weighted by the number of carlots sold. The weighted average price of all grades of corn at 5 markets covers cash sales in the Chicago, St. Louis, Omaha, Kansas City, and Minneapolis markets. Prior to November 1938, data are included for Cincinnati; however, the volume and variation are not sufficient to affect the comparability of the series.
Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of P. 197 of this volume. Monthly data prior to 1938 are available as follows: Corn, No. 3 yellow, p. 18 of the April 1940 SURVEY; corn, weighted average, 5 markets, p. 18 of the August 1939 SURVEY;
and oats, No. 3 white, in the 1940, 1938, 1936, and 1932 volumes of the SUPPLEMENT.

5 Source: U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); estimates for 1956 are preliminary.
${ }^{6}$ See note 11 for p. 136.
${ }^{7}$ Average based on months for which quotations are available.
${ }^{8}$ Based on annual total which includes revisions not allocated to the monthly figures shown.
${ }^{9}$ No sales.

## PAGE 138

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data cover the movement of domestic rice at all mills in California. Brewers' rice is not included. The stock figures relate to mill stocks only; they include both milled rice and rough rice in terms of cleaned (converted on the basis of 162 pounds of rough to 100 pounds of clean through 1938 and 162 pounds of rough to 105.3 pounds of clean subsequently).

Monthly data for all series for 1947-52, receipts and shipments for October 1933-46, and stocks for 1934-38, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised monthly data for stocks for October-December 1933 and for 1939-46 are available upon request. Data in the 1942 SUPPLEMENT and earlier editions are expressed in bags of 100 pounds instead of thousands of pounds.
${ }^{2}$ Sources: Rice Millers Association, for data prior to 1932 and beginning August 1952; U. S. Department of Agriculture, Agricultural Marketing Service, for January 1932-July 1952 (compiled from reports of the Rice Millers Association for association mills and reports of nonassociation mills reporting directly to the Department). Statistics cover the movement of domestic rice at all mills in Louisiana, Texas, Arkansas, and Tennessee and are estimates for all rice mills (in these Southern States) projected from a compilation of reports of mills that are members of the Rice Millers Association. Brewers' rice is excluded from all figures. Shipments represent distribution 'to the trade"; shipments "to other mills" are not included. The stock figures include both milled rice and rough rice in terms of cleaned (converted on the basis of 162 pounds of rough rice to 105.3 pounds of milled); they do not include rice in store in other positions than at mills.

Monthly data for 1947-52 for all series and also for 1929-46 for receipts and shipments will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note exceptions mentioned in next paragraph). Monthly data prior to 1932 for stocks appear in the 1932 SUPPLEMENT; revised monthly data for 1932-46 for stocks are available upon request.

Receipts are shown in barrels of 162 pounds in the 1949 STA TISTICAL SUPPLEMENT and earlier issues; data for shipments in the 1942 volume and prior issues are expressed in thousands of pockets of 100 pounds instead of in thousands of pounds. The heading in the 1932 SUPPLEMENT should read "shipments from mills" rather than "to mills。" Revisions: Receipts (in barrels) - 1929, August, 508,000; 1930, August, 480,535; 1931, August, 234, 237; 1932-July 233,071; August, 262,675; September, 839,693; November, 1,210,908; December, 713,110; 1934-February, 931,932; April, 192,786; shipments (in pockets)-1932, July 489,716; August, 615,848; September, 686,775; November, 1,022,289; December, 859,137; 1934-March, 738,091; April, 444,508; May, 408,753.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Figures are on a clean equivalent basis, with rough rice reduced on the basis of 162 pounds of rough rice to 105.3 pounds of clean. In the STATISTICAL SUPPLEMENTS prior to the 1951 issue, rough rice is converted to clean on the basis of 162 pounds of rough rice to 100 pounds of clean. Shipments under the Army Civilian Supply Program are inciuded
beginning 1947; data were not reported prior thereto. In 1947, $15,373,000$ pounds of such exports were included. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.
Monthly data for 1947-52 and 1929-31 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note revisions given below; also that data in the 1942 and earlier volumes are expressed in pockets of 100 pounds). Revised data for 1933-46 a re available upon request. (Revisions for 1931, in pockets: January, 369,214; November, 382,898; December, 195,350.)
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1946 represent the price of milled rice, blue rose, head, clean, medium to good, New Orleans; beginning 1947, prices are for zenith, head, extra fancy, iniller to first distributor. Through 1951 the annual averages are based on weekly quotations for Tuesday and the monthly data are averages of prices for the 4 or 5 weeks in each month. Beginning 1952 the prices are quotation averages for 1 day of the week containing the 15th of the month.
Monthly data for 1929-46 and 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised monthly data for 1947-48 may be obtained upon request.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); estimates for 1956 are preliminary.
${ }^{6}$ Sources: Chicago Board of Trade, for data beginning 1948; U. S. Department of Agriculture, Agricultural Marketing Service, prior to 1948. Data through 1947 represent receipts at Chicago, Duluth, Milwaukee, and Minneapolis. These data were furnished on a weekly basis and the monthly series was computed (by the U. S. Department of Commerce) from weekly totals by prorating data for weeks falling in 2 months.

Beginning 1948, the monthly figures are reported calendarmonth totals, and the following markets are included: Chicago; Duluth; Kansas City; Indianapolis, Milwaukee; Minneapolis; Omaha, Peoria; St. Joseph; St. Louis; Sioux City; Toledo (included beginning June 1955); and Wichita.

Monthly data for 1949-52 are published in the 1955 and 1953 editions of BUSINESS STATISTICS. Data for 1948 for 12 markets (Toledo not included) are as follows (thousands of bushels): January-December, respectively--532; 562; 1,039; 915; 879; 654; 1,$679 ; 4,441 ; 2,578 ; 1,893 ; 2,341 ; 1,925$.
Monthly data for 1932-48 (4-market series) will be found in the 1951 and earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, thousands of bushels: 1932, July, 332; 1933, July, 1,473; 1938, July, 1, 116; 1939--March, 1,241; May, 1,044; July, 1,473.) For monthly data prior to 1932, see p. 20 of the November 1932 SURVEY (revision for December 1931, 383,000 bushels).
${ }^{7}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Stocks in commercial storage include domestic grain in public elevators, as well as Government-owned stocks at principal terminal markets ( 46 markets in 1956) and grain afloat in vessels or barges in harbors of lake and seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other processing facilities, or private stocks of grain intended for local use. Figures are for the Saturday nearest the first of the month following that for which data are shown.

Monthly data for 1932-52 (with exceptions mentioned below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. Monthly data prior to 1932 are shown on p. 20 of the November 1932 SURVEY. The figures as shown in the 1938 SUPPLEMENT and earlier issues have been revised for some months from data for the Saturday nearest the end of the indicated month to the Saturday nearest the first of the following month. Revisions for months affected by this change are available upon request.
${ }^{8}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent average prices per bushel of reported cash sales, weighted by the number of carlots sold.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{9}$ Average for 3 months, October-December.
${ }^{10}$ Average for 11 months; no quotation for June.
${ }^{11}$ Beginning January 1948, data include receipts at 8 additional markets, and, beginning June 1955, receipts at Toledo, Ohio, are also included; see note 6 for this page. The 1948 monthly average comparable with earlier data is $1,288,000$ bushels.

12 Receipts at Toledo, Ohio, are included beginning June 1955.

## PAGE 139

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Figures represent the year's total crop (not monthly averages); data for 1956 are preliminary estimates.
${ }^{2}$ Source: Chicago Board of Trade. Data represent receipts at interior primary markets. The monthly figures are reported calendar-month totals.

The following markets are included: Chicago; Detroit (through January 1935 only); Duluth; Kansas City; Indianapolis; Milwaukee; Minneapolis; Omaha; Peoria; St. Joseph; St. Louis; Sioux City; Toledo (included prior to June 1933 and beginning June 1955); and Wichita.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1929-40 available upon request.
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the disappearance of domestic wheat as used for flour, feed, seed, alcohol production, and for export. The figures shown on the monthly-average lines are quarterly averages.

Quarterly data for 1949 through 2d quarter 1950 are published in the 1953 edition of BUSINESS STATISTICS; those for 1941-43, in the 1947 volume. Quarterly data for 1934-40, 1944-48, and from 3d quarter 1950 through 1952 are available upon request.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Stocks of Canadian wheat in Canada include practically all Canadian wheat held within Canadian borders exclusive of farm stocks. Subsequent to April 1932, "in transit" lake stocks are included. Beginning with September 1953, data shown for a given month are those as of Wednesday nearest the first of the following month; for August 1947-August 1953, as of Thursday; and prior to August 1947, as of Friday nearest the first of the following month.

Stocks of United States wheat reported as of April 1, July 1, October 1, and January 1 are shown here as of the end of March, June, September, and December. Data for wheat on farms and stocks in interior mills, elevators, and warehouses are estimates of the Crop Reporting Board based on reports of crop reporters as of the first of each quarter. The series on commercial stocks includes domestic grain in storage in public elevators, as well as Government-owned stocks at principal terminal markets ( 46 markets in 1956) and grain afloat in vessels or barges in harbors of lake or seaboard ports. Data do not include grain in transit either by rail or water, or stocks in elevators attached to flour mills, crushing plants, and other processing facilities, or private stocks of grain intended for local use. Figures for commercial stocks are as of Saturday nearest the first of the month following that for which data are shown. Through April 1945, stocks in merchant mills (including wheat in elevators and stored for others) are estimated totals based on wheat stocks as reported by the Bureau of the Census and raised to a 100 -percent hasis by the Agricultural Marketing Service; subsequently, the data are as supplied to the latter office and represent complete coverage.

Stocks of domestic wheat on farms and in interior mills, elevators, and warehouses for July 1 (shown here as June) include only old wheat. Any new wheat which comes into stock position is not reported until the new crop year begins. Beginning 1937 this is also true of the commercial and merchant mills series. Prior to 1937 an indeterminable amount of new wheat is included
in the latter two series. (See note 1 for p. 121 in the 1942 SUPPLEMENT for amounts of new wheat originally included in the July 1 figures for 1937-41 but excluded from the figures shown in that volume and in later issues.) Total United States stocks beginning June 1942 include wheat owned by the Commodity Credit Corporation and stored off farms in its own bins, as well as CCC-owned grain in transit and in Canadian elevators.

Annual data are quarterly averages with the exception of commercial stocks which are monthly averages. Monthly or quarterly data for 1949-52 for all series, except for the U. S. total and stocks on farms, are published in the 1955 and 1953 issues of BUSINESS STATISTICS. (Revisions for Canadian wheat for 1950-January, 152,065,000 hushels; December, 222,686,000 bushels.)

Monthly data for 1947-48 for Canadian wheat stocks and United States commercial stocks are shown in the 1951 edition of BUSINESS STATISTICS. Quarterly data for 1945-52 for total United States domestic stocks and "on farms" may be obtained upon request. Monthly or quarterly data for 1945-46 (except for the United States total and on farms) are available in the 1949 STATISTICAL SUPPLEMENT; those for 1941-44 appear in the 1947 volume (revision-total domestic, March 1944, 544,275,000 bushels).

Monthly figures for 1932-40 for stocks of Canadian wheat are shown in the $1942,1940,1938$, and 1936 SUPPLEMENTS. For monthly or quarterly figures for 1936-40 for United States stocks (commercial and merchant mills only), see also the 1942 and 1940 volumes (the June 1937 figure for merchant mills should read $40,399,000$ bushels). Revisions prior to 1941 for United States stocks (total, on farms, and in interior mills, etc.) are available upon request.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). In the total for wheat and flour, wheat flour is converted to a grain equivalent as follows: For data through 1943, on the basis of 4.7 bushels to a barrel of 196 pounds of flour; January-June 1944, on the basis of 2.398 bushels of wheat per 100 pounds of flour; July 1944-February 1946 and July 1949-December 1956, 2.33 bushels of wheat per 100 pounds; for March 1946-June 1949, the factor varies from month to month (ranging from 2.172 to 2,33 bushels per 100 pounds), being a weighted average based on the proportion of higher extraction flour sent to certain destinations. The foregoing conversion factors are those supplied by the U. S. Department of AgricuIture and take into account changes in milling practices.
Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. Such shipments in 1947 amounted to $158,751,000$ bushels of wheat and flour and $102,129,000$ bushels of wheat only. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1934-43 and 1945-52 (except for revisions given below), comparabIe with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised data for 1944 are availabIe upon request. Other revisions are as follows, in thousand of bushels: Total-1946, July, 24,755 ; 1947--August, 55,455 ; September, 45,810 ; November, 36,238; December, 37,519; 1948-April, 34,857; September, 48,958 ; October, 46,565; November, 30,988; December, 39,192; wheat only-1946, July, 17,090; 1947, September, $29,824$.

Monthly data prior to 1934 for "wheat only" and for wheat flour appear in the 1936 and 1932 SUPPLEMENTS. There have been many revisions in the data shown in those volumes for "wheat including flour." (Revisions for "wheat only" for 1931-May, 6,494,000 bushels; August, 8,911,000; for wheat flour for June 1931, 792,000 barrels.)
${ }^{6}$ Data are as of July 1.
${ }^{7}$ Average for last 2 quarters of the year.
${ }^{8}$ Receipts at Toledo, Ohio, are included beginning June 1955.

## PAGE 140

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are average prices per bushel of reported
cash sales, weighted by the number of carlots sold. Data for No. 2, hard winter, represent the price for hard and dark hard winter beginning July 1947. The weighted average price of wheat in 6 markets is based on the reported cash sales of all classes and grades combined at the following markets: Chicago, Minneapolis, Kansas City, St. Louis, Omaha, and Duluth.

Monthly data for 1929-52 for all series (except No. 1 dark northern spring for 1929-31), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data prior to 1932 for No. 1 dark northern spring wheat are shown on p. 20 of the June 1935 SURVEY.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. Data through 1938 represent wheat-flour production and the actual grindings of wheat as reported by approximately 1,100 commercial mills, including those with a daily 24 -hour capacity of 400 sacks or less (the reporting mills accounted for about 95 percent of total wheat-flour production in 1929-38). Data beginning 1939 represent complete coverage and, through June 1947, are revised estimates based on the assumption that small mills not covered by the monthly survey operated at a lower rate of capacity than reporting mills. Since July 1947, reports have been obtained only from mills with a 24 -hour capacity of 400 sacks and over. Data, representing 97 percent of the totals, are reported by 375 large mills since September 1950 (400 prior thereto) and the balance estimated; the estimated portion is based on a survey of the smaller mills in 1950.

The series on percent of total capacity operated is derived by multiplying the daily 24 -hour capacity in wheat flour (as reported) by the number of working days in the month (based on a 6 -day week through 1948 and a 5 -day week thereafter). The result is known as the maximum rated output. This figure is then divided into the total wheat flour produced during the month, giving the percent of total capacity operated.

All data relate to regular-grind flour only. In addition, from 1943 through February 1946, some mills produced granular flour, which was flour coarsely ground for the production of alcohol to be used in the manufacture of synthetic rubber. Monthly averages of data relating to granular flour for 1943-45 are as follows: Grindings of wheat (thousands of bushels)$1943,3,301 ; 1944,3,720 ; 1945,2,442$; production of granular flour (thousand of sacks) - 1943, 1,270; 1944, 1,591; 1945, 1,039; offal (tons) - $1943,35,613 ; 1944,31,992 ; 1945,21,380$. Operations as a percent of capacity for regular and granular flour combined are as follows: 1943, July-December (percentage not computed for earlier months of 1943), 72.0; 1944, 73.2; 1945, 80.0. Data by months for January 1944-February 1946 are available in the December 1944 to May 1946 issues of the monthly SURVEY OF CURRENT BUSINESS.

Monthly data for 1947-52 and for 1929-38 (with exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revised monthly data for 1945-46 are available upon request; comparable estimates by months for 1939-44 have not been compiled. (Offal production for November 1933 should read $653,276,000$ pounds.) Data for wheat flour are shown in the 1942 and earlier SUPPLEMENTS in barrels and should be multiplied by 1.96 for comparison with figures given here; offal is shown in pounds and should be converted to tons of 2,000 pounds.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. Data are based on reports from merchant mills reporting wheat-flour production and, beginning 1939, represent complete coverage (see note 2 above). Prior to 1939, the number of mills reporting stocks (around 900 to 1000 ) was somewhat smaller than the number reporting wheat-flour production. However, some mills reported that no stocks were held and others that did not report on stocks also may have held no stocks. Data cover total stocks held by reporting mills at the end of each quarter.

The figures shown on the monthly -average lines are averages of end-of-quarter figures. Quarterly data for 1947-52 and for 1929-44 (with exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top
of p. 197 of this volume. Revised data for 1945-46 (1st-4th quarters, respectively) are as follows, in thousands of sacks: $1945-6,730 ; 6,114 ; 5,251 ; 6,775 ; 1946-4,773 ; 1,813 ; 4,412 ; 6,436$. Data are shown in the 1942 and earlier SUPPLEMENTS in barrels and should be converted to sacks by multiplying by 1.96 for comparison with data shown in the later issues.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Shipments under the Army Civilian Supply Program are included beginning 1947; data were not reported prior thereto. In $1947,24,770,000$ sacks ( 100 pounds) of such exports were included. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-52 (with exceptions noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATİSTICS as indicated at top of p. 197 of this volume. (Revision, June 1931, 792,000 barrels.) Data are shown in the 1942 and earlier SUPPLEMENTS in barrels and should be converted to sacks by multiplying by 1.96 for comparison with data shown in the later issues.
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices are for carlots, miller to wholesaler, baker, or chain store. Since May 1943, prices are quoted per sack of 100 pounds; earlier data, quoted per barrel of 196 pounds, have been converted to price per sack by the Department of Commerce. Through 1951 the monthly quotations are averages of the 4 or 5 weekly prices (Tuesday price for Minneapolis and Saturday for Kansas City) for each month; the annual data, except for 1943 and 1946, are averages of the weekly quotations rather than averages of the monthly figures. Beginning 1952 the data are quotation averages for 1 day each month (in the week containing the 15 th).

Monthly data for 1949-52 are published in the 1955 and 1953 editions of BUSINESS STATISTICS; monthly data prior to 1949 are available upon request.
${ }^{6}$ See note 2 for this page regarding increase in coverage beginning with 1939.
${ }^{7}$ Data for 1939-48 are based on unrevised production figures.
${ }^{8}$ Average based on months for which prices are available.
${ }^{9}$ See note 5 for this page.
10 Average for 6 months; comparable prices for March to August (the period for which a higher extraction rate of flour was required by War Food Order No. 144) are not available.
${ }^{11}$ Beginning 1949 , operations are based on a 5 -day week (see also 2 d paragraph of note 2 for this page).

12 No sales.

## PAGE 141

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service, from compilations of the Meat Inspection Branch. Data are based on calendar months and represent the number of animals slaughtered under Federal inspection. Governmentrelief slaughter is included between June 1934 and August 1936 as follows: 1934, June-December--cattle, 3,333,600; calves, 1,376,600; 1934, September-December-sheep and lambs, 1,356,400; 1935, January-May--cattle, 186,700; calves, 39,400; 1936, August and September-cattle, 3,$500 ; 1936$, August-calves, 136. Government purchases in $1933(6,411,000$ animals $)$ for the emergency Hog Production Control Program are not included.

In 1956, slaughter under Federal inspection accounted for approximately 61 percent of all calves slaughtered, 73 percent of the cattle, 87 percent of the sheep and lambs, and 77 percent of the hogs. While the proportions of total slaughter vary from year to year, the differences generally are not large. However, in 1946 the proportion was substantially lower for cattle (58 percent), for calves and hogs in 1945 and 1946 ( 51 and 48 percent and 57 and 58 percent, respectively), and the proportion for sheep and lambs increased from around 80 percent in 1940 to 89 percent in 1947 and 1952.

Annual estimates back to 1907 of the total slaughter (covering inspected, noninspected, retail, and farm slaughter) are published in the U. S. Department of Agriculture bulletin entitled "Livestock Market News, Statistics and Related Data, 1947."

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data were shown in the 1942 and earlier SUPPLEMENTS under the "leather and leather products" section as an indication of the output of hides and skins.

Monthly data back to 1907 for federally inspected slaughter of calves and back to 1900 for the other classes are shown in "Livestock Market News, Statistics and Related Data, 1947."
${ }^{2}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. These data, compiled from reports received from stockyard companies, represent the total rail and truck receipts unloaded at practically all public stockyards (between 60 and 70 in number; 63 in 1956), including through shipments and direct shipments to packers when such shipments pass through the stockyards.

The data for June 1934-February 1935 and August and September 1936 for cattle and calves and for September-December 1934 for sheep and lambs include animals purchased for the Federal Surplus Relief Corporation. The August and September 1933 data for hogs include many pigs and sows received for sale on Government account in the Emergency Hog Production Control Program.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISCICS as indicated at top of p. 197 of this volume. Monthly data back to 1915 are shown in a bulletin issued by the U. S. Department of Agriculture entitled 'Livestock, Meats, and Wool Market Statistics and Related Data, 1943."
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are based on reports obtained from offices of State veterinarians in the various cornbelt States. The figures beginning 1951 cover 9 States as follows: Illinois, Indiana, Iowa, Michigan, Minnesota, Nebraska, Ohio, South Dakota, and Wisconsin. Those for 1940-50 cover 8 States (South Dakota is excluded) and for 1938-39, 7 States (Illinois and South Dakota are excluded).
Data apply to animals received in the corn-belt States mentioned above and cover stockers and feeders bought at public stockyard markets, as well as those coming from other States from points other than public stockyards, some of which are inspected at public stockyards while stopping enroute for feed, water, and rest.
Monthly data for 1938-52 (except for 1940, which are available upon request) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data were not collected prior to 1938.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Prices for beef steers are for native (from the corn-belt) sold out of first hands for slaughter at Chicago. Western steers are excluded. Monthly and yearly prices are weighted averages of all grades (prime, choice, good, standard, commercial, and utility). Prices are weighted by the number sold in each grade.

The price of stocker and feeder cattle shipped from Kansas City is the average price of all weights of such cattle, weighted by the number shipped for each weight group. The annual average for these series is the average of the monthly figures weighted by the quantity of all grades (or weights) shipped within each month.
Monthly data for 1938-52 for both series will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1936-37 for beef steers appear in the 1940 SUPPLEMENT; earlier monthly figures are on p. 18 of the August 1939 SURVEY. Monthly data prior to 1938 for the price of stocker and feeder cattle are available upon request.
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data beginning January 1946 (represent the price per

100 pounds of good and choice grades (all weights). These prices are essentially a continuation of the series designated as "good to choice" (see 1947 STATISTICAL SUPPLEMENT and earlier issues), but are taken from a different source and reflect a slight change in specifications.

Through 1951, the prices shown are quotation averages for 1 day each week (usually Monday); beginning with 1952, data are quotation averages for 1 day each month (in the week containing the 15th).

Monthly data for 1934-52 comparable with monthly averages for corresponding years shown herein will be found in e arlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1934 are shown on p. 18 of the September 1938 SURVEY.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. The wholesale price represents the average price of packer and shipper purchases at Chicago weighted by the number of hogs purchased. The prices do not include the processing tax effective from November 1933 through January 6, 1936.

The hog-corn price ratio represents the number of bushels ( 56 pounds) of shelled corn equal in value to 100 pounds of hog (live weight); it is based on average prices received by farmers on the 15th of each month for all grades of corn and all grades of hogs.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier issues of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1938-40 for the price of hogs are available in the 1942 SUPPLEMENT; earlier monthly data for this series and monthly data prior to 1941 for the hog-com ratio are available upon request (the latter series has been revised since publication in the 1942 SUPPLEMENT). Monthly data back to 1910 for the price of hogs are shown in a bulletin issued by the U. S. Department of Agriculture entitled "Livestock Market News, Statistics and Related Data, 1955."
${ }^{7}$ Data for 1940-50 cover 8 States. Monthly averages for 1940 for 7 States (comparable with earlier data) are as follows: Cattle and calves, 170,000 ; sheep and lambs, 278,000 .
${ }^{8}$ Data beginning 1951 cover 9 States. Monthly averages for 1951 for 8 States (comparable with data for 1940-50) are as follows: Cattle and calves, 280,000; sheep and lambs, 292,000.

## PAGE 142

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Monthly data are averages of weekly figures which are based on the mean of the daily range of quotations. Prices through July-Septernber are quotations for spring lambs; during May and June, marketings of lambs include both wooled and shorn lambs from the preceding year's crop and spring lambs from the current year's crop. From October through early spring, prices are for wooled lambs.
The average price of lambs at Chicago is based on the bulk of sales prices from data of the livestock and meat reporting service. The price of feeder lambs at Omaha is for range stock, good and choice, 50-75 pounds.
Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The average price at Chicago for May 1948 should read $\$ 26.25$.) Monthly data prior to 1938 are available upon request.
${ }^{2}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data for meat production (except for pork production excluding lard) represent the total dressed carcass weight of livestock slaughtered under Federal inspection, exclusive of meats from condemned animals. Edible offal is not included. Total production is obtained by multiplying the average dressed weight (obtained from concerns accounting for 75 to 85 percent of the total federally inspected slaughter)by the total federally inspected slaughter. For 1956, production of meats under Federal inspection accounted for 87 percent of all meats (that is, meats including wholesale, retail, and farm production); for the proportion of animals slaughtered under Federal in-
spection to the total slaughter see note 1 for p. 141. Data do not include meats from slaughter of animals purchased by the Federal Surplus Relief Corporation during June 1934-February 1935 and in August and September 1936.
"Pork production excluding lard" includes all of the dressed hog carcass, exclusive of head bones and feet and after an allowance for all c: rcass fat rendered into lard. Lard data beginning 1937 represent the actual production of rendered lard and rendered pork fat in federally inspected plants as reported by the Meat lnspection Branch (see p. 143 for figures). Prior to 1937, lard production was estimated by applying an average yield per hog to the number of hogs passed for food. Production from federally inspected slaughter accounted for 53-68 percent of the total production of lard, as estimated by the U. S. Department of Agriculture, for 1930-41, 1945, and 1946; about 72 percent for $1929,1942,1943,1947$, and 1948; 76-78 percent for 1944 and 1949-54; and 80 percent for 1955 and 1956. Rendered lard and rendered pork fat are estimated to be about 70 percent of raw fat obtained from hogs.

Monthly data for 1929-52 (except for 1937 for "pork production, excluding lard," and lard) comparable with monthly averages for corresponding years will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1938 for pork production (excluding lard) are available upon request. Revised 1937 monthly figures for lard are on p. 18 of the January 1941 SURVEY. Data for 1921-43 for all series are available in the publication of the U. S. Department of Agriculture, 'Livestock, Meats, and Wool Market Statistics and Related Data, 1943."
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. They include stocks owned by the armed services and stored in warehouses not owned or leased by them; stocks held in space owned or leased and operated by the armed services are not included: Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.

The total for all meats is the sum of the individual meat items as shown on this page and on p. 143; the total also includes edible offal and, beginning June 1944, canned meats and meat products and sausage and sausage-room products (these items were shown separately under "miscellaneous meats" in the 1949 and earlier issues of the SUPPLEMENT). The content of the various items is as follows: "Beef and veal"--beef frozen, in cure, cured and smoked, and (beginning June 1944) frozen veal which amounted to $8,517,000$ pounds for that month (veal was not reported until June 1944, although prior to that month some may have been held as beef or included in data formerly reported as "trimmings and edible offal"); "lamb and mutton"--frozen; "pork"-frozen, dry salt, in cure and cured, and other in cure,cured, and smoked. All stocks of beef, pork, and mutton trimmings, formerly included under "miscellaneous meats," have been distributed to the individual meat items beginning June 1944; see note in the 1949 STATISTICAL SUPPLEMENT. Stocks of meat purchased under the Emergency Hog Control Program and meats from "droughtstricken livestock" purchased by the Federal Surplus Relief Corporation in 1934 and 1935 are not included in the figures.

Monthly data prior to 1951 for total meat stocks, excluding lard, are available upon request (the data shown in the 1953 and earlier issues of the STATISTICAL SUPPLEMENT include stocks of lard). Monthly data for 1929-52 for the other series on stocks of meats, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The comparable item for pork is designated in the 1940 and earlier SUPPLEMENTS as "fresh and cured" pork; the series for total stocks of pork (including lard) shown in those SUPPLEMENTS has been discontinued.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted in July 1953, see note 1 for p. 104.

The trade figures comprise fresh meats and chilled or frozen, canned, pickled, cured, and other prepared and processed meats.

Data for total meats (both exports and imports) include beef and veal, pork, mutton and lamb, canned meats, fresh poultry and game, edible offal, sausage, sausage ingredients, and casings; for exports, the data also include lard, horse meat, and tushonka (contains about 90 percent canned pork). Imports of lard are not included; they were small in the earlier years covered and, recently, have been practically nil.

Exports of lard (p. 143) include neutral lard. Shipments under the Army Civilian Supply Program are included in the export figures beginning 1947; data were not reported prior thereto. In 1947, such shipments were as follows (thousands of pounds): Total meats (including lard), 141,846; beef and veal, 941 ; pork (excluding lard), 759; lard, 28,079.

Monthly data for 1938-52 for exports (with exceptions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions are as follows (thousands of pounds): Total meats (December 1946), 51,000; beef and veal (February 1948), 1,403.

Monthly data for 1951-52 for imports (except for pork) are available in the 1955 edition of BUSINESS STATISTICS (shown for the first time in that volurne). Monthly figures prior to 1953 for pork imports and prior to 1951 for the other import series are available upon request.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the wholesale price for beef, fresh, steer carcasses, choice (600-700 pounds). Monthly data are averages of weekly prices which are based on the mean of the daily range of quotations of the market news service; annual figures are simple averages of monthly data.

Monthly data for 1945-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume; monthly data prior to 1945 are available upon request.
${ }^{6}$ Average based on months for which quotations were available.

PAGE 143
${ }^{1}$ See note 2 for p. 142.
2 See note 3 for p. 142.
${ }^{3}$ See note 4 for p. 142.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The price of hams is a composite for Chicago, New York, and San Francisco beginning 1947; prior thereto, data are for Chicago only. Quotations are for smoked, loose hams at Chicago through November 1946. This series was discontinued by the compiling agency after that month. Prices beginning 1947 are for smoked, No. 1, skinned (12-15 pounds), wrapped. The lard prices are for refined lard in tierces, bulk, at Chicago.

Through 1951 the data are quotation averages for 1 day each week (Tuesday prices for hams; Thursday for lard). Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually in the week containing the 15th).

Monthly data for 1932-52 (except 1947 and 1948 data for hams which are available upon request), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1932 for hams may be found in the 1932 SUPPLEMENT; for lard, on p. 18 of the January 1934 SURVEY.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Monthly data are based on the mean of the daily range of quotations. Prices are for 8 - to $10-$ pound average loins through 1946 and for 8 to 12 pounds thereafter; this minor change does not affect the comparability of the series.

Monthly data for 1940-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1940 are available upon request.
${ }^{6}$ Source: U. S. Department of Commerce, Bureau of the Census. Data represent stocks in refrigerated and dry storages of factories and warehouses (except amounts in hands of re-
tailers) of rendered lard, neutral lard, rendered pork fat, and, beginning January 1949, refined lard. (Figures prior to 1949 may include a certain quantity of the refined product, as no distinction was made between rendered and refined in the collection of data.)

Monthly data for 1951 and 1952 are shown in the 1955 edition of BUSINESS STATISTICS. Monthly or quarterly data prior to 1951 are available upon request.
${ }^{7}$ Average is based on end-of-quarter stocks.
${ }^{8}$ Average based on months for which data are available.
${ }^{9}$ Data beginning 1947 represent a composite of quotations at Chicago, New York, and San Francisco; they are not comparable with earlier quotations which are for Chicago only. The 1947 average price for Chicago is $\$ 0.580$ per pound.
${ }^{10}$ Based on annual total which includes revisions not allocated to the monthly figures.

## PAGE 144

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent the receipts of processed poultry at Boston, New York, Philadelphia, Chicago, and San Francisco as compiled from current information supplied voluntarily by railroads (rail receipts) and by principal wholesalers, jobbers, chain-store companies, and other first-hand receivers (truck receipts). These receipts include intermarket shipments.
Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data cover stocks held in public and private cold-storage warehouses where food products are generally stored for 30 days or more. Stocks held in space owned or leased and operated by the armed services are not included. Through 1949, stocks were reported as of the first of each month; they are included here as data for the end of the preceding month.
Stocks of poultry are for frozen poultry only. Shell eggs are for cases of 30 dozen each, weighing about 45 pounds. The amount of frozen eggs (whites, yolks, whole, and/or mixed) obtained from a case of shell eggs has been about 38.5 pounds per case since the beginning of 1951; in earlier years, the yield was somewhat lower ( 36.0 pounds in 1929).

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source:U. S. Department of Labor, Bureau of Labor Statistics (except data for cocoa prior to 1943). The poultry price through 1946 is the Chicago price for live fowls, small to heavy hens, general run; thereafter, data are for heavy type, No. 1. The cocoa price beginning 1943 is for beans, Accra, bulk, f.o.b. New York, from importer; prior to 1943 the prices are averages of daily quotations compiled by Scarburgh Company, 90-96 Wall Street, New York, N. Y.

For 1943-51 the monthly data are averages of Tuesday prices for the 4 or 5 weeks of each month; the annual averages, except for the price of cocoa prior to 1943 and in 1948, are averages of the weekly quotations. Beginning 1952 the prices are quotation averages for 1 day each month (usually in the week containing the 15th).

Monthly data for 1949-52 are published in the 1955 and 1953 issues of BUSINESS STATISTICS. Monthly data for poultry for 1938-46 and for cocoa for 1929-48, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for poultry for 1947-48 and 1929-37 are available upon request.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service (U. S. Department of Labor prior to 1944). Data through 1943 are averages of Monday prices at Chicago; quotations included for July-December 1943 are for fresh firsts instead of extras, large, but the prices for the two grades are close. Beginning 1944, data represent averages of daily low and high quotations for extras (minimum 60 percent A quality).

Monthly data for 1947-52 are published in the 1955, 1953, and

1951 editions of BUSINESS STATISTICS. Monthly data for 1945-46 (Department of Agriculture series) appear on p. 24 of the June 1950 SURVEY. Comparable figures for 1944 (JanuaryDecember, respectively, in dollars per dozen) are as follows: 0.368; .351; .342; .344; .329; .355; .388; .387; .440; .470; .492; .480; monthly average, .395. Monthly data for 1941-43 (Department of Labor series) are available in the 1947 STATISTICAL SUPPLEMENT. Prices for $1914-40$, shown in the 1942 SUPPLEMENT, are approximately comparable with the 1941-43 figures.
${ }^{5}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent eggs produced by farm flocks and by commercial flocks. Monthly estimates of total eggs produced are based on returns from crop correspondents (about 30,000 in recent years) who report for the first day of each month the number of layers on hand and the number of eggs produced. The total monthly egg production is obtained by multiplying the estimated total number of layers by the number of eggs produced per layer.

Annual estimates of layers on January 1 of each year are based on a survey covering about 150,000 flocks, in addition to the returns from the regular monthly crop correspondents. At the end of the year adjustments are made in the number of layers on the first of each month so that they will be in agreement with the annual estimates. The monthly rates of lay are than applied to the adjusted number of layers to secure the adjusted total egg production for each month. Data for all years have been so adjusted. The estimates are also adjusted every 5 years to data reported in the Census of Agriculture; they have now been adjusted to data from the Census of 1954.

Monthly data for 1949 are published in the 1953 edition of BUSINESS STATISTICS; those for 1941-44, in the 1947 volume; for 1938-39 in the 1942 issue; and for 1940, on p. 24 of the June 1947 SURVEY. Monthly data for 1950-52, 1945-48, and 1929-37 are available upon request.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent dried egg production from fresh and storage shell eggs and from frozen eggs. The yield of dried eggs from a case of eggs ( 30 dozen, weighing about 45 pounds) has been approximately 10.4 pounds since January 1951; it was 10.1 pounds in 1942-50 and 9.8 pounds in earlier years. Data are available separately for whole, albumen, and yolk production from the Department of Agriculture reports.

Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1941 are available on p. 20 of the March 1945 SURVEY.
${ }^{7}$ Source: U. S. Department of Commerce, Bureau of the Census (from Office of Domestic Commerce prior to 1947). Data represent estimates of sales of confectionery and competitive chocolate products by manufacturer-wholesalers, manufacturerretailers, and chocolate manufacturers making consumer-type confectionery items such as chocolate bars, etc. The figures do not include sales of chocolate coatings or cocoa by the latter group of manufacturers and also do not include sales of retail confectioners with a single business location. The reported data are raised to represent complete industry totals.

For 1947, the annual total used is that from the 1947 Census of Manufactures. Monthly estimates for 1947 were first calculated from the January 1947 dollar sales of a group of companies by applying month-to-month percentage changes indicated by reporting companies. These estimates were then raised to the level indicated by the 1947 Census total. Beginning January 1948, estimated industry totals are derived from the sales reported by approximately 400 manufacturing companies, which in 1953 accounted for about 85 percent of the total dollar value of confectionery sales.
The annual estimates of manufacturers' sales of confectionery through 1946, compiled by the Office of Domestic Commerce, were developed by a method differing from that used by the Census Bureau and are not strictly comparable with the data for the succeeding years.
Monthly data for 1949-52 are published in the 1955 and 1953 edition of BUSINESS STATISTICS; those for 1947-48 are available upon request. Data are not available by months prior to 1947.
${ }^{8}$ Source: U. S. Department of Commerce, Bureau of the Cen(from Bureau of Foreign and Domestic Commerce through April 1941). Data beginning 1934 represent imports for consumption; prior thereto, general imports. For general explanation of foreign-trade data, as well as explanation of of sampling procedures instituted July 1, 1953, see note 1 for p . 104.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (in long tons): 1931-May, 22,513; July, 17,542; December, 15,369.
${ }^{9}$ Source: New York Coffee and Sugar Exchange, Inc. Data on clearances from Brazil cover total exports from the ports of Rio de Janeiro, Santos, Bahia, Victoria, Pernambuco, Paranagua, and, beginning 1933, Angra dos Reis.
The visible supply represents stocks of green coffee in "first hands" stored in Exchange licensed warehouses and on the docks of such warehouses. It includes stocks at the ports of New York, New Orleans, and San Francisco, the arrivals at other ports being considered by the Exchange as stocks that pass more or less immediately into consumption channels. Data do not include any stocks afloat in transit to the United States. Stocks, reported as of the first of the month, are shown here for the preceding month.

Data prior to July 1949 are in bags of original weights as reported. Beginning July 1949, the data represent bags of approximately 132 pounds. The original weight of the Brazilian bag of coffee is about 132 pounds; bags of "other kinds" of coffee are of various original weights, usually averaging about 154 pounds. Beginning with July 1949, however, original weights of "other kinds" of coffee have been converted by the compiling agency to 60 kilo bags (i.e., bags of about 132 pounds).
Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Figures for visible supply in November 1933 and January 1935 should read 936,000 bags and 705,000 bags.
${ }^{10}$ Data beginning 1944 represent averages of daily quotations and are not strictly comparable with prices for earlier periods which are Monday quotations; see also note 4 for this page.
${ }^{11}$ The 1947 average price comparable with data for earlier years is $\$ 0.252$. See note 3 for this page regarding change in specifications.
${ }^{12}$ Data beginning 1947 are not comparable with earlier figures. (See note 7 for this page.)
${ }^{13}$ Average for 10 months; no quotation for July and August.

## PAGE 145

${ }^{1}$ See note 8 for p. 144.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953 see note 1 for p. 104. Data for imports cover general imports through 1933 and imports for consumption thereafter. Exports of sugar beginning 1947 include shipments under the Army Civilian Supply Program ( 43,876 short tons in 1947); data for such shipments are not available for earlier years.

The figures are shown in the original reports in pounds; sugar is converted to short tons, and coffee to bags on the basis of 132 pounds to the bag (except as stated in note 8 for this page).

Coffee imports comprise raw or green and roasted or processed types. Exports of sugar beginning 1943 cover both raw and refined (including cane, beet, maple, brown, granulated, powdered, cubes, etc., but not including corn, grape, or flavoring sugar); prior thereto, the amounts represent refined sugar only.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data for sugar in the 1942 and earlier issues of the SUPPLEMENT are in long tons and should be converted to
short tons for comparison with figures shown beginning with the 1947 volume.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data are spot-market prices for green coffee, bulk, exdock, f.o.b. New York. Through 1951 the annual averages are averages of the weekly quotations for Tuesday and the monthly data are averages of quotations for the 4 or 5 Tuesdays in each month. Beginning with 1952 the prices are quotation averages for 1 day each month (in the week containing the 15 th ).

Monthly data for 1938-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1938 are shown on p. 22 of the April 1942 SURVEY.
${ }^{4}$ Source: U. S. Department of the lnterior, Fish and Wildlife Service; prior to 1945, from U. S. Department of Agriculture. These data represent the total holdings of fish (including shellfish), both fresh-water and salt-water species, in cold-storage warehouses in the United States and Alaska; stocks of salted and smoked fish are not included. The figures through 1942 cover stocks as of the 15 th of the month; for 1943-53, as of the 1st of the month following that for which data are shown; thereafter, as of the end of the month. The monthly reports give details as to holdings and the amount of fish frozen each month.

Monthly data for 1929-52 (except as noted below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (thousands of pounds): 1930-September, 85,358 ; October, 88,603 ; November, 91,872; December, 85,323 ; 1931-June, 39,384; July, 48,445; October, 73,144.
${ }^{5}$ Source: Weekly Statistical Sugar Trade Journal (published by Willet and Gray, Inc.). Data represent all stocks on the island as of Saturday nearest the end of the month. A Spanish ton (the unit of measurement) is equivalent to $2,271.64$ English pounds.

Monthly data for 1934-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data shown in the STATISTICAL SUPPLEMENT prior to the 1938 issue have been revised and are available upon request.
${ }^{6}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data are compiled from reports by cane-sugar refiners, beet-sugar processors, importers of direct consumption sugar, and mainland sugarcane processors. The figures cover both raw and refined sugar in terms of raw sugar ( $96^{0}$ equivalent). One ton of raw sugar $96^{\circ}$ test is assumed to be equivalent to 0.9346 ton of refined.
Production represents production of domestic cane and domestic beet sugar. Deliveries represent the distribution of sugar by primary distributors. Deliveries for domestic consumption include deliveries for U. S. military forces at home and abroad; those for export include livestock feed, etc. (beginning June 1954) and deliveries for lend-lease and for liberated areas and military relief during periods when such shipments were made.

Data on entries from offshore areas are secured from reports from the importers and represent the amounts charged against quotas, except for the periods September 11 to December 31, 1939, and April 13, 1942, to December 31, 1947, when the quotas were suspended. The data include shipments from Puerto Rico, Hawaii, Virgin lslands, Cuba and other foreign countries, and, through March 1942 and beginning 1948, from the Philippine IsIands. Invert molasses, produced and shipped in lieu of raw sugar at the request of the U.S. Government, is excluded as follows (annual totals, in terms of sugar equivalent, short tons): 1942, 316,466; 1943, 260,977; 1944, 700,914.

The data on entries from offshore areas differ from the imports of raw and refined sugar for consumption (on p. 146) compiled by the Bureau of the Census, largely in that the latter are as reported (without conversion to equivalent raw sugar of uniform polarization) and since 1935 do not include receipts from Virgin Islands.

Stocks include refiners' raw and refined stocks, stocks of beet processors and of importers of direct-consumption sugar, stocks of mainland sugarcane processors beginning January 1939, and
importers' raw stocks for January 1940 to December 1952, inclusive.

Monthly data for 1941-52 (except production for 1941-50 and entries from Hawaii and Puerto Rico for 1941-44; available upon request) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions in the December figures for specified years for entries from offshore areas are as follows (tons): Total (1943-52) - 366,925; 463,$360 ; 197,480 ; 258,452 ; 384,995 ; 209,814 ; 316,226 ; 202,277 ; 172$,904; 197,004; Hawaii and Puerto Rico (1945-52)-97,101; 49,880; 44,$663 ; 79,244 ; 309,517 ; 84,629 ; 164,620 ; 124,414$. The figure for stocks for January 1949 should read $1,347,617$ tons.
${ }^{7}$ Data through 1941 are actual exports (as reported by U. S. Department of Commerce) converted to raw value.
${ }^{8}$ Prior to July 1949 the data for visible supply include, for "coffee other than Brazilian," the amounts as reported in bags of original weights (see 3d paragraph of note 9 for p. 144).
${ }^{9}$ Monthly average computed from annual total; monthly figures not available.
${ }^{10}$ Figures for 1935-39 and beginning 1953 exclude importers' raw stocks; those prior to 1939 also exclude stocks of mainland sugarcane processors. Monthly averages for 1939 and 1940 excluding stocks of mainland sugarcane processors and importers' raw stocks, comparable with averages for 1935-38, are as follows (short tons): $1939,1,874,532 ; 1940,1,974,696$. The 1940 av , erage comparable with the average for 1939 (excluding importers' raw stocks but including stocks of mainland sugarcane processors) is $2,033,633$ short tons. The 1952 average comparable with data from 1953 forward is $1,209,719$ short tons.

## PAGE 146

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Data for sugar are for cane sugar only and represent imports for consumption for all years. Raw sugar represents all sugar testing not above $98^{\circ}$ by the polariscope, while refined sugar is sugar testing above $98^{\circ}$. The data for sugar, originally reported in pounds, have been converted to short tons.

Monthly data for sugar for 1936-52 (except for 1947 and for other revisions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, short tons: Raw sugar, March and June 1946, respectively - total, 320,906 and 194,523; Cuba, 320,906 and 184,771 ; refined sugar, October 1945, total, 35,029 .) Monthly data for 1929-35 and revised monthly figures for 1947 are available upon request. Data in the 1942 and 1940 SUPPLEMENTS are in long tons and should be converted to short tons for comparison with figures shown in later volumes.

Data for tea are imports for consumption beginning 1933; prior thereto, general imports. Monthly imports of tea for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The figure for December 1946 should read $11,641,000$ pounds.)
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The wholesale price for raw sugar is for cane, $96^{\circ}$ polarization, Cuban, duty paid, bulk, no quantity specified, market price, importer to refiner, c.i.f. New York (the note in the 1940 SUPPLEMENT erroneously states that duty was excluded). The wholesale price for refined sugar is the quotation for cane, gramulated, domestic, in 100 -pound paper bags, including excise tax, f.o.b. New York.

Through 1951 the monthly prices are averages of Tuesday prices for the 4 or 5 weeks of each month and the annual averages are averages of the weekly quotations. Beginning 1952, the prices are quotation averages for 1 day each month (usually in the week containing the 15th).

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The retail prices are for granulated cane sugar and are obtained around the 15 th of each month from a sample of chain and independent retail food dealers in New York City and vicinity.

Prices shown in the present volume and in the 1955 and 1953 editions of BUSINESS STATISTICS are per 5 pounds; in earlier volumes they are for 1 pound. Original quotations were on 1 pound bags prior to November 1937 and on 10 -pound bags from November 1937 through 1949; since 1950, the original quotations have been for 5 pounds. The change in poundage on which original quotations are based affects the comparability of the series to some extent (e.g., the October 1937 price for 5 pounds based on 10 -pound bags was $\$ 0.275$ and based on 1 -pound bags, $\$ 0.285$ ). Comparability is also affected somewhat by change in January 1946 in the sample and procedures (see note 8 for this page).

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note qualifications mentioned above and that the earlier published figures should be converted to price, per 5 pounds for comparability with present series; also note revisions of 1 -pound prices as follows: June 1933, $\$ 0.054$; July 1933, $\$ 0.052$ ).
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. The totals shown represent the latest revised estimate (not monthly averages) of the year's total crop. The Department of Agriculture issues preliminary estimates as of the first of the month for July-December, and revised estimates in the following spring.

5 Source: U. S. Department of Agriculture, Agricultural Marketing Service. Data represent stocks of tobacco in the United States and Puerto Rico (on a farm-sales-weight basis) owned by all leaf tobacco dealers, manufacturers, quasi-manufacturers, growers' cooperative associations, warehousemen, brokers, holders, and owners (except the original growers of tobacco, and manufacturers who according to the returns of the Director of Internal Revenue Service manufactured less than 35,000 pounds of tobacco, less than 185,000 cigars, or less than 750,000 cigarettes during the first three quarters of the preceding calendar year). Growers are not required to report their stocks under the law. Data are on an ownership basis, i.e., they include stocks actually owned by those enumerated above.

All data on domestic stemmed tobacco have been converted to an unstemmed basis and the unstemmed is further converted to a farm-sales weight by allowing for normal shrinkage and losses of dirt, sand, and moisture in handling. Each type of tobacco has a different yield; the conversion factors used in these computations are shown in circular No. 435, "Tobacco Shrinkages and Losses in Weight in Handling and Storage," issued in July 1937 by the Department of Agriculture. Foreign data are converted to an unstemmed basis, and, since the weight at time of entry is analogous to the farm-sales weight of domestic types, they can be combined directly with the data for domestic types on a farm-sales-weight basis. Data for the total and cigar leaf have been revised for January 1936 -April 1940 by deducting $5,550,000$ pounds on the basis of discovery of errors in returns for one large dealer. It is known that a similar error occurred over a longer period of years but no definite records are available on which to base revisions earlier than 1936. Data are reported as of the first of April, July, October, and January, and have been moved back to the last day of the preceding month for presentation in the SURVEY.

Quarterly data for 1938-52 (except for minor revisions beginning December 1948 for the total and for "air-cured, fire-cured, etc.," which are available upon request) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Quarterly data prior to 1938 are correct as shown in the 1940 SUPPLEMENT and on p. 15 of the March 1940 SURVEY, except for the total and cigar leaf for 1936 and 1937 which have been revised to exclude $5,550,000$ pounds for each quarter (see preceding paragraph). Data for fire-cured and dark aircured, flue-cured and light air-cured, and miscellaneous domestic (given separately in the 1947 and earlier issues of the SUPPLEMENT) should be combined for comparison with the data shown in subsequent volumes.
${ }^{6}$ See note 3 for this page, regarding change in quantity on which original quotations are based.
${ }^{7}$ Averages based on months for which prices are available.
${ }^{8}$ Data beginning January 1946 reflect a change in the sample and in the method of summarizing reports; January 1946 price per 5 pounds on old basis is $\$ 0.320$ compared with $\$ 0.335$ on new basis. The 1946 average is for 11 months.
${ }^{9}$ Data for January-June 1953 represent prices for New York, N. Y., and Newark, N. J.; beginning July 1953, for New York, N. Y., and northeastern N. J. (the price for June 1953 on this basis is \$0.497).

## PAGE 147

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data for leaf tobacco represent total exports or imports of unmanufactured tobacco, including stems, trimmings, and scrap. Exports include shipments under the Army Civilian Supply Program beginning 1947; data were not reported prior thereto. In 1947, leaf tobacco included 110,000 pounds of such shipments and cigarettes, 405 million. Imports represent imports for consumption beginning 1934 and general imports prior thereto. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.

Monthly data for 1929-52 (except for revisions given below), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions (leaf tobacco, in thousands of pounds; cigarettes, in thousands): Leaf tobacco exports-1931-April, 46,829; August, 23,107; September, 44,958; October, 49,155; 1939-January, 28,013; 1946-March, 52,219; December, 60,164; leaf tobacco imports-1931, March, 10,417; cigarette exports-1930-November, 251,514; December, 338,916; 1931-March, 338,308; November, 219,328; 1932-January, 190,833.
${ }^{2}$ Source: U. S. Treasury Department, Internal Revenue Service. Data represent the production of all manufactured tobacco. Scrap chewing, fine-cut chewing, plug, and twist are combined for the column designated "chewing, plug, and twist." The monthly averages are based on revised annual totals and differ from averages of the monthly figures which are from current reports and are not revised. The differences, however, are small.

Monthly data for 1934-52 (unrevised basis and with exceptions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data for snuff were not reported monthly prior to 1941 and monthly figures through 1940 for the total therefore exclude this item; also, snuff is not included in the monthly averages for the total as shown in the 1940 and 1938 SUPPLEMENTS. (Data for scrap chewing, fine cut, plug, and twist, shown in the 1947 and earlier SUPPLEMENTS, may be added for comparison with the data shown here.)
${ }^{3}$ Source: U. S. Treasury Department, Internal Revenue Service. Tax-free withdrawals include withdrawals of small cigarettes (those weighing not more than 3 pounds per thousand) for the following purposes: For shipments outside continental United States, including exports and shipments for the use of the United States military forces (except shipments to Alaska and Hawaii for the use of military forces beginning January 1, 1946, which are tax-paid); for use on aircraft and as sea stores on vessels on the high seas beyond the jurisdiction of the internal revenue laws (tax-free provision does not apply to coastwise shipping); for purchases by agencies such as the Veterans Administration, the Public Health Service, and the Red Cross for distribution in hospitals, etc.; for personal consumption by employees in tobacco factories.

Monthly data for July 1943 through December 1952 (unrevised basis) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data by months are not available prior to July 1943; monthly averages are based on annual totals and differ slightly from averages of the monthly figures, which are from current reports and are not revised.
${ }^{4}$ Source: U. S. Treasury Department, Internal Revenue Service. Data represent tax-paid withdrawals from domestic factories and are based on the number of stamps used by manufactur-
ers. Small cigarettes, weighing not more than 3 pounds per thousand, represent over 99 percent of the total production of cigarettes; large cigars, weighing more than 3 pounds per thousand, have accounted for 94 to 99 percent of the total production of cigars during the period covered here. The figures for manufactured tobacco and snuff comprise plug, twist, fine-cut, and smoking tobacco, and snuff.

The monthly averages are based on revised annual totals and differ from averages of the monthly figures which are from current reports and are not revised.

Monthly data (unrevised basis) for 1944-52 for cigarettes and 1951-52 for cigars and manufactured tobacco and snuff will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data prior to 1951 for cigars and manufactured tobacco and snuff are available upon request (data shown in the 1953 and earlier issues of the SUPPLEMENT are estimates compiled on the basis of stamps sold by collectors' offices).
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The price is a composite price, f.o.b. destination, from manufacturer to wholesaler and jobber. Data beginning 1947 exclude excise taxes; prior thereto, excise taxes are included.

Through 1951 the monthly prices are averages of Tuesday prices for the 4 or 5 weeks of each month and the annual averages are averages of the weekly quotations. Beginning 1952 the prices are quotation averages for 1 day each month (usually in the week containing the 15 th).

Monthly data for 1929-46 and 1951-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1947-50 are available upon request.

6"Scrap chewing" is included with "chewing, plug, and twist" beginning 1931; prior thereto, with "smoking." See note 2 for this page.
${ }^{7}$ Data beginning 1947 are not comparable with earlier figures, because of the exclusion of excise taxes. The monthly average for 1947 comparable with earlier data is $\$ 6.51$.

## PAGE 148

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. Data represent general imports through 1933 and imports for consumption thereafter. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

In addition to the four items shown separately in the table, total imports of hides and skins include buffalo hides, India water-buffalo, horse, colt, ass, and mule hides, cabretta, kangaroo, and wallaby skins, deer skins, fish and shark skins, reptile skins (excluded from January 1936-December 1940 when they were reported in pieces only), and seal (nonfur) skins. Prior to January 1936, other hides and skins not specified above were also included; since that date these have been excluded, as amounts are small and data in pounds are not available. Data for the four types shown separately are given here in pieces so that they will be of more value for use with the other leather series. They were shown in the 1940 and earlier SUPPLEMENTS in pounds.

Monthly data for 1938-52 (except minor revisions for 1946 and 1950; available upon request) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Includes data for types not shown separately.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The series on calfskin prices is for northern, heavy, $91 / 2-15$ pounds, f.o.b. Chicago. Steer-hide prices are for heavy native, over 53 pounds, f.o.b. Chicago. Through 1951, the prices shown are quotation averages for 1 day each week; thereafter, they are quotation averages for 1 day each month (usually in the week containing the 15 th$)$.
Monthly data for 1949-52 appear in the 1955 and 1953 issues of BUSINESS STATISTICS; monthly data for 1947-48 are available upon request.
${ }^{4}$ Source: Tanners' Council of America, Inc. Data are based on reports received from practically the entire industry and are adjusted to an industry basis. Data for production of sheep and lamb leather include, for all years, the flesh side leather of split sheepskins (fleshers) and exclude the grain leather (skivers).
Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Dome stic Commerce prior to that time. The series on sole-leather offal, including welting and belting offal, covers data reported as "other sole leather, including offal" prior to 1936, as "other sole leather' and "sole and belting leather offal" for 1936-40, and as "sole and belting leather offal" for 1941-44. These data appear to be approximately comparable. Exports of cut soles are not included in any of the data.
Upper-leather exports comprise cattle and kip side upper (grain and splits); calf and whole kip (grain and other); sheep and lamb; cabretta; goat and kid; other upper leather not elsewhere specified; and patent upper leather (cattle side and other).
Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revision for upper leather, April 1947: 4,049,000 square feet.
${ }^{6}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices for sole leather cover cattlehide bends, light, under 8 iron, vegetable tan, tannery run; those for upper cover calf, chrome tan, full grain, black, men's weight, B and C grades.

Through 1951, the prices shown are quotation averages for 1 day each week; beginning with 1952, they are quotation averages for 1 day each month (usually in the week containing the 15th).

Changes in the number of reporters in the following specified years may affect comparability of the price series: For sole leather, in 1951, 1952, and 1954; for upper leather, in 1952.

Monthly data for 1949-52 are available in the 1955 and 1953 issues of BUSINESS STATISTICS; monthly data for 1947-48 are available upon request.
${ }^{7}$ Based on the official annual total including revisions not distributed by months.
${ }^{8}$ Average computed by Office of Business Economics. The 1951 average for sole leather is based on data for 7 months (June-December); the 1952 average for upper leather, on 11 months (Feb-ruary-December). See also 3d paragraph of note 6 for this page.
${ }^{9}$ The 1953 monthly average is based on data for 11 months (January and March-December); no quotation for February.
${ }^{10}$ The 1956 monthly average is based on the reported annual total which includes adjustments not available by months. For sole leather, separate monthly figures for January-June are not available. For upper leather, the figures shown for January-June exclude small quantities combined in the original reports with other types of leather.

## PAGE 149

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. Data are compiled from reports of manufacturers representing approximately 95 percent of the total production for 1929 , 98 percent for 1930-33, 99 percent for 1934-36, 98 percent for 1937-42, practically the entire production for 1943-46, and the complete industry thereafter. Reports cover all known factories which use conventional shoe machinery. There were 1,369 establishments using conventional shoe machinery at the time of the 1954 Census of Manufactures.
Data for leather shoes made under Government contract were reported separately for 1941 to 1946; these shoes are included in total shoe production for this period but are not included in the breakdown by kinds (for monthly data, 1941-46, and further detail on military production, see the 1947 STATISTICAL SUPPLEMENT).

The data through 1943 by kinds for shoes, sandals, and play shoes (except data for infants' and babies') include only those with leather uppers. Data for all categories beginning 1944, and
earlier figures for infants' and babies' shoes, include also those with part leather and nonleather uppers. Beach sandals were reported in the classification for shoes, sandals, and play shoes beginning 1945 and are distributed by kinds for 1945-56. For 1936-44, production of beach sandals was reported separately and is included here in the totals only; prior thereto, beach sandals were reported with "other footwear." The number of beach sandals included in the grand total and total shoes, sandals, and play shoes, but not distributed by kinds, is as follows (annual totals, thousands of pairs): 1936, 3,745; 1937, 3,929; 1938, 4,496; 1939, 4,571; 1940, 4,324; 1941, 6,874; 1942, 7,294; 1943, 2,578; 1944, 2,747.

Beginning with 1945, data for athletic shoes include shoes with all types of uppers; prior thereto only those with all-leather uppers are included. Figures for "total production" cover all types of athletic shoes.

Monthly data for 1941-46 are shown in the 1949 and 1947 issues of the STATISTICAL SUPPLEMENT; monthly figures for 1947-52 (revised since publication) are available upon request.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior to that time. The data cover exports of new boots, shoes, and other footwear, with leather uppers (including men's, youths' and boys', women's and misses', infants' and children's, and slippers and moccasins for housewear; but excluding, beginning July 1950, exports of military-type shoes, etc.). The figures do not include exports of footwear with nonleather uppers, nor discontinued models, old styles, and second-hand shoes.

Beginning 1947, data include shipments under the Army Civilian Supply Program; such shipments amounted to 73,400 pairs of boots and shoes in that year. For general explanation of foreigntrade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.
Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for the 1913-37 period appear in the 1940 and 1938 volumes and in the January 1938 issue of the SUR VEY OF CURRENT BUSINESS.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data are based on prices covering specifications as follows: Men's and boys' class-dress shoes, oxfords, cattle hide (side) upper, corrected grain, Goodyear welt, rubber or synthetic outsole, medium quality; women's and misses' class -(1) oxfords (nurses'), side upper, Goodyear welt, composition outsole, lowmedium quality; (2) pumps, suede split, side or patent upper, cemented, leather outsole, low-medium quality.

The prices used in the index through 1951 are the simple arithmetic averages of the 4 or 5 weekly prices for each month; each weekly price is that which prevailed on a specific day of the week. Beginning 1952, the prices used are those prevailing on a particular day of the month, usually within the week containing the 15th.

Monthly data for 1949-52 are shown in the 1955 and 1953 issues of BUSINESS STATISTICS; monthly data for 1947-48 are available upon request.

4 Includes moccasins for housewear.
${ }^{5}$ Includes barefoot sandals and play shoes not shown separately.
${ }^{6}$ Includes barefoot sandals not shown separately.
${ }^{7}$ Beach sandals, included with "other footwear" in 1935, are included under "shoes, sandals, and play shoes" beginning 1936.
${ }^{8}$ Includes some men's, youths' and boys', women's, and misses' and children's shoes not reported by kinds.
${ }^{9}$ Includes shoes produced under Government contract; these data, reported separately in 1941-46, are not included in the breakdown by kinds (see 2d paragraph of note 1 for this page).
${ }^{10}$ The monthly average and the corresponding monthly figures for 1944 include 2,747 (monthly average 229) thousand pairs of beach sandals not distributed by kinds.
${ }^{11}$ Data for 1944 comparable with those for earlier years, which represent only shoes with leather uppers, are as follows (monthly averages, in thousands of pairs): Men's, 5,510 ; youths' and boys', 1,355; women's, 9,752; misses' and children's, 2,970.
${ }^{12}$ Monthly average production of athletic shoes with leather uppers only, comparable with earlier data, is 234 thousand pairs (see 4th paragraph of note 1 for this page).
${ }^{13}$ Camp moccasins, loafer-type shoes, strollers, and sportswear, formerly included with athletic, are included with shoes, sandals, and play shoes beginning September 1946.

14 Beginning 1950, data exclude military-type shoes, etc.
${ }^{15}$ In the 1954 figures, a negligible number of youths' and boys' play shoes are included with men's shoes, etc., and a negligible number of misses' play shoes are included with women's shoes, etc.

16 The January-June monthly figures for 1956 exclude exports of infants' and children's shoes; the 1956 monthly average, however, is based on the annual total which includes such exports.

## PAGE 150

${ }^{1}$ Source: National Lumber Manufacturers Association. Data for all years are estimated industry totals based on monthly reports from regional associations. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for 1932-33 (when total lumber and hardwoods were not adjusted) and for 1948-51 inclusive. The Census Bureau made no annual survey in 1948; for the years 1932-33 and 1949-51, although data for the eastern regions are adjusted to Census figures, data for some of the western regions and for total softwood and total lumber production are not so adjusted. Figures for 1954-56 are subject to revision when data from Census become available.

Coverage of reports by mills varies widely from region to region and, for the country as a whole, has declined from around 75 percent of estimated total lumber production in 1935 to an average of 37 percent in 1954, and remaining at approximately that level through 1956; coverage of reports on stocks is less inclusive than for production and shipments.
Production figures for 1929-40 exclude mills cutting 50 M feet or less. (In the year 1941, the estimated production of such mills totaled $136,878 \mathrm{M}$ board feet.) Shipments include both domestic and foreign shipments. Gross stocks (i.e., sold and unsold) represent those at mills and, for the Southern pine region, also those at concentration yards. Prior to 1936, stocks data for the Southern hardwood region are net (unsold stocks); prior to January 1938, those for the Appalachian region cover "dry" only (green stocks excluded).
There is considerable undercoverage in the Census data for lumber production prior to 1942 which is reflected in the NLMA data adjusted to Census totals. Estimates prepared by the U. S. Forest Service are believed to approximate more nearly the total lumber production and to give a better picture of trends. The Forest Service estimates are given in the explanatory note in the 1955 edition of BUSINESS STATISTICS (see note 2 for p. 150).

Monthly data for 1949 and 1951-52 will be found in the 1955 and 1953 editions of BUSINESS STATISTICS (minor revisions of 1950 monthly data are available upon request). Most of the monthly data in the 1951 and earlier editions have been revised in varying degrees. These revised monthly (or quarterly) data for 1929-48 are published in the August 1950 Statistical Supplement issue of the Lumber lndustry Report (prepared by U. S. Department of Commerce, Office of Industry and Commerce).
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953 (and extended for the January-June 1956 period), see note 1 for p. 104.

Exports of sawmill products include all types of hardwood and softwood lumber (rough-sawed, dressed, and worked or patterned) and flooring; small hardwood dimension stock; and beginning 1939, railroad cross ties (also mine ties in recent years). The figures through 1947 also include exports of box shooks; such exports averaged $1,224,000$ board feet monthly in 1948. The exclusion of box shooks beginning 1948 reflects adjustment to the 1949 revision of the export schedule. Data for laths and shingles are excluded for all years. Beginning 1947, figures include shipments under
the Army Civilian Supply Program (not previously available); in that year such shipments amounted to 580,000 board feet.

Imports of sawmill products are general imports through 1933 and imports for consumption thereafter. The data include softwood and hardwood sawed boards (rough and dressed), flooring, planks, deals, and sawed timber plus sawed hardwoods not further manufactured than planed, tongued, and grooved. The classification of sawmill products covers boards and lumber through 1937; clapboards were added beginning January 1938 (these amounted to 3.8 percent of total sawmill products imports in 1937, 1.1 percent in 1936, and were negligible prior to that year); sawed railroad ties are included beginning January 1939 and box shooks from January 1939 through 1953 (thereafter, quantity data not reported for box shooks). Laths, shingles, pickets, and palings, included in the sawmill products classification in the original reports through 1938, are excluded from data shown here for all years.
Monthly data for 1939-52 for exports and 1938-52 for imports comparable with monthly averages for corresponding years shown herein (with exceptions noted) will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. (Minor revisions in the 1946 monthly data for both exports and imports and in the 1950 monthly data for imports are available upon requst.) Monthly exports for 1929-38 appear on p. 18 of the March 1940 SURVEY; import data for 1929-37 appear on p. 18 of the October 1939 SURVEY.
${ }^{3}$ Imports are general imports through 1933 and imports for consumption thereafter.
${ }^{4}$ Stocks data for the indicated years reflect changes in cover age that affect comparability with earlier years. See 3d paragraph of note 1 for this page.
${ }^{5}$ Beginning 1948, figures exclude exports of box shooks which were included in earlier data. See 2d paragraph of note 2 for this page.

## PAGE 151

${ }^{1}$ Source: National Lumber Manufacturers Association. Data are estimates representing total softwood operations for the Douglas fir region and are based on data compiled by the West Coast Lumbermen's Association from monthly reports received from mills covering between 50 and 60 percent of total output. Coverage of reports for stocks and unfilled orders is less inclusive than for production and shipments. Although Douglas fir predominates, output of the region also includes West Coast hemlock, Western red cedar, and Sitka spruce.
For all years through 1953, with exceptions noted below, production and shipments data were adjusted to trends indicated by annual production figures reported by the Bureau of the Census. No such adjustments were made in 1948, 1949, and 1950. In 1948 the Census Bureau made no production survey, while for 1949 and 1950 the Association estimated total industry operations on the basis of mill reports to the regional association.
The region (designated as West Coast Woods in SUPPLEMENTS prior to the 1951 edition) comprises those portions of the States of Washington and Oregon west of the Cascades except for the pine production of Josephine and Jackson counties in Oregon which is included in data for the Western Pine region.
Shipments include both domestic and export shipments. Data for stocks apply to gross mill stocks; changes from month to month are computed from differences between production and shipments adjusted to reported inventory figures.
Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Monthly data for 1929-46 are published in the August 1950 Statistical Supplement issue of the Lumber Industry Report (prepared by the U.S. Department of Commerce, Office of Industry and Commerce).
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted in July 1953 (and extended for the January-June 1956 period), see note 1 for p. 104. Exports of Douglas fir (including "Oregon pine") sawmill prod-
ucts include rough-sawed, dressed and, in recent years, treated lumber. In conformance with revisions in the export schedule, data beginning 1949 also include flooring and other worked or patterned wood products as well as sawed timber treated with preservative (exports of treated products in 1949 and 1950 amounted to $1,945,000$ and $1,040,000$ board feet, respectively) and beginning 1952, exports of treated boards, planks, etc. This series does not cover logs or unsawed and hewn timber, nor laths, shingles, and other manufactured wood products.

Figures for "sawed timber" cover lumber 5 inches and over in least dimension, also lumber worked or patterned; those for "boards, planks, etc." are for lumber less than 5 inches in least dimension.

Because of changes in the export schedule, separate monthly data for January-June 1956 for "sawed timber" and "boards, planks, etc." are not available; the 1956 monthly averages, however, are computed from reported totals for the entire year.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p .197 of this volume.

Monthly figures for 1948 for total sawmill products shown in the 1951 SUPPLEMENT are incorrect for several months; correct totals may be obtained by adding the published data for sawed timber to those for boards, etc. For 1947, data for September were revised as follows (thousand board feet): Total, 93,450; sawed timber, 19,641; boards, etc., 73,809. For 1946, revised data are: May - total, 29,301 ; sawed timber, 14,386 ; boards etc., 14,915; July-total, 22,460; sawed timber, 9,445. For years 1929 through 1935, figures for total sawmill products may be obtained by adding the published data for sawed timber to those for boards, etc. (in the 1938 and prior SUPPLEMENTS these categories were designated as "cimber" and "lumber," respectively).
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The prices from 1947 forward are for the following detailed specifications: (1) Douglas fir lumber (BLS code number 08-11-21), construction No. 1, $2^{\prime \prime} \times 4^{\prime \prime}$, random leng th, dried, S4S (surfaced on 4 sides), mixed dimension, carlot, f.o.b. mill, rail shipment; and (2) Douglas fir flooring (BLS code number 08-11-01), B and better, 1 " x 4 ", random length, flat or mixed grain, plain end, mixed carlot, f.o.b. mill, rail shipment. Beginning with 1952, the prices shown are quotation averages for one day each month (usually in the week containing the 15 th), based on data reported by various sellers (no fewer than three) of the commodity; prior to 1952 they are quotation averages for one day of each week.

Monthly figures for 1949-52 comparable with monthly averages for the specifications described above (BLS code numbers 08-1121 and 08-11-01) will be found in the 1953 edition of BUSINESS STATISTICS. Comparable monthly figures for 1947 and 1948 are available upon request.

The monthly averages for 1929-46 (italicized figures) as shown in this volume are not comparable with subsequent figures because of changes in the reporting sample and/or specifications. Corresponding monthly figures for 1941-46 for these earlier series may be found in the 1947 SUPPLEMENT; for 1929-40, in the May 1941 SURVEY. Comparable prices for the first 6 months of 1947 are as follows: (1) Construction No. 1 - January, \$52.47; February, \$59.40; March, \$60.89; April-June, \$62.87; (2) flooring-January, $\$ 73.260$; February, $\$ 86.378$; March, $\$ 92.565$; April-June, \$95.040.
${ }^{4}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total national output of Southern yellow pine compiled by the Southern Pine Association from monthly reports of mills representing in recent years about one-sixth of total output; coverage of reports on stocks and unfilled orders is somewhat less. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for 1948- in that year the Census Bureau made no annual survey. Figures for 1954-56 are subject to revision when data from the Census annual surveys become available.

Undercoverage is known to affect Census data for lumber production prior to 1942 but the extent to which Southern yellow pine output was understated is not clear (see paragraph 4 of note 1 for p. 150). Because the Association's data are adjusted to Census
totals, the data for years prior to 1942 are understated to an unknown degree.

Shipments include domestic and export shipments. Stock figures are estimated gross stocks at mills and concentration yards; monthly stock changes are computed from the difference between total production and shipments. Unfilled order changes are similarly computed from differences between total orders and shipments.

Monthly data for 1949-52 will be found in the 1955 and 1953 editions of BUSINESS STATISTICS. The 1948 data published in the 1951 and 1949 editions (except unfilled orders and stocks) have been revised. Monthly (or quarterly) data for 1929-47 appear in the August 1950 Statistical Supplement issue of the Lumber Industry Report (prepared by the U. S. Department of Commerce, Office of Industry and Commerce).
${ }^{5}$ Not comparable with earlier data; see note 3 for this page.
${ }^{6}$ Beginning 1949, data include exports of flooring and other worked or patterned wood products as well as treated or otherwise preserved timber; see note 2 for this page.
${ }^{7}$ Beginning 1952, data include exports of treated or otherwise preserved boards, planks, etc.; see note 2 for this page.
${ }^{8}$ Data not available. See 3d paragraph of note 2 for this page.
PAGE 152
${ }^{1}$ See note 4 for p. 151.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data as well as an explanation of sampling processes instituted July 1953 (and extended for the January-June 1956 period) see note 1 for $p$. 104. Export data comprise rough-sawed and dressed lumber and timber, (both untreated and treated with preservative) as well as flooring and other worked or patterned wood products. In conformance with revisions in the export schedule, data for flooring, etc., are included beginning with 1949 only, and those for treated boards, planks, etc., beginning with 1952. Hewn or unsawed wood and wood manufactures, such as lath or shingles, are not included.

Lumber 5 inches and over in least dimension is reported as sawed timber; that under 5 inches as boards, planks, etc. The following species of pine are covered: Southern yellow, Georgia, loblolly, long leaf, pitch, short leaf, and slash.

Because of changes in the export schedule, separate monthly data for January -June 1956 for "sawed timber" and "boards, planks, etc." are not available; the 1956 monthly averages, however, are computed from reported totals for the entire year.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. (Boards, etc., are designated as "lumber" in the 1938 and earlier editions of the SUPPLEMENT.)

Revisions (in thousands of board feet): Total sawmill products-July 1948, 8,797; April 1948, 8,668; March 1948, 7,235; September 1947, 9,070; January 1946, 9,036; timber-April 1948, 1,195; September 1947, 1,464; boards, etc.-September 1947, 7,606; January 1946, 6,768. The annual totals for 1942 contain revisions not distributed by months. For years 1934-35, data for total sawmill products can be obtained by adding the two published components. For years 1929-33, inclusive, monthly data for total sawmill products and for sawed timber (which have been revised) are available on request.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices from 1947 forward are for Southern pine boards and flooring of the following specifications: (1) Boards (BLS code number 08-12-41), No. 2 and better, $1^{\prime \prime} \times 6^{\prime \prime}$, random length, S4S (surfaced on 4 sides), dried, short leaf, carlot or mixed car, f.o.b. mill; (2) flooring (BLS code number 08-12-01) B and better, 1" $\times 4$ ", standard length, flat grain, plain end, dried, bundled, short leaf, carlot or mixed car, f.o.b. mill. Beginning with 1952, the prices shown are quotation averages for one day each month (usually in the week containing the 15 th) based on data reported by various sellers (no fewer than three) of the commodity; prior to 1952, they are quotation averages for one day of each week.

Monthly data for 1949-52 comparable with monthly averages for the specifications described above (BLS code numbers 08-1241 and 08-12-01) will be found in the 1953 edition of BUSINESS STATISTICS. The 1947-48 monthly figures are available upon request.

The monthly averages for 1929-46 shown in this volume are not comparable with subsequent data because of changes in the specifications. Corresponding monthly figures for 1938-46 will be found in the 1947 and 1942 SUPPLEMENTS; those for 1929-37, on p. 22 of the April 1942 SURVEY. The monthly data from August 1942 through January 1945 published in the 1947 SUPPLEMENTS are estimates computed by the U. S. Department of Commerce, Office of Business Economics, from slightly different series compiled by the U. S. Department of Labor, Bureau of Labor Statistics. For the overlapping period August-December 1942, the substituted board prices averaged 3.7 percent lower than the preceding price data published through July 1942 and the substituted flooring prices averaged 5.2 percent lower.

Data for the first 6 months of 1947 on the earlier specifications (see italicized figures) are as follows: Boards-January, $\$ 71.66$; February, \$72.53; March, \$71.46; April, \$67.79; May, \$65.69; June, \$62.66; flooring-January, \$112.528; February, \$115.550; March, $\$ 124.441$; April, $\$ 133.862$; May, $\$ 133.250$; June, $\$ 132.148$.
${ }^{4}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total softwood production in the Western pine region compiled by the Western Pine Association from monthly reports of mills representing in recent years about three-quarters of total output; coverage of reports on unfilled orders and stocks is somewhat less. Production and shipments data are adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1953 except for 1947-51, inclusive. In 1948 the Census Bureau made no annual survey, while in 1947 and 1949-51 the figures are based on regional association estimates and do not agree with Census data. Figures for 1954-56 are subject to revision when data from Census become available.

Undercoverage is known to affect Census data for lumber production prior to 1942 but the extent to which Western pine output was understated is not clear (see 4th paragraph of note 1 for p . 150).

Shipments include domestic and export shipments. Stocks figures are estimated gross stocks at mills with month-to-month changes based on the difference between production and shipments and adjusted to inventory data of reporting mills.

Data comprise all softwood production in the Western pine region defined as follows: Washington and Oregon east of the Cascades; Jackson and Josephine counties in Oregon (pine production only); California (except in the ten northwestern coastal counties); Arizona; Colorado; Idaho; Montana; Nevada; New Mexico; South Dakota; Utah; and Wyoming. The softwood species included and their approximate percentage of total output in the Western pine region in 1947 (latest year for which data are presently available) are as follows: Ponderosa pine, 59 percent; sugar pine, 4 percent; ldaho white pine, 4 percent; lodgepole pine, 2 percent; larch and Douglas fir, 25 percent; white fir, 3 percent; Englemen spruce, Western red, and incense cedar, 3 percent.

Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Shipments and stocks for 1950 shown in the 1953 edition have been revised; also production and shipments for 1947-48 shown in the 1951 edition have been revised.

The aforementioned revisions are available upon request. Revised monthly (or quarterly) data for 1929-44 appear in the August 1950 Statistical Supplement issue of the Lumber Industry Report (prepared by the U. S. Department of Commerce, Office of Industry and Commerce).
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics, from information furnished by the Western Pine Association. Prices quoted are for 1,000 board feet of Western pine lumber, Ponderosa, boards, No. 3 common, $1^{\prime \prime} x 8^{\prime \prime}$, random length, surfaced on 2 or 4 sides, carlot or mixed car, f.o.b. mill.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 19
of this volume; those for 1932-37 appear on p. 22 of the April 1942 SURVEY. Monthly data for 1931 and earlier years are not available.
${ }^{6}$ Average for 5 months, August-December. New series not exactly comparable with earlier data. See 3d paragraph of note 3 for this page.
${ }^{7}$ New series not exactly comparable with earlier years. See 2 d and 3 d paragraphs of note 3 for this page.
${ }^{8}$ Data not available. See 3d paragraph of note 2 for this page.

## PAGE 153

${ }^{1}$ Source: National Lumber Manufacturers Association. Data for all years are estimates of total industry output compiled by the Maple Flooring Manufacrurers Association from monthly reports by mills representing in recent years about 90 percent of total production; coverage of unfilled orders and stocks data is somewhat less. Reliability of the estimates has increased as the coverage has risen from about 65 percent in years prior to 1934.
Data include all species of flooring produced in the Maple Flooring region, but maple predominates; during 1952-55, beech averaged about 2 percent of total output, birch about 1 percent.

Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein may be found in the 1953 edition of BUSINESS STATISTICS; those for 1934-48 appear in the August 1950 Statistical Supplement issue of the Lumber Industry Report (prepared by the U. S. Department of Commerce, Office of Industry and Commerce). Quarterly data for 1932-33 appear in the 1936 edition of BUSINESS STATISTICS; those for 1929-31 for all series, except new orders, are available upon request.

Data shown in the 1932 SUPPLEMENT for the years 1929-31, inclusive, represented only 15 mills and differ from the estimat. ed industry totals published in later editions.

2 Source: National Lumber Manufacturers Association. Data for all years are estimates of total industry output compiled by the National Oak Flooring Manufacturers Association from monthly reports by mills representing in recent years about two-thirds of total industry output; coverage has declined somewhat since 1929-34 when 95 to 100 percent of the industry was included.
"Oak flooring" usually includes a small portion (totaling approximately 5 percent) of maple, beech, birch, and pecan.

Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein may be found in the 1953 edition of BUSINESS STATISTICS; those for 1934-48 appear in the August 1950 Statistical Supplement issue of the Lumber Industry Report (prepared by the U. S. Department of Commerce, Office of Industry and Commerce). Revised data for 1929-33 (as shown herein and in the 1953 edition of BUSINESS STATISTICS) are available on an annual basis only.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. Data cover all known producers of hardwood plywood except container and packaging types. Comparable data earlier than 1953 are not available.
${ }^{4}$ Source: Douglas Fir Plywood Association. Data are estimates of total industry output based on reports from plants controlling on the average approximately 90 percent of the industry's capacity. Monthly totals are derived from weekly reports of the Association by prorating data for split weeks on the basis of a 5 -day workweek with allowance for the following holidays: January 1 , May 30, July 4, Labor Day, Thanksgiving, and Christmas.

Monthly figures on a comparable basis are not available prior to January 1953. Monthly averages for 1952 and earlier years are based on annual totals as published in 'The Timberman," Plywood Section.
${ }^{5}$ Quarterly average.
${ }^{6}$ End-of-year data.
7 See $2 d$ paragraph of note 4 for this page.
${ }^{8}$ Comparable monthly data for years prior to 1953 are not available.

## PAGE 154

${ }^{1}$ Source: U. S. Department of Commerce, Office of Business Economics. The figures are compiled from data collected by the Bureau of Census (Bureau of Foreign and Domestic Commerce through April 1941). For exports, iron and steel products cover all commodities (for which tonnage figures are available) which are classified in the January 1952 edition of the export schedule as pig iron; ferroalloys; iron and steel scrap; iron bars, skelp, and pipe; steel-mill products, semifinished; steel-mill products, rolled and finished; castings and forgings; and railway car and locomotive wheels, tires, and axles (rolled and forged). For imports, the items covered are those classified in the January 1954 import schedule as iron and steel semimanufactures (including pig iron, granular or sponge iron, and iron and steel scrap); steelmill products (manufactures); and ferromanganese, ferrochromium, ferrosilicon, and certain other ferroalloys. The figures for both exports and imports do not include advanced manufactures of iron and steel.

In the 1952 edition of the export schedule, certain items (pipe fittings, welding rods, bolts, fabricated structural, and other shapes) were transferred from the "steel-mill products" to the "metal manufactures" category. Data beginning 1952 exclude exports of these items which totaled 322,000 tons in 1952 and 258,000 tons in 1953. Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Monthly data for 1938-52 for all series, 1932-37 for total exports and total imports, 1936-37 for scrap exports, and 1934-37 for scrap imports will be found in earlier editions of BUSINESS ST ATISTICS as indicated in the note at top of p . 197 of this volume. Revisions are as follows: Total exports, November 1950, 283,137 short tons; scrap imports, March 1935, 2,387 long tons. The 1948 monthly averages for imports are based on annual totals which include revisions not available by months. Monthly data for 1947 for total exports, revised to cover army civilian supply shipments (included in Iater years), are shown on p. 274 of the 1953 edition of BUSINESS STATISTICS. Monthly figures for 191931 for total imports are on p. 20 of the November 1932 SURVEY. (It should be noted that data in the 1942 and earlier SUPPLEMENTS are in long tons.)
${ }^{2}$ Includes also tinplate scrap, terneplate scrap and clippings, and rerolling rails. Figures beginning 1951 exclude exports of tinplated circles, strips, cobbles, etc. (which totaled 14,610 tons in 1951); these items were previously included in scrap exports.
${ }^{3}$ Sources: U. S. Department of the Interior, Bureau of Mines, and U. S. Department of Commerce, Bureau of the Census (beginning 1951); Bureau of Mines (prior to 1951). The estimated industry totals from 1951 forward (from a combined survey covering 1,300 iron and steel foundries and steel-ingot producers) are not strictly comparable with earlier data because of changes in coverage and in sampling and estimating procedures. For prior years, the monthly data are estimated industry totals based on reports from consumers accounting for 96 to 99 percent of the industry from the latter half of 1941 through 1945 and 90 to 95 percent in 1946-50. The monthly averages for the years 1935-50 for consumption are computed from annual totals compiled by $\mathrm{Bu}-$ reau of Mines, and are based on actual reports from all consumers; for 1929-34, the monthly averages are based on annual estimates published in The Iron Age. The year-end stock figures for 1938-40 are also from the annual surveys by Bureau of Mines.
Home scrap produced is scrap produced by the consuming mills (such as revert or recycled scrap, comprising runs, spills, risers, and croppings, etc., discarded and defective products, and old scrap); the figures do not include hammer, scale, and cinder. Net purchased scrap consists of scrap purchased from outside sources; it excludes scrap transferred from other plants under the same control, scrap received under exchange contracts or conversion agreements, as well as scrap otherwise shipped. It should be noted that the descriptive note for the 1955 issue of BUSINESS STATISTICS incorrectly defined the purchased scrap received as including these transfer shipments.

Monthly data for 1941-50 for consumption and stocks,comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p .197 of this volume. Monthly data
for 1951-52 for production and receipts have been adjusted for comparability with succeeding data and are available upon request. Quarterly data for December 1939-December 1940 for consumption and September 1939-December 1940 for stocks are shown in a footnote on p. S-29 of the November 1942 SURVEY. (It should be noted that the 1939-40 figures for consumption given in that note relate only to the last month of each quarter.)
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines. Monthly data (available beginming January 1943) are based on reports from practically all mines in the U. S.; they include estimates for a number of very small mines in the southeastern area (output of which is only a few thousand tons per month) . Monthly averages through 1956 for production and shipments are computed from annual totals based on actual reports from all mines. The year-end stock figures (stocks at mines) for 1929-42 are also from the annual surveys and for 1929-41 are not entirely comparable with data for later years (see note 5 ).

The data refer to usable ore (i.e., direct shipping ore, washed ore, concentrates, sinter, and byproduct pyrites cinder and sinter) produced by both mines and beneficiating plants measured in the form shipped to the consumer, and exclude ore containing 5 percent or more manganese.

The iron ore producing districts, and the percentage of total production in each for 1947-56, are: Lake Superior District Michigan, Minnesota, and Wisconsin, 78-82 percent; Southeastern States-Alabama, Georgia, and Tennessee, 6-9 percent; Northeastern States-New Jersey, New York, and Pennsylvania, 4-6 percent; Western States - California, Missouri, Nevada, Texas, Utah, and Wyoming, 5-9 percent. About 1 percent of production consists of byproduct ore (iron cinder and sinter obt ained from the pyrites industry), produced chiefly in the Southeastern States.

Monthly data for 1943-52 will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{5}$ Data are as of December 31 and are based on reports from all mines; they exclude stocks of byproduct materials (pyrites cinder and sinter at plants that produce these products for consumption in iron and steel furnaces) which are included in data for later years; the December 31, 1942, stock figure excluding byproduct material, comparable with earlier data, is $3,367,000$ long tons.
${ }^{6}$ See note 3 for this page regarding change in source of data beginning 1935 .
${ }^{7}$ Stocks as of December 31.
${ }^{8}$ Average for 8 months-March and June through December.
${ }^{9}$ Stock data were not collected for January; average for 11 months, February-December.
${ }^{10}$ Based on annual total including revisions not incorporated in the monthly data.
${ }^{11}$ Total exports beginning 1952 exclude certain items included in earlier data; see 2 d paragraph of note 1 for this page. (In the 1953 edition of BUSINESS STATISTICS, such items were included in the 1952 data.)

PAGE 155
${ }^{1}$ Sources: The Lake Superior Iron Ore Association, except data beginning with 1956 for consumption and stocks which are compiled jointly by the Association and the American Iron and Steel Institute.
The Lake Superior iron ore district comprises Minnesota, Michigan, Wisconsin, and the Michipicoten and Steep Rock areas in Canada.
Shipment figures reflect the movement of lake ore through the Lake Superior ports of Superior, Duluth, Two Harbors, Escanaba, Ashland, and Silver Bay (the latter, beginning 1956) and the Lake Michigan port, Marquette. Also included are comparatively small amounts of ore shipped from the Canadian ports of Michipicoten (beginning August 1939) and Port Arthur (beginning July 1945). (Note that iron ore statistics shown on p. 154 relate to U. S. ore only.) It should be noted that the figures do not include direct rail shipments from mines. For the period 1953-55, all rail shipments from the Lake Superior district (U. S. and Canadian
mines) averaged $2,421,000$ tons per year. Data are expressed in gross tons, railroad weights.

In recent years, the Lake Superior region has accounted for approximately $78-81$ percent of the total iron ore shipments in the country. Because navigation is closed, no lake shipments are made during January and February and usually during March (in 1944 and 1953 there were also no shipments during December); monthly averages shown here, however, are based on 12 months.

Consumption by furnaces and stocks of iron ore cover ore originating in the Lake Superior district. (Ores originating in other U. S. and Canadian areas, as well as foreign ores, are excluded from the figures shown here.) Effective with 1956, the data reflect a broader coverage of furnaces as well as a change in the method of reporting stocks, and thus are not comparable with figures through 1955.

For the period through 1955, the consumption figures relate to Lake Superior ore consumed by U. S. and Canadian furnaces depending principally upon such ore. Thereafter, they include Lake Superior ore consumed by furnaces and agglomerating plants (not located at mine site) in all iron and steelmaking districts of the $U$. S., as well as that consumed by Canadian furnaces, etc. Also included beginning with 1956 are small amounts of Lake Superior ore sold to nonreporting companies or used for miscellaneous purposes.

Stocks at furnaces include stocks of Lake Superior ore at both U. S. and Canadian furnaces. Stocks on Lake Erie docks are those on U. S. docks only. In addition to the broader coverage of furnaces beginning with 1956, comparability of the stock figures is also affected because stocks on Lake Erie docks as reported in recent years through 1955 probably include sizable amounts of ore at points inland from the Great Lakes, whereas such amounts (although not actually in furnace yards) are now reported as at furnaces.

The or iginal reports published beginning 1956 by the Ore Assoand the AISI also show separately figures for consumption by U. S. Districts and by type of furnace in U. S. and Canada; and stocks of ore held at furnace yards, by U. S. Districts. In addition, similar data are available for ores originating from other than the Lake Superior District. Comparable data prior to 1956 are not available.

Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of P. 197 of this volume.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Imports beginning 1934 are imports for consumption; earlier data represent general imports. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Iron ore imports include concentrates; figures for imports of manganese ore and concentrates represent manganese content.

Monthly data for 1929-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Revisions (thousands of long tons): Iron ore-November and December 1950, 729 and 429, respectively; manganese ore-July 1950, 91 . The revised 1947 monthly average for manganese ore is based on an annual total which includes revisions not available by months.
${ }^{3}$ Sources: U. S. Department of Commerce, Bureau of the Census, and U. S. Department of the Interior, Bureau of Mines (jointly beginning 1951); Bureau of the Census (October 1945-December 1950); and War Production Board (prior to 1945).

All data are estimated industry totals. Figures for 1943 have been raised to industry totals by the Office of Business Economics (for percentage of industry coverage represented by reported data, see note 3 on p. 267 of the 1949 STATISTICAL SUPPLEMENT). Data for 1944-46 and 1950-53 are based on annual reports for those years from all known foundries. Totals derived from preliminary reports from the 1954 Census of Manufactures are not comparable with data obtained in the monthly survey because the former include fiscal year reports and certain revisions of the monthly data. Revised annual totals for the years 1947-49 take into account differences shown by comparing esti-
mated 1950 totals (from monthly reports from a selected sample of foundries) with actual 1950 totals (from a complete canvass of all ferrous foundries). Revised monthly estimates for 194748 for all series and 1947-50 for unfilled orders were computed by the Office of Business Economics. The monthly estimates beginning 1951 are derived from a combined survey of approximately 1,300 iron and steeil foundries and steel-ingot producers.

The term "gray-iron castings" relates to all iron castings (except malleable), including semisteel, alloy iron, and white iron castings. Tonnages represent the weight of rough castings before machining. Total shipments include shipments for use by the same company (or an affiliate, subsidiary, or parent company) and shipments for sale to other companies, shown separately beginning November 1944. Similar data were not collected prior to 1943. Production figures for 1937 and 1939, compiled from reports of the biennial Census of Manufactures, are as follows (annual totals): $1937,7,818,000$ tons; $1939,7,125,000$ tons; these figures include estimated tonnage for a small quantity reported by value only.

The original reports give separate monthly figures beginning January 1943 for cast-iron soil pipe and fittings and cast-iron pressure pipe and fittings; beginning July 1944 for chilled-iron railroad car wheels and molds for heavy steel ingots; as well as total monthly shipments by State, beginning 1951. Annual reports for 1944-46 and 1950-53 also include State data on ironfoundry activity.

Monthly figures for 1943-52 (except revised 1947-48 data, as noted above, which are available upon request), comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{4}$ Sources: U. S. Department of Commerce, Bureau of the Census, and U. S. Department of the Interior, Bureau of Mines (jointly beginning 1951); Bureau of the Census (prior to 1951).

The data beginning 1951 represent estimated industry totals derived from a combined survey of approximately 1,300 iron and steel foundries and steel-ingot producers. Annual data for 194750 and monthly data for 1949 and 1950, as shown in the 1951 edition of BUSINESS STATISTICS, have since been revised to adjust for undercoverage indicated by the complete canvass in 1950 covering shipments by 128 establishments.

Data for the years 1929-40 cover reports from 112 to 102 manufacturers operating 121 to 113 plants; for the years 194146 , from 99 to 107 manufacturers operating 110 to 116 plants. The reduction in the number of reporters through 1941 resulted, in most cases, from discontinuance of operations. Beginining May 1944, the coverage of the industry is virtually complete; for September 1942 through April 1944 the estimated coverage was 97-98 percent; and the manufacturers reporting prior to September 1942 produced about 93 percent of the total value of the output of the industry as reported in the Census of Manufactures for 1939 and 1937 and about 88 percent of the value of the output as reported in the 1935 and 1933 censuses. Total shipments by the 103 manufacturers included beginning September 1942 were 4.1 and 5.5 percent higher in September and November 1942, respectively, than shipments of the 99 manufacturers reporting previously; while shipments for sale were only 0.1 percent higher in both months, and new orders for sale, 0.2 and 0.3 percent higher. These are the only months for which data are available for both 99 and 103 manufacturers.

Monthly data for 1941-52 (except revised 1947-48 figurescomputed by the Office of Business Economics--which are available upon request), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Figures for unfilled orders begin with 1945 only. Monthly figures for total shipments for 1929-40 appear in the volumes referred to on p. 197, and on p. 20 of the April 1933 SURVEY. Monthly figures for 1936-40 for shipments for sale are available upon request.

5 Monthly average computed from estimated total shipments for sale in 1944, based on the distribution between shipments for sale and shipments for own use during November and December 1944.
${ }^{6}$ Average based on figures for 9 months shown. Data beginning 1956 are not strictly comparable with earlier figures; see 5 th and 7 th paragraphs of note 1 for this page.
${ }^{7}$ Stocks (on adjusted basis) as of January 1, 1956. See 5th and 7 th paragraphs of note 1 for this page.
${ }^{8}$ For January, February, and March.
${ }^{9}$ For July and August.

## PAGE 156

${ }^{1}$ Sources: American Iron and Steel Institute (heginning 1942) and The Iron Age (prior to 1942). The Institute data cover blastfurnace production of pig iron and ferroalloys (including ferromanganese, spiegel, and silvery pig iron) and also include production by charcoal furnaces (such production was reported separately through 1945; subsequently, the small amount has been combined with coke pig iron). The Iron Age data through 1941 exclude charcoal-furnace production, but since this represents only a small fraction of the total (two-tenths of 1 percent in 1941, according to the Institute) the two series may be considered as comparable. For 1941, total production reported by the Institute was $56,071,000$ short tons, as compared with $55,904,000$ reported by The Iron Age. Both series represent substantially complete coverage; according to the lnstitute, its coverage of total blastfurnace production was 99.5 percent in 1943 , 99.8 percent in 1942 and 1944 , and 100 percent thereafter. Both series exclude the production of electric furnaces.

Monthly averages for $1942-44$ are based on revised annual totals which include small year-end adjustments not distributed by months. Revised monthly data for 1945-50 are shown below:

Pig Iron Production: 1945-50
(Thousands of short tons)

| 1945 | 1946 | 1947 | 1948 | 1949 | 1950 |

Monthly data for 1938-44 and 1951-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Note that figures in the 1942 issue are in short tons instead of in long tons as indicated.) Monthly data for 1913-37 are shown on p. 14 of the October 1940 SURVEY.
${ }^{2}$ Sources: U. S. Department of the Interior, Bureau of Mines, and U. S. Department of Commerce, Bureau of the Census (compiled jointly beginning 1951); Bureau of Mines (prior to 1951). Beginning 1951, the data represent estimated industry totals derived from a combined survey covering approximately 1,300 iron and steel foundries and steel-ingot producers. Earlier data are estimated industry totals based on reports from consumers accounting for 96 to 99 percent of the industry total from the latter half of 1941 through 1945 and 93 to 96 percent from 1946 through 1950. Prior to 1941, data were collected only for the last month of each quarter. Consumers' stocks include suppliers' and producers' stocks.

Monthly averages for consumption for 1935-50 are based on annual data. Figures for 1931-34 are monthly averages of annual shipments; the corresponding averages for 1935 and 1936 are 1,977,000 and $2,875,000$ tons, respectively. Year-end stock figures for 1938-40 are also from annual surveys. Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: American Metal Market. Data represent averages of daily prices of pig iron. Beginning January 1953, the composite
price is computed from 10 tons of pig iron as follows: 1 ton each of basic, Neville Island; Bessemer, Neville Island; malleable, Swedeland; No. 2 foundry at Buffalo, at Chicago, at Cleveland, at Sharpsville, and at Youngstown; and 2 tons of No. 2 foundry at Birmingham.

Prior to 1953 , the composite price was computed from 10 tons of pig iron as follows: 1 ton each of Bessemer, valley; No. 2 foundry, valley; No. 2 foundry at Philadelphia, at Buffalo, at Cleveland, and at Chicago (No. 2 x foundry prior to 1938 for Philadelphia and Buffalo and, prior to 1935, for Cleveland); and 2 tons each of basic, valley, and No. 2 southern foundry, Cincinnati.

Beginning 1953, the composite does not relate to delivered prices, as formerly; to compare the new composite with that compiled prior to 1953 , an arbitrary figure of $\$ 1.58$ should be added to the new composite plus a very slight adjustment for any freight rate increases after December 1952.

Effective July 1948, the basis of quotation was changed from basing point to f.o.b. mill or shipping point.

Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions for February and October 1950, respectively, are $\$ 46.85$ and $\$ 49.87$ per long ton.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Basic pig iron prices are f.o.b. Valley furnace producing points. The foundry prices, No. 2, Northern, f.o.b. Neville Island area producing points, replace the Pittsburgh delivered prices, shown in SUPPLEMENTS prior to the 1947 issue. Effective July 1948, quotations for both series were changed from basing point prices to f.o.b. producing points. Beginning 1952, the prices shown are quotation averages for 1 day each month (usually around the 15 th); prior to 1952, they are quotation averages for 1 day each week.

Monthly data for 1923-52 for basic (furnace) pig iron and 194152 for foundry pig iron, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Sources: U. S. Department of Commerce, Bureau of the Census, and U. S. Department of the Interior, Bureau of Mines (compiled jointly beginning 1951); Bureau of the Census (prior to 1951).

The data beginning with 1945 represent industry totals and, beginning with 1951, are estimates based on a combined survey of approximately 1,300 iron and steel foundries and steel-ingot producers. The industry coverage prior to 1945 varies and is explained in detail in the next paragraph. From October 1945 forward, the figures relate to total shipments of steel castings and to for-sale shipments (commercial); previously, to "production" of commercial steel castings only. This change, however, does not significantly affect comparability of the series, since the industry usually ships its production quickly; this was particularly true during the war years when for any month production and shipments were practically the same.

Figures for 1929-44 cover reports from a varying number of manufacturers as follows: $1929-32,128-132$; 1933-34, 164; 193537,$180 ; 1938,183 ; 1939-44,187-193$. Monthly averages for 1933 for 128 manufacturers, comparable with the data for 1932 , are as follows: Production-total, 21,146 tons; railway specialties, 4,340 tons. For January 1935, the only month for which data for both 164 and 180 companies are available, the change in the number of reporting companies increased total production 1.8 percent and did not affect the figures for railway specialties. It is believed that changes in the number of firms reporting in the 1929-32 and 1935-44 periods did not materially affect the comparability of the series. The 187-193 firms reporting for 1939-44 produced approximately 96 percent of the total value of steel castings made for sale as reported in the Census of Manufactures for 1939; this percentage appears to be approximately correct for total production for sale for later years through 1944. Throughout the period 1935-44, the production of railway specialties was substantially complete, and it is believed that all production was shipped for sale. The 183 manufacturers reporting for 1938 represented practically the entire industry, according to data from the 1937 Census of Manufactures; the manufacturers reporting for 1935-37 represented 95 percent of the total value as reported in the 1935 Census and 90 percent of the total shown by the 1933 Census of Manufactures. Prior to 1935, the coverage was about 80 percent.

Steel castings reported as railway specialties comprise bolsters, side frames, couplers, yokes, draft-gear castings, snubbers, hopper doors, and hopper-door frames. Beginning 1952, the shipments for sale include small quantities for own use which cannot be excluded from the shipments for sale.
Monthly data for 1949-52 are shown in the 1955 and 1953 editions of BUSINESS STATISTICS. Revised monthly data for 194748, computed by the Office of Business Economics, are available upon request. Monthly data for 1926-46 for total shipments (for sale) and railway specialties (based on varying number of companies, as noted above) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Production for sale prior to 1945 (see note 5 for this page).
${ }^{7}$ Source: U. S. Department of Commerce, Bureau of the Census. The estimated industry totals beginning 1947 are based on reports from producers reporting monthly shipments of commercial steel forgings of 300 tons or more (except for the period from May 1951 to July 1953 when reports were received from producers shipping 50 tons or more per month). These forge shops represented the following approximate percentages of the 1947 total industry shipments of commercial steel forgings: July 1954-December 1956, 89 percent; August 1953-June 1954, 90 percent; May 1951 -July 1953, 98 percent; January 1947-April 1951, 80 percent. Averages for 1946 are computed from totals derived from a complete canvass of producers. The estimates for the May 1951 -July 1953 period are not strictly comparable with earlier and subsequent data because of the change in the factors used as a basis for the estimates.

The forge shops covered by these data include only those producing forgings for sale to the trade. The forgings not included in "for sale," i.e., those for own use, are forgings which are further processed or machined in the same plant in which the forgings were produced; in other plants of the same company; or in affiliated, subsidiary, or parent companies. All other forgings are considered as commercial forgings, and are included in "for sale." The term "drop and upset forgings" includes all steel products whose final forming operations are completed on a steam drop hammer, board drop hammer, upsetter, or mechanical press. "Press and open-hammer forgings" are steel products whose forming operations are completed on a flat die, either on open hammer or press. The tonnages reported for shipments and unfilled orders represent the weight of the forgings before machining.

Monthly data for 1946-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{8}$ Average for 4 months, September-December.
${ }^{9}$ Data prior to 1935 represent monthly averages of annual shipments of pig iron.
${ }^{10}$ Stocks as of December 31.
${ }^{11}$ Average for 8 months, March and June-December.
12 Average for 11 months, February-December.
13 Average for 6 months, July-December; see 4 th paragraph of note 3 for this page.

14 Average for 6 months, July-December; see note 4 for this page.

15 Prices beginning January 1953 are not strictly comparable with earlier data; to compare the new composite with that compiled prior to 1953 , an arbitrary figure of $\$ 1.58$ should be added to the new composite. See note 3 for this page.

## PAGE 157

${ }^{1}$ Source: American Iron and Steel Institute. Steel production includes, in addition to the ingot production by the open-hearth and Bessemer processes, electric ingots and steel for castings, except steel for castings produced in foundries operated by companies which do not produce ingots. Crucible steel production, which has been negligible during the period shown here, is not included in the figures through 1945; beginning with 1946 the
very small amount produced (not reported separately) is included with production of electric furnaces. Beginning 1947, data are based on reports from companies which account for 100 percent of total ingots and steel for castings produced by the indus try. For 1941-46, data are based on reports by companies which accounted for the following percentages of production by types of furnace: Open-hearth, 98; Bessemer, 100; electric, 86-88.

Percent of capacity shown here is the ratio of average weekly production in a given month to average weekly capacity calculated on annual capacity as of the end of the preceding year (with the exception of percentages for July-December 1937, 1941-44, and 1950 which are based on capacity as of the middle of the given year), no allowance being made for Sundays or holidays. Since the percentage of capacity measures the operating rate in relation to full capacity (which varies from year to year), it is useful as an indicator of the general economic level but should not be used for year-to-year comparison of the volume of production. The annual capacity as of December 31 of each year, on which the percent of capacity for the following year is based, is as follows (in thousands of short tons): 1928, 69,554; $1929,71,011 ; 1930,75,299 ; 1931,76,875 ; 1932,76,744 ; 1933,78,-$ $110 ; 1934,78,440 ; 1935,78,152 ; 1936,78,137$; (July 1, 1937, 78,464) ; 1937, 80, 176; 1938, 81,824; 1939, 81,614; 1940, 84, 148 (June $30,1941,86,145$ ) ; 1941, 88,566; (July 1, 1942, 89,195); 1942, 90,289; (July 1, 1943, 90,877); 1943, 93,648; (July 1, 1944, 94,051); $1944,95,501 ; 1945,91,891 ; 1946,91,241 ; 1947,94,233 ; 1948,96,=$ $121 ; 1949,99,393$; (July 1, 1950, 100,564); 1950, 104, 230; 1951, 108,$588 ; 1952,117,547 ; 1953,124,330 ; 1954,125,828 ; 1955,128,-$ 363; 1956, 133,459.

Monthly data for 1938-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Monthly data for 1917-37 for production and 1926-37 for percent of capacity appear in table 9, p. 16, of the March 1941 SURVEY.
${ }^{2}$ Source: American Metal Market. Data represent the average price of finished steel products, excluding rails, based on daily prices of 10 pounds of steel products weighted according to the importance of their production. The composite since 1933 includes the following: 2 pounds of bars; 1-1/2 pounds each of plates, pipe ( $1-3$ ), and sheets ( 26 gauge, cold rolled); 1 pound each of shapes, wire nails, and strips H.R., and $1 / 2$ pound of tinplate. Prior to 1933, the composite was weighted as follows: $2-1 / 2$ pounds of bars; $1-1 / 2$ pounds each of plates, shapes, pipe, and wire nails; 1 pound of sheets; and $1 / 2$ pound of tinplate. Beginning July 1948 the basis of quotation was changed from the basing point system to quotations at the mills of leading producers.

Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. All series are f.o.b. Pittsburgh prior to July 1948; at that time the basis of quotation was changed (except for the scrap price) from basing point to f.o.b. producing points. The scrap price for the entire period is f.o.b. Pittsburgh basing point.
Steel-billet prices cover primarily those of rerolling carbon steel and, beginning May 1953, are for the following specifications: Billets, rerolling, carbon steel, $4^{\prime \prime} \times 4^{\prime \prime} \times 10 / 15^{\prime}$ long, chemistry $-.10 \mathrm{C}, .30 / .50 \mathrm{MN}, .05 \mathrm{Max} . \mathrm{S}, .04 \mathrm{Max} . \mathrm{P}$, base quantity, mill to user, per net ton, f.o.b. mill. The prices prior to May 1953 are for billets of a different specification and, therefore, are not comparable with subsequent data. Beginning February 1948 , the compiling agency has published the price per short ton; for comparability, all earlier data as shown here are conversions of prices formerly quoted per long ton.

Structural-steel prices beginning May 1953 represent a substituted series described as follows: Structural shapes, carbon steel, $6^{\prime \prime} \times 4^{\prime \prime} \times 1 / 2^{\prime \prime}$ angles, $30^{\prime}$ long, ASTM spec. A-7, base quantity, mill to user, f.o.b. mill. Earlier data cover structural shapes, standard, carbon steel, I-beam, ASTM (A-7-46), Pittsburgh area. For the period February 1948-May 1953; the specifications were revised from $3^{\prime \prime}-15^{\prime \prime}$ depth up to $80^{\prime}$ length to $12^{\prime \prime}$ up to $60^{\prime}$, but the January 1948 price for both series was $\$ 0.028$ per pound.

The scrap price replaces the series for steel scrap, Chicago, shown in SUPPLEMENTS prior to the 1947 issue.
Beginning 1952, the prices shown are•quotation averages for 1 day each month (usually around the 15 th); prior to 1952 , they are quotation averages for 1 day each week.

Monthly data for 1929-52 (1941-52, for the steel-scrap price), comparable with monthly averages for corresponding years shown herein (except as noted below), will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Note that steel-billet prices in the 1951 and earlier volumes are per long ton and should be converted to prices per short ton for comparability with data in subsequent volumes.) Monthly data for 1935-40 for the scrap price are available upon request.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census. Data for 1933-42 cover reports of 30 to 34 manufacturers, accounting for approximately 90 percent of production of heavy steel barrels and drums, according to the 1939 Census of Manufactures. Beginning 1943, the reporting companies include all plants, both commercial and captive, known to be producing steel shipping barrels and drums. However, no heavy-type barrels and drums were reported "for own use."

The figures comprise steel barrels of 19 -gauge or heavier steel of welded-side seam construction, and steel barrels made wholly or partly of 20 -gauge, when of other than open-head construction; also grease drums of 100 -pound capacity when made of 20 -gauge or heavier steel. Excluded are terneplate oil containers gas cylinders, beer barrels, reconditioned barrels and drums, and containers not commercially useable in the transportation of commodities. Data for light types (lighter than 20 -gauge) and, since June 1944, steel packages, kegs, and pails, are also available in the same report of the Bureau of the Census.

Monthly data for 1934-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Revised July 1948 shipments, 2,084,000 barrels and drums.) Monthly data for 1933 (comparable with figures shown here through 1942) are available upon request. Data shown in the 1936 and earlier SUPPLEMENTS are not comparable, since they are for a smaller number of companies.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census. Data are compiled from reports received from all known producers in the industry. Shipments are reported in terms of number of base boxes of steel sheets consumed. These base boxes are converted to short tons by means of standard conver sion factors which differ according to type of can. A metal can is defined as a single-walled container made wholly from tinplate, terneplate, black plate, or waste plate, of 29 gauge or lighter. (This definition does not cover ice-cream cans or fluid-milk shipping containers.) Food cans include those used for fruits and vegetables, evaporated and condensed milk, other dairy products, fish and other sea food, coffee, lard and shortening, meat and poultry, and miscellaneous food cans; nonfood cans include those for beer, oil (open top, 1 and 5 quarts), pet food, and miscellaneous nonfood cans. Beginning August 1954, data for shipments of soft-drink metal cans (which totaled 5,600 tons in August) are included in the food class; prior to August 1954, shipments of this type were distributed to both food and nonfood classes.

The data are total shipments, i.e., shipments for own use (defined as those for use by the same company, or an affiliate, subsidiary, or parent company) and shipments for sale. Separate data for shipments for sale are not available prior to October 1945. The original reports also show quarterly shipments by geographical division.

Monthly data for 1943-52 for total shipments (October 1945 through 1952 for shipments for sale), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. No similar data were collected prior to 1943.
${ }^{6}$ Data beginning 1943 not comparable with those for earlier years; see note 4 for this page.
${ }^{7}$ Average for 3 months, October-December.
${ }^{8}$ Beginning July 1948, the basis of quotation was changed from
the basing point system to quotations at the mills of leading producers.
${ }^{9}$ Average for 6 months, July -December (computed by OBE); see note 3 for this page regarding change in basis of quotation.

10 Average for 8 months, May-December (computed by OBE); see note 3 for this page regarding the substituted series beginning May 1953.
${ }^{11}$ Prices beginning May 1953 are for a substituted series and therefore not comparable with earlier data; see note 3 for this page.

## PAGE 158

${ }^{1}$ Sources: U. S. Department of Commerce, Bureau of the Census, beginning September 1945; the War Production Board for 1943-August 1945. The reporting companies represent the entire industry.

Commercial closures cover both the metal and plastic types (except caps for collapsible tubes) and include those for both food and nonfood containers; they exclude production of milk-bottle closures which averaged 12.9 million units per year in 1953-56. Of the total production of closures in 1953-56, the metal type averaged 83 percent.

The original reports show production and shipments of commercial closures for glass containers by type and size; production and shipments of milk bottle closures by type; crowns by end-use; home-canning closures for glass containers; as well as raw materials consumed in the production of closures.

Monthly data for July 1945-December 1952, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.
${ }^{2}$ Source: American Iron and Steel Institute. Data are compiled from reports of companies representing 100 percent of the total production of the industry for $1953-56 ; 98.5$ percent for 1952; 99.0-99.5 percent for 1944-51, 98.0 percent for 1941-43, and 95.0-97.0 percent for 1933-40. The industry includes only those processors which are also primary producers of steel. Data are net shipments, i.e., they exclude shipments to members of the industry for conversion into further finished products or for resale.

Data shown here (and beginning in the March 1956 SURVEY OF CURRENT BUSINESS) reflect regrouping of certain products and differ from those shown in earlier SUPPLEMENTS. Total shipments relate to all grades of steel (carbon, alloy, stainless, and heat-resisting steels). For some years, total shipments include small quantities of certain grades not distributed to the separate product classifications. For example, no product detail is available for heat-resisting steels for the period 1941-49. The component items for which data are given and which may need clarification are described below.
"Semifinished products"-ingots and steel for castings, blooms, slabs, billets, tube rounds, sheet bars, skelp, and wire rods. "Rails and accessories"-all rails, tie plates, rolled and forged wheels, axles, joint bars, and track spikes. "Hot rolled bars, including light shapes" - (the note appearing in earlier SUPPLEMENTS with reference to coverage of grades for hot-rolled bars is incorrect); the figures comprise carbon, alloy, and stainless steel grades through 1949 and, thereafter, also heat-resisting steels. "Pipe and tubing"-standard and line pipe, oil-country goods, and mechanical and pressure tubing. "Wire and wire prod-ucts"-drawn wire, nails and staples, barbed and twisted wire, woven wire fence, bale ties. "Tin mill products"-electrolytic tinplate, hot dipped tinplate and terneplate, and black plate. "Sheets and strip" -hot and cold rolled, galvanized, and (beginning 1946) all other coated and enameling sheets; hot and cold rolled strip; also (beginning 1946) electrical sheets and strip. Beginning 1946, figures for cold rolled sheets (shown separately), include shipments of enameling sheets; for the period 1946-50, such shipments averaged 210,000 tons per year.

The annual totals incluct revisions that cannot be allocated to the separate months because some companies make adjustments in their yearly figures which are not available on a monthly basis. Monthly averages are based on the annual totals.

Monthly data for 1950-52 for the series as presented in this volume are available upon request. Monthly data for 1940-54 (as noted above, for a different selection or grouping of products) will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. (Shipments of hot rolled bars, reinforcing bars, and semifinished products were first shown in the 1949 SUPPLEMENT.) Quarterly data for 1933-39 appear in the 1942 SUPPLEMENT and table 45, p. 14 of the November 1940 SURVEY.
${ }^{3}$ Includes data not shown separately.
${ }^{4}$ Monthly average computed from annual total. For 1956 , the monthly data are not revised to the final annual total.
${ }^{5}$ For July and August 1956.

## PAGE 159

${ }^{1}$ See note 2 for page 158 .
${ }^{2}$ lncludes data not shown separately.
${ }^{3}$ Source: American lnstitute of Steel Construction, Inc. Data are estimated totals for the structural fabricated steel industry and are based on reports from Institute members whose shipments range from 75 to 85 percent of the total industry shipments. The estimates are adjusted periodically to the Census of Manufactures. Data cover only structural steel (for construction and building use) that is fabricated to order. Products such as window and door frames, stairs, and ornamental iron are not included. New orders (including both domestic and foreign orders) pertain to actual contracts closed; backlog, to tonnage available for future fabrication for work orders on hand.

Figures beginning 1952 include additional work (intercompany and export work and galvanized structures) not included in earlier years. For backlog, the additional work actually reported to the Institute averaged 218,000 tons per month in 1952.

Monthly data for 1947-52, comparable with monthly averages for corresponding years shown herein, are available upon request. Estimates for years prior to 1947 not published in this volume were not linked to the levels determined from materials obtained from the 1947 Census of Manufactures. Also, figures for the war years are as actually reported to the Institute and do not represent industry totals. These monthly estimates (for new orders, 1910-46, and for shipments, 1933-46) are available upon request.
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines.
Monthly production of primary aluminum is based on reports of all producers; final yearly totals are derived from an annual industry canvass.
Beginning January 1956, data for aluminum recovered from scrap are compiled by Bureau of Mines from a survey of smelters and from figures supplied by the Aluminum Smelters Research Institute covering the operations of its members. Earlier data were reported directly to the Bureau of Mines. The monthly figures exclude operations of plants consuming less than 100 tons of aluminum-base scrap per year. The calculated recoverable metal content of purchased aluminum-base scrap consumed, includes new, old, and imported scrap, and scrap treated on toll agreement. No estimates of home or runaround scrap (process scrap consumed in the plant where generated) are included in the total.
Monthly averages for aluminum from scrap are based on annual totals which include reports from additional companies not reporting monthly. Monthly averages beginning 1939 represent the recoverable aluminum content of new and old aluminumbase scrap. Data prior to 1939 refer to the recoverable alumi -num-alloy content of aluminum-base scrap plus recovery from small quantities of copper-base and zinc-base scrap; monthly averages for 1939 and 1940, comparable with earlier years, are 4,500 and 6,700 short tons, respectively.
Monthly data for primary production for 1941-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. In addition to scattered minor revisions in other years, the monthly data for 194546 have been revised (since publication in the 1949 volume) in
line with annual totals; such revisions are available upon request. Monthly data prior to 1941 are not available.
Monthly estimates of aluminum recovered from scrap for 195152 are available upon request.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce through April 1941.

Monthly averages beginning 1949 are general imports (i.e., imports for immediate consumption plus material entering the country under bond); those for 1929-48, imports for consumption. Monthly averages for 1949 for imports for consumption, comparable with data shown through 1948 are as follows (short tons): Metals and alloys, crude, 6,445 and plates, etc., 655. For foreign-trade definitions and other pertinent information, see note 1 for page 104. For 1929 through 1938, figures shown for metal and alloys (crude) include imports of scrap, not separately available; such imports are not included in the data beginning 1939. Imports of scrap in 1939 and in 1940 amounted to 5,047 tons and 649 tons, respectively.

Metals and alloys (crude) include imports of ingots, pigs, and wire bars; figures for plates, sheets, and bars also include rods, circles, squares, etc.

Monthly data for 1950-52 are available upon request. For earlier years, the figures may be obtained from records of the Bureau of the Census. (Figures for imports of bauxite were published in earlier editions of BUSINESS STATISTICS and in the monthly SURVEY OF CURRENT BUSINESS prior to the October 1955 issue.)
${ }^{6}$ Source: American Metal Market. Beginning 1930, the prices are for $99 \%$ + virgin ingot aluminum, at New York; the quotation for 1929 is for pure aluminum (No. 1 virgin 98-99\%). Beginning March 1937, the prices are based on daily quotations; prior to March 1937, the prices are the average of a daily quoted range.

Monthly data for 1915-52 are available upon request. Prices for aluminum scrap castings were published in earlier editions of BUSINESS STATISTICS and in the monthly SURVEY OF CURRENT BUSINESS prior to the October 1955 issue.

7 Monthly averages for 1929-38 include imports of scrap, not available separately. Data beginning 1939 exclude such imports. Imports of scrap in 1939 and in 1940 amounted to 5,047 tons and 649 tons, respectively.
${ }^{8}$ Average price for 1929 is for pure aluminum (No. 1 virgin, 98-99\%) in New York.
${ }^{9}$ Monthly averages beginning 1939 are not comparable with those for earlier years; see 4th paragraph of note 4 for this page.
${ }^{10}$ Less than half a ton.
${ }^{11}$ Data beginning 1949 represent general imports; earlier averages refer to imports for consumption. See note 5 for this page.
${ }^{12}$ Figures beginning 1952 include additional work not included in earlier years. See 3d paragraph of note 3 for this page.
${ }^{13}$ Based on annual total which includes reports from additional companies not reporting monthly.
${ }^{14}$ Beginning January 1954, the monthly data are derived from recovery factors which differ from those used for earlier periods. Monthly estimates for January-October 1954, comparable with earlier data are as follows (short tons): 24,152; 23,708; 27,006 ; 26,240; 24,837; 23,461; 21,315; 24,315; 23,404; 25,067.
${ }^{15}$ For July and August 1956.

## PAGE 160

${ }^{1}$ Sources: U. S. Department of Commerce, Bureau of the Census and Business and Defense Services Administration; Civilian Production Administration for data prior to October 1945.

Coverage of the specified products is essentially complete. Data for net shipments of pig and ingot (combined in this volume with shipments of mill products, but shown separately in original reports) relate to both primary and secondary products. The figures include shipments by importers and represent shipments to consuming industries, i.e., to foundries for producing castings,
to steel plants and others for destructive uses, as well as shipments for export. Pig and ingot shipped for further processing into mill products (for which separate data are shown) are not included. Net shipments of pig and ingor are derived by subtracting all receipts from reported gross shipments.

Total mill products comprise-in addition to plate and sheetrolled structural shapes, rod, and bar; wire and cable; extruded shapes; drawn tubing; powder and paste; and for 1942-September 1945, also ingots, except ingots for castings. (For 1942-45, shipments of ingots, powder, and paste averaged $15.0 ; 21.3 ; 38.7$; and 24.8 million pounds per month.) Begimning January 1955, data include shipments of aluminum forgings, whereas previously the figures included forging stock as shipments in the shape in which it was shipped to the forging operation. Total monthly shipments of mill products as measured beginning 1955 are estimated to be between 1 and 2 million pounds less than would have been calculated under the former method. However, the addition of some captive operations not previously covered partly offsets this difference.

Shipments represent net shipments (derived beginning 1954 by subtracting the sum of producers' domestic receipts of each mill shape from the industry's gross shipments of that shape; prior thereto, by subtracting from total shipments the shipments to other metal mills for further fabrication into other forms of mill products). The series beginning 1954 for mill products (compiled jointly by Census and BDSA) differs from that shown through 1953 which is according to Census reports (CPA prior to 1945). Differences between the two series are due to differences in the types of establishments canvassed, the types of products covered, and the methods of deriving net shipments. Monthly data for 1953 comparable with figures for 1954 are shown in the descriptive note on pp. 289 and 290 of the 1955 edition of BUSINESS STATISTICS. Data for plate and sheet for the period October 1945December 1953 include weight of foil stock; prior to October 1945, shipments include weight of the foil. This change does not materially affect the comparability of the data.

Monthly data for January-December 1952 for total mill products and pig and ingot are as follows (millions of pounds): 220.7 ; 215.7; 230.9; 230.7; 221.6; 202.7; 203.4; 224.4; 234.7; 259.9; 231.7; 259.8. Earlier data are not available.

Monthly data for 1946-52 for mill products and 1942-52 for plate and sheet, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at the top of page 197 of this volume. Monthly data for 1942-45 for total mill products are available upon request. Data prior to 1952 for pig and ingot are not available.
${ }^{2}$ Sources: U. S. Department of Commerce, Bureau of the Census; Civilian Production Administration for data prior to October 1945.

The data relate to total aluminum and aluminum-base alloy castings and, beginning 1944, cover all types of castings; the categories "sand," "permanent mold," "die," and "all other" are shown separately in the monthly releases of the compiling agency The castings data for 1942 and 1943 do not include figures for the "all other" types and thus are not strictly comparable with those for later years; however, this lack of comparability is not serious, since the "all other" group is a negligible part of the total. (Monthly average shipments for this group in 1944 were 233,000 pounds.)

The shipments of castings represent estimates of industry activity, including amounts shipped for sale and for own use. Prior to 1945 , the estimates are based on reported shipments representing about 98 percent of the industry total. Monthly averages for 1946 and 1950 are based on annual totals of actual figures reported by all foundries. Monthly estimates for 1946-50 (shown in the 1951 and 1949 STATISTICAL SUPPLEMENTS) were based on monthly reports from the larger foundries and annual reports from the smaller ones; the coverage ratio of the larger foundries (derived from the complete canvass in 1946) was used to estimate the total monthly shipments. Annual totals for 194750 and monthly figures for 1949-50 have been revised by the compiling source to adjust for the difference shown by the previously estimated 1950 total and the actual total. Beginning September 1952, the monthly data are based on a more reliable sample of 550 establishments producing nonferrous castings. Monthly data beginning 1951 have been revised in order to bring the previously
published data into closer agreement with the estimates obtained for September-December 1952 from the new sample.

Monthly data for 1942-52, comparable with monthly averages shown herein (except that figures for 1947-48 are unadjusted for undercoverage as noted in 3d paragraph above), will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of page 197 of this volume.
${ }^{3}$ Source: U. S. Department of the Interior, Bureau of Mines. The mine production data are in terms of recoverable metal from domestic mines (including Alaska). Monthly data are on an estimated 100 -percent-coverage basis and are adjusted after the year-end to final annual figures. The monthly figures through 1944 are based largely on smelter receipts; beginning January 1945 they represent actual mine output. The monthly averages prior to 1944 are based on annual surveys of mine output.

The monthly figures for primary production and production of refined copper from secondary materials are reported each month by all primary plants in the United States and represent copper refined from domestic and foreign primary materials as well as from secondary materials. Copper recovered in forms other than refinery shapes (such as powder, etc.) by primary plants is not included. In addition, monthly figures for the production of refined copper from secondary materials only are reported each month by secondary smelters in the United States.
Beginning with 1945, the production of secondary copper refers to copper produced by both primary plants and secondary plants. Figures prior to 1945 cover primary plants only. In 1946, recovery of refined copper from secondary plants totaled 27,594 tons. Total production of refined copper from secondary materials includes electrolytic, casting grade, and copper billets, but excludes black copper and electro type plates, and copper castings.

Monthly data for 1941-52 for mine production, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of page 197 of this volume. Quarterly data for 1946-1st quarter 1951 and monthly data for April 1951 -December 1952 for production of refined copper from primary and secondary materials are available upon request.
${ }^{4}$ Source: U. S. Deparment of Commerce, Business and Defense Services Administration (Copper Division) from records of the Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Exports relate to domestic exports (metal weight) and cover refined copper, copper scrap, brass scrap, and brass and bronze ingots. For the period January-June 1956, data for brass and bronze ingots are excluded in accordance with the commodity classification schedule. For the years 1951-54, exports of brass and bronze ingots averaged 200 tons monthly and over 60 tons per month in 1955.

General imports (imports for immediate consunption plus material entering the country under bond) relate to basic metal content of copper in all forms-ore, concentrates, regulus, unrefined, black, blister, refined; scrap, etc. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953 and January 1956, see note 1 for page 104.

Monthly data for 1947-52 are available upon request; for earlier years, monthly data may be summarized from Bureau of Census reports "Monthly Summary of Foreign Commerce of the United States." In the 1955 edition of BUSINESS STATISTICS and earlier issues, imports for consumption and total exports of refined and semifabricated forms of copper are shown.
${ }^{5}$ Average for 3 months, October-December. Data for October 1945 forward are not comparable with earlier figures, primarily because the earlier figures include shipments of aluminum ingots.
${ }^{6}$ Beginning 1945, data comprise secondary copper produced by both primary and secondary plants. Figures prior to 1945 cover primary plants only. In 1946, recovery of refined copper from secondary plants averaged 2,300 tons per month.
${ }^{7}$ Not comparable with earlier data; see 4th paragraph of note 1 for this page.
${ }^{8}$ Not strictly comparable with earlier data; see 3d paragraph of note 1 for this page.
${ }^{9}$ Based on annual total which includes exports of brass and bronze ingots for the year 1956. Such exports are not included in the monthly data for January-June 1956.

10 Data exclude exports of brass and bronze ingots; in 1955, such exports averaged over 60 tons per month.

## PAGE 161

${ }^{1}$ Source: U. S. Department of Commerce, Business and Defense Services Administration (Copper Division). The data, representing the total industry, are based on a monthly survey of the brass mills, copper wire mills, and secondary smelters (conducted jointly by BDSA and U. S. Department of the Interior, Bureau of Mines), on a quarterly survey of brass and bronze foundries, copper-base powder mills, and miscellaneous users of refined copper (conducted by BDSA), plus additional information on stocks obtained from the Copper Institute.
Total stocks include both own and toll refined copper on hand (wherever located) held by fabricators, but exclude copper held in Government stockpile. Stocks of refined copper do not include copper in process of fabrication which would be difficult to estimate because of the mixture of other metals in alloys, and of scrap materials with primary materials. Figures for fabricators' stocks and consumption cover brass mills, copper wire mills, copper-base ingot makers (secondary smelters), copperbase foundries, copper-base powder mills, and miscellaneous users of refined copper.
Receipts, consumption, and stocks of copper-base scrap are not accounted for in the summary. Statistics for such materials, however (as published quarterly in the Copper Industry Report), are shown below.

## Copper-Base Scrap <br> (Thousands of short tons-copper content)

Quarterly data for 1947-1st quarter 1951 and monthly data for April 1951-December 1952 for consumption, comparable with monthly averages for corresponding years shown herein, are available upon request. Monthly data prior to 1953 for stocks are not available.

Monthly data for 1934-54 for crude and refined copper production, deliveries, and stocks (compiled by the Copper Insti-
tute), as published in the SURVEY OF CURRENT BUSINESS prior to the October 1955 issue, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Source: Engineering and Mining Journal. Data are based on weighted averages of domestic sales for both prompt and future delivery, and represent averages of daily quotations for copper in the form of ordinary wire bars and ingot bars. Cathodes in standard sizes are sold at discounts prevailing at the various refineries at time of shipment. Other shapes are subject to premiums currently in force at the refineries.

In the trade, copper prices are quoted on a delivered basis, i.e., delivered to consumer's plant. Since delivery and interest charges vary with the destination, as well as the shipping point, the figures here are net prices at refineries on the Atlantic seaboard. Most of the refineries on the Atlantic seaboard are located in the New York tidewater areas so that, for all practical purposes, f.o.b. refinery, New York, is the same as f.o.b. Atlantic seaboard.
Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Commerce, Business and Defense Services Administration (for data beginning 3d quarter 1951). The data for previous periods as taken from various sources were adjusted by BDSA where necessary to be comparable with succeeding figures. The data represent the entire mill and foundry copper-fabricating industries. Shipments of brass mill products for 1947-2d quarter 1951 and 1st quarter 1946 were compiled by Copper and Brass Research Association, and for 1943-46, by War Production Board. Shipments of copper wire mill products for 1947-2d quarter 1951 and 1st quarter 1946 are based on consumption of refined copper reported by U. S. Department of the Interior, Bureau of Mines; for 1943-46, by War Production Board. Shipments of brass and bronze foundry products for 19462d quarter 1951 were compiled by U. S. Department of Commerce, Bureau of the Census; for 1943-45, by War Production Board.

Shipments are reported in terms of metal weight, except for copper wire mill products which are reported in copper content. The original reports also show separately for brass mill products, shipments of sheet and strip; rod, bar, and wire; and pipe and tube for both copper-base alloy and unalloyed copper, as well as total shipments of copper-base powder mill products.

Quarterly data for 1943-52, comparable with quarterly averages for corresponding years shown herein, a re available upon request.
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines, for all series except as noted. Mine production data are in terms of recoverable metal from domestic mines, including Alaska. Monthly reports for mine production are on an estimated 100-percent-coverage basis and are adjusted after the year-end to final annual figures. Monthly data for all other series are based on reports from all primary producers; from most of the known secondary smelters and others using scrap; and from approximately 450 consumers of lead. Except for consumption data, no estimates are made for those companies not reporting monthly. Monthly averages are computed from annual totals derived from the sum of the monthly data and from reports from additional companies which report on an annual basis only. All data, except stocks of scrap, are in terms of lead content.

Mine production figures through 1944 were based largely on smelter receipts; beginning January 1945, the figures represent actual mine output.

Secondary production represents lead recovered from leadand tin-base scrap at both primary and secondary smelters. The total includes secondary lead recovered by smetters that treat ore and some scrap, as well as smelters that treat only scrap and drosses.
Consumption (compiled by American Bureau of Metal Statistics prior to 1942) represents total consumption of primary and secondary lead. The data include lead in ore used directly in the manufacture of leaded zinc oxide production, and small quantities of the lead content of scrap used directly in fabricated products.

The original reports show monthly consumption of lead in metal products, pigments, chemicals, etc., by products.

Producers' stocks (compiled by the American Bureau of Metal Statistics) comprise lead in base bullion at smelters and refineries, in transit to refineries, and in process at refineries, plus lead in ore and matte and in process at smelters. Primary refiners' stocks of refined lead and antimonial lead (as compiled annually by Bureau of Mines beginning 1943) represent physical inventories at the plants, irrespective of ownership, and do not include material in process or in transit. Refiners' stocks prior to 1943 are as reported by ABMS and include metal held by all primary refiners and also by some of the refiners of secondary metal that produce soft lead. Stocks reported by ABMS at end of 1943, comparable with earlier years, totaled 33,090 tons.

Consumers' stocks of lead, shown in the original reports by type of material held, represent inventories at plants. The data beginning 1951 reflect the inclusion of reports from additional respondents; December 31,1950 stocks shown are revised for comparability with later data. December 31, 1950 stocks, comparable with stocks for earlier periods, amounted to 125,244 short tons. Beginning January 1956, the figures include secondary smelters' stocks of refinery shapes not included in the data for earlier periods. At the end of January 1956, such stocks at secondary smelters' plants amounted to approximately 12,000 short tons. For the period 1940-46, end-of-year stocks cover refined soft lead only; such stocks at the end of 1947 totaled 48,816 short tons. Consumers' stocks of lead are not available prior to 1940.

Stocks of purchased lead-base scrap held by all consumers (remelters, smelters, refiners, etc.) are shown in terms of gross weight. The total shown at the end of 1942 is derived from an expanded survey of the secondary lead industry. Stocks of scrap reported by consumers from earlier surveys at the end of 1942, 1941, and 1940 , totaled 53,500 tons, 41,200 tons, and 41,900 tons, respectively.

Monthly data for 1948-52 (except for refiners' stocks which are compiled monthly by Bureau of Mines beginning January 1951) are available upon request. Monthly data for $1930-54$ for primary lead production, shipments, and stocks (compiled by ABMS and as published in the SURVEY OF CURRENT BUSINESS prior to the October 1955 issue), as well as mine production data for 1941-52, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census; f-om Bureau of Foreign and Domestic Commerce through April 1941. General imports refer to imports for immediate consumption plus material entering the country under bond. For foreign-trade definitions and other pertinent information, see note 1 for p. 104. Imports of lead shown here comprise the lead content of ores, flue dust, and mattes; bullion or base bullion; and pigs and bars. Imports of reclaimed lead, scrap, drosses, etc., are not included. Figures for secondary lead recovery, shown in the adjacent column, include production from imported scrap and drosses.
Monthly data for 1948-52 are available upon request. Earlier monthly figures may be obtained from records of the Bureau of the Census. (Figures for imports of lead, as shown in earlier editions of BUSINESS STATISTICS and in the monthly SURVEY OF CURRENT BUSINESS prior to the October 1955 issue, relate to imports for consumption and include, in addition to ores and metals, imports of scrap and old, babbitt metal, solder, type metal, and antimonial lead. For figures through 1954, see reference note at top of p. 197 of this volume.)
${ }^{6}$ Figures shown on "monthly average" lines for copper-base mill and foundry products are quarterly averages.
${ }^{7}$ Stocks as of December 31.

## PAGE 162

${ }^{1}$ See note 4 for page 161 .
${ }^{2}$ Source: Engineering and Mining Journal. The data represent arithmetic averages of daily prices of desilverized commongrade pig lead. Prices are based on weighted averages of sales (reported by producers and their agencies) of domestically refined metal sold to domestic consumers. The quotations are on
the basis of cash, New York, on sales for both prompt and future deliveries.

Monthly data for 1929-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (The revision for June 1950, noted in the 1955 issue of BUSINESS STATISTICS, is incorrect. The price for June 1950 is $\$ 0.1181$ per pound.)
${ }^{3}$ Sources: U. S. Department of the Interior, Bureau of Mines (except estimates of primary pig tin consumption for 1929 and 1931-34, which were compiled by the American Bureau of Metal Statistics). Monthly data are based on reports from companies estimated to account for over 90 percent of tin consumption and stocks.

Production represents pig tin produced in the United States from both primary sources (imported tin ore or concentrates) and secondary sources (principally from tin recovered from detinning tinplate, scrap, and used cans); the figures exclude production of copan (first produced in 1950). Copan production in recent years is as follows (long tons): 1951, 700; 1952, 252; 1954, 477. (There was no copan production in 1953, 1955, and 1956.) Tin derived from reworking scrap originating in plants is not included in the production and consumption figures. The tin content of materials derived from re-treatment of materials in home plants and returned to the system is considered merely as a step in the manufacturing process.

Domestic mine production of tin is virtually nil. For 1950-56, total production amounted to under 100 tons per year, except for the year 1954 ( 180 tons). Figures for production for 1942-56 include pig tin produced from imported tin concentrates at the Gov-ernment-owned smelter plant at Texas City, Texas (operated by the Tin Processing Corporation, an independent contractor, under an operating agreement with the RFC and later, with the Federal Facilities Corporation). The Government discontinued operation on December 31, 1956. During the 1945-56 period, this smelter accounted for more then 90 percent of total production. Data beginning 1953 for total consumption include tin content of imported tin-base alloys (not included in earlier data); such alloys used in 1953-54 averaged about 300 tons per month. Total stocks represent the sum of Government and industrial stocks of pig tin. Government stocks represent those owned by the Federal Facilities Corporation (formerly by RFC), but exclude stocks held in the national stockpile. Industrial stocks represent stocks held by private smelters, fabricators, and distributors but do not include tin in process, tin afloat to the U. S., and secondary pig tin.

Monthly averages for 1929-56 for production and for consumption are based on annual totals; stock figures for 1929-50 represent stocks as of December 31. Averages for 1951-56 for stocks are based on the monthly data. Monthly figures were not compiled by the Bureau of Mines prior to 1951. Monthly data for 195152 (and 1942-50 for the series as compiled by the U. S. Department of Commerce and the Civilian Production Administration)are available in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from the Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953 and January 1954, see note 1 for p. 104. The data for imports comprise the tin content of ore, cassiterite, and black oxide of tin; and bars, blocks, pigs, grain, or granulated. Data beginning 1934 are imports for consumption; earlier data represent general imports.

Exports, including reexports of metallic tin, cover tin metal in ingots, pigs, bars, blocks, anodes, cathodes, slabs, and other crude forms (including ores and concentrates). The figures for 1931-41 cover foreign tin only; exports of domestic tin are not separately recorded.
Monthly data for imports of ore and metal for 1938-52, and 1929-37 for metal imports only, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Revised monthly imports of ore for January-December 1947 are as follows (long tons): 2,$932 ; 1,654 ; 0 ; 4,359 ; 1,187 ; 949$; 2,$314 ; 7,014 ; 2,987 ; 1,840 ; 1,364 ; 2,578$. Monthly data for JanuaryDecember 1951 and 1952 for exports are as follows (long tons): $1951-196 ; 207 ; 344 ; 269 ; 38 ; 66 ; 34 ; 16 ; 62 ; 48 ; 108 ; 125 ; 1952-$
$75 ; 23 ; 15 ; 42 ; 14 ; 4 ; 3 ; 17 ; 4 ; 20 ; 139 ; 23$. Earlier monthly data may be obtained from the records of the Bureau of the Census.

5 Except as noted below, data shown on "monthly average" lines for stocks of lead and tin represent stocks held at end of year, obtained from annual surveys; they are not monthly averages. Figures beginning 1948 for producers' stocks of lead and beginning 1951 for tin stocks are averages of the monthly data.
${ }^{6}$ Exports of foreign metal only; domestic tin metal exports were not recorded separately.
${ }^{7}$ Data not available.
${ }^{8}$ Less than 1 ton.
${ }^{9}$ Data represent consumers' stocks of refined soft lead only; such stocks at end of 1947 totaled 48,816 short tons.
${ }^{10}$ Figures beginning April 1942 include production by the Gov-ernment-owned smelter at Texas City, Texas.
${ }^{11}$ Beginning December 31, 1943, refiners' stocks are as compiled by Bureau of Mines. Data prior to 1943 represent end-ofyear stocks as reported by American Bureau of Metal Statistics; refiners' stocks for 1943, comparable with earlier data, amounted to 33,090 tons.
${ }^{12}$ Excludes 9,800 tons of tin (brought to the United States from Japan for the account of occupation authorities) purchased by the RFC in 1947 and first reflected in stock data as of December 31, 1947.

13 Consumers' stocks of lead at the end of 1950 , shown here, are revised for comparability with later years. Stocks at end of 1950, based on reports from fewer reporters (and comparable with earlier data), totaled 125,244 short tons.

14 Beginning January 1953, data include consumption of imported tin-base alloys (not included in earlier data); see 3d paragraph of note 3 for this page.

15 Data at end of December 1955 reflect an adjustment of approximately 6,400 tons of lead transferred to consumers' stocks from scrap stocks; such lead was formerly reported incorrectly as scrap-lead stocks. In addition, consumers' stocks for end of December 1955 are adjusted to include secondary smelters ${ }^{*}$ stocks of refinery shapes (not included in earlier data); see note 16 following.
${ }^{16}$ Data beginning January 1956 include secondary smelters* stocks of refinery shapes (not included in data through November 1955). At the end of January 1956, such stocks at secondary smelters' plants amounted to approximately 12,000 tons.

17 Production by detinners only.

## PAGE 163

${ }^{1}$ Source: American Metal Market. Data represent averages of daily prices of Straits tin for prompt delivery in New York.

In August 1941 a ceiling price of $\$ 0.5200$ a pound was established by the Government and this price was in effect through October 1946. From November 1946 through December 1949, the prices are those offered by the Reconstruction Finance Corporation. Data for January 1950 through July 1951 are open-market quotations (January 1950 RFC quoted price, $\$ 0.7614$ ). The selling price from August 1951 through August 1952 was maintained by the RFC (at $\$ 1.03$ from August 1, 1951, to January 21, 1952, and at $\$ 1.215$ from January 22, 1952, to the end of the year). Resumption of private importing for resale was permitted beginning August 1, 1952. The open-market price was nominal until midAugust.

Monthly data for 1929-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{2}$ Source: U. S. Department of the Interior, Bureau of Mines. Data represent mine production of recoverable metal (including that made into zinc pigments and salts) in the United States and Alaska. Monthly data are on an estimated 100 -percent-coverage basis and are adjusted after the year-end to final annual figures. Monthly averages for 1929-40 are computed from annual totals. Through 1944, data were based largely on smelter receipts; beginning January 1945, the figures represent actual mine output.

Monthly data for 1941-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce through April 1941. For foreign-trade definitions and other pertinent information, see note 1 for page 104.

Data on imports cover zinc in ores and concentrates and zinc blocks, pigs, or slabs. The figures apply to general imports (i.e., imports for immediate consumption plus material entering the country under bond), except the 1929-38 monthly averages for metal which are imports for consumption.

Exports represent exports of zinc cast in slabs, pigs, or blocks. For 1938, comparable data are not available separately. In that year total exports of zinc cast in slab, plates, and blocks; rolled in sheets, and strips, etc.; and zinc as scrap or in other forms amounted to 5,736 short tons.

Monthly data for 1945-52 are available upon request. Monthly data prior to 1945 may be obtained from records of the Bureau of the Census. (Figures for imports of zinc as shown in earlier editions of BUSINESS STATISTICS and in the monthly SURVEY OF CURRENT BUSINESS prior to the October 1955 issue represent imports for consumption. The data also include imports of sheets, old and worn, and dross and skimmings, which are not included in the present series.)
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines (except as noted below). Monthly data represent industry totals based on reports from companies estimated to account for over 90 percent of consumption; monthly averages for all series are based on Bureau of Mines annual surveys which include additional small companies not reporting monthly.

Primary smelter production (from domestic and foreign ores) is calculated, for the monthly series, as the difference between total secondary (redistilled) production as compiled by Bureau of Mines and total smelter production as reported monthly by the American Zinc Institute, since the Bureau of Mines compiles primary smelter production on a yearly basis only. Production of secondary redistilled zinc by primary and secondary smelters excludes zinc recovered by remelting purchased scrap and from other operations (such as production of zinc dust, zinc in zinc oxide form, etc., and zinc recovered from other alloy scrap).

Consumption by fabricators (shown separately by industry groups and products in the original reports) includes small quantities of remelt zinc for some years. Monthly averages for 192939 for consumption are based on totals (calculated by the American Bureau of Metal Statistics) representing industrial use of primary and secondary zinc, except for a few small consumers.

Consumers' stocks represent slab zinc at plants and exclude remelt spelter and metal in transit. Monthly figures for producers' stocks are compiled by the American Zinc Institute and represent stocks of slab zinc as reported by all producers that are members of the Institute. Producers' stocks shown for 192956 on "monthly average" lines represent stocks of zinc held December 31 at primary and secondary zinc reduction plants; these figures are derived from Bureau of Mines annual surveys.

Monthly data for all series for 1944-52 and for consumption and consumers' stocks for 1942-52 are available upon request. Monthly figures for 1929-52 for AZI producers' stocks (also, production and shipments as published in the SURVEY prior to the October 1955 issue) will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of page 197 of this volume.
${ }^{5}$ Source: Engineering and Mining Journal. Data represent averages of daily prices for common grades of slab zinc (usually described as ordinary prime western brands) based on weighted averages of sales reported by producers. Common grades of slab zinc are reported on the basis of St. Louis, although relatively little slab zinc is actually delivered at that point. Sales are made for delivery at the places where required, and prices are figured back to a St. Louis basis or are made on St. Louis basis and figured up to points of delivery, with allowance for freight differentials either way.

Monthly data for 1929-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{6}$ Source: U. S. Department of the Interior, Bureau of Mines. Data are based on monthly reports from all domestic producers of zinc oxide. Beginning 1941, the figures refer to the zinc content of foreign and domestic ores and concentrates consumed in the production of zinc oxide pigment. Prior to 1941, data for foreign ores are not included (for 1941-42, the zinc content of foreign ores consumed in producing zinc oxide averaged 343 tons per year; for 1943-48, 14,741 tons per year). Excluded from the figures is the zinc content of such materials as zinc dust residues, secondary residues, scrap zinc, remelt zinc, and slab zinc (the latter, however, is included for the period March-August 1946; for January - February 1946, slab zinc used in the production of zinc oxide averaged 1,375 tons per month).

Monthly averages shown are based on annual totals which include revisions not incorporated in the monthly data. Monthly data for 1942-52 are available upon request.
${ }^{7}$ Stocks as of December 31; derived from annual survey and not a monthly average.
${ }^{8}$ See 3d paragraph of note 3 for this page.
${ }^{9}$ Earlier data (for 1929-38) are imports for consumption instead of general imports.
${ }^{10}$ Data beginning 1941 include the zinc content of foreign ores used in the production of zinc oxide; prior thereto, amounts from foreign ore are not included. For 1941-42, the zinc content of foreign ores so used averaged 30 tons per month and for 1943-48, 1,200 tons per month.
${ }^{11}$ Based on total which includes, for the period March-August, slab zinc used in production of zinc oxide; other periods exclude slab zinc consumption. For January-February, slab zinc used averaged 1,375 tons per month.

## PAGE 164

${ }^{1}$ Source: The Institute of Boiler and Radiator Manufacturers (except for the period January 1946-May 1953 when estimates were compiled by the U. S. Department of Commerce, Bureau of the Census). In addition to ordinary-type cast-iron radiators, the figures cover (for the reporting firms) also cast-iron convectors and convector-radiators (but not nonferrous-metal convectors). Prior to 1940, however, data reported for convectors were incomplete. Convectors are represented by thousands of square feet of equivalent radiation. Monthly data are not available for the period September 1942-December 1945; annual estimates of production of radiators and convectors for 1942-45, compiled by the WarProduction Board, are as follows (millions of square feet of heating surface): $59.6 ; 31.0 ; 17.4 ; 17.7$.

According to the Institute, the estimates beginning June 1953 represent substantially complete coverage of shipments of the specified items. For the period 1942-May 1953 the data are based on reports of 2.2-20 companies-all the known producers of these products. In 1940 and 1941, the reporting firms were estimated by the Institute to account for nearly 99 percent of all cast-iron radiators and convectors produced; in the earlier years back to 1930, for 90-95 percent.

Monthly data for 1932-52 (except for the period September 1942December 1945), comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as in dicated in the note at top of p. 197 of this volume. The radiation figures are designated "ordinary-type radiators" in the SUPPLEMENTS prior to the 1942 issue, but, according to the Institute, include some data for cast-iron convectors and radiators.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. Data are from reports by manufacturers numbering as follows: 1933-35, 160 ( 8 of these, however, discontinued business during 1935); 1936-39, 178; 1940, 170; 1941, 159; 1942, 148; 1943, 137; $1944-45,124 ; 1946,150$. For the period 1947-52, the number of active companies ranged from 165 to 142 . The 26 companies added during 1936 were newly established concerns except for a few small ones not reporting prior to 1936. For the period Janu-ary-June 1936, the additional manufacturers represented in the 178 -company series account for about 2.1 percent of total shipments reported by the 178 companies and for 0.3 percent of total stocks. The changes between 1939 and 1941 resulted from firms going out of business or becoming inactive and from the addition
of 2 manufacturers before the close of 1940. The changes from 1942 through 1946 reflect the temporary decline in activity in the industry during the war and the resumption of activity in 1946.

The manufacturers covered in the 1937 and 1939 data shown here produced approximately 90 percent of the total value of output reported in the Census of Manufactures for those years. For the period 1944-May 1953, the reported data represent virtually the entire industry, i.e., all known manufacturers. Beginning June 1953, the monthly data are estimated industry totals based on reports from a selected group of large firms whose shipments represent about 91 percent of the total industry.

These statistics relate to oil burners and oil-burner units designed for use in conjunction with the following types of equipment: Central heating plants for homes, apartments, office buildings, churches, theaters, and similar buildings; residential water heaters; industrial-process equipment such as heat-treating furnaces, industrial ovens, etc.; and equipment for generation of steam for power. The figures do not include burners of the socalled distillate type used in ranges, stoves, water heaters, and space heaters.

Data included for furnace-burner units, boiler-burner units, and (through 1944) for water-heating units cover only those units produced by manufacturers of oil burners; units produced by firms which purchase oil burners for installation in furnaces, boilers, and water heaters of their own manufacture are excluded. Beginning 1945, data for water-heating units are excluded (prior to 1945 , water-heating units were not called for on the schedule but were usually reported in data for residential burners shipped separately).

For 1955, total shipments and end-of-year stocks, derived from reported annual figures, differed substantially from the data reported in the monthly survey. Revised monthly data for shipments are not available; revised stocks for January-December 1955 are as follows (number): 77,313; 78,040; 95,569; 109,616; 106,$364 ; 103,937 ; 99,851 ; 90,867 ; 76,532 ; 75,150 ; 75,572 ; 75,699$. Monthly data for 1933-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{3}$ Sources: U. S. Department of Commerce, Bureau of the Census, and the Gas Appliance Manufacturers' Association (the latter for shipments of gas stoves and ranges beginning Janua ry 1956; such data are estimated totals based on reports from manufacturers accounting for 80-95 percent of total industry shipments); prior to October 1945, data were compiled by the War Production Board. For the period September 1943-May 1953, monthly reports were received from all known manufacturers (ranging in number from 130 to 106 for 1946-52). Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose shipments represent over 95 percent of the total industry. The original reports also show inventories on hand at the end of the month.

Combination ranges (those designed to use two different fuels interchangeably) are shown separately in the original reports but are here included with gas stoves, since gas is one of the fuels used in most of such ranges. The gas-stove category also includes bungalow ranges, which are designed to use more than one fuel but may employ the fuels for different purposes (such as, one for cooking and another for heating water, etc.). Excluded from the gas category are the built-in types; shipments of such types totaled over 90,000 units in 1955. Miscellaneous cooking appliances (gas hot plates, needle-valve stoves, portable ovens, and other liquid-fuel types) are not included.

Monthly figures for 1945-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Monthly data for September 1943-December 1944 are available upon request. Note that data shown in the 1947 STATISTICAL SUPPLEMENT are for production; publication of production data was discontinued by the compiling agency.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census; data for the period January 1943-September 1945 are based on reports to the War Production Board. For the period September 1943-May 1953, monthly reports were received from all known manufacturers (ranging in number from 157 to 119 for 1947-53). Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose
shipments represent over 92 percent of the total industry shipments. The figures beginning June 1953 exclude shipments of wood heating stoves of the sheet-metal airtight type. For 1955, the monthly averages for shipments of gas stoves and for the total are based on annual totals which include certain types (such as laundry stoves) not covered in the monthly survey. The original reports also show inventories on hand at the end of each month.

Monthly figures for 1945-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Data for September 1943-44 are available upon request. Note that data shown in the 1947 STATISTICAL SUPPLEMENT are for production; publication of these data was discontinued by the compiling agency.
${ }^{5}$ Average for 8 months, January - August.
${ }^{6}$ Average for 4 months, September-December.
${ }^{7}$ See 2d paragraph of note 2 for this page.
${ }^{8}$ Based on total shipments (from annual survey of all known manufacturers) published by the U. S. Department of Commerce, Bureau of the Census.
${ }^{9}$ Based on annual total which includes reports from smaller firms; the monthly figures (which include estimates for these firms) were not revised.

10 Beginning June 1953, figures for total heating stoves and coal and wood stoves exclude shipments of wood heating stoves of the sheet-metal airtight type. Shipments of this type averaged 37,900 and 28,700 units per month in 1952 and 1953, respectively.

## PAGE 165

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. Data beginning January 1945 are compiled from reports received directly by the Bureau and for 1944 from reports to the War Production Board. Beginning June 1953, the data are estimated industry totals based on reports from a selected group of large manufacturers whose shipments represent over 95 percent of the total industry. For the period January 1947-June 1953, monthly reports were received from all known manufacturers (ranging in number from 148 to 166 for those years). Prior to 1947, the data were compiled from reports of manufacturers numbering from 100 to 133 in 1944-46; these manufacturers accounted for almost the entire production of warm-air furnaces. Changes in the number reporting represent for the most part the postwar expansion of the industry by the entrance of new firms. The data cover forced -air and gravity -air -flow furnaces made of cast iron and of steel.

The original reports also show separate figures for inventories of warm-air furnaces on hand at the end of each month by type of fuel consumed, and shipments and inventories of floor and wall furnaces.

Monthly data for 1944-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Sources: Gas Appliance Manufacturers' Association (beginning June 1953), and U. S. Department of Commerce, Bureau of the Census (prior to June 1953). The Association's figures are from reports of manufacturers whose shipments represent about 98 percent of total shipments; figures compiled by the Bureau of the Census represent substantially complete coverage of the industry. Monthly averages based on annual totals, as reported by the Bureau of the Census, for selected years, are as follows (number): $1947,174,246 ; 1954,203,780 ; 1955,219,453$. The figures cover direct-fired water heaters, comprising underfired storage and side-arm types. The original reports also show inventories on hand at the end of each month.

Monthly data for 1952 for shipments of gas water heaters and monthly data for September 1945-December 1951 for all water heaters of the nonelectric type (including direct-fired heaters for use with gas, oil, or coal and wood, and also indirect-fired types) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Note that data shown in the 1947 SUPPLEMENT are for production; publication of these data was discontinued by the compiling agency.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. Comparability of the series has been affected at various times by changes in the number of reporting companies and in items included (see next paragraph, also note 12 below, for available details on major changes). Beginning with 1954, the data for blowers and fans and for the unit-heater group represent orders booked by all known manufacturers of the specified products.
Figures for 1948-53 are believed to represent substantially complete industry coverage, whereas those prior to 1948 account for about 90 percent of total "production" of the items.

The Bureau of the Census reviewed the returns from the 1947 and 1954 Census of Manufactures and, as a result, revised previously published figures from 1948 forward and again from 1954 forward to incorporate data for a number of companies not reporting in the original surveys. In 1948, shipments of fans, blowers, and unit heaters by the additional companies included amounted to $\$ 10$ million. Additional companies included effective with 1950 accounted for about 4 percent of the total value of shipments of the specified items in that year. The revision beginning with 1954 raised the level of new orders for blowers and fans in that year from a quarterly average of $\$ 47,334,000$ to $\$ 49,158,000$; the revision of data for the unit-heater group was minor. Such changes as were made in coverage, etc., for the period prior to 1948 were, for the most part, unimportant, except in 1939 when new companies included increased the value of new orders for blowers and fans in that year by about 6 percent and for unit heaters by 8 percent.

Figures for blowers and fans relate almost entirely to commercial and industrial equipment (but also include household fans, except the free air circulating types); they include centrifugal blowers and fans and propeller fans and axial fans, including bearings, pulleys, or other equipment for installation when furnished. Blower-filter units (furnace blower) were not included prior to 1939 but production prior to that year was probably small. Data beginning 1953 include new orders for positive displacement blowers and turbo-blowers not included in earlier figures. In 1953, new orders for these additional items averaged $\$ 2,620,000$ per quarter. The unit-heater group covers industrial-type unit heaters and unit ventilators, including heating element and motors when furnished, and heat transfer coils. Data beginning 1947, for both blowers and fans and the unit-heater group, include also spare parts which, with the exception of some wheels and housings for blowers and fans, were not included prior to 1947. However; the change did not significantly affect comparability of the 1947 figures with those for 1946 and earlier years shown here.

The original reports provide information in detail for individual items, including the dollar value of shipments. Figures for air washers and (beginning 1956) power roof ventilators, available in the original reports, are not included in the data shown here.

Quarterly or monthly data for 1936-52 (for 1933-52 for unit heaters), comparable with averages for corresponding years as shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note changes affecting year-to-year comparability as mentioned above).
${ }^{4}$ Source: Foundry Equipment Manufacturers Association. Data represent net (total, less cancellations) new orders received for new equipment from, or sales to, the foundry trades only. The indexes are based on reports of members estimated to account for a major part of the total dollar sales of the foundry-equipment industry. The principal products are molding machines, sandcutting machines, sand-blast machines, material handling and processing equipment, tumbling barrels, sand-mixing machines, cupolas, ladles, core-making machines, etc.

Monthly indexes for May 1940-December 1952 (based on a different reporting panel of companies and constructed on the base years 1937-39) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Source: Industrial Heating Equipment Association, Inc. Data, representing new orders (less cancellations) for industrial elec-tric-processing furnaces and fuel-fired processing furnaces for the heat treatment and processing of metals and materials, are based on reports of member companies. The combined new orders for these furnaces, as reported by member companies, account for about 75 percent of those for the entire industry. The original reports also give the number of furnaces ordered.

Monthly data for electric furnaces for 1936-52 and for fuel-fired furnaces for 1946-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Sources: The Industrial Truck Association (beginning July 1941) and U. S. Department of Commerce, Bureau of the Census (prior to July 1941). Data as reported by the Bureau of the Census covered the entire industry. Data for electric trucks (operator riding) as reported to the Association are stated to cover the following percentages of the industry total: for the period 1941-49, 75 to 80 percent; 1950, 85 percent; 1951-53, 95 percent; 1954, 99 percent. Beginning 1955, figures for all types shown cover approximately the entire industry.

Data cover electric rider-type trucks, hand (motorized) trucks, and gasoline-powered trucks (including the rider types) and tractors. The platform types (fixed, low lift, and high lift) and the cantilever types (fork, ram, and crane), as well as some special models, are included.

Data prior to 1955 for electric hand trucks and gasoline-powered trucks and tractors, as compiled by the Association, are not available. According to the 1954 Census of Manufactures, shipments (for which number of units is available) of powered trucks (operator walking) totaled 8,452 units in 1954 and 7,469 in 1947; shipments of gasoline-powered trucks (operator riding) and tractors totaled 21,322 units in 1954 and 17,824 in 1947.

Monthly data for electric rider-type trucks for 1929-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

7 Quarterly average.
${ }^{8}$ Average for 4 months, September-December.
${ }^{9}$ Data beginning 1948 are not comparable with preceding figures; see 2 d paragraph of note 3 for this page.

10 Data beginning 1950 are not strictly comparable with preceding figures; see 2 d paragraph of note 3 for this page.
${ }^{11}$ Average based on annual total which includes reports from small firms; the monthly figures (which include estimates for these firms) were not revised.
$1^{12}$ Beginning 1953, figures include new orders for positive displacement blowers and turbo-blowers not included in the earlier data. In 1953, new orders for the added items averaged $\$ 2,620,000$ per quarter.

13 Data beginning 1954 cover reports from companies not for merly included; the 1954 quarterly average for new orders on the former basis, and more directly comparable with data for 1953 , is $\$ 47,334,000$.

## PAGE 166

${ }^{1}$ Source: National Machine Tool Builders' Association (from the War Production Board for the period 1941-July 1945). The data represent total industry shipments, new orders, and backlog based on reports from Association members. Reported volume of shipments and new orders accounts for 85-90 percent of the industry totals.

Machine tools included in the data are tools of the metal-cutting type, defined as power driven, complete metal-working machines, not portable by hand, used for progressively removing metal in the form of chips. The figures do not include data for types of machinery that form metal, such as presses and forging machines.

The indexes of new orders and shipments of machine tools, as shown in the biennial editions of BUSINESS STATISTICS (194955 issues), have been discontinued. (The new orders index previously published was based on gross new orders. Therefore, comparison of rates of change between the present dollar series of net new orders and the former index for gross new orders should not be made.)

Monthly data for 1945-52, comparable with monthly averages for corresponding years shown herein, are available upon request. Monthly data for total dollar shipments only for the period 1939-44 are available as follows: 1940, see note on p. S-30 of
the November 1942 SURVEY; monthly data for 1941-44 are shown in the 1947 STATISTICAL SUPPLEMENT; data for 1939 are available upon request.
${ }^{2}$ Source; U. S. Department of Commerce, Bureau of the Census. The data are based on reports from all known companies manufacturing the specific types of equipment covered. The dollar value of shipments is compiled from net billing prices, f.o.b. factory.

Shipments of construction machinery as shown here relate only to excavating and earthmoving types. The types included are road construction and maintenance machinery (ditchers and trenchers, carrying and hauling scrapers, motor graders and light maintainers, graders, loaders, rippers, rooters, rollers), construction machinery for mounting on tractors (cranes, shoveltype loaders, dozers, cable power-control units), off-highway trailers and wagons (beginning 1950) and off-highway trucks (1950-54), portable well and blast-hole drills, etc. These figures for construction machinery do not include shipments of power cranes, shovels, and tractors (see separate data for the latter). The original reports include the value of shipments of tracklaying tractors and contractors' off-highway wheel-type tractors in the total value of construction machinery since these types of tractors are used extensively as excavating and earthmoving equipment.

Data beginning 1950 include off-highway type truck tractors, trailers, wagons, and trucks (the latter type are included for the years 1950-54 only), designed primarily for operation on natural terrain and restricted from operating on public highways. Total shipments of these types were valued at $\$ 22,856,000$ in 1950 . For the period 1947-49 for these off-highway types of equipment, only heavy-duty wagons (including tractor-drawn carts, wagons, dump bodies, and trailers) are covered. In 1949, shipments of heavyduty wagons totaled $\$ 1,399,000$. As noted above, figures for 195054 also include shipments of off-highway type trucks (load on back) which are not available on a quarterly basis for recent years. In 1955, shipments of this type were valued at $\$ 42,251$, 000.

In 1953-54, shipments of construction machinery (including tractors) for export averaged 32 percent of total shipments; shipments (excluding tractors) for export averaged 25 percent of total shipments.

In the basic reports, shipments by type of equipment are shown by number and value; the annual summary contains data on power cranes, drag lines, and shovels.

Quarterly data for 1948-52, comparable with quarterly averages for corresponding years shown, are as follows:

Construction Machinery
(Excluding tractors, power cranes, shovels)
Shipments

${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. The quarterly estimates of total shipments of selected classes of farm machines and equipment (except tractors) are based on quarterly reports from manufacturers producing significant amounts of the listed classes of products. For all types, the reporting companies account for over 65 percent of the total value of shipments and for the largest classes of products, the reporting companies account for over 80 percent of the total. The data cover the value of complete units and attachments, but exclude the value of parts. The classes of products covered are as follows: Plows and listers; harrows, rollers, pulverizers, and stalk cutters; planting, seeding, and fertilizing machinery; cultivators and weeders; sprayers and dusters; harvesting machinery; haying machinery; machines for preparing crops for market or for use; milking machines and equipment; farm elevators and blowers; farm wagons, trucks, and other farm transportation equipment.

Quarterly data are not available prior to 1954.
Figures obtained from annual surveys of farm machines and equipment are not comparable with the quarterly estimates because the two surveys differ in the following respects. First, the annual survey represents virtually complete coverage of all manufacturers of farm machines and equipment and comprises shipments of complete units, attachments, and parts, whereas the quarterly survey (based on a sample of manufacturers) does not cover the value of parts shipped. (The total value of attachments and parts shipped in recent years is as follows: 1953, $\$ 202,935$, $000 ; 1952, \$ 216,383,000 ; 1951, \$ 231,906,000$.) Second, the annual survey also includes the value of farm poultry, barn, and barnyard equipment not called for on the quarterly survey. (Total shipments of such types of equipment in recent years are as follows: 1953, $\$ 54,830,000 ; 1952, \$ 56,032,000 ; 1951, \$ 69,971,000$. ) Third, for various periods (as noted below), the annual survey covers tractors, or certain types of tractors, not included in the quarterly data. Finally, whereas the quarterly estimates refer to calendar quarters, the annual totals are reported by manufacturers on either a calendar- or fiscal-year basis.

Annual reports on farm equipment have been published by the Department since 1920, except for the years 1932, 1933, and 1934. These reports show value of domestic and export shipments for complete units and/or attachments and parts by class of product and by geographical division and state, as well as number produced, and domestic and export shipments by individual items of farm equipment. For the period 1949-53, export shipments of farm machines and equipment (complete units, attachments, and parts), excluding tractors, averaged over 8 percent of total shipments. Total shipments of farm machines and equipment (compiled from the annual reports of the Bureau of the Census) are shown below:

Farm Machines and Equipment
(Complete units, attachments, and parts)
Shipments ${ }^{1}$

|  |  |  |  | 1943 | 602.3 |

${ }^{1}$ Data prior to 1947 represent "sales", but do not differ significantly from 'shipments"。
${ }^{2}$ Data are from the 1954 Census of Manufactures.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census. The data are based on reports received frcm active manufacturers of complete tractors; data represent total shipments reported by all producers of the specified types, and exclude garden tractors. For years prior to 1947, the figures represent sales, but these data do not differ significantly from shipments. Quarterly averages prior to 1951 are based on totals reported on either a fiscal-year basis or a calendar-year basis.

Total shipments include wheel-type contractors' off-highway tractors (used extensively as excavating and earthmoving equipment). Shipments of this type are also included in the wheel-type category shown for the years 1929-52, but are excluded thereafter. In 1952, shipments of wheel-type contractors' off-highway tractors averaged 1,007 units (valued at $\$ 14,962,000$ ) per quarter.

The figures for tracklaying and wheel-type tractors (other than contractors' off-highway type) are available on a monthly basis; figures for contractors' off-highway wheel-type, on a quarterly basis. In the SURVEY OF CURRENT BUSINESS, monthly shipments of the former are shown prior to the release of the quarterly data for all types. The quarterly averages shown in the present volume are based on annual totals which may include revisions not incorporated in the quarterly data.

The original monthly reports also show number of tractors (by horsepower rating) shipped for domestic farm and nonfarm use, total exports, and number produced by type of fuel.

Quarterly data for 1948-52 for tracklaying and contractors' off-highway wheel-type tractors and annual totals beginning 1922 for all series (except for the years 1932, 1933, and 1934) are available upon request. Quarterly data for wheel-type tractors, other than contractors' off-highway, are not available prior to 1952. (The quarterly figures for 1952 shown in the 1955 edition of BUSINESS STATISTICS were not revised to the final annual totals on which the quarterly averages for 1952 are based.
${ }^{5}$ Source: Hydraulic Institute. Data reflect the value of new orders booked by reporting companies. From $3 \overline{4}$ to 36 companies reported in the 1929-37 period, 32 to 25 in 1938-44, and 31 to 34 in 1945-56. Bookings of the reporting companies accounted for about 70 percent of the total industry bookings in 1929-44 and about 80 percent thereafter. Classes of pumps covered by the data include single steam, duplex steam, simplex and duplex power, triplex and multiplex power, close-coupled centrifugal (including motors), all other centrifugal pumps (single and multi-stage), and rotary pumps.

Monthly data for 1934-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. For comparable monthly figures for 1919-30, see the April 1937 SUR VEY, p. 19. Figures beginning 1931 shown in the April 1937 SUR VEY have been revised to cover the addition of a new company and to exclude data for a company previously reporting; this change does not affect the figures prior to 1931. The revised monthly data for 1931-33 are available upon request.
${ }^{6}$ Data for all series (except machine tools and pumps) are quarterly averages.
${ }^{7}$ Excludes export sales of tracklaying tractors; see note 8 for this page.
${ }^{8}$ Quarterly averages for 1929 and 1930 for tracklaying tractors cover domestic sales only; data for total sales and export sales cannot be published without disclosing operations of individual companies. Export sales of tracklaying tractors in the period 1935-38 averaged 6,626 units (valued at $\$ 12$ million) per year.
${ }^{9}$ Based on 4 months, September-December.
10 Data beginning 1950 include off-highway type truck tractors, trailers, wagons, and trucks (the latter type is included for the years 1950-54 only), designed primarily for operation on natural terrain and restricted from operating on public highways. Total shipments of these types were valued at $\$ 22,856,000$ in 1950. See 3d paragraph of note 2 for this page.
${ }^{11}$ Beginning 1953, data exclude shipments of contractors' offhighway wheel-type tractors which are included in the earlier figures. In 1953, shipments of this type averaged 736 units (valued at $\$ 10,920,000$ ) per quarter.

12 Based on annual total which includes revisions not incorporated in the quarterly data.
${ }^{13}$ Data beginning 1 st quarter 1955 exclude shipments of offhighway type trucks (load on back) which are covered in theperiod 1950-54. Quarterly data for this type of equipment are not available beginning 1955. In 1955, total shipments of these trucks were valued at $\$ 42,251,000$.
${ }^{14}$ Based on total which excludes shipments of farm elevators and blowers for the 4 th quarter of 1956. See note 15 for this page.
${ }^{15}$ Excludes the value of farm elevators and blowers because the coverage was insufficiently complete to meet publication standards. Shipments of this product class averaged $\$ 8.4 \mathrm{mil}-$ lion per quarter in the first 9 months of 1956. Total shipments
of farm machines and equipment (excluding farm elevators and blowers) for the 4 th quarter 1955, comparable with data shown for 4th quarter 1956, amounted to $\$ 123,902,000$.

## PAGE 167

${ }^{1}$ Source: The Association of American Battery Manufacturers, lnc. The data (compiled for the Association by the Marketing Services Company, Dun ${ }^{3}$ Bradstreet, Inc.) represent estimated industry totals derived from reports of jobbers, dealers, mailorder houses, and chain stores that report monthly shipments. Beginning 1954, the estimates are benchmarked to the 1954 Census of Manufactures; for 1947-53, to the 1947 Census; and for 1939-46, to the 1939 Census.

Monthly data for 1941-46 and 1949-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Monthly data for 1947-48 adjusted to the benchmark indicated by the 1947 Census of Manufactures are shown on p. S-35 of the July 1952 SURVEY. Monthly data for 1937-40 are available upon request.
${ }^{2}$ Source: Board of Governors of the Federal Reserve System, Division of Research and Statistics. The combined index, reflecting changes in total output of refrigeration appliances, comprises refrigerators, freezers, room air conditioners, and (beginning 1950) dehumidifers; it includes production for Government, military use, and for export.

The monthly index of production, derived mainly from reported factory shipments and inventories, is adjusted to annual benchmarks. For refrigerators, the monthly total number of units for all sizes is also adjusted to an annual index based on separately weighted output series for different sizes of refrigerators. The adjustment for seasonal variation also allows for fluctuations due to holidays and, for recent years, for the apparent greater concentration of output of refrigeration appliances in the first half of the year.

Monthly data for 1947-52 are as follows:

|  | Refrigeration Appliances: Index of Output Seasonally adjusted$1947-49=100$ |  |  |  |  |  |

${ }^{3}$ Source: Vacuum Cleaner Manufacturers Association. Data are based on reports of members of the Association and several nonmember companies, and cover practically the entire industry. They represent manufacturers' sales to all outlets, including export and domestic sales. Figures shown beginning 1935 cover standard floor-type vacuum cleaners only; for earlier years, data also include shipinents of reconditioned or rebuilt models. (Monthly average for 1935 comparable with earlier years is 75,300 units.)

Monthly data for 1941-52 (except for 1943-45), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revision: December 1949, 268, 517 units.) Monthly figures for 1936-40 are available upon request.
${ }^{4}$ Source: American Home Laundry Manufacturers' Association. For the period 1945-56, the data represent manufacturers' domestic sales (i.e., excluding export sales) compiled from reports of members of the Association estimated to account for at least 97 percent of the total industry sales.

The figures through 1956 in the present volume include sales of combination washer-dryer machines; in 1956, sales of such types totaled 102,400 units. (It should be noted, however, that data beginning January 1957, as published in the April 1957 SURVEY and subsequent issues, exclude sales of combination washerdryer units - now shown separately in the original reports.) For 1947-52 and January-June 1953, the figures include sales of small or midget-type washers. Total sales of such types for the indicated years are as follows (thousands of units): $336.8 ; 287.6 ; 99.2$; 100.9; 79.5; 73.5; 30.8 (for January-June 1953). Sales of gasolineengine washers are included for the entire period, but for recent years represent a negligible part of the total.

The data through 1942, as shown here, represent estimated industry totals (including export sales) and are based on reports from members accounting for approximately 98 percent of total sales. Figures for the war period are not available.

Monthly data for 1946-52, comparable with monthly averages for corresponding years shown herein, will be found in the 1955 edition of BUSINESS STATISTICS. Monthly data for 1933-June 1942, as described in paragraph above, appear in the 1947 and 1942 STATISTICAL SUPPLEMENTS and on p. 17 of the October 1939 SURVEY.
${ }^{5}$ Source: Radio-Electronics-Television Manufacturers Association, Marketing Data Department. Data represent industry totals based on reports from both members and nonmembers of the Association. Both private and company brands are included. Radio production comprises home, portable, automobile, and clock models. Data for television sets cover home, portable, and combination models for monochrome receivers only; excluded are industrial and commercial types and color television receivers. The monthly data for all years represent 4-and 5 -week periods as follows: March, June, September, and December cover 5 weeks; other months, 4 weeks.

Monthly data for 1947-51 for radio and television sets are shown on p. 20 of the October 1952 SURVEY; for 1952, see the 1955 issue of BUSINESS STATISTICS.
${ }^{6}$ Source: National Electrical Manufacturers Association.
The index for insulating materials covers the following products: Laminated products, electrical; manufactured electrical mica; varnished fabric and paper; vulcanized fiber; varnished tubing and saturated sleeving (beginning May 1952); and special dry process electrical porcelain (through December 1955).

The index for motors, etc., applies to integral horsepower motors and generators as follows: A.C. generators, engine and belt driven, all sizes (excluding waterwheel and turbogenerators); integral horsepower motors, polyphase induction, 1-200 horsepower, inclusive; integral horsepower motors and generators, D. C., 1-200 horsepower, $3 / 4$ to 150 kilowatts, inclusive; synchronous motors, 1 horsepower and larger; integral horsepower motor generator sets, all types, $3 / 4$ to 150 kilowatts, inclusive (beginning August 1940); and integral horsepower motors, single phase, 1 horsepower and larger (beginning January 1944). Data for fractional horsepower motors are not included.

Basic data for the component series are compiled from reports of both nonmember and member companies of the National Electrical Manufacturers Association; the reports do not include all manufacturers of these products but are stated by the compilers to be fairly representative of the industry. The indexes are based on dollar figures of billed sales for electrical insulating materials and of gross orders received for motors and generators.

The method of computation of the electrical insulating materials index is as follows: (1) A separate index is computed for each of the components of the series; (2) each of the indices is multiplied by the weight assigned to it; (3) these weighted indices are then combined for each month and the aggregate for each month is related to the average aggregate monthly figure for the base years, 1947-49.

The method of computation of the motors and generators index is as follows: First the value reported quarterly to the Association for each component product is inflated to represent 100 percent of the industry, based on estimates of the coverage of the reports prepared by the Association from available data; the inflated dollar figures for all products covered by the index are then combined for each quarter and the aggregate for each quarter is related to the average aggregate quarterly figure for the base
years, 1947-49. The 1942-45 data for motors and generators have been adjusted for cancellations reported through December 1945; in making this adjustment the cancellations are deducted from data for the quarter in which the original order was reported Similar adjustments have not been made in the earlier data nor in the data since 1945.

No adjustments have been made in pertinent periods for renegotiations of contracts nor for accidental fluctuations due to extremely large orders. The indexes are not adjusted for seasonal variations nor for differences in the number of working days in the month.

Monthly and/or quarterly data for 1934-52 for the insulating materials index and the motors and generators index are shown on p. 28 of the February 1955 SURVEY. The series published in BUSINESS STATISTICS prior to the 1955 edition are based on the year $1936=100$.
${ }^{7}$ Source: National Electrical Manufacturers Association; from data furnished voluntarily by its members. It should be noted that the statistical coverage of the industries is not altogether comprehensive. The Association states that the figures shown are not necessarily complete nor are they necessarily comparable; users of the data are therefore cautioned to avoid misinterpretation. References to earlier monthly figures and information relating to the individual series are given below.

Monthly or quarterly data for 1929-52 (except monthly figures prior to 1932 for polyphase induction motors), comparable with averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for July 1929-31 for polyphase induction motors, as well as revisions in the 1934 and 1935 figures for shipments of vulcanized fiber, are available upon request.

Vulcanized fiber. - Data for vulcanized fiber cover 5-6 companies (except for December 1956, 7 companies). Shipments, which are domestic and exclude inter- and intra-company shipments, comprise shipments of vulcanized fiber sheets, rods, specialties, and tubes (beginning 1934), but exclude hollow ware (other than tubes) for all periods except, as noted, for the 1st 4 months of 1956. (The note in the 1953 edition of BUSINESS STATISTICS incorrectly states that shipments of hollow ware are included.) Data for consumption of vulcanized fiber paper include total consumption of paper (both sheets and tubes), including consumption in hollow ware.

Motors and generators.- Billed sales and gross new orders of electric motors and generators cover domestic business only; that is, sales to organizations in continental United States, Alaska, Hawaii, and Canal Zone. Included are rails, pulleys, and parts sold with motors and generators (but not spare parts sold separately), V-belts and other transmission units, and switchgear. Data for direct current integral motors and generators (i.e., motors and generators $1-200$ horsepower--3/4 to 150 k .w. --except mill-type motors) include also direct connected exciters sold with generators, belted or motor generator exciters, and field rheostats and discharge resistors sold with generators.
According to figures obtained from the 1954 Census of Manufactures, the 1954 billings data for direct current motors and generators represent over 80 percent of the total industry commercial shipments; for polyphase induction motors, over 70 percent of the total.

Data for polyphase induction motors are as reported by 23-27 companies for 1933-40, 24 for 1941, 21-24 for 1942, 25-27 for 1943-44, 27-29 for 1945-46, 34-36 for 1947, and 34-31 for 194856. Data for direct current motors and generators cover 17-21 companies for 1933-42, 23-24 for January-May 1943, and 25-30 from June 1943 through December 1956. (The number of participating companies was not reported prior to 1933.)
${ }^{8}$ Source: National Electrical Manufacturers Association. The data, representing approximately 70 to 80 percent of the industry, are compiled from reports of 13 manufacturers beginning July 1954 and from 11 manufacturers for earlier months. The figures comprise shipments of galvanized and black enameled rigid steel conduit and cover both the domestic and export market, including sales from consigned stock.

Comparable figures are not available prior to July 1952. Tonnage shipments of rigid steel conduit and fittings for 1937-52 (as compiled by Dun and Bradstreet, Inc., for the Rigid Steel Conduit Industry) are shown in the 1953 edition of BUSINESS STATISTICS.
${ }^{9}$ Average for 6 months, July-December.
${ }^{10}$ Quarterly average.
11 Not comparable with earlier years; see note 3 for this page.
12 Average for 6 months, January-June.
${ }^{13}$ Average for 4 months, January-April. Civilian production was suspended in April 1942
${ }^{14}$ Not strictly comparable with earlier data; see note 4 for this page.

15 Average based on 53 weeks; averages for other years cover 52 weeks.

16 Based on annual total which excludes shipments of hollow ware (other than tubes). See following note.

17 Includes shipments of hollow ware (other than tubes) not included in other months; such shipments averaged $\$ 189,000$ and $\$ 113,000$ per month in 1955 and 1954, respectively.

## PAGE 168

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. Data represent the output of Pennsylvania anthracite only; the small amount of anthracite mined outside of Pennsylvania is included with bituminous coal production. Figures are derived from weekly data on carloadings of anthracite as reported by the Association of American Railroads, prorated to a monthly basis. A census of mine operators is taken annually and the monthly data are then adjusted to the reported total. Figures include coal loaded at mines for shipment (product of breakers, washeries, and dredges), including shipments by truck from authorized operations, coal used at collieries for power and heat, and coal sold to local trade and used by employees. lllicit operations are not included through 1940. Beginning 1941, data include bootleg coal purchased by legitimate operators and prepared at their breakers. Annual total amounts of bootleg coal included are as follows (thousands of short tons): 1941, 1,902; 1942, 2,617; 1943, 1,266; 1944,507 ; 1945, $260 ; 1946,352$; 1947, $604 ; 1948,544 ; 1949,443$; 1950, 601. (The 1941-46 figures for bootleg coal as shown in the 1949 and 1947 SUPPLEMENT notes represent total production, not amounts purchased by legitimate operators.) Beginning 1951, data include output of small independent producers, many of whom were formerly classed as bootleg operators.

Monthly data for 1929-52 (except revisions for 1931 which are available upon request), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ Sources: Anthracite Committee of the Department of Commerce of the CommonweaIth of Pennsylvania beginning June 1941; Anthracite Institute from the middle of 1932 through May 1941; and Anthracite Bureau of Information prior to the middle of 1932. Data represent, prinarily, prepared coal in ground storage. Excluded is coal on cars at breaker sidings, enroute, at piers, and in boats at piers. Data cover domestic and steam sizes of coal and run-of-mine and its various steam coal derivatives. Variation in the size and homogeneity of the sample affect the strict comparability of the series. Thus, data on broken coal have been included intermittently since the beginning of compilation, but they represent less than one-tenth of one percent of the total.

Monthly data for 1935-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data prior to August 1934 are not strictly comparable with succeeding figures (see note 15 for this page).
${ }^{3}$ Sources: U. S. Department of Commerce, Bureau of the Census; prior to May 1941, from Bureau of Foreign and Domestic Commerce. Bunker coal on vessels engaged in foreign trade is not included.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein (with exceptions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, in thousands of short tons are as follows: 1946-April, 378; De-
cember, 942; 1947-September, 866; monthly average, 710.) Data prior to 1938 are expressed in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Quotations for anthracite cover Pennsylvania anthracite, white ash (chesmut size through 1952; stove thereafter); those for bituminous coal are for various sizes. Data are average retail prices as of the 15th of the month and are based on cash sales of coal (1-ton lots) for residential use delivered at the curb, or into the bin if no extra charge is made. Taxes are included where applicable.
Beginning 1953, the anthracite prices cover 6 cities; the bituminous prices, 26 cities. The 1951 and 1952 prices for anthracite are based on 11 cities and for bituminous on 29 cities; earlier quotations for the former cover 10-25 cities and for the latter, 21-38 cities. Prior to July 1944 for anthracite and prior to September 1940 for bituminous coal, the number of cities covered was constant ( 25 for anthracite and 38 for bituminous). Thereafter the city representation was gradually reduced until, at the end of 1950, the anthracite price covered 10 cities and the bituminous, 21 cities. In most cases the average was not materially affected by the change in number of cities.

Effective with 1951, the prices for both anthracite and bituminous are weighted by "cost-population" in each city surveyed in 1950. The anthracite series prior to 1951 is a weighted average of prices in the cities covered (weights used were based on distribution by rail, or rail and tidewater, to each city during the 12 -month period from August 1, 1935, to July 31, 1936). The bituminous prices prior to 1951 are unweighted averages of quotations.

Monthly (or quarterly) data for 1936-52 for both series (also for 1929-35 for bituminous) for the various price composites as described, and comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Minor revisions for bituminous coal for 1939 and 1940 are available upon request.) Monthly data for anthracite for 1929-35 appear in the 1940 SUPPLEMENT and on p. 20 of the February 1937 SURVEY.
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning 1947, prices are for Pennsy lvania anthracite, chestnut, f.o.b. car at mine; prior to 1947 the quotations are for coal on tracks, destination. From 1952 forward the prices shown are quotation averages for 1 day each month (usually around the 15th); earlier data are quotation averages for 1 day each week.

Monthly data for 1949-52 and for 1932-46 (averages shown in italics) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1947 and 1948 are available upon request.
${ }^{6}$ Source: U. S. Department of the Interior, Bureau of Mines. The monthly figures as originally compiled and reported in the SURVEY are estimates based on daily and weekly statements of cars of coal loaded by the principal railroads and of shipments over the more important originating rivers, supplemented by direct reports from a number of mining companies, local coal operators' associations, and detailed monthly production statistics from district and State sources. Allowance has been made for commercial truck shipments, local sales, and colliery fuel, and for small truck or wagon mines which produce over 1,000 tons a year. These estimates are later revised to agree with the results of the annual statistical reports from the coal producers. Data comprise bituminous and lignite and any anthracite mined outside of Pennsylvania, coal used at collieries for power and heat, and coal made into coke at the mines.

Data exclude production from small mines which have an output of less than 1,000 tons a year and sell their product by wagon or truck; such production was also excluded from data for 1919, 1921, 1924 and thereafter as published in earlier volumes. In 1944 there were approximately 1,821 of these small mines with a total production of 756,000 tons (later information is not available).

Monthly data for 1929-38 and 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p: 197 of this volume. Data for 1939-40 (in the 1942 SUPPLEMENT) have been revised and are available upon request.
${ }^{7}$ Source: U. S. Department of the Interior, Bureau of Mines. (The data for several of the separate categories are obtained from various original sources; these sources, together with other pertinent information, are given in notes 8 through 12 following.)
The data on consumption and stocks of bituminous coal and lignite are based on complete coverage of all consumers in each class with the exception of "other industrials" and "retail" (the latter shown on p. 169). The figures for each of these two categories are based on a monthly sample approximating 35 percent coverage. In each case a benchmark, based on 95percent coverage, was established in 1943 to represent complete coverage. Since 1943, the monthly figures for the aforementioned categories have been derived by the matching of identicals for the last two months, calculating the percentage change of these identicals for the last month from the month previous and applying this percentage change to the published figure for the month previous. The results obtained have been reasonably reliable over a period of years.
It is not appropriate to calculate consumption from production, imports, exports, and changes in stocks because certain significant items of stocks are not included. These items are: Stocks on Lake and Tidewater docks, stocks at other intermediate storage piles between mine and consumer, and coal in transit.
The available monthly figures prior to 1953 for industrial consumption will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. It should be noted, however, that in the present volume, bunker fuel is included as a component of "industrial consumption"; whereas in earlier volumes it was presented separately. Also it should be noted that the monthly averages prior to 1951 are, in a number of instances, based on annual totals which include revisions not allocated to the monthly figures.
${ }^{8}$ Sources: Federal Power Commission; prior to July 1936, U. S. Geological Survey. Data represent bituminous coal consumed and stocks held by public-utility power plants. Data on consumption include a small quantity of coke amounting to appriximately 100,000 tons annually. Annual data for all years and monthly figures beginning January 1945 have been adjusted to exclude coal consumed by plants generating electric energy for electric railways and railroads and by manufacturing plants generating electric energy for public sale (coal consumed by these plants in 1944 amounted to $2,231,000$ tons).

Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (It should be noted that the monthly data prior to 1945 as shown in the 1947 SUPPLEMENT and earlier issues do not exclude coal consumed by plants mentioned in last sentence of above paragraph.)
${ }^{9}$ Source: U. S. Department of the Interior, Bureau of Mines. See also note 7 for this page. Data for cement mills include a small amount of anthracite.
${ }^{10}$ Estimates are based largely on reports from a selected list of representative manufacturing plants. Coal consumed by coal-gas retorts and as fuel in coal mines, formerly shown separately, is now included in this group.

Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. In the 1949 and 1947 volumes, the figures for consumption of coal-mine fuel should be added to those for "other industrial"; in the 1942 and earlier volumes, data for both coal-mine fuel and coal-gas retorts should be added to those for "other industrials."
${ }^{11}$ Consumption by class 1 railways is based on the average daily consumption of coal as reported by the Association of Arrerican Railroads to the U.S. Department of the Interior, Bureau of Mines. Data relating to stocks held by class 1 rail-
ways are reported by the same source. Figures represent coal consumption for all purposes, including locomotive, power-house, shop, and station fuel. Data for switching and terminal companies are not included.

Monthly data for September 1932 through 1952 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (the figure for consumption for March 1933 should read 6,030,000 short tons). Data published in the 1932 SUPPLEMENT represent consumption in road train service only and are not comparable with subsequent figures.

12 Source: U. S. Department of Commerce, Bureau of the Census; prior to May 1941, from Bureau of Foreign and Domestic Commerce. Data cover coal (of both domestic and foreign origin) laden in U. S. ports on ships of U. S. and foreign registry which are engaged in foreign trade and also on Canadian ships passing from one U. S. port to another in the trade on the Great Lakes.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data in the 1940 SUPPLEMENT and earlier issues are shown in long tons; these can be converted to short tons by multiplying by 1.12 .
${ }^{13}$ Average for 4 months, September-December.
$1^{14}$ Data for "railways" are included with "other industrials."
${ }^{15}$ Data for 1929-34 (shown in italics) include only the quantity of coal in the storage yards of the larger line companies and a small amount put on the ground by some of the larger individual companies; subsequently, they were changed to include coal in cars on railroad sidings, and coal sold to retailers or wholesalers, but held at the mine awaiting orders for shipment. As a result of this change, the figures for August and September 1934 (the only months for which overlapping data are available) were increased 8.6 percent and 12.5 percent, respectively.
$1^{6}$ Average for 4 months (January, April, July, and October).
17 Average for 5 months (January, April, July, September, and December).
${ }^{18}$ Beginning January 1947, prices are quoted f.o.b. car at mine instead of on tracks, at destination. Monthly average for 1947 comparable with data in italics is $\$ 14.108$.
${ }^{19}$ Data beginning 1951 are based on quotations in 11 cities; see note 4 for this page. Monthly average for 1951 comparable with data in italics is $\$ 23.16$.
${ }^{20}$ Beginning 1953, data represent the weighted average price of anthracite (stove) based on quotations in 6 cities as follows: Baltimore, Boston, Laconia, (N.H.), Madison (Wis.), Middletown (Conn.), and New York.

## PAGE 169

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. Data are obtained from a selected list of representative retail dealers (including some small manufacturing plants) and estimates of total retail deliveries and stocks are made from this sample. (See also note 7 for p. 168.) Data on consumption include some coal shipped by truck from mine to final destination.

Monthly data for 1938-52 (also for September 1932 through 1937 for retail dealers' stocks) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{2}$ See note 7 for page 168 .
${ }^{3}$ See note 8 for page 168 .

${ }^{5}$ See not 10 for page 168 .
${ }^{6}$ See note 11 for page 168 .
${ }^{7}$ See note 1 for this page and note 7 for page 168 .
${ }^{8}$ Source: U. S. Department of Commerce, Bureau of the Census; prior to May 1941, from Bureau of Foreign and Domestic Commerce. Beginning 1947, data include shipments under the Army Civilian Supply Program which were not reported previous1 y ; in that year, such shipments amounted to 102,200 short tons. (For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for $p .104$.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein (with exceptions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revisions, in thousands of short tons: 1946-April, 1,753; December, 1,701; 1947-February, 3,191; September, 7,593 .) Data in the 1940 SUPPLEMENT and earlier issues are reported in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{9}$ See note 4 for page 168.
${ }^{10}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices are quotation averages for 1 day each month (in the week containing the 15th). Comparable data prior to May 1954 are not available; for wholesale prices through April 1954 for coal of different specifications, see the 1955 edition of BUSINESS STATISTICS.
${ }^{11}$ Average for 4 months (September-December).
12 Average for 4 months (January, April, July, and October).
${ }^{13}$ Average for 5 months (January, April, July, September, and December).

14 Average for 4 months (March, June, September, and December).

15 Data for 1951 and 1952 are based on quotations for 29 cities. See note 4 for p. 168.

16 Beginning 1953, data represent weighted averages based on quotations in 26 cities for all sizes of bituminous coal.

17 Average of data for May-December.

## PAGE 170

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. Data are based on reports from plants accounting for practically the entire output of beehive and oven coke, including public-utility plants having coke ovens. The figures exclude screenings, coke produced by medium - and low -temperature carbonization plants and by coal-gas retorts, and coke made from coal-tar pitch. The coke trade is concerned primarily with beehive and oven coke, since only such coke is adapted to blast furnaces and foundries, which consume the bulk of all coke produced.

Data on petroleum coke (the residue from the petroleum-refining process) are also given here, since this product has some importance as a petroleum-refinery fuel, as a household fuel, and for industrial uses. In recent years the production of petroleum coke includes increasing quantities of nonmarketable catalyst coke (1,901,000 short tons included in 1954; 2,400,000 in 1955; and 2,749,000 short tons in 1956).

Data relating to stocks at plants are here restricted to oven (byproduct) and petroleum coke, since beehive plants as a rule carry only small stocks. Stocks of oven coke at furnace plants relate to those at plants whose main business is the production of furnace coke which has an assured outlet either through financial affiliation with, or direct ownership by, an ironworks, or through long-time contracts. Merchant plants, as the name implies, refer to those plants producing coke for sale. Included are a few plants affiliated with local iron furnaces which produce more coke than the furnaces can absorb and which therefore sell in competitive markets; plants affiliated with alkali and chemical works; and a number of plants (though constructed primarily to supply city gas) which must dispose of their coke in the usual trade channels.

Monthly data for 1929-52, with exceptions given below, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

Revised production figures for 1929 and 1931 for beehive and oven coke are available upon request. Separate data for stocks
at furnace and at merchant oven-coke plants are shown beginning 1932 only. The following revisions in stocks should be noted (figures in thousand short tons): Petroleum coke, July 1929, 630; total at oven-coke plants, December 1936 and December 1939, 1,699 and 2,570, respectively.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941).

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STAT1ST1CS as indicated at top of p. 197 of this volume. Data in the 1940 SUPPLEMENT and earlier issues are in long tons and may be converted to short tons by multiplying by 1.12 .
${ }^{3}$ Sources: U. S. Department of Labor, Bureau of Labor Statistics (through 1951); "Steel" magazine (beginning 1952). The series represer's averages of weekly quotations for beehive coke for blast-furnace use, f.o.b. Connellsville ovens.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines (from data supplied by the Oil and Gas Journal). Prior to 1947, California data were furnished by the American Petroleum Institute. Also prior to 1947, data as originally released covered 4or 5 -week periods but were later revised, according to the compilers, to cover calendar months.

Monthly data for 1929-52 (except revisions for 1938 which are available upon request) will be found in earlier editions of BUS1NESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{5}$ Source: U. S. Department of the lnterior, Bureau of Mines. Production data are for crude oil (including some condensate which is mixed with crude) and represent oil transported from producing properties plus that remaining on properties and consumed on leases. Refinery operations are based on the ratio of the daily average crude runs to stills to the total rated capacity per day of operating refineries. Consumption (runs to stills) includes consumption of both domestic and foreign crude oils, but does not include reruns of unfinished oils and unfinished gasoline.

Monthly data for 1929-52 (with exceptions mentioned) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The 1931 revised production figures are available upon request. Consumption for July 1939 should read $106,899,000$ barrels.
${ }^{6}$ Barrels of 42 gallons.
${ }^{7}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; figures include some fuel oils (principally residual oil) which were formerly reported as transfers from crude oil. The 1948 monthly average on the new basis is $170,696,000$ barrels.
${ }^{8}$ See 2d paragraph of note 1 for this page.

## PAGE 171

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. Stocks of gasoline-bearing crude petroleum represent stocks of refinable crude oil.

The available monthly data prior to 1953, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (it should be noted that numerous changes in reporting have affected year-to-year comparability; certain major changes follow). Data prior to 1933 for stocks at refineries, at tank farms and in pipelines, and on leases apply to stocks east of California only (in those earlier years gasolinebearing stocks in California were not available by location; they are, however, included in the total for the U. S.). Beginning with January 1949 the figures for total gasoline-bearing stocks also include heavy crude stocks in California (in the published monthly figures through 1937, California heavy crude stocks are included with stocks of residual fuel and, for 1938-48, they are shown separately; the 1948 monthly average for California heavy crude is $8,020,000$ barrels). In the 1942 SUPPLEMENT, gasolinebearing oil is shown as "refinable in U. S."; the March 1940 fig-
ure (in that volume) for stocks at refineries should read 50,194,000 barrels.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data for imports are imports for consumption beginning 1934; prior thereto, general imports. For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104.

Monthly data for 1938-52 for exports and for 1929-52 for imports (except for revisions noted below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Data for exports were first shown in the 1942 volume. (Revisions for imports-December 1946 and October $1950-6,719,000$ and $15,526,000$ barrels.)
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices through 1951 are quotation averages for 1 day each week; thereafter, the data are quotation averages for 1 day each month (usually in the week containing the 15th). From 1935 forward, the quotations are for crude petroleum, $36^{\circ}-36.9^{\circ}$ gravity; prior thereto, $33^{0}-33.9^{0}$ gravity. (Monthly average for 1935 for crude, $33^{0}-33.9^{0}$ gravity, is $\$ 0.94$ per barrel.)

Monthly data for 1947-52 (for the $36^{0}-36.9^{\circ}$ series) and for 1929-34 (for the $33^{\circ}-33.9^{0}$ series) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for $1935-46$ for the $36^{\circ}-36.9^{0}$ series appear on p. 20 of the March 1951 SURVEY.
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines. See notes 16 and 18 for this page regarding changes in January 1949 and January 1953 affecting comparability of the data.

Monthly data for 1932-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. In the 1942 and earlier issues, distillate fuel oil is shown as "gas oil and distillate fuel oil." For monthly data for 1930 and 1931 see p. 20 of the February 1933 SURVEY.
${ }^{5}$ Source: U. S. Department of the lnterior, Bureau of Mines. Data represent apparent consumption as computed from production plus imports, minus exports, plus or minus the change in stocks. The export data used differ from those shown separately for the items, since the former include shipments to noncontiguous territories.

Comparability of the series has been affected at various times as follows: Beginning 1939, by the inclusion of net transfers of crude oil east of California and by the change in method of computing stocks (see note 16 for p. 172); beginning 1951, by a revised definition of "bulk terminals" which is reflected in the stock data used in computing domestic demand; beginning 1953, by the exclusion of data for jet fuel, now shown separately (see note 18 for this page).

Monthly data for 1938 - 52 comparable with monthly averages for corresponding years shown herein (with qualifications mentioned above) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{6}$ Barrels of 42 gallons.
${ }^{7}$ Revised basis. Additions made at beginning of indicated years are as follows (thousands of barrels): 1931, 3,073; 1933, 160.
${ }^{8}$ Revised basis. Deductions made at beginning of indicated years are as follows (thousands of barrels): 1932, 725; 1934, 1,089; 1938, 993; 1939, 793; 1944, 1,374.
${ }^{9}$ Not comparable with earlier data; see note 1 for this page.
${ }^{10}$ Not comparable with earlier data; see note 3 for this page.
${ }^{11}$ Revised basis; $11,615,000$ barrels transferred at the beginning of the year from refinery to tank-farm and pipeline stocks.

12 Revised basis. See note 5 for this page and note 16 for $p$. 172 for explanation of a change affecting comparability of the data, and for 1939 figures comparable with those for earlier years.
${ }^{13}$ Excludes substantial August shipments which were omitted because of incomplete information on original documents.
${ }^{14}$ Revised basis; 199,000 barrels transferred at the beginning of the year from crude-oil stocks to natural-gasoline stocks.
${ }^{15}$ Beginning January 1949, data for heavy crude in California are not separately available, but are included with gasoline-bearing stocks. Figures for gasoline-bearing stocks from January 1949 forward are, therefore, not strictly comparable with those for earlier periods.
${ }^{16}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; figures exclude some fuel oils (principally residual oil) which have been transferred to crude runs to stills. The 1948 monthly average on new basis is $31,612,000$ barrels for distillate and $39,999,000$ barrels for residual oil.
${ }^{17}$ Data beginning January 1951 are not comparable with those for earlier periods; see note 5 for this page. Monthly averages for 1951 comparable with earlier data are as follows (thousands of barrels): Distillate, 37,425 ; residual, 47,027.
${ }^{18}$ Beginning January 1953, data for jet fuel are excluded (see p. 174 for figures). Monthly averages for 1952, excluding jet fuel, are as follows (thousands of barrels): Production, 43,160; domestic demand, 39,749. See also notes 4 and 5 for this page.

## PAGE 172

${ }^{1}$ Sources: Federal Power Commission; prior to July 1936, from U. S. Geological Survey. Data represent fuel oil consumed by privately and publicly owned electric utilities. The public group comprises municipal electric utilities, Federal plants, rural electrification cooperatives, power districts, and State power projects.

Monthly data for 1945-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The monthly figures prior to 1945, shown in the 1947 SUPPLEMENT and earlier issues, are not comparable with figures in subsequent volumes since the earlier issues include also consumption by plants operated by electric and steam railroads and by certain industrial plants which sold some energy for public use.
${ }^{2}$ Source: Interstate Commerce Commission. Data beginning with 1937 cover all quantities of fuel oil and diesel fuel purchased by class 1 railways (including switching and terminal companies), whether for locomotive, station, shop, or other use. Figures prior to 1937 cover consumption of fuel oil by steam locomotives in road train service of class 1 steam railways; they exclude consumption of gasoline by motor-car trains, diesel fuel by locomotives and motor-car trains, and fuel oil used in yard switching service.
It should be noted that monthly averages beginning with 1937 are based on annual totals containing revisions not distributed by months. Monthly data for 1951 and 1952 for the series currently used and for 1929-36 for the italicized series, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1937-50 for the current series are available upon request.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data cover oil of both domestic and foreign origin laden, in U. S. ports, on ships of U. S. and foreign registry which are engaged in foreign trade, and also on Canadian ships passing from one U. S. port to another in the trade on the Great Lakes.
Monthly data for 192952 (except revisions mentioned below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Revisions are as follows (thousands of barrels): 1946-July, 5,514; 1940-June, 2,925; July, 3,008; August, 2,681; 1931-September, 3,068. Other minor revisions of data appearing in the 1932 SUPPLEMENT are available upon request.
${ }^{4}$ Source: U. S. Department of the Interior, Bureau of Mines. Data include all refinery stocks of distillate and residual fuel oils, bulk-terminal stocks in California, and (beginning 1939) bulk terminal stocks east of California. Data prior to 1938 for residual oil include also heavy crude oil in California; for 1938-48,
heavy crude in California was reported separately. Comparability of the series is materially affected by the aforementioned changes, as well as by changes at the beginning of 1949, 1951, and 1953; for details, see notes $16,18,20,21$ for this page.
Monthly data for 1932-52 for distillate and for residual appear in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note various changes affecting comparability). The 1932-37 monthly data for residual as shown in the 1940 and earlier SUPPLEMENTS are for "east of California"only.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Separate data for distillate fuel oil and residual fuel oil are not available prior to 1932. Data for lubricants include all lubricating oils. For general explanation of foreign-trade data, as well as an explanation of sampling procedures instituted July 1, 1953, see note 1 for p. 104.
Monthly data for 1938-52 for distillate and residual fuel oil and lubricants and for 1929-52 for kerosene will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p$. 197 of this volume. Note revisions as follows (thousands of barrels): Distillate fuel oil, 1947-- July, 3,016; September, 3,134; 1948-January, 1,392; April, 1,642; October, 1,329; residual fuel oil, January 1948, 454; kerosene, October 1947, 627; lubricants, 1947-June, 1,339; September, 894; October, 1,080; December, 1,130.
${ }^{6}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are quotation averages for 1 day each week; thereafter the prices are quotation averages for 1 day each month (usually in the week containing the 15th). Data represent prices of distillate fuel oil, bulk lots, f.o.b. refineries or terminals, excluding all fees and taxes.

Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1935-46 are available on p. 20 of the March 1951 SURVEY.
${ }^{7}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are quotation averages for 1 day each week; thereafter the prices are quotation averages for 1 day each month (usually in the week containing the 15th). Data represent prices of residual fuel oil, Oklahoma (group 3), No. 6 fuel, bulk lots, excluding all fees and taxes.

Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1935-46 are available on p. 20 of the March 1951 SURVEY; prices were inadvertently shown there as dollars per gallon instead of dollars per barrel.
${ }^{8}$ Source: U. S. Department of the Interior, Bureau of Mines. Domestic demand represents apparent consumption as computed from production plus imports, minus exports, plus or minus the changes in stocks. The export data used in this computation differ from those shown separately on this page, in that the former include shipments to noncontiguous U. S. territories. Beginning January 1951, the comparability of data on kerosene is affected by a revised definition of bulk-terminal stocks (see note 20 for this page). Comparability of the kerosene series is again affected beginning 1953 by the exclusion of data for jet fuel (see note 21 for this page).
Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note above-mentioned changes affecting comparability).
${ }^{9}$ Source: U. S. Department of the Interior, Bureau of Mines. Stocks of kerosene include stocks held at refineries and, beginning January 1942, bulk-terminal stocks. Prior to January 1942, the data cover refinery stocks only (see note 13 for this page). See also notes 18,20 , and 21 for this page for further changes materially affecting the comparability of data for kerosene stocks. Stocks of lubricants exclude distributors' stocks in California beginning January 1948. (See note 9 for p. 173.)

Monthly data for 1942-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume (note above-mentioned changes affecting comparability).
${ }^{10}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are quotation averages for 1 day each week; thereafter the prices are quotation averages for 1 day each month (usually in the week containing the 15th). Data represent prices of kerosene, New York Harbor, No. 1 fuel, bulk lots, f.o.b. refineries or terminals, excluding all fees and taxes.

Monthly data for 1947-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. Monthly data for 1935-46 are available on p. 24 of the August 1950 SURVEY.
${ }^{11}$ Barrels of 42 gallons.
${ }^{12}$ Revised basis. Deductions at the beginning of indicated years are as follows (thousands of barrels): Distillate-1934, 710; 1941, 29; 1942, 596; residual-1931, 2,638; 1938, 13,512; 1941, 1,278; 1942, 236. (For 1938, see also note 4 for this page.)

13 Revised basis. Additions at beginning of indicated years are as follows (thousands of barrels): 1931, 62; 1933, 59; 1942, 4,916. (See also note 9 for this page.)
${ }^{14}$ Revised basis. Additions at beginning of indicated years are as follows (thousands of barrels): Distillate, 1933, 167; resid-ual-1933, 705; 1934, 214.
${ }^{15}$ Not comparable with earlier data; see note 2 for this page. Monthly average for 1937 for earlier series is $4,453,000$ barrels. Beginning with 1937, the averages are based on annual totals containing revisions not distributed by months.
${ }^{16}$ Revised basis. Stock data include bulk-terminal stocks east of California beginning January 1939. (Bulk-terminal stocks in California have been included since 1924.) The domestic demand data, in addition to including changes in bulk-terminal stocks east of California, include net transfers of crude oil east of California beginning 1939. (Transfers of crude oil in California have been included with residual fuel oil statistics beginning 1932 and with distillate fuel oil beginning 1938.) Monthly averages for 1939 comparable with data for 1938 are as follows (thousands of barrels): Domestic demand- distillate fuel oil, 11,560; residual fuel oil, 26,645 ; stocks-distillate fuel oil, 25,807 ; residual fuel oil, 92,948. Stock figures for December 31, 1938, comparable with those for 1939 are as follows (thousands of barrels): Distillate fuel oil, 36,224 ; residual fuel oil, 101,971.
${ }^{17}$ No quotation.
${ }^{18}$ Beginning January 1949, data are shown on a new basis to reflect changes in reporting for California; data for distillate and residual fuel oils exclude cracking stocks (formerly included with finished stocks in California) and data for fuel oils and kerosene exclude stocks held by distributors in California (formerly included with bulk-terminal stocks). December 1948 figures on new basis comparable with succeeding data are as follows ( thousands of barrels): Distillate, 71,429; residual, 64,021; kerosene, 23,941.
${ }^{19}$ Beginning January 1950, coverage was increased to include one East Coast terminal not previously reporting; December 1949 figure on the new basis, $75,435,000$ barrels; on old basis, 75,207 , 000 barrels.
${ }^{20}$ Beginning January 1951, data are on a revised basis, due to a change in the definition of "bulk terminals." December 1950 data for stocks on the revised basis are as follows (thousands of barrels): Distillate, 76,021; residual, 41,700; kerosene, 21,430. Monthly averages for 1951 on the old basis are as follows (thousands of barrels): Stocks-distillate, 71,512; residual, 42,619; kerosene, 23,594; domestic demand, kerosene, 10,308.
${ }^{21}$ Figures beginning January 1953 exclude data for jet fuel. Comparable figures for 1952 are as follows (thousands of barrels): Distillate stocks (December), 98,688; kerosene-production (monthly average), 10,731; domestic demand (monthly average), 10,104; stocks (December), 27,216.
${ }^{22}$ Figures beginning January 1953 exclude data for jet fuel.

## PAGE 173

${ }^{1}$ See note 8 for p. 172.
${ }^{2}$ See note 9 for p. 172.
${ }^{3}$ See note 5 for p. 172.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are quotation averages for 1 day each week; thereafter the prices are quotation averages for 1 day each month (usually in the week containing the 15th). Data through July 1956 represent prices of lubricants, mid-continent, bulk lots, bright stock, conventional, 150-160 viscosity $210^{\circ}, 0-10$ pour point, excluding all fees and taxes. Beginning August 1956 the prices are for "solvent refined," 95 viscosity index, instead of "conventional" and are not comparable with earlier figures.

Monthly data for 1947-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1935-46 (for the "conventional" series) are available on p. 20 of the March 1951 SURVEY.
${ }^{5}$ Source: U. S. Department of the Interior, Bureau of Mines. Data represent total gasoline production, including aviation gasoline (shown separately on p. 174) and benzol. Sales of liquefied petroleum gases are deducted beginning 1941 and transíers of cycle products, beginning 1943. The figures beginning 1953 do not include production of jet fuel. (Reports on jet fuel were initiated in 1952; data are shown separately on p. 174 of this volume.)
"Gasoline and naphtha from crude oil" covers refinery production and, beginning 1953, is derived by adding to finished gasoline and naphtha the net production of unfinished gasoline. (The net production is a minus quantity if the unfinished gasoline derived from the current month's crude runs exceeds the amount of finished gasoline derived in that month from unfinished gasoline produced in a prior period. In other words, the total amount of gasoline and naphtha from crude is the amount produced from the current month's crude runs.)
"Natural-gas liquids used at refineries" represents that portion of the production of this item consumed in blending at refineries; "natural-gas liquids used in other gasoline blends, etc." is a net figure after stock adjustments and, beginning 1951, includes losses and exports.

It should be noted that, prior to 1953, the figures for the component items shown here do not add to those for total gasoline production. The difference is accounted for by changes in the method of reporting stocks and, prior to 1951, also by losses, exports, etc.

Monthly data for 1936-52 (except for natural-gas liquids used in other gasoline blends; available for 1951-52 only), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. (Gasoline and naphtha from crude oil is shown in the 1942 and 1940 volumes in two separate categories, i.e., straight run and cracked gasoline.)
${ }^{6}$ Source: U. S. Department of the Interior, Bureau of Mines. Data represent the apparent consumption in continental United States of refinery and natural gasoline (including aviation gasoline), naphtha used for industrial purposes, and, through 1952, the low-grade gasoline blend in jet fuels. Domestic demand is computed from production plus imports, minus exports, plus or minus the change in stocks. Figures beginning January 1951 reflect adjustment to a new basis of reporting bulk-terminal stocks and, therefore, are not comparable with earlier data (see note 15 for this page). The export figures used in computing domestic demand differ from those shown in column 1 on p. 174 in that the former include shipments to noncontiguous U. S. territories. Natural gasoline losses are included beginning 1932; in that year such losses represented about 1 percent of total motor fuel consumed. Comparability is again affected in 1953 by the exclusion of data for jet fuel (see note 16 for this page).
Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note above-mentioned changes affecting comparability).
${ }^{7}$ Source: U. S. Department of the Interior, Bureau of Mines. Finished gasoline stocks are those held at refineries, at bulk terminals, and in pipelines. A change in the definition of "bulk terminals" is reflected in data for finished gasoline beginning January 1951; the figures from 1951 forward, therefore, are not comparable with earlier data (see note 15 for this page). Comparability is again affected in 1953 by the exclusion of data for jet fuel (see note 16 for this page). Stocks at refineries and termi-
nals also include domestic shipments of gasoline consigned to them and in transit by water or rail. Unfinished aviation gasoline, most of which is probably held at refineries, is included in the finished gasoline stocks. Unfinished gasoline is held only at refineries. Stocks of natural-gas liquids are those held at natural gasoline plants, at refineries, and at bulk terminals. Stocks of natural-gas liquids at bulk terminals have been included only beginning 1935 and stocks at refineries beginning 1930; previously, only those at natural gasoline plants were counted. Stocks of liquefied petroleum gas are included with data for natural-gas liquids beginning in 1942; prior to that time only stocks of natural gasoline and cycle products were represented. (See notes 10, 11, $13,14,15$, and 16 for this page for details on changes in the basis of reporting.)

Monthly data for 1938-52 (for refinery stocks, 1941-52) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume (note above-mentioned changes affecting comparability; also, the November 1939 figure for unfinished gasoline should read $5,171,000$ barrels).
${ }^{8}$ Barrels of 42 gallons.
${ }^{9}$ Revised basis. Deductions at beginning of indicated years are as follows (thousands of barrels): 1931, 144; 1932, 26; 1937, 460; 1948, 923. In 1933, 229,000 barrels were added.
${ }^{10}$ Revised basis. Deductions at the beginning of indicated years are as follows (thousands of barrels): At refineries-1931, 643; 1932, 7,850; total-1935, 674; 1942, 254.
${ }^{11}$ Revised basis. Additions at the beginning of indicated years are as follows (thousands of barrels): "Natural-gas liquids"1931, 723; 1934, 369; 1935, 476 (represents stocks of natural gasoline at terminals); 1942, 162 (beginning January 1942 includes liquefied petroleum gases at natural gasoline and cycle plants); "total finished gasoline"-1933, 1,703 (includes transit and pipeIine stocks not previously included); 1934, 3,639; "at refineries"1933, 135 (bulk terminal, transit, and pipeline stocks included beginning 1933); 1934, 5,334.
${ }^{1 \cdot 2}$ Reflects natural gasoline losses beginning 1932. Monthly average for 1932 excluding losses is $31,158,000$ barrels.
${ }^{13}$ Revised basis; $1,100,000$ barrels transferred from refinery to unfinished gasoline at the beginning of the year.
${ }^{14}$ Revised basis; 199,000 barrels of California condensate transferred from crude-oil stocks at the beginning of the year.
${ }^{15}$ Beginning 1951, data are on a revised basis reflecting a change in the definition of "bulk terminals." The December 1950 figure for stocks of finished gasoline on the revised basis is 116,347,000 barrels. Monthly averages for 1951 on the old basis are as follows (thousands of barrels): Domestic demand, 90,996; stocks of finished gasoline, 117,381 .
${ }^{16}$ Excludes jet fuel beginning January 1953 (see also notes 5, 6 , and 7 for this page). Comparable 1952 monthly averages are as follows (thousands of barrels): Total production-98,169; gasoline and naphtha from crude oil (including unfinished net), 86,464; domestic demand, 95,249 ; stocks (December 31)-total stocks, 126,501 ; at refineries, 69,290 .
${ }^{17}$ Average for 7 months (January-July).
${ }^{18}$ Prices beginning with August 1956 are not comparable with earlier prices; see 1st paragraph of note 4 for this page.

## PAGE 174

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted July 1953, see note 1 for p. 104. Data cover commercial and lend-lease exports, but motor fuel sent to the Armed Forces abroad during the war is excluded. Beginning 1947, data include shipments under the Army Civilian Supply Program; such shipments were not previously reported. For 1947 these shipments amounted to 879,000 barrels of benzol. The figures comprise motor fuels (including jet fuel beginning 1953) and refinery gasoline; natural gasoline blending agents (beginning 1940); and, prior to 1953, also
benzol, naphtha, mineral spirits, solvents, and other finished light products.

Monthly data for 1938-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (note above-mentioned changes affecting comparability and revisions following). Revisions (thousands of barrels): 1947-April, 3,356; July, 4,014; September, 3,130; 1948 -December, 2,976. Monthly data prior to 1938 are shown on p. 16 of the December 1940 SURVEY.
${ }^{2}$ Source: U. S. Department of the Interior, Bureau of Mines. Data cover total output and stocks held at all refineries. Aviation gasoline is distinguished from ordinary motor fuel chiefly by its higher octane rating but also by additional components blended into it for various purposes. In addition to the "100-octane and above" classification, the totals also include 90 but under 100octane and some under 90-octane aviation gasoline. Stocks cover finished gasoline and, prior to 1949, also unfinished aviation gasoline (see note 11 for this page). Unfinished aviation gasoline is included in the finished gasoline stocks on p. 173 (see note 7 for that page). Stocks other than those held at refineries but still in the production stage, such as stocks in transit, are believed to be negligible.

Data for total production and stocks are not available prior to October 1939; separate data for 100 -octane and above are not available prior to 1942. Monthly data for 1941-52 for total production and total stocks and for 1942-52 for "100-octane and above" will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume.
${ }^{3}$ Source: U. S. Department of the Interior, Bureau of Mines. Jet fuels are composed of various amounts of low-grade gasoline, kerosene, and distillate fuel blended at refineries. (In 1956, about 77 percent of the total jet fuel production was gasoline, 17 percent kerosene, and 6 percent distillate fuel oil.) Production is mostly for military aviation use; small amounts are for export. Data for jet fuel were first reported separately at the beginning of 1952; previously, jet fuel was included with the production, domestic demand, and stocks of the products from which it was blended.
Monthly figures for 1952 are available upon request.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data through 1951 are quotation averages for 1 day each week; beginning 1952 they are quotation averages for 1 day each month (usually in the week containing the 15th). The figures represent prices of motor gasoline, Oklahoma (group 3), regular grade, f.o.b. refineries or terminals, excluding all fees and taxes.
Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume.
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Data beginning 1947 represent prices of motor gasoline, New York Harbor, regular grade, 85 octane research, bulk lots, f.o.b. refineries or terminals, excluding all fees and taxes. Through 1951, prices are quotation averages for a specific day of each week; beginning 1952, they are quotation averages for 1 day each month (usually in the week containing the 15 th ). The figures prior to 1947 (shown in italics) are prices of motor gasoline, tank wagon, New York, delivered to undivided dealers (i.e., those who handle only gasoline of a single company); figures exclude the New York State and Federal taxes. The comparable average for 1947 for this series is $\$ 0.118$.

Monthly data for 1949-52 for the current series appear in the 1955 and 1953 editions of BUSINESS STATISTICS; those for 194748 are available upon request. Monthly figures for 1935-46 for the italicized series appear on p. 24 of the January 1951 SUR VEY.
${ }^{6}$ Source: American Petroleum Institute (through May 1956, according to data compiled by the Texas Company; thereafter, from Platt's Oilgram Price Service). The prices are simple averages of service-station prices (exclusive of taxes) on the 1st of each month for regular-grade gasoline in representative cities. ( 50 cities through May 1956 and 54 cities thereafter). The 50 cities include 2 in the State of New York and 1 in each of the other 47 States and the District of Columbia. The 54 cities include 2 each in the States of New York, Ohio, Texas, California, and Washington, 1 in each of the other 43 States, and the District of Columbia. The change in the cities represented does not materially affect the comparability of the series. The prices for the 1 st of the month are shown here as of the end of the preceding month.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly figures prior to 1938 are shown on p. 16 of the March 1941 SURVEY.
${ }^{7}$ Barrels of 42 gallons.
${ }^{8}$ Average for 3 months, October-December.
${ }^{9}$ Includes some gasoline of 98-99 octane rating.
${ }^{10}$ See note 5 for this page, regarding change in specifications, etc.
${ }^{11}$ Beginning January 1949, data exclude stocks of unfinished aviation gasoline. December 1948 figures on the new and old bases, respectively, are as follows (thousand barrels): Total5,915; 6,068; 100-octane-2,504; 2,603.
${ }^{12}$ Not comparable with earlier data; see 1st paragraph of note 1 for this page regarding change in coverage beginning January 1953.
${ }^{13}$ Beginning 1954, data for stocks exclude stocks of components not of petroleum origin. Comparable figures for December 1953 are as follows (thousands of barrels): Total, 9,055; 100-octane and above, 5,238 .
${ }^{14}$ Average for 9 months, January-September. Data after September 1956 are not available.
${ }^{15}$ Data beginning January 1956 include jet fuel at bulk terminals.
${ }^{16}$ Data beginning June 1956 cover 54 cities; see note 6 for this page.

## PAGE 175

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. Data cover only asphalt and wax made from perroleum. Asphalt production includes that produced at refineries from both domestic and imported petroleum. Stocks of asphalt represent amounts held at petroleum refineries only; beginning January 1948, data exclude distributors' stocks in California (see note 7 for this page). Wax data refer to output and stocks of petroleum refineries only.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (revision for wax stocks, May 1952, is 630,000 barrels). In BUSINESS STATISTICS prior to the 1955 edition, data for asphalt are in short tons ( 1 ton $=5.5$ barrels) and data for wax are in thousands of pounds ( 280 pounds $=1$ barrel).
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. The figures shown have been adjusted from reported data to represent complete coverage of all manufacturers of the spec ified roofing and siding products (see minor exceptions stated in note 8 for this page).

Data include direct shipments (export and domestic) from the producing plants and from warehouses served by or operated in conjunction with these plants. To avoid duplication, shipments of the listed products to other manufacturers of these products are not included. Only those products having a base of dry felt or other organic binder are covered; no data are included for products made with an asbestos base.
Monthly data for 1941-52 for asphalt roofing and September 1943 through 1952 for asphalt siding and saturated felts will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1946-52 for asphalt board products are available upon request.
${ }^{3}$ For asphalt, 5.5 barrels equal 1 short ton; wax, 1 barrel equals 280 pounds.
${ }^{4}$ Revised basis ( 34,000 barrels deducted at beginning of 1932 and 17,000 barrels deducted at beginning of 1937).
${ }^{5}$ Average for 9 months, April-December.
${ }^{6}$ Average for 4 months, September-December.
${ }^{7}$ Revised basis; 250,000 barrels deducted at the beginning of the year.
${ }^{8}$ Monthly averages for 1949-51 are based on annual totals containing revisions not allocated to the monthly data. The monthly figures for the indicated years may not reflect complete industry coverage.

## PAGE 176

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from the War Production Board for 1941 through August 1945). Data include both domestic and imported pulpwood and, beginning 1941, represent total receipts, consumption, and stocks at all wood pulp mills with estimates for a few mills that do not report regularly. For years through 1940, annual data only are available for consumption; monthly averages are computed from those totals. Prior to 1941, consumption data exclude mills producing wholly defibrated, exploded, asplund fiber, and similar grades of pulp, but it is believed that the exclusion of such mills does not materially affect the comparability of the data. Further details as to softwood and hardwood and geographic regions are available in the original reports.

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. No monthly data are available prior to 1941.

Since the monthly data were published in the SUPPLEMENTS referred to above, minor revisions which were not distributed by months were made in the annual totals for some years as indicated by note 6 for this page.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (for the war period through August 1945, from the War Production Board). Data beginning 1941 cover all mills producing paper and paperboard except that all 1943 data and receipts and stocks figures for 1944 include reports from a few mills producing other products; in order to raise totals to an industry basis, estimates are included for a few mills not reporting in some months or years.
Monthly consumption averages computed from annual totals for 1940 and earlier years are not exactly comparable with those for later years due to exclusion of some mills not classified in the industry prior to 1941. Their inclusion in 1941 raised the total for that year by 3.5 percent (see note 1 for p. 178).

Monthly data for 1943-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.

Monthly data are not available for years prior to 1943. Since publication of the monthly data, revisions which were not distributed by months have been made in the annual totals for some years as indicated by note 6 for this page.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census (from April 1942 through September 1945 based on reports received by the War Production Board). This series replaces the previously published data covering wood-pulp production and stocks as compiled by the U. S. Pulp Producers Association (and adjusted to Census annual totals), differing only in presentation to the extent that stocks totals are shown here by type of mill instead of by grade of pulp. All tonnages are on a 2000 -pound air-dry weight basis (10 percent moisture).
Data represent practically complete coverage of all known pulp mills operating in the United States and one mill which started operations in 1954 in Alaska. Beginning with 1940, data for six mills not previously classified as pulp producers were included, raising the total production approximately 1 percent. (The 1940 monthly average for all grades, excluding these mills, amounted to 737,600 short tons.)

Data for stocks cover, in addition to pulp mills, all known producers of paper and board and, effective July 1950, mills outside the paper and board industry that consume wood pulp. The consumption of these latter mills accounted for approximately 88 percent of the wood pulp consumed outside the industry in 1947 and with increased coverage now account for all but a small percentage of outside consumption.
Prior to 1948, data for the dissolving and special alpha grade of pulp (a special grade of bleached sulphite and sulphate used primarily in the manufacture of rayon, cellophane, photographic film, plastics, explosives, etc.) are included with data for sulphite.

The 1949 monthly average shown for dissolving and special alpha is based on an annual total; separate monthly figures for 1949 for that grade are not available.

The monthly averages shown are based on annual totals which, in some instances, do not agree with the sum of the monthly figures because of revisions which are not available by months. Production data (except for dissolving and special alpha) are available on a monthly basis beginning January 1945; stocks, beginning September 1945.
${ }^{4}$ See 2d paragraph of note 3 for this page.
${ }^{5}$ See 2 d paragraph of note 2 for this page.
${ }^{6}$ Based on slightly revised annual totals; the revisions were not distributed by months.
${ }^{7}$ See 4th paragraph of note 3 for this page regarding classification of dissolving and special alpha grade prior to 1950.

## PAGE 177

${ }^{1}$ See note 3 for p. 176.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data cover imports and exports of all grades of wood pulp. Pulpwood, rags and rag pulp, and other paper-base stocks are not included. Data relate to imports for consumption beginning 1934; in earlier years they cover general imports. Tonnages of imports for all years and of exports beginning 1936 are air-dry weights.
Monthly data for 1934-52 for total exports and imports and for 1949-52 for dissolving and special alpha imports, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of the BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. In the 1940 and earlier SUPPLEMENTS, however, no export data nor import totals were published, but the latter may be obtained by adding chemical and groundwood classes. Monthly data for dissolving and special alpha exports are not available prior to 1952; those for imports prior to 1949.
${ }^{3}$ See 2d paragraph of note 3 for page 176.
${ }^{4}$ Defibrated or exploded included with soda, semichemical, etc; monthly average for 1946 based on sum of unrevised monthly figures for defibrated or exploded is 63,462 tons.
${ }^{5}$ Monthly average based on annual total; data not available by months.

## PAGE 178

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census, except data for 1941 through September 1945 which were compiled from reports to the War Production Board. Figures for most of the period beginning with 1941 are estimates of total industry output based on reports from all known operating mills and include estimates for nonreporting mills. Figures prior to 1941 exclude operations of certain mills (approximately 25) which before that year were not classified as producers of paper and paperboard. The output of the additional mills included in 1941 lifted the level of total production approximately 5 percent above the basis of data for 1940 and prior years, with most of the added output consisting of construction paper and board.

Production data pertain to primary operations, i.e., paper and board as it leaves the cutting, reeling, trimming, sorting, or supercalendaring operations directly behind the machine. Patent and clay-coated boards and paper coated on the paper machine are considered primary products, as are building boards and flexible paper insulation. All measurements cover finished production or machine production less machine and finishing-room waste.

It should be noted that data for the component items as shown in the present volume differ in certain respects from data in earlier volumes. The changes (made to conform to Census totals as now reported) are as follows: (1) construction (building) paper, formerly included in the total for paper, is now combined with construction board; (2) wet-machine board, formerly included with paperboard, is now shown as a separate item.

The paper total as presently constituted comprises such major items as newsprint, groundwood paper (uncoated), printing and converting paper (paper-machine coated), book paper (uncoated), fine paper, coarse paper, special industrial paper (including absorbent paper), sanitary tissue stock, and tissue paper. Paperboard comprises container board, bending board, nonbending board, special paperboard stock, and cardboard. Wet-machine board comprises binders' board, shoe board, and other wetmachine board. The construction paper and board total covers construction paper and hardboard and insulating board.
In addition to the increased coverage (mentioned in 1 st paragraph) affecting the comparability of totals beginning 1941 with earlier totals, comparability of data for the component categories shown here has also been affected from time to time by changes in classifications and definitions. Because of such changes, totals for the components for earlier years (prior to 1946, in par ticular) may be less accurate than those for recent years. Two classification changes reflected in the data beginning with 1946 should be noted. Effective with data for that year, stock for laminated wallboard and for other building board, totaling 51,181 tons, was transferred from the building board class to the paperboard class. By this transfer, the 1946 total production figure on the old basis for the category "construction paper and board" was lowered about 2.5 percent and that for paperboard was raised by 0.6 percent. Also beginning 1946, liners for gypsum and plasterboard were transferred from building board to paperboard; however, the figures for the pertinent components for prior years, as shown here, have been adjusted for comparability with 1946 and subsequent data.

The reader is reminded that the monthly averages from 1946 forward are computed from annual totals containing revisions not distributed to the monthly figures. An approximate adjustment of the monthly figures can, of course, be made by multiplying the reported monthly figures for the various items by factors obtained by dividing the annual totals by the totals of the monthly data.
Quarterly data for 1942 and monthly data beginning 1943, with the qualifications mentioned above, are available upon request. For total paper and board production, such figures comparable with monthly averages shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.
${ }^{2}$ Source: American Paper and Pulp Association. Data are estimated industry totals based on monthly reports from mills representing in recent years over 75 percent of the total output of all paper (excluding building paper, newsprint, and paperboard). The Association's figures have been adjusted to annual production data published by the Bureau of the Census through 1943 and monthly thereafter. Production figures for the current month published in the monthly SURVEY are preliminary estimates by the Association and are adjusted the following month to the Census figures.

Data for new and unfilled orders, shipments, and stocks on hand at end of month are estimates by the American Paper and Pulp Association or affiliated associations based on reports from mills and expanded to industry totals. The Census Bureau does not publish similar types of data.
"Total paper, excluding building paper, newsprint, and paperboard,'" in addition to fine, printing, and coarse paper, includes through 1955 tissue and miscellaneous papers not shown separately in the SURVEY. Beginning with January 1956 data, tissue paper is included in the production total only. "Fine paper" comprises writing, cover, text, Bristol, and thin papers (carbon, cigarette, etc.), with writing paper accounting for about four-fifths of the total. "Printing paper" includes book paper and groundwood printing and specialty paper; book paper constitutes about threequarters of the total. "Coarse paper" comprises kraft, sulphite, glassine, and greaseproof and vegetable parchment papers, used chiefly for wrapping, shipping, and converting.

Monthly data for 1941-52 comparable with monthly averages shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Data published in the 1942 and earlier SUPPLEMENTS comprise only reporting mills and, chiefly because they were not raised to industry-wide coverage, are not comparable with subsequent figures. Monthly averages included in the present volume for the years 1934-40, inclusive, are based
on comparable data computed for those years by the Assocaition but never published in the SURVEY.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years beginning with 1941 and the monthly or quarterly data published in the previous SUPPLEMENTS referred to on p. 197 (revisions available on request).

Since publication of the 1941-44 data, which included the "wrapping paper" group, the latter has been revised by excluding special industrial paper and giving it the name "coarse paper" now currently used. For the years 1941-44, the coarse paper series averaged about 8 percent less than the former wrapping paper series, but this shift between classes did not affect the other published figures. Other very small revisions have been made in the $1942-43$ data for total and fine paper shipments with more appreciable revisions in new and unfilled orders and stocks. In 1954, the method of estimating industry-wide unfilled orders and stocks from the data furnished by reporting mills was changed, with the result that the published series for total, fine, printing, and coarse paper were all revised back to January 1947 on the basis of the new method.
${ }^{3}$ See 1 st paragraph of note 1 for this page regarding increased coverage of mills beginning with 1941.
${ }^{4}$ See 5 th paragraph of note 1 for this page regarding classification changes beginning with 1946.
${ }^{5}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not strictly comparable with those for prior years. However, revisions for the year 1947 were very small, raising the unfilled orders by an average of 0.3 percent and lowering stocks by an average of 0.4 percent.
${ }^{6}$ Beginning with January 1956 data, tissue paper is not included with totals for new and unfilled orders, shipments, and stocks. Figures for December 1955 are unrevised estimates.

## PAGE 179

${ }^{1}$ See note 2 of page 178.
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. The prices quoted from 1947 forward are for 100 pounds of book paper (BLS code number 09-31-21), A grade, English finish, white sheets untrimmed, cased, standard weights $25^{\prime \prime} \times 38^{\prime \prime} / 500$, carload lots, f.o.b. mill, carload freight allowed, zone 1. Beginning with 1952, the prices shown are quotation averages for one day of each month (usually in the week containing the 15 th), based on data reported by various sellers (no fewer than three) of the commodity; prior to 1952, they are quotation averages for one day of each week.

Monthly figures for 1949-52 comparable with monthly averages for the specification described above (BLS code number 09-31-21) will be found in the 1953 edition of BUSINESS STATISTICS. The 1947-48 monthly prices per 100 pounds on a comparable basis are as follows: 1947-January, \$9.50; February-July, \$9.97; August, $\$ 10.22$; September-December, $\$ 10.47 ; 1948$-January-April, $\$ 10.47$; May, $\$ 10.63$; June-August, $\$ 10.80$; September, $\$ 11.09$; October-December, \$11.30.

The monthly averages for 1935-46 as shown in this volume are not comparable with subsequent figures. Such averages are based on quotations for book paper, B grade, English finish, uncoated, white sheets, f.o.b. mill, freight allowed, zone 1. Quotations for this grade for the first 6 months of 1947 are as follows: January, $\$ 9.30 ;$ February, $\$ 9.68$; March-June, $\$ 9.80$. The $1941-46$ monthly figures for this grade appear in the 1947 issue of the STATISTICAL SUPPLEMENT.
${ }^{3}$ Data beginning 1941 exclude "special industrial paper" and are not comparable with those for earlier years. See 6th paragraph of note 2 for p. 178.
${ }^{4}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not comparable with prior years.
${ }^{5}$ Data beginning 1947 are not strictly comparable with earlier figures; see note 2 above.

## PAGE 180

${ }^{1}$ See note 2 for p. 178.
${ }^{2}$ Source: Newsprint Service Bureau and the Newsprint Association of Canada. The reported data cover virtually the entire industry in both Canada (including Newfoundland) and the United States. Judged by the comparison of newsprint production data for the United States with figures published by the Bureau of the Census, the Association's data cover between 96 and 100 percent of total United States newsprint output for each of the years 1929 through 1956-with coverage in the last 6 years at 100 percent. Effective January 1936 for the United States and a year earlier for Canada, shipments data have included tonnage invoiced (whether or not shipped) and stocks at mills have included supplies at destination warehouses not yet invoiced to customers; previously, shipments of U. S. newsprint had represented only paper moved during the period and stocks covered only tonnage at mills.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to on p. 197 (revisions available on request). Data for Canadian newsprint in the 1949 and prior SUPPLEMENTS exclude Newfoundland; monthly data including Newfoundland for 1937-46 are shown on pp. 22-23 of the May 1950 SURVEY. Monthly data for Canada including Newfoundland prior to 1937 have not been published in the SURVEY; monthly averages for 1934 and earlier years in the present volume are computed from annual totals except that stocks are those at yearend. Since publication in the SUPPLEMENTS indicated on p. 197, data for stocks of United States newsprint at mills for years 193537 were revised upward, the increase averaging 12 percent in 1935, 6 percent in 1936, and 5 percent in 1937. Since publication; the 1938 U . S. shipments total was slightly revised but the adjustment was not distributed by months. For 1929-31, inclusive, the data published in the 1932 SUPPLEMENT for United States news print were slightly revised, revisions averaging less than 1 percent. The 1930 monthly average of U. S. newsprint production (based on unrevised monthly figures) shown in the 1932 SUPPLEMENT is incorrect; the correct figure is 106,983 short tons.
${ }^{3}$ Source: American Newspaper Publishers Association. Data beginning 1942 are based on reports from 422 publishers representing 525 newspapers which, over the period 1942-56, have accounted for a portion varying from 70 to 78 percent of total United States newsprint consumption. Data for earlier years, based on variable and slightly larger numbers of publishers, represented about 80 percent coverage in 1929-36 and around 75 percent subsequently.

Stocks at publishers are those on hand in city of publication; those in transit represent tonnage billed to the publisher by mills but not received.

Monthly data for 1936-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Consumption data for 1929-35 were published in the March 1940 SURVEY, p. 10; comparable data for stocks at publishers and in transit, 1929-35, are shown in the September 1938 SURVEY, p. 20, table 74. An error in the note of table 74 in the latter issue is explained in the 1942 SUPPLEMENT note.
${ }^{4}$ Stocks at end of year; comparable figure for end of 1935 is 185,489 short tons.
${ }^{5}$ Data beginning 1941 exclude "special industrial paper" and are not comparable with those for earlier years. See 6th paragraph of note 2 for p. 178.
${ }^{6}$ Beginning with January 1947 data, unfilled orders and stocks are derived by a different method, hence are not strictly comparable with prior years.

PAGE 181
${ }^{1}$ Source: U.S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through

April 1941). Data cover standard newsprint paper and imports for consumption (general imports prior to 1934). For general explanation of foreign-trade data, as well as explanation of sampling procedures instituted in July of 1953, see note 1 for p. 104.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of $p .197$ of this volume.

The following revisions in previously published data should be noted as explaining differences between the monthly averages contained herein for earlier years and the monthly data published in the previous SUPPLEMENTS referred to on p. 197. Revised imports (in short tons): 1931-April, 175,516; June, 190,919; 1946-December, 319,072; 1948-March, 398,486; April, 349,828; November, 416,984.

2 Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning with 1952, the prices shown are quotation averages for one day each month (usually in the week containing the 15th), based on data reported by various sellers (no fewer than three) of the commodity; prior to 1952, they are quotation averages for one day each week. The price quoted is for a ton of standard newsprint, rolls, contract, delivered to principal ports (BLS code number 09-32-01). Data through 1946 as published here and prices in the 1951 and earlier SUPPLEMENTS are on a slightly different basis (BLS code number 744); revised monthly data for 1947-48, never published in the SURVEY, are available on request.

Monthly data for 1929-46 and 1949-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.
${ }^{3}$ Source: National Paperboard Association. The figures are based on weekly data representing estimated industry totals compiled by the Association from reports of member companies accounting in recent years for approximately 87 percent of total industry output. These reports are supplemented by estimates for nonmember companies based on annual reports obtained by the Association from practically all mills known to produce paperboard. The monthly figures, shown in the SURVEY and in the present volume, for orders and production are calendarmonth totals computed by the Office of Business Economics from the Association's weekly data by prorating figures for weeks falling in 2 months. Monthly data for percent of activity are averages of weekly percentages for 4- or 5- week periods, with weeks ending on the $1 \mathrm{st}, 2 \mathrm{~d}$, or 3 d of the month being included in the average of the preceding month in accordance with the Association's reports for 4- and 5-week periods; unfilled orders are stated as of the end of the same 4- or 5 -week periods.

Percent of activity is computed from inch-hours of machine operation which take into account machine widths (based on last dryer width) and hours of operation. A 6-day week of continuous operation is defined as 100 -percent activity.

Monthly data for 1938-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted in the next paragraph, will be found in earlier editions of BUSINESS. STATISTICS as indicated at the top of p. 197 of this volume. Comparable monthly data prior to 1938 were never published in the SURVEY; monthly averages shown herein for these earlier years were computed from annual totals.

Percent of activity data for 1938-40 and new orders and production tonnage data for all years through 1950 and for 1952 have been slightly revised by the Association but the revisions were not distributed by months. Although the revisions for most years average less than 1 percent, monthly figures of the above-named series in the SUPPLEMENTS referred to on p. 197 will not exactly correspond with the monthly averages contained herein.
${ }^{4}$ Source: Fibre Box Association (prior to 1940 from the National Container Association). Data are estimated industry totals based on monthly or weekly reports of member companies coverin about four-fifths of the industry and on estimates of nonreporting companies; these current data are subsequently adjusted to final figures obtained by the Association in an annual survey which covers a greater portion of the industry than the weekly reports and which is supplemented by estimates for nonreporting
companies. Figures measure the surface area of corrugated and solid fibre containers including area of interior packings.

Monthly data are computed by the Office of Business Economics from the reported weekly data on the basis of a $51 / 2$-day week ( 6 days prior to 1953), prorating figures for weeks falling in 2 months (data are distributed on a $41 / 2$-week basis when New Year's Day, July 4, Labor Day, and Christmas fall in the week prorated; on a 5-day basis when Memorial Day is involved).

Monthly data for 1941-52 comparable with monthly averages for corresponding years shown herein, with the exceptions noted below, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. Monthly data for 1934-40 appear on p. 20 of the September 1944 SURVEY. Monthly data are not available prior to 1934.

Minor revisions have been made in previously published monthly data for 1940-52 to adjust prorated monthly figures for observance of New Year's Day (affecting December and January data) and for Memorial Day (half-day affecting May and June data); other minor revisions have been made in the annual totals, which were not distributed by months.
${ }^{5}$ Source: Folding Paper Box Association. Data are from reports of companies representing from 52-56 percent of the entire industry in the years 1946-56 (45-50 percent in 1937-45). Monthly indexes for the current year, with the average of the years 1947-49 =100, are computed by the Office of Business Economics from the dollar figures of orders and shipments furnished by the Association and from an expansion factor also provided by the Association to raise the reported figures to industry-wide totals. The monthly indexes are subsequently revised to conform to those published by the Association in its Annual Statistical Report.

Monthly data for 1949-52 comparable with monthly averages for corresponding years shown herein will be found in the 1953 edition of BUSINESS STATISTICS.

Monthly data for the years 1941-48 published in the 1951, 1949, and 1947 SUPPLEMENTS were on the base, 1936=100, hence are not comparable with indexes on the 1947-49 base. They can be shifted to the new base, 1947-49 average $=100$, by dividing each index on the 1936 base by the following 1947-49 averages: New orders-divide by 4.2533 ; shipments-divide by 4.5523 ; the resulting quotients will be comparable with the currently computed indexes. Monthly data prior to 1941 were not published in the SUPPLEMENT.
${ }^{6}$ Source: Publishers' Weekly. Data are based on reports from publishers, numbering between 800 and 900 in recent years. In order to assure as complete a coverage as possible, the records of the compilers are checked against book reviews and notices, and also against the card index of the Library of Congress. Only books are included; pamphlets, theses, and reports are excluded. Reprints, in the sense of reprints with no change whatsoever, are not included. However, popularly priced editions in reprint series, usually done by a different publisher from the original, are included.

Monthly data for 1929-52 comparable with monthly averages for corresponding years shown herein, except for a few minor revisions, will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.

7 Data beginning 1947 are not strictly comparable with earlier years; see note 2 for this page.
${ }^{8}$ Average of March-December data; not comparable with earlier years. See note 9 following.
${ }^{9}$ Beginning with March 1956, the prices are not entirely comparable with earlier data; in that month the number of reporters was increased to give representation in the southern area. The March 1956 price on the former basis was unchanged from the previous month.

## PAGE 182

${ }^{1}$ Sources: U. S. Department of Commerce (Business and Defense Services Administration beginning October 1953; National Production Authority for September 1950-September 1953; and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); the Civilian Production Administration and predeces-
sor agencies for June 1941-March 1947; and the U. S. Department of Commerce (Bureau of Foreign and Domestic Commerce) and the Rubber Manufacturers Association, Inc., for the earlier period. The data include natural rubber (dry, in all forms including guayule) and the dry weight of natural latex. Gutta balata, guttapercha, gutta-siak, and gutta-jelutong-pontianak are not included.

Consumption figures represent consumption by all rubber users. For July 1941-June 1947, consumption data are based on complete reports. Beginning July 1947, consumption data are estimated totals based on samples representing almost the entire industry. Earlier consumption figures are based on monthly reports to the Rubber Manufacturers Association, from both member and nonmember companies, adjusted to industry totals on the basis of annual surveys of the rubber industry by the Bureau of Foreign and Domestic Commerce.

Stock figures relate to total industry stocks on hand and, for the period from December 1939 through June 1947 also Government stocks. The figures beginning July 1947 represent estimated stocks available to industry, but do not include Government strategic stocks. Prior to 1941, year-end stocks were derived from annual surveys by the Bureau of Foreign and Domestic Commerce, and data for other months were calculated from the year-end figures by adding imports and deducting consumption and reexports.

Monthly averages prior to 1929 and monthly data prior to 1953 comparable with figures shown herein (except as mentioned below) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Exceptions: Consumption figures for 1932-33 in the 1936 SUPPLEMENT have been revised; consumption figures for 1931 and earlier years in the 1932 volume are reported data instead of industry totals; the March 1924 figure for stocks should read 72,576 long tons.) Notes 1 and 11 for p. 160 of the 1942 SUPPLEMENT give information on the coverage of the reported data for individual years prior to 1941 and the method of raising the data to industry totals. Monthly consumption figures for 1924 - 33 raised to industry totals are available upon request.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from the Bureau of Foreign and Domestic Commerce through April 1941).

The import statistics beginning 1934 relate to imports for consumption; previously, to general imports. (For definitions and other pertinent foreign-trade information, including explanation of sampling procedures instituted in July 1953 and modified for the period January-June 1956, see note 1 for p. 104.)

Data for imports of natural rubber cover crude rubber and milk of rubber, or latex (dry rubber content), including guayule rubber. Balata, jelutong, pontianak, gutta-percha, and other guttas are not included. Quantities are reported with no allowance for shrinkage which was of negligible importance prior to 1943 and after 1945, but was significant in 1943-45 because of the increase in imports of nonplantation rubber which requires washing. Shrinkage was estimated by the Civilian Production Administration to reduce the 1943-46 totals by the following amounts: 1943, 8.8 percent; 1944, 5.5 percent; 1945, 6.7 percent; 1946, 1.3 percent. Reexports of rubber are comparatively small. Monthly average reexports for 1941-56 are as follows (long tons): 1941, 448; 1942, 905; 1943, 1,882; 1944, 812; 1945, 792; 1946, 643; 1947, 343; 1948, 556; 1949, 521; 1950, 720; 1951, 217; 1952, 252; 1953, 698; 1954, 620; 1955, 884; 1956, 939.

Monthly averages for 1913-28, and monthly data for 1936-52 (for imports of natural rubber) and for 1943-52 (for exports of synthetic rubber), will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (1946 revisions for natural rubber are as follows, in long tons: August, 45,404; October, 46,339; November, 54,849.) Earlier monthly figures beginning 1913 for natural rubber appear on p. 18 of the May 1940 SURVEY.

The 1941 and 1942 figures for synthetic rubber exports (inadvertently omitted from the 1947 and 1949 SUPPLEMENTS) represent allocations for export as reported by the War Production Board. Imports of synthetic rubber, not shown in the table, are as follows (monthly averages, in long tons): 1944, 849; 1945, 944; 1946,$626 ; 1947,112 ; 1948,1,306 ; 1949,1,437 ; 1950,2,143$; 1951, $840 ; 1952,1,658 ; 1953,1,065 ; 1954,1,408 ; 1955,920 ; 1956,649$. There were no imports of synthetic prior to 1944.
${ }^{3}$ Sources: U. S. Department of Labor, Bureau of Labor Statistics (for data beginning April 1947); U. S. Government base selling price (from February 1942 through March 1947); Rubber Trade Association of New York, Inc. (through January 1942).

The prices cover No. 1 ribbed smoked sheets and, beginning with 1952, are quotation averages for one day each month (usually in the week containing the 15th). From early 1942 through 1947 the U.S. Government was the sole purchaser of natural rubber and the price shown for that period is the Government base selling price. This price was fixed at $\$ 0.225$ in 1941 and continued until January 13,1947 , when it was raised to $\$ 0.2575$. A free market was restored April 1, 1947, and the prices shown thereafter are spot market prices at New York. However, the Government continued to sell rubber at $\$ 0.2575$ in April and early May 1947.

Monthly averages beginning 1921 and monthly figures for 192352 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (revisions for September 1947, $\$ 0.167$; July 1949, $\$ 0.164$; January and November 1950, $\$ 0.184$ and $\$ 0.732$ ).
${ }^{4}$ Sources: U. S. Department of Commerce (Business and Defense Services Administration beginning October 1953; National Production Authority for September 1950-September 1953; and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); and the Civilian Production Administration and predecessor agencies prior to April 1947. All data are industry totals and include butadiene-styrene, neoprene, butyl, and buta-diene-acrylonitrile types. Production for the entire period and consumption and stocks through August 1945 are based on complete reports; thereafter, consumption and stocks are based on samples representing almost the entire industry and are adjusted to complete coverage. Stock figures include Government and industry stocks for the entire period. Stocks shipped for export but not cleared are not included.

Monthly figures for 1941-52 comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (July 1950 figure for production should read 43,820 tons; December 1946 revision for stocks, 115,186 tons).
${ }^{5}$ Sources: U. S. Department of Commerce (Business and De fense Services Administration beginning October 1953; National Production Authority for September 1950-September 1953 and Bureau of Foreign and Domestic Commerce for April 1947-August 1950); the Civilian Production Administration and predecessor agencies for January 1941-March 1947; and the Rubber Manufacturers Association, Inc., and the U. S. Department of Commerce (Bureau of Foreign and Domestic Commerce) prior to 1941. Data through 1943 include only natural rubber reclaim; thereafter, both natural and synthetic rubber reclaim. Consumption and production for April 1942-August 1945 and later production data are based on complete reports; data for the earlier period and zonsumption data beginning September 1945 are based on monthly reports, representing a large proportion of the industry, adjusted to complete coverage. Stock figures for 1941-June 1947 are calculated from consumption, production, exports, and imports and are adjusted periodically to reported inventories, representing complete coverage. Beginning July 1947, stocks represent estimated total stocks based on reported figures.

Consumption and stocks prior to 1941 were based on monthly reports to the Rubber Manufacturers Association, adjusted to complete coverage by the Association beginning May 1938 and by the Bureau of Foreign and Domestic Commerce (on the basis of annual surveys of the industry) for the earlier period. Annual production figures prior to 1941 were derived from changes in stocks, amounts consumed, and amounts exported and imported; monthly figures reported to the Rubber Manufacturers Association were adjusted to these annual totals. Information on the coverage of the reported monthly data for individual years prior to 1941 and the method of adjusting these data to industry totals are given in the 1942 SUPPLEMENT in notes 1 and 12 for p. 160.

Monthly averages prior to 1929 and monthly data for 1932-52 (except for 1932 revisions in producton) comparable with monthly averages for corresponding years shown herein will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (January 1950 figure for stocks should read 27,319 tons.) Data shown in the 1932 SUPPLEMENT are re-
ported data instead of industry totals. Monthly figures prior to 1933 for production and prior to 1932 for consumption and stocks are available upon request.
${ }^{6}$ The monthly averages for 1939-42 for consumption and production are based on annual totals; stock figures for 1940-42 are for December 31. The 1939-41 data, with the exception of production for 1939 and 1940, are estimated.
${ }^{7}$ Monthly average calculated by the Office of Business Economics.
${ }^{8}$ Includes year-end adjustment of $+2,750$ tons.
${ }^{9}$ Includes year-end adjustment of $+3,000$ tons.
10 Includes year-end adjustment of $+1,600$ tons.
11 Includes year-end adjustment of +220 tons.
$1^{12}$ Includes year-end adjustment of +575 tons.
13 Includes year-end adjustment of $+1,420$ tons.
14 Includes year-end adjustment of +440 tons.
15 Includes year-end adjustment of +250 tons.

## PAGE 183

${ }^{1}$ Source: Rubber Manufacturers Association, Inc. All data are 100-percent industry totals, based on reports from manufacturers accounting for a large proportion of the industry; estimates are included for nonreporting companies. The estimated industry totals were adjusted by the Association to biennial Census of Manufactures data through 1939. Since 1940, the monthly estimates have been adjusted to reported annual totals. Figures for casings apply to automotive casings only; those for inner tubes ap ply to automotive tubes and, beginning 1951, also motorcycle tubes. The figures do not include data for solid rubber tires or pneumatic tires for motorcycles, bicycles, and aviation, industrial, and agricultural equipment.

Total shipments include all shipments to purchasers from factories, regional branches, and sectional warehouses (except shipments to other tire manufacturers, i.e., intermanufacturers' purchases) and, beginning 1944, also transfers to company-owned stores. Tires on consignment are included in shipments at the time they are sold, and contract mileage tires at the time they are shipped to the account or servicing point. Shipments to factory warehouses are not included. Shipments for original equipment represent shipments to vehicle manufacturers for original equipment.

Export shipments are those reported by manufacturers and cover new tires only. From 1941 until the end of the war, the Association reported lend-lease shipments as replacements instead of shipments for export, except that from late 1943 until the end of 1945 orders placed by the Office of Economic Warfare (formerly Foreign Economic Administration) were classified under exports. It is stated by the Association that companies were requested to conform to the export definition of the Government and to consider shipments to Alaska, Hawaii, and Puerto Rico as domestic business but that one or two companies reported shipments to those areas in exports. Inconsistencies in data for export shipments have a bearing on the accuracy of the figures for replacement sales, which represent total shipments less shipments for export and for original equipment. Export shipments as reported by the Association differ from export statistics of the U.S. Department of Commerce shown in the 7th column, which cover total exports to foreign countries (including lend-lease shipments for pertinent periods), based on declarations of all exporters, and include used and retreaded tires as well as new tires and, beginning 1952, also motorcycle tires.

Stock figures include quantities held at factory, regional branches, and sectional warehouses and consigned stocks, as well as those in transit between such points, and, prior to 1944 , stocks of company -owned stores. Stocks purchased from other manufacturers are included. The change beginning 1944 in the treatment of transfers to company oowned stores (whereby these transfers were considered sales, and stocks at company-owned stores were excluded from inventories) was made to coincide with the control plans of the OPA Rationing Board.

During 1942, Government restrictions required vehicle manufacturers to return excess stocks and exporters to return some stocks originally intended for shipment to foreign customers.
Dealers also made large returns of stocks to manufacturers under a Government-sponsored program. The shipments figures are not adjusted for such returns. As a result, there are distortions in the data and it should be noted that inventories increased in some months out of all proportion to production (see the 1947 STAT1STICAL SUPPLEMENT for 1942 monthly data). The Association cautions that, because of considerable confusion in the industry in 1942, figures for that year should not be used to indicate trends.

Monthly figures for 1936-37 and 1939-52 for all series (except 1936-37 and 1939-40 data for shipments of casings for replacement equipment and for export), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p$. 197 of this volume. The 1938 monthly figures have been revised and are available upon request. Monthly figures prior to 1936 for production, total shipments, and stocks are on pp. 16-18 of the May 1939 SURVEY. Export data shown in the 1942 and 1940 volumes are exports as reported by the U. S. Department of Commerce (see explanation of the data above) plus shipments to Alaska, Hawaii, Puerto Rico and, beginning 1935, Virgin Islands; while replacement shipments are total shipments less these export figures and shipments for original equipment. However, for most years, these data for exports and replacement shipments do not vary significantly from the export and replacement shipments reported by the Association. Annual data back to 1910 and monthly figures beginning 1921 for export shipments and replacement shipments, as reported by the Association, are available upon request.
${ }^{2}$ Sources: U. S. Department of Commerce, Bureau of the Census (Bureau of Foreign and Domestic Commerce through April 1941). For definitions and other pertinent foreign-trade information, including explanation of sampIing procedures instituted July 1953 and modified for the period January-June 1956, see note 1 for p. 104.

Data for exports of pneumatic casings cover automotive tires, including used and retreaded tires as well as new tires; motorcycle tires are included beginning 1952. The figures do not include exports of solid and cushion tires, or airplane, bicycle, tractor, and farm implement tires.

Data for exports of tubes cover automotive tubes of all types, except figures for January-June 1956 which cover truck and bus tubes only. During the 1 st half of 1956, other types of automotive tubes were not reported separately in the export statistics. However, the 1956 monthly average is based on the annual total, including the items omitted in the January-June period.

Monthly data for 1941-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (revision: May 1948, exports of casings, 142 thousand). Monthly data for 1924-40 comparable with the figures shown here are available upon request. (It should be noted that figures through 1941 as shown in the 1942 SUPPLEMENT and earlier volumes are not comparable with the present series which covers only shipments from the customs area to foreign countries; figures in the earlier volumes also included shipments from the United States to Alaska, Hawaii, Puerto Rico, and, beginning 1935, the Virgin Islands.)
${ }^{3}$ Data for motorcycle tubes are included beginning 1951.
${ }^{4}$ Data for motorcycle tires are included beginning January 1952.
${ }^{5}$ For truck and bus tubes only; see 3d paragraph of note 2 for this page.

## PAGE 184

${ }^{1}$ Source: U. S. Department of the Interior, Bureau of Mines. The coverage of the monthly figures on operations is practically complete, according to annual figures of the compiling agency. Data represent operations in continental United States and, beginning 1940, also in Puerto Rico (operations in Puerto Rico started January 1940). The figures for September 1944 through 1946 also include data for one plant in Hawaii (plant dismantled December 1946).

Data for production and shipments relate to finished portland cement; they include high-early strength cement which, beginning 1955, is separately reported by the compiling agency. Clinker cement is unground cement; i.e., the intermediate product between raw materials and the finished cement. Data for production of clinker cement are available in the original reports.

Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The December 1929 figure for stocks of finished portland cement should read 23,701,000 barrels.)
${ }^{2}$ U. S. Department of Commerce, Bureau of the Census. Data comprise unglazed common and face brick and cover virtually all known manufacturers of the specified products. The monthly figures beginning June 1953 include estimates for smaller establishments not required to report on a monthly basis as of that date.

Monthly data for 1943-52 for production and for September 1942 through 1952 for shipments will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The 1952 monthly figures are not adjusted to the revised annual total.)
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices are for common building brick, f.o.b. plant, and from 1947 forward are based on quotations from about 20 reporters. The prices prior to 1947 are based on quotations from about 50 reporters; they are not comparable with data for later years.

Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually in the week containing the 15 th); prior to 1952, they are quotation averages for 1 day each week.

It should be noted that brick prices vary considerably in different parts of the country, and that the series shown here is only indicative of the trend.
Monthly data for 1932-48 for the 50-company series and for 1949-52 for the 20-company series will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census. The monthly series through May 1953 are based on reports received from virtually all known manufacturers of the specified product; beginning June 1953, the monthly figures are estimated industry totals which include appropriate allowances for smaller establishments excused from reporting on a monthly basis. The 1929-39 figures for production are from the biennial Census of Manufactures for $1929,1931,1933,1935,1937$, and 1939 and the Census of Clay Products Manufactures for years alternating the biennial census years. The 1940 figures are estimated industry totals based on data (for about 94 percent of the industry) from the 1940 Census of Clay Products Industries. Production figures for 1929-40 are monthly averages computed from annual totals.
Monthly data for 1943-52 for production and September 1942 through 1952 for shipments will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (The 1952 monthly figures are not adjusted to the revised annual total.)
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Cen sus. The data cover virtually all known manufacturers of the specified product; they include estimates for small establishments excused in June 1953 from reporting on a monthly basis. There are no comparable data prior to 1942.
Monthly data for 1943-52 for production and September 1942 through 1952 for shipments will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume.
${ }^{6}$ Average for 4 months, September to December.
${ }^{7}$ See note 3 for this page; 1947 average price comparable with the earlier series is $\$ 19.867$.
${ }^{8}$ The 1952 monthly average is based on the revised annual total; this total includes an upward revision not allocated to the monthly figures.

## PAGE 185

${ }^{1}$ Sources: U. S. Department of Commerce, Bureau of the Census, for data since October 1945; prior thereto, the Glass Con-
tainer Association and the Glass Container Manufacturers Institute (for data through 1944) and the War Production Board (for Jan-uary-October 1945). Data cover all known manufacturers of glass containers but, prior to 1945, include (except for stock figures through 1943) estimates for two small companies that did not report. The omission of stocks of these two companies prior to 1944 does not appreciably affect the comparability of the stock data.
Production figures from 1945 forward include production both for domestic use and for export; prior to 1945, some production for export may not have been included. Shipments exclude those for direct export; such shipments for 1953-56, respectively, were (thous. of gross): 3,112; 2,779; 2,804; 2,966. Beginning 1948, data for the beverage classification cover both returnable and nonreturnable containers; prior thereto, the figures cover returnable containers (except in 1944 when some nonreturnable containers are included). Beer bottles comprise both returnable and nonreturnable types.

Current data as reported to the Census Bureau include a breakdown of production and stocks by type of container similar to the classes shown here for shipments. Production and shipments represent a continuation of the revised data published beginning with the 1947 SUPPLEMENT; the revisions were made to include estimates for two small companies and to distribute by separate classifications the shipments data reported by West Coast manufacturers.

Monthly data for 1941-52 for all categories and those for 193440 for stocks will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume (notice that in the 1951, 1949, and 1947 volumes, data for "fruit jars and jelly glasses" are shown separately; they should be combined with figures for wide-mouth containers for comparability with figures shown herein). Revised monthly figures for production and shipments for 1940 are available upon request.

## PAGE 186

${ }^{1}$ Sources: U. S. Department of the Interior, Bureau of Mines; imports are from the U. S. Department of Commerce, Bureau of the Census beginning May 1941 and Bureau of Foreign and Domestic Commerce prior thereto. Imports represent general imports through 1933 and imports for consumption thereafter. The $\mathrm{Bu}-$ reau of Mines data are based on quarterly and annual reports covering all primary gypsum producing and processing companies. Data on crude gypsum and on calcined gypsum are from quarterly reports beginning 1930 and annual reports for 1929.

Production of crude gypsum covers 97 to 100 percent of the industry, except in 1933 when the coverage was 93 percent; the figures exclude byproduct gypsum. Data on calcined gypsum include production from domestic, imported, and (beginning with 1938) byproduct crude, and represent complete coverage beginning 1938; for the earlier years they cover 98 to 99 percent of the industry.

Data on gypsum products beginning 1938 are based on quarterly reports (except for "industrial uses" which are based on annual data for 1938) covering total sales of calcined products and 95 to 100 percent of sales on uncalcined products. The quarterly averages for 1929-1937 are computed from annual totals that represent complete coverage of the market for uncalcined and calcined gypsum products. Sales by processing companies that use byproduct crude or that do not mine or calcine gypsum are included for all years and adjustments are made for changes in the classifications used in the different canvasses to make statistics for the earlier years comparable with data currently reported. Data for 1929-31 for uncalcined products and for 1929-36 for lath, wallboard, and "all other" are partly estimated.
Uncalcined gypsum products include portland-cement retarder and agricultural gypsum, as well as gypsum for use as filler and for unspecified minor uses.

Quantities for industrial uses apply to plate-glass, terra-cotta, and pottery plasters, dental and orthopedic plasters, and industrial molding, art, and casting plasters, etc. "All other" building plasters include sanded and premixed perlite, plasters sold to mixing plants, gauging and molding plasters, prepared finishes, roof-deck plasters, miscellaneous building plasters, and Keene's cement.

Quarterly data for 1939-52 for "industrial uses" and for 193852 for all other items (except "all other" plasters, wallboard, and
"all other" building uses), comparable with quarterly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. To obtain comparable quarterly figures back to 1938 for "all other" plasters, the separate data shown in earlier volumes for all other building plasters and for Keene's cement should be added. Also, the quarterly figures back to 1938 , comparable with quarterly averages shown herein for "wallboard" and "all other building uses" combined, may be obtained from earlier volumes by adding the separate data for tile and wallboard.
${ }^{2}$ Sheathing board is included with wallboard through 1941; thereafter, with 'all other" building uses. Relatively small quantities of laminated board and formboard are included with wallboard through 1953; thereafter, such items are included with "all other" building uses.
${ }^{3}$ Base-coat plasters included with "all other" plasters.
${ }^{4}$ See 2 d paragraph of note 1 for this page regarding industry coverage.
${ }^{5}$ Figures beginning 1942 are not comparable with those for prior years. See note 2 for this page.
${ }^{6}$ Beginning with 1954 , relatively small amounts of laminated board and formboard, formerly included with wallboard, are included with "all other."

## PAGE 187

${ }^{1}$ Source: National Association of Hosiery Manufacturers, Inc. Data are estimated industry totals for full-fashioned and seamless hosiery, socks, and anklets, etc. The estimates are based on monthly reports of member and nonmember concerns which accounted for approximately 80 percent of the total industry shipments in 1935-52, 73 percent in 1953-54, 72 percent in 1955, and 70 percent in 1956. For the year 1954, the Association's figures for total shipments of hosiery were approximately 93 percent of total shipments as published in the preliminary reports from the Census of Manufactures for that year. However, total shipments of full-fashioned hosiery, as reported by the Association, were approximately in agreement with those shown in the reports from the Census. Annual reports of production for 1944 were obtained from a large proportion of the nonreporting mills and were used in computing final data for that year. During the existence of the Hosiery Code Authority in the years 1934 and 1935, reports were received from 622 concerns operating 807 plants which accounted for 98 percent of the output of the industry. Monthly averages for 1929-34 are estimated from the Census of Manufactures for 1933 and for 1935 and the monthly and annual summaries of the Bureau of the Census.

Data beginning January 1950 include shipments of slipper socks; those beginning January 1952, shipments of men's synthetic (other than nylon and rayon) seamless half-hose and slack socks. During the first year in which the new types were reported, they accounted for less than 1 percent of the total shipments.

Annual reports of the Association also provide monthly data on production and stocks by type of hosiery, annual shipments by fiber content, as well as a geographic distribution of production.

Monthly data for 1934-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Shipments for 1929-33 have been revised since publication of data in the 1940 and earlier volumes.
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census. The data represent industry totals. Monthly averages for each year are computed from annual reports of all known cutters of men's apparel, including those not represented in the monthly reporting panel. The monthly estimates are based on a sample survey of manufacturers accounting for the following percentages of total industry output: Beginning 1954, 75 percent of total 1953 cuttings; 1953, 85 percent of total 1953 cuttings; 1949-52, 90 percent or more of total 1950 cuttings; in 1948, on reports from $1,-$ 000 firms representing approximately 85 percent of total production. The 1949 figures as shown here have been adjusted to include operations of additional establishments identified in the 1950 canvas as coming within the scope of the survey. In 1950, such establishments accounted for approximately 3 percent of to-
tal cuttings of tailored garments and work clothing and about 4 percent of total furnishings.

Cuttings of suits comprise both regular-weight and summerweight. Shirts, other than work shirts, comprise furnishings made from woven fabrics designed primarily for dress, street, business, sport, leisure, or utility wear.

The original monthly reports show average weekly cuttings which are raised to 4 - or 5 -week totals by the Office of Business Economics and are subsequently revised to the 4 - or 5 -week monthly totals as published in the annual reports of the Bureau. The 5-week periods for the years 1953-56 are as follows: 1954, 1955, and 1956-March, June, September, December (except for 1956 in which November instead of December covers 5 weeks); 1953-January, April, July, October, December. It should be noted that the figures for 1953 represent 53 reporting weeks, whereas the data for other years cover 52 weeks. The annual reports of the Bureau also include data on cuttings of men's and boys' selected apparel by type of garment, size, and fabric.

Monthly data for 1951-52, comparable with monthly averages for these years shown herein, will be found in the 1955 edition of BUSINESS STATISTICS. Monthly data for 1948-50 a re available upon request.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. Data are estimated total cuttings of the specified types of apparel, except that the statistics do not include the quantities of women's outerwear made by establishments classified in industries other than those listed below. Monthly estimates beginning January 1954 are based on reports from producers that account for approximately 75 percent of the industry. Quarterly estimates for 1949-53 are based on reports from all known establishments classified in the five principal women's outerwear industries (blouse industry, unit-price dress industry, dozen-price dress industry, coat and suit industry, skirt industry), as well as some women's outerwear establishments not specifically classified, but which manufacture the principal products of the five industries mentioned.

Figures for coats include cuttings of both trimmed and untrimmed coats. Cuttings of dresses comprise dresses sold at a unit price and those sold at a dozen price only; they exclude data for firms engaged solely in the manufacture of washable service apparel, aprons, smocks, hoovers, and nurses' and maids' uniforms. Data for suits exclude ski, snow, and slack suits, suit dresses, and uniforms.

The classifications used for women's outerwear are not exactly comparable to the industry classifications appearing in the "Standard Industrial Classification Manual," the 1954 Census of Manufactures, and Annual Surveys of Manufactures for the years 1949-53. The SIC Manual and the latter surveys classify the noncutting apparel jobber in wholesale trade; whereas the present series includes operations of jobbers owning the materials and employing contractors to produce garments, but omits the operations of the contractors.

The original reports show cuttings of the various items by price line of establishment and type of fabric, as well as cuttings of skirts and slips and shipments of sweaters.

Quarterly data for 1950-52, comparable with quarterly averages for corresponding years shown herein, will be found in the 1955 edition of BUSINESS STATISTICS. Quarterly data prior to 1950 are not available on a comparable basis.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census. The Bureau of the Census reports cumulative ginnings in running bales for 12 specified dates during the cotton year-August 1, August 16, September 1, September 16, October 1, October 18, November 1, November 14, December 1, December 13, January 16, and total ginnings (preliminary figures) on March 20. A final report on total ginnings from the crop grown in the precedyear is issued in May. Total ginnings for the season are given in both running bales and equivalent 500 -pound bales (gross weight). The latter figures are derived from reported ginnings in running bales. The Consolidated Cotton Report (issued by the Bureau of the Census and the Agricultural Marketing Service of the U. S. Department of Agriculture, August to December inclusive) gives estimated total production in 500 -pound gross bales; these estimates are published in the SURVEY until total ginnings, convert ed to equivalent 500 -pound bales, become available in March. As the weight of the running bale varies for different localities, as
well as (to a lesser degree) from year to year (see note 5 for this page), running bales are converted to bales of uniform weight in order to measure more accurately the size of the cotton crop.
Prior to 1945 , bale weights for about half of the cotton crop were obtained from local weighers, merchants, and other handlers of cotton. For the years 1945-56, bale weights of the cotton ginned (obtained directly from ginners) ranged from 15 to 4 percent of the total crop harvested. On the basis of these reports, weighted average bale weights were computed for each county and used to convert running bales to equivalent 500 -pounds gross weight. County totals were added to obtain State and United States totals.

Monthly figures represent cumulative ginnings as of the end of the month specified (except that the December 13 period is given here as of the end of December, and the January 16 period is given as of the end of January) for the cotton-ginning season; the March figure covers total ginnings from the crop grown in the preceding year. Annual figures represent total production (i.e., ginnings) from the crop grown in the year shown.

Annual figures beginning 1913 and monthly data prior to 1953 for ginnings in running bales for selected reporting dates will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p .197 of this volume. (Revisions for the periods to end of November 1950 and to December 13, 1950, respectively, 8,786,000 and 9,180,000 running bales.) Figures for 1913-22 include small amounts of Lower California and Mexican cotton ginned in the United States. Figures for earlier years back to 1899 and also county and State data are given in the original reports of the Bureau of the Census.
${ }^{5}$ Production of lint cotton is expressed in both running bales and equivalent 500 -pound bales (gross weight), as indicated. All other figures for cotton (see p. 188) are in running bales, except imports and stocks of foreign cotton which have been converted to bales of 480 pounds net (for the period January 1931-March 1946, bales of 478 pounds net), equivalent to bales of 500 pounds gross. Round bales (produced prior to 1942), included in running bales of lint cotton, are counted as half bales. The average gross weight of the running bale for recent crop years follows (pounds): $1951-52,502.4 ; 1952-53,506.2 ; 1953-54,504.5 ; 1954-55,502.9$; 1955-56, 506.1. The average gross weight of bales of lint cotton exported is slightly higher. Part of the difference between these types is due to heavier wrappings and bindings for export and to the fact that the larger portion of export cotton comes from States in which bales average highest in weight. Data for quantities of cotton exported and imported are after tare (i.e., a deduction is made for weight of wrappings, etc.).
${ }^{6}$ Total ginnings from crop grown in the year shown and not a monthly average.
${ }^{7}$ Quarterly average.
${ }^{8}$ Beginning with the 1950 annual canvass, a number of additional firms were added to the survey. For 1950, the additional firms accounted for approximately 6 percent of the total cuttings of the major outerwear industries. Figures for 1949 shown here are adjusted for comparability, whereas the data for 1947 and 1948 omit production of these additional firms.
${ }^{9}$ Average based on 53 reporting weeks; averages for other years are based on 52 weeks.
${ }^{10}$ Total ginnings from crop grown in preceding year.

## PAGE 188

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. The data are compiled from reports received from all establishments consuming raw cotton. A bale is considered to be "consumed" when it is opened at the mill. Beginning January 1950, data are for 4- and 5-week periods; earlier data are for calendar months. The 5 -week periods for the years 1953-56 are as follows 1953 - January, April, July, October, and December; 1954-56March, June, September, and December, except that for 1956, November covers 5 weeks instead of December.

The monthly reports of the Bureau of the Census show total consumption by cotton-growing States, New England States, and "all other" States; separate figures for consumption of foreign cotton (Egyptian and other foreign) and American-Egyptian cotton; stocks held by consuming establishments and stocks at public storage
and compresses; cotton-system spinning activity; imports and exports; and world supply and distribution of cotton.

Monthly data for 1923-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume.
${ }^{2}$ Source: New York Cotton Exchange. Figures for total stocks as shown here include ginned stocks in all hands, both private and Government controlled, and also, for dates in harvesting periods, the unpicked portions of the current crop. The Exchange uses figures compiled by the Bureau of the Census for stocks of Ameri can cotton in consuming establishments and in public storage and at compresses and for stocks of foreign cotton. Beginning 1950, the Bureau's cotton statistics are reported for 4 - and 5 -week periods; stocks are for end of period covered, which is generally the Saturday falling nearest the end of the month or the beginning of the following month. Figures are in running bales, counting round bales (produced prior to 1942) as half bales, except foreign cotton which has been converted to equivalent bales of 480 pounds net weight.

Cotton held by the Federal Government on July 31, the end of the crop year, for 1946-56, respectively, is as follows (in thousands of bales): Stocks owned and "pooled" (cotton awaiting sale and on which loans have matured) - $577 ; 44 ; 8 ; 0 ; 3,137 ; 76 ; 6 ; 235$; $128 ; 6,442 ; 5,987$; (in addition to these stocks, bales of extra-long staple cotton held for the account of the Secretary of Agriculture on July 31 totaled approximately 31,000 bales in 1953 and 1954; 15,000 bales in 1955; and 3,000 bales in 1956); stocks held as collateral against loans to producers - $209 ; 11 ; 33 ; 3,819 ; 403 ; 3$; $279 ; 1,751 ; 6,876 ; 1,640 ; 6,058$. (Of the 12 million bales owned and financed by the U. S. Government on July 31, 1956, approximately 3 million bales were sold and earmarked for export beginning August 1956.)

Monthly data for 1941-52 for all series and 1936-40 for domestic cotton stocks, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Revisions, in thousands of bales, for August and November 1945, respectively, are as follows: Total stocks - 18,928; 16,060 ; total domestic stocks- 18,$811 ; 15,927$; stocks on farms and in transit--9,256; 3,242. There are also other revisions of a minor nature.) Monthly data for August 1925-December 1935 for domestic cotton are shown on p. 16 of the August 1939 SURVEY. (Data for "public storage and compresses" and "consuming establishments" are designated "warehouses" and "mills," respectively.) Monthly data prior to 1941 for stocks of foreign cotton in the United States and total stocks including foreign cotton are available upon request.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Imports beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note 1 for p. 104.

In the original reports, exports are given in detail by countries of destination, and imports by countries of origin. Exports are exclusive of reexports and are expressed in running bales. Beginning 1947, data include shipments under the Army Civilian Supply Program (not previously available); such shipments amounted to 30,395 bales in 1947.

Beginning April 1946, imports (as reported by the Bureau of the Census) are in bales of 480 pounds net. Imports (covering data prior to April 1946) are shown in the original reports in pounds and were converted to bales by dividing by 478; therefore, imports of cotton prior to April 1946, as shown in the 1947 edition of BUSINESS STATISTICS, are in bales of 478 pounds net, equivalent to bales of 500 pounds gross weight. In SUPPLEMENTS prior to the 1947 issue, the data are in bales of 500 pounds net weight.
Monthly data for 1929-52, comparable with monthly averages for corresponding years shown herein (with exceptions mentioned below), will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of $p .197$ of this volume. Revisions (bales): Exports-1940- March, 426,942; April, 340,469; May, 212,323; June, 129,887; imports- October 1948, 11,820. Data for imports for 1940 and earlier years (as published in the 1942 and prior volumes) should be converted to 500 -pound gross weight
bales (by multiplying by 1.046) to have figures comparable with those shown here.
${ }^{4}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. In computing the average price received by farmers, State prices received by farmers for all grades of lint cotton, as determined from reports of special price reporters, are weighted by monthly sales in each State (including an allowance for unredeemed loans at estimated average loan value) to obtain a monthly average price for the United States. Prices are taken as of the 15th of the month. Annual averages beginning 1942 are unweighted averages of calendar-month prices; annual figures for 1929-41 are weighted crop-year average prices.

The average prices received, beginning 1936, are for American upland (short-staple) cotton only. Prices received in 1929-35, as shown here and in SUPPLEMENTS prior to the 1953 issue, include sales of small quantities of American-Egyptian and Sea-Island (long staple) cotton. The two prices differ for a few scattered months by one-tenth of 1 cent.

Monthly data for farm prices for 1941-52 (comparable with monthly averages shown here for years beginning 1942), and for 1934 through July 1937, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of $p .197$ of this volume. (Revised figure for May 1936, \$0.114; note also that prices are in dollars per pound in SUPPLEMENTS prior to the 1951 issue.) Monthly figures for August 1937-December 1940 (revised since publication of the 1942 and earlier SUPPLEMENTS) are given in a note on p. S-35 of the June 1944 SURVEY. Data in the 1936 and 1932 SUPPLEMENTS and data prior to 1928 in the 1940 and 1938 issues are based on State prices weighted by production and are not entirely comparable with the current series weighted by sales. Monthly averages for all years shown in the 1942 SUPPLEMENT are weighted averages instead of simple averages of the monthly figures as in earlier and later volumes. Monthly data for August 1909-July 1936 are available in the January 1946 issue of "Crops and Markets" published by the U. S. Department of Agriculture.

The spot market price, beginning August 1951, represents the average price of middling 1 -inch American cotton computed from official daily quotations of cotton exchanges in southern markets. For the period August 1951-July 1954, the following markets are represented: Charleston (this market was substituted for Norfolk beginning August 6,1941), Augusta, Atlanta (substituted for Savannah beginning December 4, 1950), Montgomery, New Orleans, Memphis, Little Rock, Dallas, Houston, and Galveston. Effective August 1954, the Department of Agriculture began publishing the average spot price in 14 spot markets. (The four additional markets are Lubbock, Texas; Fresno, California; Greenville, South Carolina; and Greenwood, Mississippi. There is no significant break in comparability due to the expanded number of markets.) For the period, August 1939-December 1950, prices are as quoted on middling $15 / 16$-inch, based on 10 markets. (For the period August-December 1951, the price of middling 1 -inch cotton was 0.4 cents per pound higher than middling 15/16-inch.) For August 1930-July 1939, the prices were computed by adding the monthly average premiums for $15 / 16$-inch to the average price of $7 / 8$-inch in the 10 markets, premiums for 4 markets (Norfolk, Augusta, Savannah, and Montgomery) being estimated; for January 1928 to July 1930, average premiums for $15 / 16$-inch in 6 markets were added to the average price of $7 / 8$-inch in the 10 markets.

Monthly data for market prices for 1938-52 (for middling 15/16inch as described above) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Note that prices are quoted in dollars per pound in SUPPLEMENTS prior to the 1951 issue.) Monthly data for 1913-37 are available upon request.
${ }^{5}$ Source: U. S. Department of Commerce, Bureau of the Census. Linters are the short fiber obtained by the cottonseed-oil mills in delinting cottonseed. The quantity of linters obtained from a ton of cottonseed varies. In recent years, the average quantity obtained has varied as follows (years ended July 31): 1953 and 1954, 184; 1955, 187; 1956, 180.

Data are for calendar months. (The note appearing in earlier SUPPLEMENTS, stating that beginning 1950 monthly data covered either 4- or 5 -week periods, is incorrect. The monthly data beginning 1950 are adjusted to calendar months.)

Production figures are based on reports from cottonseed-oil mills only; excluded are linters obtained from planting seed at
gins and other delinting plants. For the 5 years ended July 31, 1955, such production averaged 19,492 running bales; for the year ending July 31, $1956,15,288$ bales. It is probable that consumption figures include some motes, sweepings, etc. Production of such items in the 1952-53 season amounted to 66,958 equivalent 500-pound bales; in 1953-54, 62,186; 1954-55, 41,908; and in 1955-56, 31,300 equivalent bales.

Data for stocks include stocks held in consuming establishments in public storage and at compresses, and stocks at cottonseed-oil mills. Data do not include stocks held in private warehouses or by private individuals, stocks held at ports, and linters in transit. Data for the excluded items are available only as of July 31, and are partially estimated. Total stocks, including linters in transit, as of July 31 for recent years are as follows (in running bales): 1953, 1,110,690; 1954, 1,542,723 (revised); 1955, 1,490,725; 1956, $1,025,480$.

Monthly data for 1938-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Monthly data for consumption for 191337 and for production and stocks for August 1925-December 1937 are available upon request.
${ }^{6}$ See note 5 for p. 187.
${ }^{7}$ Data are in running bales. The average gross weight (in pounds) of the running bale, as computed from returns received from cottonseed-oil mills, for recent years is as follows (years ended July 31): 1953, 596.8; 1954, 603.2; 1955, 606.2; 1956, 617.2.
${ }^{8}$ Monthly averages beginning 1942 are simple averages of calendar-month prices; averages for 1929-41, are weighted cropyear averages. For 1929-35, averages represent prices received for all cotton (including long-staple).
${ }^{9}$ Beginning 1950, data for consumption and production cover 4- and 5-week periods; stocks are as of end of period covered (see notes 1 and 2 for this page).
${ }^{10}$ Average based on 5 months, August-December. Data prior to 1951 are average prices for middling $15 / 16$-inch cotton; see note 4 for this page.

## PAGE 189

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. Data for $1937,1939,1947$, and 1954 are from the Census of Manufactures; data for certain periods were compiled from reports to the Civilian Production Administration and predecessor agencies. Statistics are from reports filed by manufacturers primarily engaged in weaving fabrics over 12 inches in width of cotton, silk, rayon, and other synthetic fiber yarns. All such manufacturers were canvassed and estimates were made for a few manufacturers not filing reports. Production of tire cord and fabric is excluded. Production is that taken from the looms.

Effective with 1951, the production of broad woven mixed goods has been classified, by fabric, according to chief fiber content by weight. Prior to 1951 , no fabric containing as much as 25 percent wool by weight was classified as cotton fabric. In the 1 st quarter of 1951, however, less than one-half of 1 percent of the total cotton cloth was produced on woolen and worsted looms.

The original reports show production by type of goods for printcloth yarn fabrics, sheeting and allied coarse and medium yarn fabrics, fine cotton goods, colored-yarn fabrics, and other classes, by type of fabric for these goods. For the sheetings and duck goods, further detail is given for width, thread count, and number of yards per pound.
The quarterly data cover 13 -week periods (except for the 4 th quarter of 1953 which represents 14 weeks).

Quarterly data for 1942-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Data for the first 3 quarters of 1942 were estimated in part from reports on scheduled rather than actual production.)
${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Exports comprise cotton cloth (including mixed fabrics, cotton chief weight), duck and tire fabric, both unfinished (in the gray) and finished (bleached, yarn dyed or dyed in the ,piece, printed, stiffened or otherwise converted). In the period

1947-50 and 1952, exports of cotton cloth, duck, and tire fabric accounted for approximately three-fourths of the value of exports of all cotton finished manufactures; in 1935-46, 1951, and 195356, for about two-thirds; and in earlier years for a somewhat larger proportion. Beginning 1947, exports include shipments under the Army Civilian Supply Program (not previously available) such shipments for that year amounted to $12,016,000$ square yards.

Imports comprise cotton cloth, both unfinished and finished. Figures beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note 1 for p. 104.

Monthly data for 1936-52, comparable with monthly averages for corresponding years shown herein (with exceptions noted below), will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. Minor revisions for exports in 1947 are available upon request. Revisions for imports in 1946 are as follows (thousands of square yards): June, 3,629; December, 2,273.
${ }^{3}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Mill margins represent the difference between the price of unfinished cloth obtainable from a pound of raw cotton and the price of cotton (includes processing tax for the period August 1933 to December 1935 amounting to about 4 cents per pound when corrected to a gross-weight basis). The mill margin thus includes all manufacturing costs other than raw cotton, and the manufacturer's profit. The cloth prices used in computing the mill margins are averages of spot prices obtained from trade publications for 17 gray-goods constructions ( 6 print cloths, 3 sheetings, 4 drills, 1 sateen, 1 twill, and 2 ducks). Unfinished or gray goods refers to cloth that has not been bleached, dyed, or printed. Prices, quoted on a per-yard basis, have been converted to a price per pound on the basis of the approximate quantity of each cloth obtainable from a pound of cotton, with adjustment for salable waste.

Raw cotton prices used in the revised series beginning August 1950 are monthly average prices for Memphis territory growths, even-running lots, prompt shipment, delivered at mill points including landing costs and brokerage. Those used in the original series through July 1950 were spot prices at 10 designated markets for cotton in mixed lots, flat, in warehouses (for names of markets, see 5 th paragraph of note 4 for p. 188). The higher cost of cotton which results from the introduction of "landed" prices is offset to a considerable extent by changes in the qualities of cotton assumed to be used by mills in the manufacture of the 17 selected constructions. The average margin for the 17 constructions is unweighted.

Monthly data for 1936-52, comparable with monthly averages for corresponding years shown herein (with exceptions noted below), will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Figures for September 1944-December 1946, published in the 1947 and 1949 volumes, have been slightly revised to incorporate new prices for twill and sateen constructions which were previously included at Office of Price Administration ceiling prices. Monthly data beginning August 1925 are shown in table 51, p. 18 of the November 1939 SURVEY.
${ }^{4}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Averages beginning 1947 (except the sheeting price which begins 1951) represent substituted series and cover cloth prices based on the following specifications: Denim-white back, 28inch, $8 \mathrm{oz} . / \mathrm{yd}$., after sanforizing, finished, f.o.b. finishing plant; print cloth- 39 -inch, $68 \times 72,4.75$ yds./lb., in gray, f.o.b. mill; sheeting-class B, 40 -inch, $48 \times 44$ or $48 \times 48,3.75 \mathrm{yds}$./lb., in gray, f.o.b. mill.

Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually around the 15th); prior to 1952, they are quotation averages for 1 day each week.

Data for 1929-46 (1929-50 for sheeting) cover prices of cloth described as follows: Denim-blue, white-backed, 28 -inch, 2.20 yards per pound, unsanforized (mill finish); print cloth-38-1/2inch, 64 by 60, 5.35 yards per pound (except for 1944-45 when prices relate to print cloth, 64 by $56,5.50$ yards to a pound as indicated in note 13 for this page); sheeting-36-inch, 56 by 60, 4 yards per pound, unbleached, unmercerized (except for the 194446 period when prices relate to 56 by 56 sheering as indicated in note 14). Production of 56 by 60 sheeting and $64 \times 60$ print cloth
was discontinued during the war period by War Production Board order, effective April 20, 1943, and looms formerly producing these constructions were required to produce $56 \times 56$ sheeting and $64 \times 56$ print cloth, respectively. Monthly average prices for 1947 for denim and print cloth and 1951 for sheeting (comparable with the series described in this paragraph) are 33.8 cents, 24.6 cents, and 23.0 cents, respectively.

Monthly data for 1949-52 for the current series (1951-52 for sheeting) are shown in the 1955 and 1953 editions of BUSINESS STATISTICS; those for 1947-48 (except for sheeting) are available upon request. Monthly figures for 1929-48 for the former print cloth and sheeting series, and for 1938-48 for the former denim series (described in foregoing paragraph), comparable with monthly averages for pertinent years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. For the print cloth price, revisions of 1 or 2 cents have been made in a few monthly figures for the years 1926-31. (Note that prices in the 1951 SUPPLEMENT and earlier issues are quoted in dollars per yard.)
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Carded cotton yarn quotations beginning February 1952 are for weaving, natural stock, $20 / 2$, on cones or tubes, f.o.b. mill. Earlier data for this series are not available for publication. Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually around the 15th); prior to 1952, they are quotation averages for 1 day each week,

Data for 1941-51 (in italics) are for carded, southern, 22/1, cones, white, knitting, f.o.b. mill. Earlier figures are for northern, 22/1, cones, carded, white, mulespun, f.o.b. mill; the average for 1941 comparable with the earlier data is $\$ 0.360$. Annual figures through 1951 are averages of the weekly quotations rather than averages of the monthly figures shown.

Monthly data for February-December 1952 for the current series are shown in the 1955 edition of BUSINESS STATISTICS. Monthly data for 1941-51 for the southern price and for 1923-41 for the northern mulespun price, comparable with monthly averages for pertinent years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (In the 1955 edition of BUSINESS STATISTICS, the reference note incorrectly stated that the northern mulespun series appeared in the 1951, 1949, and 1947 volumes.)
${ }^{6}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Combed cotton yarn quotations, beginning February 1952, are for knitting, natural stock, $36 / 2$, on cones or tubes, f.o.b. mill. Earlier data for this series are not available for publication. Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually around the 15th); prior to 1952, they are quotation averages for 1 day each week.

Data for the 2d half of 1946 through 1951 (in italics) are for carded cotton yarn (knitting), twisted, $40 / 1$, on skeins, f.o.b. mill; earlier data are for southern, $40 / 1$, single, carded, f.o.b. mill. (Data for the years 1929-32 represent quotations for this description at New Bedford which have been linked to the series of similar description first quoted at Boston in 1933.) The southern series was discontinued after October 1946 (quotations for JulyOctober, $\$ 0.672$; $\$ 0.756 ; \$ 0.804$; $\$ 0.834$ ).

Annual averages through 1951 are averages of the weekly quotations rather than averages of the monthly figures.

Monthly prices for February-December 1952 for the current series, monthly prices for 1947-50 for twisted yarn on skeins, and monthly prices for 1936-June 1946 for the southern series will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. The notes in the 1942 and 1940 SUPPLEMENTS should state that the prices are f.o.b. mill instead of f.o.b. Boston. Monthly data as shown in the 1940 SUPPLEMENT and earlier issues may be converted to the substituted series by dividing the New Bedford price by 110.7.
${ }^{7}$ Source: U. S. Department of Commerce, Bureau of the Census. Data relate to all cotton-system spindles and, beginning August 1945, include data for spindles spinning synthetic and other fibers and blends; earlier monthly averages and figures shown in SUPPLEMENTS prior to the 1949 issue are for spindles consuming 100 percent cotton.

Figures beginning 1945 for active spindles refer to number of spindles active on the last working day of the period covered;
earlier data and figures shown in SUPPLEMENTS prior to the 1949 issue (except where noted for 1946 in the 1947 volume) relate to spindles active at any time during the month. In the first half of 1946, the number of spindles active on the last day of the month averaged 2 percent less than the number active at any time during the month. Beginning 1950, the Bureau's monthly cotton statistics represent operations for 4 and 5 weeks; earlier data are for calendar months. The 5-week periods for the years 1953-56 are as follows: 1953-January, April, July, October, and December; 1954-56-March, June, September, and December, except that for 1956, November covers 5 weeks instead of December. Other months cover 4 weeks. Data for active spindles are as of the end of the period covered, which is generally the Saturday falling nearest the end of the specified month or the beginning of the following month.

The rate of operations represents the relationship of spindle hours operated to the total spindle hours that would have been worked if all spindles in place had operated continuously for 80 hours each week. The figures beginning August 1944 have been revised by the compiling source to omit allowances made (in previously published figures) for that portion of total spindles not normally operated on holidays. Beginning with August 1945, the rate is based on the number of cotton-system spindles in place, and on hours of operation of these spindles regardless of type of fiber spun; prior to August 1945, the rate is based on the number of spindles in place used exclusively for spinning cotton, and on hours of operation of such spindles.

Monthly data for August 1945-December 1952 (except monthly figures for mill operations as percent of capacity-revised to eliminate holidays-and for August 1945-December 1946 for average spindle hours per working day, which are available upon request) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume.

Earlier data relating to spindles consuming 100 percent cotton are available as indicated below. Active spindles and spindle hours operated-for monthly data prior to July 1945, see p. 197 (mentioned above) referring to earlier SUPPLEMENTS. Operations as percent of capacity --prior to eliminating holidays for data beginning August 1944, minor adjustments were made in previously published capacity percentages to conform with a revised schedule of holidays observed-for monthly figures for August 1933-August 1938, see p. 18 of the March 1939 SUR VEY (data were not computed on a comparable basis prior to August 1933); monthly data for September 1938 -July 1945 as shown in the 1947 and 1942 SUPPLEMENTS are adjusted to omit holidays on the basis of the former schedule of holidays.
${ }^{8}$ Average for 5 months, August-December.
${ }^{9}$ Quarterly average. The $1937,1939,1947$, and 1954 averages are computed from totals derived from the Census of Manufactures; they are not averages of quarterly figures.
${ }^{10}$ A verage for 11 months; no quotation for October.
${ }^{11}$ Not comparable with earlier data; see note 5 for this page.
12 Average for January-June. The print-cloth average is for $64 \times 60$ cloth and the sheeting average for $56 \times 60$ sheeting. How ever, it may be noted that the price of the $56 \times 56$ sheeting was also 10.8 cents for May-December.

13 Price for $64 \times 56$ print cloth (see note 4 for this page); price for this construction for May and June 1943 was 8.7 cents. Price for $64 \times 60$ print cloth for October-December 1945, comparable with later data and with data through June 1943, was 9.9 cents.

14 Price for $56 \times 56$ sheeting (see note 4); prices for this construction for May-June 1943 and October 1946 were the same as for $56 \times 60$ sheeting. The average for 1946 is for 11 months, January-November; the October and November price included in the average is 18.0 cents.

15 Not strictly comparable with earlier data; see 2d and 3d paragraphs of note 7 for this page.
${ }^{16}$ Average for 6 months, July -December; comparable with later figures (see 2d paragraph of note 6 for this page).
${ }^{17}$ Not comparable with earlier prices; see note 4 for this page.

18 Average for 5 months, August-December. Data not strictly comparable with earlier figures; see 2 d paragraph of note 3 for this page.
${ }^{19}$ Not strictly comparable with earlier data; see note 1 for this page.

20 Average for 11 months; the cotton exchanges did not quote spot prices during February 1951.
${ }^{21}$ A verage for 11 months, February-December.
22 Not strictly comparable with earlier data; see note 6 for this page.
${ }^{23}$ Quarterly average based on production for 53 weeks; aver ages for other years are based on totals for 52 weeks.

24 Prices beginning June 1953 are not strictly comparable with earlier data because of change in number of reporters; average price for 1953 is based on 7 months, June-December.

25 Average for 1955 based on 10 months, January-October; actual prices for November and December 1955 were not published by the Bureau of Labor Statistics.
${ }^{26}$ Average for 9 months, January-September; calculation of mill operations as percent of capacity suspended pending a revision of the series.

27 Data cover 14 weeks; other quarterly data are for 13 weeks.

## PAGE 190

${ }^{1}$ Source: Textile Economics Bureau, Inc.; published in Textile Organon. The figures for production and stocks represent industry totals for the specified items. Production refers to packaged or baled production ready for sale or fabrication. Stock data represent stocks of all finished filament yarn, staple, and tow held by domestic producers. Waste is not included in any of the series shown here.

Data beginning 1941 for rayon and acetate are as actually reported by the entire industry; earlier data are estimated totals based on reports obtained from 86 percent or more of the industry, with adjustments for complete coverage in accordance with information from the Census of Manufactures.

Production of noncellulosic fibers is available beginning with 1940 only; prior thereto, such production was nominal or nonexistent. Textile glass fiber production (together with that of other noncellulosics) is included in total fiber production for all years from 1940 forward. Production of textile glass fiber may, of course, be derived by subtracting from total fiber production the data shown for the component items.

Data included for rayon relate to manmade fibers produced by the viscose, cuprammonium, and nitrocellulosic (through 1934) processes. (Latter process discontinued after 1934.) Rayon horsehair and straw are included in the filament yarn figures beginning with 1952 (for the period 1940-51, production of these items averaged just under 1 million pounds per year). Acetate means manmade fibers composed of cellulose acetate.

Noncellulosic fibers comprise the following types: Acrylic, dinitrile, nylon (polyamide), polyester, polyethylene, polyvinyl acetate, protein, saran, tetrafluoroethylene, etc.

Filament yarn means a yarn composed of a number of fine and continuous filaments, grouped and lightly twisted together. Staple (sometime called staple fiber) is made by cutting the manmade filaments into short and usually uniform lengths. These short fibers are subsequently spun into yarn, and the resulting yarn is called "spun yarn." Tow is a collection of many parallel, continuous filaments without twist, which are grouped together in rope-like form.

Only quarterly production data are shown in this volume; however, the monthly magazine SURVEY OF CURRENT BUSINESS provides, for rayon and acetate fiber production, the latest available monthly figures following the close of the latest quarter.

Monthly data for 1938-52 for rayon and acetate stocks comparable with monthly averages for corresponding years will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Monthly data for 1930-37 for yarn stocks appear on p. 18 of the April 1940 SURVEY (these data are correct except for scattered revisions in the end figures
which are due to more accurate rounding of figures). Monthly data for 1934-37 for staple stocks are available upon request.
Annual totals for 1911-28 and quarterly data for 1930-50 for rayon and acetate production are available upon request. Quarterly data for 1951-52 for production of manmade fibers (total and components) are shown below. (The data for noncellulosic fiber exclude production of textile glass fiber which is included in the total.)

## Manmade Fiber Production: Quarterly (Millions of pounds)

|  | Total | Rayon and acetate |  | Non-cellulosic |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Filament yarn | Staple plus tow |  |
| 1951: 1st quarter | 372.3 | 245.1 | 81.0 | 38.6 |
| 2d quarter. | 388.5 | 253.7 | 83.7 | 42.9 |
| 3d quarter.. | 390.3 | 250.1 | 87.2 | 44.4 |
| 4th quarter. | 348.2 | 209.3 | 84.1 | 44.7 |
| 1952: 1st quarter. | 324.5 | 189.1 | 74.7 | 48.8 |
| 2d quarter.. | 308.9 | 179.3 | 71.0 | 48.2 |
| 3d quarter.. | 375.8 | 227.8 | 82.8 | 54.4 |
| 4th quarter. | 382.3 | 232.6 | 78.5 | 59.3 |

${ }^{2}$ Source: U. S. Department of Commerce, Bureau of the Census; from Bureau of Foreign and Domestic Commerce through April 1941. Export and import figures for manmade fibers and manufactures, as shown here, cover both cellulosic and noncellulosic types. The import figures are imports for consumption. For foreign-trade definitions and other pertinent information, see note 1 for page 104.

Because of the reclassification of commodities according to the January 1, 1952, Export Schedule, data beginning 1952 are not directly comparable with figures for earlier years. The following descriptions apply to exports and imports beginning 1952.

The totals for yarns and monofilaments (both exports and imports) are exclusive of spun yarns (i.e., those made from short fibers such as staple or waste). For exports, the data comprise filament yarns and cord, thrown yarns, thread and handwork yarns, monofilaments, monostrands, and extruded bands and strips (not woven; suitable for manufacture of textiles). For imports, the data comprise yarns including those put up for handwork), monofilaments, sewing thread, and bands or strips not exceeding 1 inch in width (suitable for manufacture of textiles).

The totals for staple, tow, and tops (both exports and imports) also include tops, sliver and roving of staple and waste, but exclude waste, rags, clips, noils, etc. Staple is made by cutting the manmade filaments into short and usually uniform lengths.

Exports of broad woven piece goods comprise broad woven fabrics made wholly or chiefly of manmade fibers by weight. Specific fabrics represented are pile, upholstery and drapery, woven filament yarn and spun yarn fabrics, and other fabrics of mixed or blended fibers. (These figures do not include knit fabrics, cord-tire and fuel-cell fabrics, and narrow woven fabrics.)
Prior to 1952, the figures are summarized, insofar as possible, in the same broad groups as those for succeeding years. For earlier years, under the several commodity schedules used, various items were reported in less detail. Specifically, for some years exports of spun yarns and rayon waste and some knit fabrics are included in the totals shown. Also, for the earlier years, some commodities may have been classified under other types of goods which they resembled. It is assumed that exports of staple began in 1943.
Monthly data prior to 1953 may be obtained from records of the Bureau of the Census. (Figures for imports of rayon, etc., as shown in earlier editions of BUSINESS STATISTICS and in the monthly SURVEY OF CURRENT BUSINESS prior to the October 1956 issue represent the total for yarns, including spun yarns, filaments, thread, and bands or strips not exceeding 1 inch in width, suitable for manufacture of textiles. Although these data cover primarily cellulosic types, some noncellulosic types are also included in the more recent years.)
${ }^{3}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Annual averages beginning 1947 for the yarn price are for a substituted series covering filament yarn, viscose, 150 denier;
comparable data for earlier periods are not available. Prior to 1947, the prices are for yarn in skeins; the January 1947 price for the current series is $\$ 0.624$; for the former, $\$ 0.620$. The monthly averages for the years 1947-50 and 1956 are computed by the Office of Business Economics. More complete specifications for the staple price are as follows: Viscose, $1-1 / 2$ denier, all lengths, bright luster, in bales. (The staple prices for 195256 are estimates computed by the Office of Business Economics and are derived by using as a projecting factor the rate of change in the wholesale price index for this series as published by the Bureau of Labor Statistics.) Both the yarn and staple series are f.o.b. shipping point. Beginning with 1952, the prices are quotation averages for one day each month (usually around the 15th); prior to 1952, they are quotation averages for one day each week.

Monthly data for 1949-52 for both series, for 1938-46 for yarn in skeins, and for 1938-48 for staple, comparable with monthly averages for corresponding years shown, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. Prices for 1913-September 1941 for yarn in skeins appear in the November 1941 SURVEY (p. 22, table 30). Monthly prices for 1947-48 for yarn and 1928-37 for staple are available upon request.
${ }^{4}$ Data for fiber production are quarterly averages.
${ }^{5}$ Based on total for year which includes imports for 6 months only for certain types of commodities. The quantities not reported are believed to be small.
${ }^{6}$ Beginning 1940, total production includes noncellulosic and textile glass fiber production; prior to 1940, such production was nominal.
${ }^{7}$ Less than 500 pounds.
${ }^{8}$ Not comparable with earlier data; see note 3 for this page.
${ }^{9}$ Beginning 1952, figures include rayon horsehair and straw; see 4 th paragraph of note 1 for this page.
${ }^{10}$ Data beginning 1952 are not strictly comparable with figures for earlier years. See note 2 for this page.
${ }^{11}$ Based on total which includes exports of certain items for the year 1956; such exports are not included in the monthly data for January-June 1956. See note 12 for this page.

12 Data for January-June 1956 exclude certain exports (which are included for other periods) as follows: Yarns-excludes thread and handwork yarns which averaged 24,000 pounds per month in 1955; staple, etc. -excludes sliver, tops, and roving of staple which averaged 33,000 pounds per month in 1955.

## PAGE 191

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census. Data prior to 1947 were compiled from reports to the Civilian Production Administration and predecessor agencies. The figures represent the entire production of broad woven fabrics ( $o$ ver $12^{\prime \prime}$ in width) of manmade fibers, both cellulosic and noncellulosic, and of silk and silk mixtures. In addition to items shown separately, total production of manmade-fiber fabrics includes broad woven fabrics of 100 -percent glass (beginning 2 d quarter 1944), of saran monofilament, acrylic, and polyester fibers, and of paper (beginning 1954), etc. Quarterly figures include estimates for a few companies reporting on an annual basis. The quarterly data cover 13-week periods (except 4th quarter 1953 which represents 14 weeks).
Beginning 1951, all broad woven goods are classified according to principal fiber content. Rayon and acetate goods are defined as those containing 51 percent or more rayon and/or acetate by weight. Figures prior to 1951 exclude rayon fabrics containing 25 percent (or more) wool. (Figures for 1950 exclude 43,799,000 yards of fabric - containing less than 25 percent wool-produced on woolen and worsted looms. No breakdown is available to show quantities that are cotton or chiefly cotton, or rayon or chiefly rayon. For 1950, however, production includes 19,896,000 yards of fabric- 25 percent or more wool-made in rayon mills. The majority of these fabrics contain less than 50 percent wool.) Fabric production beginning 1951 includes yardage of rayon and acetate fabrics (amounting to 8 million yards in 1951) and other
synthetic fabrics ( 21 million yards in 1951) produced on woolen and worsted looms.

NyIon production beginning 1953, as shown here, comprises fabrics of 100 -percent nylon and of nylon mixtures (chiefly nylon); for 1952 and earlier years, 100 -percent nylon fabric only. In 1953, mixtures (chiefly nylon) amounted to 18.3 million linear yards.

Silk fabric statistics beginning 1946 represent fabric of 100percent silk and mixtures over 51 percent silk; they also include raw and spun silk yardage. Production in the 1935-45 period refers to fabric of 100 -percent silk (small quantities of silk mixtures are excluded). Also, for $1929,1931,1933$, unknown quantities (presumed to be small) of rayon are included in the data derived from the Biennial Census of Manufactures reports.

It should be noted that for the years 1929-37, data are expressed in thousands of square yards; beginning 1939, in thousands of linear yards.

Production is that taken from the looms and is measured in linear yards of varying widths over 12 inches; the greater part of the yardage is for fabrics in widths of 40 to 45 inches. The original reports show production by type of fabric; yarn consumed by type of yarn; machinery activity (number of looms in place, and aggregate hours operated); and stocks of selected filament yarns at mills.

Quarterly data for total manmade-fiber fabric, nylon, and silk fabric production for 1944-52 are available upon request. Quarterly data for the 2 d half of 1943 through 1952 for rayon and acetate goods, comparable with quarterly averages shown, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume.
${ }^{2}$ Includes data not shown separately.
${ }^{3}$ See note 2 for page 190.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Silk imports are for unmanufactured silk, comprising raw silk (including wild or tussah and doupion), cocoons, silk noils (not exceeding two inches in length), and waste.

Data beginning 1934 are imports for consumption; earlier figures are general imports. For definitions and other pertinent foreign-trade information, see note 1 for p. 104.

Monthly data for 1923-52 comparable with monthly averages contained herein (except as noted) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. The 1950 and 1951 monthly averages are based on annual totals which include revisions not incorporated in the monthly data.
${ }^{5}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Prices beginning 1950 are for raw silk, white, Japanese, in bales, 20/22 denier, 87 percent (AA), f.o.b. warehouse. For the earlier series, the description is as follows: Silk, raw, white, Japan, double extra crack, $13 / 15$ denier, 78 percent, New York. Quotations for 1948 and 1949 are for a substituted series of the same description, but represent a composite price; the quotations for 1948 are the same for both the composite price and for the former series.
Prices for 1936-July 1941 are from a trade organization and have been substituted for those based on mill reports. However, the comparability of the series is not seriously affected. The overlapping averages for 1936 and 1937 on the old basis are $\$ 1.766$ and $\$ 1.858$, respectively. Beginning with 1952 , the prices shown are quotation averages for 1 day each month (usually around the 15th); prior to 1952, they are quotation averages for 1 day each week.

From August 1941 through May 1942 prices represent ceilings established by OPA and predecessor agencies. All stocks of silk were taken over by the Defense Supplies Corporation in July 1941. Prices are not available for the period from June 1942 to June 1946, since silk was not sold for commercial use. When silk imports from Japan were resumed after the war, the United States Commercial Company (RFC) became the exclusive selling agent of Japanese silk. Prices for 1946 represent selling prices of U. S. Commercial Company; in July and August of 1946, prices were on a bid basis and for the balance of the year were auction prices.

Monthly data for 1923-52 (except for the period July 1942-June 1946) comparable with averages contained herein will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume.
${ }^{6}$ Source: U. S. Department of Commerce, Bureau of the Census. Data cover total mill consumption (of shorn and pulled wool of the sheep) on the woolen spinning and worsted combing systems and, prior to 1946 , also consumption by all other known manufacturers, including consumption in batting and felt manufactures and on the cotton, silk, etc., systems of spinning. Total raw wool consumed on the cotton system of spinning for the years 1950-56 is as follows, in millions of pounds: $1950,4.3 ; 1951,2.9$; 1952, 3.5; 1953, 1.9 (revised); 1954, 1.3 (revised); 1955, 1.3; 1956, 1.1. Manufacturers of felt, hat bodies, and other miscellaneous products consumed approximately 7.8 million pounds in 1946. Estimates are included for a few manufacturers from whom reports were not received. The 1946 figures originally published also included data for all known manufacturers using wool. They have been revised to cover consumption on the woolen and worsted system only, so that data will be comparable with figures compiled since the early part of 1947. Total consumption for the year 1946, including all known manufacturers, entirely comparable with earlier data, is as follows (thousands of pounds): Apparel class, 620,241 ; carpet class, 128,056 . It may be noted that consumption on the woolen and worsted systems accounted for 98.3 percent of total consumption of apparel wool in 1946 and practically the entire consumption of carpet wool.

Apparel-class wool comprises wool generally regarded as more or less suitable for apparel purposes, whereas carpet-class wool is foreign wool particularly suitable for the manufacture of floor coverings. Beginning 1942, all domestic and duty-paid foreign wools have been classified as apparel and all free foreign wools as carpet. Apparel-class wool not finer than $40^{\circ}$ s and all carpet-class wool (if used for floor coverings, press cloth, knit or felt boots, camel's hair belting, or lumbermen's heavy fulled socks) may be imported free of duty. Prior to 1942, reported amounts of duty-free apparel wool not finer than 40 's were included in the apparel-wool classification (this wool was incompletely reported prior to September 1941) and a small quantity of duty-paid wool was included in the carpet-wool classification. The 1941 figures shown here include all duty-paid foreign wool in apparel wool and all duty-free foreign wool in carpet wool, as in figures for later years. Earlier data have not been similarly revised but amounts involved prior to September 1941 were small.

Prior to 1942, wool was considered consumed when carded or otherwise advanced beyond scouring. For the period 1942-46, wool was considered consumed on the worsted system when it entered the scouring bowls and on the woolen and other systems when it was put into process as scoured wool. Beginning August 1948, wool consumption on the worsted system is measured as the sum of top and noil production; consumption on the woolen system is measured at the time the wool is processed in the mixes for spinning.

Data are reported for 4- and 5-week periods. For 1953-56, the 5-week periods are as follows: 1953, January, April, July, October, and December; 1954-56, March, June, September, and December (except that for 1956, November covers 5 weeks and December, 4 weeks). No data were collected for the week of December 28, 1941, to January 3, 1942. The reporting year covered 51 weeks for 1942 and 53 weeks for 1943,1947 , and 1953; the monthly averages for these years were computed from 52 -week totals based on average weekly consumption for the reporting year. Monthly averages are computed on final annual totals which may include revisions not incorporated in the monthly data.

Monthly data for 1934-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. (There have been minor revisions in 1935 data for ap-parel-class wool.) Monthly figures for apparel-class wool for 1932-33 are available in the 1936 edition; for 1918-34, on p. 20 of the July 1935 SURVEY. Monthly data prior to 1934 for carpet wool are in the September 1935 "Raw Wool Consumption" report of the Bureau of the Census.
${ }^{7}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April
1941). Data beginning 1934 are imports for consumption; earlier data represent general imports. For definitions and other pertinent foreign-trade information, see note 1 for p. 104. The figures represent unmanufactured wool converted to a clean-weight basis. Figures beginning 1953 exclude imports of carbonized wool which is reported in actual weight only; in 1952, imports of this class averaged 52,000 pounds (clean weight) per month.

Data for the apparel class comprise all wools (both apparel and carpet) subject to duty, including the animal hairs and Government imports which are free of duty. Excluded from this class are all wools entered free for immediate consumption or withdrawn free under bond for manufacture of rugs, carpets, other floor coverings, knit or felt boots, etc.

Monthly data for total wool imports (clean-weight basis) for 1949-52 and apparel class for 1951-52 appear in the 1955 and 1953 editions of BUSINESS STATISTICS. Monthly data for 192348 for total wool imported in the condition received (i.e., not converted to a uniform basis) will be found in earlier editions of BUSINESS STATISTICS as indicated at the top of p. 197 of this volume. (Revisions for 1931: January, 13,747,000 pounds; March, 15,358,000; June, $16,812,000$; July, 13,024,000.) Monthly imports prior to 1949 for apparel-class wool may be obtained from records of the Bureau of the Census.
${ }^{8}$ Data for production of manmade-fiber fabrics and silk fabric are quarterly averages.
${ }^{9}$ Data are in terms of thousands of square yards; those beginning 1939 are in thousands of linear yards.
${ }^{10}$ An unknown quantity of rayon fabric is included in the figures for silk fabric for this period.
${ }^{11}$ Data are not available prior to 1938. Detailed classifications for manmade goods were not provided for in the Export Schedule. If goods of manmade fabrics were exported, they were classified under other types of goods which they resembled.

12 Average for 1941 is for 7 months, January-July. The Office of Price Administration fixed the price of raw silk at $\$ 3.080$ in August 1941; see 3d paragraph of note 5 for this page. For 1942, the average is for 5 months, January-May.
${ }^{13}$ Quarterly average based on 6 months, June-December.
${ }^{14}$ Figures for production of total manmade-fiber fabrics include small quantities of silk mixtures which are excluded from figures for silk fabric.
${ }^{15}$ Represents quarterly average production of fabrics of silk, nylon, casein etc., not available separately.
${ }^{16}$ Average for 6 months, June-December.
${ }^{17}$ Excludes consumption on cotton, silk, and other systems; comparable with succeeding data. Monthly average for 1946 comparable with data for 1945 and earlier years (thousands of pounds): Apparel class, 51,687; carpet class, 10,671. (See note 6 for this page.)
${ }^{18}$ Average for 10 months; no sales reported in April and September.
${ }^{19}$ Not comparable with earlier data (monthly average for 1950 comparable with earlier data, $\$ 3.106$ ); see note 5 for this page.
${ }^{20}$ For data beginning 1951, see 2d paragraph of note 1 for this page explaining the coverage of mixed fabrics.
${ }^{21}$ Quarterly average based on total production for 53 weeks. For the total and for nylon-fiber fabrics, the average is based on annual total which includes revisions not distributed to the quarterly data.
${ }^{22}$ Beginning 1953, data relate to nylon and chiefly nylon mixtures; earlier data, to 100 -percent nylon fabric only. In 1953, goods of chiefly nylon mixtures averaged over 1.5 million linear yards per month.
${ }^{23}$ Beginning 1953, data include exports of certain broad woven fabrics (mixed or blended fibers, chiefly rayon and acetate, and other chiefly manmade fibers) not included in prior years. In 1953, exports of these fabrics averaged $1,708,000$ square yards per month.
${ }^{24}$ Beginning 1953, data exclude imports of carbonized wool. Such imports, which are included through 1952, averaged 52,000 pounds per month in that year.
${ }^{25}$ Based on total which includes production by establishments reporting annually with no breakdown of their quarterly production.
${ }^{26}$ Represents production for 14 weeks; other quarters, 13 weeks.

## PAGE 192

${ }^{1}$ Source: U. S. Department of Agriculture, Agricultural Marketing Service. Prices are from the reporting service of that agency and are based on the mean of weekly ranges of quotations from the Weekly Review of the Boston Wool Market. More complete descriptions of the series are as follows: Territory woolraw, graded territory, 64s, 70 s , 80 s, fine, good French combing and staple, clean basis; fleece-raw wool, bright, graded fleece, 56s-58s ( $3 / 8$ blood, good French combing and staple), clean basis; Australian wool-raw, 64s-70s, good topmaking, clean basis, Boston market, excluding duty.

Beginning in April 1943, practically all domestic wools were purchased by the Commodity Credit Corporation and sold to mills at Office of Price Administration ceiling prices. These purchase and sale prices were identical through November 1945, after which the Commodity Credit Corporation cut its selling price below its purchase price. Beginning June 1947, for the territory wool, data are for wool sold on the open market (the figures through August 1948 are based on information obtained from trade and government sources) instead of the Commodity Credit Corporation selling price; the June 1947 price comparable with data for prior months is $\$ 1.225$ per pound. For the bright fleece series, the open-market quotations began in August 1948 and, for that month, the prices from both sources were identical.
Monthly data for 1941-52 (with qualifications mentioned) will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Revised January 1948 quotation for the Australian wool price, $\$ 1.292$.) Note that bright fleece prices shown in SUPPLEMENTS prior to the 1953 issue are quoted as the grease equivalent of the clean-basis price (based on arbitrary shrinkage of 47 percent); monthly data for 1924-48 for bright fleece on the clean basis are available upon request. Monthly data for 1939-40 for the two domestic series appear on p. 24 of the February 1945 SURVEY. Monthly data for domestic wool for 1913-38 and for Australian wool for 1936-40 are available upon request.
${ }^{2}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning with 1952, the prices shown are quotation averages for 1 day each month (usually around the 15th); prior to 1952, they are quotation averages for 1 day each week. Quotations beginning 1947 are for a substituted series specified as follows: Worsted yarn, Bradford system, machine knitting, $2 / 20 \mathrm{~s}-50 \mathrm{~s} / 56 \mathrm{~s}$, undyed, in oil, on skeins, f.o.b. mill. Prior to 1947, data are for worsted yarn, $2 / 32 \mathrm{~s}$, crossbred stock, white, in skeins; the price for January-August 1947 for that specification averaged $\$ 1.95$ per pound. Beginning August 1955, the prices are estimates computed by the Office of Business Economics and are derived by using as a projecting factor the rate of change in the price index for this series as published by the Bureau of Labor Statistics.
Monthly data for 1949-52 for the current series are shown in the 1955 and 1953 editions of BUSINESS STATISTICS; comparable monthly prices for 1947-48 are available upon request. Monthly data for 1923-48 for the former series, comparable with monthly averages for corresponding years (1929-46) shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p .197 of this volume. (Revision, April 1926, \$1.45.)
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census. Data beginning 1948 represent totals for the industry and include estimates (based on loom activity) for about 10 to 12 percent of the known manufacturers. Earlier data are based on reports of manufacturers which account for 98 percent or more of the total production of woolen and worsted woven goods and include estimates for a few manufacturers from which reports were not received. The quarterly data are for 13 weeks, except that the 4th quarter of 1953 covers 14 weeks. The quarterly aver-
ages for 1937 and 1939 are based on annual totals from reports of the Census of Manufactures. Beginning 1951, the production of broadwoven goods is classified according to principal fiber content by weight. The figures beginning 1951 therefore exclude fabrics containing 25.0-49.9 percent wool which were previously included. For the men's and women's categories, however, such fabrics were excluded beginning 1948.

Beginning 1947, data for the separate classifications under apparel fabrics exclude Government orders; the figures, therefore, are not comparable with those for previous periods. (Due to various other changes in classification, quarterly data for 1947 for the detail by type of apparel fabric are not comparable for that year, nor with data for earlier and subsequent years. See the descriptive note in the 1951 edition of BUSINESS STATISTICS.) Total apparel fabrics produced for Government orders in 1946 amounted to approximately 992,000 linear yards. Separate data for nonapparel fabrics produced for Government orders are not available.

In addition to the exclusion of Government orders from the individual classifications, further changes have been made in the detail under apparel fabrics. Beginning 1947, some materials (classified as "general use and other fabrics" in the 1947 SUPPLEMENT) are distributed to the individual classifications. For the period 1947-50, the data for "total apparel fabrics other than Government orders" include goods (containing $25.0-49.9$ percent wool reported by the cotton and rayon weavers) not distributed to the separate classifications. The figures for 1946 and earlier years for men's and women's fabrics include production by these weavers.

Quarterly data for 1942-52 will be found in earlier editions of BUSINESS STATISTICS as indicated at top of p. 197 of this volume. (Notice that comparability of the series has been affected by the various changes mentioned above.)
${ }^{4}$ For the period 1948 through 1950, data for "total apparel fabrics, excluding Government orders" include production by cotton and rayon weavers not distributed to the separate classifications. See 3d paragraph of note 3 for this page.
${ }^{5}$ Yardage is in 54 -to- 60 -inch widths or equivalent 54 -inch linear yard measure for fabrics other than blankets and a 72 -inch linear yard measure, or equivalent, for blankets. The 1937 and 1939 data were reported in square yards and have been converted to these equivalent linear yards.
${ }^{6}$ Source: U. S. Department of Labor, Bureau of Labor Statistics. Beginning with 1952, the indexes are based on price quotations for 1 day each month (usually around the 15th); prior to 1952, they are based on quotations for 1 day each week. More complete specifications for the series are as follows: Woolen flamnel suit-ing-men's and boys', stock dyed, 12-13 oz./yd., fine and medium grade, $57^{\prime \prime} / 60^{\prime \prime}$, f.o.b. mill; worsted gabardine or crepe suitingwomen's and children's, hard-finished, $101 / 2-121 / 2 \mathrm{oz} . / \mathrm{yd}$. , $56^{\prime \prime}-60^{\prime \prime}$, f.o.b. mill. (For the period July 1952-December 1954, the range of width for the gabardine series is $54^{\prime \prime}-58^{\prime \prime}$; prior to July 1952, $56^{\prime \prime}-58^{\prime \prime}$. However, the index is adjusted to form a continuous and comparable series.)

Monthly data for 1947-52, comparable with monthly averages for corresponding years shown herein, are shown in the 1955 and 1953 editions of BUSINESS STATISTICS. Earlier indexes for these constructions are not available.
${ }^{7}$ Data for woolen and worsted woven goods are quarterly averages.
${ }^{8}$ Not strictly comparable with data for later years; men's-wear fabrics made on commission, which represented 2 percent of total men's wear in 1939, are excluded.
${ }^{9}$ Average for 7 months, June-December; see note 1 for this page.
${ }^{10}$ Not comparable with earlier data; see note 2 for this page.
${ }^{11}$ Beginning 1948, figures exclude production of fabrics containing 25.0-49.9 percent wool as well as production for government orders. See note 3 for this page.

12 Average for 6 months, July-December.
${ }^{13}$ Beginning 1951 , figures exclude production of fabrics containing 25.0-49.9 percent wool. See note 3 for this page.

14 Quarterly average based on production for 53 weeks; averages for other years are based on totals for 52 weeks.

15 Represents production for 14 weeks; data for other quarters are for 13 weeks.

## PAGE 193

${ }^{1}$ Sources: U. S. Department of Commerce, Bureau of the Census and Civil Aeronautics Administration.

The data are based on reports from all aircraft companies active in manufacturing complete aircraft, aircraft engines, and aircraft propellers. Whereas the figures include parts for these components made by these companies, the data do not include operations of companies which manufacture only parts and accessories. The figures (except for backlog of military orders) comprise orders and sales for both civilian and U. S. military customers and incIude other miscellaneous products and services. The value of backlog for the military, shown here, covers only complete aircraft, engines, and propellers.

The data represent net sales billed and net new orders, i.e., new orders received during the quarter less terminations during the quarter. There is some duplication in the figures for the value of backlog, new orders, and net sales, since the value of subcontracts is reported both by the prime contractor and the subcontractor (i.e., for complete aircraft and parts only). If both the prime contractor and the subcontractor are airframe producers, the value of the contracts for complete aircraft and parts is duplicated in the total figures shown here. As measured by major subcontracts let by airframe producers to other airframe producers, the duplication in the value of backlog of orders for complete aircraft and parts has averaged less than 3 percent of total backlog in recent years.

In the original reports, value of sales and orders is shown separately for complete aircraft, aircraft engines, and aircraft propellers by type of customer.

Data prior to 1948 are not available. Quarterly figures for 1948-52 comparable with quarterly averages for corresponding years shown are as follows:

| New orders, net <br> (qtrly. total) | Sales, net <br> (qtrly. total) | Backlog of orders, <br> end of qtr. |
| :---: | :---: | :---: |

N.A. Not available.
${ }^{2}$ Sources: U. S. Department of Commerce, Civil Aeronautics Administration and Bureau of the Census. Data are shipments (both domestic and export) as reported by all plants active in the manufacture of complete civilian aircraft. At the end of 1956 ,
reports were received from 25 companies operating 28 plants. Shipments for 1945 (in terms of airframe weight) are as reported by CAA.

Figures for value of production of aircraft prior to 1946 (as compiled by CAA) include value of engines, parts, parachutes, etc., and are available in the "Statistical Handbook of Civil Aviation," 1950 edition.

Monthly data for 1946-52 for airframe weight and 1951-52 for value of shipments are available upon request. Monthly data for 1947-50 for dollar shipments may be obtained from the original reports.

Monthly data for 1930-45 for aircraft production (shown in terms of number of aircraft) will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Monthly data for 1940 have been revised and are available upon request.
${ }^{3}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data represent airplanes actually exported with no consideration given to date of production. Beginning January 1940, exports of landplanes minus engines are included. Prior to 1940, these were reported with data for parts, accessories, etc., and were not available separately, but were so small in number that their inclusion beginning with that year does not affect the comparability of the series. Figures through 1949 include both military and civil aircraft exports; for allperiods, they exclude gliders and lighter-than-air aircraft. Beginning 1950, the data are exports of commercial and civilian aircraft (i.e., not manufactured to military specifications) and exclude exports of all mili-tary-type aircraft. Data beginning May 1949 exclude "special category" exports not shown separately for security reasons. The data beginning 1954 have been adjusted to include exports of new commercial cargo transports and used and rebuilt (demilitarized) aircraft, formerly classified as "special category" and therefore excluded from the total.

Monthly data for 1951-52 are as follows (thousands of dollars): 1951-407; 279; 392; 385 ; 485; 466; 486; 216; 236; 292; 375; 458; 1952-444; 1,352; 560; 983; 4,125; 3,276; 5,059; 3,005; 475; 1,852; 2,202; 3,284. Earlier monthly data, in terms of dollars, may be obtained from the records of the Bureau of the Census.
Monthly data for 1936-54 (except for 1942 which are not available), in terms of number of units only, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (The data for 1954, as shown, exclude exports of two types of aircraft formerly classified as "special category." Figures for 1947-48 exclude exports of rotary-wing aircraft which totaled 35 and 47 planes in 1947 and 1948, respectively.) Monthlydata for 'production for export" for earlier years are shown in the 1938, 1936, and 1932 volumes.
${ }^{4}$ Source: Automobile Manufacturers Association. Prior to 1940, the series was compiled by the U. S. Department of Commerce, Bureau of the Census, in cooperation with the Automobile Manufacturers Association (formerly known as the National Automobile Chamber of Commerce). Data shown are factory sales and represent complete coverage of the industry. Although commonly referred to and sometimes interpreted as being identical with production, factory sales for a given period obviously exclude some units produced in that period but not yet sold and include others produced in earlier periods. In addition todomestic sales, the totals include as foreign sales in a given month the number of complete units or vehicles that can be assembled abroad from the parts exported in that same month. These foreign sales account for the difference between domestic and total sales. Since military vehicles are not shown separately, it should be noted that the data include many military vehicles during 194145.

The passenger-car classification includes -in addition to passenger cars-taxicabs and station wagons; it also includes any school buses, ambulances, and funeral cars made with passengercar chassis. The truck classification includes trucks, truck tractors, road tractors (excluding highway-construction machinery), and any school buses, station wagons, and fire apparatus made with truck chassis by truck manufacturers. A substantial part of the truck classification comprises chassis only, without bodies. Fire apparatus made by companies specializing in that line is excluded. The coach classification includes all buses,
primarily those of the integral type, sold to for-hire transportation companies whether for city or intercity service. The coach classification also covers special types of coaches, including integral school buses if made with coach chassis (nonintegral school buses are excluded). Trolley coaches are excluded, since these are built by companies not covered by the Association reports.

The passenger-car, truck, and motor-coach classinications as defined above reflect a postwar revision of data by the Automobile Manufacturers Association affecting all data back to January 1940. Hence the factory sales data shown beginning with the 1947 STATISTICAL SUPPLEMENT differ somewhat in comparability from those in previous volumes. In earlier SUPPLEMENTS, for instance, all station wagons, ambulances, funeral cars, school buses, and all other buses were reported as trucks; moreover, foreign assemblies from parts manufactured in the United States were reported in the month in which they were actually assembled abroad, although the parts going into the assembled vehicles might have been manufactured months previously. These changes in the definitions of the units counted have affected the passenger-car data only slightly but have had the effect of lowering factory sales of trucks for 1940 and 1941 on the present basis about 4 percent below the data shown in the 1942 SUPPLEMENT for those years. See note 6 for p. 170 in the 1942 volume for a description of the data as reported prior to 1940.

Annual totals for total motor vehicles, passenger cars, and trucks have been revised by the Automobile Manufacturers Association for the years 1928-39 in order to make the classifications of all vehicles comparable with the figures beginning 1946. In addition, other adjustments have been made beginning 1928 for greater accuracy and comparability. Monthly averages for 1928 (number): Total vehicles, 363,230 ; passenger cars--total, 314,618; domestic, 280,543 ; trucks-total, 48,612 ; domestic, 34,128 . Monthly data for 1941 and 1946-52, comparable with monthly averages shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Revisions for 1946-49 for total vehicles and trucks, both total and domestic sales, are available upon request. Revisions for December 1950: Total vehicles, 640,935; truckstotal, 118,899 ; domestic, 103,531 .) Monthly figures are not available for 1942-45. Monthly statistics of factory sales for years prior to 1940, as described in 3d paragraph of this note, will be found in earlier editions of BUSINESS STATISTICS as noted above; revised monthly figures for 1940 are shown on p. 24 of the June 1947 SURVEY. Monthly data from 1921 to 1939 are available in a release entitled "Automobiles," published by the Bureau of the Census on August 1, 1941.
${ }^{5}$ Data exclude sales of military trucks. Monthly averages for total military truck sales are: 1940, 5,$176 ; 1941,17,175 ; 1942$, 52,806 ; 1943, 56,237 ; 1944, 51,$780 ; 1945,30,351$; monthly averages for domestic military truck sales -- available for 1940-41 only--1940, 2,913; 1941, 14,193.
${ }^{6}$ Coaches are included with trucks; data are not available separately during the war period.
${ }^{7}$ Figures for new orders and sales of complete aircraft are quarterly averages; those for backlog of orders are as of December 31, not quarterly averages.
${ }^{8}$ Based on data for 2d, 3d, and 4th quarters of 1948.
${ }^{9}$ Data beginning May 1949 exclude "special category" exports not shown separately for security reasons. Exports of aircraft beginning 1950 exclude all military-type aircraft.
${ }^{10}$ Based on data for the 3d and 4th quarters of 1951.
${ }^{11}$ Beginning 1954, data include two types of aircraft formerly classified "special category;" see note 3 for this page.

## PAGE 194

${ }^{1}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data include exports of domestic new and secondhand motor trucks, buses, and chassis (including truck tractors), and new and second-hand passenger cars and chassis. Chassis are included in order to give representation to exports of "unas-
sembled" cars. Monthly reports (United States Exports of Domestic and Foreign Merchandise) give details for trucks, by capacity, as well as details for exports of parts and accessories.

During the war years, exports include shipments under LendLease and UNRRA but exclude shipments for U. S. overseas armed forces. Beginning 1947, data include shipments under the Army Civilian Supply Program. Such shipments were not reported previously (see 4th paragraph of note 1 for p. 104); in 1947, they totaled only 45 trucks. Data beginning July 1949 for motor trucks exclude "special category" exports not shown separately for security reasons. Figures beginning 1952 for all series exclude all military-type exports. Effective with January 1956, the figures for trucks and buses include exports of "used" special-purpose vehicles (not included in earlier data); in 1955, exports of these types averaged 26 vehicles per month.

Monthly data for 1929-52 and prior years, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p .197 of this volume. (Revisions: June 1948 -total, 29, 964; trucks, 14,976; November 1948-total, 20,566; trucks, 9,824; December 1948-total, 42,486; trucks, 23,664; March 1940-total, 26,094 ; trucks, 15,231 .)
${ }^{2}$ Sources: U. S. Department of Commerce, Bureau of the Census (beginning September 1945); War Production Board (1942August 1945). Beginning September 1953, monthly estimates of total production are based on reports from plants accounting for 99 percent of total output of specified types of trailers. The monthly estimates are subsequently revised where necessary when annual reports are received from plants not included in the monthly reporting panel. The number of plants reporting activity during the period 1946-50 varied between 80 and 120; beginning July 1950, reports were obtained from a number of additional companies and the industry coverage was increased about 6 percent ( 122 to 133 companies reported for July-December). In 1951, the number of reporting companies ranged from 118 to 161 and for 1952, from 162 to 145 . Beginning January 1952, the data are defined as track trailers having one or more axles with a rating of 10,000 pounds or more per axle. Earlier figures are described as truck trailers with a rated capacity of 5 tons or more. This change in specification, however, apparently has no appreciable effect on comparability of the data as shown here.

Figures represent the total production of truck trailers (covering the trailer only, and not the truck, i.e., engine or cab) for both civilian and military use (except for 1939-41 and July and August 1945, when only civilian production was reported). Begin ning September 1945, data are reported as total production, and show no breakdown for civilian and military use. It is known, however, that the production of military trailers tapered off rapidly after the war, becoming negligible during the last quarter of 1945. The sizable increase in production of trailers in 1953 reflects in part a substantial increase in Defense Department procurement in that year of small-capacity trailers of special construction. Types of complete trailers (total unit of chassis and body) covered, in addition to vans, shown separately, are as follows: Tanks; pole, pipe, and logging trailers; platforms; low-bed heavy haulers; dump trailers; off-highway trailers; auto transport trailers; public-utility trailers; and converter dollies.

Available monthly figures for 1945-52 for total production, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. Monthly data for civilian, military, and total production are available separately for January 1942-June 1945 in the 1947 SUPPLEMENT. The annual data for 1939-41 are shown beginning in the 1949 volume as complete trailers, since the figures on the original reports apparently exclude "trailer chassis."
${ }^{3}$ Figures are for trailer chassis only, for sale separately; production is estimated as equal to shipments.
${ }^{4}$ Source: R. L. Polk \& Company (except for the period March 1942 through December 1945). Data represent the number of new passenger and commercial cars registered each month and are complete for all States and the District of Columbia. The figures through 1939 for commercial cars and through 1940 for passenger cars include deliveries to the Federal Government which are excluded thereafter (except for nonmilitary Federal Government vehicles reported to the compilers by the manufacturers). For

1940, the monthly average number of commercial cars delivered to the Federal Government, as reported by the compiling agency, was 1,430 . Deliveries of passenger cars to the Government were small prior to 1941 and were not reported separately. The original reports of R. L. Polk \& Company show the statistics by make of car and by States.

Data for the period March 1942 through July 1945 are from the Office of Price Administration for passenger cars and from the War Production Board and the Office of Defense Transportation for commercial cars. For this period, the data represent rationed deliveries of cars to civilian users. Data from August through December 1945 are estimates by the Automobile Manufacturers Association. The large excess of new registrations of passenger cars over factory sales during the war period is accounted for by the stocks of cars in the hands of manufacturers, dealers, and distributors on January 1, 1942, which were taken over by the Government and released for essential uses only. The War Production Board estimated that on January 1, 1942, the industry's stocks of new passenger cars in all hands totaled about 538,000.

Monthly data for 1932-52 will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (For some years, the monthly averages shown in this volume are based on annual totals which include adjustments not incorporated in the monthly data.) The 1940 figures for commercial cars shown in the 1942 edition include Federal Government deliveries and, therefore, differ from the 1940 monthly average in this volume. Also, minor revisions have been made for 1938 and 1952 in the commercial-car registrations and for 1952 in the passenger-car registrations. Earlier data for passengercar registrations appear on p. 19 of the August 1933 SURVEY; monthly data for 1925-1931 for commercial cars are available upon request.
${ }^{5}$ Source: American Railway Car Institute. The data, reported to the Institute by its members and others, cover all car builders (both equipment manufacturers and railroad and private-line shops), including the Pullman Company for pertinent years. (Notice that Pullman Company cars were not included in data published in SUPPLEMENTS prior to the 1947 issue.)

Figures for freight cars pertain to all types for railroads, private car lines and industries, and governmental customers. The railroad-shop shipments, however, apply to freight cars for domestic use only.

Figures for 1941-56 for passenger-car deliveries (both total and domestic) by equipment manufacturers include also troop hospital cars, troop kitchen cars, and troop sleepers. Such deliveries totaled 7 in 1941; 24 in 1942; 678 in 1943; 995 in 1944; 905 in 1945; 878 in 1946; 23 in 1952; 130 in 1953; and 3 in 1954.

The figures for new orders represent net new orders but the data for backlog are unadjusted for cancellations.

Passenger-car data reported by railroad shops, not shown separately in the statistical table, are provided as follows (number of cars): Shipments (annual totals) for 1934-38, 1940, and 1942-51, respectively $-95 ; 5 ; 40 ; 72 ; 82 ; 6 ; 31 ; 4 ; 8 ; 3 ; 8 ; 191 ; 124 ; 18 ; 10$; 34; (no passenger-car shipments were made by railroad shops in 1939, 1941, and 1952-56); unfilled orders (end of year), 1947-5190; 16; 0; 34; 0 .

Monthly data for 1945-52 for all series (except unfilled orders for freight and passenger cars and new orders for freight cars), comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p .197 of this volume. Monthly data are available upon request as follows: Freight cars-new orders, 1941-52 (except data for foreign orders, 194352); unfilled orders, 1943-52; passenger cars-unfilled orders, 1947-50 (for 1951-52, see 1955 volume). For monthly figures for 1932-44 for shipments, by equipment manufacturers only, of freight and passenger cars (excluding the Pullman Company for 1932-40), see earlier volumes referred to in above-mentioned note. Revisions for 1939 freight-car shipments are as follows: January-total, 1,186; domestic, 1,186; February-total, 1,961; domestic, 1,951; June-total, 2,151; domestic, 2,151; Novembertotal, 2,617; domestic, 2,617; December-total, 4,516; domestic, 4,286.
${ }^{6}$ Figures exclude "chassis shipped as such" as in succeeding periods; see last sentence of 3d paragraph of note 2 for this page.
${ }^{7}$ Includes military production; see 2d paragraph of note 2 for this page.
${ }^{8}$ Average for 4 months, September-December.
${ }^{9}$ Beginning July 1949, data exclude "special category" exports not shown separately for security reasons. Beginning 1952, exports for all motor vehicles (including passenger cars) exclude all military types.
${ }^{10}$ Beginning July 1950 , the industry coverage has been increased by approximately 6 percent; see 1 st paragraph of note 2 for this page.
${ }^{11}$ Based on annual total including revisions not distributed to the monthly data.
${ }^{12}$ Beginning 1956, data include exports of used special-purpose vehicles (not included in earlier data); in 1955, exports of these types averaged 26 vehicles per month.

## PAGE 195

${ }^{1}$ See note 5 for p. 194.
${ }^{2}$ Data for unfilled orders of freight cars are as of end of year, not averages of end-of-month figures.

## PAGE 196

${ }^{1}$ Source: Association of American Railroads. The data cover class I roads only, which for the period shown have accounted for 90 to 95 percent of the total United States mileage operated by all line-haul railroads. Effective December 1955, the data reflect reclassification of reporting roads to the Interstate Commerce Commission revised list of class I line-haul railroads; comparability with earlier data, based on ownership, is affected by less than 1 percent.

The figures for cars owned or leased exclude privately owned cars and railroad-owned private refrigerator cars. For 1935-48, the percentage undergoing or awaiting repairs is based on "total cars on line," rather than on total cars owned. (Total cars on line include all railroad-owned cars on class I lines, regardless of the class of the originating road; this figure is usually slightly less than the total owned, because more class I cars are on "other than class I" lines than the reverse.) Beginning 1949, data represent cars awaiting repairs as a percent of total owned; the comparability of the series, however, is not affected by more than 0.3 percent.
The freight-car ownership report includes data on car installations and retirements, by districts and for the individual roads and by type and capacity of car. The condition report gives the ownership of cars undergoing or awaiting heavy and light repairs, by districts, by individual roads, and by type of car.
Monthly data for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Minor revisions have been made in some of the figures appearing in the volumes prior to the 1947 issue.) In the 1955 edition and prior issues of BUSINESS STATISTICS, monthly data for unfilled orders of freight cars, as compiled by AAR for class I roads, are also shown. Also, in these earlier volumes, figures shown on the "monthly average" lines are averages of the monthly data; in the present volume, the data relate to cars owned or leased as of December 31.
${ }^{2}$ Source: Association of American Railroads. Data are for class I roads only and cover all locomotives assigned to freight service, passenger service (including multiple-purpose types), and switch, yard, and company service. The percentage of steam locomotives undergoing or awaiting repairs is based on the total owned and leased from others. Data beginning 1951 for dieselelectric and electric locomotives are shown in terms of power units; figures prior to 1951 represent complete locomotives as
operated. Figures shown on the monthly average lines for the years 1929-52 for unfilled orders of diesel-electric and electric locomotives represent the backlog as of September 1; data shown for 1953-56 are as of December 31.
The original ownership and condition report also gives-for steam, diesel-electric (including gas turbine-electric, beginning 1952), and electric locomotives-the number of locomotives held for classified repairs and number retired; all data are shown by types and aggregate tractive effort of locomotives, by districts, and for individual roads.

Monthly data for unfilled orders of diesel-electric locomotives for 1941-52 and percentage of total steam locomotives held for repairs for 1929-52 will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p .197 of this volume. (In the 1951, 1949, and 1947 volumes, unfilled orders of diesel-electric and electric locomotives will be found under the caption "other locomotives"). For monthly data prior to 1941 for unfilled orders of diesel-electric and electric locomotives, as compiled by the Bureau of the Census, see the 1942 SUPPLEMENT. Monthly data for 1929-52 for steam locomotives owned and for 1936-40 for total backlog (as compiled by AAR) are available upon request. Monthly data prior to 1953 for number of diesel-electric and electric locomotives owned, number serviceable, and number installed may be obtained from reports of the AAR.
${ }^{3}$ Beginning 1 1551 , data represent number of power units; data shown prior to 1951 are in terms of complete locomotives as operated.
${ }^{4}$ Source: U. S. Department of Commerce, Bureau of the Census (from Bureau of Foreign and Domestic Commerce through April 1941). Data represent exports of new railroad-service locomotives, including switching types (comprising steam, straight electric, diesel, nonelectric, diesel-electric, and other types); industrial, including surface mine; underground mine; as well as used and rebuilt locomotives.
Monthly data for 1941-52, comparable with monthly averages for corresponding years shown herein, will be found in earlier editions of BUSINESS STATISTICS as indicated in the note at top of p. 197 of this volume. (Revised total exports, September 1946, 115 locomotives.)
Because of the reclassification of items in the revised export schedule of January 1, 1952, exports of all locomotives beginning 1952 are not summarized by type of power for each class. Monthly exports of steam locomotives for 1923-51 are published separately in the 1953 edition and earlier issues of the STATISTICAL SUPPLEMENT. (There have been a few scattered minor revisions for data appearing in the 1940 issue.)
Figures for total and "other" locomotives as shown in the 1942 and earlier SUPPLEMENTS have been adjusted to include railway, industrial, and mining locomotives of the electric, gasoline, and diesel types. Revised monthly data for 1929-40 and prior years, to include these additional classes, are available upon request.
${ }^{5}$ Figures for diesel-electric locomotivies are not available separately but are included in the total.
${ }^{6}$ Data for 1929-50 represent the number of locomotives on order as of September 1; for 1951 and 1952, the number of power units on order as of September 1; and for 1953-56, the number of power units on order as of December 31.
${ }^{7}$ In 1932, a total of 4 diesel-electric locomotives were installed.
${ }^{8}$ Number of diesel-electric and electric locomotives serviceable as of November 30, 1943; total number owned or leased as of that date, 2,570 .
${ }^{9}$ Earlier data represent percent of total freight cars on line and, therefore, are not strictly comparable with percentages from 1949 forward; see note 1 for this page.
