## A Supplement to the SURVEY OF CURRENT BUSINESS

U.S. DEPARTMENT OF COMMERCE<br>C. William Verity, Secretary<br>Robert Ortner, Under Secretary for Economic Affairs<br>BUREAU OF ECONOMIC ANALYSIS<br>Allan H. Young, Director<br>Carol S. Carson, Deputy Director

## ACKNOWLEDGMENTS

BUSINESS STATISTICS: presents the historical data and methodological notes for approximately 2,100 series that appear in the SURVEY Of CURRENT Business. It is the most comprehensive publication of its kind, and thus is a valuable reference tool.

The main body of the publication presents monthly data for 1983-86 and annual data for 1961-86 for approximately 1,900 series, drawn from public and private sources, that are published monthly in the S (or "blue") pages of the SURVEY. The methodological notes for each series are in a separate section, with pages of this section numbered to correspond to those on which the data for the series appear. Appendix I provides pre-1983 monthly data for selected series. Appendix II provides quarterly and annual data for several series prepared by the Bureau of Economic Analysis-national income and product accounts, new plant and equipment expenditures, and U.S. international transactions. Methodological notes for Appendix II follow the tables. Data available through mid-September 1987 are included in this volume.

Sincere appreciation is expressed for the generous cooperation of the many organizations that have contributed to this volume and to the monthly SURVEY. These organizations are listed on pages 145 and 146 .

This volume was prepared in the Current Business Analysis Division, of which Gurmukh S. Gill is Chief, under the general direction of Carol S. Carson, Deputy Director, Bureau of Economic Analysis. The Statistical Series Branch, of which Kenneth A. Beckman is Chief, had primary responsibility. Associates in that branch are: Duhurst Hood, Rita M. Quick, Cherie Roberts, and Frederick von Batchelder. Tracy R. Tapscott and Gretchen M. Gibson assisted in reviewing the methodological notes. Production, planning, and design assistance was provided by the Publication Services Branch, under the supervision of Leland L. Scott. Within that branch, Sybella W. G'Schwend coordinated the typesetting of the methodological notes.

## 25th Edition

Foreword ..... iii
Contents, by Subject ..... vi-vii
Annual Data, 1961-86, and Monthly Data, 1983-86 ..... 1-144
Methodological Notes Follows 144
Sources of Data ..... 145,146
Appendix I: Historical Data for Selected Series ..... 149-215
Appendix II: Quarterly BEA Statistics
National Income and Product Accounts ..... 219-242
New Plant and Equipment Expenditures ..... 243-245
U.S. International Transactions ..... 246-250
Methodological Notes ..... Follows 250
General Index ..... 251

## Contents, By Subject

GENERAL BUSINESS INDICATORS:
PERSONAL INCOME ..... 1,2
INDUSTRIAL PRODUCTION ..... 3-7
BUSINESS SALES AND INVENTORIES ..... 8-10
MANUFACTURERS' SALES, INVENTORIES, ANDORDERS11-21
BUSINESS INCORPORATIONS ..... 21
INDUSTRIAL AND COMMERCIAL FAILURES ..... 22
COMMODITY PRICES:
PRICES RECEIVED AND PAID BY FARMERS ..... 23
CONSUMER PRICES ..... 24-26
PRODUCER PRICES ..... 27-29
PURCHASING POWER OF THE DOLLAR ..... 29
CONSTRUCTION AND REAL ESTATE:
CONSTRUCTION PUT IN PLACE ..... 30,31
CONSTRUCTION CONTRACTS ..... 32
HOUSING STARTS AND PERMITS ..... 32,33
CONSTRUCTION COST INDEXES ..... 33
REAL ESTATE ..... 34
DOMESTIC TRADE:
ADVERTISING ..... 35,36
WHOLESALE TRADE ..... 36
RETAIL TRADE:
All types of retail stores, sales and inventories ..... 37-41
Multiunit firms with 11 or more stores ..... 41,42
LABOR FORCE, EMPLOYMENT, AND EARNINGS: POPULATION ..... 43
LABOR FORCE ..... 43-45
EMPLOYMENT:
Employees in nonagricultural establishments ..... 46-48
Production workers on private nonagricultural payrolls ..... 48-50
HOURS AND EARNINGS:
Average weekly hours per worker, manufacturing and nonmanu-facturing industries 51,52
Aggregate hours and indexes in nonagricultural activities ..... 53,54
Average hourly earnings, private nonagricultural payrolls ..... 55-58
Miscellaneous hourly wages ..... 58
Average weekly earnings, private nonagricultural payrolls ..... 59
EMPLOYMENT COST INDEXES ..... 60
LABOR CONDITIONS:
Help-wanted advertising ..... 60
Work stoppages (strikes) ..... 60
UNEMPLOYMENT INSURANCE PROGRAMS ..... 61
FINANCE:
BANKING:
Open market paper outstanding ..... 62
Farm Credit System loans ..... 62
Federal Reserve Banks, condition ..... 62,63
Federal Reserve member banks (all) reserves and borrowings. ..... 63
Federal Reserve weekly reporting banks, condition ..... 63,64
Commerical bank credit ..... 65
Money and interest rates ..... 65
CONSUMER CREDIT ..... 66,67
FEDERAL GOVERNMENT FINANCE:
Budget receipts and outlays ..... 68
Budget financing ..... 68
Gross debt ..... 68
Budget receipts by source and outlays by agencies ..... 68,69
GOLD AND SILVER ..... 69
MONETARY STATISTICS ..... 70,71
PROFITS AND DIVIDENDS ..... 72
SECURITIES ISSUED ..... 73
SECURITY MARKETS:
Stock market customer financing ..... 74
Bonds (prices, sales, and yields) ..... 74
Stocks (prices, yields, sales, and shares listed) ..... 75-77
FOREIGN TRADE OF THE UNITED STATES:
VALUE OF EXPORTS:
Exports by geographic regions and leading countries. ..... 78,79
Exports by commodity groups and principal commodities ..... 79,80
VALUE OF IMPORTS:
General imports by geographic regions and leadingcountries.81,82
General imports by commodity groups \& principal commodities. ..... 83
INDEXES ..... 84
SHIPPING WEIGHT AND VALUE ..... 84
TRANSPORTATION AND COMMUNICATION:
TRANSPORTATION:
Air carriers ..... $.85,86$
Transit industry ..... 86
Motor carriers ..... 86
Railroad finances and traffic ..... 87
Travel ..... $\mathbf{8 7 , 8 8}$
COMMUNICATION:
Telephone and telegraph carriers ..... 88
CHEMICALS AND ALLIED PRODUCTS:
CHEMICALS:
Inorganic chemicals ..... 89
Inorganic fertilzer materials ..... 90
Industrial gases ..... 91
Organic chemicals ..... 91
ALCOHOL ..... 91,92
PLASTICS AND RESIN MATERIALS ..... 92
ELECTRIC POWER AND GAS:
ELECTRIC POWER, PRODUCTION, SALES, REVENUE.... 93
GAS, CUSTOMERS, SALES, REVENUE ..... 94
FOOD AND KINDRED PRODUCTS; TOBACCO:
ALCOHOLIC BEVERAGES ..... 95,96

Footnotes giving source of data and description of series appear in the section immedi-
ately following these tables.

## Methodological

## Notes

## Reference to Data

The statistical section in this volume contains annual data for 1961-86 and monthly data for 1983-86. Appendix I contains annual and monthly data for $1961-82$ for some of the more important series in the statistical section. Annual data prior to 1961 appear in the following earlier editions of BUSINESS STATISTICS: 1947-60, in the 1979 edition; 1939-46, in the 1969 edition; 1929-38 in the 1959 edition. Monthly data prior to 1983 , unless otherwise indicated in the methodological notes for individual series, appear in the following earlier editions of BUSINESS STATISTICS:

| Monthly data <br> for: | BUSINESS STATISTICS <br> edition | Monthly data <br> for: | BUSINESS STATISTICS <br> edition |
| :---: | :---: | :---: | :---: |
| $1981-82$ | 1984 | $1955-56$ | 1959 |
| $1979-80$ | 1982 | $1953-54$ | 1957 |
| $1975-78$ | 1979 | $1951-52$ | 1955 |
| $1973-74$ | 1977 | $1949-50$ | 1953 |
| $1971-72$ | 1975 | $1947-48$ | 1951 |
| $1969-70$ | 1973 | $1945-46$ | 1949 |
| $1967-68$ | 1971 | $1941-44$ | 1947 |
| $1965-66$ | 1969 | $1938-40$ | 1942 |
| $1963-64$ | 1967 | $1936-37$ | 1940 |
| $1961-62$ | 1965 | $1934-35$ | 1938 |
| $1959-60$ | 1963 | $1932-33$ | 1936 |
| $1957-58$ | 1961 | 1931 and earlier | 1932 |

# Methodological Notes to the Statistical Series 

## PAGE 1

1. Source: U.S. Department of Commerce, Bureau of Economic Analysis. "Personal come" is the income received by persons from all sources, that is, from participation in oduction, from both government and business transfer payments, and from government terest, which is treated like a transfer payment. Persons consists of individuals, nonprofit stitutions serving individuals, private noninsured welfare funds, and private trust funds. roprietors' income is treated in its entirety as received by individuals. Life insurance arriers and private noninsured pension funds are not counted as persons, but their saving credited to persons. Personal income is the sum of wage and salary disbursements, other bor income, proprietors' income with inventory valuation and capital consumption adjustents. rental income of persons with capital consumption adjustment, personal dividend come, personal interest income, and transfer payments to persons, less personal contribuons for social insurance.
"Wage and salary disbursements" consists of the monetary remuneration of employees, ucluding the compensation of corporate officers; commissions, tips, and bonuses: and
receipts in kind that represent income to the recipients. Retroactive wages are counted when paid rather than when accrued.
"Other labor income" consists primarily of employer contributions to private pension and private welfare funds, including privately administered workers' compensation funds.
"Proprietors' income with inventory valuation and capital consumption adjustments" is the income, including income in kind, of sole proprictorships and partnerships, and of tax-exempt cooperatives. The imputed net rental income of owner-occupants of farm dwellings is included. Dividends and monetary interest received by proprietors of nonfinancial business, and rental incomes received by persons not primarily engaged in the real estate business are excluded; these incomes are included in dividends, net interest, and rental income of persons. The two valuation adjustments are designed to obtain income measures in which inventory withdrawals and charges for depreciation of fixed capital are valued at replacement cost, the valuation concept underlying national income and product accounting, rather than at historical cost, the valuation concept underlying business accounting. The capital consumption adjustment also restates depreciation to that reflecting uniform service lives and straight-line depreciation formulas.
"Rental income of persons with capital consumption adjustment" is the income of persons from the rental of real property, except the income of persons primarily engaged in the real estate business; the imputed net rental income of owner-occupants of nonfarm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources. The capital consumption adjustment is described in the preceding paragraph.
"Personal dividend income" is the dividend income of persons from all sources. It equals dividends less "dividends received by government." Dividends received by government consists of dividends received by State and local government social insurance and other funds.
"Personal interest income" is the interest income of persons from all sources. It equals net interest plus "interest paid by government to persons and business" less "interest received by government" plus "interest paid by consumers to business." The last item consists only of interest paid by individuals in their capacity as consumers.
"Transfer payments" to persons is income payments to persons, generally in monetary form, for which they do not render current services. It consists of business transfer payments and government transfer payments. Government transfer payments include payments under the following programs: Federal old-age, survivors, disability, and hospital insurance; supplementary medical insurance; medicaid; State unemployment insurance; railroad retirement and unemployment insurance; government retirement and unemployment insurance; workers' compensation; veterans, including veterans life insurance; food stamp; black lung; supplemental security income; and direct relief. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included.

Personal income differs from national income in that it includes transfer payments and interest received by persons, regardless of source, while it excludes both employee and employer contributions for social insurance, corporate profits tax liability, corporate inventory valuation and capital consumption adjustments, and undistributed corporate profits. A minor difference also appears in the wage and salary component, in that retroactive wage payments are included in personal income when disbursed and in national income when accrued.

The sources and methods used in compiling the monthly series are given in the following paragraphs.

Annual estimates of private wages and salaries, by industry, and of State and local government wages and salaries are based mainly on annual tabulations of wages and salaries of employees covered by State unemployment insurance from the Bureau of Labor Statistics. Monthly estimates of private wages and salaries are based are based on payroll indexes calculated by using data from the Bureau of Labor Statistics monthly survey of employment, hours, and earnings. Monthly estimates of State and local government wages and salaries are based on judgmental trends. Annual and monthly estimates of Federal Government wages and salaries are based on data from the Office of Personnel Management and the Office of Management and Budget.

Annual estimates of other labor income, except for the most recent year, are based on: For private pension and profit-sharing funds, employer contributions from Internal Revenue Service tabulations of business tax returns when available and judgmental trends in other years; for group health and life insurance, total premiums paid from trade sources and Health Care Financing Administration and data on employer share from trade source; and for workers' compensation, contributions from trade sources. Annual estimates for the most recent year are based on: For group health insurance, total premiums paid from Health Care Financing Administration; and for others in this category, judgmental trends. Monthly estimates are based on judgmental trends.

Annual estimates of nonfarm proprietors' income, except for the most recent year, are based on Internal Revenue Service tabulations of business tax returns, adjusted for understatement of income on tax returns and several conceptual differences. Annual estimates for the most recent year and monthly estimates are based on: For construction, trade, and services, indicators of activity (such as value of housing put in place); for most others, judgmental trends. Annual and quarterly estimates of farm proprietors' income are based on Department of Agriculture data on net income, obtained by deriving gross earnings (cash receipts from marketings, inventory change, government payments, other cash income, and nonmoney income) and subtracting production expenses, adjusted to exclude corporate profits from Internal Revenue Service tabulations of business tax returns. Monthly estimates are interpolated from the quarters with modifications to reflect subsidy payments and price movements.

Annual estimates of rental income from nonfarm nonresidential properties, except for the 2 most recent years, are based on rents paid and received by business and government, adjusted for expenses associated with property (mainly depreciation, taxes, interest, and repairs), from Internal Revenue Service tabulations of business tax returns, Census Bureau surveys, and the Budget of the United States prepared by the Office of Management and Budget. Annual estimates for the 2 most recent years and quarterly estimates are based on judgmental trends. Annual estimates of rental income from owner-occupied nonfarm housing are derived as space rent (see nonfarm housing in personal consumption expenditures) less related expenses, including maintenance and repair from Bureau of Labor Statistics quarterly consumer expenditure survey, mortgage interest, estimated by applying an interest rate to outstanding mortgage debt from the Federal Reserve Board, and property taxes from Census Bureau quarterly surveys of State and local tax collections. Quarterly estimates for space rent, mortgage interest, and property taxes are derived in the same way as the annual estimates. Quarterly estimates for maintenance and repairs are based on the number of units in the housing stock and the CPI for maintenance and repairs. Depreciation estimates are based on investment outlays, current prices for capital Digitiod ford depreciation rates; all other expenses are based on judgmental trends. Annual http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
and quarterly estimates of rent from tenant-occupied nonfarm housing are derived in the same way as the owner-occupied annual estimates and are adjusted to cover only rental income accruing to persons not primarily engaged in the real estate business. Annual estimates of royalties, except for the most recent year, are based on Internal Revenue Service tabulations of royalties reported on individual tax returns. Annual estimates for the most recent year and quarterly estimates are based on judgmental trends. Annual estimates of rent from farms owned by nonoperator landlords are prepared in conjunction with farm proprietors' income; see that description. Quarterly estimates are based on judgmental trends. Monthly estimates of total rental income are interpolated from the quarterly estimates.

Annual estimates of personal dividend income, except for the 2 most recent years, are based on Internal Revenue Service tabulations of corporation tax returns. Annual estimates for the 2 most recent years and monthly estimates are estimated from a Bureau of Economic Analysis sample of corporations.

Annual estimates of personal interest income are derived from net interest and are calculated as net interest, plus interest paid by government to persons and business, less interest received by government, plus interest paid by consumers to business. In addition to monetary interest flows, personal interest income includes flows of interest in kind (imputed interest). Annual estimates of domestic monetary net interest are derived from Internal Revenue Service tabulations of business tax returns or, when these tabulations are not available, interest receipts and payments from regulatory agencies (such as the Federal Deposit Insurance Corporation), from trade sources, or from applying interest rates to assets/liabilities from Federal Reserve Board flow of funds accounts. Foreign monetary net interest is estimated as part of the balance of payments accounts.

Annual estimates of imputed net interest paid by banks, savings and loan associations, and credit unions are based on interest payments and receipts from regulatory agencies. Estimates of net imputed interest paid by investment companies and life insurance carriers are based on property income earned from Internal Revenue Service tabulations of business tax returns, and for the 2 most recent years, from trade sources. Net imputed interest paid by noninsured pension funds is estimated from the Federal Reserve Board flow of funds accounts. Federal Government interest is derived by the Bureau of Economic Analysis from the Budget of the United States and from Treasury Department data. State and local government interest is based on annual and quarterly Census Bureau survey data. Interest paid by consumers to business is the sum of the monthly estimates, which are based mainly on applying interest rates to Federal Reserve data on outstanding consumer credit.

Quarterly estimates of personal interest income are derived by estimating monetary and imputed interest received by persons separately. Estimates of monetary interest received by persons are derived by applying interest rates to household assets from the Federal Reserve Board flow of funds accounts. Estimates of imputed interest received by persons are based on judgmental trends. Monthly estimates of personal interest income are interpolations of the quarterly estimates.

Annual estimates of business transfer payments to persons are based on Internal Revenue Service tabulations of business tax returns. Other components, such as liability payments for personal injury, are based on information from other government and trade sources. Annual estimates of Federal Government transfer payments are derived largely from the Budget of the United States, Treasury Department data, and agency data on the individual programs. State and local government transfer payments are derived from Census Bureau surveys and from reports by Federal agencies that fund certain State and local government programs. Monthly estimates of business transfer payments and of state and local government transfer payments are based on judgmental trends. Monthly estimates of Federal Government transfer payments are based largely on monthly Treasury Department data.

Monthly estimates of employee contributions for old-age, survivors, disability, and hospital insurance, unemployment insurance, railroad retirement insurance, Stateadministered workers' compensation programs, and Government employee retirement systems are based on relevant wage and salary data, taking into account changes in contribution rates. Medical insurance premiums, veterans life insurance premiums, and Federal workers' compensation contributions are based on records of the agencies concerned. Annual estimates of old-age, survivors, disability, and hospital insurance contributions by the self-employed are derived from data supplied by the Social Security Administration.

Monthly data for 1961-82 for the series indicated by a star are in appendix I to this volume. A discussion of monthly estimates of personal income and its disposition appears in the November 1979 SURVEY OF CURRENT BUSINESS. A discussion of the latest benchmark revision incorporating changes in definitions and classifications, and improvements in statistical methods appears in the December 1985 SURVEY OF CURRENT BUSINESS. Annual data for 1929-82 and quarterly data for 1946-82 appear in THE NATIONAL INCOME AND PRODUCT ACCOUNTS OF THE UNITED STATES, 1929-82: STATISTICAL TABLES. See also the July 1986 and July 1987 SURVEYs.
2. "Commodity-producing industries" consists of the following Standard Industrial Classification (SIC) divisions: Agriculture, forestry, and fisheries; mining; construction; and manufacturing. "Distributive industries" consists of the following SIC divisions: Transportation and public utilities, excluding the U.S. Postal Service; wholesale trade; and retail trade. "Service industries" consists of the rest-of-the-world sector and the following SIC divisions: Finance, insurance, and real estate; and services. "Government and government enterprises" comprises Federal, State and local government and government enterprises. See note 1 above for sources and methods used in compiling the estimates.
3. "Personal contributions for social insurance," which is subtracted out of personal icome, includes payments by employees, self-employed, and other individuals who particiate in the following programs: Federal old-age, survivors, disability, and hospital insurnce; supplementary medical insurance; State unemployment insurance; railroad etirement; government retirement; veterans life insurance; and temporary disability insurnce.
4. Equals personal income less the following farm components: Wages and salaries, ther labor income, proprietors' income with inventory valuation and capital consumption djustments, and net interest.

## PAGE 2

1. See note 1 for p. 1 .
2. "Personal tax and nontax payments" is tax payments (net of refunds) by persons except personal contributions for social insurance) that are not chargeable to business xpense and certain other personal payments to government agencies (except government nterprises) that it is convenient to treat like taxes. Personal taxes includes income, estate nd gift, and personal property taxes. Nontaxes includes tuitions and fees paid to schools nd hospitals operated mainly by government, passport fees, fines and penalties, and onations.
"Disposable personal income" is personal income less personal tax and nontax payrents. It is the income available to persons for spending or saving.
"Personal outlays" is the sum of personal consumption expenditures, interest paid by onsumers to business, and personal transfer payments to foreigners, net. The last item is ersonal remittances in cash and in kind to abroad less such remittances from abroad.
"Personal saving" is personal income less the sum of personal outlays and personal tax nd nontax payments. It is the current saving of individuals (including proprietors), onprofit institutions serving individuals, private noninsured welfare funds, and private rust funds. Personal saving may also be viewed as the sum of net acquisition of financial ssets (such as cash and deposits, securities, and the net equity of individuals in life nsurance and in private noninsured pension funds) and physical assets, less the sum of net orrowing and of capital consumption allowances.
A discussion of the latest benchmark revision incorporating changes in definitions and :lassifications, and improvements in statistical methods appears in the December 1985 ;urvey Of Current Business. Annual estimates for 1929-82 and quarterly estimates or 1946-82 appear in THE NATIONAL INCOME AND PRODUCT ACCOUNTS OF「HE UNITED STATES, 1929-82: STATISTICAL TABLES. See also the July 1986 and uly 1987 SURVEYs.
3. "Personal consumption expenditures" is goods and services purchased by individuals, perating expenses of nonprofit institutions, and the value of food, fuel, clothing, rent of lwellings, and financial services received in kind by individuals. Net purchases of used ;oods are also included. Purchases of residential structures by individuals and nonprofit nstitutions serving individuals are classified as gross private domestic investment.

Personal consumption expenditures for goods as well as services are estimated for eenchmark years as final demand components of the Input-Output Table. For goods, the rasic data are: Product shipment values reported in the census of manufacturers; nonnanufactured foods and fuels, derived from censuses of agriculture and mineral industries; mports, including transportation costs, insurance, and duties; and changes in wholesalers' ind retailers' inventories. The available supply is apportioned at producers' values among ntermediate uses, investment, exports, government purchases, and personal consumption :xpenditures. To the derived consumption expenditures at producers' value are added :stimates of transportation costs, wholesale and retail margins, and sales taxes, based rincipally on Interstate Commerce Commission, census of business, and Internal Revenue jervice data.

Estimates of consumption expenditures for goods for years between and beyond benchnarks and quarterly and monthly consumption expenditures estimates rest chiefly on the rends shown by the Census Bureau's retail sales figures by kind of store; quantity series and price information (for such items as autos, gasoline, and tobacco); and other data from sovernment and nongovernment sources.

Periodic comprehensive sources, notably the censuses of population and housing, busiress, and agriculture, provide underlying data for space rental values, personal services, epair services, and other components that together constitute nearly 60 per cent of the tollar value of consumer services. The information is supplemented by comprehensive innual reports of Federal Government agencies, such as the Department of Education for Jrivate higher education outlays, the Federal Communications Commission for telephone ervice, the Interstate Commerce Commission for railroad and bus travel and for houseold moving services (or expenditures), the Securities and Exchange Commission for srokerage fees, the Department of Transportation for air travel, the Internal Revenue Service and the Census Burcau for data on hotels, and professional, personal, automotive, epair, and recreation services. Important use is made also of annual data available from rivate sources such as the American Council of Life Insurance and A.M. Best Company or insurance items, the American Hospital Association for hospital services, the Edison Electric Institute and the American Gas Association for electric and gas utilities, the American Public Transit Association for outlays for local transportation, and the New York Stock Exchange for brokerage fees.

A more detailed description of sources and methods used in estimating personal Digipnsuraption-expenditures appears in "Monthly Estimates of Personal Income, Taxes, and httputhayssep published findthe grovember 1979 issue of the SURvEY OF CURRENT BUSINESS. Federal Reserve Bank of St. Louis
4. Includes data for items not shown separately.
5. Disposable personal income in 1982 dollars is derived using the implicit price deflator for personal consumption expenditures.
6. Constant-dollar or "real" estimates-i.e., estimates from which price change has been removed, are generally obtained by dividing the most detailed current dollar components by appropriate price indexes.
"Personal consumption expenditures" are deflated mainly by price series that are components of the Consumer Price Index compiled by the Bureau of Labor Statistics, U.S. Department of Labor.
7. The implicit price deflators are a by product of the deflation of GNP. They are derived as the ratio of current-dollar to constant-dollar GNP (or component)-multiplied by 100 . They are weighted averages of the detailed price indexes used in the deflation of GNP. In each period, the weights are based on the composition of constant-dollar output in that period. Thus changes in the implicit price deflator reflect not only changes in prices but also changes in the composition of GNP. Consequently, the implicit price deflator can give misleading signals of price change, and its use as a measure of price change should be avoided.

## PAGES 3-7

1. Source: Board of Governors of the Federal Reserve System, Division of Research and Statistics. The index measures changes in the physical volume or quantity of output of manufacturing, mining, and electric and gas utilities. It reflects output changes at all stages within manufacturing and mining industries (including intermediate as well as final products). The index does not cover production on farms, in the construction industry, in transportation, or in various trade and service industries. A number of groups and subgroups include data for individual series not published separately.

Since the index of industrial production was first introduced by the Board in the 1920's, it has been revised from time to time to take account of the growing complexity of the economy, the availability of more data, improvements in statistical processing techniques, and refinements in methods of analysis.

The figures presented here reflect revisions of the industrial production index introduced by the Board in July 1985 (the first since 1976 and the sixth since the 1920's). With the revision, the reference year of the index was moved from 1967 to $1977=100$; the number of basic index series was increased from 235 to 252 ; the industry classification of the series now matches the 1977 Standard Industrial Classification (SIC); the individual series were adjusted to the 1972 and 1977 Census of Manufactures, the Annual Surveys of Manufactures through 1981, and other sources; and new value-added weights were assigned to each series.

The method used in combining the individual series is the weighted average of relatives. This consists of (1) reducing each series into relatives, with the average for the base period, 1977, as 100; (2) multiplying each series of relatives by a base-year weight factor; and (3) adding the products (relatives multiplied by weights) for any 1 month and dividing by sum of the weights to obtain the index number for the month. The weights used are percentage weight factors. Because the total of the percentage weight factors is equal to 100 , the sum of the products of all series for any 1 month (all series times their respective weight factors) gives the index of industrial production for that month. The products of the component series and their weights give the number of points contributed to the index by individual series. This method of computation facilitates analysis of the changes in the index. For example, it makes it possible to observe the points contributed by each series or group of series, and therefore to determine which series or group of series is responsible for the month-to-month changes in the total index or in the index for any group or subgroup of industries.

The weights used are based on value added-the difference between the value of production and the cost of materials or supplies consumed. Different value-added weights for different years are used in an attempt to represent accurately the evolution of relative prices. In the revised index, 1967 weights have been used for the 1967-72 period, 1972 weights for 1972-77, and 1977 weights from 1977 to the present. The individual series and the weighted aggregates for each of these periods have been linked to form a continuous index expressed as a percentage of output in 1977. Before this revision, value-added weights from 1967 were used in the current monthly industrial production index.

Components of the index are adjusted for two kinds of short-time recurring fluctuations, i.e., for differences in the number of working days from month to month and for seasonal variation. Beginning with indexes for January 1947, allowances for holiday observances have been made in seasonal factors rather than in working-day adjustments. Except for Easter, each of the principal holidays is in the same month each year-January, May, July, September, November, and December. Reported product data are converted to a daily average basis by adjusting for the number of working days in the reporting period. No allowances for holiday shutdowns are made in the working-day adjustment; consequently, the effects of holiday observances on monthly output are reflected in the indexes unadjusted for seasonal variation. No adjustment is required for monthly series based on employee-hour and kilowatt-hour data because they are little affected by calendar variations.

Individual series are seasonally adjusted by the X-II version of the Census Method II seasonal adjustment procedure.

Monthly data for 1961-82 for those series indicated by a star appear in appendix 1 to this volume. Monthly data for other series prior to 1983 are available from the Industrial Output Section, Board of Governors of the Federal Reserve System, Washington, DC
20551. A more detailed description, together with a history of the index, a glossary of terms, a bibliography, and historical data is presented in the Industrial Production-1986 Edition. This publication is available from the Publication Services, Board of Governors of the Federal Reserve System, Washington, DC 20551.

## PAGES 8 and 9

1. Source: U.S. Department of Commerce, Bureau of the Census. For specific information on sources of data and descriptions of series, see footnotes 2,3 , and 4.

Beginning January 1982, manufacturers' inventories are valued using methods other than last-in-first-out (LIFO) in order to reflect the current costs of goods held as inventory. Beginning December 1980, the retail trade and merchant wholesalers' inventories are also valued using non-LIFO methods. Previously, inventories were valued using a mixture of LIFO and non-LIFO methods. For further information, see footnotes 2, 3, and 4.
2. Until 1982, manufacturers' inventories are book values of stocks on hand at the end of the period and are valued according to the valuation method used by each respondent, and the aggregates are a mixture of LIFO and non-LIFO values. About one-fourth of manufacturers' inventories are valued on a LIFO basis. Beginning 1982, inventories are valued using non-LIFO methods. For more information, see the Current Industrial Report, Manufacturers' Shipments, Inventories, and Orders: 1982-1986, M3-1/86), chapter 1, p. V.

A detailed description of the series and historical data for all currently available series appear in the Current Industrial Report, Manufacturers' Shipments, Inventories, and Orders: 1982-1986. M3-l/86). Current data are available in Current Industrial Reports, Manufacturers' Shipments, Inventories, and Orders, Series M3-1. Explanations of previous revisions to the series appear in the 1984 and earlier editions of BUSINESS Statistics.
3. Until December 1980, retail trade inventories are book values of merchandise on hand at the end of the period and are valued according to the valuation method used by each respondent, and the aggregates are a mixture of LIFO and non-LIFO values. Beginning December 1980, inventories are valued using non-LIFO methods as described in the Current Business Report, Revised Monthly Retail Sales and Inventories: January 1977 through December 1986, BR-13-86S, p. 6. Although the LIFO method is used extensively by department and food stores, its use is more widespread in manufacturing than in retail trade.

A detailed description of the series and current data are available in Current Business Reports, Monthly Retail Trade, Sales and Inventories, Series BR. Historical data for all currently available series appear in the Current Business Report, Revised Monthly Retail Sales and Inventories: January 1977 through December 1986, BR-13-86S. Explanations of previous revisions to the series appear in the 1984 and earlier editions of BUSINESS Statistics.
4. Until December 1980, merchant wholesalers' inventories are book values of merchandise on hand at the end of the period and are valued according to the valuation method used by each respondent, and the aggregates are a mixture of LIFO and non-LIFO values. Beginning December 1980, inventories are valued using non-LIFO methods as described in the Current Business Report, Revised Monthly Wholesale Trade, Sales and Inventories, December 1980 Through December 1986, BW-13-86S, p. 5.

A detailed description of the series and historical data for all currently available series appear in the Current Business Report, Revised Monthly Wholesale Trade, Sales and Inventories, December 1980 Through December 1986, BW-13-86S. Current data are available in Current Business Reports, Monthly Wholesale Trade, Sales and Inventories. Series BW. Explanations of previous revisions to the series appear in the 1984 and earlier editions of Business Statistics.
5. Source: U.S. Department of Commerce, Bureau of Economic Analysis (BEA). Manufacturing shipments are deflated primarily using components of the Producer Price Index combined with the Annual Survey of Manufactures (ASM) product-class shipments weights. Retail sales are deflated by the kind-of-business classification using components of the Consumer Price Index for All Urban Consumers combined with the 1977 census commodity-line sales weights. Merchant wholesalers' sales are deflated by the kind-of-business classification primarily using components of the Producer Price Index combined with the 1977 census commodity-line sales weights.

BEA prepares the constant-dollar estimates of manufacturing inventories at the twodigit SIC industry level by the stage of fabrication and the merchant wholesalers' and retailers' inventories by the kind-of-business classification. The deflators are primarily the weighted averages of components of the Producer Price Index with appropriate lag structures based on information about inventory turnover periods. For further information, see the Survey of Current Business, "Constant-Dollar Manufacturing Inventories," November 1981.
6. Annual data are based on unadjusted monthly data.

## PAGE 22

1. Source: Dun \& Bradstreet, Inc. A failure is defined as "a concern that is involved in ourt proceeding or a voluntary action that is likely to end in loss to creditors." All ustrial and commercial enterprises that are petitioned into the Federal Bankruptcy urts are included in the failure records. Also included are: Concerns forced out of iness through such actions in the State courts as foreclosure, execution, and attachnts with insufficient assets to cover all claims; concerns involved in court actions such as eivership, reorganization, or arrangement; voluntary discontinuances with known loss to ditors; and voluntary compromises with creditors out of court, where obtainable
The series shown for liabilities represent approximately current liabilities (i.e., all ounts and notes payable and all obligations, whether in secured form or not, known to held by banks, officers, affiliated companies, supplying companies, or the Government). ey do not include long-term publicly held obligations. Offsetting assets are not taken o account.
The failure data through June 1975 are for 48 States and the District of Columbia; a beginning July 1975 include Hawaii, and beginning September 1976, they include iska. Data for all years years shown here exclude railroad failures and such activities as 1 ks , financial companies, holding companies, real estate and insurance brokers, amusent enterprises, shipping agents, tourist companies, transportation terminals, etc.
The classification of the failure records by industries conforms to the "Standard lustrial Classification Manual," in order to facilitate direct comparison between failures 1 any other series of data based on the same official code.
The failure index relates the number of failures in each month to the number of lustrial and commercial enterprises listed in the Dun \& Bradstreet Reference Book. It ows the annual rate at which business concerns would fail if the number of failures and icerns listed in that month prevailed for an entire year. The index is expressed as the nual number of failures per 10,000 listed industrial and commercial enterprises. The nadjusted" figures have been slightly adjusted to equalize, insofar as possible, the mber of working days each month. Seasonal fluctuations have been removed in the justed index by a method using deviations from a 12 -month moving average.
Monthly data for the failure index are only available through December 1983 due to continuance of series. Data starting with 1984 will be available only on an annual basis, : note 3 for this page regarding comparability of the data.
Monthly data for 1961-82 for the series indicated by a star are in appendix 1 to this ume; comparable monthly data for all series for 1961-82, together with pertinent alifications, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. I this section).
2. See 3d paragraph of note 1 for this page.
3. As of January 1984 Dun \& Bradstreet expanded the compilation of business closing tistics in certain industry groupings. As a result, calculations of industrial breakdowns ve been changed to reflect the new collection criteria and data reported for individual lustries prior to 1984 are not comparable to succeeding years.
4. See 6th paragraph of note 1 for this page.

## PAGE 23

1. Source: U.S. Department of Agriculture (USDA), National Agricultural Statistics rvice, Agricultural Statistics Board (formerly Statistical Reporting Service, Crop Report; Board). Indexes are based on official estimates of prices received by farmers for their dducts sold at local markets - point of first sale-or at the point to which farmers deliver sir products.
The reported prices received by farmers are tabulated and averaged by State. The ate estimates of average prices are weighted by marketing or production estimates to ive at national averages.
Subgroup indexes from September 1952 to January 1965 were weighted by the 53-57 average marketing year sales and for individual items 1953-57 calendar year es were used. Indexes for 1965 forward are weighted by calendar year marketings for 71-73.
For combining the various subgroup indexes into an all-crop, an all-livestock and estock products, and an all-farm-products index, weights are percentages based on arage cash receipts of farmers (with adjustments to reflect imputed weights for items not :luded in the index) for the two periods, 1953-57, and 1971-73.
There are 37 commodities represented in the index as of January 1986. These items zounted for about 90 percent of total cash receipts from farm marketings during 71-73.
The items represented in each group and the percentage-weights of the groups, based Digkerage cast recejpts in 1953-57, and 1971-73 are shown in the following table:

## Group Weights: Index of Prices Received by Farmers

[Percent]

| Commodity Group | 1953-75 ${ }^{1}$ | $1971-73^{2}$ |
| :---: | :---: | :---: |
| All farm products | 100.0 | 100.0 |
| All crops ......................................................... | 45.2 | 44.2 |
| Commercial vegetables ....................................... | 4.2 | 4.1 |
| Cotton | 8.4 | 2.9 |
| Feed grains and hay | 9.1 | 12.1 |
| Food grains | 7.9 | 7.2 |
| Fruit | 4.7 | 4.5 |
| Oil-bearing crops | 4.9 | 9.2 |
| Potatoes, sweetpotatoes, and dry edible beans........ | 1.9 | 1.8 |
| Tobacco | 4.1 | 2.4 |
| Livestock and products. | 54.8 | 55.8 |
| Dairy products | 14.6 | 11.1 |
| Meat animals | 29.1 | 37.2 |
| Poultry and eggs | 10.7 | 7.5 |
| Wool ............................................................... | . 4 | Dropped |

1. September 1952 to January 1965.
2. January 1965 forward.

The indexes shown here are not adjusted for seasonal variations. The original reports have adjusted indexes for five subgroups - fresh market fruit; fresh market vegetables; potatoes, sweetpotatoes, and dry edible beans; dairy products; and poultry and eggs.

The index of prices received by farmers was last revised in May 1976 when the weight-base period was changed from 1953-57 to 1971-73. For further information concerning this revision write to the U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board, Washington, DC 20250 for the technical reports. For additional details concerning these indexes see the following USDA publications: (1) Major Statistical Series, Volume 1. Agricultural Prices and Parity, Agriculture Handbook 365; (2) Agricultural Economics Research, April 1950; (3) Agricultural Economics Research, April-July 1959; (4) special reports, 1976 Revision of Agricultural Price Indexes; and (5) Scope and Methods, Miscellaneous Publication No. 1308 issued in September 1983.

Monthly data for 1961-82 for those series indicated by a star appear in appendix I to this volume. Annual and monthly data back to January 1910 appear in various issues of Agricultural Prices and Supplements thereto (available from the U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board, Washington, DC, 20250), and the annual publication Agricultural Statistics (available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402).

To facilitate comparison with other indexes, the indexes of prices received by farmers have been converted to a 1977 reference base. The converted indexes supplement, but do not replace the official indexes, which, pursuant to law, are published on the $1910-14=100$ base. Annual indexes back to 1910 and monthly indexes back to 1965 on the new base, along with comparable indexes on the 1910-14 base, are published in the Agricultural Prices 1980 and subsequent annual summaries. Data for current months, on both bases, appear in the monthly issues of Agricultural Prices.
2. Includes data for items not shown separately.
3. Source: U.S. Department of Agriculture (USDA), National Agricultural Statistics Service, Agricultural Statistics Board (formerly Statistical Reporting Service, Crop Reporting Board). The Index of Prices Paid by Farmers, Including Interest, Taxes, and Wage Rates, is a measure of the changes that occur in the level of prices paid by farmers and their families for commodities and services used in living and farm production. In addition to commodities, the combined index (Parity Index) includes data for interest per acre on indebtedness secured by farm real estate, taxes per acre on farm real estate, and wage rates paid hired farm labor.

Prices paid by farmers are compiled primarily from data reported by firms that sell to farmers and ranchers. Prices paid for individual commodities are collected by States, and then weighted by estimates of purchases of the commodity by farmers in each State to obtain a national average. Survey procedures and frequency were changed in 1977 and 1986. See Agricultural Prices, January 1977 and March 1986 for program changes (available from U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board, Washington, DC 20250).

For the period September 1952-64, weights were based on 1955 expenditures and for 1965 forward 1971-73 expenditures. The commodity-group indexes are combined into an index representing commodities used in both living and production, together with interest, taxes, and wage rates paid hired farm labor, by weighting the group indexes in proportion to the percentage of total expenditures represented by the commodities and services in the corresponding groups in the respective periods.

Percentage weights used in deriving the combined index are shown in the following table:

# Group Weights: Index of Prices Paid by Farmers Including Interest, Taxes, and Wage Rates 

[Percent]

| [Percent] |  |  |
| :---: | :---: | :---: |

| Commodities, services, interest, taxes, and wage rates $\qquad$ | $100.00$ | 100.0 |

I. September 1952 to January 1965.
2. January 1965 forward.

Monthly data for 1961-82 for the series indicated by a star appear in appendix 1 to this volume

Annual indexes back to 1910 and monthly and quarterly indexes for 1923-60 were published in USDA, Statistical Reporting Service, Statistical Bulletin No. 319, 1962. A detailed description of the 1950 and 1959 revisions of the indexes appears in the April-July 1959 issue of Agricultural Economics Research. A technical description of the 1976 revision may be obtained from the U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board, Washington, DC 20250. Reference should also be made to the following USDA publications for: (1) Method of Computing Parity Prices-Agricultural Prices, each January issue; (2) a description of the major indexes and Parity Index-Major Statistical Series, Volume I, Agricultural Prices and Parity, Agricultural Handbook 365; (3) years prior to 1971-supplements to the September issues of Agricultural Prices; (4) 1971-1985-the August Supplements of Agricultural Prices: (5) the July 1986 issue of Agricultural Prices; and (6) additional detail concerning these indexes-Scope and Methods, Miscellaneous Publication No. 1308 issued in September 1983. These publications are available from the U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board, Washington, DC 20250.

To facilitate comparison with other indexes, the indexes of prices paid by farmers have been converted to a 1977 reference base. The converted indexes supplement, but do not replace the official indexes, which, pursuant to law, are published on the $1910-14=100$ base. Annual indexes back to 1910 and monthly indexes back to 1965 on the new base, along with comparable indexes on the 1910-14 base, are published in the Agricultural Prices 1980 and subsequent annual summaries. Data for current periods on both bases, appear in the January, April, July, and October monthly issues of Agricultural Prices.
4. The Parity Ratio is the quotient, expressed as a percentage, obtained by dividing the Index of Prices Received by Farmers by the Parity Index (Prices Paid, Including Interest, Taxes, and Wage Rates), both indexes on the $1910-14=100$ base. It measures whether the purchasing power of farm products are, on the average, greater or less than the purchasing power of farm commodities in the base period, 1910-14.

A ratio that incorporates and reflects Government payments made directly to farmers is identified as an "Adjusted Parity Ratio." It is described in detail in the January 1964 issue of Agricultural Prices. Since 1964, data for the two most recent years for the Adjusted Parity Ratio appear in each January issue of Agricultural Prices. (A monthly "preliminary Adjusted Parity Ratio" is described in the April 1967 issue of Agricultural Prices, and the figures appear in each monthly issue through February 1986 and, thereafter, in the April, July, October, and January monthly issues.) Annual data for 1961-86 are shown in the following table:

## Adjusted Parity Ratio, 1961-86

$[1910-14=100]$

| Year | Year |  |
| :---: | :---: | :---: |
| 1961 ............................... 83 | 1969 | 79 |
| 1962 .............................. 83 | 1970 | 77 |

5. Effective with this reporting period, availability of data has been changed from monthly to 3 -month intervals.

## PAGE 24

1. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). The Consumer Price Indexes (CPI's) are statistical measures of the average changes in the cost of fixed, or constant, "market baskets" of consumer goods and services purchased by the index population, either all urban consumers or urban wage earners and clerical workers.

CPI's are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments-grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of BLS representatives.

The indexes as published in the 1971 and subsequent editions of BUSINESS Statistics, and beginning with the March 1971 Survey Of Current Business, are on a $1967=100$ reference base. Indexes on this base were first published by the BLS for January 1971.

The last major revision of the indexes was completed in December 1977. Effective with release of the January 1978 data, the BLS introduced: (1) An updated and revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) and (2) a broader based CPI for All Urban Consumers (CPI-U), including salaried workers, the self-employed, the retired, and the unemployed, as well as wage earners and clerical workers. This revision included an updating of the expenditure weights for the various spending categories (such as rood, clothing, and medical care) and the area, item, and outlet samples. In addition to the introduction of the CPI-U, which represents about 80 percent of the noninstitutional civilian population whereas the CPI-W represents about 40 percent, other visible improvements include: (1) Monthly or bimonthly indexes that are available for 28 major urban areas compared with monthly or quarterly indexes for 23 areas previously; (2) regional indexes that are available for urban areas of different population-size classes; and (3) some index components that are of a more general character than a very specific item. Less obvious improvements include: (1) More representative outlets; (2) increased monthly and bimonthly pricing, largely replacing quarterly pricing; (3) expansion of the number of areas from which prices were obtained to a sample of 85 primary sampling units (PSU's) (instead of 56 urban areas as formerly) including central cities, suburbs, and urbanized places within 25 miles of a selected county or selected groups of contiguous counties, and also collection outside of the PSU's to represent out-oftown purchases; (4) substantially lower measurement errors; and (5) improved statistical methods. Both the new CPI-U and the revised CPI-W were linked to the unrevised CPI-W as of December 1977 to provide continuous series.

Details regarding the major revision effective with the January 1964 index appear in the 1977 and earlier editions of BUSINESS STATISTICS; details regarding the major revision effective with the January 1953 index as well as information pertaining to the 1962 conversion of the index to the 1957-59 reference base, appear in the 1963 and earlier editions of Business Statistics; a description of the interim adjustment of the index for the 1950-52 period appears in the 1953 issue of Business Statistics.

The description of the CPI's in the following paragraphs applies mainly to the series beginning January 1978 and includes information for some indexes not published here.

The quantity and quality of items contained in the respective market baskets are held constant except at times of weight revisions. The CPI's reflect, therefore, only changes in prices and none of the other factors that affect family living expenses, such as change in family composition; they do not reflect changes in the kinds and amounts of goods and services families buy, or the total amount families spend for living, or the differences in living costs in different places.

The indexes are of the weighted aggregative type. When it was first issued in 1919 (with index data going back to 1914), the time-to-time changes in retail prices were weighted according to expenditures of wage earners and clerical workers in large cities during 1917-19. At different times it has been necessary to modernize the samples and methods of calculation of the index and to bring up to date the "market basket" of goods and services included. The index numbers as currently published, utilize the 1917-19 expenditure weights for the 1913-24 period; 1934-36 expenditure weights for the 1930-49 period; and the average of the two sets of weights for the intervening period of 1925-29. Weights for 1950-52 represent 1947-49 spending patterns, and those for 1953-63 were estimated 1952 spending patterns, based on a study of consumer expenditures in 1950. (Pending completion of the major revision made in January 1953, certain interim adjustments were made in 1951 and the indexes were recalculated back to January 1950-except
ta for "all items" and "rent" which were revised back to January 1940 to correct for a is in the rent index.) Weights for 1964-77 were derived from reported expenditures of a efully selected sample of wage-earner and clerical-worker families and individuals in 60-61 and adjusted for price changes between the survey dates and 1963. The current ending patterns reflected in the CPl's were derived from a consumer expenditure survey dertaken over the 1972-73 period. The reported expenditures were adjusted for price ange between the survey dates and December 1977.
The goods and services covered by the index are those customarily identified as urchased for daily living" items. Prior to January 1978, about 400 items were priced, th the basis of sample selection being probability proportionate to importance in nsumer spending. Two subsamples of items were priced in different cities and in Terent outlet samples. All of the most important items were priced in all of the 56 cities, tile those of lesser importance were priced in either of two subsamples of cities. Detailed, ther narrowly defined specifications were used to collect prices for items of the same ality in successive price periods. Beginning with the 1978 revision, approximately 265 s of items, called item strata, are priced for the CPI's. These fairly broad categories of ods and services are exhaustively defined on checklists. The original selection of the ecific items to be priced in a specific retail store is generally accomplished by a collector ing the checklist in systematic stages that take sales information provided by the spondent into account in each stage. After the initial selection, the same item (or a close bstitute) is priced from period to period so that, as far as possible, differences in ported prices are measures of price change only. This revised procedure gives each riety, brand, size, etc., a chance of selection proportional to its importance in total sales $r$ the general category in the particular store. Federal, State, and city taxes directly sociated with the purchase and use of items are reflected in the index for the items on lich they are imposed. Property taxes are implicitly included in the cost of housing. either income, personal property, nor social security taxes are included.
Food, fuels, and several other items are priced monthly in each urban location. Prices most other goods and services are obtained on a regular rotating pricing cycle-monthly the five largest urban areas and every other month in all other places. Most prices are tained from personal visits by BLS representatives. Mail questionnaires are used to tain public utility rates, some fuel prices, and certain other items.
As a result of the 1972-73 Consumer Expenditure Survey and the change to the lisaggregated" pricing technique. the components of the CPI, including groups, subgups, and right down to the individual item indexes, have undergone numerous changes. lthough this disaggregated, outlet-specific pricing has little visible effect on the summary ice indexes, the number of detailed price indexes published has been changed substanilly because of the significantly larger range of goods and services covered. Some amples of new items being priced for the CPI due to these methodological changes are ectronic calculators, auto rentals, convalescent and nursing home care, hairpieces and igs, and safe deposit box rental. In addition, a greater variety of used cars, more menenience foods, more infants' and toddlers' clothing, etc., are priced.
The coverage of some of the major component indexes are described in what follows:
The food index component includes both food at home and food away from home estaurant meals and other food bought and eaten away from home). Prior to the revision ade in January 1953, prices for "food away from home" were estimated to move like ices for "food at home," but since that date have been measured by prices for restaurant eals and snacks (including vending machine items). (See the technical notes, "Food istribution Changes and the Consumer Price Index," Reprint No. 2434 from the January 364 Monthly Labor Review; "Calculation of Average Retail Food Prices," published in e January 1965 issue of the Monthly Labor Review; and "Revision of the CPI Food utlet Sample," Reprint No. 2563 from the January 1968 Monthly Labor Review.)
The housing index measures changes in rental costs and expenses connected with the :quisition and operation of a home. The CPI-U, beginning with data for January 1983, id the CPI-W, beginning with data for January 1985, reflect a change in methodology ied to compute the homcownership component. A rental equivalence measure replaced c asset-price approach. For a detailed discussion of the change in the trcatment of meownership, see "Changing the Homeownership Component of the Consumer Price idex to Rental Equivalence," CPI Detailed Report, January 1983.
The private transportation index includes prices paid by urban consumers on such ams as new and used automobiles, gasoline, motor oil, tires, repairs and maintenance, surance, registration fees, driver's licenses, parking fees, etc. City bus, streetcar, subway, xicab, intercity bus, airplane, and railroad coach fares are some of the components of the lblic transportation index. Additional information may be found in the August 1956 'onthly Labor Review, Reprint No. 2202; the January 1978 and subsequent CPI Detailed eports; and the May 1961 Monthly Labor Review, Reprint No. 2368.
The medical care index includes prices for several drugs and prescriptions; other cdical care commodities; physicians’ services; dentists' fees; other professional services; sspital rooms, other hospital and medical care services; and health insurance. Health surance is represented by prices for a number of hospital and professional services for hich claims are paid, plus a small portion representing the insurer's earnings or sverhead." For details on health insurance, see the technical note, "Health Insurance in e Revised CPI," in the November 1964 Monthly Labor Review. (See also the August 378 Monthly Labor Review.)
As previously stated, the quantity weights used beginning 1978 represent the average archases of the urban consumer or urban wage earner and clerical worker population oups in the years 1972-73. The basic information for this weight calculation was stained from the 1972-73 Consumer Expenditure Survey in 216 areas, adjusted for price DigatigedénwerAtresurvey dates and 1977. Most of the expenditure information was httpaififedsierasteriessóeduartyrly interviews that involved about 20,000 families and covered
the calendar years 1972 and 1973. Additionally, another sample of about 18,000 families kept 2-week diaries to provide expenditure data for frequent purchases, such as food and personal care items, which are typically difficult to recall over a longer period. The average annual incomes were $\$ 11,745$ and $\$ 12,453$, respectively, for the all urban consumer and urban wage earner and clerical worker population groups.

A major innovation in the 1978 revision consisted of determining, in a scientific way, where people buy. A point-of-purchase survey (POPS) was conducted to select for each index population a representative sample of retail stores, mail houses, bowling alleys, doctors' offices, and other places where goods and services were bought. In previous revisions, data permitting a scientific selection of outlets were unavailable. Although in the 1964 revision, areas and types of outlets were selected with probability methods, the outlets themselves were not. Outlets that dropped out of the sample were replaced on a judgment basis, and no provision was made for reflecting shifts in merchandising techniques or for the development of new stores and shopping areas. The lack of a scientifically selected outlet sample and the deterioration in the sample over time were two of the most serious deficiencies or possible sources of bias-in the previous CPI system. The 1974 POPS provided the only known technique for associating market basket items with outlets frequented by the two specific population groups and covered approximately 23,000 families. Between 1978 and January 1982, separate outlet samples were maintained for the two population groups. Beginning with data for January 1982, prices collected from the sample of stores and service establishments selected for the CPI-U are also used for the CPI-W. Most items priced for the indexes were selected from the full probability sample of retail stores and other outlets developed from survey results.

Since the 1978 revision, to ensure that the CPI properly reflects the marketplace on a continuing basis, a POPS is conducted in one-fifth of the 85 primary sampling units in the outlet sample each year. From these surveys, a new outlet sample for each pricing area is selected. Thus, over a 5 -year period, the entire CPI outlet sample can be revised.

Still another survey was initiated to provide more accurate and current data for the rent index. Under the previous system, in most cities, rent data were collected for two subsamples of up to 500 rental units each. Rents in each subsample were recorded every 6 months-one sample priced 3 months after the other so that rent levels were collected every 3 months by interviewers who either phoned or visited tenants. The interviewers used a detailed checklist covering cost for fuels, gas and electricity, telephones, garage space, furniture, water, maid service, switchboard service, and so forth. In the five largest cities, three subsamples of about 500 rental units each were priced semiannually in different calendar months, providing data for a different subsample every 2 months, and for the same subsample every 6 months.

A new rent survey, begun in 1974, has been incorporated into the ongoing CPI program. Under the new system, the overall sample within cities is smaller, and each sample is divided into six subsamples for semiannual pricing. Thus, rent information is collected from different subsamples each month rather than bimonthly or quarterly as before. For example, one subsample is surveyed in January and July, another in February and August, and so on. Interviewers ask for the amount of the previous month's rent as well as the current rent to make short-term comparisons of rent between the current month and the previous month and this 1 -month change is combined with the 6 -month change to generate a composite change for each subsample. The new sample design, therefore, has improved the timeliness as well as the accuracy of the rent index.

In calculating the index, price changes for the various items in each location are combined with weights that represent their importance in the spending of their respective index population. Individual urban area data are then combined in the total index with weights based on estimated 1970 population of all urban consumers or of urban wage earners and clerical workers. Almost half of the weight is carried by the 23 largest areas (about a quarter of the weight is carried by the 5 largest areas), only a little over 10 percent of the weight is carried by the 16 areas selected to represent the smallest areas with urban population from 2,500 to 75,000 , and the two intermediate size classes-those composed of areas having urban population between 75,000 to 385,000 and 385,000 to $1,250,000$-each carry about one-fifth of the weight. Most of the index numbers are computed on the $1967=100$ reference base; index numbers for new series that had no close counterpart prior to the 1978 revision are computed on a December $1977=100$ base; the "all items" index for the U.S. city average and for selected areas is also available (from the BLS) on the 1957-59=100 base.

In December 1986, the relative importance of the goods and services priced for the CPI-U was as follows: Food and beverages, 17.824; housing, 42.947; apparel and upkeep, 6.335; transportation, 17.217; medical care, 5.420; entertainment, 4.403; and other goods and services 5.855 . For the CPI-W, the comparable figures were as follows: Food and beverages 19.733; housing, 40.492; apparel and upkeep, 6.362 transportation, 19.094; medical care, 4.469; entertainment, 4.082; and other goods and services, 5.768.

Beginning January 1966, the BLS monthly release show seasonally adjusted national indexes for selected groups, subgroups, and special groups where there is a significant seasonal pattern of price change. The factors currently in use were derived by the X-1I-ARIMA Seasonal Adjustment Method. In January of each year, seasonally adjusted indexes and seasonal factors for the preceding 5 years are updated based on data through the previous December.

Monthly data for 1961-82 (where available) for those series indicated by a star appear in appendix I to this volume. Historical data tables, some providing annual data prior to 1961 and monthly or quarterly data prior to 1983, including the special group indexes are available from the Bureau of Labor Statistics, U.S. Department of Labor, Washington, DC 20212.

The indexes are initially issued in the form of a press release about four weeks following the month to which the data pertain. The CPI Detailed Report is issued about a month after the press release. Detailed data and quarterly articles analyzing price developments in the Nation's economy are presented in the Monthly Labor Review.

Monthly releases of the U.S. Department of Labor contain, in addition to the national average, indexes for areas grouped by size of city, by region of the country, for crossclassifications of regions and size classes, and for the following areas: Chicago; Detroit; Los Angeles-Long Beach-Anaheim; New York; Philadelphia; Boston; Houston; Minneapolis-St. Paul; Pittsburgh; Buffalo; Cleveland; Dallas-Ft. Worth; Milwaukee; San Diego; Seattle-Everett; Washington, DC; Atlanta; Baltimore; Cincinnati, Honolulu; Kansas City; St. Louis: Anchorage; Northeastern Pennsylvania; Miami; Portland, Oregon-Washington; San Francisco-Oakland; and Denver-Boulder.

Additiona! information on the concept, methods of calculation, uses, and limitations of the index may be found in the following U.S. Department of Labor publications. Monthly Labor Review

## Other

Report No. 517, "The Consumer Price Index: Concepts and Content Over the Years" (Revised, May 1978)
2. Includes data for items not shown separately.
3. Beginning with data for January 1983 (January 1985, for CPI-W), this index is affected by a change in methodology used to compute the homeownership component. For additional information regarding this change, see note 1 for this page.

## PAGE 25

1. See note I for p. 24.
2. Includes costs for lodging while out of town and tenants' insurance not shown separately.
3. This index (first shown in the 1984 edition of BUSINESS STATISTICS) reflects costs associated with homeowners' consumption of shelter service. This index combines the subindexes of owners' equivalent rent and household insurance. See also note 1 for p. 24.

No data are available prior to December 1982.
4. Includes residential telephone, water, sewerage service, and other utilities not shown separately.
5. Called "solid and petroleum fuels" prior to 1964 and "fuel oil and coal" from 1964 through 1977.
6. Includes data for items not shown separately.
7. Beginning with data for January 1983, this index is affected by a change in methodology used to compute the homeownership component. For additional information regarding this change, see note 1 for p. 24.

## PAGE 26

1. For a detailed discussion on the Consumer Price Index, see note 1 for p. 24. Seasonally adjusted price indexes are designed to eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year-such as
 http:/phangepyersulhliday.brand sales.
ated back to 1947 wherever possible. The new indexes affected by classification changes individually footnoted in this volume. Further details on the revised classification acture appear in Wholesale Prices and Price Indexes, January 1967 (Final) and эruary 1967 (Final).
The index as published in the 1969, 1967, 1965, and 1963 editions of BUSINESS ATISTICS and, the April 1962-January 1971 issues of the SURVEY OF CURRENT SINESS, reflects the series converted to the reference base $1957-59=100$. Indexes on : 1957-59 base were first published by BLS when January 1962 data were released.
The index as published in the 1971 and subsequent volumes of Business Statistics 1, beginning with the February 1971 Survey of Current Business, reflects the ies converted to the reference base $1967=100$. Indexes were first published by BLS on $: 1967=100$ base when January 1971 data were released.
The general concepts and methods used in the index are the same as before the 1962 d 1971 conversions to the 1957-59 and 1967 reference bases. These rebasings of the oducer Price Index were not accompanied by a change in the base weights; the :thodology employed in converting to the new reference bases involved routine arithmetI calculations that did not affect the continuity or statistical comparability of the index ies. Detailed information regarding the conversion, as well as rebasing factors for all ies in the Producer Price Index, are available from the Bureau of Labor Statistics, U.S. spartment of Labor, Washington, DC 20212. See also Wholesale Prices and Price dexes, 1962, Bulletin No. 1411; Wholesale Prices and Price Indexes, 1963, Bulletin No. 13; and Whotesale Prices and Price Indexes, January 1971.
In 1978, BLS began the first comprehensive revision of the Producer Price Indexes. is revision has resulted in the following improvements to the indexes: (1) Multiple unting of price changes, which occurred in the previous indexes, has been eliminated by revised classification and aggregating structure, which is more consistent with the uctures used for many other measures of economic performance, (2) scientific sampling ihniques have replaced the previous judgmental procedures, (3) coverage of production $s$ been expanded, (4) samples of producers and products have been expanded, and (5) all ices needed to reflect adequately prices at which transactions actually occur have been sated systematically. Another planned improvement, which has not yet been impleented, involves measures of index error and precision. This revision will establish a new stem of price indexes, consisting of four major components: (1) Industry output price dexes, (2) detailed commodity price indexes, (3) SOP price indexes, and (4) industry put price indexes. For more information regarding the underlying concepts and methodogy of this revision, see "The Producer Price Index Revision: Overview and Pilot Survey esults," published in the BLS Monthly Labor Review, December 1979 and Chapter 7, roducer Prices," published in the BLS Handbook of Methods, Volume I, Bulletin 34-I(1982). Reprints are available upon request from the Bureau of Labor Statistics, S. Department of Labor, Washington, DC 20212.

The last general revision of the procedures used to calculate the Producer Price Indexes as completed in 1952; being worked back to January 1947 and linked to the old series to ovide a continuous index.
For periods shown here through 1966, the prices most often used were those that evailed on a particular day of the month--usually Tuesday of the week containing the 5th of the month; beginning January 1967 prices relate, for the most part, to the Tuesday ' the week in which the 13th of the month falls. For some commodities, however, another 1y may be selected as a more representative trading day; e.g., some farm products are iced as of Monday. Usually the prices selected are f.o.b. production or central marketing jints. Delivered prices are included only when it is the customary practice of the industry - quote prices on this basis.

The index is calculated as a weighted average of price changes. The weights used in re index represent the total net selling value of commodities (including the value of sales ir export) produced, processed in, or imported into the United States and flowing into rimary markets. Values are f.o.b. production point and exclusive of excise taxes; the alues of interplant transfers, military products, and goods sold at retail directly from roducing establishments are excluded. The weight universe includes values from industries assified as manufacturing, agriculture, forestry, fishing, mining, gas and electricity and ublic utilities. It includes values for goods competitive with those produced in the roducing sector of the economy, such as waste and scrap materials. All systematic roduction is included, but individually priced items, such as works of art, are excluded. ivilian goods normally purchased by the Government are included, but production of nilitary goods is excluded. The Producer Price Index refers to the private producing sector $f$ the economy; sales by the Government are excluded. However, Government sales of lectric power are included if they are considered competitive with free market sales.

Calculation of an individual commodity price index starts with the average of prices for idividual company reporters, with each reporter usually having equal weight regardless of ny differences in company size. The short-term relative of price change, which is the ratio $f$ the current month's average price to the previous month's average price, is then applied , the previous month's index to derive the current month's index. To derive indexes for ommodity groupings, each commodity price relative is first weighted with its own hipment value plus the shipment values of related commodities not directly priced whose rices are assumed to move similarly. The individual weighted commodity price relatives re summed to produce a commodity grouping aggregate, which is then divided by its orresponding weighted value in the index base period. Similar procedures are used to erive indexes for SOP, durability of product groupings, and a number of special compose groupings.

For a more detailed description of Producer Price Indexes and methods of calculation, se BLS Handbook of Methods for Surveys and Studies (1976) (Bulletin No. 1910), vailable from the Bureau of Labor Statistics, U.S. Department of Labor, Washington, DC Digitized for FRASER

## Price Index (1967=100)

| Market level (1) | June 1957 <br> (2) | $1967$ <br> (3) | June 1967 <br> (4) |
| :---: | :---: | :---: | :---: |
| Primary (PPI) | 93.2 | 100.0 | 100.2 |
| Consumer (CPI) | ... 84.3 | 100.0 | 99.7 |

## June 1967 purchasing power

|  | June $1957=\$ 1.00$ Col. $2 \div$ Col. 4 (5) | $1967=\$ 1.00$ <br> Col. $3 \div$ Col. 4 <br> (6) |
| :---: | :---: | :---: |
| Primary (PPI) | 0.930 | \$0.998 |
| Consumer (CPI) | ........ . 846 | 1.003 |

Thus, the first figure in column 5 expresses the June 1967 primary market value of the June 1957 dollar (June $1957=\$ 1.00$ ) and indicates a decline of 7 percent in purchasing power between June 1957 and June 1967.

Annual data for 1947-60 are shown in the following table:

## Purchasing Power of the Dollar

$$
[1967=\$ 1.00]
$$

As measured by producer prices
As measured by consumer prices (CPI-W)

| Year |  | Year |  |
| :---: | :---: | :---: | :---: |
| 1947 | 1.351 | 1947 | \$1.495 |
| 1948 | 1.252 | 1948 | 1.387 |
| 1949 | 1.289 | 1949 | 1.401 |
| 1950 | 1.266 | 1950 | 1.387 |
| 1951 | 1.156 | 1951 | 1.285 |
| 1952 | 1.163 | 1952 | 1.258 |
| 1953 | 1.175 | 1953 | 1.248 |
| 1954 | 1.172 | 1954 | 1.242 |
| 1955 | 1.170 | 1955 | 1.247 |
| 1956 | 1.138 | 1956 | 1.229 |
| 1957 | 1.098 | 1957 | 1.186 |
| 1958 | 1.073 | 1958 | 1.155 |
| 1959 | 1.075 | 1959 | 1.145 |
| 1960 | 1.067 | 1960 | 1.127 |

Monthly data for 1961-82 appear in appendix I to this volume. Historical data tables providing monthly data back to 1913 are available upon request to the Bureau of Labor Statistics, U.S. Department of Labor, Washington, DC 20212.

## PAGE 30

1. Source: U.S. Department of Commerce, Bureau of the Census. New construction covers the complete original erection of structures; mechanical installations such as plumbing, heating, elevators, etc. to new or existing structures; additions, alterations, and major replacements to an existing building, or the conversion of space to other uses requiring structural changes; outside construction of fixed structures such as highways and streets, railroad tracks, air fields, piers, sewers, electric power and distribution lines, and similar facilities built into or fixed to the land.

Value-put-in-place estimates represent the value of construction installed or erected at the site during a given period. For an individual project, this includes the cost of materials installed or erected; cost of labor (both by contractors and force account) and a proportionate share of the cost of construction equipment rental; contractor's profit and project owner's overhead costs: architectural and engineering fees; interest and taxes paid during construction; and miscellaneous costs charged to the project on the owner's books.

The total value-in-place for a given period is the sum of the value put in place on all projects underway during this period, regardless of when work on each individual project was started or when payment was made to the contractors. For some categories, published estimates represent payments made during a period rather than the value of work actually done during that period. For other categories, estimates are derived by distributing the total construction cost of the project by means of historic construction progress patterns.

The distinction between private and public (Federal, State, and local) construction is Digitized for the basis of ownership during the construction period, not source of funds. http://fraser.stlouisfed.org/

Where the basic data for an individual series are not available on a monthly basis, no monthly value-put-in-place estimates are published, but monthly estimates are included in all affected totals. The methodology described below applies to the current estimating procedures.

Construction cost of one-unit houses started each month is estimated using data from the Census Bureau's Housing Starts Survey and Housing Sales Survey. The estimated cost of all single units started is then distributed into monthly value put in place by applying fixed patterns of monthly construction progress.

Construction cost is estimated separately for units built to be sold or rented and units built by the owner or for the owner on contract. In both cases, the total cost is obtained by multiplying the number of units started by an average construction cost per unit. For units built to be sold or rented, the average construction cost is the average sales price at the time of start multiplied by the factor 0.7813 . This factor elimates an estimate of the cost of "nonconstruction" items such as raw land, marketing costs, closing costs, and moveable appliances. The average construction cost for units built by the owner or for the owner on contract is the average contract value at time of start increased by the factor 1.0190 to eliminate "nonconstruction items" and add the value of land development done by the builder.

Value-in-place estimates for buildings of two or more units are directly measured from monthly progress reports from a sample of new residential building projects selected from reports of housing units in the Housing Starts Survey. Once a project is started the owner is asked to report the value of work done each month until the project is completed. About 3,700 projects are in the sample each month, including newly selected projects as well as projects carried over from previous months.

Improvements to private residential buildings are estimated on the basis of quarterly surveys of owners of residential properties. No monthly estimates are published for this series.

Private nonresidential construction expenditure estimates are based on a Monthly Construction Progress Survey conducted by the Bureau of the Census. This survey uses three different sources for identifying nonresidential projects: (1) Computer tapes from the F.W. Dodge Division of the McGraw-Hill Information Systems Company for projects valued at $\$ 50,000$ or more in the entire United States except Hawaii; (2) Building permits from the permit-issuing places of Honolulu and Maui in Hawaii; and (3) Projects in the United States in a sample of areas not covered by building permit systems but which are part of the Census Bureau's Housing Starts Survey.

A sample of building projects is selected from these sources and monthly progress reports are requested from the owners, builders, or architects responsible for these buildings. In 1986, more than 600 new projects were sampled per month in the 50 States, about 6 percent of the total number of projects from which the sample was drawn. Estimates are prepared from the sample data; they are adjusted for undercoverage and appropriate imputations are made for nonrespondents.

Annual farm nonresidential construction expenditure estimates are extrapolated from the annual U.S. Department of Agriculture Report, Income and Balance Sheet Statistics. No monthly or quarterly estimates are published for this series.

Annual estimates for most privately owned public utilities (covering construction expenditures by railroads and by electric light and power, gas, and petroleum pipeline companies) are based on data obtained from Federal regulatory agencies or from cooperating private companies and trade associations. Preliminary current values for electric are from the Bureau of Economic Analysis' quarterly Plant and Equipment survey and railroad railroad values are from the Interstate Commerce Commission's quarterly survey. No monthly estimates are published for these series.

Expenditure estimates for the telephone and telegraph category are developed from direct reports by a number of the largest independent telephone companies and adjusted to account for the entire industry. Estimates prior to January 1984 were developed by the American Telephone and Telegraph Company.

Monthly expenditure estimates for State and locally-owned public construction are based on progress reports from a sample of projects owned by State and local governments. The sampling and estimation procedures used to obtain these data are similar to those for the private nonresidential buildings survey. The sole source of information for identifying State and local projects is F. W. Dodge. About 5,000 projects are in the survey at any one time, including newly selected projects as well as projects carried over from previous months.

Expenditure estimates for virtually all types of federally owned construction are based on reports compiled by the responsible Federal agencies.

Seasonal adjustment factors for all series, including the series for which monthly values are estimated and not published, have been computed using X-11 ARIMA, a modification of the Census Method II seasonal adjustment program. Seasonally adjusted values are computed for all individual types of construction, and the values for individual types are combined as required to obtain values for total series.

Monthly data for 1961-82 for series indicated by a star appear in appendix I to this volume. Monthly estimates on a more detailed basis are published currently by the Bureau of the Census in Construction Reporis, C30 series, Value of New Construction Put in Place, which is available on a subscription basis. Monthly data for 1964-86 for all series, as well as comprehensive explanations of the data are available upon request from the Census Bureau.
2. Includes data not shown separately.

2. Includes data not shown separately.

PAGE 32

1. Source: F.W. Dodge Division, McGraw-Hill Information Systems Company. Data 'er new construction, additions, and major alteration projects; maintenance work is luded.
Beginning with January 1969, data cover construction in 50 States and the District of lumbia. In the period 1956-68 data cover 48 contiguous States and the District of lumbia; prior to 1956, 37 Eastern States and the District of Columbia.
F.W. Dodge construction statistics are based on data obtained from: Dodge Reports, mit place reports, publications, and sampling. Permit place and sample information are id for one- and two-family house data. The bulk of nonresidential and residential data is ;ed on Dodge Reports.
The valuation figures contained in Dodge construction statistics represent, as nearly as sible, actual construction costs. Construction cost of a project is exclusive of land, hitect's fees, and, in the case of manufacturing buildings, the cost of equipment that is an integral part of the structure.
The monthly indexes of total value of construction are based on seasonally adjusted ta. The annual indexes are based on annual figures and are not averages of the monthly lexes.
Monthly data prior to 1983 for series indicated by a star are in appendix I to this ume; monthly data for 1961-82 for all other series appear in earlier editions of ISINESS STATISTICS (see reference note, p. 1 of this section). Except for the index, the nual totals for 1961-86 reflect revisions not distributed to the monthly data.
2. Source: Engineering News-Record. Data are not directly comparable to Engineering ws-Record's discontinued New Plans series, which were shown in the 1984 and earlier itions of BUSINESS STATISTICS, because of different minimum project values. Data ver new construction plans for public (Federal, State, and municipal) and private jects in the United States, and as before, exclude one and two-family homes.
The New Plans series is drawn from a database called Dodge Major Projects and vers projects valued at $\$ 750,000$ or more entering the planning stage. The database vers 49 States, with Hawaii excluded.
Monthly totals are combinations of 4 - or 5 -week periods ending on the Thursdays ling within the month. For this reason, care should be exercised in making monthmonth comparisons. Monthly figures may vary from year-to-year cumulative totals cause F.W. Dodge routinely adjusts both its plans and contracts as corrected information comes available.
3. Source: U.S. Department of Commerce, Bureau of the Census (Construction Statiss Division).
A housing start consists of the start of construction on a new housing unit, when :ated within a new building that is intended primarily as a housekeeping residential ilding designed for nontransient occupancy. Start of construction for private housing its is defined as the beginning of excavation for the footings or foundation of a building; - public housing units it is defined as when the construction contract is awarded. All using units in a multifamily building are counted as being started when excavation for z building is started. A housing unit is a single room or group of rooms intended for cupancy as separate living quarters by a family, by a group of unrelated persons living sether, or by a person living alone. A housekeeping residential building is one consisting imarily of housing units. Housing starts exclude group quarters (such as dormitories, and oming houses), transient accommodations (such as transient hotels, motels, tourist urts), and mobile homes. Publicly owned housing includes housing units in buildings for lich construction contracts were awarded by Federal, State, and local governments. Units structures built by private developers for salc upon completion to local public housing thorities under the U.S. Department of Housing and Urban Development "Turnkey" ogram are classified as private.
Seasonally adjusted estimates of housing starts are the actual number of housing units arted in a month adjusted to remove the normal seasonal movement. The adjustment ows for month-to-month variations resulting from normal or average changes in weather nditions, from the differing number of holidays, and from the differing number of days the month. The purpose of this seasonal adjustment is to bring out underlying cyclical :nds.
The seasonal factors were developed using the X-11 version of the Census Method II. description of the $\mathrm{X}-11$ version appears in Bureau of the Census Technical Paper No. , "The X-11 Variant of the Census Method II Seasonal Adjustment Program."
Monthly data for 1961-82 for total privately-owned housing units started, unadjusted d seasonally adjusted at annual rates, appear in appendix I to this volume. Monthly data : 1961-82, except as noted below, for all other series appear in earlier editions of jSiness Statistics (see reference note, p. 1 of this section). Monthly data for 77-78 (for total, private and public new housing units started) and 1978 (for one-family uctures, privately owned, seasonally adjusted) have been revised and are available upon juest. For a comprehensive explanation of the series shown here, see the January or Dightilitohfly Fissuesof the Construction Report, C20, titled "Housing Starts," published by http \&/ÉnsuseB.usteaulisfed.org/

These national indexes are averages of indexes for 20 major pricing areas. The individual indexes take into account prices for selected building materials, common and skilled labor wage rates, and sales and social security payroll taxes. They are also adjusted to reflect the effect of labor shortages and labor efficiency, as determined by studies in each of the 20 pricing areas.

The selected building materials include common brick, common lumber, portland cement, structural steel, heating and plumbing equipment, glass, hardware, and paint. Materials cost data are obtained from construction contractors and building trade associations. Weights are based on studies by the compiler of actual building costs and vary by type of structure.

The indexes on the $(1982=100)$ base are available back to 1961 for annual data and 1976 for bimonthly data.
5. Source: Engineering News-Record (ENR). The indexes shown here reflect data as of the 1st of the indicated month and are published on two bases, $1913=100$ and $1967=100$.

The Construction Cost Index and the Building Cost Index have four components each, three material items and labor. The material items for both indexes are: (1) The average mill price for structural steel shapes; (2) a 20 -city average of wholesale prices for portland cement; (3) a 20 -city average of wholesale prices for 2 inches $\times 4$ inches S 4 S pine and fir in carload lots. The labor component of the Construction Cost Index, which is designed to show the movement of construction cost in general, is the common labor rate, ENR 20 -city average, while the labor component of the Building Cost Index is the ENR 20-city average for three skilled labor trades, carpenters, bricklayers, and structural iron workers. The labor rates are shown on p. 58 under construction wages.

The component series are weighted according to their relative importance as determined by the compilers. Since the indexes are computed with real prices, the proportion a given component has in the index will vary with its relative escalation rate. In the late 1970's labor's share of the index decreased because materials prices were rising faster than wage rates. In 1971, when labor rates were rising rapidly, common labor represented $\$ 76$ out of every $\$ 100$ in the Construction Cost Index. This trend began to reverse itself in 1981. With common labor and material cost inflation slowing to a crawl in recent years, ENR'S 1986 Construction Cost Index was:

|  | Percent |
| :---: | :---: |
| Common labor | 76 |
| Structural steel | 14 |
| Lumber, $2 \times 4$ 's | 8 |
| Portland cement | . 2 |

In the Building Cost Index, skilled labor represented $\$ 61$ out of every $\$ 100$ in 1971, and steel only $\$ 19$. With skilled wage hikes and prime material costs increases now modest, ENR's Building Cost Index for 1986 was:

|  | Percent |
| :---: | :---: |
| Skilled labor | 59 |
| Structural steel | 24 |
| Lumber, $2 \times 4$ 's | 14 |
| Portland cemen | ... 2 |

Although the quantities involved remain constant, the materials weights are revised on rare occasions to reflect the new price quoting bases dictated by changes in pricing systems of supplying industries. Nevertheless, those weight changes affect the materials component very little during the year of change.

Since the skilled labor rate used in the Building Cost Index is considerably higher than the common labor rate used in the Construction Cost Index, a weight of 68.38 man-hours was substituted for the common labor weight of 200 man-hours.

Both the Construction Cost Index and the Building Cost Index measure the effects of wage-rate and material-price trends. They are not adjusted for productivity, managerial efficiency, competitive conditions, contractor overhead and profit, design changes or other less tangible cost factors.

In times when productivity is low, the selling price of construction, represented by the final costs of structures in place, will be relatively higher than the index. At the other extreme, when productivity is usually higher and bidding competition sharp, such as in a recession, the selling price of finished construction will generally fall below ENR's material and labor cost trends.

It should be noted that these data represent total production in the United States and not amounts used in the construction industry, because construction operates within the whole economy and not just in its own segment of it.

Monthly data for 1967-82 for Building and Construction Cost indexes appear in the 1971 and subsequent editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); monthly data for 195I-66 are available upon request.
6. Source: U.S. Department of Transportation, Federal Highway Administration. The index is a composite derived from average contract prices for fixed amounts of the following items: Common excavation; surfacing (portland cement concrete pavement and bituminous concrete pavement); and structures (reinforcing steel, structural steel, and Digitstructural concrete). In more exact terms, the index is a price index, measuring price Digitized uor for fixed amounts of the items represented.
http:/fraser. stloulsfed.org/
ich authorized the Veterans Administration to lend up to $\$ 33,000$ directly to the veteran en funds from private sources were not available, was suspended by congressional action everyone except severely disabled veterans who are eligible for and receive the ecially Adapted Housing Grant for "wheelchair housing."
Monthly data for 1947-82 appear in earlier editions of BUSINESS STATISTICS (see erence note, p. 1 of this section). Monthly data for 1946 are available upon request. No flier monthly figures are available. The total amount of home loans guaranteed from wember 1944 through December 1945 was $\$ 192,240,000$.
4. Source: Federal Home Loan Bank Board. Data represent the amount of Federal me Loan Bank advances to member institutions. Member institutions are savings ;ociations (i.e., savings and loan associations, building and loan associations, cooperative nks, homestead associations, and similar institutions), 596 mutual savings banks, and rrently, five insurance companies. The savings and loan association members include ne State-chartered savings and loan associations that are not insured by the Federal vings and Loan Insurance Corporation.
End-of-year data prior to 1961 and monthly data for 1939-82 appear in earlier editions BUSINESS STATISTICS (see reference note, p. 1 of this section).
5. Source: Federal Home Loan Bank Board. Beginning in 1985, the estimating procere includes all thrift institutions insured by the Federal Savings and Loan Insurance गrporation (FSLIC)-savings and loan associations (including building and loan associions, cooperative banks, homestead associations, and similar institutions) and mutual vings banks. The estimates before 1985 are based upon data reported monthly by only sured savings and loan associations. Accordingly, data from 1985 to present are not ictly comparable to prior data.
Statistics presented are estimates of the amount of mortgage loans closed during the ecified periods. In general, these estimated totals are derived by expanding mortgage ans made by insured institutions on the basis of the relationship between assets of insured stitutions and total assets of all thrift institutions.
Only loans on homes (one- to four-family residential properties and five or more family iits) are included in the construction and purchase loan-purpose categories. Loans on mes for any other purpose (e.g., refinancing, repairs and reconditioning, taxes and surance), and all nonhome loans are grouped under "all other purposes." Prior to 1973, ans on residential structures with five or more family units were not included in the instruction and purchase loan-purpose categories, but came under "all other purposes."
All federally chartered associations are required to be members of the Federal Home aan Bank System, while membership is optional for State-chartered associations.
Annual data prior to 1961 and monthly data for 1936-54, 1957-60, and 1965-82 )pear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this ction). Monthly data for 1955-56 and 1961-64 are available upon request.

1. Source: Leading National Advertisers (L.N.A.). Amounts represent advertising revque of general magazines and national farm magazines; advertising in nationally distribted newspaper supplements and sections is not included in the data presented here rowever, such data are provided in the original reports received from L.N.A.). Space cost based on the one-time rate; special rates are used where applicable. Retail advertising nd direct-mail advertising are not distributed according to individual classes but are icluded in "all other" advertising.

Basic data for industry class totals are reported on a cumulative basis only; therefore, onthly data are derived by subtraction. Figures from year to year may not be strictly omparable, as minor publications are added or deleted. Comparability of both the annual nd the monthly data may also be affected by shifts in the classification of products. No omparable data prior to 1948 are available.

Monthly data for 1951-82 appear in earlier editions of Business Statistics (see sference note, p. 1 of this section).
2. January and February 1983 revised monthly figures are not available from the surce, but they are included in the 1983 revised annual total figure.

## PAGE 36

I. Source: Newspaper Advertising Bureau, Inc. Advertising linage data for approxirately 700 daily and 500 Sunday newspapers are combined with data for newspaper dvertising rates. Adjustments are made for discounting pratices.

The advertising of retail merchants is included under the classification "Retail". The dvertising of products is included under the classification "National". The retail advertiser ; the merchant whose customers are the consumers. The national advertiser is the lanufacturer, who distributes to these merchants.
No comparable monthly data prior to 1981 are available. Annual data are available pon request, back to 1959 .
Digit?zEarfinformation Rabout the merchant wholesalers series, see footnotes 1 and 4 for htipesffrased. Stlouisfed. org/ Federal Reserve Bank of St. Louis
sample, and other improvements made to increase the reliability of the estimates. For strict comparability, the following allowances should be made when making certain data comparisons:
(1) Beginning in 1953, the introduction of 1950 census data added about 600,000 to the population and about 350,000 to the labor force, total employment, and agricultural employment. Other categories were relatively unaffected.
(2) Beginning in 1960, the inclusion of Alaska and Hawaii added about 500,000 to the population, about 300,000 to the labor force, and about 240,000 to nonagricultural employment. Other categories were not appreciably affected.
(3) Beginning in 1962, the introduction of 1960 census data reduced the population by about 50,000 , and the labor force and total employment by about 200,000 . Other categories were virtually unchanged.
(4) Beginning in 1972, the introduction of 1970 census data added about 800,000 to the population, and a little over 300,000 to the labor force and total employment. A subsequent adjustment in March 1973 (based on 1970 census data) which substantially affected major categories for white and black and other workers, resulted in a net increase of 60,000 in the labor force and total employment. Other categories were not significantly affected.
(5) Beginning in 1978, an expansion in the sample and changes in the estimation procedures added about 250,000 to the labor force and total employment.
(6) Beginning in 1982, changes in the estimation procedures and the introduction of 1980 census data caused substantial increases in the population and estimates of persons in all labor force categories. Rates on labor force characteristics, however, were essentially unchanged. in order to avoid major breaks in series, some 30,000 labor force series were adjusted back to 1970. The effect of the 1982 revisions on various data series and an explanation of the adjustment procedure used are described in "Revisions in the Current Population Survey beginning in January 1982," in the February 1982 issue of Employment and Earnings. The revisions did not, however, smooth out the breaks in series occuring between 1972 and 1979 that are described above.
(7) Beginning in 1986, the population controls used in the estimation procedures were revised to reflect an explicit estimate of the number of undocumented immigrants (largely Hispanic) since 1980 and an improved estimate of the number of legal foreign-born emigrants for the same time period. As a result, the civilian population and labor force estimates were raised by nearly 400,00 ; civilian employment was increased by about 350,000 . The Hispanic-origin civilian population and labor force estimates were raised by about 425,000 and 305,000 respectively, and civilian employment by 270,000 . Overall and subgroup unemployment levels and rates were not significantly affected. Because of the magnitude of the adjustments for Hispanics, data were revised back to January 1980 to the extent possible. An explanation of the changes and their effect on estimates appears in "Changes in the Estimation Procedure in the Current Population Survey Beginning in January 1986" in the February 1986 issue of Employment and Earnings

Nonagricultural employment in the labor force series differs in levels and trends from estimates compiled from establishment payrolls-see page 46 and following pages. Factors such as definitions, coverage, and sources account for the differences. This series, from the direct household-interview survey, includes domestics and other private household workers, self-employed persons, and unpaid family workers who worked 15 hours or more in the survey week in Camily-operated enterprises, whereas the payroll or establishment survey covers only employees on payrolls of nonagricultural establishments; persons holding more than one job during the survey week are counted once in the household survey, but multiple jobholders are counted each time (i.e., on each payroll) in the establishment survey; and persons with a job not at work (i.e., absent because of bad weather, work stoppages, personal reasons, etc.) are included in the household survey but are excluded from the payroll survey if on leave without pay for the entire payroll period.

The Explanatory Notes of the original monthly source report, Employment and Earnings, provide detailed information on the concepts underlying labor force data, historical comparability, estimating procedures, measures of sampling variability, as well as comparisons with similar series. The reader is also referred to Concepts and Methods Used in Labor Force Statistics Derived From the Current Population Survey, Bureau of Labor Statistics Report 463.

Annual and monthly data for 1961-82 for series shown with a star are in appendix I of this volume.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). The seasonal adjustment program used for labor force data is an adaptation of the standard ratio-to-moving average method, which provides for moving adjustment factors to take account of changing seasonal patterns. For most of the 1970's, the BLS used the Census Bureau's X-II Variant of the Census Method II Seasonal Adjustment Program to adjust the labor force data. In January 1980, the X-11 ARIMA seasonal adjustment method, which was developed at Statistics Canada as an extension of the X-11 method, was adopted as the official seasonal adjustment procedure. This procedure, which places more emphasis on recent data, provides better seasonal adjustments than does the X-11 method alone.

All seasonally adjusted civilian labor force and unemployment rate statistics, as well as the major employment and unemployment estimates, are computed by aggregating independently adjusted series. For example, the seasonally adjusted levels of total unemployment, civilian employment, the civilian labor force, and the seasonally adjusted unemployment rate are all produced by aggregation of the seasonally adjusted results for the 12 major labor force component series. The seasonally adjusted level of total unemployment is the sum of the seasonally adjusted levels of unemployment for the four sex-age groups (men and women 16-19, and men and women 20 years and over). Sitizeasonally adjusted employment is the sum of the seasonally adjusted level of employment http:/frarasert.stoxage-industry groups (men and women 16-19, and men and women 20 years Federal Reserve Bank of St. Louis
and over, employed in nonagricultural and agricultural industries). The seasonally adjusted civilian labor force is the sum of all 12 components. Finally, the seasonally adjusted civilian workers unemployment rate is calculated by taking the total seasonally adjusted unemployment level as a percent of the total seasonally adjusted civilian labor force.

Monthly seasonally adjusted data for 1961-82 for the series shown with a star are in appendix I to this volume. Monthly seasonally adjusted data for 1948-86 are available from the source.

## PAGE 46

1. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). Data relate to all of the United States. For an explanation of the differences between employees on nonfarm establishment payrolls and nonagricultural employment as a component of the labor force series, see note 1 for p. 43.

Workers covered-The estimates of employees (other than government-see paragraph below) include all full-time and part-time workers in nonagricultural establishments who received pay for the pay period, or any part of the pay period, that includes the 12 th of the month. Not covered are proprietors, the self-employed, unpaid volunteer or family workers, farm workers, domestic workers in houscholds, military personnel, and employees of the Central Intelligence and National Security Agencies; salaried officers of corporations are included. Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the employer), on paid holiday or vacation, or who work during a portion of the pay period even though they are unemployed or on strike during the rest of the period are counted as employed. Not counted as employed are persons who are laid off, on leave without pay or on strike for the entire period, or who are hired but have not been paid during the period. Persons who worked in more than one establishment during a single reporting period are counted each time reported, whether the duplication is due to turnover or dual jobholding. A distinction is made between the two principal categories of workers: (1) all employees and (2) production and related workers, construction workers, and nonsupervisory workers. "All employees" comprise all persons, both supervisory and nonsupervisory. For the definition of production or nonsupervisory workers, see note 1 for p. 48.

Employment in Federal Government establishments relates to civilian employees only and represents those who occupied positions the last day of the month. Intermittent workers are counted if they performed any service during the month. BLS considers regular full-time teachers (private and governmental) to be employed during the summer vacation period whether or not they are specifically paid in those months.

The data are classified in accordance with the Standard Industrial Classification Manual, 1972 (Office of Management and Budget). In June 1987, the BLS revised the employment series, adjusting it to March 1986 benchmarks.

Benchmark adjustments--Employment estimates are compared periodically with comprehensive counts of employment which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made as indicated. The primary sources of benchmark information on employment data, by industry, are compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These tabulations cover about 98 percent of the total nonagricultural employment in the United States. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with new benchmark levels, industry by industry. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted at levels between the new benchmark and the preceding one, and the new benchmark for each industry is then carried forward progressively to the current month by use of the sample trends. Thus, under this procedure, the benchmark is used to establish the level of employment; the sample is used to measure the month-to-month changes in the level.

Data for all months since the last benchmark to which the series has been adjusted are subject to revision. To provide users of the data with a convenient reference source for the revised data, the BLS publishes, as soon as possible after each benchmark revision, a summary volume of employment, hours, and earnings statistics entitled Supplement to Employment and Earnings, Revised Establishment Data.

Monthly data for 1961-82 for the series shown with a star are in appendix I to this volume.

Monthly and annual employment data for each separate industry are published in the July 1987 Supplement to Employment and Earnings (unadjusted data beginning 1983 and seasonally adjusted data beginning 1980). Prior periods are in Employment, Hours, and Earnings, United States, 1909-84, BLS Bulletin 1312-12, available from the Superinten-
nt of Documents, U.S. Government Printing Office, Washington, DC 20402. Estimates jwn in earlier editions of Business Statistics are according to earlier benchmarks d seasonal factors then in use.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). See note 1 for s page for sources, coverage, and definitions of the establishment (or payroll) employ:nt statistics.
The seasonal movements which recur periodically (such as warm and cold weather, pp-growing cycles, holidays, vacations, etc.) are, generally, the largest single component month-to-month changes in employment. After adjusting the data to remove such sonal variation, the basic trends are more evident.
A detailed description of the seasonal adjustment method appears in "X-11 Variant of :Census Method 11 Seasonal Adjustment Program" (1967) and "The X-11 ARIMA asonal Adjustment Method"; for establishment data, seasonally adjusted series for all ployees, women employees, production workers, hours, and earnings (prior to July 1980) re computed using the BLS Seasonal Factor Method. Beginning July 1980, the X-11 RIMA method is used. Seasonal adjustment factors are directly applied to the compont levels. Seasonally adjusted totals for most of these series are then obtained by taking weighted average of the seasonally adjusted data for the component series. Seasonally justed average weekly earnings are the product of seasonally adjusted average hourly rnings and seasonally adjusted weekly hours. Average weekly earnings in constant llars, seasonally adjusted, are obtained by dividing average weekly earnings, seasonally justed, by the seasonally adjusted revised Consumer Price Index for Urban Wage arners and Clerical Workers (revised CPI-W), and multiplying by 100 . Indexes of gregate weekly hours, seasonally adjusted, are obtained by multiplying average weekly urs, seasonally adjusted, by production or nonsupervisory workers, seasonally adjusted, d dividing by the 1977 base. For total private, goods-producing, private serviceoducing, total trade, manufacturing, durables, and nondurables, the indexes of aggregate cekly hours, seasonally adjusted, are obtained by summing the aggregate weekly hours, asonally adjusted, for the appropriate component industries and dividing by the 1977 se.
Beginning in June 1983, seasonal adjustment factors for Federal Government employent are derived from unadjusted data that include Christmas temporary workers emjyed by the Postal Service. In earlier years the number of these workers was substantial, $d$ at times varied greatly from year to year. Hence, it was considered desirable to clude this group.
The revised seasonally adjusted series for the establishment data reflect experience rough March 1987. Seasonal factors to be used for current adjustment appear in the ne 1987 issue of Employment and Earnings.
Monthly data for 1961-82 for the series shown with a star are in appendix I to this lume and also appear in the BLS Bulletin No. 1312-12, Employment. Hours, and arnings, United States, 1909-84; however, the Supplement to Employment and Earnings blished in July 1987 should be used for unadjusted data beginning 1983 and seasonally ljusted data beginning 1980. These publications are available from the Superintendent of scuments, U.S. Government Printing Office, Washington, DC 20402. Figures shown in rlier editions of BUSINESS STATISTICS are not comparable since they are based on rlier benchmarks and seasonal factors.

I. Source: U.S. Department of Labor, Bureau of Labor Statistics. The employment timates are for all 50 States and the District of Columbia.
See note 1 for p. 46 regarding sampling, estimating, industry classification for proceres, and benchmark adjustments. The data cover all production and related workers in ining and manufacturing; construction workers in construction; and nonsupervisory works in transportation, communication, electric, gas, and sanitary services; wholesale and Digtailztrade; finance, Einsurance, and real estate; and services. Included are full-time and httrt-7ime workers whedare on payrolls of private nonagricultural establishments and who Federal Reserve Bank of St. Louis
with wage rates, which represent the rates stipulated for a given unit of work or time, while earnings refer to the actual return to the worker for a stated period of time. The earnings series do not represent total labor cost to the employer because of the exclusion of irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the productionworker or nonsupervisory-worker definition. Similarly, average weekly earnings are not the amounts available to workers for spending, since they do not reflect such deductions as those for income and social security taxes, etc. Earnings expressed in 1977 dollars (real earnings) are adjusted for changes in purchasing power since the base period, 1977, by dividing the current earnings by the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

Method of computing industry series.-"Average weekly hours" for individual industry are computed by dividing production or nonsupervisory worker hours (reported by plants classified in that industry) by the number of production or nonsupervisory workers (reported for the same establishments). Similarly, "average hourly earnings" are obtained by dividing the reported total production or nonsupervisory worker payroll by the total production or nonsupervisory worker hours. Estimates for both hours and hourly earnings for nonagricultural divisions and major industry groups are averages (weighted by employment for hours and by aggregate hours for hourly earnings) of the figures for component industries. "Gross average weekly earnings" are computed by multiplying gross average hourly earnings by average weekly hours. In addition to the factors mentioned above, which exert varying influences upon gross average hourly earnings, gross average weekly earnings are affected by changes in the length of the workweek, part-time work, work stoppages, labor turnover, and absenteeism. Persistent long-term increases in the proportion of part-time workers in retail trade and many of the service industries have reduced average workweeks and have affected the average weekly earnings series. The BLS monthly report, Employment and Earnings, provides current hours and earnings averages for about 450 separate industries.

Monthly data for 1961-82 for the series shown with a star are in appendix 1 to this volume. Seasonally adjusted monthly data beginning 1980, and monthly data not adjusted for seasonal variation beginning 1983 are in the July 1987 Supplement to Employment and Earnings. Prior periods are in the BLS Employment, Hours, and Earnings, United States, 1909-84; Bulletin No. 1312-12 (1985), available from the U.S. Government Printing Office, Washington, DC 20402.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). Data for the private sector payroll, excluding agricultural and government workers, are derived from employer reports to the States plus additional sources (including the Bureau of Census series, "County Business Patterns," etc.) not covered in the sample reports. (See note 1 for this page and note 1 for pp. 46 and 49 for concepts and definitions for employces, production and nonsupervisory workers, hours, and earnings.)

Hours and earnings data for the transportation and communication, trade, finance, and services divisions are available beginning January 1964; data for private payrolls are not available monthly prior to 1964 . Figures for all private employees are available beginning 1939. Monthly data beginning April 1983 and seasonally adjusted data beginning January 1980 are in the July 1987 Supplement to Employment, Hours, and Earnings, Establishment Data (BLS). Prior periods are in BLS Employment, Hours, and Earnings, United States, 1909-84; Bulletin No. 1312-12 (1985).
3. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). See note 1 for this page for definitions, concepts, computation, and limitations of average weekly hours, and hourly and weekly earnings statistics.

In accordance with the annual practice of updating seasonal factors, effective June 1984, the BLS published revised seasonally adjusted data back to 1979 for most series. In December 1976 a change in procedure was introduced so that aggregated levels of seasonally adjusted hours and earnings are derived as a weighted average of their scasonally adjusted components. Prior to this change, the seven series involved were directly adjusted. (BLS has published the complete historical series for these seven items.) All other hours and earnings series are seasonally adjusted by applying factors directly to the corresponding unadjusted series; seasonally adjusted average weekly earnings are the product of seasonally adjusted hourly earnings and weekly hours. Weekly earnings in constant dollars, seasonally adjusted, are obtained by dividing seasonally adjusted average weekly earnings by the seasonally adjusted Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W). For a detailed description, see The X-II ARIMA Seasonal Adjustment Method (Statistics Canada Catalogue No. 12-564E, 1983).

Monthly data for 1961-82 for the series shown with a star are in appendix I to this volume. Monthly seasonally adjusted data beginning January 1980 are in the July 1987 Supplement to Employment and Earnings (BLS). Prior periods are in BLS Bulletin No. 1312-12, Employment, Hours, and Earnings, United States, 1909-84 (1985); available from the U.S. Government Printing Office, Washington, DC 20402. Data shown in earlier editions of BUSINESS STATISTICS reflect earlier benchmarks and seasonal factors then in use.
4. Source: U.S. Department of Labor, Bureau of Labor Statistics. Overtime hours are defined as those for which premiums are paid because the hours are in excess of the number of hours of either the straight-time workday or the workweek during the pay period that includes the 12 th of the month. Weekend and holiday hours are included only if overtime premiums are paid. Hours for which only shift differential, hazard, incentive, or other similar types of premiums are paid are excluded.

The concept pertains to hours worked at a rate higher than straight time; it includes premium hours worked even when the weekly total is below 40 . This may occur in Digitndustries wherester normal workweek is under 40 hours (such as printing or apparel). On itp. herather.shagdisheurs.opgid for at double time for holidays actually worked (when straight Federal Reserve Bank of St. Louis

## PAGE 55

3. This series is not seasonally adjusted because the seasonal component is small ative to the trend-cycle and/or irregular components and consequently cannot be sarated with sufficient precision.

## PAGE 58

1. Source: U.S. Department of Labor, Bureau of Labor Statistics. See notes 1 and 3 for 51. for a description of the original earnings statistics, which cover straight-time hourly rnings plus premium and incentive pay. The earnings refer to all production or nonsuper:ory jobs, including part-time jobs.
The hourly earnings indexes exclude effects of two types of changes that are unrelated underlying wage-rate developments: Fluctuations in overtime premiums in manufactur3 (the only sector for which overtime data are available) and the effects of changes in e proportion of workers in high-wage and low-wage industries. The seasonal adjustment minates the effect of changes that normally occur at the same time and in about the me magnitude each year.
The earnings index expressed in 1977 dollars is adjusted for changes in purchasing wer. This constant-dollar index is calculated by dividing the seasonally adjusted earnings dex by the Consumer Price Index for Urban Wage Earners and Clerical Workers :PI-W), seasonally adjusted, for the respective period.
2. Beginning January 1983; mining, wholesale trade, and finance, insurance and real tate are not seasonally adjusted because the seasonal component is small relative to the end-cycle and/or irregular components and consequently cannot be separated with suffient precision.
3. Source: Engineering News-Record. Figures represent the hourly wages of common id skilled labor in the construction industry as of the lst of each month. The data are mpiled from monthly reports of correspondents in 20 cities as follows: Atlanta, Balnore, Birmingham, Boston, Chicago, Cincinnati, Cleveland, Dallas, Denver, Detroit, ansas City, Los Angeles, Minneapolis, New Orleans, New York, Philadelphia, Pittsburgh,
. Louis, San Francisco, and Seattle. The rates are arithmetic averages of wages actually lid in the 20 cities and cover take-home pay plus fringe benefits, including welfare fund, ansion fund, etc.; the data reflect retroactive wage increases. The skilled labor rates are erages for three principal trades (bricklayers, carpenters, and structural ironworkers); the immon labor rates are averages for building and heavy construction workers.
Annual data prior to 1961 and monthly data for 1932-82 appear in earlier editions of USINESS STATISTICS (see reference note, p. I of this section).
4. Sources: Interstate Commerce Commission (ICC) and the Bureau of Labor Statistics 3LS). Average hourly earnings of employees of class I railroads are based on the number persons (excluding executives, officials, and staff assistants) on the payroll at the middle the month. Beginning 1972, the data are for line-haul roads only, that is, excluding gures for switching and terminal companies; data prior to 1972 include data for these Digitized for FRASER
companies. Because of the unavailability of data from ICC, BLS has been the source for monthly data beginning January 1978. Effective with 1978, annual figures are an average of the 12 months.

The total compensation (from which the hourly earnings are derived) includes employees' contributions but excludes taxes paid by the railroads for old age retirement and unemployment insurance. Backpay resulting from retroactive wage agreements and other adjustments are not included in the monthly figures but are included in computing the annual averages; the averages therefore may differ substantially in some years from the average of the monthly figures. Average hourly earnings are affected by changes in the proportion of employees in each wage group, as well as by changes in wage rates. Effective 1971, the ICC publishes figures for the months of June and December and for the year.

Annual data prior to 1961 and monthly figures for 1929-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).

## PAGE 60

1. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). The Employment Cost Index (ECI)-the most comprehensive measure available of labor cost trends-is a quarterly measure of the average change in the total cost of employing labor. It covers not only wages and salaries but also employers' costs for employee benefits, such as paid leave, severance pay, health and life insurance, pension and saving plans, social security, and unemployment insurance. Coverage of the private sector excludes the selfemployed, owner-managers, private household workers, and unpaid family workers. Coverage of the public sector includes State and local government workers, but excludes Federal Government workers.

The wage, salary, and benefit cost data from which the ECl is computed are obtained quarterly from a sample of about 2,800 establishments and a sample of occupations within those establishments. The data apply to the pay periods containing the 12 th day of March, June, September, and December, Earnings of salaried employees, earnings of workers paid under incentive systems, and benefit cost data are converted to an hours worked basis. Weights for industries and occupations, derived from employment data from the 1970 Census of Population, are held constant. Thus, the index measures the cost of buying the same mix of labor inputs as in the base period. The computation of the index is based on the standard formula for a fixed-weighted index. This index and its submeasures are constructed consistently across industries and occupations and are, therefore, mutually comparable. For a more detailed discussion of the ECI, see chapter 11, "The Employment Cost Index" of the BLS Handbook of Methods, Bulletin 2134-1.

Historical data for these indexes are available back to June 1981 from BLS.
2. Source: The Conference Board, Inc. The index of help-wanted advertising volume is based on the number of help-wanted ads published in the classified sections of leading newspapers, currently one in each of 51 cities located throughout the country, representing 51 major labor market areas. (As of 1971, one newspaper was deleted.) In 1968, nonagricultural wage and salary employment in the 52 labor market areas selected for the index represented 72 percent of employment in the 200 major labor areas defined by the Bureau of Labor Statistics and 51 percent of total nonagricultural employment in the United States. Currently, nonagricultural wage and salary workers in the 51 areas included in the index continue to represent over 50 percent of total U.S. nonagricultural employment.

The original data are adjusted for monthly variation in the number of Sundays and for seasonal variation. Seasonal adjustment is made for each individual newspaper series by The Conference Board. The seasonal factors are reviewed annually and are recalculated when necessary. After the Sunday adjustment and the seasonal adjustment, the average daily want-ad volume in each city is converted to an index on a base of 1967 average monthly volume equal to 100 .

In combining these city indexes into regional totals, weights are applied to each city index, representing the proportionate weight of annual nonagricultural employment in each of the labor-market areas represented in the sample. The effect of this weighting is to adjust for differences among cities in the ratio of help-wanted advertising to the number of nonagricultural employees. These differences reflect different competitive positions of the individual papers represented in the sample and variations in the relative importance of newspaper advertising volume as a means of seeking employees. The city indexes are summed into regional and national indexes by multiplying each city index by the appropriate weight.

As stated above, the index covers ads published in classified sections of newspapers; it excludes ads in financial, sports, and other sections. Also, it should be noted that the index is based on the number of ads, not the number of jobs advertised.

In addition to the national index, data are available from the source agency for each of the nine major regions and 51 individual cities. For an analysis of the behavior of the index (with reference to the business cycle and labor market conditions), see The Conference Board's Technical Paper No. 21 (1977).

Monthly data for 1971-82 are in the 1975-1984 editions of BUSINESS STATISTICS.
3. Work stoppages include all known strikes or lockouts involving 1,000 workers or more and lasting a full shift or longer. Data are based largely on newspaper accounts and cover all workers idle one shift or more in establishments directly involved in a stoppage. They do not measure the indirect or secondary effect on other establishments whose employees are idle owing to material or service shortages. Formerly, these estimates measured the impact of strikes involving 6 workers or more.

Annual data on the new base ( 1,000 or more workers) for 1947-60 and monthly data for 1979-82 are available upon request. Annual and monthly data on the old base ( 6 or more workers) are available from BLS.

## PAGE 61

1. Source: U.S. Department of Labor, Employment and Training Administration. The data represent an unduplicated count of insured unemployment under the regular State, Federal employees', and ex-servicemen's programs, and that covered by the Railroad Unemployment Insurance Act. Insured unemployment covers all 50 States and the District of Columbia. Puerto Rico and the Virgin Islands are covered beginning 1961 and 1978 respectively. Beginning January 1978, Civilian employment covered by the State, railroad, and Federal civilian employee programs includes some agricultural and domestic workers.

Beginning 1970, the insured unemployment figures also include persons eligible for unemployment compensation under the extended duration provisions of regular State laws. Not included are operations under the Federal Supplemental Benefits and Special Unemployment Assistance programs (which began January 1975), Temporary Unemployment Compensation Act of 1958 (effective June 19, 1958), and Temporary Extended Unemployment Compensation Act of 1961 (effective April 8, 1961).

Data reflect the number of workers reporting the completion of at least 1 week of unemployment. Annual averages may reflect adjustments not distributed to the monthly data.

A direct comparison of insured unemployment statistics with estimates of total unemployment cannot be made because of differences in concepts and coverage. The main groups of workers excluded from this series on insured unemployment are unpaid family workers, the self-employed, and some agricultural workers. Also, prior to 1972, workers employed in "covered" industries might be ineligible because of size-of-firm exclusions; see 2d paragraph of note 2 below

Annual data prior to 1961 and monthly data for 1957-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section); those for 1955 and 1956 are available upon request. Definitions, uses, limitations, and technical notes from the beginning of each Federal program are in Historical Statistics of Employment Security Activities, 1938-66 (January 1968), U.S. Department of Labor, Manpower Administration.
2. Source: U.S. Department of Labor, Employment and Training Administration. Data cover operations of regular programs under State unemployment insurance laws. All series include operations in the 50 States, as well as in the District of Columbia, Puerto Rico (beginning 1961), and the Virgin Islands (beginning 1978).

For the period shown, the number of workers covered under Federal law has been extended according to size-of-firm and payroll provisions. Originally, firms that employed 8 or more workers on at least one day in each of 20 different weeks in a calendar year were covered. Effective January 1, 1956, the law covered firms with 4 or more employees and beginning January 1, 1972, firms with one or more employees. Almost all of the States were required to amend their unemployment insurance laws in 1971 in accordance with the Employment Security Amendments of 1970. In 1976 the law was amended to extend coverage (effective January 1, 1978) to include virtually all State and local government employees plus many agricultural and domestic workers.

An "initial claim" is the first claim in a benefit year filed by a worker after losing his job, or the first claim filed at the beginning of a subsequent period of unemployment in the same benefit year. The initial claim establishes the starting date for any insured unemployment that may result if the claimant is unemployed for 1 week or longer. Transitional Transitional claims (filed by persons as they start a new benefit year) are excluded; therefore the data represent more closely instances of new unemployment.
"Insured unemployment" for a given month is the average weekly number of covered persons filing claims certifying to 1 or more weeks of unemployment under State programs during that month. Operations under extended duration provisions are not included. The insured unemployment series (adjusted for the lag between actual unemployment and the filing of the claim) refers to the actual week of unemployment. The rate of insured unemployment (insured unemployment as a percentage of average monthly covered employment) is based on covered employment for the 12 -month average ending two completed calendar quarters prior to the month for which the insured unemployed relate. The adjusted series is computed by a ratio-to-moving-average method to remove the effects of seasonal changes.

State laws are designed to provide some replacement for wage losses suffered through unemployment among workers regularly attached to the labor force. To be eligible for benefits, a worker must have had a designated minimum amount of earnings or employment (or both) with "covered" employers. As a result, the insured unemployed count excludes new and part-time workers who have not had sufficient earnings or employment to earn rights to benefits. Unemployed persons who have exhausted their benefit rights are not covered; in times of prolonged unemployment, the loss of benefit rights could cause a marked divergence between the trends of insured unemployment and total unemployment. itizeor "number of beneficiaries," monthly data represent the average weekly number of Digitized ficiaries computed from weeks compensated for in the calendar month or year.

For "benefit payments," data beginning 1971 exclude payments made under extended duration provisions by the States having such programs. Monthly figures for amount of benefit payments are unadjusted for voided benefit checks and transfers under the interstate combined-wage plan; annual totals are net amounts adjusted to exclude such items.

Annual data prior to 1961 and monthly data for 1961-82 are in earlier editions of Business Statistics (see reference note, p. 1 of this section). Revised 1963 data for initial claims and for insured unemployment are in the 1971 BUSINESS STATISTICS note.

Definitions, uses, limitations, and technical notes, are in Historical Statistics of Employment Security Activities. 1938-66 (January 1968), U.S. Department of Labor, Manpower Administration.
3. Source: U.S. Department of Labor, Employment and Training Administration. The data cover operations in the United States, Puerto Rico, and the Virgin Islands under the program of Unemployment Compensation for Federal Civilian Employees (UCFE). The UCFE program provides unemployment insurance protection to civilian employees of the Federal Government or of wholly owned instrumentalities, with the following exceptions: Elective officers in the executive and legislative branches of Government, certain foreign service personnel, temporary emergency workers, and other small groups.

Annual and monthly data back to 1955 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Sources: U.S. Department of Labor, Employment and Training Adminstration. Data beginning 1959 relate to the government program under the "Ex-Servicemen’s Unemployment Compensation Act of 1958" (UCX), effective October 27, 1958. Ex-servicemen who had a period of service that began after July 31, 1955, and those who entered the armed services before February 1, 1955, and were separated after October 27, 1958, are eligible under the UCX program. The figures exclude information relating to beneficiaries who have claimed benefits jointly with other programs.

For a description of veterans' programs in effect from 1944-58, see the 1984 and earlier editions of BUSINESS STATISTICS. Annual data prior to 1961 and monthly data 1944-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Average weekly insured unemployment and benefits paid under all Federal programs are in Historical Statistics of Employment Security Activities, 1938-66 (January 1968), U.S. Department of Labor, Manpower Administration.
5. Source: Railroad Retirement Board. Data relate to the program authorized by the Railroad Unemployment Insurance Act (effective July 1, 1939). The data cover program activities during the period, regardless of when unemployment occurred. The temporary Benefits Act of 1961 was changed in 1981 to include only those people with 10 or more years of benefits.

Annual data prior to 1961 and monthly data prior to 1982 are shown in earlier editions of Business Statistics.

## PAGE 62

1. Source: Federal Reserve Bank of New York. The figures represent the total acceptance liability outstanding on the last day of the month of banks and bankers in the United States and of agencies of foreign banks in this country. Data comprise acceptances based on (a) imports, (b) exports, (c) goods stored in the United States or shipped between points in the United States and foreign countries, and (d) dollar exchange. Data by classes of acceptances are available in the Federal Reserve Bulletin.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of Business Statistics (see reference note, p. 1 of this section).
2. Source: Federal Reserve Bank of New York; published in Federal Reserve Bulletin. Commercial paper is short-term, negotiable, unsecured promissory notes sold by reporting companies with original maturities of 270 days or less, for which the reporting company has received but not yet repaid the proceeds of the sale. Amounts placed are according to a varying number of companies. Dealer-placed paper is as reported by dealers and includes all financial paper sold in the open market. Directly placed paper is as reported by financial companies that place their paper directly with investors, and is payable on demand.

Finance companies are institutions engaged primarily in activities such as, but not limited to, commercial, savings, and mortgage banking; sales, personal, and mortgage financing; factoring, finance leasing, and other business lending; insurance underwriting; and other investment activities. Nonfinancial companies include public utilities and firms engaged primarily in activities such as communications, construction, manufacturing, mining, wholesale and retail trade, transportation, and services.

Monthly data for 1971-82 appear in the 1975 and subsequent editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); those prior to 1971 are available from the Board of Governors of the Federal Reserve System.
3. Source: Farm Credit System. Data provide a comprehensive picture of the Farm Credit System activities under the direction of the Farm Credit Corporation of America.

The Farm Credit System is a nationwide system of lending institutions and affiliated services and other entities. Through its 37 banks and its associations, the System provides credit and related services to farmers, ranchers, producers or harvesters or aquatic products, rural homeowners, certain farm related businesses, agricultural and aquatic cooperatives, and rural utilities. System institutions are federally chartered under the Farm Credit Act of 1971, as amended, and are subject to regulation by a federal agency, the Farm Credit Administration.

The United States is divided into twelve Farm Credit districts. The offices are located Springfield (MA), Baltimore (MD), Columbia (SC), Louisville (KY), Jackson (MS), St. juis (MO), St. Paul (MN), Omaha (NE), Wichita (KS), Austin (TX), Sacramento (CA), id Spokane (WA). At the same location in each district there is a Federal Land Bank, a ederal Intermediate Credit Bank, and a Bank for Cooperatives. There is also a Central ank for Cooperatives located in Denver, Colorado.
Data in greater detail and descriptions of the lending institutions in the System may be und in the annual reports of the Farm Credit System.
4. Source: Board of Governors of the Federal Reserve System. Data represent the undition of the 12 Federal Reserve banks combined, as reported at the end of the month.
Total assets include Reserve bank credit outstanding and the gold certificate account, ; well as these items not shown separately: Special drawing rights certificate account, ederal Reserve notes of other banks, other cash, bank premises, cash items in process of mllection, and other assets. Reserve bank credit outstanding also includes items not shown sparately: Acceptances bought outright and held under repurchase agreements (beginning recember 1966), and Reserve bank float (i.e., uncollected cash items minus deferred vailability cash items).
Total liabilities include-in addition to deposits and Federal Reserve notes-capital ccounts, other liabilities and accrued dividends, and deferred availability cash items. Total eposits are mainly member-bank reserve balances; they also include the U.S. Treasurer's eneral account, foreign deposits, and other deposits.
Federal Reserve notes constitute the major part of the country's currency in circulation nd are liabilities of the Reserve banks that issue them. They are a prior lien on all assets $f$ the Reserve banks and are specifically secured by the pledge of collateral at least equal , the amount of notes issued. This collateral may consist of gold certificates, U.S. iovernment securities, and eligible short-term paper discounted or purchased by the teserve bank. In the past, the amount of notes that could be issued was subject to another mitation, namely, that the Reserve bank have gold certificate reserves of a given ercentage of the Federal Reserve notes in actual circulation. The requirement, which no onger prevails, was 40 percent prior to June 12, 1945, and 25 percent from that date until March 18, 1968.
Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). (Revisions in millions of lollars: December 1960 for gold certificate reserves, 17,479; March 1945 for total bank eserve credit outstanding, 20,311; March 1930 for member bank reserve account, 2,367.)
5. Includes data not shown separately.
6. Includes direct and guaranteed securities.
7. All annual data through 1978 are for fiscal years ending June 30. Beginning 1979, innual data are for calendar years ending December 31.
8. A change in reporting instructions resulted in offsetting shifts in the dealer-placed and directly placed financial company paper in October 1979.
9. Effective December 1, 1982, there was a break in the commercial paper series. The cey changes in the content of the data involved additions to the reporting panel, the :xclusion of broker- or dealer-placed borrowings under any master note agreements from he reported data, and the reclassification of a large portion of bank-related paper from lealer placed to directly placed. Previous statistics do not reflect these changes.
10. Correction of a previous misclassification of paper by a reporter created a break in .he series beginning December 1983. The correction added some paper to nonfinancial and o dealer-placed financial paper.
11. Beginning October 1984, the number of respondents in the bankers acceptance survey was reduced from 340 to 160 institutions-those with $\$ 50$ million or more in total acceptances. The new reporting group accounts for over 95 percent of total acceptances ${ }_{3}$ ctivity.

## PAGE 63

1. See note 4 for p. 62.
2. Includes data not shown separately.
3. Between mid-1917 and December 1959, member banks had to satisfy legal reserve requirements entirely in balances held at Reserve banks. Until June 21, 1917, however, member banks were allowed also to count a part of their vault cash and a part of their deposits with other banks as legal reserves. Beginning December 1, 1959, banks were again authorized to count part of their vault cash as legal reserves, and after November 23, 1960, this privilege was extended to include all vault cash.
4. Source: Board of Governors of the Federal Reserve System. Total member bank reserves held consist of reserve balances with Federal Reserve banks (which exclude required clearing balances and adjustments to compensate for float) plus vault cash used to satisfy reserve requirements.

With respect to required reserves, the Board of Governors of the Federal Reserve System has legal power to set (within specified limits) the percentage of deposits that must be held in reserve for each reserve classification. Excess reserves are the difference between reserves actually held and required reserves; they indicate the extent to which member banks may legally expand their loans and investments without having recourse to the Federal Reserve banks.

Free reserves are the difference between the excess reserves of member banks and member bank borrowings at Federal Reserve banks. A negative figure indicates a situation Digitized which borrowings are larger than excess reserves; the term "net borrowed reserves" is http://frastly used.stlouisfed.org/

Monthly data for 1961-82 for those series indicated by a star appear in appendix I to this volume. Annual data prior to 1961 and monthly data for 1947-60 (1959-82 for required reserves) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data prior to 1947 (1958 for required reserves) are available in the Supplement to Banking and Monetary Statistics, Section 10, published by the source agency.
5. Source: Board of Governors of the Federal Reserve System. Data cover the condition of weekly reporting large commercial banks as of the last Wednesday of the month or year (data prior to 1985 are as of the Wednesday nearest the end of the month or year). The weekly reporting banks are 168 of the largest commercial banks in the Nation, both members and nonmembers of the Federal Reserve System. These banks had total assets exceeding $\$ 1.4$ billion in their domestic offices as of December 31, 1982, and voluntarily report their balances in assets and liability accounts as shown in these tables.

The series has been revised from time to time to extend the coverage and to reflect other improvements. The 1984 revision, carried back to January 1979, is the first major revision since January 1979. It reflects changes in the panel of reporting banks and in item content. Some new items were added, and several definitional changes have been made to take account of revised treatment of the quarterly report of condition. The revised panel includes 168 reporting banks that had domestic office assets exceeding $\$ 1.4$ billion as of December 31, 1982. The net effect of the panel changes, which added large commercial banks and dropped smaller ones, was to increase the total assets by about 2 percent. In 1984, the new series accounted for 51 percent of the total assets of all domestically insured commercial banks, a slightly higher share than in the former reporting panel of 171 banks.

For data shown in this volume, there are three major breaks in comparability: (1) Effective with data for January 1979, to incorporate the aforementioned revision; (2) effective with data for January 1972, to reflect changes in the panel of reporting banks, a change in consolidation basis, and changes in content of several of the asset and liability items; (3) effective with data for July 1965, to cover the largest volume of bank assets possible in the smallest number of banks, and to account for a major share of the short-term fluctuations in major bank asset and liability categories. A revision of lesser significance was effective with data for June 1969.

More complete details on the July 1965 revision appear in the August 1966 issue of the Federal Reserve Bulletin. A description of the June 1969 revision appears in the August 1969 Federal Reserve Bulletin. Further information on the January 1979 and 1984 revisions is available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, DC 20551.
6. In addition to items shown separately, the demand deposits total includes banks in foreign countries, foreign governments and official institutions, and certified and officers' checks.
7. Revised basis; not comparable with earlier data (see 3d and 4th paragraphs of note 5 for this page).
8. Change in reporting procedures; earlier data not strictly comparable.
9. Revised basis; not comparable with earlier data (see 3d paragraph of note 5 for this page).
10. Revised basis; not comparable with earlier data (see 2d paragraph of note 5 for this page).

## PAGE 64

1. See note 5 for p. 63.
2. In addition to individuals, partnerships, and corporations, the nontransaction balances total includes the following: States and political subdivisions; U.S. Government; depository institutions in U.S.; and foreign governments, official institutions, and banks.
3. The term "adjusted" denotes exclusion of loans and Federal funds with domestic commercial banks and, through May 1969, after deduction of valuation reserves; beginning June 1969, data are reported gross (before deduction of valuation reserves). Figures prior to June 1959 exclude loans to foreign banks.
4. Loans to nonbank depository and other institutions include loans to sales finance and personal finance companies, other business credit companies, mutual savings banks, insurance companies, mortgage companies, savings and loan associations, and Federal lending agencies. No comparable data are available for periods prior to April 1961.
5. "Other loans" include loans to individuals, agricultural loans, loans to foreign banks, loans to foreign governments, Federal funds sold to nonbank brokers and dealers and to others, plus "all other loans," and lease financing receivables.
6. Includes data for "bills" and "certificates" not shown separately.
7. Revised basis; not comparable with earlier data (see 3d and 4th paragraphs of note 5 for p. 63).
8. Change in reporting procedures; earlier data not strictly comparable.
9. Revised basis; not comparable with earlier data (see 3d paragraph of note 5 for $p$. 63).
10. Revised basis; not comparable with earlier data (see 2d paragraph of note 5 for p . 63).
11. Break in series due to definitional change. No comparable data are available prior to 1984. (See note 12 for this page regarding loan obligations of States and political subdivisions).
12. Securities of Federal agencies and corporations have been shifted out of "other securities" and are now combined with U.S. Treasury securities. Also, loan obligations of States and political subdivisions have been shifted out of "other securities" and are now shown separately among the loan items.

## PAGE 65

1. Source: Board of Governors of the Federal Reserve System. The series was revised in 1987 to reflect new benchmark and seasonal adjustments as well as a change in method of computing monthly averages of the foreign-related bank components of the series.

Benchmark corrections are made periodically in these series to correct for estimation errors that arise in blowing up sample bank reports to represent all banks. New blowup factors, derived from quarterly condition reports, have been updated through the June 1986 reports for all insured banks and all foreign-related institutions that are represented in the commercial bank universe.

During the 1985 revision, there were important definitional changes, with the most significant being the shift of certain obligations of States and political subdivisions from "other securities" to loans and the shift of Federal agency securities from other securities to a new combination with U.S. Treasury securities. The latter combination, which raised "U.S. Government securities" and lowered other securities by $\$ 166.8$ billion as of December 31, 1983, was estimated back to December 1972. The shift of State and political subdivision obligations to loans was not carried back before January 1984; consequently, there are offsetting breaks in series, lowering the other securities and raising the total loan components of bank credit by $\$ 33.2$ billion at the beginning of 1984 .

Revised historical data back to December 1972, together with a description of numerous breaks in series, are available upon request from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551.
2. Adjusted to exclude interbank loans.
3. Source: Board of Governors of the Federal Reserve System. The prime rate is the interest rate banks charge their most creditworthy business customers for short-term loans. It is the base used to scale upward the rates charged on most loans to other business customers. The prime rate is not as sensitive as money market instrument rates, which fluctuate daily in response to short-term changes in supply and demand. Rather, its movements tend to be infrequent, changing only by increments of one quarter of a percentage point. Major banks tend to change their prime rate in response to increasing differentials with selected open market money rates.

The monthly data are averages computed by multiplying each "predominant" prime rate (the rate charged by the majority of 30 large money market banks) by the number of days it was in effect during the month, summing these products, and dividing by the number of days in the month. The annual data are unweighted averages of the monthly averages.

For a discussion of the history of the prime rate and its role in the lending process, see "The Prime Rate", Monthly Review, Federal Reserve Bank of New York, April and May 1962, pp. 54-59 and 70-73, respectively.
4. Reported by the Board of Governors of the Federal Reserve System. Data represent the charge on loans made to member commercial banks by Federal Reserve banks. Each Rescrve bank establishes its own discount rate, subject to review by the Board of Governors of the Federal Reserve System. In practice, the discount rates are generally uniform among the 12 Reserve banks.

Federal Reserve loans to depository institutions are for short-term adjustments in their reserves, and are not generally available for extended periods. For further information, see The Federal Reserve Act, section 10(b), 11(b), 13, 14(d), and 19(b7); Regulation A of the Board of Governors of the Federal Reserve System (12 CFR 201).

Monthly data for 1961-82 appear in appendix I to this volume; annual data prior to 1961 and monthly data for 1929-60 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised figure for November 1929 is 4.50 percent.
5. Source: Farm Credit Administration. The figures represent interest rates charged by the Federal intermediate credit banks and are averages of the loan rates of the 12 banks. The average annual interest rate for each Federal intermediate credit bank is determined by averaging the 12 monthly rates.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section). Revisions: May 1930, 4.82 percent: August 1930, 4.13; July 1933, 3.12; September 1947, 1.53; July 1948, 1.90; March 1949, 2.04; February 1951, 2.04; July 1951, 2.36; October 1955, 2.63.
6. Source: Federal Home Loan Bank Board (FHLBB). Data are combined weighted avcrages of interest rates on conventional first mortgage loans for the purchase of single-family homes. They are confined to loans originated directly (rather than by correspondents) and are compiled from data received through the cooperation of a representative sample of four major types of lenders in the United States. These lending institutions are savings and loan associations, mortgage companies, mutual savings banks, and commercial banks (that report to the FHLBB).

Federally underwritten mortgages are excluded from the survey, as are loans for any purpose other than for purchase of a home.
Digitizeconthly data fer 1963-82 appear in the earlier editions of BuSINESS STATISTICS (see

Federal Reserve Bank of St. Louis
7. Source: Federal Reserve Bank of New York; published in Federal Reserve Bulletin. Beginning November 1977, data are unweighted averages of offering rates quoted by at least five dealers (in the case of commercial paper) or finance companies (in the case of finance paper). Previously, these rates were the most representative rate quoted by those dealers and finance companies. For bankers' acceptances, data through 1975 are the average of the midpoint of the range of daily dealer closing rates offered for domestic issues. Beginning January 1976, yields are the most representative rates for top-rated banks only. Yields, for the bankers' acceptances, commercial paper, and finance paper, are quoted on a bank-discount basis, rather than an investment yield basis (which would give a higher figure). Rates on dealer-placed commercial paper are for firms whose bond rating is Aa or the equivalent. Data through October 1979 show a maturity of 120-179 days. Beginning November 1979, maturity is for 180 days. For finance paper, data through October 1979 show a maturity of 150-179 days. Beginning November 1979, maturity is for 180 days.

Monthly data for 1970-78 for rates on finance company paper placed directly appear in the 1979 edition of BUSINESS STATISTICS, with data through 1982 appearing in subsequent editions. Annual data prior to 1961 and monthly data for 1938-82 for rates on bankers' acceptances and commercial paper appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
8. Source: Board of Governors of the Federal Reserve System. Three-month Treasury bills are auctioned and issued weekly. An average interest rate, expressed on a bank discount basis, is computed for each weekly issuance, on the basis of varying prices at which portions of the issue are awarded to the highest bidders. The monthly series is the average of the four or five weekly rates for each month. (These auction rates are similar to, but not the same as, market rates; the latter are rates on outstanding bills, based on daily trading quotations.)

The auction average rate for each week is dated as of the date of issue of the bills, usually a Thursday, even though the auction usually occurs on the Monday of that week or, at times, on Friday of the preceding week. Therefore, the monthly average of weekly rates sometimes includes the results of an auction that occurred late in the preceding month.

Monthly data for 1961-82 appear in appendix I to this volume; monthly data for 1941-60 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).

## PAGES 66 and 67

1. Source: Board of Governors of the Federal Reserve System. The consumer installment credit series covers most short- and intermediate-term credit extended to individuals through regular business channels, usually to finance the purchase of consumer goods and services or to refinance debts originally incurred for such purposes, and scheduled to be repaid (or with the option of repayment) in two or more installments. Debt secured by real estate (including first liens, junior liens, and home equity loans) is excluded. Credit extended to governmental agencies and nonprofit or charitable organizations, as well as credit extended to business or to individuals exclusively for business purposes, is excluded.

There are four major types of consumer installment credit. "Revolving" credit includes credit arising from purchases on credit card plans of retail stores and banks, cash advances and check credit plans of banks, and some overdraft credit arrangements. "Automobile" credit represents credit extended for the purchase of new or used passenger automobiles whether or not the credit is specifically secured by the automobile purchased. "Mobile home" credit covers credit extended for the purchase of mobile homes. An "other" category, not shown, includes personal cash loans, sales finance contracts for nonautomotive goods, and home improvement loans (both FHA-insured and noninsured) made to finance the maintenance and improvement of dwellings units.

The consumer credit series is based on comprehensive benchmark data that become available periodically. Current monthly estimates are brought forward from the latest benchmarks in accordance with weighted changes indicated by sample data. Classifications are made on a "holder" basis. Thus, installment paper sold by retail outlets is included in figures for the banks and finance companies that purchased the paper.

The amount of outstanding credit represents the sum of the balances in the installment receivable accounts of financial institutions and retail outlets at the end of each month. Net change measures the change during the month in the amount of consumer installment credit outstanding. It is defined as the amount of consumer installment credit extended less the amount liquidated (including repayments, charge-offs, and other credits) during the month. Each monthly change is computed by subtracting the seasonally adjusted amount outstanding at the end of the previous month from the amount outstanding at the end of the current month. Information is not available to make separate estimates of the amount of extensions, liquidations, and chargeoffs of bad debts.

The estimates of the amount of credit outstanding and net change include any finance and insurance charges included as part of the installment contract. Also included in some cases is unearned income on loans, because some lenders cannot separate the components.

The seasonally adjusted data are adjusted for differences in the number of trading days and for seasonal influences. The seasonal factors used are derived by the Census X-11 ARIMA process.

Current data are available monthly, in the Federal Reserve statistical release G.19, "Consumer Installment Credit," and in the Federal Reserve Bulletin.

Monthly data for 1961-82 for series indicated by a star appear in appendix I to this lume. The latest revised monthly figures prior to 1983 are available from the Board of overnors of the Federal Reserve System (Washington, DC 20551).
2. Includes auto dealers.
3. Beginning January 1977, includes revolving retail credit, which was separated from e total retail credit; data not comparable with those for earlier periods. Also, excludes )-day charge credit held by travel and entertainment companies.

## PAGE 68

1. Source: U.S. Treasury Department. These data incorporate the changes in the resident's Budget for 1969, in accordance with those recommendations of the President's ommission on Budget Concepts that were adopted and implemented during fiscal year 968. They now cover all Federal agencies and programs, including virtually all programs nanced by trust and deposit funds, which prior to that time were not included in what as called the "administrative budget."
Beginning fiscal year 1967, data are on the basis of the Monthly Statement of Receipts nd Outlays of the U.S. Government, compiled from reports received from disbursing, ollecting, and administrative agencies of the Government. Data for prior years were erived on basis of the unified budget concepts adopted January 1968.
2. "Net receipts" represents gross budget receipts less refunds.
3. Source: U.S. Treasury Department. These data are on the basis of the Monthly 'tatement of Receipts and Outlays of the U.S. Government. "Borrowing from the public" ; the net transactions of total agency securities, plus public debt securities as published in aily Treasury statements, minus the Federal securities held as investment of Government ccounts and noninterest-bearing public debt securities held by the International Monetary und and international lending institutions in recognition of U.S. Government subscription ommitments. "Reduction in cash balances" is the difference between the "total surplus or eficit" ("budget surplus or deficit" plus "off-budget surplus or deficit") and "borrowing rom the public." Prior to October 1980, the "reduction in cash balances" was the ifference between the "budget surplus or deficit" and "borrowing from the public."
4. Source: U.S. Treasury Department. Data are on the basis of daily Treasury tatements and administrative accounts and reports. "Gross debt outstanding" includes nvestment transactions of the Departments of Health and Human Services (formerly Jepartment of Health, Education, and Welfare), Housing and Urban Development, Labor, ransportation, Treasury, and the Veterans Administration and other independent agencies; $t$ also includes other securities held by the public.
5. Includes data not shown separately. Amount of public debt securities outstanding ave been adjusted to exclude issues to the International Monetary Fund and other nternational lending institutions.

## 6. Includes holdings of Federal Reserve banks.

7. Source: U.S. Treasury Department. Data cover only budgetary operations of the rederal Government; i.e., only those operations involving accounts that determine the uudget surplus or deficit. All yearly data through 1976 as shown in the present volume are iscal year totals ending June 30. Effective with 1977, annual figures are for fiscal year :nding September 30. Beginning fiscal year 1967, actual figures are from the Monthly Btatement of Receipts and Outlays of the U.S. Government, compiled from reports eceived from all Government collecting, disbursing, and administrative agencies and the「reasurer of the United States. Data for prior years were derived on basis of the unified uudget concepts adopted January 1968. The Monthly Statement shows gross receipts, efunds, and net receipts; and outlays, applicable receipts, and net outlays. Budget receipts ind outlays shown in this volume are "net."

Budget accounts include general accounts (which are credited with receipts not desgnated by Congress for specific purposes and cover most appropriations and expenditures), ;pecial accounts (or funds earmarked by Congress for specific purposes), revolving acsounts (financing a continuing cycle of operations in which expenditures generate receipts, ind the receipts are available for expenditure without further action by Congress), sonsolidated working fund (established to receive, and subsequently disburse, advance sayments from other agencies or bureaus), management fund account (to facilitate acsounting for and administration of intragovernmental activities that are financed by two or nore appropriations), trust fund accounts (moneys held in trust for use in carrying out ;pecific purposes or programs), and transfer appropriation accounts (allocations that are reated as nonexpenditure transactions at the time the allocation is made).

Items under receipts are explained as follows: "Individual income taxes"-taxes both withheid and not withheld; "social insurance taxes and contributions"-employment taxes and contributions, unemployment insurance, and contributions for other insurance and etirement (see also note 9 for this page); "other"-excise taxes (see also note 10 for this page), estate and gift taxes, customs duties, and other miscellaneous receipts.

Monthly data for July 1967-December 1982 are in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
8. Includes individual income taxes designated for the Presidential election campaign fund. Prior to February 1974, these taxes are included in "Other."
9. Includes taxes and contributions for Federal old-age and survivors insurance trust fund, Federal disability insurance trust fund, Federal hospital insurance trust fund, railroad Dightivemeftraccoags. httipusplffundr. Sederal feraployeyes retirement contributions, and other retirement contributions. Federal Reserve Bank of St. Louis
10. Includes excise taxes on alcohol, tobacco, documents, other instruments, and playing cards; manufacturers excise taxes, retailers excise taxes (repealed effective June 22, 1965); and miscellaneous.
11. Beginning October 1980, data represent the "total surplus or deficit" ("budget surplus or deficit" plus "off-budget surplus or deficit").
12. See last sentence of note 3 for this page.

## PAGE 69

1. See note 7 for p. 68 .
2. Includes data not shown separately.
3. The U.S. Department of Health, Education, and Welfare was redesignated as the U.S. Department of Health and Human Services by the Department of Education Organization Act, which was approved on October 17, 1979 and implemented on May 4, 1980.
4. Includes interest payments by Government corporations and other business-type activities on securities issued to the Treasury:
5. Source: U.S. Treasury Department. From 1966 through November 1974, data are compiled from the daily Treasury statement; and then from the Treasury Bulletin. Figures are the gold stock at the end of the months and years indicated.

Through March 17, 1968, private U.S. sales of gold (including newly mined gold) to the U.S. Treasury and private purchases (for industrial purposes) from the Treasury affected official gold reserves. These U.S. Treasury transactions were discontinued after that date as a result of an international monetary agreement providing that officially held gold should be used only to effect transfers among monetary authorities.

End-of-year data prior to 1961 and monthly data for 1936-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Increases in the figures in 1972 and 1973 reflect revaluation of the gold stock on the basis of the changed gold content of the dollar. The revaluations add $\$ 828$ million to the gold stock on May 8, 1972, and $\$ 1,165$ million on October 18, 1973
6. Gold prices for the months are averages of daily quotations, whereas annual prices are averages of the 12 months as compiled by Handy and Harman and published, beginning 1967, in Metals Week, a McGraw-Hill publication. Prior to 1967, the data appeared in Metal and Mineral Markets, a weekly news service of the Engineering and Mining Journal. Quotations are per troy ounce 0.9995 purity and represent the lowest prices at which gold, in commercial bar form of acceptable brand and quality, is offered to Handy and Harman for nearby delivery at New York in quantities sufficient to meet daily requirements.
7. Silver prices for the months are averages of daily quotations, whereas annual prices are averages of the 12 months as compiled by Handy and Harman and published, beginning 1967, in Metals Week, a McGraw-Hill publication. Prior to 1967, the data appeared in Metal and Mineral Markets, a weekly news service of the Engineering and Mining Journal. Quotations are per troy ounce purity 0.999 fine.

Beginning with 1962, quotations represent the lowest prices at which silver, in commercial bar form of acceptable brand and quality, in accordance with Association for Standardized Testing Method (ASTM) designation B413-69, is offered to Handy and Harman for nearby delivery at New York in quantities sufficient to meet daily requirements. Prior to 1962 , prices are for silver contained in unrefined silver-bearing materials; they were determined by Handy and Harman on the basis of actual sales of bar silver ( 0.999 fine) in amounts of 50,000 troy ounces or more for nearby delivery at New York. Silver contained in unrefined silver-bearing materials submitted for refining is quoted at a discount from silver in commercial bar form.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly averages and monthly figures back to 1913 and 1923, respectively, are shown in the 1932 SUPPLEMENT (revisions: January 1923, $\$ 0.657$; July 1933, $\$ 0.376$ ).
8. Beginning 1962, data are for silver in commercial bar form (until mid-November 1962, priced one-quarter of a cent higher than on former basis; four-tenths of a cent higher from November 15, 1962 to September 2, 1968; one cent higher effective September 3, 1968).
9. Social Security Trust Fund outlays are included in expenditures beginning fiscal year 1963; prior thereto, reflected under the Treasury Department.
10. From September 1965 through January 1971, data include gold deposits by the International Monetary Fund for the purpose of mitigating the impact of gold payments to the Fund for quota increases by countries that purchased such gold from the United States. The United States has a corresponding gold liability to the Fund.
11. In 1975, the U.S. Treasury sold gold from the gold stock in public auctions, and in 1975-76, sold gold for the striking of American Revolution Bicentennial medals.
12. From May 1978 through 1979, the U.S. Treasury sold gold at auction to the public, decreasing the gold stock. Subsequently, the U.S. Treasury sold gold medallions and commemorative coins to the public. Beginning in October 1986, the U.S. Treasury struck gold bullion coins. As these coins are sold to the public the gold stock is decreased. However, when possible, the gold stock is replenished by purchases of newly mined U.S. gold, thereby, restoring the gold stock to its October 22, 1986, levels.
13. Beginning June 1979, data reflect budget outlays by the Department of Health and Human Services. Prior data are for budget outlays by the Department of Health, Education, and Welfare.

## PAGES 70 and 71

1. Source: U.S. Treasury Department. Data are for the end of the period; monthly through 1982, and quarterly beginning 1983. Currency and coin in circulation includes all U.S. money outside of the Federal Reserve banks and the Treasury, with two exceptions: (1) Gold coin and silver coin "known" to have been exported; and (2) all gold coin outstanding. Thus, the figures include currency and coin held by the public and by banks, and any "unreported" U.S. money carried or shipped abroad.

Gold coin was withdrawn from circulation in January 1934, since the Gold Reserve Act of 1934 (which was the culmination of gold actions of 1933) vested in the United States the title to all gold coin and gold bullion. Gold coin is included in the circulation figures prior to January 1934 published in the 1959 and earlier volumes of BUSINESS STATISTICS, but the amounts included (effective with the 1940 volume) are as revised by Federal Reserve to reflect a deduction of $\$ 287$ million in each period. The $\$ 287$ million (representing gold coin reported in January 1934 as still in circulation) was excluded because it is believed to have been largely lost or melted down, or otherwise to have disappeared from circulation over the years. All other gold coins minted in recent years, such as the Statue of Liberty gold coins, the Olympic gold coins, and the Eagle gold coins, are not included in the currency and coin statement since such coins are sold to the public at premium prices and are not used as a medium of exchange.

Outstanding currency amounts shown on statements published before 1967 have been reduced for old series currencies and the 1928 series gold certificates as authorized by the Old Series Currency Adjustment Act. In addition, an act to reduce/write off silver certificates issued after June 3, 1929, was approved on June 24, 1967. In December 1971, the outstanding coin amounts was decreased by the transfer of some $\$ 2.9$ million Carson City silver dollars to GSA as authorized by an act approved on December 31, 1970.

Annual data prior to 1961 and monthly data for 1936-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
2. Source: Board of Governors of the Federal Reserve System. The series shown here were revised and expanded in early 1980 to reflect the redefinition of the monetary aggregates by the source agency. The redefinition was prompted by the emergence, in recent years, of new monetary assets-for example, negotiable order of withdrawal (NOW) accounts and money market mutual fund shares-and alterations in the basic character of established monetary assets-for example, the growing similarity of, and substitution between, the deposits of thrift institutions and those of commercial banks.

Presently the Federal Reserve publishes three monetary aggregates which replace the old M-1 through M-5 measures. In addition, a very broad measure of liquid assets has been adopted. The principle underlying these new monetary aggregates is that similar assets should be combined at the same level of aggregation. The new definitions of the monetary aggregates are as follows:

M1.-Consists of (1) currency outside the Treasury, Federal Reserve banks, and the vaults of commercial banks; (2) travelers checks of nonbank issuers; (3) demand deposits at commercial banks other than those due to domestic banks, the U.S. Government, and foreign banks and official institutions less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCD) consisting of NOW accounts and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts and demand deposits at thrift institutions. The currency and demand deposit components exclude the estimated amount of vault cash and demand deposits, respectively, held by thrift institutions to service their OCD liabilities.

M2.-Consists of MI plus overnight (and continuing contract) repurchase agreements (RP's) issued by all commercial banks and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, money market market deposit accounts (MMDA's), savings and small-denomination time deposits (time deposits-including retail RP's-issued in denominations of less than $\$ 100,000$ ), and balances in both taxable and tax-exempt general purpose and broker/dealer money market mutual funds (MMMF). Keogh and individual retirement account (IRA) balances at depository institutions and in MMMF's are excluded. Also excludes all balances held by U.S. commercial banks, money market funds (general purpose and broker/dealer), foreign governments and commercial banks, and the U.S. Government. Also subtracted is a consolidation adjustment that represents the estimated amount of demand deposits and vault cash held by thrift institutions to service their time and savings deposits.

M3.-This measure equals M2 plus large-denomination time deposits (those issued in denominations of $\$ 100,000$ or more) and term RP liabilities issued by commercial banks and thrift institutions, term Eurodollars held by held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada, and balances in both taxable and tax-exempt institutions-only MMMF's. Excludes amounts held by depository institutions, the U.S. Government, money market funds, and foreign banks and official institutions. Also subtracted is a consolidation adjustment that represents the estimated amount of overnight RP's and Eurodollars held by institution-only MMMF's.
L.-This broad measure of liquid assets equals M3 plus nonbank public holdings of U.S. savings bonds, short-term Treasury obligations, bankers acceptances and commercial paper, net of MMMF holdings of these assets.

The currency component consists of currency outside the Treasury, the Federal Reserve banks, and the vaults of all commercial banks.

The demand deposit component consists of demand deposits at all commercial banks and certain foreign related institutions, other than those due to domestic commercial Digbanks foreign bankss and official institutions, and U.S. Government, less cash items in the httpprofeasse of colluestion ang Federal Reserve float (float represents reserves credited to Federal Reserve Bank of St. Louis
depository institutions on checks in process of collection by Federal Reserve banks for which offsetting debits have not yet been made against the reserve accounts of the drawee banks).

Other checkable deposits include ATS and NOW balances at depository institutions, credit union share draft balances, and demand deposits at thrift institutions. Other checkable deposits seasonally adjusted equals the difference between the seasonally adjusted sum of demand deposits plus OCD and seasonally adjusted demand deposits.

Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by foreign branches of U.S. banks to U.S. nonbank customers. Data for this component are not seasonally adjusted. Another component, for which only unadjusted data are available, is the money market fund balances. These funds enable investors to buy shares in a money market portfolio and earn money market rates of return without investing the traditional large sums needed for direct investment. Assets of the funds were zero prior to 1974. Whereas these shares are highly liquid, the money market deposit accounts have a specific maturity. Assets in these accounts were zero prior to December 1982.

The time deposit series consist of the small denomination time deposits, large denomination time deposits, and savings deposits. Savings deposits are interest-bearing deposits that do not have a specific maturity. All other time deposits mature at a specified period, and earlier withdrawals result in substantial interest penalties.
Small denomination time deposits-including retail RP's-are issued in amounts of less than $\$ 100,000$. Large denomination time deposits are those issued by commercial banks and thrift institutions in amounts of $\$ 100,000$ or more, less holdings of domestic banks, thrift institutions, and the domestic CD holdings of money market mutual funds.

Consolidation adjustments have been made in the construction of each of the new measures, in order to avoid double counting of the public's monetary assets. One major consolidation adjustment involves the netting of deposits held by depository institutions with other depository institutions. In constructing M1, demand deposits held by commercial banks with other commercial banks and the demand deposit holdings of thrift institutions that are estimated to be used in servicing their checkable deposits have been removed. Similarly, at the M2 level all other demand deposit holdings of thrift institutions are deducted. Savings and time deposits held by depository institutions are also appropriately netted at the M2 and M3 levels. The other major kind of consolidation adjustment involves removing certain assets held by money market mutual funds from several components appearing in the M2, M3, and L measures. These institutions issue shares to the public and use the proceeds to acquire a variety of liquid assets that are components of the new M2, M3, and L measures. To avoid first counting these amounts as money market mutual fund shares and then counting them again as money market fund holdings of RP's, CD's, commercial paper, and so forth, holdings of each of these assets by general purpose and broker/dealer and institution-only money market funds are subtracted from the relevant components.

The procedure for constructing the seasonally adjusted aggregates has been to seasonally adjust each component wherever possible-and then to sum the components to derive the appropriate total. Seasonal adjustment factors for the components of the money stock have been revised using the same X-11 ARIMA procedure adopted in 1982. Some components have not been seasonally adjusted. In some cases sufficient historical data are not yet available. In other cases the components are dominated by such a strong trend that seasonal adjustment is not likely to be successful.

A detailed explanation of the new measures was published in the February 1980 issue of the Federal Reserve Bulletin. Monthly and weekly data from 1959 to date are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, DC 20551.

Monthly data for 1961-82 for those series indicated by a star appear in appendix I to this volume.

## PAGE 72

1. Source: Beginning the fourth quarter of 1982, U.S. Department of Commerce, Bureau of the Census. Prior to the fourth quarter of 1982, the Federal Trade Commission. Quarterly estimates for all manufacturing corporations (including newspapers beginning 1969), classified by both industry and asset size, are produced from uniform, confidential income statements and balance sheets received each calendar quarter from a probability sample of all enterprises classified as manufacturers (according to the Standard Industrial Classification (SIC) through 1962; beginning 1963, according to the Enterprise Standard Industrial Classification (ESIC)) and required to file U.S. Corporation Income Tax Form 1120.

The conventional accounting concept of profits used in the estimates differs from the national income concept. In the latter, capital gains and dividends received by corporations are deducted from profits, capital losses and depletion charges are added to profits, and adjustments are made for international flows affecting profits.

The consolidated enterprise concept used in the estimates eliminates the multiple counting of all interplant and other intracompany transfers included in establishment statistics and, to the fullest extent possible, eliminates the multiple counting of all intercorporate transfers included in statistics based on unconsolidated or partly consolidated reports from multicorporate enterprises.

Due to mergers and acquistions in the prior year, data are revised in the first quarter of each year to reflect industry reclassification on a regular basis.

Quarterly estimates for 1951-82 appear in earlier editions of BUSINESS STATISTICS e reference note, p. 1 of this section).
2. Beginning with 1963 data, the industry classification is based on the ESIC. Sce note or this page.
3. Beginning fourth quarter 1973, because of changes in method of consolidation (to nimize the effect of foreign operations of multinational enterprises), data are not nparable with those for earlier periods.
4. Prior to fourth quarter 1973 for petroleum refining only.

## PAGE 73

1. Source: Securities and Exchange Commission (SEC). The data cover substantially all w securities offered for cash sale in the United States with terms to maturity of more in 1 year. The data include flotations, irrespective of whether the issues were registered der the Securities Act of 1933. The data include corporate and noncorporate issues of .5 million or less that are offered pursuant to Regulation A of the Securities Act of 33.

The data in these tables are based on material filed with the SEC in connection with 2 various acts and on questionnaires received from companies issuing securities without gistration under the Securities Act of 1933. Notices of offering are obtained from lancial publications and from special reports from leading life insurance companies, as 11 as materials filed with the SEC.
Omitted from the statistics are issues that do not appear in the financial press (mainly zurities sold through continuous offering, such as issues of open-end investment comnies and employee purchase plans), intercorporate transactions, U.S. Government pecial issues" and other direct sales to Federal agencies and trust accounts, notes issued clusively to commercial banks, and parts of issues known to have been sold outside the ited States.
The figures represent offerings, not actual sales. However, the portion of the total maining unsold is believed to be quite minor and is composed chiefly of nonunderwritten ues of small companies.
Estimated gross proceeds are derived by multiplying principal amounts or number of its by offering prices.
Definitions of the various classifications that are not self-explanatory follow: The public ility group, beginning 1948, comprises electric light and power, gas, and water; before 48. telephone and telegraph, pipelines, and street railway companies also were included. le communication group includes telephone utilities. Financial and real estate excludes vestment companies.
Monthly data for 1961-82 for those series indicated by a star appear in appendix I to is volume. Annual data prior to 1961 and monthly data for 1941-82, except as noted low, for all other series appear in earlier editions of Business Statistics (see ference note, p. 1 of this section). The correct figure for "extractive" for December 1963 $\$ 1$ million. Monthly data for 1934-40 and revisions for 1975-77 are available upon quest.

## 2. Includes data not shown separately.

3. Source: The Bond Buyer of New York. Data represent sales of securities, including ag-term refunding issues, by States and municipalities in the United States and sales of inds of U.S. territories and insular possessions and municipalities, therein. The figures slude Public Housing Authority note and bond issues, which are in effect backed by deral guarantee of payment. Also included are preliminary loan notes issued by local iblic agencies to finance urban renewal projects. These notes are secured by the full faith d credit of the U.S. Government.
Monthly data for 1961-82 for long-term State and municipal issues appear in appendix to this volume; annual data prior to 1961 and monthly data for 1929-60 for long-term iues, and 1929-33 and 1936-82 for short-term issues, appear in earlier editions of JSINESS STATISTICS (see reference note, p. I of this section). Monthly averages back to 113 and monthly data beginning 1923 are given in the 1932 volume. Revision for April 127 short-term issues is $\$ 67,252,000$; also, the October and November 1930 figures for ng-term issues in the 1932 volume are reversed. Revised monthly data for 1934-35 for ort-term issues are available upon request.
4. Revised basis, reflecting the elimination of private placement data from series. In Idition, the public exempt offerings have been excluded. Monthly data prior to 1981 that e shown in appendix 1 include private placement data and public exempt offerings.

## PAGE 74

1. Source: Board of Governors of the Federal Reserve System. Credit extended by okers are data for member firms of the New York Stock Exchange.
"Margin Credit" is all credit extended for the purpose of purchasing or carrying stocks, related instruments, subject to initial margin requirements and secured by restricted Nateral. Beginning July 1983, under the revised Regulation T, margin credit at broker:alers includes credit extended against stocks, convertible bonds, stocks acquired through ercise of subscription rights, corporate bonds, and government securities. Separate porting of data for margin stocks, convertible bonds, and subscription issues was disDigutinued fir ApriA $9 \underline{284}$. "Free credit balances" are in accounts with no unfilled commithttentsftis the brokersfand arg subject to withdrawal upon demand.

Monthly data for 1971-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Source: Standard \& Poor's Corporation. Data are based on Wednesday closing prices. An arithmetic average of yields to maturity for the 15 high-grade municipal bonds is first computed (see note 6 for this page). The resulting series is then converted to a price basis by using bond yield tables. A 4 -percent coupon with 20 years to maturity is assumed.

Annual data prior to 1961 and monthly data for 1941-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). (Revisions-dollars per $\$ 100$ bond: 1948-May, 127.1; July, 126.6; November, 125.0; 1974—June, 76.2; September, 71.0.) Monthly figures for earlier years are available upon request.
3. Source: New York Stock Exchange. Data represent volume (par value) of bond sales on the New York Stock Exchange, as reported on the ticker, computed as of the trading date. Some stopped bond sales and other sales not reported on the ticker are excluded.

Annual data prior to 1961 and monthly data for 1936-82 appear in carlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Available monthly data for 1913-35 are given on pp. 18-19 of the December 1973 SURVEY OF CURRENT Business.
4. Source: Moody's Investors Service. These averages were set up in 1928 to include 10 bonds of each rating (Aaa, Aa, A, and Baa) for each group (railroads, public utilities, and industrials), making 120 bonds in all. Since January 1, 1935, however, there has not been a full set of 10 bonds in some rating classifications because of the limited number of suitable issues. At that time the Aaa industrials contained only 7 bonds and the Aa industrials only 6, compared with 10 bonds in each of the other rating classifications; the total number of bonds was therefore 113. As of December 1986, there were 88 bonds used, distributed in each group as follows: Railroad-no Aaa, $3 \mathrm{Aa}, 6 \mathrm{~A}$, and 4 Baa bonds; public utility- 10 Aaa, $10 \mathrm{Aa}, 10 \mathrm{~A}$, and 10 Baa bonds; and industrial- $7 \mathrm{Aaa}, 10 \mathrm{Aa}, 9 \mathrm{~A}$, and 9 Baa bonds.

Occasional substitutions in the bond list have been made when ratings have been changed, when a bond has been called, when a bond sold too far above its call price, or because of approaching maturity. Suitable adjustments (usually small), which are gradually amortized, are introduced to prevent such substitutions from impairing the comparability of the series. No convertible or other unusual issues are included. Due to the lack of sufficient components outstanding, the Aaa railroad average was discontinued as of December 18, 1967.

Averages are computed as follows: A daily yield based on the closing price for each individual bond is first computed and then unweighted arithmetic averages of these yields are compiled for the different rating classifications. The corporate averages by ratings (Aaa, Aa, A, and Baa) and the group averages (railroad, public utility, and industrial) are compiled by averaging these rating-classification yields. Thus each rating group enters into the overall averages on the same basis whether it contains 10 bonds or less. The overall corporate yield average is the average of the three groups (railroad, public utility, and industrial). The monthly series are averages of daily figures and the annual series are averages of 12 monthly figures.

Monthly data for 1961-82 for Aaa and Baa bonds appear in appendix I to this volume; annual data prior to 1961 and monthly data for 1934-82 (except for revisions listed below) for all series appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions for August 1959: Industrial, 4.56; railroad, 4.80. Monthly data for 1919-33 appear in the November 1937 issue of the SURVEY OF CURRENT BUSINESS.
5. Source: The Bond Buyer. Data represent the yield of a representative bond, having a maturity of about 20 years and selling at a price close to par. Originally the series included bonds of the 20 largest cities (excluding Washington, DC). Substitutions in the list of cities have been made from time to time, as some cities paid off the bulk of their debts or for many years had no debt outstanding with a sufficiently long maturity. As of December 1986, these indexes included bonds issued by 7 cities, 10 states, 2 counties (Dade County, Florida and Nassau County, New York), and 1 territory (Puerto Rico). Data are compiled as of Thursday of each week, and the figures shown here are for the Thursday nearest the end of the month (either the last Thursday of the given month or the first Thursday of the following month).

Monthly data for 1961-82 appear in appendix I to this volume. Annual data prior to 1961 and monthly data for 1923-60 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
6. Source: Standard \& Poor's Corporation. The series is an arithmetic average of yields to maturity of 15 high-grade domestic municipal bonds. The yields are based on Wednesday closing prices and the monthly figures are averages of the four or five weekly figures for the month. (Prior to 1929 the monthly figures were based on an average of the high and low prices for the month.) These yields are used to compute the price data for municipal bonds shown on this page.

Annual data prior to 1961 and monthly data for 1923-82 (except revisions given below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions (percent): 1930-January, 4.22; 1931-July, 3.85; August 3.83; September, 3.91; October, 4.35; November, 4.42; December, 4.64.
7. Source: Board of Governors of the Federal Reserve System. Data are computed by the U.S. Department of the Treasury, based on prices reported to it by the Federal Reserve Bank of New York. Yields are based on a composite of daily closing-bid quotations in the New York over-the-counter market. Before April 1953, they were based on the mean of the closing bid-and-ask quotations.

The monthly series represents monthly averages of daily yields of bonds that are neither due nor callable in less than 10 years.

Monthly data for 1961-82 appear in appendix I to this volume; monthly figures for October 1941 through 1960 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
8. Beginning December 18, 1967, Aaa railroad bonds not included; data not comparable with earlier figures.
9. New series beginning June 1984.
10. The Aaa public utility average was suspended January 17, 1984, because of a lack of appropriate issues. The average corporate and the Aaa corporate do not include Aaa utilities from January 17 to October 12. The Aaa utility average was reinstated on October 12; the October monthly average includes only the last 14 days of the month.

## PAGE 75

1. Source: Dow Jones \& Co., Inc.; data published in The Wall Street Journal. The averages are computed from daily closing prices of representative stocks listed on the New York Stock Exchange. The industrial averages are based on 30 stocks and the transportation averages on 20 stocks for the entire period beginning October 1928 and March 1928 respectively; the public utility averages were based on 20 stocks until June 1938 when the number was reduced to 15 .

Substitutions have been made at various times in the actual stocks included in the averages, such as when a stock becomes too inactive, or when its movements, because of an extremely low price, become so small as to have little effect on the average, etc. Also, over the period covered, a number of splits have occurred in the stocks represented, and many large stock dividends have been paid. To preserve the historical continuity of the series, adjustments for these changes have been made, including appropriate adjustments of the dividing factors used to compute the averages.

At the end of December 1986 for example, instead of adding the closing prices for the 30 industrials, etc., and dividing by the number of stocks in each group, the computed daily averages were derived by using the following divisors: Industrials, 0.889 ; transportation, 1.032; utilities, 2.171; 65 stocks, 4.025 . (The latest dividing factors will be found each day in The Wall Street Journal.)

A more detailed description of the method of constructing the averages is given in "Dow Jones Averages: A Non-Professional's Guide," available from The Educational Service Bureau, Dow Jones \& Co., P.O. Box 300, Princeton, N.J. 08540.

Monthly data for 1961-82 for industrial stocks appear in appendix I to this volume; annual data prior to 1961 and monthly figures for 1934-82 for all series and back to 1923 for industrial and transportation (formerly railroad) stocks appear in the earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions of the averages: May 1938-utility, 19.09; railroad, 22.00; September 1932-railroad, 35.27; November 1929-utility, 78.98. Monthly data for the 1929-33 period for 65 stocks appear in the September 1938 issue of the Survey Of Current Business.
2. Source: Standard \& Poor's Corporation. These indexes are the series introduced by the compilers in early 1957. Since that time, the composite index has been based on 500 stocks. For the back record, the compilers standardized on the former " 90 composite" index, and the " 500 composite" was linked to the former data to provide continuous historical comparisons. Monthly averages and annual ranges for the composite, industrials, transportation, utilities, and financial are based on daily indexes. All other stock price indexes are based on weekly indexes. The data are based on weekly indexes prior to 1928 for the composite, industrials, and utilites, and prior to July 1976 for transportation and financial. For railroads, the figures from 1928 to July 1, 1976 are based on daily indexes. As of December 1986, the number of stocks included in the following indexes was: capital goods, 98; consumer goods, 178; railroads, 8; money center banks, 8; major regional banks, 9 ; and property-casualty insurance, 5 .

The formula used is generally defined as a "base-weighted aggregative" expressed in relatives, with the average value for the base period 1941-43 equal to 10 . The basic formula is modified as necessary to adjust for arbitrary price changes caused by the issuance of rights, stock dividends, splits, etc.

For a complete description of the indexes see the 1986 edition of "Security Price Index Record," published by Standard \& Poor's Corporation.

Monthly data for 1961-82 for the combined index ( 500 stocks) and the 400 industrial stocks appear in appendix I to this volume; annual data prior to 1961 and monthly data for 1953-82 (1955-82 for bank stocks) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data prior to 1953 (1955 for bank stocks) and for 1970-74 (covering 20 transportation stocks and 40 financial stocks) are available upon request. (The July 1956 figure for railroad stocks, published in the 1959 volume, should read 34.63.)
3. Includes data not shown separately.

## PAGE 76

1. See note 2 for p. 75 .
2. Source: New York Stock Exchange (NYSE). These monthly indexes, introduced in July ${ }^{1966}$, are based on the averages of the daily closing prices of all common stocks listed Digitize the N YE . When first published, the transportation index was based on 76 issues, the http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis
finance index on 75 issues, the utility index on 136 issues, and the industrial index on the nearly 1,000 NYSE-fisted common stocks not included in the other three subgroup indexes. The number of issues in each group changes slightly from time to time.

The NYSE Composite Index measures the changes in the aggregate value of all the common stocks listed on the Exchange. The index base is set at 50.00 as of December 31, 1965. Adjustments in the base market values are made, when necessary, to compensate for new listings, delistings, mergers, and price changes resulting from issuance of rights.

To provide historical continuity the index has been linked statistically to the weekly index of common stocks compiled by the Securities and Exchange Commission (SEC) for the years 1939-64. Similar in structure to the NYSE index, the SEC index encompassed 300 issues, accounting for nearly three-fourths of the market value of all NYSE-listed common stocks. The NYSE Composite Index is thus available on a daily close basis beginning May 28, 1964, and on a weekly close basis from January 7, 1939 to May 28, 1964, the four group indexes (on a daily close basis), beginning December 31, 1965.

Monthly data for June 1964-December 1982 for the composite index and for 1966-82 for the other indexes are shown in earlier editions of BUSINESS STATISTICS beginning with the 1967 edition (see reference note, p. 1 of this section). Daily and weekly indexes, as indicated in the paragraph above, are available from the New York Stock Exchange.
3. Source: National Association of Securities Dealers, Inc. The National Association of Securities Dealers Automated Quotations (NASDAQ) System included securities of 4,417 over-the-counter companies with a total market value of $\$ 362.2$ billion at the end of 1986 . The NASDAQ National Market System (NASDAQ/NMS), which covers NASDAQ securities that meet certain market and financial criteria (such as shares outstanding and asset size), includes nearly all of the more than 2,600 larger NASDAQ companies.

NASDAQ price indexes include all NASDAQ/NMS equities (except warrants) and other NASDAQ domestic common stocks not designated on NMS. They are market-value weighted and are not adjusted for cash dividends. The monthly indexes are averages of daily closing values. For NASDAQ/NMS equities, all indexes use the last sale; for non-NMS equities, the indexes use the highest bid. NASDAQ indexes were set equal to 100 on February 5, 1971, and NASDAQ/NMS indexes were set equal to 100 on July 10 , 1984.

For NASDAQ/NMS issues, total daily volume of shares sold for each issue is the sum of the volume of the reported transactions. This same concept is used by the principal exchanges. For non-NMS issues, the volume of shares sold is calculated by summing the higher of the buy or sell number of shares for each issue as entered by each NASDAQ marketmaker. This is equivalent to the net change in the marketmaker's inventory plus the number of shares that the marketmaker has both bought and sold. The market value is the monthly total of daily dollar volume for all trading days in the month. The daily dollar volume is the sum of each issue's daily share volume multiplied by the last sale price for NASDAQ/NMS issues and the closing high bid for non-NMS issues.
4. Average for 7 months (June-December).

## PAGE 77

1. Source: Standard \& Poor's Corporation. Monthly data are averages of weekly yields for each group. These yields are obtained by dividing the aggregate cash dividends (based on the latest known annual rate) by the aggregate market value of the stocks in the group. The stocks in the group are selected for their market performance rather than their dividend records (at various times some of the component companies have omitted dividends).

Annual data prior to 1961 and monthly data for 1973-82 for the composite, industrial and utilities are published in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); monthly data for periods prior to 1973 are available upon request.
2. Source: Securities and Exchange Commission. Data are on the basis of trades cleared during the month. Clearances occur some time after the transaction date. Sales of voting trust certificates, American depository receipts, and certificates of deposit are included; sales of rights and warrants are not included (note that data in the 1957 and earlier issues of BUSINESS STATISTICS include such sales). Data represent the total value and volume of stocks sold on all registered exchanges.

Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. I of this section). Revisions for New York Stock Exchange: market value-1975-December, 11,016; volume-1975-December, 423. Monthly data for October 1934-54 are available upon request.
3. Source: New York Stock Exchange. Data for volume of sales are exclusive of odd lot and stopped sales. The figures are on the basis of sales effected, instead of sales cleared as shown in the adjacent column.

Annual data prior to 1961 and monthly data prior to 1975 appear in the 1975 and earlier editions of Business Statistics. Monthly figures for 1975-82 are available upon request.

## 4. See note 3 for p. 76.

5. Source: New York Stock Exchange. Data show the market value of all stocks listed on the Exchange, and the number of shares listed. Market values are based on prices as of the close of the last market session of the month. The figures have been compiled on a monthly basis (as of the end of the month) as far back as December 1924.

End-of-year data prior to 1961 and end-of-month data for 1925-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
6. Includes revisions not distributed to the months.
7. Data through March 1948 are based on 15 stocks; for the period April 1948-August 165 on 14 stocks; thereafter, on 10 stocks.
8. Average for July-December; no data available prior to July 1976.

## PAGE 78

1. Source: U.S. Department of Commerce, Bureau of the Census. Detailed data are intained in current monthly reports FT 410 (exports), FT 135 (imports), and FT 990 xports and imports). These reports also contain a general explanation of foreign trade atistics as well as of the sampling and estimating procedures and their effect on these atistics. (See also last two paragraphs of this note regarding sampling and estimating.)
Data are compiled primarily from copies of Shippers' Export Declarations and import itries filed with the U.S. Customs officials. The statistics show the trade of the U.S. ustoms area (the 50 States, the District of Columbia, and Puerto Rico) and beginning 381, of the U.S. Virgin Islands with foreign countries. Prior to 1981, data on trade :tween the U.S. Virgin Islands and foreign countries were separately compiled and ablished, but not included in the regular trade statistics.
Exports.-Total exports reflect exports of domestic and foreign merchandise. Export gures reflect both Government and nongovernment shipments of merchandise from the .S. Customs area (and the U.S. Virgin Islands beginning 1981), with the exception of the dlowing types of shipments: (1) Merchandise shipped in-transit through the United States om one foreign country to another; (2) goods destined for the U.S. Armed Forces or U.S. plomatic missions abroad for their own use; (3) bunker fuel and supplies and equipment ir vessels and planes engaged in foreign trade; (4) nonmonetary gold and silver in the rm of ore, sweepings, scrap, base and refined bullion, etc. (beginning January 1969 silver the above-mentioned forms is included in the regular statistics; beginning January 1978, onmonetary gold is included in these forms); (5) issued monetary coins of all component retals; and (6) items of relatively small statistical importance, such as low-value or oncommercial shipments by mail, household and personal effects of travelers, and goods ir the personal use of U.S. Government employees abroad, etc.
Included in the export figures are Department of Defense Military Assistance Program irant-Aid shipments and economic assistance shipments under the Foreign Assistance Act. he data also reflect shipments of agricultural commoutites under P.L. 480 (The Agricul1 ral Trade Development and Assistance Act of 1954, as amended) and related laws. xports of uranium and other nuclear materials are also included in the data as a result of le lifting of security restrictions in 1961.
Imports.-The import statistics reflect both Government and nongovernment imports of lerchandise into the U.S. Customs area without regard to whether the importation ivolves a commercial transaction. The import statistics, in general, are a complete record f merchandise that physically moves into the United States from foreign countries (except or in-transit shipments). However, the following are excluded: American goods returned to re United States by U.S. Armed Forces; shipments of relatively small statistical signifiance, such as personal and household effects, temporary imports, and low-valued nonutiable imports by mail; issued monetary coins of all component metals; and (prior to anuary 1978) gold in the form of ores, concentrates, waste and scrap, and refined bullion. ilver in these forms is included beginning January 1969. With the lifting of security estrictions, uranium imports are included, effective January 1961.
General imports are a combination of entries for immediate consumption and entries tto bonded warehouses. Imports for consumption are a combination of entries for immeiate consumption and withdrawals from warehouses for consumption.

Export and import value.-The value reported in the export statistics is defined as the alue at the U.S. port of export, based on the selling price (or cost if not sold), including iland freight, insurance, and other charges to the U.S. port of export. The value, as efined, is equivalent to an f.a.s. (free alongside ship) value, excluding the cost of loading he goods aboard the exporting carrier and transportation or other costs beyond the port of xport. The import values, through 1973 and beginning January 1982, are customs import alues. Through 1973, customs values were as appraised by the U.S. Customs Service in ccordance with the legal requirements of Sections 402 and 402 a of the Tariff Act of 930 , as amended. They were based either on foreign market value, export value, onstructed value, or American selling price, etc., and generally represented a value in the oreign country; they therefore excluded U.S. import duties, freight, insurance, and other harges incurred in bringing the merchandise to the United States. This valuation was rimarily used for collecting import duties and frequently did not reflect the actual ransaction value. The Customs import value, as of January 1982, reflects the value of nports as appraised by the U.S. Customs Service in accordance with the legal requirenents of the Tariff Act of 1930, as amended (most recently by the Trade Agreements Act f 1979). This Customs value as amended by the Trade Agreements Act of 1979, is enerally defined as the price actually paid or payable for merchandise when sold for xportation to the United States, excluding U.S. import duties, freight, insurance, and ther charges incurred in bringing the merchandise to the United States. In the case of ransactions between related parties, the relationship between buyer and seller should not nfluence the Customs value.

In the case of overland shipments originating in Canada only, the Customs value enerally does not include costs incurred in bringing the merchandise from the interior oint of origin to the Canadian border point.

In those instances where assistance was furnished to a foreign manufacturer for use in Droducing an_article which is imported into the United States, the value of the assistance Digequired to be meluded in the Customs value reported for the merchandise. Such http://fraser.stlouisfed.org/
"assists" include both tangible and intangible assistance, such as, machinery, tools, dies and molds, blue prints, copyrights, research and development, and engineering and consulting services. Therefore, unit values for some imports, if derived by using the Customs value, may be substantially increased due to the inclusion of such "assists."

From January 1974 through December 1981, imports are valued on a f.a.s. basis. The f.a.s. value represents the transaction value of imports at the foreign port of exportation; it is based on the purchase price, i.e., the actual transaction value and generally includes all charges incurred in placing the merchandise alongside the carrier at the port of exportation in the country of exportation.

Sampling and estimating shipments.-For Canada, the 10 -percent sample was maintained and applied to shipments valued \$100-\$1,999; \$251-\$1,999; and \$501-\$1,999 effective January 1963, October 1969, and March 1979 respectively. For countries other than Canada, using a 50 -percent sample, data were estimated for shipments valued \$100-\$499 (July 1953 through September 1969), \$251-\$499 (October-December 1969 and September 1970 through February 1978), from January through August 1970 export data were fully compiled, $\$ 251-\$ 999$ (March 1978 through February 1979) and $\$ 501-\$ 999$ (March 1979 through June 1981). Effective July 1981 through December 1984, the statistics for countries other than Canada, reflected fully compiled data for shipments valued over $\$ 500$. The estimated data for the above-mentioned low-valued shipments are combined with fully compiled data for the nonsampled shipments to produce the commodity, country, and other totals shown in the export statistics. Effective January 1985, export statistics are fully compiled on shipments valued over $\$ 1,000$ to all countries. Value data for shipments valued under $\$ 1,001$ are estimated for individual countries using factors based on the ratios of low-valued shipments to individual country totals. The statistics also include estimates for shipments valued under \$100 prior to October 1969, and under \$251 from October 1969 to February 1979, under $\$ 501$ from March 1979 through December 1984, and under $\$ 1,001$ since January 1985 in country totals but are not classified by commodity.

In the import statistics, data for informal entries (generally containing items valued under $\$ 251$ ) and various types of formal entries valued under $\$ 100$, in general, were estimated prior to June 1965, usually from a 1 -percent sample. Data for both formal and informal entries valued under $\$ 251$ have been estimated since July 1965, based on a 1-percent sample for all years except 1967 and 1970, when a 5 -percent sample was used. The estimates, although not classified by commodity, are included in country and other import totals. Prine to lanuary 1985, the total value of the estimated low-valued shipments generally amounts to less than 1-percent of the import total. Effective August 1982 through December 1984, shipments valued under \$251 are estimated from factors based on the ratios of under- $\$ 251$ shipments to individual country totals. Effective January 1985, import statistics are fully compiled on shipments valued over $\$ 1,000$ except for articles which must be reported on formal entries when valued over $\$ 250$. The total value of the estimated low-valued shipments generally amounts to slightly less than 4 percent of the import total.
2. Export statistics generally show country of ultimate destination as known to the exporter at the time of shipments; if this is not known, country of consignment.

Imports are shown by country of origin, except that where the importer cannot readily obtain information as to the country of origin, the country of shipment is reported. In addition, countries reported as origin may actually represent shipment for merchandise that is transshipped before it reaches the United States.

Monthly data for 1961-82 for those series indicated by a star appear in appendix I to this volume. Annual data prior to 1961 and monthly data for 1955-82 (except minor revisions for 1956 exports to Canada) are in earlier editions of BUSINESS STATISTICS.

Monthly figures for 1951-54 appear in the 1957 and 1955 editions of BUSINESS STATISTICS; however, data for January-May 1954 for total exports and for Europe have been revised to include $\$ 3,500,000$ additional shipments to Turkey; also, the 1952 monthly averages for Europe, Northern and Southern North America, and South America as shown in the 1955 volume are incorrect (see later volumes). Monthly figures for 1949 and 1950 appear in the 1953 volume; those for 1947 and 1948, in the 1951 volume (there have been scattered revisions of the published figures). Monthly data for 1941-46 (except revisions mentioned below) are shown in the 1949 and 1947 volumes. Most of the published 1946 monthly figures have since been revised. There have been minor revisions in the 1944 monthly data for general imports for total Latin American Republics; revisions for August and October 1943 for the same series are $\$ 131,401,000$ and $\$ 129,775,000$ respectively. Also there have been revisions for 1942-46 of certain previously published monthly figures for imports, to adjust for revaluation of tin-ore imports.

Monthly averages back to 1913 and monthly figures for 1938-40, except for Colombia and Venezuela, are available in the 1942 SUPPLEMENT. Monthly figures for 1923-37 for total exports, including reexports, total general imports, and exports and imports for geographic regions, and for Argentina, Brazil, Chile, Mexico, Canada, United Kingdom, France, Germany, Italy, and Japan are shown in the 1940, 1938, 1936, and 1932 volumes. The published figures are correct except for minor revisions in the figures in the 1932 volume and two major changes as follows: Total exports, including reexports, August 1929, $\$ 380,565,000$; Europe, total, April 1931, \$94,634,000.
3. Data are adjusted for working day and seasonal variation by the Census Method II Seasonal Adjustment Program. A description of the advantages of this method (and how to evaluate its results) appears in "Electronic Computer and Business Indicators" by Julius Shiskin, National Bureau of Economic Research, Occasional Paper 57, New York. The Bureau of the Census Technical Paper Number 15 (1967 revision), "The X-11 Variant of the Census Method II Seasonal Adjustment Program," presents a description of the adjustment process as performed by electronic computer, the many options available to the user, and a sample of the computer printout of an adjusted series.

Monthly data for 1961-82 on a seasonally adjusted basis appear in appendix 1 to this volume.
4. Beginning with the 1963 volume of BUSINESS STATISTICS, Australia and Oceania (formerly included with Asia) are shown separately.
5. Formerly United Arab Republic; present designation effective January 1972.
6. Formerly Union of South Africa; present designation effective January 1962.
7. See 3d paragraph of note 1 for this page regarding the inclusion of nonmonetary gold and silver ores, base bullion, and refined bullion, etc.
8. Effective with January 1986 data, the practice of adjusting exports and imports for seasonal and working-day variations was discontinued.

## PAGE 79

1. See note 1 for p. 78 for a general description of foreign trade; also, see note 2 for that page for references to the availability of monthly data prior to 1983.
2. Comprises Union of Soviet Socialist Republics in Asia and Europe.
3. Comprises the 20 Latin American Republics.
4. Annual data for agricultural and nonagricultural products have been revised for recent years; the revisions are not available by months. Therefore, the data for months will not add to the totals for the year; also, because of rounding, the two components will not equal total U.S. exports.

For total exports and agricultural and nonagricultural totals, annual data prior to 1961 and monthly data for 1929-82, except as noted below, will be found in earlier editions of BUSiness Statistics (see reference note, p. I of this section). The January-May 1954 data for total U.S. merchandise exports and for total nonagricultural exports, as published in the 1957 and earlier editions of BUSINESS STATISTICS, have been revised. Also, the 1947 and 1948 figures shown in the 1951 volume have been revised. There have been minor revisions in the 1946 data and in the figures in the 1932 SUPPLEMENT. Monthly averages for total agricultural and nonagricultural products shown in the 1942 SUPPLEMENT for years prior to 1919 are for fiscal years ending June 30 .
5. See 3d paragraph of note 1 for p. 78 regarding the inclusion of nonmonetary gold, silver ores, base bullion, and refined bullion, etc.

## PAGE 80

1. See note 1 for p. 78 for a general description of foreign trade statistics.
2. The data for commodity groups and principal commodities shown here and since the 1967 volume replace those shown in earlier volumes of BUSINESS STATISTICS by economic classes and principal commodities. Because of regrouping of commodities and changes in the export commodity classifications, it is not possible to make direct comparisons between these groups and those in the earlier volumes. More detailed commodity information for current periods appears in the Bureau of the Census reports FT990, Highlights of U.S. Export and Import Trade, the FT410 for exports, and FT135 for imports. Monthly data for 1965-82 are in the 1969 and later editions of BUSINESS Statistics.

## PAGE 81

Digitized. Sec hres for p. 78 regarding valuation of imports
insports or U.S. flag commercial vessels chartered by the Department of Defense under ne, voyage, and space charter arrangements); (4) for the periods July 1953-December 155 and July 1956-December 1962, shipments individually valued less than 500 ; for the :riod January-June 1956, shipments individually valued less than 1,000 ; and beginning nuary 1963, shipments to Canada individually valued less than 2,000 and those to other untries individually valued less than 500 . However, the annual data (except for 1964) clude estimates for the 100-499, the 100-999, and the 100-1,999 shipments, based on a )-percent sample of such shipments. (Prior to July 1953, export shipments of less than 10 were excluded.) Effective January 1985, shipments to all countries valued 1,000 or less e excluded.
Vessel import figures are general imports and represent the total of imports for ımediate consumption plus entries into Customs-bonded storage and manufacturing waresuses made at U.S. Customs area from foreign countries. The following elements are :cluded from the vessel import figures: (1) American goods returned by the U.S. Armed orces for their own use; (2) import shipments on Army or Navy transports and, effective ith April 1952 statistics, on vessels under time and voyage charter to the Military Sea ransportation Service; (3) prior to 1954, import shipments valued at less than 100 where te shipping weight was less than 10,000 pounds; from January 1954 to December 1957, uports valued at less than 100 (irrespective of weight) and those having a shipping weight less than 2,000 pounds (irrespective of value); from January 1958 to June 1965, those lipments having a value of less than 100 regardless of shipping weight; from July 1965 to ecember 1984, those shipments valued 250 and under reported on both formal and formal entries. Effective January 1985, shipments valued 1,000 or less are excluded. The following types of shipments are excluded from both the vessel export and import tta: (1) Shipments of household and personal effects; (2) shipments by mail and parcel ost; (3) shipments of vessels under their own power and afloat; (4) merchandise shipped bond through the United States in transit from one foreign country to another "without aving been entered as an import" (imported merchandise cleared through Customs and ibsequently reexported is included in both the import and export statistics); (5) U.S. ade with Puerto Rico and with U.S. possessions and trade between U.S. possessions.
Annual data are statistical-year totals, and monthly data are on a statistical-month asis; i.e., they are tabulated from reports received in the month, regardless of when the lipment was made.
Monthly figures for 1951-58 (statistical-month basis) for shipping weight will be found 1 the 1961, 1959, 1957, and 1955 editions of BUSINESS STATISTICS (data therein are in ing tons; they should be multiplied by 1.12 for comparability with figures now shown in 1ort tons). Monthly data for 1959-82 for shipping weight and value appear in the 1963 nd subsequent editions of BUSINESS Statistics (see reference note, p. 1 of this ection); those for periods prior to 1959 for value are available in the reports of the source gency.
5. Beginning January 1965, data are not strictly comparable with those for earlier eriods because of the inclusion of "special category" items removed from the restricted st.
6. See note 1 for p .78 regarding valuation of imports.

## PAGE 85

1. Source: Department of Transportation, Research and Special Programs Administraon, Transportation System Center; formerly Civil Aeronautics Board (CAB). Data cover zheduled and nonscheduled services of all certificated route air carriers. Scheduled service zfers to transport service operated according to published flight schedules, including extra ections and related nonrevenue flights. Nonscheduled service refers to revenues from lights, such as charter flights, that are not operated in regular scheduled service.

Beginning January 1981, data are not directly comparable with earlier data. The hanging nature of airline operations under deregulation necessitated a reevaluation and estructuring of air carrier groupings. The data are classified in two broad operational roups, "domestic" and "international". The "domestic" group encompasses operations ithin and between the 50 States and the District of Columbia, the Commonwealth of 'uerto Rico, and the U.S. Virgin Islands; Canadian transborder; and for certain carriers, 4exican transborder operations. All other operations are considered "international." Prior s 1969, operations between the 48 States and Alaska or Hawaii are included in the iternational category.

A "revenue passenger-mile" represents 1 revenue passenger transported 1 mile in evenue service. Revenue passenger-miles are computed by summing the products of the evenue aircraft miles flown on each inter-airport hop multiplied by the number of revenue assengers carried on that hop. Effective January 1974, revenue passengers were redefined o exclude travel and cargo agents and tour conductors traveling under reduced-rate ransportation. For earlier periods, nonrevenue passengers covered only airline employees nd their families traveling for token charges. For the months of December 1974 and放cember 1973, the percentage of nonrevenue passenger-miles to total passenger-miles is s follows (percent): Total certificated route carriers, 5.8 and 3.9 ; domestic, 5.5 and 3.8; iternational, 7.1 and 4.3.
"Revenue passenger-load factor" represents the percent that revenue passenger-miles re of available seat-miles in revenue passenger service. "Total revenue ton-miles" applies Digitheetotal of passenger plus nonpassenger traffic, i.e., the sum of passenger and baggage, htreightasepress UiStemailgand foreign mail. "Revenue ton-mile" is 1 ton ( 2,000 pounds) of httrightaserestiouistem.ong
Federal Reserve Bank of St. Louis
revenue traffic transported 1 statute mile ( 5,280 feet). "Ton-miles" are the product of aircraft miles flown on each inter-airport hop multiplied by the number of tons carried on that hop.

Monthly and quarterly data for 1967-82 are in the 1984 and earlier editions of BUSINESS STATISTICS. Data prior to 1967 are available in the CAB monthly report, "Air Carrier Traffic Statistics" and the quarterly, "Air Carrier Financial Statistics." The series shown in the 1969 and earlier editions of BUSINESS STATISTICS are for domestic trunk carrier operations only.
2. Total includes other revenues not shown separately.
3. Beginning 1969, operations between the 48 States and Alaska and Hawaii are included in the domestic group and excluded from the international group of carriers. Traffic statistics for 1969, comparable with data for earlier years, for domestic and for international operational operations, respectively, are as follows: Passenger-miles (billions), 95.95; 29.47; cargo ton-miles (millions), 1,971; 1,385; mail ton-miles (millions), 616; 729.
4. Beginning 1974, comparison of operating revenues and expenses with prior periods is affected by revised reporting regulations-"other" transport-related revenues and expenses are reported gross in operating revenues and in expenses rather than as net in operating revenues. For 1974, for total certificated route carriers, the effect of the reporting change increased operating revenues and expenses by less than 3 percent.

## PAGE 86

1. See note 1 for p. 85.
2. Source: American Public Transit Association. Data are estimated totals for all organized local passenger transportation agencies (publicly and privately owned) in the United States. The estimates of passengers carried are based on reports from member and nonmember companies whose operations represent approximately 85 percent of the total industry.

The urban transit industry covers local motor bus, railway (subway, elevated, and surface lines), and trolley coach traffic. Excluded from the figures are long distance interstate motor carriers, suburban or commuter railroads, sightseeing buses, school buses, and taxicabs.

Beginning 1972, data have been restated to cover all "unlinked passenger trips," rather than revenue passengers as in the previous series. Each time a rider boards a transit vehicle it is counted as an "unlinked passenger trip." For example, a rider who transfers from one bus to another bus in going from origin to destination takes two "unlinked passenger trips" regardless of whether that rider uses a revenue transfer, a frec transfer, or no transfer at all.

Monthly data for 1972-82 for the new series are available upon request; monthly data for 1947-76 for the old series appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
3. Source: Interstate Commerce Commission (ICC). The data are compiled from reports from a varying number of regulated carriers that furnish complete reports to ICC. The 100 carriers listed are generally the largest class I U.S. motor carriers of property based upon the previous year's revenues with the following exceptions. Effective January 1980, contract carriers are not included because the data filed by these carriers were substantially reduced in scope, in accordance with ICC'S revised reporting regulations. Class I carriers are defined as follows: Effective January 1980, average of 5 million dollars or more; 1973-79, average of 3 million dollars or more; 1955-72, average of 1 million or more; 1949-54, 200,000 or more; 1947-48, 100,000 or more.

Effective with 1976, data are for the 100 largest class I carriers (accounting for approximately 80 percent of all revenue). They are for intercity carriers of all types of commodities comprising common carriers of general and special commodities and intercity contract carriers and include both common and contract services of these carriers. Operations of local carriers are not included. Beginning 1973, data refer to actual tonnage carried; earlier data, to billed tonnage.

Annual data prior to 1961 and quarterly data for 1951-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: American Trucking Associations (ATA), Inc., Division of Research and Economics. The index (calculated by the link relative method) is based on the ATA monthly survey of class I and class II intercity motor carriers of general freight; the sample used for the month represents at least one-half of the total class I and class II regulated general freight tonnage moved that month. The index is adjusted for seasonal variation and for the number of trading days in accordance with factors developed by the U.S. Department of Commerce, Bureau of the Census, based on data supplied by the ATA.

Beginning 1974, comparison of tonnage carried with prior periods is affected by a change in reporting actual tonnage carried instead of tonnage billed.

The original quarterly reports for carriers of general freight and of liquid petroleum products show tonnage by region and by type of carriage. They also provide comparative data (not adjusted for seasonal variation) for reporting carriers by regions and tonnage. Revised monthly indexes (1957-70) are available upon request.

## 5. See note 3 for p. 85.

6. See 3d paragraph of note 2 for this page regarding change affecting comparability of data.
7. See note 4 for p. 85 .
8. See 2 d paragraph of note 3 for this page regarding comparability of data.
9. Beginning Jan. ${ }^{\circ} 1981$, data are not comparable with earlier data because of the inclusion of commuter railroads and a sample of small transit systems.

## PAGE 87

1. Source: Association of American Railroads. Data cover class I railroads (see note 5 for this page) and exclude switching and erminal companies.

Net railway operating income is the difference between railway operating revenues and the total of railway operating expenses, railway tax accruals, and net equipment and joint facility rents. Ordinary income is calculated after "income from nonrailroad operations" is added and interest on debt and other fixed charges are deducted. (Prior to 1967, ordinary income was reported as net income). Ton-miles refer to 1 ton of freight moved 1 mile.

Quarterly data will not add to annual totals because of frequent changes in the railroad industry due to reclassifications and mergers.

Annual data prior to 1961 and monthly or quarterly data for 1934-82 are in earlier editions of BUSINESS STATISTICS.
2. Includes mail, express, and other operating revenue not shown separately. Effective 1974, mail and express revenues are included in freight revenues; for the years 1971, 1972, and 1973, total mail and express revenues are as follows (millions of dollars): 133.3; 100.7; 86.2
3. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). The index measures changes in prices of shipping goods by rail in the United States. It reflects price changes for all line-haul railroad shipments and it is not influenced by changes in quantity, shipping terms, types of service, etc. The index is not intended to measure changes in railroad revenues or shipper costs that result from changes in service or mode.

The price index is derived from a sample of shipments from the Interstate Commerce Commission's 1 -percent waybill sample. BLS obtains data on quantities of goods shipped (and other specifications for each shipment) from the waybill selected for pricing. The index relates to the movement of a specific quantity of freight between two specific locations (line-haul service) and any requested services. Identical shipments of commodities are used and are defined by precise specifications to incorporate the principal pricedetermining factors. Therefore, the prices used in the index conform with the concept of the railroad's price for shipping a fixed set of commodities under specified conditions. The prices used are the rates in effect on the 15 th of each month for identical shipments of commodities; the prices are derived from schedules (tariffs) published by the carriers.

Monthly indexes for 1969-82 are in the 1975-84 editions of BUSINESS STATISTICS (1969 and 1970 are in the descriptive note of the 1975 edition). A detailed explanation of concepts, methods, uses, and limitations appears in the June 1975 Monthly Labor Review, together with rail freight monthly price indexes for 11 commodity groups for 1969-74.
4. Source: Laventhol \& Horwath. The data reflect reports received from several hundred transient hotels, full-service motor hotels, and economy hotels operating throughout the year. In 1952, the hotel survey was broadened from the smaller, postwar sample to include a large number of cities and regions. Prior to 1972, adjustments were made gradually for changes in the types and number of hotels participating in the survey. Beginning in 1972, figures for hotels (and restated data for the prior year) reflect changes in the composition of the sample. Therefore, data prior to 1971 are not directly comparable with figures shown beginning in 1971.

Data for average sale per occupied room refer to room revenue, that is, average daily rent and not to scheduled room rates.

The restaurant sales index for each month is related to the corresponding month of the base year 1967. As the sample varies from month to month, it is necessary to compute the index from percentage changes (the given month as compared with the corresponding month in the preceding year) based on the reports received. The index represents the hotel and motor hotel industry only and includes both food and beverage sales.

Annual data prior to 1961 and monthly data for 1929-82 for hotels appear in earlier editions of BUSINESS STATISTICS. Annual and monthly data beginning May 1971 for motor hotels are available in earlier editions of the BUSINESS STATISTICS (see reference note, p.l of this section). Annual and monthly data beginning in 1980 for economy hotels are available upon request or from the source.
5. Effective 1978, class I roads are defined as those having annual operating revenues of 50 million or more; for the period 1975-77, 10 million or more; for the period 1965-74, 5 million or more; for the period 1956-64, 3 million or more; and prior to 1956, 1 million or more. The net effect of the changes in classification of the carriers for the summary data shown here is minor.
6. Beginning 2d quarter 1971, data for the National Railroad Passenger Corporation (Amtrak) are excluded.
7. Beginning 1984, data are calculated on 1983 year-end depreciation accounting basis.

## PAGE 88

1. Source: U.S. Department of Justice, Immigration and Naturalization Service (INS) (through 1975), and U.S. Department of Transportation (from INS records beginning 1976). Data are compiled from passenger manifests or lists required by law and from regulations prepared for vessels and aircraft traveling between the United States and Digiforeign countries E(Planes carrying passengers on flights originating or terminating in Digitzeada are exempt from the manifest requirement.)
Federal Reserve Bank of St. Louis
rvices, and other toll service revenues. Miscellaneous revenues includes telegraph com issions, directory advertising and sales, rent revenues, revenues from general services and enses, and other operating revenues.
Subscriber station revenues are local service revenues from business and residence bscribers' service and from semipublic service; including revenues from main stations, 'ivate branch exchange systems, order turrets, and other subscribers' stations. Also cluded are local service revenues from mileage charges and auxiliary equipment when mnected with subscribers' service
Message tolls are toll service revenues from the transmission of messages over general Il switching networks charged for on a per-message basis, including revenues from lessages transmitted entirely over the company's own lines and amounts from division of Il service revenues for messages transmitted partly over the company's lines and partly rer lines of other companies. Revenues from guarantees at toll stations and from toll rminals, other local loops, and related facilities and equipment furnished in connection ith message toll services are included. Also included are revenues from teletypewriter change service, toll charges, and charges for monthly service equipment, installations toves, and directory listings
2. Source: Federal Communications Commission (FCC). Data are compiled from ronthly reports of telegraph carriers each having annual operating revenues in excess of 50,000 beginning 1948. Because of federal deregulation, carriers are free to enter both omestic and international markets. Previously, carriers were limited either to domestic or verseas markets. The 1982 and earlier editions of BUSINESS STATISTICS showed separate ries for domestic and international operations.
Figures for operating expenses include depreciation. Net operating revenues are total perating revenues less operating expenses, depreciation, operating taxes, and miscellaneous perating revenues deductions. The item includes no deduction for income taxes
Annual data and quarterly or monthly data for 1943-82 for domestic operations are in le 1982 and earlier editions of BUSINESS STATISTICS For overseas operations (annual ata, 1939-82 and quarterly data, 1963-82), refer to the 1967-1982 editions of BUSINESS TATISTICS.
3. Beginning 1961, figures are not comparable with earlier periods; see 3d paragraph of ote 3 for this page regarding new definitions of visits.
4. Investment tax credits were first available in 1962. If they had been accounted for in 962 as they are accounted for beginning with the year 1963, operating income in 1962 ould be approximately 50 million less ( $1,625,000,000$ ).
5. See 2d paragraph of note 1 for this page regarding change in comparability in data.
6. Data for 1984 are not comparable to 1983 because of court ordered divestiture.

## PAGE 89

1. Source: U.S. Department of Commerce, Bureau of the Census. Data cover all known ommercial manufacturers of the selected chemicals (except as indicated in the note of odium silicate) and represent the "primary" manufacture of the various chemicals, ocluding quantities produced for further processing in the same plant, for intracompany ransfer, and for sale to other companies. In some cases, data are included for material roduced "in process" as an intermediate to the end product.
The figures are believed to be essentially complete except, in some years, for quantities f various chemicals produced by plants either owned or operated by the Federal Govern aent or operated solely for its account. It should be noted, however, that production of ertain chemicals by plants operated by the Tennessee Valley Authority and production of ertain chemicals (such as nitric acid, sodium sulfate, and sulfuric acid) in Government wned, privately operated plants are included

Except as indicated in the following paragraph, annual data prior to 1961 and monthly lata for 1941-82 (1955-77 and 1979-82 for acetylene and 1955-82 for sodium sulfate) ppear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this ection).

Monthly data for the indicated years for the following series are available upon request: tcetylene (1952-54, 1978, revised), aluminum sulfate (1958-68 and 1971, 1972, revised), mmonia, synthetic anhydrous (1978, revised), ammonium nitrate (1949-54, 1956-62, 966-68), ammonium sulfate (1949-68), hydrocholoric acid (1978, revised), nitrogen soluions (1958-63, 1965-68), phosphorous (elemental) (1954-68), phosphoric acid (1978, evised), sodium hydroxide (1972 and 1978, revised), sodium silicate (1978, revised), odium sulfate (1941-54), sodium tripolyphosphate (1950-68), sulfuric acid (1977-78, evised), titanium dioxide (1958-68), hydrogen (1949-60, 1963, 1964, 1966-68, 1978, evised), nitrogen (1954, 1955, 1957-60, 1966-68, 1978, revised), and, oxygen (1978, evised). Monthly data beginning 1969 (except those revisions mentioned above) for these eries appear in the 1973 and subsequent editions of BUSINESS STATISTICS (see reference lote, p. 1 of this section).
2. Data exclude quantities produced and consumed in municipalities.
3. Data include white (yellow) and red phosphorus.
4. Data cover soluble silicate glass, liquid and solid. Amounts produced and consumed n making meta-, ortho-, and sesquisilicates are excluded.
5. This series, representing high and low purity of sodium sulfate including Glauber's alt, was first shown in the 1959 BUSINESS STATISTICS and supersedes the series for odium sulfate shown in the 1957 and earlier volumes.
Digitize the 1977 BuSINESS STATISTICS, data for production of sodium sulfate was titled Digitized
http: I/frectly aser.stlouisfed.org

Annual data prior to 1961 and monthly data for 1941-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section). Revisions for 1941 and 1946 appear in footnote 5 for p. 125 of the 1959 edition of BUSINESS STATISTICS.
9. See 1st paragraph of note 7 for this page regarding change in coverage.
10. Annual total reflects revisions not distributed to the months.
11. See 5th paragraph of note 7 for this page.
12. Reported annual total; includes data being withheld to avoid disclosure of operations of individual firms.
13. See 2d paragraph of note 6 for this page.
14. Less than 500 short tons.

## PAGE 91

1. See note 1 for p .89 .
2. Data exclude information from railroad shops, shipyards, welding shops, and small establishments using portable generators.
3. Data include an unspecified amount of hydrogen produced for sale or transfer to plants consuming hydrogen in the production of ammonia, but exclude amounts produced by the ammonia dissociation process (cracking of ammonia)

Beginning January 1969, data exclude amounts produced in petroleum refineries for captive use and are not comparable with those shown for earlier periods
4. Low purity nitrogen (less than 99.5 percent) included beginning January 1971. Data exclude amounts produced and consumed in the manufacture of synthetic ammonia or ammonia derivatives.
5. Low purity oxygen (less than 99.5 percent) included beginning January 1970. Data exclude amounts produced and consumed in the manufacture of synthetic ammonia or ammonia derivatives.
6. Source: U.S. International Trade Commission (formerly U.S. Tariff Commission), with the exception of data for glycerin, which are furnished by the U.S. Department of Commerce, Bureau of the Census. Data cover estimated industry totals of the specified product and include production for sale and for consumption, if any, in the producing plants. Except for ethyl acetate (prior to 1985) and formaldehyde, the products are reported on the basis of 100 percent content of the specified material.

Any differences between the annual data and the sum of monthly or quarterly data, are the result of revised annual totals, for which there are no corresponding monthly or quarterly revisions.

In the 1955 and earlier editions of BUSINESS STATISTICS, glycerin data were shown separately for high gravity and yellow distilled and for chemically pure glycerin; they should be combined for comparability with data in later editions.

Effective with the 1969 BUSINESS STATISTICS, methanol production data cover synthetic only. Data published in the 1967 and 1965 BUSINESS STATISTICS are for natural and synthetic methanol combined; and, in the 1963 and earlier editions the two components were shown separately.

Annual data prior to 1961 and monthly data for 1943-82 (1951-82 for formaldehyde, 1941-82 for glycerin, 1939-82 for methanol, on bases described above) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1946-50 for formaldehyde are available upon request.
7. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. Data for operations, as defined below, cover the United States and Puerto Rico.

Production figures are net, i.e., gross production (original production plus production by redistillation) minus the quantity used in redistillation and cover alcohol and spirits produced by facilities of distilled spirits plants.

Stock figures represent alcohol and spirits in bonded storage at distilled spirits plants, including stocks in denaturing facilities of these plants. A tax gallon for spirits of 100 proof or over is the alcoholic equivalent of a U.S. gallon at $60^{\circ} \mathrm{F}$., containing 50 percent of ethyl alcohol by volume; for spirits of less than 100 proof, the tax gallon is equal to the wine gallon. A wine gallon is a U.S. gallon of liquid measure equal to the volume of 231 cubic inches. Data shown in the 1961 and earlier editions are expressed in proof gallons, which, for all data covered here, are synonymous with tax gallons.

More complete data for alcohol and spirits, including details by States, are available in monthly reports published by the source.

Annual data prior to 1961 and monthly data for 1934-82, except as noted below, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section). Production of ethyl alcohol and spirits for November 1978 has been revised to 37.7 million tax gallons.
8. Annual total reflects revisions not distributed to the months.
9. See 2 d paragraph of note 3 for this page regarding exclusions beginning January 1969.
10. Beginning January 1970, data include low purity (less than 99.5 percent) oxygen and are not comparable with those shown for earlier periods. Separate data are not available for low purity oxygen
11. Beginning January 1971, data include low purity (less than 99.5 percent) nitrogen and are not comparable with those shown for earlier periods.
12. Beginning with 1985 , frequency of reporting has been changed from a monthly to a Digiquapterly babsis.
(1) Annual figure for 1977 is from the 1977 Census of Manufactures
(2) Annual figure for 1978 is from the annual survey of manufactures.
(3) Annual and monthly data for 1979-80 are the result of benchmarking the trend in e original monthly series to annual totals established for 1981-82 in the current dustrial report, Pain and Al/ied Products, MA28F(82)-I and for 1978 in the annual rvey of manufactures.
(4) Beginning with 1981, data are estimates of the total U.S. value of shipments of lint, varnish and lacquer, which were developed by increasing the product category totals ported to the Bureau of the Census by inflation factors.
These factors are used because the annual survey panel was selected to measure proximately 90 -percent of total shipments in the paint industry. The factors (based on 177 census relationships for 1981 , and 1982 census relationships for 1982 through 1986) ing each product class value up to 100 -percent.
Comparability of the annual data through 1976 , (which represent total factory sales) ith those beginning 1977 (which are total value of shipments) is not considered to be eatly affected.
Monthly data for 1981 appear in the 1984 BUSINESS STATISTICS. Monthly data for 179-80 and 1982 are available upon request. Annual and monthly data for the individual tegories shown here are not available prior to January 1979.
9. See 2 d paragraph of note 7 for this page regarding the exclusion of gata on certain blyvinyl material.
10. Effective with 1985 data, the reporting frequency has been changed to quarterly isis.

## PAGE 93

1. Source: U.S. Department of Energy, Energy Information Administration. Total oduction of electric energy is the sum of energy produced in the United States ncluding Alaska and Hawaii beginning January 1964) by electric utilities. It is caterized here as generated by fuels (i.e., coal, oil, gas, nuclear, and other, which includes sothermal, wood, and waste) and waterpower (i.e., hydroelectric).
Data for "electric utilities" are based on reports obtained from all electric supply 'stems producing for public use, and cover plants of both the privately- and municipallywned electric utilities, as well as other publicly-owned producers. This latter group is smposed of Federal projects, cooperatives, power districts, and State projects. Coverage is ibstantially 100 percent, comprising at the end of 1986 a total 3,050 generating plants zerated by 763 utilities.
Monthly data for 1961-82 for total production by electric utilities appear in appendix I 1 this volume. Annual data prior to 1961 and monthly data for 1941-60 (for total roduction of electric utilities) and 1941-82 (for production by source), except as noted zlow, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this sction). Monthly data for September 1976-December 1978 for production by source have zen revised and are available upon request.
2. Source: Edison Electric Institute. Data are estimated U.S. totals for the entire ectric light and power industry contributing to the public supply of electricity. The gures comprise operations of all private, municipal, cooperative, governmental, and Idustrial enterprises engaged in the production or distribution of electricity for the use of re public.
Owing to differences among respondents in the "commercial and industrial" classificaon and the continuous reclassification between small and large light and power comanies, year-to-year comparisons are more significant when made of total commercial and idustrial sales than when made of each separate classification.
Annual data prior to 1961 and monthly data for 1938-75 (except 1957 and 1958 for ommercial and industrial) and quarterly data for 1979-82 (except 1981 for revenue from iles), appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this sction). Monthly data for 1957 and 1958 for commercial and industrail service and uarterly data for 1981 for revenue from sales have been revised and are available upon squest. Previously published monthly data for 1976-78 have been revised and converted , a quarterly basis: these quarterly data are available upon request.
3. Beginning January 1964, includes data for Alaska and Hawaii.
4. Annual total reflects revisions not distributed to the monthly data.

## PAGE 94

1. Source: American Gas Association (AGA). Data represent complete coverage of the as utility industry (includes all regulated distribution and transmission companies but xcludes producers) in the United States. Because of the diminishing importance of ranufactured and mixed gas relative to natural gas, data listed separately for these in the 971 and earlier editions of BUSINESS STATISTICS are shown in aggregate as total utility as beginning with the 1973 edition. Sales data, presented here in British Thermal Units Btu's), are shown in the 1953 through 1971 editions of Business Statistics in therms nd in the 1951 and earlier editions (for the period 1945-48) in cubic feet. Rough onversion may be made from therms to Btu's by equating 1 therm to 100,000 Btu's, and om cubic feet to Btu's on the basis of $1,000 \mathrm{Btu}$ 's equal to I cubic foot.
 httples/and revenueafigperes.ofgglude data for gas resold.

The various classes of service are based on the primary purpose for which the gas is used or the type of customer to which a stated rate shall apply. The common classes of service as applied to ultimate customers and as recommended by the AGA for use by utilities, although not uniformly accepted, are defined below.
"Residential" applies to service supplied for domestic purposes under individual contracts in a single-family dwelling or building, or in an individual flat or apartment in a multi-family dwelling or building or portion thereof occupied as the home, residence, or sleeping place of one or more persons.
"Commercial" applies to service to customers engaged in wholesale or retail trade, agriculture, communications, finance, fisheries, forestry, insurance, real estate, transportation, etc., and to customers not directly involved in other classes of services.
"Industrial" applies to service supplied for a process that creates a product or changes raw or unfinished materials into another form or product (including electric generation) or that involves the extraction of a raw material from the earth.
"Other" applies to service to municipalities or other governmental agencies and interdepartmental sales if made under a definite rate schedule.

For periods prior to 1976, data for "Other" electric generation are included in the "Other" class of service. For the period 1976-84, data for all electric generation are included in the "Industrial" class of service. Beginning with 1985, sales and revenue data of electric generation are shown separately. However, total customers of electric generation (less than 500) continue to be included in the "Industrial" class of service. Separate data on sales and revenue of electric generation are not available for periods prior to 1985.

Quarterly data for 1973-75 (except as noted below), 1979, and 1981-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Quarterly data for 1969-72, 1975 (for revenue from sales to customers), 1976-78, and 1980 have been revised and are available upon request. Quarterly data for 1945-68 for total utility gas (comparable with annual data shown in the 1979 and subsequent editions of Business Statistics) are available from the American Gas Association; those for natural gas and manufactured and mixed gas are shown separately in the 1971 and earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. See 8 th paragraph of note 1 for this page regarding change in coverage.

## PAGE 95

1. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. Data cover operations of all breweries in the United States. The figures represent production, taxable withdrawals, and stocks (on brewery premises) of beer, ale, and other liquors produced from fermented malt. Cereal beverages (i.e., beverages containing less than one-half of 1 percent alcohol by volume) are not included.

In addition to the taxable withdrawals published here, the original reports show data for tax-free withdrawals, covering amounts withdrawn for export and for vessels and aircraft, consumed on brewery premises, and used for cereal beverages.

Annual data prior to 1961 and monthly data for 1933-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data shown in earlier editions have been revised as follows (thousands of barrels): Production-September-October 1978, 14,836 and 14,365; taxable withdrawals-September-October 1978, 13,937 and 13,327; March 1950, 6.002; stocks-September-October 1978, 14,068 and 13,892.
2. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco and Firearms. The data represent complete coverage of operations of registered distilleries and fruit distilleries.

In addition to whisky, which is shown separately, the totals for distilled spirits include rum, gin, brandy, vodka, and other distilled spirits (spirits-fruit produced at fruit distilleries; spirits-grain, spirits-cane, etc., produced at registered distilleries). Production figures are net-that is, gross production (original production plus production by redistillation) minus the quantity of distilled spirits used in redistillation.

Stocks are domestic stocks in bonded storage at distilled spirits plants, based on the original entry gage. Losses are not determined until withdrawal and, therefore, are not included except for distilled spirits in cases for which losses have already been determined.
(For statistics relating to ethyl alcohol, see p .91 of this volume.)
A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon (the alcoholic equivalent of a U.S. gallon at $60^{\circ} \mathrm{F}$., containing 50 percent of ethyl alcohol by volume). For spirits of less than 100 proof, the tax gallon is equivalent to the wine gallon (a U.S. gallon of liquid measure equivalent to the volume of 231 cubic inches).

Annual data prior to 1961 and monthly data for 1933-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1977-78, as shown in the 1979 edition, have since been revised and are available upon request.
3. Source: Distilled Spirits Council of the U.S. Data are based on sales in all States in which sales of distilled spirits are legal. The number of States permitting such sales has increased from 27 States and the District of Columbia in 1934 to 50 States and the District of Columbia in December 1966. Data are included for Mississippi, beginning July 1966 and for Hawaii, beginning January 1965. Data for Hawaii are estimated for 1969 and from July 1977 to present. For the period 1970-83, data for Hawaii are reflected only in the annual totals. Beginning with 1984, data for Hawaii are reflected in the months.

Figures for the "license" States are based on tax collections, gallonage shipments to wholesalers, or shipments by wholesalers to retailers (wholesaler depletion); those for monopoly States, on actual wholesale and retail sales reported by State liquor control authorities.

A wine gallon is the standard U.S. gallon containing 231 cubic inches.
Annual data prior to 1961 and monthly data for 1938-82 (except as indicated below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1934-37, 1940, 1944, 1968-74, and 1977-78 have been revised and are available from the source.
4. Source: U.S. Department of Commerce, Bureau of the Census. Data are imports for consumption. They include spirits, cordials, liqueurs, bitters, ethyl alcohol, and compounds containing spirits. For a general explanation of foreign trade data, see note 1 for p. 78. For definition of a standard proof gallon, see 5 th paragraph of note 2 for this page.

Annual data prior to 1961 and monthly data for 1936-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for total distilled spirits for 1957, as shown in the 1961 volume, have been revised as follows (proof gallons): June 2,252,000; November 3,651,000. (Minor revisions have been made in the 1943 figures for total distilled spirits as shown in the 1947 volume.)
5. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. The data are based on reports of all bonded wine cellars. Stocks are those on wine cellar premises. Data cover champagne, other effervescent wines, and artifically carbonated wines. In addition to the data on effervescent wines published here, the original reports show data for vermouth and special natural wines other than vermouth.

Annual data prior to 1961 and monthly data for 1938-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1978 have been revised as follows (thousands of wine gallons): Production-December, 1,526; taxable withdrawals-October, 3,268; stocks-December, 8.261
6. Source: U.S. Department of Commerce, Bureau of the Census. Data are imports for consumption. Figures for effervescent wines include champagne and all other sparkling wines. Still wines (shown on p. 96 of this volume) include vermouth, rice wine (sake), and other still wines. For a general explanation of foreign trade data see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1936-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
7. Barrels of 31 wine gallons (i.e., gallons of 231 cubic inches).
8. Reported annual total; revisions not reflected in the monthly data.

## PAGE 96

1. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. The data are based on reports of all bonded wine cellars. Production of still wines represents the amount removed from fermenters, exclusive of distilling materials produced at wineries. Stock figures (representing stocks on wine cellar premises) also exclude data for distilling materials. Data for taxable withdrawals and for stocks include vermouth and special natural wines other than vermouth.

In addition to taxable withdrawals of still wines, as shown here, the original reports from the source reflect considerable quantities of still wines withdrawn tax free for the following purposes: For use in production of effervescent wines, nonbeverage wines, and vinegar: for export; for use as distilling materials; and through September 1979, for family use and for use of the United States.

Distilling materials produced at wineries represent substandard wines produced with excessive water or residue materials that are used as distilling materials in the production of brandy

Annual data prior to 1961 and monthly data for 1936-82 (1943-82 for distilled materials produced), except as noted below, appear in earlier editions of BUSINESS Statistics (see reference note, p. I of this section). August 1953 figure for stocks should read $145,218,000$ wine gallons. Monthly data for 1977-78, as shown in the 1979 edition, have since been revised and are available upon request.
2. See note 6 for p. 95.
3. Source: U.S. Department of Agriculture, National Agricultural Statistics Service (formerly Statistical Reporting Service). Data are compiled from manufacturers' reports sent directly to the Department; data for 1986 are estimates. Total cheese production includes American-type cheese and foreign and miscellaneous types. (Swiss, Brick and Munster, Limburger, Italian, Neufchatel, cream cheese, blue mold, etc.) but excludes cottage cheese and (through 1973) full-skim American. The figures shown separately for American cheese include production from whole milk only, which generally is the basis for 99 percent or more of the total American cheese output; data represent largely Cheddar cheese but include other varieties known as Colby, Washed or Stirred curd, Jack, and Monterey.

Annual data prior to 1961 and monthly data for 1938-82 (except for some periods of 1982, where only quarterly data are shown, and for those periods noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Total cheese production figures were revised as follows: January-April 1970-166.8, 160.0, 188.0, and 194.7 respectively; June 1978-332.0; October 1978-279.4.
4. Source: U.S. Department of Agriculture, National Agricultural Statistics Service Dig(formecty Statjstical Reporting Service). Data represent stocks held in public and private Digitiled for http://fraser.stlouisfed.org/

Stocks of butter and cheese exclude those held in refrigerated space owned, leased, or operated by the armed services. Stocks are shown here as data for the end of the preceding period.

Annual data prior to 1961 and monthly data for 1932-82 (for some periods of 1982, only quarterly data) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
5. Source: U.S. Department of Labor, Bureau of Labor Statistics. First shown in the 1984 edition of BUSINESS STATISTICS. For a general explanation of Producer Price Indexes, see note 1 for p. 27.

Annual indexes for 1947-60 and monthly indexes for 1947-82 are available upon request.
6. Source: U.S. Department of Commerce, Bureau of the Census. Data for cheese are imports for consumption and include all classes of cheese.

Data for milk (shown on p. 97) are exports of condensed and evaporated milk and cream. Beginning January 1978, under a revision of Export Schedule B, condensed milk and evaporated milk (formerly shown separately) are reported as a single total, which also includes bulk shipments (in barrels, drums, and tanks) formerly excluded. As a result of this change, data for earlier periods are not comparable with those beginning January 1978. For a general explanation of foreign trade data see note 1 for p .78.

Annual data prior to 1961 and monthly data for 1929-82, except as indicated below, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Effective with the 1979 edition of BUSINESS STATISTICS, annual data back to 1947 and monthly data back to 1975 for condensed and evaporated milk have been combined to derive the total exports shown herein. Data for imports prior to 1934 are general imports. Revisions are as follows (thousands of pounds): Cheese imports, 1930-October, 6,325; December, 5,237; exports, December 1946-condensed milk 13,515; evaporated milk, 48,102 .
7. Source: U.S. Department of Agriculture, Agricultural Marketing Service. Data represent the average wholesale price of Cheddar cheese (shown in 1979 and earlier editions as American cheese), single daisies ( $20-22$ pounds of cheese shaped into a cylindrical form and wrapped in parafin), at Chicago.

Annual data prior to 1961 and monthly data for 1945-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly figures for 1929-44 are available upon request. (The prices shown in the 1947 and earlier SUPPLEMENTS are for a different series.)
8. Annual total reflects revisions not distributed to the months.

## PAGE 97

I. Source: U.S Department of Agriculture, National Agricultural Statistics Service (formerly Statistical Reporting Service). Data for production represent the entire industry for unsweetened evaporated milk and for sweetened condensed milk. The series relate to case goods produced from whole milk.

Data for stocks represent complete coverage and comprise stocks held by manufacturers at all points, those in transit, and those contracted for but not delivered.

In the 1971 and earlier editions of BUSINESS Statistics, data for production and stocks of condensed and evaporated milk were shown separately. In the 1973 and subsequent editions, these data are combined to avoid disclosing operations of individual firms. Data published in the 1971 and earlier editions should be combined for comparability with those shown herein.

Annual data prior to 1961 and monthly data for 1929-82 (except for some periods of 1982, where only quarterly data are shown, and for those periods noted below) appear in earlier editions of Business Statistics (see reference note, p. 1 of this section). January 1962 production of condensed milk should read $6,100,000$ pounds.
2. See note 6 for p. 96 .
3. Source: U.S. Department of Agriculture, National Agricultural Statistics Service (formerly Statistical Reporting Service). Data are estimated total production of milk on farms, based on daily average milk production per cow (from a sample group of farms) and the estimated number of cows on farms.

Annual data prior to 1961 and monthly data for the following years appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section): 1981-82 (for some periods of 1982, only quarterly data), 1969, 1963-64, 1957-59, 1953-54, and 1949-50. Monthly data for 1970-80, 1965-68, 1960-62, 1955-56, 1951-52, and 1929-48 as published in earlier editions have since been revised and are available upon request.
4. Source: U.S. Department of Agriculture, National Agricultural Statistics Service (formerly Statistical Reporting Service). Data represent the consumption of fluid milk in the manufacture of the principal dairy products. The products currently included in the data are creamery butter, cheese, evaporated and condensed milk (case goods), creamed cottage checse, dry whole milk, and frozen products (ice cream, ice milk, and frozen desserts). Beginning 1958, the creamed cottage cheese and frozen products were added, and account was taken of the monthly variation in production resulting from changes in milkfat content (the earlier series was based on milk of average fat content for the year).

Annual data prior to 1961 and monthly data 1961-82 (except for some periods of 1982 , where only quarterly data are shown, and for those periods noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised monthly data for 1977-78 and 1958-60 are available upon request. No comparable data are available prior to 1958.
5. Source: U.S. Department of Agriculture, National Agricultural Statistics Service rmerly Statistical Reporting Service). Data represent the average price received by mers for fluid milk including premium payments and before hauling charges are lucted for all milk sold during the month to plants and dealers. Data cover (1) Milk jible for the fluid market (i.e., eligible for fluid consumption as milk or cream including v surplus of such milk that may be subsequently diverted to manufacture) and (2) milk manufacturing grade (i.e., milk of manufacturing grade sold by farmers to creameries, zese plants, condenseries, and other plants for use in manufacturing dairy products). In nputing the monthly and annual average prices for the series shown here, weights used combine prices are estimates of quantities of each grade sold in each State each month. Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of isiness Statistics (see reference note, p. 1 of this section). Monthly data for 29-54 are available upon request.
6. Source: U.S. Department of Agriculture, National Agricultural Statistics Service rmerly Statistical Reporting Service). Data for production (except 1986 figures, which : estimates) are as reported by all firms operating dry-milk factories in the United ates. Data for stocks cover dry milk held by manufactures at all points, those in transit, d those contracted for but not delivered.
Annual data prior to 1961 and monthly data for 1941-82 (except for some periods of 82, where only quarterly data are shown, and for those periods noted below) appear in rlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised unthly data, which are available upon request, are as follows: Production of dry whole 1k (1952-55 and 1962); production of nonfat dry milk (1954-56 and 1962); and stocks nonfat dry milk (1954).
7. Source: U.S. Department of Commerce, Bureau of the Census. Data cover exports of $y$ whole milk and nonfat dry skim milk for human consumption. Shipments under the my Civilian Supply Program are included. For a general explanation of foreign trade ta, see note 1 for p. 78
In the 1947-77 editions of BUSINESS STATISTICS, these exports are shown in two parate categories (i.e., dry whole milk and nonfat dry milk). Effective with the 1979 ition, these data are combined to coincide with the January 1978 restructuring of the hedule B export commodity classification system. Data published in the 1947-77 itions should be combined for comparability with those shown in the 1979 and subseent editions. Data shown in the 1942 and earlier SUPPLEMENTS are combined totals dry whole milk and dry skim milk.
Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of JSINESS STATISTICS (see reference note, p. I of this section).
8. Source: U.S. Department of Agriculture, National Agricultural Statistics Service ormerly Statistical Reporting Service). Prices for nonfat dry milk are based on reports of anufacturers covering actual sales to jobbers, wholesalers, grocers, and similar buyers, ,.b. factory, on the basis of cash or short-term credit. The figures shown here are based prices of nonfat dry milk made by both the spray and roller process. Data exclude the ice for spray-dried nonfat milk sold in retail packages.
Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of isiness Statistics (see reference note, p. I of this section).
9. Annual total reflects revisions not distributed to the months.
10. See 2d paragraph of note 6 for p. 96 regarding changes affecting comparability of e data.
11. Effective January 1978, the export commodity classification system was completely structurcd; data may not be strictly comparable with those shown for earlier periods.
12. Average based on quotations for fewer than 12 months.
13. Effective with 1986 data, coverage has been reduced to 21 selected States, presenting approximately 85 percent of U.S. production. Comparable data for 1985 are railable upon request.

## PAGE 98

1. Source: U.S. Department of Commerce, Bureau of the Census. Data include exports barley, corn, oats, rye, and wheat, plus the grain equivalent of malt, cornmeal and corn our, oatmeal, and wheat flour as converted from the original data by the U.S. Departent of Commerce, Bureau of Economic Analysis. The conversion factors used to obtain e grain equivalent are as follows: Malt-1 bushel of malt per bushel of barley; cornmeal ind corn flour) -6.194 bushels of corn to a barrel of cornmeal (or 3.16 bushels per cwt.); atmeal-7.6 bushels of oats to 100 pounds of oatmeal; wheat flour-July 1957-December 363. 2.3 bushels; and, beginning January 1964, 2.33 bushels of wheat per 100 pounds of our. For periods when barley flour and rye flour were exported, these also are included, onverted to grain equivalent of 5.5 bushels to the barrel for barley and 6 bushels to the arrel for rye flour. The conversion factors are those used by U.S. Department of griculture and take into account changes in milling practices.

The weight per bushel for the various grains included is as follows (pounds): Barley, 48; rn (shelled) and rye, 56; oats, 32; and wheat, 60.
Shipments under the Army Civilian Supply Program are included. For a general <planation of foreign trade data see note 1 for p. 78.
Annual data prior to 1961 and monthly data for 1945-82 appear in earlier editions of Digifineiss spatitirs (see refcrence note, p. 1 of this section).
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
represent distribution "to the trade;" beginning June 1965 they also include distribution to Government agencies (shipments "to other mills" are not included). The stock figures include both milled rice and rough rice in terms of cleaned (converted on the basis of 162 pounds of rough rice to 105.3 pounds of milled); they cover rice in store mills only.

Annual data prior to 1961 and monthly data for 1947-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section). Monthly data for 1939-46 are available upon request.
6. Source: U.S. Department of Commerce, Bureau of the Census. Data cover paddy or rough rice, and milled rice; wild rice is not included. Figures are on a clean equivalent basis, with rough rice reduced on the basis of 162 pounds of rough rice to 105.3 pounds of clean. In the 1949 and earlier editions of BUSINESS STATISTICS, rough rice is converted to clean on the basis of 162 pounds of rough rice to 100 pounds of clean. Shipments under the Army Civilian Supply Program are included. For a general explanation of foreign trade data see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1947-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section). Revised data for 1933-46 are available upon request.
7. Less than 50 thousand bushels.

## PAGE 100

1. See note 2 for p. 98.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics. First shown in the 1984 edition of BUSINESS Statistics. For a general explanation of Producer Price Indexes, see note 1 for p. 27.

Annual indexes for 1947-60 and monthly indexes for 1947-82 are available upon request.
3. Source: U.S. Department of Agriculture, Economic Research Service. Data represent the disappearance of domestic wheat as used for flour (including that used for breakfast food), feed, seed, alcohol production, military procurement, and for export or shipment to outlying areas.

Effective with this edition of BUSINESS STATISTICS, data reflect a change in the reporting periods from those shown in earlier editions. The quarterly data, available back through 1976, now represent the three-month periods of December-February, March-May, June-August, and September-November. Annual data, back through 1976, now represent the new twelve-month period of December-November.
4. See note 3 for p. 98.
5. Source: U.S. Department of Commerce, Bureau of the Census. See note 1 for p. 98 regarding conversion factors. Army Civilian Supply Program shipments are included.

Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of Business Statistics (see reference note, p. 1 of this section).
6. Annual total reflects revisions not distributed to the months.
7. Effective January 1978, the export commodity classification system was completely restructured; data may not be strictly comparable with those shown for earlier periods.
8. Based on a 11-month average.

## PAGE 101

1. Source: U.S. Department of Commerce, Bureau of the Census. Data are estimated totals based on reports from commercial mills with a daily capacity of 400 sacks and over. The reported data from these larger mills (approximately 177 in 1986) account for about 98 percent of the estimated totals. Estimates for smaller mills (approximately 200 in 1986) are included on the basis of their proportion of production reported in the census of manufactures. All data relate to regular-grind flour only.

Annual data prior to 1961 and monthly data for 1947-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised monthly data for 1973-74 (for millfeed) and 1973-75 (for grindings of wheat) are available upon request. It should be noted, millfeed production was shown as "offal" in the 1979 and earlier editions of BUSINESS STATISTICS.
2. Source: U.S. Department of Commerce, Bureau of the Census. Data are based on reports from merchant mills reporting wheat-flour production and represent complete coverage (see note 1 for this page). Data cover total stocks held by reporting mills at the end of each quarter.

Annual data prior 1961 and quarterly data for 1947-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
3. Source: U.S. Department of Commerce, Bureau of the Census. See note 1 for p. 98 regarding conversion factors. Army Civilian Supply Program shipments are included. It should be noted that in the 1965-73 editions of BUSINESS STATISTICS, the unit for wheat flour exports was shown incorrectly as "thousands of sacks"; it should have read "millions of sacks."

Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: U.S. Department of Labor, Bureau of Labor Statistics. First shown in the Digifized edition of BUSINESS STATISTICS. For a general explanation of Producer Price Digitized tor fefser for p. 27. Indexes prior to June 1983 are not available. http://fraser, see notlouisfed.org/ for p /

## PAGE 102

1. Source: U.S. Department of Agriculture, National Agricultural Statistics Service irmerly Statistical Reporting Service). Data are based on calendar months or, for 1982, arters and represent the number of animals slaughtered under Federal inspection.
In 1986, slaughter under Federal inspection accounted for approximately 94 percent of calves slaughtered, 96 percent of the cattle, 97 percent of the sheep and lambs, and 97 rcent of the hogs. While the proportions of total slaughter vary from year to year, the ferences are generally not large.
Annual data prior to 1961, quarterly data for 1982, and monthly data for 1929-81 pear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this etion).
2. Source: U.S. Department of Agriculture, Agricultural Marketing Service. Prices for ef steers are for choice, $900-1,100$ pounds, Omaha, and are based on the means of the ily range of quotations. These data are not comparable with those shown in the 1973 and rlier editions of Business Statistics. The price of stocker and feeder cattle shipped mm Kansas City is the average price of all weights of such cattle, weighted by the mber shipped for each weight group. The annual averages for these series are the erages of the monthly figures weighted by the quantities of all grades (or weights) ipped within each month.
For beef steers, Omaha, monthly data for 1971-82 appear in earlier editions of JSINESS STATISTICS (see reference note, p. I of this section). Annual data for 1955-60 id monthly data for 1955-70 are available from the source.
For stocker and feeder cattle, annual data prior to 1961 and monthly data for 1938-82 'pear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this ction).
3. Source: U.S. Department of Agriculture, Agricultural Marketing Service. Monthly ita are averages per 100 pounds of choice grade veal calves, South St. Paul, which are ised on the means of the daily quotations.
This series is not comparable with data published in the 1975 and earlier editions of jsiness Statistics.
Annual data for 1957-60 and monthly data for 1973-82 appear in earlier editions of USINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 157-72 are available upon request from the source.
4. Sources: U.S. Department of Agriculture, Agricultural Marketing Service (AMS) id National Agricultural Statistics Service (NASS), formerly Statistical Reporting Serce. The hog price (from AMS) represents the weighted average cost per 100 pounds of ıckers' and shippers' purchases of barrows and gilts at Sioux City.
The hog-corn price ratio (from NASS) represents the number of bushels ( 56 pounds) of elled corn equal in value to 100 pounds of hog (live weight); it is based on average ices received by farmers on the 15 th of each month for all grades of corn and all grades hogs.
Beginning 1970, the annual averages for the hog-corn price ratio are for a market year Jecember-November) instead of a calendar year as formerly.
Annual data prior to 1961 and monthly data for 1967-June 1970 and 1973-82 for the -ice of hogs appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 this section). Comparable monthly data for 1965, 1966, and July 1970-December 1972 -e available upon request.
Annual data prior to 1961 and monthly data for 1941-58 and 1965-82 for the hog-corn -ice ratio appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of is section). Monthly data for 1959-64 have been revised and are available upon request.
5. Source: U.S. Department of Agriculture (USDA), Agricultural Marketing Service tMS). Monthly data are averages of weekly figures, which are based on the means of the aily range of quotations. July-September prices are quotations for spring lambs; those for lay and June are for wooled and shorn lambs from the preceding year's crop and spring ambs from the current year's crop. From October through early spring, prices are for ooled lambs.
The average price of lambs at Omaha is based on the bulk of sales prices from data of ie USDA, AMS, Livestock and Meat Reporting Service.
Annual data prior to 1961 and monthly data for 1967-82 appear in earlier editions of USINESS Statistics (see reference note, p. 1 of this section). Monthly data for 957-66 are available upon request.
6. See 3d paragraph of note 4 for this page.
7. Average based on quotations for fewer than 12 months.

## PAGE 103

1. Source: U.S. Department of Agriculture, National Agricultural Statistics Service iormerly Statistical Reporting Service). Beginning with the 1977 edition of BUSINESS TATISTICS, data are for total commercial slaughter and are not comparable with those nown in the 1975 and earlier editions of Business Statistics. They represent the ressed weight of livestock slaughtered under Federal inspection, as well as in other plants out exclude data for lard and animals slaughtered on farms). Data for pork (shown on p . 04) also exclude rendered pork fat.

Beginning 1966, data include custom slaughtering in plants for farmers as part of the ommercial meat production estimates and are not comparable with 1965 and earlier Digriods. for FRASER
6. Source: U.S. Department of Commerce, Bureau of the Census. Data represent imports for consumption. For a general explanation of foreign trade data, see note 1 for $p$. 78.

Data for imports of coffee represent crude coffee only. The figures are published by the source in pounds and are converted and shown here in bags of 60 kilograms.

Annual data prior to 1961 and monthly data for 1929-82 for cocoa and 1955-82 for coffee appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Data prior to 1955 for coffee may be obtained from the Foreign Trade Division, Bureau of Census.
7. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). This series, first shown in this edition of BUSINESS STATISTICS, is from the BLS International Price Program and provides a measure of price change for coffee purchased from other countries by U.S. residents. Prices are based on the cost, insurance, and freight (c.i.f.) value at the U.S. port of importation; they include the other costs associated with bringing the product to the U.S. border, but do not include duty charges. To the extent possible, the data gathered refer to transactions completed during the first 2 weeks of the third month of each calendar quarter-March, June, September, and December.

Quarterly data for 2d Qtr. 1977-4th Qtr. 1982 are available upon request. Data for earlier periods are not available.
8. Source: U.S. Department of Commerce, National Oceanic and Atmospheric Administration. These data represent the total holdings of frozen fish (including shellfish), both fresh-water species, and (beginning January 1974) farm-raised catfish, in cold-storage warehouses; stocks of salted and smoked fish are not included. The figures cover stocks as of the end of the month. The monthly reports give details as to holdings and the amount of fish frozen each month.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section). Scattered revisions for periods prior to 1963 are shown in the footnotes in the 1982 and earlier editions of business statistics.
9. See 2d paragraph of note 1 for p. 103.
10. Annual total reflects revisions not available by months.
11. Average based on quotations for fewer than 12 months.
12. See Ist paragraph of note 8 for this page regarding change affecting comparability of data.
13. See 2d paragraph of note 2 for p. 103 regarding change affecting comparability of data.
14. Effective January 1978, the export commodity classification system was completely restructured; data may not be strictly comparable with those shown for earlier periods.

## PAGE 105

1. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78. Data for sugar are published by the source in pounds and are converted and shown here in short tons. In January 1978, the export commodity classification system was completely restructured; basing the new structure on the organizational framework of the Tariff Schedules of the United States. As a result, coverage for exports and imports of sugar are identical; covering sugars, sirups, and molasses derived from sugar cane or sugar beets, which are principally of crystalline structure or in a dry amorphous form. It should be noted that exports of sugar for years prior to 1978 may not be strictly comparable with those shown for subsequent years. Exports of sugar include shipments under the Army Civilian Supply Program. Imports of sugar represent imports for consumption.

In the 1977 and earlier editions of BUSINESS Statistics, data for imports of sugar were shown separately as "raw" and "refined" and should be combined for comparison with imports shown beginning with the 1979 edition.

Data for tea are imports for consumption.
Annual data prior to 1961 and monthly data for exports of sugar (1929-82), for imports of sugar (1936-46, 1948-82), and for imports of tea (1929-82) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for imports of sugar for 1947 are available upon request. Scattered revisions for periods prior to 1959 are shown in the footnotes in the 1982 and earlier editions of BUSINESS Statistics.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics. First shown in the 1984 edition of BUSINESS STATISTICS. For a general explanation of Producer Price Indexes, see note 1 for p. 27.

Annual indexes for raw sugar (1947-60) and monthly indexes for raw sugar (1947-82) and refined sugar (December 1977-December 1982) are available upon request.
3. Source: U.S. Department of Agriculture, National Agricultural Statistics Service (formerly Statistical Reporting Service). Figures represent each year's total crop; the 1986 figure is preliminary. Crop estimates for 1929-60 are shown in the 1979, 1969, and 1959 editions of BUSINESS Statistics.
4. Source: U.S. Department of Agriculture (USDA), Agricultural Marketing Service. Data represent stocks of leal tobacco in the United States and Puerto Rico (on a farm-sales-weight basis), reported as owned by all leaf tobacco dealers, manufacturers, quasi-manufacturers, growers' cooperative associations, warehousemen, brokers, holders, and owners (except the original growers of tobacco, and manufacturers who, according to ithe returns $o f$, the Commissioner of Internal Revenue, manufactured less than 35,000 Digitized tor pound of less than 185,000 cigars, or less than 750,000 cigarettes during the first

three quarters of the preceding calendar year). All Government loan stocks are included as dealer holdings. Growers are not required to report their stocks under the law. Data are on an ownership basis; i.e., they include stocks actually owned by those enumerated above. Data by type of tobacco are available from reports of the Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture.

All data on domestic stemmed tobacco have been converted to an unstemmed basis, and the unstemmed is further converted to a farm-sales weight by allowing for normal shrinkage and losses of dirt, sand, and moisture in handling. Each type of tobacco has a different yield; the conversion factors used in these computations are shown in the quarterly Tobacco Stocks Report, issued by USDA. Foreign data are converted to an unstemmed basis, and since the weight at time of entry is analogous to the farm-sales weight of domestic types, they can be combined directly with the data for domestic types on a farm-sales-weight basis. Data are reported as of the first of April, July, October, and January, and are shown here as the end of the preceding month.

End-of-year data prior to 1961 and end-of-quarter data for 1938-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note p. 1 of this section). Scattered, minor revisions for 1949-78 are available upon request.
5. Source: U.S. Department of Commerce, Bureau of the Census. Data for leal tobacco represent total exports or imports of unmanufactured tobacco, including stems, trimmings, and scrap. Exports include shipments under the Army Civilian Supply Program. Imports represent imports for consumption. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Scattered revisions for periods prior to 1947 are shown in the footnotes in the 1982 and earlier editions of Business statistics.
6. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. Tax-exempt withdrawals include withdrawals of small cigarettes (those weighing not more than 3 pounds per thousand) for the following purposes: Export, use of the United States (including sea stores), personal consumption, and beginning July 1961, for experimental purposes.

Annual data prior to 1961 and monthly data for July 1943-December 1982 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data are not available prior to July 1943.
7. Source: U.S. Treasury Department, Bureau of Alcohol, Tobacco, and Firearms. Data represent taxable withdrawals from domestic factories and are based on the number of stamps used by manufacturers. In recent years small cigarettes (i.e., those weighing not more than 3 pounds per thousand) represent close to 100 percent of the total production of cigarettes; large cigars (i.e., those weighing more than 3 pounds per thousand) have accounted for approximately 75 percent of the total production of cigars.

Annual data prior to 1961 and monthly data for 1944-82 for cigarettes (except as noted below) and 1951-82 for cigars appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions for cigarettes (millions): 1976-October, 52,247; November, 51,321.
8. Annual total includes revisions not distributed to the months.
9. See 1st paragraph of note 1 for this page.

## PAGE 106

1. Source: U. S. Department of Commerce, Bureau of the Census. The data represent exports of all leather and lining leather but exclude sole and rough leather. The total covers sheep and lamb glove and garment leather; pig and hog leather; and antelope, ass, bovine, buckskin, buffalo, cabretta, calf, capeskin, caribou, cattle, colt, cordovan, deerskin, dik-dik, doeskin, elk, gazelle, goat, horsehide, kid, kip, mule, ranchhide, reindeer, and zebra leather. Also covered are cattle and kip side upper leather (grain and splits); calf and whole kip (grain and other) upper leather; goat and kid upper leather; sheep and lamb upper and lining leather; cattle and kip side patent upper leather; and other upper leather (including lining and patent) not elsewhere specified.

Annual data prior to 1961 and monthly data for 1955 and July 1956-December 1982 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). In the 1967 and earlier editions, the "glove and garment leather" should be added to the "upper and lining leather" to arrive at the total export figure.
2. Source: U.S. Department of Labor, Bureau of Labor Statistics. The leather index is based on prices for finished cattlehide and kipside leather; finished sheep and lamb leather; and rough, crust, and wet blue.

The index is based on prices for 1 day each month (beginning January 1967, the Tuesday of the week in which the 13th of the month falls; for 1952-66, Tuesday of the week containing the 15 th).

Monthly data for 1947-82 are available upon request.
3. Source: U.S. Department of Commerce, Bureau of the Census. Data are based on a sample of all known manufacturers of footwear and represent total U.S. production of nonrubber footwear and production of shoes with soles vulcanized to fabric upper and rubber and/or plastic protective footwear.

Beginning with 1965, substantial changes were introduced into the detailed classification of footwear as a result of recommendations of the Interagency Shoe Committee and the Shoe Manufacturers' Industry Advisory Committee. These changes affect the comparability of earlier data with those beginning 1965. However, the totals shown are directly comparable.

Annual data prior to 1961 and monthly data for 1953-82 and 1941-46 appear in earlier tions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised nthly data for 1947-52 are available upon request.
4. Source: U.S. Department of Commerce, Bureau of the Census. Effective January 55, data reflect adoption of revised export schedule and cover exports of new boots, yes, and other footwear (including men's, youths' and boys', women's, misses', children's, ants', house slippers, including moccasins for housewear, and footwear, n.e.c., including letic footwear); exports of military-type shoes, etc., are excluded.
Data include shipments under the Army Civilian Supply Program. For a general slanation of foreign trade data, see note 1 for p. 78.
Annual data prior to 1961 and monthly data for 1938-82 appear in earlier editions of ISINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 13-37 appear in the 1940 and 1938 volumes and in the January 1938 issue of the irvey of Current Business.
5. Source: U.S. Department of Labor, Bureau of Labor Statistics. Indexes are based on ces covering specifications as follows: men's leather upper, dress and casual; women's ther upper; and women's plastic upper.
The indexes are based on prices for 1 day each month; the Tuesday of the week in ich the 13 th of the month falls.
Monthly data from 1973-82 for women's leather upper are available upon request.
6. See 2 d paragraph of note 3 for this page.
7. See 1 st paragraph of note 4 for this page.
8. Because of an overall revision to the export commodity classification system effective nuary 1,1978 , data may not be strictly comparable with those shown for earlier periods.

## PAGE 107

1. Source: National Forest Products Association (NFPA); data compiled for NFPA by peland Economics Group, Inc. Data for all years are estimated industry totals (including iwaii beginning January 1963) based on monthly reports from regional associations. The ures relate essentially to the operations of sawmills and planing mills (general); they lude rough, dressed (surfaced), and worked lumber (i.e., lumber that, in addition to ing dressed, has been matched, shiplapped, or patterned). Data for separately operated bring mills are not included (see p. 109 for hardwood flooring data).
Coverage of mill reports varies widely from region to region and, for the country as a ole, has declined from around 75 percent of estimated total lumber production in 1935 an average of 55 percent in recent years; coverage of reports on stocks is less inclusive an for production and shipments.
Annual totals may contain revisions not distributed to the months.
Annual data prior to 1961 and monthly data (except for stocks) for 1949, and 1961-82 pear in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this stion). Earlier monthly data are available upon request.
2. Source: U.S. Department of Commerce, Bureau of the Census. For a general planation of foreign trade data, see note 1 for p. 78.
Exports of sawmill products include all types of hardwood and softwood lumber sugh-sawed, dressed, and worked or patterned) and flooring; hardwood small-dimension ock; railroad cross ties; and mine ties in recent years.
Imports of sawmill products are imports for consumption. The data include softwood d hardwood sawed lumber and timber (boards, planks, deals, flooring, siding, and other rms, rough, planed or dressed, or otherwise processed but not further manufactured than aned and tongued and grooved), as well as sawed railroad ties, dowels (through August '63), box shooks and packing boxed (through 1953).
Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of JSINESS Statistics (see reference note, p. 1 of this section).
3. Beginning September 1963, data exclude dowels, formerly included.

## PAGE 108

1. Source: National Forest Products Association (NFPA); data compiled for NFPA by upeland Economics Group, Inc. Data are estimates representing total softwood operations $r$ the Douglas fir (Coast) region and are based on data compiled by the Western Wood oducts Association (formerly by the West Coast Lumbermen's Association). Although juglas fir predominates, output of the region also includes West Coast hemlock, Western d cedar, Sitka spruce, white fir, Ponderosa pine, sugar pine, Idaho white pine, and cense cedar.
Beginning January 1954, the region (designated as West Coast woods in the SUPPLEENTs prior to the 1951 edition) comprises the portions of the States of Washington and regon west of the Cascades including the pine production of Jackson and Josephine unties of Oregon, which for earlier years is included in data for the Western Pine region. is modification does not seriously affect comparability of the data.
Shipments include both domestic and export shipments. Data for stocks apply to gross ill stocks; changes from month to month are computed from differences between oduction and shipments adjusted to reported inventory figures.
Annual data prior to 1961, monthly data prior to 1983 and other pertinent notes appear Dig

2. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78. Exports of Douglas fir (including "Oregon pine") sawmill products include rough-sawed, dressed, and in recent years, treated lumber. This series does not cover logs or unsawed and hewn timber, nor laths, shingles, and other manufactured wood products.

Figures for "sawed timber" cover lumber 5 inches and over in least dimension, also lumber worked or patterned; those for "boards, planks, etc." are for lumber less than 5 inches in least dimension.

Southern pine exports (shown on p. 109) include dressed lumber and timber (both untreated and treated with preservative), as well as flooring and other worked or patterned wood products. In conformance with revisions in the export schedule, data for flooring, etc., are included beginning with 1949, and data for treated boards, planks, etc., beginning with 1952. Hewn or unsawed wood and wood manufacturers, such as laths or shingles, are not included. The following species of pine are covered: Southern yellow, Georgia, loblolly, long leaf, Nicaraguan yellow, pitch, short leaf, and slash.

Annual data prior to 1961 and monthly data for 1949-82 appear in earlier editions of Business Statistics (see reference note, p. 1 of this section).
3. Source: U.S. Department of Labor, Bureau of Labor Statistics. Dressed softwood is wood from trees of coniferous species that has been dressed or surfaced by planing on at least one edge or face. For a general description of the Producer Price Indexes, see note 1 for p. 27.

Annual data prior to 1961 and monthly data prior to 1983 are available upon request.
4. See note 1 for p. 109.

## PAGE 109

1. Source: National Forest Products Association (NFPA): data compiled for NFPA by Copeland Economics Group, Inc. Data for all years are estimates of total national output of Southern yellow pine compiled by the Southern Pine Association from monthly reports of mills representing in recent years about 40 percent of total output; coverage of reports on stocks and unfilled orders is somewhat less. Production, shipments, and new orders data have been adjusted to conform with annual production figures published by the Bureau of the Census for all years through 1976.

Shipments include domestic and export shipments. Stock figures are estimated gross stocks at mills and concentration yards; monthly stock changes are computed from the difference between total production and shipments. Changes in unfilled orders are similarly computed from the difference between total orders and shipments.

Annual totals may contain revisions not distributed to the months.
Annual data prior to 1961 and monthly data prior to 1983 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Also see earlier editions for notes with information pertaining to time periods not shown in this edition.
2. See note 2 for p. 108.
3. See note 3 for $p .108$.
4. Source: National Forest Products Association (NFPA); data compiled for NFPA by Copeland Economics Group, Inc. Data for all years are estimates of total softwood production in the Western pine (Inland) region compiled by the Western Wood Products Association (formerly by the Western Pine Association).

Shipments include domestic and export shipments. Stocks represent estimated gross stocks at mills; month-to-month changes are computed from differences between production and shipments adjusted to reported inventory figures.

Data comprise all softwood production in the Western pine region defined as follows: Washington and Oregon east of the Cascades; pine production only in Jackson and Josephine counties in Oregon through 1953 (see 3d paragraph of note 1 for p. 108); California (except in the 12 northwestern coastal counties); Arizona; Colorado; Idaho; Montana; Nevada; New Mexico; South Dakota; Utah; and Wyoming. The softwood species included are as follows: Ponderosa pine, sugar pine, Idaho white pine, larch and Douglas fir, white fir, Engelmann spruce, Western red, incense cedar, lodge pole pine, and hemlock.

Annual data prior to 1961 and monthly data for 1945-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
5. Source: National Forest Products Association (NFPA); data compiled for NFPA by Copeland Economics Group, Inc. Data for all years are estimates of total industry output compiled by the National Oak Flooring Manufacturers Association from monthly reports by mills representing in recent years about 90 percent of total industry output.
"Oak flooring" usually includes a small portion (totaling approximately 3 percent) of maple, beech, birch, and pecan.

Annual data prior to 1961 and monthly data for 1949-82, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).

## PAGE 110

1. Source: U.S. Department of Commerce, Bureau of the Census. Figures for exports and imports of steel mill products are as compiled by the American Iron and Steel Institute from Census reports, and incorporate adjustment to reflect uniform coverage of products insofar as possible. Imports, effective with September 1963, reflect reclassification of commodities with the adoption of the U.S. Tariff Schedules; exports, effective

1965, are summarized according to the revised Export Schedule B (January 1, 1965 and subsequent editions). Therefore, imports beginning September 1963 and exports beginning 1965 are not directly comparable with data for earlier periods.

Steel mill products include semifinished products, structural shapes, plates, rail and track accessories, concrete reinforcing bars, bar shapes under 3 inches, hot rolled and cold finished bars, pipe and tubing, wire, black plate, tin plate, and sheets and strips. Exports of secondary tin plate (specifically provided for in the export schedule beginning 1952) are included in steel mill exports. Scrap imports and exports include tin plate scrap; imports also cover rails for scrap and rerolling, and exports omit ships for scrapping. Data for both exports and imports exclude iron ore, advanced (or fabricated) steel manufactures, iron products (other than pig), and ferroalloys.

Exports cover shipments of domestic merchandise; imports cover those for consumption. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual data prior to 1961 and monthly data for exports and imports of steel mill products (1957-82), scrap (1938-82), and pig iron (1961-82) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Note that scrap imports shown in the BUSINESS STATISTICS prior to the 1961 edition omit tin plate scrap. Monthly data for steel mill products exports and imports (1954-56) and pig iron exports and imports (1953-60) are available upon request.
2. Includes heavy melting grades and scrap in bundles; tin plate and terneplate scrap; iron or steel; iron scrap; and other steel scrap. Data beginning 1951 have been adjusted to exclude exports of tinplated circles, strip, cobbles, etc.; these items (amounting to 14.600 tons in 1951) are included in scrap exports for earlier years and in steel mill products beginning 1965.
3. Sources: U.S. Department of the Interior, Bureau of Mines, and U.S. Department of Commerce, Bureau of the Census (compiled jointly beginning 1951); Bureau of Mines (prior to 1951). The estimated industry totals from 1951 forward are derived from a combined survey covering iron and steel foundries and steel ingot producers. Consumption figures and yearend stocks for 1947-50 were compiled by the Bureau of Mines based on reports from a smaller sample of consumers. Annual data beginning 1974 and monthly data beginning January 1975 reflect an expanded survey of iron and steel foundries; for 1974 the additional coverage, accounting for about 3 percent of scrap consumption of direct reduced iron, totaled 614,000 tons. Annual totals include revisions not distributed to the monthly data.

Production of scrap is from recirculating (home, plant, or recycled scrap), obsolete (molds, stools, machinery, and buildings-excluding rerolling rails), and other (including slag) scrap. Receipts of purchased scrap from dealers and all others are net after deducting scrap shipped, transferred, or otherwise disposed of during the period.

Complete iron and steel scrap stocks are not available; some producers (railroads and manufacturers) are not canvassed. The original monthly reports also show production, receipts, etc., of ferrous scrap by type of manufacturer and scrap consumption by grade.

Annual data prior to 1961 for consumption and stocks and monthly data for 1953-82 (consumption and stocks, 1941-82) appear in earlier editions of BUSINESS STATISTICS (see refcrence note, p. 1 of this section). Monthly data for production and receipts (1951-52) are available upon request.
4. For a general explanation of Producer Price Indexes, see note 1 for p. 27.
5. See Ist paragraph of note 1 for this page regarding changes in the schedules used to summarize commodities.
6. Beginning 1970, imports of scrap exclude figures for rerolling rails and other articles of metal scrap, and imports of pig iron exclude figures for sponge iron and ferrous scale. Imports for 1969 excluding these items and comparable with data for 1970 are as follows: scrap 335,000 and pig iron, 407,000 short tons.
7. Less than 500 tons.
8. Beginning January 1985, data have been revised because of a new estimation procedure and may not be comparable with earlier periods.

## PAGE 111

1. Source: U.S. Department of the Interior, Bureau of Mines. Monthly data are industry totals based on reports from a sample canvass of mines in the United States; they include estimates for a number of very small mines. Annual figures are derived from actual reports from all known mines and are believed to represent 100 percent of the industry. The yearend figures for stocks at mines for 1964-86 exclude byproduct material which are included in the yearend figures for other years. Byproduct ore is included in the end-of-month figures through 1982. Beginning January 1983, byproduct ore is excluded from end-of-month figures. Stocks after 1982 are not comparable with those of previous years because of the reclassification of some stocks from the usable to a byproduct category Ore stocks as of December 31, 1964, comparable with earlier periods, totaled $10.752,000$ long tons.

The data refer to usable ore; i.e., direct-shipping ore (shipped directly from mines to consumers without any treatment for removal of waste constituents), concentrates (produced by washing, gravity, or other standard methods), and agglomerates produced at mines (by pelletizing, briquetting, or other methods of agglomerating). Agglomerates produced at consuming plants are excluded.
Digitized Annual data prior to 1961 and monthly data for 1943-82 appear in earlier editions of Digitized INESS STATISTICS (see reference note, p. 1 of this section).
http: BuSiNer.stlouisfed.
2. Source: U.S. Department of Commerce, Burcau of the Census. Imports of iron ore include manganiferous iron ore, containing not more than 10 percent by weight of manganese, and dross or residuum from burnt pyrites. The figures represent imports for consumption. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions for November and December 1950 are 729,000 and 429,000 long tons.
3. Sources: American Iron Ore Association and American Iron and Steel Institute. The data cover ores originating in the United States, Canada, and other foreign countries. Iron ore is defined as including all iron ore, iron ore concentrates, and iron ore agglomerates produced at or near mine locations.

For 1951-56, consumption covers iron ore consumed directly in the blast furnaces, steel furnaces, and sintering plants located at iron or steel plants. Beginning 1957, consumption figures also include small quantities of ore sold to nonreporting companies and ore used for other purposes. Consumption figures exclude comparatively small tonnages of ore consumed by the cement and paint industries and other miscellaneous use. (Shipments of iron ore, compiled by the U.S. Department of the Interior, Bureau of Mines, also shown on this page, include shipments to these users, as well as ore consumed in ferroalloy furnaces.)

Monthly data for 1957-82 are in carlier editions of Business STATISTICS (see reference note, p. 1 of this section); monthly data prior to 1957 are not available.
4. Source: U.S. Department of Commerce, Bureau of the Census. The data cover exports of all grades of iron ore and concentrates. For scattered years, monthly data include small quantities of reexports of foreign ore; not included are exports of unroasted iron pyrites. Beginning January 1979 , monthly data exclude reexports. For a general explanation of foreign trade data, see note 1 for p .77.

Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); monthly data for earlier years may be obtained from records of the Bureau of the Census.
5. Source: U.S. Department of Commerce, Bureau of the Census. Data represent general imports. For a general explanation of foreign trade data, see note 1 for p. 78. The data (reported in manganese content) cover imports of manganese metal (unwrought and unalloyed), including waste and scrap; manganese ore, including ferruginous and manganiferous iron ore (containing more than 10 percent of manganese); and ferromanganese and ferrosilicon manganese alloys. Effective September 1963, data are summarized according to the Tariff Schedules of the United States, Annotated and may not be strictly comparable with imports through August 1963.

Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data prior to 1955 may be obtained from records of the Bureau of the Census.
6. Beginning September 1963, data are summarized according to the Tariff Schedules of the United States, Annotated and may be directly comparable with earlier figures. 7. Less than 500 tons.

## PAGE 112

1. Source: American Iron and Steel Institute (AISI). According to the AISI, its coverage of total blast-furnace production is 100 percent. The data cover blast-furnace production of pig iron, including silvery pig iron. Data as shown in the 1959-77 editions of BUSINESS STATISTICS exclude production of ferroalloys in blast furnaces. Beginning with the 1979 edition, data beginning 1975 include ferroalloys and are not comparable with earlier periods shown.

Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Sources: U.S. Department of the Interior, Bureau of Mines; and U.S. Department of Commerce, Bureau of the Census (compiled jointly). Data represent estimated industry totals derived from a combined survey covering iron and steel foundries and steel ingot producers.

Annual data prior to 1961 and monthly data for 1941-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
3. For a general explanation of Producer Price Indexes, see note 1 for p. 27.
4. Sources: U.S. Department of Commerce, Bureau of the Census; and U.S. Department of the Interior, Bureau of Mines (compiled jointly).

All data are estimated industry totals. The monthly estimates are derived from a combined sample survey; all blast furnaces, all large foundries, and all producers of selected foundry items are included in the sample.

The original reports show separate data for gray iron and for ductile (nodular) iron castings by type (cast iron pressure and soil pipe and fittings, molds for heavy steel ingots, and other gray iron castings). Semisteel alloy iron and white iron castings are included in the gray iron castings total. Tonnages represent the weight of rough castings before machining. Total shipments include castings produced and consumed at the same location in the production of finished products and castings shipped for use by the reporting company or by an affiliate, subsidiary, or parent company, as well as those for sale. Annual reports for $1944-46,1950,1953$, and 1955-73 also provide data by State for shipments and production of iron and steel castings (by type) and of raw steel.

Annual data prior to 1961 and monthly data for 1943-46 (except steel castings) and for 1949-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised monthly data for 1947-48 for all series are available upon request.

Malleable iron castings shipments are available monthly back to 1929 and appear in rlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section) and on 20 of the April 1933 Survey Of Current Business.
5. Source: American Iron and Steel Institute. Through 1966, the data are from mpanies that account for virtually the entire output of all steel for castings produced by got makers. Beginning 1967, the term "raw steel production" was substituted for ingots d steel for castings and refers to the total production of raw steel as defined. Raw steel defined as steel in the first solid state after melting, suitable for further processing or le; raw steel covers ingots, steel castings, and strand (continuous) or pressure-cast blooms, llets, slabs, or other product forms. (The steel casting production included covers only at which is produced in foundries operated by companies producing steel ingots.) Direct mparability of the raw steel series and the ingot series will gradually diminish as a larger oportion of raw steel output is in the form of semifinished steel, such as billets, blooms, d slabs. For the first 3 months of 1975, strand and pressure casting tonnage totaled nost 9 percent of total raw steel production.
The production rate of capability utilization is based on tonnage capability to produce w steel for a full order book based on the current availability of raw materials, fuels, and pplies, and on the industry's coke, iron, steel making, rolling, and finishing facilities. ata are not available for periods prior to 1975.
Monthly data for tonnage of steel for 1961-82 are shown in appendix I to this volume. nnual data prior to 1961 and monthly data for 1938-60 appear in earlier editions of $J$ SIness STATISTICS (see reference note, p. 1 of this section). Monthly data for the oduction rate of capability utilization for 1975-82 are shown in the 1977 and subsequent itions of BUSINESS STATISTICS (see reference note, p. I of this section).

## PAGE 113

1. Source: American Iron and Steel Institute. Data are compiled from reports of mpanies representing nearly 100 percent of the total production of the industry. Beginng 1970, estimates are included for a small number of companies that report raw steel oduction but not shipments. The industry includes only those processors that are also imary producers of steel. Net shipments (i.e., after deducting shipments between reportg companies for conversion, further processing, or resale) cover all grades of steel arbon, alloy, stainless, and heat-resisting). Items covered by product class are described low.
Semifinished products-ingots and steel castings, blooms, slabs, billets, sheet bars, clp, and wire rods.
Rails and accessories-all rails, tie plates, rolled and forged wheels, axles, joint bars, id track spikes.
Pipe and tubing -standard and line pipe, oil country goods, mechanical, pressure, ructural, and stainless pipe and tubing.
Wire and wire products-drawn wire, wire nails and staples, barbed and twisted wire, Jven wire fence, bale ties, and baling wire.
Tin mill products-electrolytic and hot dipped tin plate, tin free steel, black plate, and her products.

Sheets and strip-hot and cold rolled sheets, electrical, galvanized and all other etallic coated sheets and strip, and hot and cold rolled strip.
Annual totals include adjustments not distributed to the monthly data.
Monthly data for 1961-82 for total shipments only appear in appendix I to this volume. nnual data prior to 1961 and monthly data for 1953-82 appear in earlier editions of JSINESS STATISTICS; monthly data by products for 1950-52 are available upon request.
2. Includes shipments of tool steel not shown separately.
3. Includes shipments of sheets and strip (electrical, hot dipped and electrolytic Ivanized, and other metallic coated) and hot and cold rolled strip, not shown separately.

## PAGE 114

1. Source: American Iron and Stee! Institute (AISI). See note for p. 113 regarding eel products shipments by product and for a description of industry and product werage.
Data for total shipments are shown on p. 113. Preliminary monthly estimates are shown irrently in the SURVEY OF CURRENT BUSINESS until final quarterly shipments are ailable.
The other group includes steel shipped for electrical equipment; appliances and other mestic and commercial products (such as furniture and professional and institutional |uipment); agricultural machinery and products; oil and gas drilling; mining, quarrying, id lumbering: ordnance, etc.; aircralt; shipbuilding and marine equipment; as well as steel r further processing into mill shapes, steel products, or for resale and, beginning January 176. oil and gas supply houses and pipelincs.

Annual data prior to 1961 and quarterly data for 1963-82 are in earlier editions of JSINESS ST^ATISTICS (see reference note, p. I of this section). Quarterly data prior to 163 are available from the AISI report, Form AISI-16, "Shipments of Steel Products by arket Classifications."
DigizizSqurce:FK.S. Eepartment of Commerce, Bureau of the Census. The data cover httpducerss and manufacturergeonsumers of steel mill products, and steel service centers.

Data for consumers (receipts, consumption, and inventories of steel mill shapes and forms) are derived from a monthly sample survey and are expanded to represent total operations for manufacturing industries only. The survey panel accounted for approximately 58 percent of the total quantity of steel consumed in the 1958 Census of Manufactures. Estimates have been derived to represent 100-percent coverage of steel consumers. Since 1979, estimates for manufacturers' (consumers) receipts, consumption, and inventories have been benchmarked to the 1963, 1967, 1972, 1977, and 1982 Censuses of Manufactures.

Data for producing mill inventories are based on information collected from companies that produce over 50 percent of total steel output. Estimates have been derived to represent 100 -percent coverage of steel producers and are benchmarked annually to the Current Industrial Reports: Inventories of Steel Mill Shapes.

Estimates for steel service centers' (warehouses) inventories are derived from a current monthly sample of steel service centers, which accounts for approximately 30 percent of the total inventory of steel mill products held by steel service centers. The year 1976 is used as the base to provide estimates of the total inventories.

Monthly data for 1962-82 (for service centers, 1971-82) are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); no earlier monthly data are available. Service center end-of-month inventories for 1962-70 are shown on p. S-32 of the May 1975 issue of the Survey Of Current Business.

## PAGE 115

1. Source: U.S. Department of the Interior, Bureau of Mines. Production data of primary aluminum are based on monthly reports from all producers; final yearly totals are derived from an annual industry canvass.

Estimates of metal containing aluminum recovered from scrap represent the total industry and are based on annual surveys by the Bureau of Mines.

Annual data prior to 1961 and monthly data for 1941-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78.

Imports of metal and alloys (crude) refer to unwrought metal other than alloys, including aluminum in coils not greater than 0.375 inch in diameter, unwrought alloys of aluminum (except aluminum silicon), hollow cast extrusion ingots and, beginning 1974, pipes, tubes, blanks, and fittings. (In 1974, these additional articles of aluminum totaled almost 600 short tons.) Imports of plates, sheets, etc., also cover wrought rods, bars, strip, angles, shapes, and sections. Not included are imports of aluminum wire, waste and scrap, and powders and flakes.

Exports of aluminum and aluminum alloys are summarized as unwrought crude metal (pig, blooms, ingots, billet-including extrusion ingot and billet-bars, blocks, slabs, shot) and as semicrude shapes and forms (plates, sheets, bars, rods, tubes, pipes, and fittings). Excluded are exports of foil, powders and flakes, and wire and electrical conduit. Annual exports include small quantities of miscellaneous semifabricated forms not included in the monthly data.

Effective September 1963, imports are summarized according to the Tariff Schedules of the United States, Annotated (through August 1963 according to the Census Import Schedule A) and are not directly comparable with imports prior to 1963. Effective 1965, exports are tabulated according to the revised Export Schedule B (January 1, 1965 and subsequent editions) and are not directly comparable with exports prior to 1965.

Annual data prior to 1961 and monthly data for 1953-82 for imports (except as noted below) and 1957-82 for exports (1969-82 for plates, sheets, etc.) are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); monthly imports for 1950-52 are available upon request. December 1955 imports of metal and alloys have been revised to 10,200 tons. Monthly figures for earlier periods than indicated above may be obtained from records of the Bureau of the Census.
3. Source: U.S. Department of the Interior, Bureau of Mines. Prices are Metals Week monthly average spot or market price. The purity of primary aluminum is usually 99.5 percent. Monthly data for October 1971 to December 1982 are available upon request.
4. Sources: U.S. Department of Commerce, Bureau of the Census; and International Trade Administration.

Data are tabulated from a survey of all known producers of aluminum ingot and mill products shipping 10,000 pounds or more per month. Data for net shipments of ingot (both primary and secondary) include shipments by importers and represent shipments to consuming industries; i.e., to foundries for producing castings, to steel plants and others for destructive uses, as well as shipments for export. Ingot shipped for further processing into mill products is not included.

Annual data prior to 1961 and monthly data for 1952-82 for total mill products and ingot are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section- 1952 monthly data appear on p. 294 of the 1957 edition). Monthly data for total mill products (1946-82) and for plate and sheet excluding foil for 1959-82 and including foil for 1942-58 are shown in the aforementioned volumes. Monthly data for 1942-45 for total mill products and 1954 - 58 for plate and sheet, excluding foil, are available upon request. No data prior to 1967 for inventories are available.
5. Source: U.S. Department of Commerce, Bureau of the Census. The data represent to total industry shipments of aluminum and aluminum base alloy castings.

For a description of the survey methodology used to develop this series, see Current Industrial Reports: Nonferrous Casting, Summary for 1983, series M33E(83)-13 from the Bureau of the Census.
6. Not directly comparable with earlier data; see note 2 for this page regarding changes in the classification schedules.

## PAGE 116

1. Source: U.S. Department of the Interior, Bureau of Mines. Mine production data are in terms of recoverable metal from mines in the United States. The monthly figures are estimates reflecting 100 -percent coverage and are adjusted to final annual totals of mine production.

Primary refinery production figures represent the total refined copper produced at primary plants from domestic, foreign, and electrowon primary materials. (The electrowinning process differs from traditional methods of refining copper in that the copper ore is not smelted. Instead, copper is leached from the ore with a solvent. The copper is then separated from the solvent by electrolysis).

Production of copper refined from scrap (produced by both primary and secondary plants) includes electrotype, casting grade, and copper billets. Excluded are black copper and electrotype plates, copper castings, and copper recovered by primary plants in forms other than refinery shapes (such as powder, etc.).

No data for electrowon copper are available for periods earlier than those shown here.
Annual data prior to 1961 and monthly data for 1953-82 for all other series (1941-82 for mine production) are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Source: U.S. Department of Commerce, Bureau of the Census. General imports (imports for immediate consumption plus material entering the country under bond) relate to the copper content of copper in all forms-refined; ores; black, blister, and anode copper; other metal-bearing materials; and waste and scrap. Effective January 1974, total imports and imports of refined copper also include the copper content of alloyed refined copper not included in earlier data. (For 1974, general imports of alloyed refined copper totaled 9.6 thousand short tons.) Not included are materials imported duty-free under bond for processing and exportation. Beginning September 1963, the data are summarized according to the Tariff Schedules of the United States, Annotated and may not be comparable with earlier imports.

Exports represent to domestic exports (gross metal weight; i.e., including other alloying constituents) and cover unwrought refined copper (alloyed and unalloyed), including remelted (in cathodes, pigs, cakes, wirebars, etc.); copper waste and scrap; and beginning 1974, copper content of copper ash and residues, ore and concentrates, and matte; and gross weight of blister and other unrefined copper. (In 1974, exports of the additional items amounted to 23.9 thousand short tons.) Effective with 1965, exports are summarized according to the January 1, 1965, Export Schedule B (and subsequent editions) of commodity classifications and are not directly comparable with earlier figures. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual totals prior to 1961 and monthly data for 1953-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data prior to 1953 may be obtained from records of the Bureau of the Census.
3. Source: U.S. Department of Interior, Bureau of Mines. The data, representing the total industry, are based on a monthly survey of brass mills, copper wire mills, and secondary smelters.

Monthly stocks of refined copper include copper refined at refineries, wire rod mills, brass mills, secondary smelters, chemical plants, foundries, miscellaneous manufacturers, and the Commodity Exchange, Inc.

Monthly data for 1953-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section).
4. Source: Metals Week (prior to 1967, Engineering and Mining Journal). Beginning January 1978, prices are U.S. producers' weighted average cathode, delivered U.S. destination basis. In the trade, copper prices are quoted on a delivered basis by producers, i.e., delivered to consumer's plant.

Beginning February 1970, the Metals Week price reflects a change in the method of calculation as follows: The domestic price is a weighted average based on the current estimated U.S. mine production rates and on the known selling prices of major domestic producers, reduced to a delivered wirebar basis (imported copper is not included in the calculation). The equation used to calculate the average is changed whenever there is a change in a company's known production rate or selling price. The monthly averages are weighted averages of the daily quotations.

Through January 1970, the prices were calculated as averages of domestic sales for flat-priced producer copper in the form of wirebars. Domestic sales (referring to the market in which the copper was sold and not to the origin of the metal) included foreign-produced copper sold at a flat price in the U.S. market.

Annual averages prior to 1961 and monthly data prior to 1978 (delivered basis) and for 1929-66 (refinery basis) are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1978-82 (cathode price) are available upon request.
5. Source: U.S. Department of Commerce, International Trade Administration. The data represent the entire copper-base mill and foundry fabricating industries. Shipments Digitized areported in terms of metal weight, except for copper wire mill products, which are in http:/fopraser content weight.
Federal Reserve Bank of St. Louis

Annual data prior to 1961 and quarterly data for 1953-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised 1966 foundry product shipments appear in the corresponding note in the 1971 BUSINESS STATISTICS.
6. Not directly comparable with earlier data; see note 2 for this page regarding changes in the commodity classifications.
7. Figures for 1970 include reexports of foreign refined copper, including remelted copper.
8. Excludes 20,000 in government stockpiles.

## PAGE 117

1. Source: U.S. Department of the Interior, Bureau of Mines. Mine production data represent actual mine output (in terms of recoverable metal) from domestic mines. Monthly reports for mine production represent greater than 99 -percent coverage. Monthly data are estimated totals based on reports from most of the known secondary smelters and others using scrap and from consumers of lead. Annual totals are derived from the sum of the monthly data and from reports from additional companies that report on an annual basis only. All data except stocks of scrap are in terms of lead content. Beginning 1964, data reflect sales of Government stockpile surplus lead to commercial users and for Government use.

Production recovered from lead-, tin-, and copper-base scrap may include lead recovered by smelters that treat ore with scrap, as well as by smelters that treat only scrap and drosses.

Consumption is shown in the original monthly reports distributed by use (i.e., by type of metal products, pigments, chemicals, and miscellaneous uses).

Annual data prior to 1961 and monthly data for 1953-82 (mine production, 1941-80) are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Source: U.S. Department of Commerce, Bureau of the Census. General imports refer to imports for immediate consumption plus material entering the country under bond. For a general explanation of foreign trade data, see note 1 for p. 78. Imports of lead comprise the dutiable lead content of all lead-bearing ores, lead bullion, and other unwrought lead (alloyed and unalloyed) plus the lead content of alloys of bismuth. Not included are imports of lead waste and scrap and wrought or semifabricated shapes. Effective with data for September 1963, the imports are summarized according to the commodity classifications of the Tariff Schedules of the United States, Annotated and are not directly comparable with earlier data. Figures for secondary lead recovery, shown in the adjacent column, include production from imported scrap.

Annual data prior to 1961 and monthly data for 1953-82 are in earlier editions of BUSiness Statistics (see reference note, p. 1 of this section).
3. Source:' American Bureau of Metal Statistics. Effective January 1979, producers' stocks exclude stocks of lead base bullion in transit. Effective January 1978, data represent stocks of ore matte scrap in process and base bullion. Yearend data for 1953-77 comprise lead in raw material and in base bullion at smelters, in transit, at refineries, and in process.

Primary refiners' stocks refer to inventories at plants and do not include material in process or in transit.

Consumers' and secondary smelters' stocks of lead in refinery shapes and lead in copper-base scrap are shown in the original reports by type of material consumed. Data reflect the inclusion of reports from additional respondents; see also note 1 for this page. Consumers' stocks also include secondary smelters' stocks of refinery shapes.

Stocks of purchased lead-base scrap held by smelter-refineries are shown in terms of gross weight.

Annual data prior to 1961 and monthly data for 1929-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: Metals Week (prior to 1967, Engineering and Mining Journal, Metal and Mineral Markets). The data represent arithmetic averages of daily prices of common grade lead. Prices are weighted averages of fixed-price sales of domestically refined lead sold by domestic producers to consumers. Prices through November 1971 are at New York, on sales for both prompt and future deliveries; beginning December 1971, data refer to one nationwide price, delivered basis.

Annual data prior to 1961 and monthly data for 1929-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
5. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p . 78 . lmports for consumption comprise the tin content of tin ore and black oxide of tin, and unwrought tin, other than alloys of tin. Effective September 1963, import statistics are summarized according to the Tariff Schedules of the United States, Annotated and are not directly comparable with earlier figures.

Exports (including reexports of metallic tin) refer to unwrought tin and tin alloys-annually, beginning 1963, and monthly, beginning January 1973. Annual totals prior to 1963 also include exports of wrought tin and tin alloys in basic shapes and forms. Beginning with data for 1965 , exports are according to the January 1, 1965 revised Export Schedule B (and subsequent editions) and are not directly comparable with exports prior to 1965.

Annual totals prior to 1961 and monthly data for imports of ore (1938-82), imports of metal (1929-82), and exports (1951-82) are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for ore exports

951-52) and revised data for ore imports (1947) are in the corresponding note in the 357 edition of BUSINESS STATISTICS. Earlier monthly data for exports may be obtained om the records of the Bureau of the Census.
6. Source: U.S. Department of the Interior, Bureau of Mines. The monthly consumpon and secondary production data are as reported by companies that account for over 90 ercent of primary tin consumption and over 80 percent of secondary tin consumption. The inual totals include adjustments not distributed to the monthly series
Tin recovered from scrap processed in the United States comprises tin recovered in all rms (alloys, solder, type metal, babbitt, etc.), as well as recovered metal (secondary pig $n$ and remelt tin), which is shown separately. Domestic mine production of tin is virtually . 1.
Industrial stocks held by private smelters, fabricators, and distributors exclude data for $n$ in process and tin in transit to the United States. Small stocks of secondary pig tin are icluded. The data reflect national stockpile surplus tin sales to industry or for government se.
Annual data prior to 1961 and monthly data for 1951-82 (1958-82 for secondary roduction) and for 1942-50 (as compiled by the U.S. Department of Commerce and the 'ivilian Production Administration) are in earlier editions of BUsIneSS STATISTICS (see eference note, p. 1 of this section). It should be noted that data are shown in long tons in le 1975 and earlier editions of BUSINESS Statistics.
7. For the period September 1963-April 1964, tin ore imports were expressed in terms $f$ gross weight in the original Census reports; for other periods, in terms of tin content. he 1967 Minerals Yearbook (U.S. Department of the Interior, Bureau of Mines) shows n ore imports for consumption (tin content basis): 1963, 1,676 metric tons; 1964, 5,273 retric tons.
8. Data are not strictly comparable with earlier periods because of the exclusion of tocks of lead base bullion in transit to refineries.

## PAGE 118

1. See note 5 for p. 117.
2. See note 6 for p. 117.
3. Sources: Metals Week for prices beginning January 1976; American Metal Market or prices prior to January 1976.
The Metals Week composite monthly price (calculated using U.S. dollars per metric on) is based on average daily prices at two markets, the Penang, Malaysia, settlement and he London Metal Exchange for 3 -month high grade tin ( 99.85 percent). The composite ncludes charges for frcight, commissions, insurance, etc., plus the dealer's financing costs luring a 70 -day export period and the consumer's financing costs during a 70 -day period. For consumers, this 70 -day cost adjustment is for the period between receipt of the tin by he consumer and the time the tin (in its finished form) leaves the consumer. The :omposite thus represents the replacement cost for tin for the month (but not necessarily he monthly spot price). No earlier comparable prices are available.
The American Metal Market price prior to January 1976 represents averages of daily Jrices of Straits tin, Grade A, 99.8 percent or higher, for prompt delivery in New York.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: U.S. Department of the Interior, Bureau of Mines. Data represent actual nine production of recoverable zinc (including that made into zinc pigments and salts) in :he United States. Monthly data are on an estimated 100 -percent coverage basis and are adjusted to final annual figures.

Annual data prior to 1961 and monthly data for 1929-82 are shown in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section).
5. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78.

Imports cover the dutiable zinc content of all zinc-bearing ores and unwrought, unalloyed zinc in basic shapes and forms. Excluded are imports of unwrought alloys of zinc in basic shapes, wrought (semifabricated) shapes, waste, scrap, wire, powders, and flakes. General imports refer to imports for immediate consumption plus merchandise entered into Customs bonded storage warehouses and Customs bonded smelting and refining warehouses. Effective September 1963, the data are summarized according to the Tariff Schedules of the United States, Annotated and are not directly comparable with earlier data.

Exports refer to unwrought, unalloyed zinc that is cast in slabs, blocks, or pigs. Excluded are unwrought zinc alloys, wrought zinc, and wrought zinc alloys. Beginning with 1965, export statistics are according to the January 1, 1965 revised Export Schedule B (and subsequent issues) and are not directly comparable with earlier data.

Annual totals prior to 1961 and monthly data for 1953-82 are in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
6. Sources: U.S. Department of the Interior, Bureau of Mines; and American Bureau of Metal Statistics (ABMS).

Total consumption of zinc in the United States is the sum of figures for slab zinc, ores, and scrap shown separately. Consumption of ores includes ore used directly in galvanizing; the scrap consumption excludes redistilled slab and remelt zinc.
 httpompanies that redert annyally to the Bureau of Mines.

Consumers' stocks represent slab zinc at plants and exclude metal in transit. Monthly figures for producers stocks are compiled by the ABMS. Producers' stocks (shown in the annual section) for all years are from the Bureau of Mines' annual surveys and refer to zinc held at primary and secondary zinc reduction plants.

Annual data prior to 1961 and monthly data for 1953-82 (for consumption of ores and scrap, 1956-82) are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section).
7. Source: Metals Week (prior to 1967, Engineering and Mining Journal, Metal and Mineral Markets). Prices are weighted averages that reflect fixed-price sales of Prime Western grade zinc, as well as a compilation of sales of other grades, by domestic producers to consumers (metal of foreign origin is excluded). The daily sales are weighted by tonnage. The monthly price is a mean average of the weighted daily prices.

Effective January 1971, the price is on a delivered basis (average freight rates are added to the price of producers whose metal is sold f.o.b. smelter) and is not directly comparable with the East St. Louis base price shown through 1970.

Annual data prior to 1961 and monthly data for 1929-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
8. Not directly comparable with earlier data; see note 5 for this page regarding changes in the commodity classification schedules.
9. Beginning 1971, the delivered price is not comparable with the East St. Louis base price shown through 1970. For December 1970, the East St. Louis base price was 15.0 cents per pound; the delivered price would have been 15.5 cents.
10. Less than 50 tons.

## PAGE 119

1. Source: Industrial Heating Equipment Association, Inc. (IHEA). Data represent domestic new orders (less cancellations) for industrial heating equipment. industrial combustion equipment, atmosphere generating equipment, replacement parts, etc., for the heat treatment and processing of metals and materials. Beginning 1971, data for industrial ovens are reported with data for fuel-fired and electric processing equipment. The figures are based on reports of member companies of IHEA. The combined new orders for these products, as reported by member companies, account for about 75 percent of those for the entire industry.

Annual data prior to 1961 and monthly data prior to 1983 are in earlier editions of BUSINESS STATISTics (see reference note, p. 1 of this section).
2. Source: The Material Handling Institute, Inc. (MHI). Shipments are the actual dollar value of material handing equipment shipped in a month as reported by eight cooperating trade associations. These associations' member companies report the figures to their respective associations, who then give these figures to an accounting firm that totals them and reports the totals to the MHI. According to the MHI, the shipments represent over 80 percent of the business activity in the portion of the industry that the eight associations represent. The total dollar value for shipments in the whole industry is not available. Although these eight associations in combination represent a significant portion of the material handling industry, they by no means represent the whole industry. Some segments of the industry not represented by the eight associations are: intra- and interplant containers of all types, dock-boards and ramps, and many types of user-specified components and accessory and accessory products.

The following associations cooperate in supplying the reported figures for their companies: Caster \& Floor Truck Manufacturers Association; Conveyor Equipment Manufacturers Association; Crane Manufacturers Association of America, Inc.: Hoist Manufacturers Institute; The Industrial Truck Association; MHI Hand Lift Truck Manufacturers; Monorail Manufacturers Association; and Rack Manufacturers Institute.

Historical annual and monthly data back to 1954 for this series are in the December 1985 issue of the SURvey OF CURRENT BUSINESS on page S-35.
3. Source: American Supply \& Machinery Manufacturers' Association, Inc. (ASMMA). The new orders index is based on the total new orders received by a cross section of ASMMA members. These are orders for supplies, machinery, and equipment that are placed with industrial hardware manufacturers who sell their products through industrial distributors (see note 4 for this page).

A 2-month moving average (current and preceding month) is used to develop the index. The index is adjusted for seasonality and the number of working days.

Beginning 1977, the base is $1977=100$. Indexes with a base of $1967-69=100$ appear in the 1973 and 1975 editions of BUSINESS STATISTICS.
4. Sources: National Industrial Distributors Association and Southern Industrial Distributors Association. The sales index is compiled from monthly dollar sales of selected members of the two associations. Markets are represented in proportion to the national sales of each distributor as indicated by a sales analysis prepared by the American Supply \& Machinery Manufacturers' Association, Inc.

Beginning 1977, the new base is $1977=100$. Indexes on a base of $1967=100$ appear in earlier editions of the Business Statistics.
5. Sources: National Industrial Distributors Association and Southern Industrial Distributors Association. The inflation index measures manufacturers' prices of industrial supplytype products, using data from the U.S. Bureau of Labor Statistics. The following 10 products are in the index: Fasteners, miscellaneous metal products, power-driven hand tools, valves and fittings, hand tools, rubber belts and befting, material handling equipment, mechanical power transmission equipment, abrasives, and cutting tools.

The index is based on a 2 -month moving average and is seasonally adjusted. The base is $1977=100$.

Monthly data for 1967-76, with $1967=100$ as the base, are in the 1979 and earlier editions of the BUSINESS STATISTICS.
6. Source: The National Fluid Power Association (NFPA). The indexes are a month-to-month comparison of shipments of the same reporting companies, based on $1985=100$.

Fluid power products are specialized items of equipment used in industrial machines, mobile equipment, and manufacturing plants of 70 major industries. They are original equipment items in most heavy equipment found in sizable manufacturing plants. Consumption of fluid power products is considered a good indicator of industrial activity levels. Hydraulic products are primarily original equipment items that go into heavy equipment, such as machine tools and mining equipment. Pneumatic products are used in manufacturing plants, particularly plants producing durable goods.

Annual and monthly data beginning in 1960 are available from the NFPA.
7. Source: National Machine Tool Builders Association. The data represent total industry volume based on reports from members of the association. The reporting companies produce about 90 percent of the U.S. machine tool output.

Machine tools of the metal cutting and metal forming types (see p. 120) are defined as power driven, complete metal-working machines, not portable by hand, used for progressively removing metal in the form of chips or for the forming of metal.

Monthly data for 1961-82 for total new orders and total shipments of metal cutting and metal forming tools appear in appendix I to this volume. Monthly figures for 1956-82 for all series appear in earlier editions of BUSINESS STATISTICS and in the March 1968 issue of the Survey of Current Business on p. 35. For metal cutting tools, monthly averages for years prior to 1947 for total shipments only and monthly data for 1953-55 for the cutting tool series (except backlog) are in the 1957 volume; monthly data for 1945-52 are available upon request. No data prior to 1956 are available for the forming tools.
8. Data beginning 1971 include new orders for ovens; such data are not included in earlier figures.

## PAGE 120

## 1. See note 7 for p. 119.

2. Source: U.S. Department of Commerce, Bureau of the Census. The statistics are taken from the quarterly Current Industrial Report, Construction Machinery (MQ35D). The MQ35D covers all companies engaged in the manufacture of the types of construction and surface mining machinery and equipment that are included in the survey. Statistics for previous quarters may be revised as a result of corrected data, including the receipt of late reports.
3. Source: Battery Council International. The data, compiled for the council by Smith, Bucklin \& Associates, Inc. (beginning 1975) represent the industry's total civilian shipments by U.S. manufacturers to jobbers, dealers, mail-order houses, and chain stores. Shipments for export and for military and other government use (such as post offices) are not included. Shipments refer to automotive type replacement batteries for use in automobiles, trucks, buses, truck-tractors, tractors, golf carts, etc., and those for marine and general use, but do not cover batteries used in industrial trucks and tractors.

Annual data prior to 1961 and monthly data prior to 1983 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: Electronic Industries Association, Marketing Services Department. Effective 1973, all data are for the total market; i.e., units produced or sold in the United States regardless of brand name or country of origin. Prior to 1973, data refer to total industry production including imported sets for sale under U.S. manufacturers brand names. Intracompany transfers are excluded.

Radio sets refer to table, portable, automobile (through December 1979), and clock models.

Television sets refer to table, console, portable, and combination models for monochrome receivers through 1964. Color receivers are included beginning with production for 1965 (color sets produced in 1964 totaled $1,463,000$ units).

The monthly data for all years represent 4- and 5-week periods as follows: March, June, September, and December cover 5 weeks (except for December 1974 when the data cover 6 weeks); other months cover 4 weeks.

Annual data for radio sets prior to 1961 and monthly data for 1951-82 for both series are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
5. Annual data for 1973 and 1974 and quarterly data for all years exclude shipments of rubber-tired dozers to avoid disclosure of operations of individual firms.
6. Effective 1965, the production of color sets is included; see note 4 for this page.
7. Beginning 1973, data are for the total market and include sets imported directly for
partments. Allowance has been made for commercial truck shipments, local sales, llicry fuel, and for small truck mines, which produce over 1,000 tons a year. These imates are later revised to agree with the results of the annual statistical reports from : coal producers. Data comprise bituminous (including subbituminous) coal and lignite as :ll as coal used at collieries for power and heat.
Bituminous coal is mined by using either the underground or surface mining method, lereas lignite is produced only by using the surface mining method. The underground athod is used by tunneling into the earth to the coal which is then mined using such uipment as cutting machines and continuous, longwall and shortwall mining machines. te surface method is used when coal can usually be found within a lew hundred feet of e surface by using surface excavation equipment such as draglines, power shovels, lldozers, loaders and augers. This method also may be known as area, contour, open-pit, ip, or auger mining. As recently as 1985, over 60 percent of bituminous coal and lignite is produced by using the surface mining method
Data exclude production from small mines that have an output of less than 1,000 tons a ar and scll their product by truck.
Monthly data for 1961-82 appear in appendix I to this volume; annual and monthly ta for 1947-60 appear in appendix I of the 1979 edition of BUSINESS Statistics. onthly data for 1929-38 and 1941-46 appear in earlier editions of BUSINESS -ATISTICS (see reference note, p. 1 of this section). Data for 1939-40 (in the 1942 JPPLEMENT) have been revised and are available upon request.
5. Source: U.S. Department of Energy, Energy Information Administration. Data for th consumption and stocks cover bituminous (including subbituminous) coal and lignite. )r a discussion on the type of surveys and procedures used over the years in the Hlection of coal data, see "Explanatory Notes" in the Quarterly Coal Report, published the Energy Information Administration, U.S. Department of Energy.
Total consumption includes amounts not shown separately for bunker fuel but excludes nounts for class I railroads, and approximates total consumption of bituminous coal and ,nite. Stocks on lake and tidewater docks, those at other intermediate storage piles tween mine and consumer, and coal in transit are omitted from data presented here. scause of these omissions from stocks, a reliable consumption figure cannot be calculated I the basis of production, imports, exports, and changes in stocks.
Figures for electric power utilities (originally compiled by the Fedcral Power Commison) pertain to consumption and stocks held by public utility power plants. They exclude el consumed in generating plants of electric railways and railroads and manufacturing ants generating electric energy for public sales.
Annual data prior to 1961 and monthly data prior to 1983 (except as noted below) pear in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this ction). Monthly data for consumption of bituminous coal for 1954 have been revised and e available upon request. Monthly and end-of-year industrial stocks for 1970 are not jailable.
6. In addition to coke plants, includes data for steel and rolling mills, cement mills, her manufacturing, and mining industries.
7. Through 1979, includes stocks for residential and commercial, which were shown paratcly in the 1979 and earlier editions of BUSINESS STATISTICS as "retail dealers" ocks. Beginning 1980, these stocks are no longer available from the source.
8. Source: U.S. Department of Labor, Bureau of Labor Statistics. Beginning July 1976, dexcs reflect coal sold in contract sales transactions (excluding captive production) in urious domestic mining regions. Through June 1976, indexes are based on prices (relating eastern coal production only) f.o.b. mine, reported by coal producers or sales agents vering movements within primary markets, such as, electric utilities, industries, coking lants, and coal used for domestic purposes. Adjustments are made for discounts, allowanis, and taxes.
Annual data for 1947-60 and monthly data for 1971-82 appear in earlier editions of USINESS STATISTICS (see reference note, p. I of this section). Annual data for 1926-46 nd monthly data for 1926-70 are available upon request.
9. Revised total; revisions not distributed to the components.
10. Reported annual total; monthly revisions are not available.
11. Beginning 1978, includes small amounts for bunker fuel; prior to 1978, these mounts were included only in the total consumption figure.

## PAGE 123

1. Source: U.S. Department of Energy, Energy Information Administration. Data are ased on reports from plants accounting for practically the entire output of beehive and ven coke, including public utility plants having coke ovens. However, since 1979, no eehive coke has been produced. The figures exclude screenings, coke produced by edium- and low-temperature carbonization plants and by coal-gas retorts, and coke made om coal-tar pitch. Data for production of beehive and oven coke, which were published sparately in the 1979 and earlier editions of BUSINESS STATISTICS, should be combined rr comparison with production data shown in the 1982 and subsequent editions.

Data for petroleum coke (the residue from the petroleum refining process) are given cre, since this product has some importance as a petroleum refinery fuel, as a household sel, and for industrial uses. Over the years an appreciable amount of nonmarketable Diotalyst cope has been included in the production of petroleum coke (14,531,000 short tons htt'p! $/ 986 \mathrm{f}$ asser.stlouisfed.org/

Data shown here for stocks at plants are restricted to oven (by-product) and petroleum coke. Stocks of oven coke at furnace plants relate to those at plants whose main business is the production of furnace coke, which has an assured outlet either through financial affiliation with, or direct ownership by, an ironworks or through long-time contracts. Merchant plants, as the name implies, refer to those plants producing coke for sale on the commercial (open) market. Included are a few plants that are affiliated with local iron furnaces and produce more coke than the furnaces can absorb and, therefore, sell in competitive markets; plants affiliated with alkali and chemical works; and a number of plants (though constructed primarily to supply city gas) that must dispose of their coke through the usual trade channels.

Annual data prior to 1961 and monthly data for 1932-82 (except as noted below) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Production of beehive and oven coke for December 1978 has been revised to 4,679,000 short tons.
2. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
3. Source: U.S. Department of Labor, Bureau of Labor Statistics. Indexes are based on buyers' posted prices (obtained from the petroleum companies) of crude petroleum produced in thirteen areas (the Illinois Basin, Pennsylvania, Kansas, Oklahoma, West Texas, Texas Gulr Coast, East Texas, South Louisiana, North Louisana, Wyoming, California, Colorado, and Alaska).

Monthly data for 1961-82 appear in appendix I to this volume. Annual and monthly data for 1947-60 appear in appendix I of the 1979 edition of BUSINESS Statistics.
4. Source: U.S. Department of Energy, Energy Information Administration. Data for gross input to crude oil distillation units (known as crude runs to stills, prior to January 1974) include both domestic and foreign crude oils and, beginning January 1974, may include input of lease condensate, natural gas plant liquids, unfinished oils, and other hydrocarbons that are processed through the crude oil distillation facilities. Because of these inclusions, the data are not comparable with those for 1973 and earlier periods.

The refinery operating ratio represents the daily average gross input (crude runs to stills prior to January 1974) divided by the daily average operable capacity.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of BUSiness Statistics (see reference note, p. 1 of this section).
5. Source: U.S. Department of Energy, Energy Information Administration. Imports of refined products and exports (crude and refined), shown on p. 124, are from the U.S. Department of Commerce, whereas, imports of crude are those obtained by the Energy Information Administration from petroleum companics to balance refinery reports and differ from totals reported by the U.S. Department of Commerce. Data are for the United States, excluding U.S. territories and possessions.

In 1981, the Energy Information Agency changed some definitions and concepts to reflect recent developments in refining and blending practices. These changes include adding gasohol production to motor gasoline production and accounting more precisely for distillate and residual fuel oil processed further after initial distillation. Because of these changes, comparability of data for 1980 and earlier years with 1981 may have been affected. A description of these changes appears in the May 1981 issue of Monthly Energy Review, U.S. Department of Energy, Energy Information Administration.

Some of the principal terms used and their meanings are explained below
All oils.-Crude petroleum, natural gas Jiquids, and their derivatives.
New supply of all oils.-Beginning 1980, a derived figure representing total field production and imports (including imports into the strategic petroleum reserve) of crude oi (including lease condensate); total field production and net imports of natural gas plant liquids; imports of unfinished oils and gasoline blending components; other hydrocarbons and alcohol new supply (field production); and imports of refined products. Prior to 1980 , a reported figure representing crude oil (including lease condensate) production, plus production of natural gas plant liquids, plus other hydrocarbons and alcohol new supply (field production), plus imports of crude oil (including imports into the strategic petroleum reserve, beginning January 1977) and other imports of petroleum products.

Total product demand.-Beginning 1980, a derived figure representing total petroleum products supplied for domestic use plus exports of crude petroleum (including lease condensate) and refined products. Prior to 1980, a derived figure representing total netw supply, plus unaccounted for crude oil and processing gain, plus decreases or minus increases in change in stocks of all oils, less crude losses. Because there were substantial secondary and consumers' stocks that were not reported to the Energy Information Administration, this figure varied considerably from consumption.

Domestic product demand.-Total product demand less exports.
Imports.-Receipts of foreign oils in the United States.
Exports.-Total shipments to foreign countries from the United States.
Stocks.-Crude petroleum stocks comprise those on leases (producers' stocks), at tank farms, in pipelines, and at refineries. Stocks of unfinished oils, natural gasoline, etc. (prior to 1967, shown as natural gas liquids) are those at plants and terminals and at refineries. Stocks of refined products comprise those held at refineries, as well as those at bulk terminals and in pipelines, if any (for liquefied petroleum gases, also stocks underground).

Beginning January 1963, certain oils have been reclassified and reported scparately as "petrochemical feedstocks." As a result, the data for demand, production, and stocks for various refined products (i.e., gasoline, kerosene, fuel oils, and liquefied petroleum gases) shown on pp. 124-127 are not comparable with those for earlier periods. However, the total product demand and total domestic product demand figures on p. 124 are comparable.

Annual data prior to 1961 and monthly data for 1955-82 (except as indicated in note 6 for this page) appear in the earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section).
6. Crude petroleum production includes amounts of lease condensate, which is a natural gas liquid recovered from gas well gas (associated and non-associated) in lease separators or natural gas field facilities. Leased condensate consists primarily of pentanes and heavier hydrocarbons.

Monthly data for 1961-82 appear in appendix I to this volume. Annual and monthly data for 1947-60 for production of crude petroleum and 1955-60 for imports of crude petroleum and unfinished oils appear in appendix 1 of the 1979 edition of BUSINESS Statistics.
7. Barrels of 42 gallons.
8. See note 4 for this page regarding change in comparability of data.
9. Reported annual total; revisions not distributed to the months.
10. Based on new 1981 stock level; not comparable with earlier periods. See 2d paragraph of note 5 for this page.

## PAGE 124

1. Source: U.S. Department of Energy, Energy Information Administration. See note 5 for p. 123.
2. Beginning with the 1975 edition of BUSINESS STATISTICS, data account for processing gain and crude losses and are not comparable with data shown in earlier editions.

Total domestic product demand includes data for items not shown separately.
Monthly data for 1961-82 appear in appendix I to this volume. Annual and monthly data for 1955-60 appear in appendix I of the 1979 edition of BUSINESS STATISTICS.
3. Annual data prior to 1961 and monthly data for gasoline (1938-82), kerosene (1929-82), distillate fuel (1932-82), residual fuel (1938-82), jet fuel (1953-82), and lubricants (1929-82) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section). See separate notes regarding changes affecting comparability.
4. Beginning January 1983, data include small amounts of road oil. For 1982, domestic demand of road oil totaled 591,000 barrels. See note 4 for p. 127 for definitions of asphalt and road oil.
5. Barrels of 42 gallons.
6. Beginning January 1963, data are not comparable with those for earlier periods because of the reclassification and separate reporting of certain oils as "petrochemical feedstocks." See next to last paragraph of note 5 for p. 123.
7. Beginning January 1964, data for gasoline exclude special naphthas.
8. Effective 1964, data for jet fuel used in commercial aircraft are excluded from kerosene and included in the jet fuel total. Data for these two items, for earlier periods, are not comparable.
9. Beginning January 1975, data reflect an increase in coverage and are not comparable with earlier periods; see 2d paragraph of note 1 for p. 125.
10. Beginning January 1979, data reflect coverage of additional processing facilities; not strictly comparable with data shown for earlier periods.
11. Based on new 1981 stock level; not comparable with earlier periods. See 2d paragraph of note 5 for p . 123.
12. Sec 4th paragraph of note 1 for p .125 regarding change in coverage.

## PAGE 125

1. Source: U.S. Department of Energy, Energy Information Administration. See also note 5 for p. 123. Beginning January 1967, data reflect change in reporting to show all stocks of unfinished oils, natural gasoline, plant condensate, and isopentane as one item, and stocks of refined products as another (both items include stocks at refineries, natural gas processing plants, terminals, and bulk stations). Also, as a result of increased coverage in certain bulk terminals, stocks (shown here and on p. 126 for distillate and residual fuel oils) for 1967 are on a new basis. Comparable end of year stocks for 1966 (millions of barrels) are: Total stocks, 881.1; unfinished oils, etc., 93.8; refined products, 548.9 ; distillate, 158.1; residual, 63.9.

Beginning January 1975, primary stock coverage for the refined petroleum products has been increased to include approximately 100 additional bulk terminals. For those items actually affected by this change, comparable end of year stocks for 1974 (millions of barrels) are: Total stocks, 1,121.1; refined products, 742.5; gasoline, 228.3; kerosene, 16.9; distillate, 223.8: residual, 74.9 ; jet fuel, 29.8; and asphalt, 21.6. No significant change in end of year stocks for lubricants.

Beginning January 1979, data include coverage of additional processing facilities. For those arcas actually affected by this change, comparable end of year stocks for 1978 (millions of barrels) are: Total stocks, 1,285.2; unfinished oils, etc., 119.9; refined products, 789.0; gasoline, 241.0; aviation gasoline, 2.9; and liquefied petroleum gases, 136.1.

In January 1983, respondents to bulk terminal and pipeline surveys were increased, thereby affecting the amount of stocks reported, beginning January 1983. Based on this Digincrease, in woresage comparable end of year stocks for 1982 and change in stocks (from http!ppriasus periodifsfer 18822, 1983, and January 1983 would have been (millions of barrels):

Total stocks, 1,462.0; crude oil, 645.0; motor gasoline, 203.0; distillate, 186.0; residual, 68.0; liquefied petroleum gases, 103.0; other petroleum products, 259.0 ; and change in stocks (shown on p. 124), $-21.6,-8.4$ and -9.5 respectively.

Annual data prior to 1961 and monthly data for 1947-82 (1955-80 for refined products), appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Data include jet fuel held by pipeline companies and bulk terminal stocks of lubricants, asphalt, and miscellaneous oils.
3. Source: U.S. Department of Energy, Energy Information Administration for all data except prices; see note 5 for p. 123 for pertinent explanations.
4. Annual data prior to 1961 and monthly data for gasoline production (1936-82) and stocks (1938-82) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Also, see separate notes regarding changes affecting comparability of the data.
5. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). Data are price indexes of monthly sales of regular grade leaded gasoline to jobbers, commercial consumers, and retail outlets. They replace the previously published prices (shown in the 1973 and earlier editions of BUSINESS STATISTICS) and are developed from revenue and volume data collected directly from the petroleum companies.

Indexes through May 1985 reflect a 1 -month lag in pricing because of the time required to collect the data;-e.g., May index reflects changes in prices between March and April. When the Energy Information Agency of the Department of Energy began publishing more timely price data for petroleum products, it became possible for BLS to eliminate the 1-month lag. Effective with the revised index for June 1985 (available once the July 1985 index was published), indexes reflect price movements through the middle of the month for which they are shown. It should be noted that the "revised" June index differs from that originally published with the index change between May and June actually reflecting 2 months of price movements.

Monthly indexes for February 1973-December 1982 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Indexes prior to February 1973 are not available.
6. Source: U.S. Department of Labor, Bureau of Labor Statistics (BLS). These two series, first shown in the 1984 edition of BUSINESS STATISTICS, are compiled from data collected by the BLS at the pump from a sample of full-service. mini-service, and self-serve gas stations and in conjunction with the Consumer Price Index.

Monthly data for 1974-82 are available upon request.
7. See p. 127 for production and stocks of jet fuel.

Annual data prior to 1961 and monthly data for 1941-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
8. Barrels of 42 gallons.
9. Beginning January 1963, data are not comparable with those for earlier periods because of the reclassification and separate reporting of certain oils as "petrochemical feedstocks."
10. Beginning January 1964, data exclude special naphthas formerly included. In 1964 production and stocks of special naphthas amounted to (millions of barrels) 26.1 and 5.9 respectively.
11. Beginning January 1964, data exclude alkylate, formerly included.
12. See 1 st paragraph of note 1 for this page regarding change affecting comparability of data.
13. Average based on quotations for fewer than 12 months.
14. Beginning January 1975, data are not comparable with earlier periods; see 2d paragraph of note 1 for this page.
15. Effective with the 1982 edition of BUSINESS STATISTICS, stocks of crude petroleum for the strategic petroleum reserve (reflected in total stocks of crude petroleum) are shown separately.

Monthly data for 1979-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for October 1977-December 1978 are available upon request; data for earlier periods are not available.
16. Beginning 1979, data include coverage of additional processing facilities. See 3d paragraph of note 1 for this page.
17. Based on new 1981 stock level and (except for strategic petroleum reserve stocks) are not comparable with earlier periods. See 2 d paragraph of note 5 for p .123.
18. See 4th paragraph of note 1 for this page regarding change in coverage.
19. See 2 d paragraph of note 5 for this page regarding change in coverage.
20. Effective with the January 1985 price, gasoline that contains alcohol as an additive is included.

## PAGE 126

1. Source: U.S. Department of Energy, Energy Information Administration for all data except price indexes; see note 5 for p. 123.
2. Data for production of kerosene and distillate fuel oil include small amounts of natural gas liquids produced at natural gas processing plants.

Annual data prior to 1961 and monthly data for kerosene production (1929-82), kerosene stocks (1942-82), and production of distillate and residual fuel oils (1932-82) appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Also, see separate notes regarding changes affecting comparability of the data.
3. Source: U.S. Department of Labor, Bureau of Labor Statistics. Data are indexes :veloped from revenue and volume data collected directly from petroleum companies; ey are based on the following specifications:
Kerosene (Light distillate).-Monthly sales to resellers for regular grade kerosene, stove I, PS-100, or No. 1 fuel (excluding jet fuet) and for jet fuel, kerosene base, commercial pe to the airline industry (excluding bonded fuel).
Distillate fuel oil (Middle distillate).-Monthly sales fuel oil, No. 2 to resellers, f.o.b. finery or terminal, and diesel fuel, No. 2 or standard diesel, to large consumers.
Residual fuel oil.-For No. 6 fuel, monthly cargo sales, to resellers.
These indexes replace previously published prices shown in the 1973 and earlier ditions of Business Statistics
Indexes through May 1985 reflect a 1 -month lag in pricing because of the time :quired to collect the data; e.g., May index reflects changes in prices between March and pril. When the Energy Information Agency of the Department of Energy began publishg more timely price data for petroleum products, it became possible for BLS to eliminate le 1 -month lag. Effective with the revised index for June 1985 (available once the July 785 index was published), indexes reflect price movements through the middle of the ronth for which they are shown. It should be noted that the "revised" June index differs om that originally published with the index change between May and June actually :flecting 2 months of price movements.
Annual data for 1947-60 and monthly data for 1971-82 appear in earlier editions of USINESS STATISTICS (see reference note, p. I of this section). Monthly data for 947-70 arc available upon request.
4. Data include all refinery and bulk terminal stocks of distillate/residual fuel oil. See :parate notes regarding changes affecting comparability of the data.
Annual data prior to 1961 and monthly data for 1938-82 appear in earlier editions of USINESS STATISTICS (see reference note, p. 1 of this section).
5. Barrels of 42 gallons.
6. Beginning January 1963, data are not comparable with those for earlier periods ccause of the reclassification and separate reporting of certain oils as "petrochemical edstocks."
7. Beginning January 1965, data exclude commercial grade jet fuel and are not omparable with earlier periods. Comparable 1964 data excluding these amounts are nillions of barrels): Production, 95.0; stocks, 27.3. See p. 127 for production and stocks of st fuel.
8. Sce 1st paragraph of note 1 for p. 125 regarding increase in coverage.
9. Beginning 1972, data include small amounts of crude to be burned as fuel; omparability of data with earlier periods not greatly affected.
10. Sec 2 d paragraph of note 1 for p. 125 regarding increase in coverage.
11. Beginning 1979, data include coverage of additional processing facilities.
12. Based on new 1981 stock level; not comparable with 1979 and earlier periods.
13. See 4th paragraph of note 1 for p. 125 regarding change in coverage.
14. See 6th paragraph of note 3 for this page regarding change in coverage.

## PAGE 127

1. Source: U.S. Department of Energy, Energy Information Administration; see note 5 or p. 123 for pertinent explanations.
2. Through 1964, data are for military jet fuel only. Beginning January 1965, data nclude commercial jet fuel (formerly shown with kerosene). Comparable 1964 data ncluding these amounts are (millions of barrels): Production, 182.5; stocks, 18.7. Data for tocks also include jet fuel at bulk terminals.

Annual data prior to 1961 and monthly data for 1952-82 appear in earlier editions of 3USINESS STATISTICS (see reference note, p. 1 of this section).
3. Annual data prior to 1961 and monthly data for 1929-82 for production and 924-82 for stocks appear in carlier editions of BUSINESS STATISTICS (see reference tote, p. 1 of this section).
4. Through 1982, data cover asphalt, a dark-brown-to-black cement-like material conaining bitumens as the predominant constituents obtained by petroleum processing. The lefinition includes crude asphalt as well as the following finished products: Cement, fluxes, he asphalt content of emulsions (exclusive of water), and petroleum distillates blended with asphalt to make cutback asphalts.

Beginning 1983, data include small amounts of road oil, which is defined as any heavy setroleum oil including residual asphaltic oil. It is generally produced in six grades from 0 the most liquid) to 5 (the most viscous). Total road oil data for 1982 were (thousands of ,arrels): Production. 610 and stocks, 47.

Production includes amounts produced from both domestic and imported petroleum. stocks represent amounts held at petrolcum refineries only.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of 3usiness Statistics (see reference note, p. 1 of this section). In the 1953 and earlier rolumes, data are shown in short tons ( 1 ton of asphalt $=5.5$ barrels).
5. Stocks exclude nonrecoverable amounts of liquefied petroleum gases in underground ;torage.
6. Barrels of 42 gallons.
7. Beginning January 1963, data are not comparable with those for carlier periods yecause of the reclassification and separate reporting of certain oils as "petrochemical Digitized of the FRASER

The annual totals contain revisions not distributed to the monthly figures. An approximate adjustment of the monthly figures can, of course, be made by multiplying the reported monthly figures for the various items by factors obtained by dividing the revised annual total by the totals of the monthly data.

No annual data are available prior to 1971. Monthly data for 1977-82 are available upon request.
3. Source: U.S. Department of Labor, Bureau of Labor Statistics. Indexes are computed from price quotations for 1 day of each month (usually the Tuesday of the week containing the 13 th).

Specifications for the paper prices used in deriving the indexes are as follows: (1) paperboard--a composite for the group comprising container board, folding boxboard, and set-up boxboard; (2) building paper and board-a composite for the group comprising insulation board (vegetable fiber and roof and ceiling tile) and hardboard.

Annual indexes prior to 1961 and monthly indexes for 1959-82 appear in the 1963 and subsequent editions of BUSINESS STATISTICS (see reference note, p. 1 of this section); monthly indexes for 1947-58 (for paperboard, 1946-58) are available upon request.
4. Source: American Paper Institute (API). Data are estimated industry totals based on monthly reports from affiliated divisions. They are based on a new set of definitions, established in 1968, and have been regrouped, so that it is not always possible to make direct comparisons between the new and the old data. The figures have been adjusted to 100 percent industry levels on the basis of percentages of total capacity covered by the reporting members for each grade as computed from the API's annual capacity survey. Data for the current month as published in the SURvey Of Current Business represent preliminary cstimates of the API. Annual data back to 1934 and monthly data for 1947-68 on the old basis (except as indicated in note 2 for p. 173 of the 1969 volume) appear in the 1969 and earlier editions of BUSINESS STATISTICS. Monthly data for 1969-82 are available upon request. Annual totals may contain revisions not distributed to the months.

## PAGE 130

1. Source: American Paper Institute (API), Newsprint Division. The reported data cover virtually the entire industry in both Canada and the United States. Judged by the comparison of newsprint production data for the United States with figures published by the Bureau of the Census, the API's data cover virtually 100 percent of total U.S. newsprint output for the years shown. Shipment data include tonnage invoiced (whether or not shipped), and stocks at mills include supplies at destination warehouses not yet invoiced to customers.

Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
2. Source: American Paper Institute, Newsprint Division (based on a survey by the American Newspaper Publishers Association). Data for consumption by publishers in the 1979 and earlier editions of the BUSINESS STATISTICS represent American Newspaper Publishers Association 525 users, in short tons. Beginning with the 1982 edition, data represent total U.S. users, in metric tons. Publishers' stocks are those on hand in city of publication plus tonnage billed to the publishers by mills but not received.

Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
3. Source: U.S. Department of Commerce, Bureau of the Census. Data cover "Imports for consumption" of standard newsprim paper. For a general explanation of foreign trade data, see note 1 for p. 78.

Annual data prior to 1961 and monthly data for 1939-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: U.S. Department of Labor, Bureau of Labor Statistics. The index is for a ton of standard newsprint, rolls, contract, manufacturer to newspaper publisher, f.o.b. mill, freight allowed or delivered. Monthly data for earlier periods are available from the source agency. For a general explanation of Producer Price Indexes, see note 1 for p. 27.
5. See note 4 for p. 129.
6. Source: Fibre Box Association. Beginning July 1978, all biweekly statistics were replaced with monthly data from reports of member companies covering almost 90 percent of the industry and estimates of nonreporting companies; these preliminary data are subsequently adjusted to final figures obtained by the Fibre Box Association in an annual survey and are supplemented by estimates for nonreporting companies. The data are measurements of the surface area of corrugated and solid fiber containers, including the area of interior packings.

Annual data prior to 1961 and monthly data for 1941-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
7. Source: American Paper Institute. Unbleached kraft paper contains more than 80 percent unbleached sulphate woodpulp. Wrapping paper, shipping sack, grocers sack and other bag and converting papers-18 pounds and over ( $24 \times 36-500$ ).
8. Beginning January 1974, data for production, shipments, stocks, and consumption for Canada and the United States reflect reduction in basis weight of newsprint from 32 to 30 pounds for 500 sheets measuring 24 inches $\times 36$ inches.

Stocks include quantities held at factories, regional branches, and sectional warehouses; ocks in transit between such points; consigned stock; and stocks purchased from other anufacturers.
Some annual totals include revisions not distributed to the months.
Annual data prior to 1961 and monthly data prior to 1983 for some series and notes for her series that are available upon request, together with pertinent qualification, appear in irlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section)
6. Source: U.S. Department of Commerce, Bureau of the Census. For a general iplanation of foreign trade data see note 1 for p. 78.
Coverage of data for exports of pneumatic casings for the time periods shown herein aries as follows: Beginning January 1965 data cover exports of pneumatic tires, including assenger car, truck, bus, and motorcycle (also motor scooter) tires; for the period January 958-December 1964 data include new automotive tires (passenger car, truck, and bus), ut exclude motorcycle tires.
The figures do not include exports of solid and cushion tires; airplane, bicycle, tractor, nd farm implement tires (see preceding paragraph for coverage of motorcycle tires).

Data for exports of inner tubes for the years shown cover types as follows: Beginning anuary 1965, all types of inner tubes for vehicles, including aircraft; those for January 958-December 1964, all types, new and used, excluding aircraft.
Some annual totals include revisions not distributed to the months.
Annual data prior to 1961, monthly data for 1941-82 and other information for years ot shown, appear in earlier editions of BUSINESS STATISTICS (see reference note, p.l of uis section).
7. Data for motorcycle tires are included for the period January 1958-December 1976.
8. Data for motorcycle tires are included beginning January 1965.
9. Data beginning January 1965 include all types of inner tubes for vehicles, including ircraft.
10. Data beginning January 1972 include mobile home tires.
11. Data beginning January 1977 exclude motorcycle tires and tires for mobile homes.
12. No data are available prior to December 1983.
13. The Bureau of the Census discontinued publication of monthly data effective with he December 1972 report. Beginning 1973, data on an annual basis only will be published y the Census Bureau. Data beginning January 1973 are from the Rubber Manufacturers issociation.

## PAGE 132

1. Source: U.S. Department of the Interior, Bureau of Mines. Data cover operations in he United States and Puerto Rico and represent shipments of portland cement, high-:arly-strength cement and, through 1964, finished cement used in the manufacture of נrepared masonry cement. Monthly data are considered practically complete with annual igures reflecting late revisions, which are not reflected in the monthly data.
Annual data for 1962-72 are from the Bureau of Mines Minerals Yearbook. Annual fata, beginning with 1973, and monthly data are from the Bureau of Mines "Mineral ndustry Surveys-Cement."

Beginning January 1972, data are reported in "short tons" by the Bureau of Mines and, or comparability purposes, are converted and shown here in "barrels" by multiplying by j.31915.

Annual data prior to 1961 and monthly data for 1929-82 appear in earlier editions of 3USINESS STATISTICS (see reference note p. 1 of this section).
2. Source: U.S. Department of Commerce, Bureau of the Census. Data cover total hipments of all known producers of the specified products.

Data for shipments of brick represent building or common brick (made primarily for suilding purposes; not especially treated for texture or color) and facing brick (often reated to produce surface texture and made of selected clays or otherwise treated to roduce desired color). Data for floor and wall tile include both glazed and unglazed types, and also quarry tile.

Annual data prior to 1961 and monthly data for 1955-82 appear in earlier editions of Business Statistics (see reference note, p. I of this section).
3. Source: U.S. Department of Labor, Bureau of Labor Statistics. This index, first shown in this edition of BUSINESS STATISTICS, is not comparable with that published in the 1984 and earlier editions of BUSINESS STATISTICS. For a general explanation of Producer Price Indexes, see note 1 for p. 27.

Data prior to December 1984 are not available.
4. Source: U.S. Department of Commerce, Bureau of the Census. Data represent the net sales price, f.o.b. plant; net discounts, allowances, freight charges, and returns. Products bought and resold without further manufacture are excluded. Data cover sheet glass (flat glass made by continuous drawing), plate glass (flat glass formed by a rolling process, ground and polished on both sides, with surfaces essentially plane and parallel), float glass (flat glass, identical in appearance to plate glass, but formed by a process in which thickness is controlled by floating the glass on molten bed of tin), and, through 1984, rolled and wire glass (includes glass, one or both surfaces of which are roughed, figured, ribbed, or otherwise impressed, and wire glass, polished or otherwise). Laminated glass or otherwise fabricated flat glass products and, beginning January 1985, rolled and wire glass are not included.
inventorics, and unfilled orders. Broadwoven fabrics are defined as cloth, except knit, over 12 inches in width as it comes off the loom. Fabric classifications are based on the chief fiber content of the fabric by weight. Blends and mixtures which are by weight 50 percent natural fiber and 50 percent manmade fiber are classified, for purposes of consistency, in the manmade category.

Production data are adjusted for the number of working days in the report period to compensate for differences in individual company reporting patterns; i.e., calendar month, 4 -week, 5 -week periods. March, June, September, and December were 5 -week periods for 1983-85. January, April, July, October, and December were 5-week periods for 1986. Total production includes some manmade apparel fabrics (gray) not shown separately.

Inventory data include all fabrics located at the reporting plants regardless of the ownership of the material, owned fabric which is held at private or public warehouses is also included. Inventories of fabricated textile products such as sheets, towels, pillowcases, etc., are excluded. Total inventories include some manmade apparel fabrics (gray) not shown separately.

Backlog of finishing orders include the backlog of orders for finishing of cotton and manmade fiber fabrics. Plants that finish for their own account include unfilled orders for finished fabric. Total unfilled orders include some manmade apparel fabrics (gray) not shown separately.

Annual and monthly data in the 1979 and earlier editions of the BUSINESS STATISTICS are based on monthly reports by weaving mills.
2. Sources: U.S. Department of Commerce, Bureau of the Census, and U.S. Department of Agriculture, National Agricultural Statistics Service, Agricultural Statistics Board. Estimates of the total crop are published by the Agricultural Statisics Board monthly as of August I through January 1. These total crop estimates (in net weight bales of 480 pounds) are shown in the monthly Survey Of Current Business. The Bureau of the Census reports cumulative ginnings in running bales for cotton ginned prior to specified dates during the cotton year. Effective with the crop of 1972, certain of the specified dates were changed. The monthly ginnings figures represent cumulative ginnings for the crop year through the end of the month. In order to measure accurately the size of the cotton crop, it is necessary to convert running bales, which vary in weight. into bales of uniform weight. Bale weights are collected on a sample basis from the ginners several times during the season. On the basis of these reports, the number of equivalent 480 -pound net-weight bales were computed.

Annual figures beginning 1913 and monthly data prior to 1981 for ginnings in running bales for selected reporting dates appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
3. Source: U.S. Department of Commerce, Bureau of the Census. The monthly data are compiled from reports received from consumers of cotton accounting for over 95 percent of total consumption of domestic and foreign cotton in the United States. Annual reports are obtained from companies not reporting monthly and are used to revise the monthly data. Domestic cotton consumption is expressed in running bales and foreign cotton in net-weight bales. Consumption (on the cotton system) refers to materials that have passed through the opener, or have otherwise been removed from inventory and put into process for spinning. bleaching, etc. The monthly production figures represent 5 -week reporting periods as follows: March, June, September, and December were 5 -week periods for 1983-85. January, April, July, October, and December were 5 -week periods for 1986. Other months in each year are for 4 weeks.

The monthly reports of the Bureau of the Census show total consumption and stocks by area and State, by type, and by origin (domestic or foreign growth); and world supply and distribution of cotton. For recent years, consumption is also shown in thousands of pounds, net trading-weight basis.

Annual data prior to 1961 and monthly data for 1923-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).

## PAGE 136

## 1. Source: New York Cotton Exchange

Total stocks include ginned stocks in all hands, both private and Government controlled, and also, for dates in harvesting periods, the unpicked portions of the current crop. These cotton statistics are reported for 4 - and 5 -week periods; stocks are for the end of the period covered, which is generally the Saturday falling nearest the end of the month. Figures are in running bales, except for foreign cotton, which has been converted to net-weight bales. Stocks of foreign cotton (not shown separately) may be obtained by subtracting total domestic stocks from total stocks; such derived foreign stocks exclude cotton held in bond.

Annual data prior to 1961 and monthly data for 1941-82 for all series and 1936-40 for domestic cotton stocks are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revisions for August and November 1945 are in the corresponding note in the 1957 and 1955 editions of BUSINESS STATISTICS.

Monthly data for August 1925-December 1935 for domestic cotton are shown on p. 16 of the August 1939 SURVEY.
2. Source: U.S. Department of Commerce, Bureau of the Census. For definitions and other pertinent foreign trade information, see note 1 for p. 78.

Data relate to raw cotton (not carded, combined, or processed). Imports represent imports for consumption; exports relate to domestic cotton (i.e., exclusive of reexports). Import statistics, effective with September 1963 data, are according to the Tariff Schedule Digitizene fohifen 5 frafes. Annotated, and export statistics, effective 1965, are according to the http://fraser.stlouisfed.org/
revised Export Schedule B (January 1, 1965, and succeeding editions); therefore, imports beginning 1963 and exports beginning 1965 are not directly comparable with figures for earlier periods.

Annual data prior to 1961 and monthly data for 1929-82 (except as mentioned below) are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Scattered monthly revisions for for both exports and imports prior to 1954 are in the note in the 1967, 1957, and 1955 editions of Business Statistics.
3. Source: U.S. Department of Agriculture, Crop Reporting Board, National Agricultural Statistics Service. Prices received by farmers are for American upland (short staple) cotton. With the use of a probability sample, the total quantity purchased from farmers and the dollars paid for that quantity are obtained. These prices (based on 480 -pound net-weight bale reflect actual purchases and include discounts and premiums paid during the month. The most current (preliminary) price shown in each issue of the SURVEY OF CURRENT BUSINESS refers to an estimated mid-month price that excludes discounts and premiums.

Annual averages shown are season averages; i.e., weighted crop-year average prices.
Annual data prior to 1961 (as noted below) and monthly data for 1934-July 1937 and for 1941-82 are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Revised averages: April 1964, 31.6; August 1960, 32.3 cents per pound. Annual averages as shown in the 1961 and earlier editions of BUSINESS STATISTICS are simple averages of prices for calendar months.
4. Source: U.S. Department of Agriculture, Agricultural Marketing Service, Commodity Economics Division. The calendar-month price represents the average price of Strict Low Middling $1 / 16$ inch, American white cotton computed from official daily quotations of cotton exchanges in designated markets. The annual averages are season or crop-year averages of monthly data for the year of growth, August through July.

Beginning August 1971, the averages are net; i.e., in terms of 480-pound net-weight bales, and are not directly comparable with earlier prices in gross-weight bales. To convert prices on a gross-weight bale basis to a net-weight bale basis, multiply the market price by 1.0438. Effective August 1, 1973, the base quality grade used in spot market price quotations was changed to grade 41 staple 34 from grade 31 staple 32 (Middling 1 inch).

Market prices shown in earlier editions of BUSINESS Statistics cover the base quality in effect.
5. Source: U.S. Department of Commerce, Bureau of the Census. Data relate to cotton-system spinning spindles (which do not include spindles for spinning uncut top); data for spindles spinning manmade and other fibers and blends are included.

Figures for active spindles refer to number active (for the shift during which the largest number of spindles was operated) on the last working day of the period covered. Spindle hour data reflect the total spindle hours operated during the period. The Bureau's monthly cotton statistics represent operations for 4 and 5 weeks. The 5 -week periods were as follows: March, June, September, and December for 1983-85. January, April, July, October, and December were the 5 -week periods for 1986.

Annual data prior to 1961 and monthly data for August 1945-December 1982 (and data prior to August 1945 relating to spindles consuming 100 percent cotton only) are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section).
6. Running bales are loosely bound bales of varied weight. Net-weight bales are bales of uniform weight.
7. See 2d paragraph of note 4 .
8. Less than 500 bales.

## PAGE 137

1. Source: U.S. Department of Commerce, Bureau of the Census. The data are derived from the Bureau's quarterly survey, Broadwoven Fabrics (Gray), series MQ22T. The figures represent total production of cotton fabrics, over 12 inches in width, by all known weaving mills regardless of their primary activity. Production of tire cord and fabric (shown separately in the original report) is not included in the present series.

Effective with 1951, production of broadwoven mixed goods is classified according to chief fiber content by weight. Therefore, cotton fabrics are wholly or chiefly by weight of cotton (a fabric, 40 percent cotton, 30 percent rayon, and 30 percent acetate, is classified as manmade fiber fabric). Blends and mixtures, by weight 50 percent of one fiber and 50 percent of another fiber, are classified according to the fiber of greatest value (a fabric 50 percent polyester and 50 percent cotton, is a manmade fiber fabric). A fabric containing 5 percent or less of a second fiber is classified as being 100 percent of the first fiber (a wool fabric containing 5 percent or less silk fiber is classified as a 100 percent wool fabric).

The original reports show the number of looms operating on the specific fabrics and production (in thousands of linear yards) by type of goods for duck and allied fabrics; sheeting and allied coarse and medium yarn fabrics; print cloth yarn fabrics; carded colored yarn fabrics; toweling, washcloth, and dishcloth fabrics; blanketing and other napped fabrics; fine cotton fabrics; and all other woven cotton fabrics and specialties.

Annual data prior to 1961 and quarterly data for 1942-82 are in earlier editions of BUSINESS Statistics (see reference note, p. 1 of this section).
2. Source: American Textile Manufacturers Institute, Inc. The data are based on reports from manufacturers whose production currently represents from 85 to 90 percent of the cotton gray goods industry.

The orders and inventories (at cotton mills) are expressed as the number of weeks vessary to produce these amounts, based on current production levels. They are not justed for seasonal variation, including those resulting from holidays, vacation periods,
. Annual data in this volume are averages of the 12 end-of-month figures.
Monthly data for 1957-82 (1969-82 for the ratio) are in earlier editions of BUSINESS 'ATISTICS (see reference note, p. 1 of this section).
3. Source: U.S. Department of Agriculture (USDA), Economic Research Service, as mputed from data compiled by the Bureau of the Census. Cotton cloth foreign trade ta are reported in varying units (e.g., square yards or pounds) and in considerable detail - the many kinds of fabric. The summary trend series shown here are calculated in terms the raw cotton equivalent of the various cloths and expressed in bales of 480 pounds net ight.
U.S. domestic exports cover standard constructions of cloth, tire cord, tapestry, uphol:ry fabrics, table damask, and pile fabrics (in addition to the cloth representation, the al includes cotton equivalent of small quantities of cotton yarn, twine and cordage, and read). Imports for consumption cover the same products except that table damask and e fabrics (grouped in the original reports with manufacturers of such fabrics) are not :luded. Also excluded are manufactured products (house furnishings, apparel, etc.).
Beginning 1965, exports are classified according to the revised Exports Schedule B, nuary 1,1965 , and subsequent editions, and may not be strictly comparable with earlier ;ures. Effective 1963, imports are classified according to the Tariff Schedule of the uited States. Annotated, and may not be directly comparable with earlier figures. The SDA report, Cotton and Wool Situation, provides separate figures (in pounds) for yarn, read, cloth, and manufactures by product.
Monthly data for 1965-82 are in earlier editions of Business STatistics (see fercnce note, p. 1 of this section); monthly data for July 1959-December 1964 are in atistics on Cotton And Related Data, 1930-67 (March 1968), and Supplement, U.S. epartment of Agriculture.
4. Source: U.S. Department of Labor, Bureau of Labor Statistics. For a general planation of Producer Price Indexes, see note 1 for p. 27.
5. Source: Textile Economics Bureau, Inc.; published in Textile Organon. Data reprent industry totals, as specified.
The rayon and acetate yarn and monofilaments group covers, through 1973, industrial yon yarn and textile rayon yarn and monofilaments, and acetate, including diacetate and iacetate. Beginning 1974, the rayon yarn is excluded (see note 6 for this page). The meellulosic (except glass) category covers-for yarns and monofilaments-nylon and amid, olefin (polyethylene and polypropylene) yarn and monofilaments and film fiber, )lyester, saran, spandex (and small quantities of other types for some years) through 173. Beginning 1974, production of saran and spandex is excluded (see note 7 for this 1ge). The noncellulosic staple, tow and fiberfill covers nylon, aramid, acrylic, modacrylic, lyester, and other types. Textile glass refers to continuous strand and staple sliver and ccludes figures for blown glass wool and pack for filtration in insulation, etc. Waste is not cluded in any of the series shown.
The Textile Organon provides a quarterly supply account: production, shipments lomestic and export), stocks, imports, etc., for yarns and filaments and for staple by ajor fibers.
Annual data prior to 1961, quarterly data for 1951-82 (noncellulosic stocks and glass ber production and stocks, 1959-82), and rayon and acetate end-of-period stocks 938-82) are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this :ction). Quarterly revisions for 1965-66 appear in the note in the 1971 volume.
Textile glass fiber production, not shown separately in the aforementioned volumes for le period 1951-58, may be derived by subtracting from total fiber production the data lown for component items; end-of-quarter stocks (1953-58) for noncellulosic fibers and :xtile glass are available upon request.
6. Beginning 1974, data cover acetate yarn only. Production of rayon yarn and sonofilaments for 1974, 1975, and 1976 totaled 171.8;64.8; and 74.8 million pounds.
7. Beginning 1974, data omit saran and spandex yarn. For 1974, 1975, and 1976, roduction of these types totaled 11.9; 11.7; and 12.0 million pounds.

## PAGE 138

I. Source: U.S. Department of Commerce. Bureau of the Census. The figures represent te entire production by all known weaving mills (regardless of their primary activity) of roadwoven fabrics over 12 inches in width, manmade fibers, silk, paper, and other jecialty fabrics. The data are derived from the Census quarterly survey, Broadwoven abrics (Gray), series M22T.

Broadwoven goods are classified according to principal fiber content. Manmade fiber oods are defined as those containing 50 percent or more of manmade fiber by weight.
The original reports show production by type of fabric and fiber, yarn consumed by ipe of yarn, number of looms in place, and loom hours operated. Production of manmade ber tire cord and tire fabric by type of goods is also shown quarterly.
Annual data prior to 1961 and quarterly data for 1964-78 in linear yards are in the 979 and earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this zetion). Monthly data for 1979-82 in square yards are in the 1982 edition of BUSINESS TATISTICS.
Digitized Includes data for all other filament yarn fabrics (including saran and olefin) not http: Wi/fraserately stiouisfed.org/

Annual data prior to 1961 and monthly data for 1941-82 for the domestic series are in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly prices for 1970-82 for Australian wool are in earlier editions of BUSINESS Statistics.
5. Source: U.S. Department of Commerce, Bureau of the Census. Woolen and worsted broadwoven fabrics (except woven felts) represent production by all known mills and are derived from the quarterly survey, Broadwoven Fabrics (Gray), series MQ22T. Data are for fabrics wholly or chiefly wool, reprocessed wool, or reused wool.

The original report, series MQ22T, provides detailed figures for woolen and for worsted apparel fabrics (for men's and boys' and for women's and children's goods) and nonapparel fabrics, as well as for woven felts.

The 1979 and earlier editions of BUSINESS STATISTICS showed data for the production of woolen and worsted broadwoven fabrics in millions of linear yards; blanketing in 72 -inch width or equivalent; other fabrics, 54 - to 60 -inch widths or equivalent 54 -inch width.

For annual data prior to 1961 and quarterly data for 1942-82, see reference note, p. 1 of this section.
6. Yardage is in millions of finished square yards.
7. Not comparable with earlier data; see note 3 for this page regarding change in commodity classification schedules.
8. Average for 10 months; March and April 1976 prices are not available.

PAGE 140

1. Source: U.S. Department of Commerce, Bureau of the Census. The data represent the entire U.S shipment of woven, tufted, needle-punched, knitted, braided, hooked, and other types of rugs and carpeting shipped during the period, including transfers to other divisions of the reporting company; estimates are included for nonreporting firms. Excluded are products fabricated from carpeting or roll goods not manufactured in the reporting establishment.

The original Current Industrial Reports: Carpet and Rugs, series MQ22Q, shows detailed shipments in terms of yardage and dollar value by type of rug, and quantities of yarns and fabrics consumed in their manufacture by type of fiber. The Census Bureau's data beginning in 1968 and 1977 reflect increases in the number of firms surveyed as well as adjusting previously published shipments for comparability with current estimates. Data prior to 1968 are not directly comparable.

Quarterly shipments for 1968-82 are in earlier editions of BUSINESS STATISTICS (see descriptive note in those volumes).
2. Source: U.S. Department of Commerce, Bureau of the Census. Monthly data are based on a sample of cutters accounting for about 90 percent of total U.S. output of the specified apparel items. The estimates represent cuttings of garments from material owned by the reporting company whether cut by that company or others on its account. The annual totals (from the Current Industrial Reports: Men's and Boys' Outerwear, series MA23E and Women's and Children's Outerwear, series MA23F) represent total cuttings and are considered a more reliable record of the level of apparel production.

The monthly data (from Men's, Women's, Misses' and Juniors' Selected Apparel. series M23I) are based on a sample of establishments accounting for 80 to 90 percent of output. The monthly data are in substantial agreement with the annual series; differences for some items are because of sampling fluctuations, errors in reporting, coverage (such as the introduction of new producers and new products), and the benchmark in use. Production (cuttings) includes reports from jobbers reporting output made from their materials; operations of contractors producing garments for other companies are not covered. (Also excluded are small quantities of garments cut as secondary products by establishments primarily producing other apparel and accessories.)

For all items, monthly women's apparel data are unavailable for 1974 and 1982.
Women's "Coats" (trimmed and untrimmed) include toppers, car, suburban, plastic, reversible, and wool water-repellent coats, but exclude raincoats. Women's "Suits" include tailored suits, pant suits, and jumpsuits made from both woven and knitted fabric, and tailored uniform suits sold as a unit. Excluded are coordinates sold as separate units. Uniform suits are included in the annual totals but are not covered in the monthly data. Women's "Skirts" include gauchos and uniform skirts. Women's "Slacks" include all pants except jeans and dungarees and jean-cut casual slacks. "Jeans and dungarees" include all pants of jean-type construction that are made from denim fabric and "jean-cut casual slacks" include all pants of jean-type construction made from fabric other than denim, i.e., corduroy, etc. Women's "Blouses" include knit and woven fabric blouses but exclude knit outerwear sport shirts. Women's "Dresses" include suit-type dresses, formal, work and house dresses, and jumpers. Men's "Suits" include uniform suits, casual suits, formal wear, and tailored leisure suits. Ski and snow suits and boys' suits are excluded. Men's "Coats" include tailored suit-type coats, leisure and casual sport coats, formal jackets, and tailored uniform jackets; excluded are zip-type jackets, work jackets, and heavy outerwear jackets and raincoats. Men's "Trousers" include uniform and all pants except jeans, jean-cut casuals, dungarees, and work pants. Men's "Jeans, jean-cut casual slacks, and dungarees" include all pants of jean-type construction made from denim and other fabric; i.e., corduroy, etc. Men's "Shirts" include dress or business (open front, usually with collar band, may or may not have sleeve sizes, may be sized S-M-L-XL) and sport shirts designed primarily for sport, leisure, or casual wear and sized S-M-L-XL (open front or pullover including. polo shirts and T-shirts made for outerwear); excluded are work and Digitibed fhirts. Begening 1972, shirts also include knit outerwear sport shirts. http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis
7. Figure represents backlog as of December 31, 1961; backlog as of January 1, 1962, $\$ 14.147$ million. The difference between the two figures is due to an increase in the mber of companies covered in the survey and revisions to previously reported data; no mparable data for components of the total backlog as of January 1 are available.
8. Beginning 1965, data may not be strictly comparable with figures for earlier years; e Ist paragraph of note 6 for this page.
9. Beginning 1968, data are on a funded basis; see 2 d paragraph of note 1 for this ge.
10. Data are no longer available.
11. Effective with 1984, quarterly data are no longer available.

PAGE 142
I. Source: Motor Vehicle Manufacturers Association of the United States, Inc. Factory les (from plants located in the United States) represent almost complete coverage of the dustry. Although sometimes interpreted as being identical with production, factory sales tta generally refer to vehicles shipped and sold, or billed to customers, dealers, or allied visions, whereas production data refer to number of units leaving the assembly lines and c counted whether ready to ship or not. (Monthly production data, which include tactical hicles, are available a month earlier than figures for factory sales and are shown for the ost current month in a footnote of each issue of the SURVEY OF CURRENT BUSINESS.) <port sales (not shown here) account for the difference between domestic and total sales. Iles of vehicles to Federal Government agencies are included; however, sales figures from ants located in Canada and, beginning July 1964, all tactical vehicles are excluded.
Passenger cars include factory sales of taxicabs, station wagons, ambulances, funeral rs as well as passenger carriers used as school buses, which are made on passenger car lassis, (through 1979) passenger vans, and (beginning January 1979) Volkswagens. Beginng January 1980, sales of passenger vans are excluded.
Trucks and buses-see p. 143-include sales of trucks, truck tractors, all buses rimarily those of the integral type) sold to for-hire transportation companies for city or tercity service, and (beginning January 1980) passenger vans formerly reported as issenger cars. Also included are special types of coaches; e.g., integral school buses if ade with coach chassis or truck chassis. Station wagons and fire apparatus made with uck chassis are included; fire apparatus made by companies specializing in that line are cluded. Data for trucks and buses include figures for chassis only, without bodies.
Annual data prior to 1961 and monthly data for 1941 and 1946-82 are in earlier litions of Business Statistics (see reference note, p. 1 of this section). No monthly Ita are available for 1942-45. Revised monthly figures for 1940 are shown on p. 24 of e June 1947 Survey Of Current Business. Statistics prior to 1940 (in the 1947 id carlicr editions of Business STATISTICS) are on a different basis of classification.
2. Sources: Motor Vehicle Manufacturers Association of the United States, Inc. IVMA), Ward's Automotive Reports, and U.S. Department of Commerce, Bureau of conomic Analysis (BEA). Retail sales and inventories of franchised dealers of all mestic new passenger cars in the United States are derived from data as reported by IVMA. Retail sales of all imported passenger cars are from the Ward's Automotive eports. Retail sales are broadly defined as units reported by dealers as being delivered to msumers based on receipt of retail sales cards. Figures for domestics comprise all cars sembled in the United States and cars assembled in Canada and imported into the nited States under the provisions of the U.S.-Canadian Automotive Products Trade Act 1965. Imports comprise all other cars.

The ratios of end-of-month inventories to total monthly sales are calculated by BEA om seasonally adjusted data.
For series marked with a star, monthly data for 1961-82 (where available) appear in pendix 1 to this volume; monthly data for 1958-60 (except for imports, seasonally ljusted) appear in appendix I to the 1979 edition of BUSINESS STATISTICS. Monthly ita for 1966-82 for total (unadjusted and seasonally adjusted) and imports (unadjusted) ' retail sales, annual data for 1958-60 and monthly data for 1958-82 for all other items e available upon request.
3. Source: U.S. Department of Commerce, Bureau of the Census. For a general iplanation of foreign trade data, see note 1 for p. 78.
Comparability of the data for the period shown is affected by the various export assification schedules in effect over the years.
Prior to 1965, export data include unassembled passenger cars.
For 1965-77, export data represent new, nonmilitary passenger cars (including station agons), assembled (including units originally assembled but disassembled solely for lipping purposes), and chassis with engines mounted.
In 1978, the export classification system was completely restructured, based on the ganizational framework of the Tariff Schedules of the United States. Because of this structuring, export data, beginning January 1978, represent new, on-highway, fourheeled passenger automobiles including ambulances and hearses, all cylinders, and pasnger automobile chassis. No distinction is made between vehicles for military and mmilitary use, between assembled and unassembled vehicles, or chassis with and without ggines mounted.
Data for all periods shown here exclude used vehicles and automobile bodies.
The increase in exports to Canada, beginning 1965-66, reflects the implementation of DigitiYed-fanadians Amtomotive Products Trade Act (APTA) of 1965, which permits ditpy.ffree entry into Canada of specified U.S. vehicles.
Federal Reserve Bank of St. Louis

Retail inventories include U.S.-built Mercedes-Benz trucks (beginning August 1982) and, U.S.-built Nissan trucks (beginning January 1984). Unlike retail sales, inventories include captive imports.

Units are classified on the basis of gross vehicle weight (GVW), which is the weight of the vehicle with a full load.

Monthly data for 1967-82 for series marked with a star appear in appendix to this volume. Monthly data for 1967-82 for all other series are available upon request. Data prior to 1967 are not available.
3. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for $p$. 78 . Comparability of the data for the period shown is affected by the various export classification schedules in effect over the years.

Prior to 1965, data include exports of unassembled vehicles.
For the period 1965-77, data cover new, nonmilitary trucks, assembled (including units originally assembled but disassembled solely for shipping purposes), truck chassis with engines mounted, truck tractors, motor buses, and special-purpose vehicles (gasoline and diesel).

Beginning with annual data for 1966 and monthly data for 1971, off-highway trucks and trucks with derrick assembly, winches, etc. are included.

Beginning 1969, exports of special-purpose vehicles that operate in whole or in part on runners or skis are excluded.

In 1978, the export classification system was completely restructured, based on the organizational framework of the Tariff Schedules of the United States. Beginning with January 1978, export data cover new, all fuels, nonmilitary automobile trucks (including off-highway trucks), truck chassis, truck tractors (excluding truck trailers), motor buses, and trucks mounted with derrick assemblies and similar drilling equipment. No distinction is made between assembled and unassembled vehicles, or between chassis with and without engines mounted.

It should be noted annual data for 1978-82 include a small amount of exports representing auto truck tractors, gasoline fueled, new, over $44,000 \mathrm{lbs}$. GVW, which are not included in the monthly data.

Annual data prior to 1961 and monthly data for 1963-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section).
4. Source: U.S. Department of Commerce, Bureau of the Census. For a general explanation of foreign trade data, see note 1 for p. 78. Effective 1963, data are in accordance with the Tariff Schedule of the United States, Annotated; the latest being 1987. Comparability of the data shown here is affected by the various import classification schedules in effect over the years.

Data cover imports of automobile trucks and motor buses, truck tractors (with their trailers), fire engines, separate truck bodies (including cabs) and chassis and, beginning 1972, automobile trucks valued less than $\$ 1,000$. Not covered in the data are truck tractors imported separately from their trailers, and vehicles constructed and equipped to perform special services, such as mobile cranes, wreckers, concrete mixers, mobile clinics, etc.

Annual data prior to 1961 and monthly data for 1963-82 appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Note that monthly data for 1966-71, as shown in the 1975 and earlier editions, do not include import data of separate chassis and bodies.
5. R. L. Polk \& Company. Data exclude registrations of buses not produced on a truck chassis. Beginning 1980, data include registrations of passenger vans. See also 1st and 2d paragraphs of note 5 for p. 142.

Annual data prior to 1961 and monthly data for 1932-82, except as noted below, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Monthly data for 1938 and 1954-56 have been revised and are available upon request. Registrations for November 1959 have been revised to 74,300 units. Monthly data for 1925-31 are available upon request. It should be noted the series shown in the 1967 and earlier editions of BUSINESS STATISTICS is titled "Commercial cars (trucks)."
6. For the period 1963-65, cata include imports of other units not specifically identified.
7. See note 3 for this page regarding coverage effective January $1,1965$.
8. See 7th paragraph of note 3 for this page.
9. See 3 d paragraph of note 1 for p . 142 regarding change affecting comparability of the data.
10. See ist paragraph of note 5 for this page.
11. See note 2 for this page regarding increase in coverage.

## PAGE 144

1. Source: U.S. Department of Commerce, Bureau of the Census. Derived from a monthly survey, the data represent coverage of all known firms engaged in the manufacture of truck trailers and refer to trailers (drawn by a truck or truck-tractor) having one or more axles with a rating of 10,000 pounds or more per axle.

Complete trailers and chassis are defined as trailers in which the body is permanently attached to the chassis; not included are new trailer chassis shipped with detachable trailers. Shipments include complete trailers reported by manufacturers who purchase the chassis and add the body.

Detachable trailer bodies refer to all trailer bodies manufactured with or without detachable chassis or running gear, including those for use on ships or rail cars (minimum size 8 feet $\times 8$ feet $\times 10$ feet).

Detachable trailer chassis (and running gear), manufactured for use with detachable trailer bodies, cover all detachable chassis, whether shipped with detachable bodies or not.

The Highway Traffic Safety Administration Regulation, "Truck Air Brakes Standards," requires that the braking system for these vehicles meet the same standards as other vehicles effective 1975. Shipments were high through 1974 as buyers anticipated the additional cost of the new systems beginning 1975.

The total for complete trailers and chassis includes the following types: Van (open and closed tops), shown separately here; tank; bulk commodity and dry materials (except van); pole, logging, and pipe; platform; low-bed heavy haulers; dump trailers and dump chassis; automobile transport; all other trailers and chassis, except detachable trailers and detachable trailer chassis. Effective with the 1975 edition of BUSINESS STATISTICS, annual data (beginning 1964) and monthly data for complete trailers and chassis exclude shipments of dollies and converter gear.

Monthly data for 1971-82 (1961-82 for van type trailers and chassis), except as noted below, appear in earlier editions of BUSINESS STATISTICS (see reference note, p. 1 of this section). Shipments for February 1978 for van type trailers and chassis have been revised to 8,717. Shipments for January and February 1977 for total trailers and chassis have been revised to 8,872 and 11,174 respectively. Monthly data for $1964-70$ for complete trailers and chassis (excluding dollies and converter gear), for detachable trailer bodies and for detachable trailer chassis sold separately are available upon request.
2. Sources: Beginning 1966, published jointly by the Association of American Railroads and the American Railway Car Institute; prior to 1966, by the Institute. The data cover all car builders (both equipment manufacturers and railroad and private-line shops). The figures cover new freight cars for domestic use only and pertain to all types of cars for railroads, private car lines and industries, and governmental customers; excluded are rebuilt cars and cars for export.

New orders represent net new orders; i.e., adjusted for cancellations; end-of-period backlog figures are not similarly adjusted.

Annual data for shipments and new orders reflect revisions not distributed to the monthly figures.

Annual data prior to 1961 and monthly data for 1967-82 (except as indicated below) are in earlier editions of BUSINESS STATISTICS. Data through 1968 as shown in the 1969 and prior editions of BUSINESS STATISTICS also cover freight cars for export by equipment manufacturers; see reference note of the 1969 edition. Total unfilled orders have been revised as follows: September-December 1976 to 26,182; 26,649; 24,939; and 23,515 respectively; November 1977 to 30,257; and July 1978 to $74,961$.
3. Source: Association of American Railroads (AAR), beginning 1971; Interstate Commerce Commission (ICC), through 1970.

The data cover class I railroads, which account for about 95 percent of the total U.S. mileage operated by all line-haul railroads. Effective December 1955, December 1965, January 1976, January 1978, and January 1982, the data reflect changes in the definition of class I railroads. Beginning 1982, a procedure was adopted to adjust the class I threshold for inflation by restating current revenues in 1978 constant dollars. Thus the current basis for class I carriers is about $\$ 82$ million (from 1978 to 1982, $\$ 50$ million or more; from 1976 to $1978, \$ 10$ million or more; from 1965 to $1976, \$ 5$ million or more; from 1955 to 1965, $\$ 3$ million or more; for earlier periods, $\$ 1$ million or more).

The AAR's data cover revenue freight cars as reported to AAR by class I railroads; excluding cars on private lines and railroad owned and controlled refrigerator car lines.

Data through 1970 are from ICC and refer to the total number of freight-carrying cars and average car-carrying capacity available for service at end of year; the aggregate capacity measures total carrying capacity for units owned and used plus cars leased from others. According to the ICC, these data, for the periods through 1970, are not strictly comparable with each other because of changes in accounting and reporting.

Annual data prior to 1961 and monthly data for 1929-82 (1963-82 for car capacity) are in earlier editions of BUSINESS STATISTICS (see reference note, p. I of this section). Monthly data prior to 1963 for car capacity are available from the AAR. Minor revisions have been made in some of the figures appearing in BUSINESS STATISTICS prior to the 1947 issue.
4. Figures for trailer bodies also include shipments of trailer chassis, sold separately.

## A Directory to Information About GNP

In recent years, a number of BEA publications have provided information about GNP and its income and product components. "A Directory to Information About GNP" is an annotated list of those publications, numbered with the most recent publication first and going back to the mid-1970's. The directory is included as Part II in BEA-MP-4-GNP: An Overview of Source Data and Estimating Methods, September 1987. Methodology Paper Series MP-4 is available from the U.S. Government Printing Office, Superintendent of Documents, Washington, DC 20402-Stock No. 003-010-00170-8, at a price of $\$ 2.00$.

# Methodological Notes for Appendix II 

General note for all tables:<br>SAAR seasonally adjusted at annual rates.

PAGES 219-242

1. "Gross national product" is the market value of the goods and services produced by abor and property supplied by residents of the United States, before deduction of lepreciation charges and other allowances for business and institutional consumption of ixed capital goods. Other products charged to expense by business are deducted. Gross ational product comprises the purchases of goods and services by persons and governnent, gross private domestic investment (including the change in business inventories), and let exports (exports less imports). Beginning with 1960, the estimates cover the 50 states Ind the District of Columbia; before 1960, Alaska and Hawaii were partly omitted.
2. "Personal consumption expenditures" is goods and services purchased by individuals, perating expenses of nonprofit institutions serving individuals, and the value of food, fuel, :lothing, rental of dwellings, and financial services received in kind by individuals. Net surchases of used goods are also included. All private purchases of dwellings are classified ${ }_{15}$ gross private domestic investment.

Personal consumption expenditures for goods as well as services are estimated for senchmark years as final demand components of the Input-Output Table. For goods, a sommodity-flow technique is employed, using product shipment values reported in the icnsus of manufactures; nonmanufactured foods and fuels, derived from censuses of agriculture and mineral industries; imports, including transportation costs, insurance, and Juties; and changes in wholesalers' and retailers' inventories. The available supply is apportioned at producers' values among intermediate uses, investment, exports, government surchases, and personal consumption expenditures. To the derived consumption expenditures at producers' value are added estimates of transportation costs, wholesale and retail nargins, and sales taxes, based principally on Interstate Commerce Commission, census of ousiness, and Internal Revenue Service data.

Estimates of consumption expenditures for goods for years between and beyond benchmarks and for quarters and months rest chiefly on the trends shown by the Census Bureau's retail sales figures by kind of store; quantity series and price information (for ;uch items as autos, gasoline, and tobacco); and other data from government and nongovernment sources.

Periodic comprehensive sources--notably the censuses of population and housing, business, and agriculture-provide underlying data for housing services, personal services, epair services, and other components that together constitute nearly 60 per cent of the Jollar value of consumer services. This information is supplemented by comprehensive annual reports of Federal Government agencies, such as the Department of Education for rivate higher education outlays, the Federal Communications Commission for telephone service, the Interstate Commerce Commission for railroad and bus travel and for household moving revenue, the Securities and Exchange Commission and the New York Stock Exchange for brokerage fees, the Department of Transportation for air travel, the Census Bureau for data on hotels, and professional, personal, automotive, repair, and recreation Digetiviees.fømportanaluse is made also of annual data available from private sources such as httphè/Americantociorneid . बrglife Insurance and A.M. Best Companv for insurance items, the Federal Reserve Bank of St. Louis

American Hospital Association for hospital services, the Edison Electric Institute and the American Gas Association for electric and gas utilities, and the American Public Transit Association for outlays for local transportation.

A listing of publications with additional information on the concepts, methods, and data sources used in preparing the estimates appears in "A Directory to Information About GNP" cited on the first page of these notes.
3. "Gross private domestic investment" includes fixed investment (business purchases on capital account), and the value of the change in business inventories. Fixed invesiment includes new construction and durable equipment (capital goods) purchased by business and nonprofit institutions. New residential construction purchased by owner-occupants is included because homeownership is treated as a business in the NIPA's. Fixed investment includes capital goods purchased for rent or lease, as well as for the purchaser's own use. Dealers' margins on purchases of used capital goods are included, as well as net business purchases of used capital goods from households and governments.

The structures component of fixed capital goods is derived from monthly figures for total private new construction compiled by the Bureau of the Census (see pp. 30 and 31 of this volume), construction and exploration expenditures for petroleum and natural gas wells and mine shafts, sales of new mobile homes, commissions on the sale of structures, and net purchases of used structures from Government. The petroleum and natural gas wells and mine shaft construction and exploration expenditures are benchmarked to data collected in the censuses of mineral industries. The annual estimates that are tied to these benchmarks are developed mainly from data on drilling footage (adjusted for changes in costs) as reported in trade sources.

The producers' durable equipment component of fixed capital is estimated using the commodity-flow techniques outlined in the section on personal consumption expenditures.

For benchmark years, the main source of data on the value of product shipments is the census of manufactures. The estimates are calculated by detailed commodities and commodity groups. For each commodity, manufacturers' shipments are adjusted to include imports and to exclude the flows that do not contribute to gross private capital formation. These include intermediate shipments of machinery components and parts, replacement parts, shipments for export, government purchases, and consumer purchases. Trade and transportation margins, which account for the difference between the manufacturers' prices and the purchasers' prices, are added. Finally, adjustments are made for transactions in used goods.

For noncensus years, the annual survey of manufactures provides product shipments data at a less detailed level. For some commodities, the information on shipments is supplemented by data from the Current Industrial Reports for specific products. Trade source data on unit sales and average prices and merchandise export and import data from the Census Bureau are used to estimate motor vehicles purchases.

Quarterly interpolations and extrapolations are based on data derived largely from the monthly Census reports of manufacturers' shipments, Census foreign trade data, and motor vehicle trade association data.
4. "Change in business inventories" measures the change in the physical volume of inventories valued at average prices for the period. Census Bureau data on the accounting methods used by business to value inventories are used to separate reported values into LIFO (last-in-first-out) and non-LIFO portions. To ascertain the change in the physical quantity of stocks of nonfarm inventories, end-of-period non-LIFO book values are con-
verted to constant-dollar values using Bureau of Labor Statistics Producer Price Indexes and other price measures appropriate to each industry. The indexes are chosen to reflect the commodity composition of inventories in an industry, and are constructed to measure the acquisition cost of the commodities in inventory. The changes in LIFO and non-LIFO inventories are added together to obtain the change in nonfarm business inventories. The change in farm inventories is estimated by BEA and the Department of Agriculture from quantity and price data.

The book values of nonfarm inventories are based on data reported to the Bureau of the Census and business income-tax return data tabulated by the Internal Revenue Service.

The annual and quarterly basic data for manufacturing and trade inventories, which comprise about nine-tenths of the nonfarm total, have been derived from the following monthly and annual Census publications: Manufacturers' Shipments, Inventories, and Orders; Annual Survey of Manufactures; Monthly Retail Trade; Annual Retail Trade Report; Monthly Wholesale Trade Report; and Annual Trade Report. The annual inventories of all nonfarm industries other than manufacturing and trade are obtained, mainly from Internal Revenue Service data; quarterly estimates of inventories in these industries are based mainly on data obtained from the Federal Reserve Board and the Department of Energy, as well as on indirect data on business activity.
5. "Net exports of goods and services" is exports less imports of goods and services. Exports are part of national production. Imports are not, but are included in the expenditure components of gross national product, and are therefore deducted. There are differences between the national income and product accounts measures of exports and imports and those in the detailed balance of payments accounts. A listing of publications with additional information on the concepts, methods, and data sources used in preparing the estimates appears in "A Directory to Information About GNP" cited on the first page of thesc notes.
6. "Government purchases of goods and services" is the compensation of government employees and purchases from business and from abroad. Transfer payments, interest paid by government, and subsidies are excluded. Gross investment by government enterprises is included, but their current outlays are not. Net purchases of used goods and structures are included; sales and purchases of land and financial assets are excluded.

The quarterly estimates of Federal purchases of goods and services are based on the Monthly Treasury Statement of Receipts and Outlays of the U.S. Government issued by the Treasury Department. Numerous adjustments must be made to account for differences between budget outlays and purchases. The adjustments account for the fact that: (1) Budget outlays include amounts not representing purchases of goods and services, (2) budget outlays exclude other items that do constitute purchases according to the definition of gross national product, and (3) budget outlays reflect still other purchases with timing different from that of the national income and product accounts.

The procedure is to treat the Treasury total of budget outlays as a benchmark, adding or subtracting appropriate amounts so as to derive purchases of goods and services as a residual. The principal deductions are public debt interest, grants-in-aid to State and local governments, transfer payments, subsidies, net expenditures of government enterprises, foreign currency purchases, and loans and other capital transactions. Among the principal additions are the acquisition of fixed assets and inventories by government enterprises. It may be noted that this addition involves partial restoration of the total enterprise expenditures previously deducted. Purchases are also converted from a cash timing basis to a delivery timing basis. This is achieved primarily by a detailed analysis of physical deliveries of goods to the Department of Defense. The other necessary adjustments for these general procedures are either found explicitly in the Treasury Statement or derived from annual data published in the Budget, the U.S. Government Annual Report: Appendix, Financial Management Service, U.S. Department of Treasury, financial reports of government corporations, detailed information from the Department of Defense on deliveries, and a wide variety of other documents. Contacts with officials of government agencies supplement the basic source material.

Statistics from the Bureau of Labor Statistics are used together with Census data to derive measures of compensation for State and local employees.

State and local purchases of goods and services other than compensation are derived primarily from annual Governmental Finances, State Government Finances, and other reports of the Governments Division and the Construction Statistics Division of the Bureau of the Census.

Estimates for other purchases of goods and services are derived by subtracting from State and local government expenditures (excluding payroll and related outlays) those outlays that do not represent direct purchases of goods and services, such as transfer payments, interest, current operating expenditures of government enterprises, and purchases of land, and adding back outlays for goods and services that are netted out of total expenditures, namely, government contributions to self-administered insurance funds.

The quarterly estimation of purchases is based primarily on independent State and local payroll and public-construction data.

A listing of publications with additional information on the concepts, methods, and data sources used in preparing the estimates appears in "A Directory to Information About GNP" cited on the first page of these notes.
7. See note 1 for a general description of the gross national product. This presentation shows the portion of the gross national product accounted for by goods, services, structures, and inventory change. The durable goods component comprises producers' durable equipment, personal consumption expenditures for durable goods, government purchases of durable goods, and net exports of durable goods. The nondurable goods component Digicioreptises persefiefronsumption expenditures for nondurable goods, government purchases httpol/nnondurable gigedso .and/net exports of nondurable goods.

Services includes personal consumption expenditures for services, government purchases of services from business, the compensation of government employees, and net exports of services.

Structures consists of private and public expenditures for structures, except for the compensation of government employees engaged in new force-account construction. This compensation is included in the compensation of government employees and is classified as a service.

A listing of publications with additional information on the concepts, methods, and data sources used in preparing the estimates appears in "A Directory to Information About GNP" cited on the first page of these notes.
8. Constant-dollar estimates are estimates from which price change has been removed. "Gross national product in constant dollars" or real GNP is derived principally by dividing components of the current-dollar gross national product by appropriate price indexes, in as fine a breakdown as practicable. A large number of product groups are deflated separately each quarter, and many additional price indexes, drawn from the sources indicated below, are combined to deflate the annual current-dollar estimates.
9. "Personal consumption expenditures" are deflated mainly by price series that are components of the Consumer Price Index compiled by the Bureau of Labor Statistics, U.S. Department of Labor.
10. The "structures" component of gross private domestic investment is deflated largely on the basis of construction price and cost indexes compiled by government agencies and private organizations. The specific techniques used are described in the August 1974 Survey of Current Business (pp. 18-27). Producers' durable equipment purchases are deflated principally by the Producer Price. Indexes compiled by Bureau of Labor Statistics. The techniques used are described in the July 1975 SURVEY OF CURRENT Business (pp. 20-23).
"Change in business inventories" is also deflated largely on the basis of the Producer Price Indexes.
11. "Net exports of goods and services" is the balance of separately deflated exports and imports. Major reliance in removing price changes is on merchandise export and import price indexes prepared by the Bureau of Labor Statistics and merchandise export and import unit-value indexes prepared by the Bureau of the Census. For additional detail sec "Forcign Transactions", Methodology Paper Series MP-3, May 1987.
12. In the deflation of government purchases, two different methods are used. The methodology for obtaining estimates of constant-dollar government purchases from business incorporates information on prices and product composition of government purchases. In some cases, price information that relates directly to the kinds of goods and services purchased is obtained from government agencies, especially the Department of Defense. Detail on the product composition of government purchases permits a matching of current-dollar purchases with the price indexes used to convert them into constant dollars. For the Federal Government, this current-dollar information is derived from financial records and contracts awarded by the Department of Defense and General Services Administration, and certain other agencies. The Department of Defense and other agencies also supply numerous reports and computer tapes on contract prices, deliveries, contract control documentation, and budget backup documentation. For State and local government, incorporation of information underlying the 1963, 1967, 1972, and 1977 input-output tables on the industry distribution of the several functional categories of purchases serves a similar purpose.

For compensation of employees, the constant-dollar estimates are obtained by extrapolating the current-dollar estimates in 1972 by a physical quantity measure. For civilian employees, quality-adjusted hours worked are used to approximate physical quantity. For Federal Government civilian employees, hours worked in the various Civil Service and wage board grades are valued at 1972 average compensation in those grades. The rationale of this system is that shifts in grade levels reflect such factors as experience and education: the procedure is modified to eliminate shifts in grade levels that do not reflect differences in these factors. Constant-dollar compensation for military employees is obtained by using a similar procedure with data for employment by military rank. For State and local government employees other than teachers, constant-dollar compensation is average base-year compensation times a full-time equivalent measure of employment times changes in the average work week from the base year. For elementary and secondary teachers, measures of hours worked (classified by educational attainment and experience) are multiplied by base-year average compensation for each of the classifications. For teachers in higher education, the weighting takes into account only differences in educational attainment.

A listing of publications with additional information on the concepts, methods, and data sources used in preparing the estimates appears in "A Directory to Information About GNP" cited on the first page of these notes.
13. For a description of GNP by type of product, see footnote 7; for a description of the constant-dollar estimates, see footnotes 8 .
14. The fixed-weighted price index is a weighted average of the detailed price indexes used in the deflation of GNP. These price indexes are combined using weights that reflect the composition of GNP in 1982. Because the same weights are used for each period, comparisons over any timespan reflect only changes in prices. Note 8 discusses the derivation of the constant-dollar estimates.

For more detailed discussions of these price indexes, see "Alternative Measures of Price Change for GNP," in the March 1969 Survey OF CURRENT Business and "Reconciliation of Quarterly Changes in Measures of Prices Paid by Consumers" in the March 1978 Survey Of Current business.
15. The implicit price deflators are a by product of the deflation of GNP. They are :rived as the ratio of current-dollar to constant-dollar GNP (or component)-multiplied 100. They are weighted averages of the detailed price indexes used in the deflation of NP. In each period, the weights are based on the composition of constant-dollar output that period. Thus changes in the implicit price deflator reflect not only changes in rices but also changes in the composition of GNP. Consequently, the GNP implicit price :flator can give misleading signals of price change, and its use as a measure of price lange should be avoided.
16. "National income" is the income that originates in the production of the goods and rvices attributable to the labor and property supplied by residents of the United States. icomes are recorded in the forms in which they accrue to residents, and are measured 3fore deduction of taxes on those incomes. They consist of compensation of employees, roprietors' income, net interest, corporate profits, and the rental income of persons.
17. "Compensation of employees" is the income accruing to employees as remuneration Ir their work. It is the sum of wages and salaries and supplements to wages and salaries.
18. "Wages and salaries" consists of the monetary remuneration of employees, including te compensation of corporate officers; commissions, tips, and bonuses; and receipts in kind lat represent income to the recipients.
19. "Supplements to wages and salaries" consists of employer contributions for social ssurance and of other labor income. Employer contributions for social insurance includes mployer payments under the following programs: Federal old-age, survivors, disability, nd hospital insurance; State and Federal unemployment insurance; railroad retirement and nemployment insurance; government employee unemployment insurance and retirement; ilitary medical insurance and publicly administered workers' compensation. Other labor icome consists primarily of employer contributions to private pension and welfare funds, nd directors' fees.
20. "Proprietors" income with inventory valuation and capital consumption adjustments" shown separately for farm and nonfarm enterprises) is the monetary income and income in ind of sole proprietorships and partnerships, including the independent prolessions, and of x-exempt cooperatives. Interest and dividend income received by proprietors of nonfinanial business, and rental income received by persons who are not required to file businessype tax returns are excluded; these incomes are included in net interest, dividends, and ental income of persons. The two valuation adjustments are designed to obtain income reasures in which inventories and fixed capital are valued at replacement cost, the aluation concept underlying national income and product accounting, rather than historial cost, the valuation concept underlying business accounting. The capital consumption djustment also places the using up in production of fixed capital on a consistent basis dith respect to service lives and depreciation formulas (straight-line). Farm income is neasured exclusive of inventory profits: therefore no valuation adjustment is required.
21. "Rental income of persons with capital consumption adjustment" is the income of ersons from the rental of real property, except the income of persons engaged in the real state business who file business-type tax returns; the imputed net rental income of wner-occupants of nonfarm dwellings; and the royalties received by persons from patents, opyrights, and rights to natural resources.
22. "Corporate profits with inventory valuation and capital consumption adjustments" is he income, measured before income taxes, of organizations treated as corporations in the VIPA's. These organizations consist of all entities required to file Federal corporate tax eturns, including mutual financial institutions and producers' cooperatives; private noninured pension funds: nonprofit organizations that primarily serve business; Federal Reserve Janks; and certain federally sponsored credit agencies. The income is that arising in urrent production. With several differences, this income is measured as receipts less xpenses as defined in Federal tax law. Among these differences are: Receipts exclude apital gains and dividends received, expenses exclude depletion and capital losses, invenory withdrawals are valued at current replacement cost, and depreciation is on a consisent accounting basis and valued at current replacement cost. The corporate profits eported by industry group differ from the total in that they reflect depreciation accountng practices used for Federal income tax returns. Because national income is defined as he income of U.S. residents, its profits component includes income earned abroad by U.S. sorporations and excludes income earned in the United States by foreign corporations.

The estimate of corporate profits is prepared in three stages of decreasing reliance on lata: (1) a benchmark estimate is made for the most recent year for which complete ax-return data are available from the Internal Revenue Service; (2) the annual estimates are extrapolated to more recent years by use of information from samples of stockholder eports, the Bureau of the Census Quarterly Financial Report and regulatory agency data; and (3) quarterly estimates are interpolated within and extrapolated beyond the annual otals by use of more limited samples.

The first stage of the estimating process can be viewed as a series of statistical and zonceptual adjustments to the statistical estimates prepared by the Internal Revenue Service of net income reported on corporate tax returns. The major adjustments include: adding profits disclosable by complete audit, State income taxes, the income of federallysponsored credit agencies that do not file tax returns, the bad debt adjustment, and ax-return depletion; deducting capital gains and dividends received; and substituting net emittances from abroad for foreign earnings.

Having determined the annual benchmark, the estimates are extrapolated forward for years not yet availablc from the Internal Revenue Service. An extrapolation is made for zach of more than 70 industry cells separately using industry indicators based on data from the Census Bureau's Quarterly Financial Report for Manufacturing, Mining, and DigitadedCFarporations.ftockholder's report, or regulatory agencies the results are summed to

23. "Corporate profits before tax" is the income of organizations treated as corporations in the NIPA's, as described above, except that it reflects the inventory and depreciation accounting practices used for Federal income tax returns. It consists of profits tax liability, dividends, and undistributed corporate profits, this measure is sometimes referred to as "book profits".
24. "Corporate profits tax liability" is the sum of all Federal, State, and local income taxes on corporate earnings; these earnings include capital gains and other income excluded from profits. The taxes are measured on an accrual basis, net of applicable tax credits. "Corporate profits after tax" is corporate profits before tax less corporate profits tax liability.
25. "Dividends" is payments in cash or other assets, excluding the corporation's own stock, made by corporations located in the United States and abroad to stockholders who are U.S. residents. The payments are measured net of dividends received by U.S. Corporations. Dividends paid to State and local government social insurance funds and general government are included.
26. "Undistributed corporate profits" is corporate profits after tax less dividends.
27. "Inventory valuation adjustment" (IVA) for corporations is the difference between the cost of inventory withdrawals as valued in determining profits before tax and the cost of withdrawals valued at current replacement cost. The IVA is required to conform the inventory accounting methods used by business to those used in the NIPA's. Measurement of inventory change as physical volume change valued in prices of the current period conforms its treatment to that of all other components of gross national product. The IVA can also be viewed as the excess of the replacement cost of inventories used up over their historical acquisition cost. That this definition is equivalent to the definition stated above follows from the fact that, according to all methods of inventory valuation used by business, inventory purchases in an accounting period are reflected in book values in the prices of that accounting period. To make the measurement of charges against gross national product consistent with gross national product, the IVA must be applied to reported corporate prolits and proprietors' income, because these are based on the same accounting methods that underlie the book value of inventories.
28. "Capital consumption adjustment" is the tax return-based capital consumption allowances less capital consumption allowances that are based on consistent accounting and valued at replacement cost.
29. "Net interest" is interest paid by domestic business less interest received by it, plus interest received from abroad less interest paid to abroad. Interest payments on mortgages and home improvement loans are counted as interest paid by business, because homeowners are treated as businesses in the NIPA's. Interest paid by consumers and by government, including government enterprises, is not added into this component because it is not considered a factor cost of production. In addition to monetary interest, net interest includes imputed interest. The imputed interest payments by financial institutions other than life insurance carriers and private noninsured pension plans to persons, governments, and foreigners have imputed service charges as counter entries in the GNP; they are included in personal consumption expenditures, in government purchases, and in exports, respectively.
30. "Personal income" is the income received by persons from all sources: that is. from participation in production, from transfer payments from government and business, and from government interest, which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions serving individuals, private noninsured welfare funds, and private trust funds. Proprietors' income is treated in its entirety as received by individuals. Life insurance carriers and private noninsured pension funds are not counted as persons. but their saving is credited to persons. Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance.
31. "Personal tax and nontax payments" is tax payments (net of refunds) by persons (except personal contributions for social insurance) that are not chargeable to business expense, and certain other personal payments to government agencies (except government enterprises) that it is convenient to treat like taxes. Personal taxes include income, estate and gift, and personal property taxes. Nontaxes include tuitions and fees paid to schools and hospitals operated mainly by government, passport fees, fines and penalties, and donations.

Federal personal tax payments-individual income and estate and gift taxes-are derived from data reported by the Treasury Department. Income tax withholdings are amounts withheld from employees' wages and salaries. The estimates are derived by adjusting Federal collections data to allow for the lag from the time the tax payments are withheld from the employee until the time the employer deposits the payment with the Treasury. Seasonal adjustment is accomplished by distributing the calendar year totals over four quarters in accordance with the movement of seasonally adjusted payrolls subject to withholding. Appropriate allowances are made for changes in tax rates. Other components of personal tax payments represent cash collections net of cash refunds. Nonwithheld individual income taxes (quarterly declarations, end-of-year settlements, and back payments) and income tax refunds are smoothed through the year to approximate seasonal adjustment. Estate and gift taxes are seasonally adjusted separately. Federal personal nontax payments are determined principally from detailed analyses of Budget data on miscellaneous and proprietary receipts of the Treasury.

State and local personal tax payments (which consist of income, estate and gift, motor vehicle, personal property, and other taxes) are based on the State Government Finances, Governmental Finances, and beginning in the first quarter of 1962, Quarterly Summary of State and Local Tax Revenue and other reports of the Governments Division of the

Census Bureau. State and local personal nontax payments, consisting largely of hospital and health charges, tuition and related educational charges, fines and penalties, and charges for tuition payments, are obtained from the same sources. Income taxes are seasonally adjusted by distributing the calendar year totals in accordance with seasonally adjusted payrolls. Seasonally adjusted nontaxes are calculated by graphic interpolation or extrapolation.
32. "Disposable personal income" is personal income less personal tax and nontax payments. It is the income available to persons for spending or saving.
33. "Personal outlays" is the sum of personal consumption expenditures, interest paid by consumers to business, and personal transfer payments to foreigners (net). The last item consists of personal remittances in cash and in kind to abroad less such remittances from abroad.
34. "Personal saving" is personal income less the sum of personal outlays and personal tax and nontax payments. It is the current saving of individuals (including proprietors), nonprofit institutions serving individuals, private noninsured welfare funds, and private trust funds. Personal saving equals the change in the net worth of persons, which may also be viewed as the sum of net acquisition of financial assets (such as cash and deposits, securities, and the net equity of individuals in life insurance and in private noninsured pension funds) and physical assets less the sum of net borrowing and of capital consumption allowances with capital consumption adjustment.
35. Data represent Federal Government transactions as recorded in the national income and product accounts (NIPA's). The Federal sector is recorded in a manner consistent with the treatment of the personal, business, and State and local government sectors in the NIPA's. The Federal sector of the NIPA's records receipts from business on an accrual basis and receipts from individuals on a cash basis. Purchases of goods and services are recorded largely on a delivery basis; transler payments and grants-in-aid to State and local governments are recorded on a cash basis; and net interest paid and subsidies less the current surplus of government enterprises are recorded on an accrual basis.

Federal Government receipts cover four categories: (1) Personal tax and nontax receipts, consisting of individual income taxes (net of refunds), estate and gift taxes, and certain nontaxes such as tuition and fees paid to schools and hospitals operated mainly by the government, passport fees, fines and penalties and donations; (2) corporate profits tax accruals, consisting of the Federal tax on corporate income and the return of Federal Reserve System's net earnings (less assessments for the Board of Governors, currency costs, and dividends) to the Treasury; (3) indirect business tax and nontax accruals, consisting of excise taxes (such as liquor, tobacco, and gasoline), customs duties, and certain nontaxes (such as fees, rents and royalties, and penalties); (4) contributions for social insurance programs such as social security, medicare, unemployment insurance, retirement funds for government employees, and veterans life insurance.

Federal Government expenditures cover five categories: (1) Purchases of goods and services consist of the compensation of Government employees, purchases from business and from abroad, and gross investment of Government enterprises. (2) Transfer payments consists of transfer payments to persons and foreigners. Transfer payments to persons are income payments to persons for which they do not render current services and includes payments for programs such as social security, unemployment insurance, medicare, and Federal civilian, military, and veterans pensions. Transfer payments to foreigners consists of U.S. Government nonmilitary grants to foreign governments in cash and in kind, and of transfer payments, mainly retirement benefits, to former U.S. residents living abroad. (3) Grants-in-aid to State and local governments consists of Federal payments to State and local governments, other than for net interest payments. Major grants-in-aid are for public assistance, highways, education, and general revenue sharing. (4) Net interest paid is interest paid by the Government less interest received. (5) Subsidies less the current surplus of Government enterprises consists of subsidies, such as payments to farmers, and the current surplus of Government enterprises, calculated by subtracting current outlays from sales receipts.

Federal Government purchases of goods and services is the only category of Federal expenditures that enters directly into the calculation of GNP. Other expenditures enter into the income stream and have an impact on GNP when spent by the recipients.

Federal Government surplus or defeat is Federal receipts less Federal expenditures.

## PAGES 243-245

1. Source: U.S. Department of Commerce, Bureau of Economic Analysis (BE $A$.). The basic data are derived from reports submitted to BEA by a large nonprobability sample of nonfarm companies, corporate as well as noncorporate. The estimates presented are universe totals of expenditures by nonfarm business for new plant and equipment ( $\mathrm{P} \& \mathrm{E}$ ) in the United States and are based on sample data compiled from reports on a company basis and not from separate reports for plants or establishments. A company's capital expenditures are assigned to a single industry in accordance with the industry classification of the company's principal product or service. In 1977, expenditures of sample companies accounted for 54 percent of estimated universe expenditures.

The estimates cover expenditures for new facilities and for repair, expansion, or replacement of existing facilities that are chargeable to fixed asset accounts and for which depreciation or amortization accounts are ordinarily maintained. The survey excludes expenditures for land and mineral rights: maintenance and repair that are not capitalized; used plant and equipment, including that purchased or acquired through mergers or
 httpityefesser.stlouisfed.org/
Federal Reserve Bank of St. Louis

The estimates of real (constant-dollar) expenditures are computed from data on currentdollar spending and from capital goods price deflators developed by BEA. Detailed procedures for preparing constant-dollar estimates are described in the February 1985 Survey of Current business.

P\&E expenditures differ from nonresidential fixed investment, which is a component of GNP, in type of detail, data sources, coverage, and timing. For further information, see pages 24-25 of the February 1985 SURVEY OF CURRENT BUSINESS.

The estimates of P\&E expenditures for the manufacturing sector are higher than those compiled by the Bureau of the Census in the Annual Survey of Manufactures. A major source of this difference is the scope of coverage. In the BEA series, the manufacturing sector covers all establishments-nonmanufacturing as well as manufacturing-operated by companies classified as manufacturing. In the Census Bureau series, only manufacturing establishments are covered. (At the same time, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are included in the Census Bureau manufacturing data; in the BEA series, they are included in the nonmanufacturing sector.)

Seasonal factors for adjusting quarterly $\mathrm{P} \& E$ expenditures by industry are computed using the Census Bureau's X-11 program.

More detailed information on sources, definitions, and methods of estimation appear in the February 1985 issue of the SURVEY OF CURRENT BUSINESS. Estimates of actual and planned P\&E expenditures appear in the April, June, September, and December issues of the Survey Of Current Business.
2. "Commercial and other" consists of wholesale and retail trade; finance and insurance; personal and business services (including construction); and communication.

## PAGES 246-250

1. Source: U.S. Department of Commerce, Bureau of Economic Analysis (BEA). The U.S. international transactions accounts summarize economic transactions between residents of the United States and those of the rest of the world during a specified time period. The data shown here exclude transactions under military grant programs.

The accounts for international transactions may be set up in various ways. This volume follows the current presentation in the SURVEY OF CURRENT BUSINESS, which distinguishes between transactions in goods, services. unilateral transfers, and capital transactions. Not all international transactions can be measured or estimated. Those that cannot be determined are categorized here as "statistical discrepancy"; they represent the difference between the "recorded" net credits and debits.

Balances of international transactions are computed on the basis of selected specific categories of transactions. The selection essentially reflects an analytical judgment and may vary according to the general context and aim of the analysis. Several balances are presented here.
(1) The balance on merchandise trade measures net exports of goods from the United States.
(2) The balance on goods and services measures net exports of goods and services from the United States.
(3) The balance on goods, services, and remittances takes into account unilateral transfers other than U.S. Government grants as well as net exports of goods and services.
(4) The balance on current account measures net exports of goods and services and unilateral transfers, including U.S. Government grants. It is a component of the U.S. gross national product.

Merchandise imports and exports are based chiefly on the official foreign trade statistics of the United States compiled by the Bureau of the Census; exports are on a f.a.s. transactions valuation basis in all years; imports represent transactions values, f.a.s. forsign port of exportation for 1974-81. For all prior years and since 1982, imports reflect Customs values. Definitional changes mandated by the Trade Agreements Act of 1979 make the Customs value currently in use very close to the f.a.s. measure, except that overland shipments from Canadian plants are valued f.o.b. plant. Estimates of inland Canadian transportation charges to the border are added by BEA. For data after 1982, BEA has retabulated data compiled by the Census Bureau. The retabulation was necessary to assure that transactions were attributed to the month in which they actually occurred. The retabulated data are seasonally adjusted by BEA; seasonally adjusted export and import totals are the sum of seasonally adjusted 4 -digit end-use commodity categories.

Certain adjustments to the Census data for valuation, coverage, and timing are made by BEA for the international transactions accounts. Adjustements for recent years include major deductions from the figures compiled by the Bureau of the Census for exports of goods by the Department of Defense under grants and under military agency sales contracts, and imports by U.S. military agencies. These items are shown elsewhere in the international transactions accounts. Another adjustment. beginning with data for 1970 , reflects the Bureau of the Census reconciliation of discrepancies in the trade statistics published by the United States with those published by Canada. In addition, merchandise exports have been adjusted upwards by adding an estimate for inland freight charges on U.S. shipments to Canada since surveys have revealed that for many such shipments these charges have not been properly included in the export value shown on the Shipper's Export Declarations. Also added to the Census statistics are imports and exports of electric energy. Purchases of vessels are also added to Census impert statistics; vessels are excluded entirely from the tariff schedules. Exports are adjusted for sales of vessels, largely for scrapping, because Census documents are not always filed for all vessel exports, expecially ir U.S. flag vessels are not in the United States at the time of sale. Information on both purchases and sales of vessels are derived from secondary sources and from the
aritime Administration. Exports and imports of nonmonetary gold are another addition to ensus statistics. Through March 17, 1968, by balance of payments convention, private .S. sales of gold (including newly mined gold) to the U.S. Treasury that resulted in a rise official gold reserves were added to Census exports while private purchases (for dustrial purposes) from the Treasury that resulted in a decline in official gold reserves ere added to Census imports: These U.S. Treasury transactions were discontinued after at date as a result of an international monetary agreement which provided that officially ald gold should be used only to effect transfers among monetary authorities. When all gal restrictions on private U.S. ownership of gold were removed in 1975, the balance of tyments convention was changed to consider U.S. Treasury gold transactions with private S. residents as domestic transactions. A second adjustment to the Census data began ith data for July 1971, to record transfers of nonmonetary gold from (to) gold held under irmark for foreign and international accounts at the Federal Reserve Bank to (from) U.S. idustrial and artistic users. Beginning with data for 1975, transactions with all private .S. residents to and from foreign official holdings at the Federal Reserve Bank have been Ided to Census exports and imports A third adjustment to the Census import data has een made for the International Monetary Fund (IMF) nonmonetary gold deliveries into I.S. markets, which commenced in 1976. A fourth adjustment-for physical movements of onmonetary gold into and out of the country - was made unnecessary after 1977 when jverage of the Census data was expanded to include movements of gold ore, scrap, base ullion, and nonmonetary bullion.
Transfers under military agency sales contracts represent deliveries of goods and ervices by U.S. military agencies to foreign countries under credit and cash sales ontracts. Deliveries are financed from funds received from foreign governments and from I.S. Government grants and credits. Funds received in advance of deliveries are considred an increase in assets held by foreigners in the United States; deliveries against such repayments result in a decline in foreign assets.
Direct defense expenditures abroad cover both merchandise and services. Expenditures y U.S. military personnel in the foreign economies are included as well as foreign xpenditures by the Armed Forces, both for their own use abroad and for transfer to our llies.

Receipts of income on U.S. investment abroad include (1) earnings, both distributed nd reinvested, and interest (net of witholding taxes) of incorporated and unincorporated friliates; (2) dividends and interest on foreign securities held by U.S. residents; (3) tterest and fees received on bank and commercial claims on foreigners; and (4) interest eceived by the U.S. Government on its reserve assets and on its foreign loans and other laims on foreign countries.
Payments of income on foreign investments in the United States include (1) earnings, oth distributed and reinvested, and interest (net of witholding taxes) of incorporated and nincorporated affiliates; and (2) dividends and interest paid on U.S. private and Governaent securities, bank deposits, and other assets held by foreigners.
Data for income on direct investment are obtained from quarterly and annual BEA uestionnaires. Other income data are estimated by applying appropriate yields to outtanding amounts of investment. U.S. Government income is calculated from the books of he operating agencies.

Exports of other services include receipts from transportation, foreign visitors to the Jnited States, royalties and fees from affiliated and unaffiliated foreigners, contract perations of U.S. construction, engineering, consulting, and other technical services firms, einsurance transactions, communications, foreign governments and international agencies, nd nonmilitary services rendered by the U.S. Government whether paid in cash or rovided under its assistance programs.

Imports of other services include principally U.S. payments for transportation, U.S. ravel abroad, reinsurance, royalties and fees to affiliated and unaffiliated foreigners, and J.S. Government diplomatic expenditures.

Estimates for transportation receipts and payments are derived from questionnaires listributed to U.S. carriers and U.S. agents of foreigr carriers, from roreign embassy eports, and from tonnage and import charges data contained in the Bureau of the Census eports on foreign trade. Travel estimates are based on the number of international ravelers recorded by the Immigration and Naturalization Service, U.S. Department of lustice, and their average expenditures, which are secured from a questionnaire distributed o a sample of the travel population. Estimates for the remaining services are obtained nostly from quarterly and annual reports of U.S. Government operating agencies or :ompanies participating in the transactions.

Unilateral transfers include net private remittances from U.S. individuals and instituions, U.S. Government grants, U.S. Government pensions and other transfers.

Net private remittances include (1) noncommercial payments from individuals residing vithin the United States and its possessions to individuals residing in foreign countries debit); (2) institutional remittances of cash and the value of goods forwarded abroad by :haritable organizations (debit); (3) an estimate of the value of parcels sent abroad by ndividuals as gifts (debit); and (4) pensions and other transfers, including indemnity and estitution payments, made by foreign governments to U.S. residents (credit).

Personal remittances are estimated on the basis of data received from banks, communication companies, and the U.S. Postal Service. Institutional remittances are based on information obtained from reports of organizations to BEA. The value of gift parcels is determined by applying an average value per pound to the total number of pounds of parcel post forwarded abroad as reported by the U.S. Postal Service. Remittances to U.S. private residents made by foreign governments are obtained from balance of payments records of foreign countries (mainly Germany, Canada, and the United Kingdom).
U.S. Government grants (other than military) consist of transfers to foreigners of goods, services, or cash with no fixed obligation for payment. Included are transfers of services under technical assistance programs and the Peace Corps. Pensions and other transfers to foreigners include only U.S. Government transactions. Pension payments are made mainly by the Veterans Administration, the Office of Personnel Management, and the Social Security Administration. Other transfers include U.S. Government payments of membership assessments to international orgainizations.
U.S. Government capital flows, net. excluding official reserve assets, represent disbursements on loans by the Export-Import Bank, the Agency for International Development, the Department of Agriculture, the Department of Defense, and other Government agencies (less repayment of outstanding loans), capital investment in multilateral development banks, and net changes in holdings of foreign currencies and other claims not included with official reserve assets. Foreign currency holdings included here are obtained mainly through the sale of agricultural products under PL 83-480 and through Coreign payments of interest and principal on loans. Such currency holdings are reduced mainly through their use for U.S. Government administrative expenditures and for grants and loans to the countries issuing these currencies.
U.S. private capital flows, net, include (1) changes in direct investment abroad (which include purchases and sales of equity interests in foreign companies, increases and decreases in intercompany debt, and increases and decreases in reinvested earnings in incorporated and unincorporated foreign affiliates); (2) purchases and sales of roreign securities; (3) changes in claims reported by U.S. banks; and (4) changes in claims on unaffiliated foreign residents reported by U.S. nonbanking concerns.

Foreign capital flows, net, include (1) changes in foreign direct investment in the United States (which include purchases and sales of equity interests in U.S. companies, increases and decreases in intercompany debt, and increases and decreases in reinvested earnings in incorporated and unincorporated U.S. affiliates; (2) foreign purchases and sales of U.S. securities (including securities issued by local governments and securities issued by U.S. Government agencies); (3) changes in U.S. liabilities to foreigners reported by U.S. banks; and (4) changes in U.S. liabilities to unaffiliated foreign residents reported by U.S. nonbanking concerns.

Data for U.S. and foreign direct investment are based on quarterly and annual BEA direct investment questionnaires; data on other private capital flows are collected by the Treasury Department through the Federal Reserve System; and data on U.S. Government liabilities (other than marketable securities) are calculated from the books of the operating agencies.

Movements in U.S. official reserve assets include transactions in U.S. official holdings of gold, special drawing rights, foreign currencies (Treasury and the Federal Reserve System holdings), and the U.S. reserve position in the IMF. The latter-the amount the United States could purchase in foreign currencies at anytime-equals the sum of the U.S. quota in the IMF and net lending to the IMF minus the IMF's holdings of U.S. dollars (other than administrative currency balances) in its General Resources Account.

Special drawing rights (SDR's) are international reserve assets which were created through amendments to the Articles of Agreement of the International Monetary Fund to provide an orderly and adequate growth in international liquidity. Allocations to the United States and other participating nations was made in 1970-72 and 1979-81. The allocation of SDR's is shown separately in the international accounts as a credit entry. Changes in holdings of SDR's are included in U.S. official reserve assets. Reserve holdings of SDR's change not only as a result of allocations but also through purchases of SDR's from other countries or through sales of SDR's to other countries, and by use of SDR's in transactions with the IMF.

Movements in foreign official assets in the United States include changes in U.S. Treasury and other U.S. Government securities, changes in other U.S. Government liabilities and in liabilities reported by banks, and changes in holdings of U.S. equity and debt securities.

Detailed annual balance of payments data beginning 1960 and quarterly data beginning 1970 are in the June 1981 SURVEY OF CURRFNT BUSINESS: revised data for recent years are in the June 1986 and June 1987 issues of the SURVEY OF CURRENT Business. Quarterly data for 1967-69 appear in the June 1977 SURVEY OF CURRENT BUSINESS, for 1960-66 in the September 1977 Survey Of Current Business, for 1955-59 in the September 1970 Survey OF CURRENT Business. and for 1950-54 in the Balance of Payments Statistical Supplement, a Department of Commerce publication issued in 1963. Annual data for 1948-59 appear in the June 1973 Survey OF Current Business, and for 1919-47 in the previously mentioned Statistical Supplement. The format for data prior to 1960 is somewhat different than the current format.
