### PROSPECTIVE CHANGES IN THE RATE OF INTEREST.

THE prospective changes of the money market are discussed in Wall street with unusual anxiety, and the prevailing incertitude, the conflicting views as to its probable fluctuations in the immediate future, offer a very striking illustration of the instability and other mischiefs entailed by a paper money system which is inflated, redundant, and unsustained by the solid support of a specie basis. By some shrewd observers, it is supposed that the rate of interest must for some time rule low; first, because the Treasury Department cannot, without some injury to itself, make any new negotiation that will produce stringency; and secondly, because of the vast amount of paper money which the national banks are daily adding to the gorged and overflowing current of our circulating currency. In this latter reason there is considerable force. For as Mr. F. Clarke, in a recent letter on the necessity of redemption, has well observed:

"The amount of legal tender notes now in circulation is about six hundred and eighty-five millions, and the circulation of the banks, State and National, is about three hundred millions, together with legal tender and bank circulation, in round numbers, one thousand millions. The bank circulation of the whole country, North and South, at the breaking out of the rebellion, was not over two hundred millions, and the gold and silver in circulation at that time not over one hundred and fifty millions. The circulation of the country at this time is about three times greater than it was or ever had been before the suspension of specie payments. The enormous expenditures of the government, and the sudden and great increase of the volume of business created by the war, rendered an increase of circulating medium an absolute necessity. The war is now over, and but a comparatively small amount of currency will be required by the disbursing officers of the government, and the business created by the war has already nearly ceased. The great increase of the volume of currency must, consequently, show itself, either by its concentrating at the business centre of the country to an extent that will make it a necessity to have some mode of redemption provided, otherwise a new impulse will be given to inflation and increase of prices until employment is found for the whole volume of currency. In this way it would be absorbed even if it was twice as much as now issued."

Now, without claiming that we do not need more currency now than five or six years ago, it is argued that as a much smaller aggregate of currency will suffice for the exchanges of the country in time of peace than was required during the war, the redundancy will soon produce its usual effects, a plethora of unemployed capital, low rates of interest, rampant speculation, and ruinous commercial expansion. The prevalence of these opinions explains the recent activity in the dry-goods business and in several other departments of our domestic trade; and it has of course developed a speculative movement, to some extent, in our importations, as will be seen by the official tables published elsewhere.

At the Stock Exchange a more desponding view has been taken of the financial situation. Vague fears to some extent prevail that on the meeting of Congress, if not before, there may be spasmodic revulsions which will tell on the sensitive values of railroad and other securities, effect some changes in the relation between creditor and debtor, and thus cause serious oscillations in the current rate of interest. This apprehensive timidity on the part of our enterprising financial men explains the extreme dullness of the stock market, and causes sometimes the most trivial rumors to produce effects quite disproportioned to their credibility and importance.

From the derangement caused by the absorption in the South of large amounts of capital and currency, some of our prophets anticipate an advance in the loan market. These persons forget, however, that this very outlet, opened at the South for the relief of our overcharged and plethoric paper money system, is salutary. The draining off of our superfluous currency is one of the most gratifying and conservative features in our present financial position, and will, perhaps, preserve us from realizing some of our worst fears,

At any rate, so far as this source of anxiety is concerned, a six per cent money market can scarcely receive much disturbance.

As to what Congress may do to improve the value of the paper dollar, and to bring it nearer to that of the dollar in coin, it is premature to enquire. One thing only is certain, that every step towards the resumption of specie payments will press heavily on the debtor, for it will compel him to pay his creditor in a currency worth more than that in which his debts were incurred. By the expectation of the failures which must thus be infallibly produced except the delicate process be carried on slowly and wisely, the state of public confidence must receive a shock, and in consequence the rate of interest, and the willingness to lend, may fluctuate considerably.

This future trouble is, however, too far off to be of much present practical use except to inspire caution. But it should lead our mercantile classes to do their business as far as possible on a cash basis, and to avoid the old dangerous long credits which we observe some houses, from the desire to attract business, have lately shown some disposition to revive.

#### CONTRACTION OF THE CURRENCY.

The present and prospective evils of inflation, high prices, and an unstable currency have developed a growing conviction in the public mind that the time has arrived when a permanent contraction must be attempted in the volume of our redundant paper money. Various means of accomplishing the reduction have been investigated by the Secretary of the Treasury, who has not as yet made public the decision to which he has been led, or the plan which he will finally adopt. The suspense has given rise to a multitude of fugitive rumors in Wall street, most of which have probably been invented to serve some temporary purpose. Almost all that is really known is that Mr. McCulloch is pledged to reduce the currency as soon as possible; that he is in correspondence with various persons as to the most expedient methods of effecting the object; and that he is fully convinced that if the right plan can be discovered, its adoption at an early day will be likely to prevent much future derangement, financial mischief, and public loss.

Now to withdraw a large amount of currency from circulation means, first, to negotiate a loan for the required sum; and then to destroy the paper money which this loan sells for and brings into the Treasury. To pay out these legal tenders again after they have been locked up a few weeks in the public coffers, or to supply their place with other legal tenders, endowed with more or less of activity and inflating power, is not to improve the currency, but to derange it. The contraction of their paper money which the people want, is a permanent contraction; and to be permanent and safe it must be slow and gradual. On this point there is no diversity of opinion among well-informed men.

As to the nature and terms of the loan by which the currency can best be withdrawn, opinions differ. There appear, however, to be but two essentially different kinds of loan open to choose from. We must issue long gold-bearing bonds or short date currency-bearing paper. Of course long bonds will in some respects be the best for our purpose, as their renewal cannot cause us any embarrassment for five or twenty years, if we select the five-twenties, or for double that period if we prefer the ten-forties. As soon as possible, therefore, we must fund our greenbacks into long bonds. But the difficulty is that there are so many of these bonds pressing more or less directly on the market that we could scarcely hope to sell fifty or one hundred millions of five-twenties at the present time, without exerting considerable depression on prices; while at the current rates, money could

not be raised on them below  $8\frac{1}{2}$  per cent, which is an inadmissible rate of interest to pay for a long loan. As to the ten-forties again, they are for some reason so unpopular that in the present attitude of the public mind we cannot hope to make them available. The seven-thirties would scarcely serve our purpose better, for with 830 millions negotiated so rapidly and so recently, we are prohibited by every principle of sound practical finance from offering more until the older issues begin to take their place among the short date paper which the portfolios of our lending institutions have an almost unlimited capacity of absorbing.

It would seem, then, that if we would immediately withdraw our currency by a loan, that loan cannot consist of long gold-bearing bonds, nor even of three years' Seven-thirties. What other resources are left to us? Evidently we must offer some obligations of short date. One year certificates would probably be more easily negotiated than any other government securities at the present moment and by disposing of fifty millions at about the market price, we could raise the money at a lower rate of interest than on Five-twenties. Mr. Chase, in one of his reports, called attention to the fact, which he fully proved, that a one year six per cent government security, falling due at promiscuous dates, is extremely popular. Now that private credits are less extended, it supplies the place of commercial paper as an investment, and is very convenient to a large class of moneyed institutions. Hence, from 125 millions to 175 millions of certificates of indebtedness have been kept afloat without the slightest inconvenience; and, there is no doubt, that so long as the exigencies of the Treasury may require it, an amount falling but little short of this sum, could be kept permanently in the hands of the public. For all practical purposes this would form a permanent loan of over 100 millions, and might be extremely serviceable during the funding of our currency and the consolidation of our public debt.

If, as is claimed, the law does not permit certificates of indebtedness to be issued below par, the Secretary of the Treasury has the power, under the act of March 4, 1864, to issue one year 6 per cent Treasury notes, not legal tenders, and not convertible into gold-bearing bonds. These being substantially equivalent to 6 per cent certificates, would doubtless be eagerly sought, and as largely absorbed.

The objection that such a negotiation would add one more to the long and intricate list of government securities is not unworthy of consideration. It is, however, sufficiently answered by the necessity of the case. If any better method can be devised of raising money for the specific purpose of contracting the currency, by all means let its advocates have a fair hearing. But if not, it would be absurd and un-American to reject the right method because it happens to be new.

Another objection to the issue of one year six per cents is founded on the fear of increasing the "temporary obligations" of the government. Now, we believe that the apprehension of serious embarrassment to the public service from this cause is only in part well-founded. But, as has been already shown, these 6 per cent securities would belong to the temporary debt only in name. In reality they would constitute a permanent loan, new notes being issued as fast as the old ones matured.

In retiring our currency by means of some such short date loan as we have ventured to suggest, the additional advantage might probably be realized of preventing such perturbations of the money market as would cause severe stringency; for our contracting machinery would be sensitive to such influences, and might be elastic enough to adapt itself to them.

Whatever form of security is adopted, however, for the

raising of means to withdraw and cancel the currency, two conditions are indispensable in working out the plan. First, a guarantee should be given to the public that the currency shall really be destroyed, and shall, on no account be issued again; and, secondly, an official statement should be published weekly to show the amount of currency destroyed during the week, and the aggregate still outstanding. This statement might resemble in form, and be issued together with that now published of the circulation of the National Banks.

#### GOVERNOR PERRY'S MESSAGE.

Among the gratifying aspects of public opinion in the South, none, perhaps, is more significant at the present moment, or more likely to be productive of good than the prevailing confidence, the enthusiastic belief in the recuperative energy of their several States, which is exhibited by the multitudes of Southerners whom recent events have brought to New York. "In a few years," say they, "we shall be more prosperous because more industrious than we ever were." And the effect of this opinion is that every man seems to be embracing some peaceful, remunerative employment. Capitalists are seeking investments. Officers who know little of commerce but much of engineering, are devoting their skill to develop railroads; and in the crippled condition of their fertile but impoverished districts, the energy, soldierly activity, and untiring zeal of such men cannot fail to render service to the country. Generals are becoming heads of colleges, subalterns are cultivating the soil, the rank and file are busily dispersing themselves in the shops and stores, in the plantations and farms; and all classes seem to vie with each other in learning or practicing some employment equally conducive to personal emolument and to the national wealth. Of course in a society so disorganized, there are numerous exceptions; but we are informed that the general tendency is in the right direction, that these honorable aspirations prevail extensively, and that their area and intensity are daily extending. If this be so, if so commendable a spirit rules and is permanent, every true friend of the South will rejoice; for this homage to the dignity of labor, this "worship of work," which has enriched the North, will give riches and honor and power to the South, as to every community that has ever adopted it.

In this point of view, the general tone of the very sensible message of Governor Perry to the Constitutional Convention of South Carolina is significant:

"Gloomy as the present may seem," he says, "the future will be bright and glorious. Nothing is ever likely to occur again to mar the harmony of the Union. The North and the South are mutually necessary to each other, and all the pursuits of the one are dependent on those of the other. The United States as a whole, combine all the elements of national prosperity and greatness more than any other people on the face of the earth. No empire in the world ever united in so eminent a degree the three great sources of independence, power, and wealth—agriculture, commerce, and manufactures. As long as civilization continues, this great republic will flourish and increase in numbers, wealth, and grandeur. It can only crumble and break into fragments when ignorance and darkness shall have prevailed the land. South Carolina as an integral part of this great power must partake of its riches and prosperity. The abolition of slavery will give new energy and self-reliance to her people, stimulate industry, and promote economy in all the vocations of life. In less than ten years we shall realize in the loss of slavery a blessing to ourselves and our children."

It would be contrary to all experience, however, were we to expect that the reorganization of labor on the basis of freedom is to be accomplished without a spasm. The changes in the industrial and social machinery of the nation which are involved in the sudden freedom of four millions of enslaved peasantry, may well be expected, as Governor Perry says, "to produce at first confusion, idleness, and dissipation." These difficulties, however, will soon disappear. With his freedom the negro will learn self-respect, and will realize self-development. He will soon find that he must either work or perish. Even in slavery he has shown, in numerous instances, great proficiency in certain kinds of skilled

labor. He is docile, patient, capable of learning handicraft trades, and besides his valuable and well known delicate sensibility of touch, he has other aptitudes for mechanical excellence and industrial utility, which will be evoked by cultivation, or by the stimulus of self-reliance and social responsibility.

Another impediment to the realization of the bright hopes of the South is the lack of capital. Just hinting at this difficulty, which will rectify itself, the message before us devotes special attention to the deranged condition of the currency. The frightful evils of paper money, as with accelerating rapidity it depreciates, and approaches its final stages of utter worthlessness, have been illustrated by the rebellion more clearly than by our continental currency, by John Law's *système* or by any other similar experiment recorded in the financial history of the world. The storm, however, has ceased, and out of the general chaos which it has left behind we have to educe order and stability, activity and productive growth. Let us, however, hear Governor Perry's remarks on this subject:—

"After the collapse of the so-called confederacy, the Southern States were left in a most anomalous condition in reference to their monetary affairs. The gold and silver had been exported as an article of commerce during the war; the State banks were all broken and their bills driven out of circulation, and the Confederate money became, of course, valueless. This left the South without any kind of money or a circulating medium. Eight millions of people, in a high state of civilization, occupying a rich and fertile country, without money or the means of exchange except by barter.

"The want of money or a circulating medium cannot continue long. The sale of cotton, as soon as its transportation to market is practicable, will supply the country with money enough for its most pressing wants. The farmers and planters, now that their slaves are emancipated may very well dispose of a portion of their lands to relieve their embarrassments and acquire the means of enriching and improving the remainder. Northern capitalists and European immigrants will readily make investments in real estate in South Carolina. In a short time money, which is superabundant in the Northern States, will materially and necessarily flow South, seeking its value, as water flows seeking its level."

This flow of capital to the Southern States is progressing in a daily increasing current. And judging from present evidence, the people have saved from the general ruin more cotton, more tobacco, more naval stores, more of their various produce of all kinds, than had been supposed possible. Having such elements of material wealth, with which to start a traffic, there is ample scope for all the energy which is animating our Southern fellow-citizens. They will soon accumulate abundance of currency and floating capital, to place their reviving industry and their regenerated productive power on a solid foundation. And in the contentment subordination and fusion of interests which material prosperity will produce, we shall, perhaps, find a solution of some of those political problems which at present baffle the sagacity and awaken the fears of our statesmen.

#### SOUTHERN REORGANIZATION AND NATIONAL WEALTH.

For some weeks past commerce in our Northern cities has put on somewhat of its former character. Merchants are here from every considerable Southern town, to fill up their assortments as of old; and many of them making arrangements for the liquidation of debts incurred prior to the great civil war. Long credits, the bane of our former trade, do not seem to be so often desired; a fact going to show that our Southern countrymen are becoming awake to the superior importance of quick sales and short accounts.

For several years there has been a great scarcity of manufactured goods, and the removal of the embargo has been followed by an extraordinary demand. Emigrants have also begun to direct their movements from Europe and the North to that part of the country. Many officers and soldiers of the late Federal army have selected homes, and entered upon the cultivation of the soil. Northern men, Yankees particularly, are greatly desired as colonists. They are familiar with meth-

ods to make labor effective, and would double the productiveness of the districts where they fixed their abode. As cotton-growers they would speedily fill the markets of the world with that great Southern staple; and, not resting content with that, they would reticulate the country with railroads, and fill it with manufactories, "diffusing" New England, with her avocations and institutions, over the entire South, and making the Great West come to them, instead of crossing the ocean for a market. Before the civil war, manufacturing had begun to constitute an important branch of Southern industry. There were, in 1860, 350 woolen mills and 180 cotton factories, employing almost fifteen million dollars of capital. Indeed, the statistics of Southern manufactures were as follows:—Number of manufacturing establishments 27,054; capital invested \$181,538,000; value of raw material \$158,065,000; value of the annual product \$283,188,000; help employed 168,038 males and 34,417 females.

The exports at the same time were valued at \$207,843,376, consisting almost entirely of cotton, tobacco, rice and lumber. With the reorganization of industry and the influx of a large emigration, it will not take many years to resume supremacy in the European market with the raw material. The present population will hardly be sufficient for this. Now that slavery is out of the way, the colored population will become large consumers as well as producers. It is safe to assume that they will consume ten times the value of manufactured goods that they did formerly. Either the South must largely increase its commerce with manufacturing districts, or engage in the business at home. We presume that both will be done.

If that part of the country, five years ago, with a sparse population and limited capabilities of rendering labor productive, produced \$283,000,000 value of manufactures, and exported \$207,000,000 worth of cotton, tobacco, rice and lumber to Europe, what may we not expect in the new times, when freedmen, interested in the productiveness of their industry, take the place of slaves, when American ingenuity shall introduce machinery into every department of labor, and foreign immigration shall populate densely the immense area of now unoccupied territory? The most substantial inducements exist for capital to invest there, and for labor to seek employment. The products of the soil and the mine, with the aid of manufactories, afford the most ample scope for enterprise.

But to prepare the way for this vast influx of colonists and prosperity, the National Government must establish civil law, and with it security of life and property. Social questions must be left, in a great degree, to adjust themselves. Slavery is forever dead, and everybody rejoices; but as for the emancipated slave, he is still on probation. If he abides the test his future will be fortunate enough; and if he fails, no legislation can make good his deficiency. Circumstances must determine the peculiar relation of the colored population. The restoration of civil government at the South should not be delayed till the social problem is solved. It is not enough that hostilities have ceased. The proclamation that "Order reigns in Warsaw" did not tempt men of wealth to repair thither to invest their property, or colonists to find employment. They require the institutions that make peace secure, and it is the province of government to furnish them. Then wealth and population will flow thither as water flows to the valley.

In common with the leading men of the great political parties, we have been pleased to behold President Johnson hastening to lay aside the extraordinary powers which the national exigency had conferred, and exerting the energies of the government for the restoration of civil authority in the revolt-

ed States. The genius of our Constitution is directly opposed to the maintenance of a colonial system. It has been our policy with the Territories to hurry their inhabitants to the adoption of State government.

When our countrymen took up arms in 1861, to suppress the Great Rebellion, they had no idea of overthrowing the laws and government of the revolted States. Theories were not entertained; even abolitionists for the time thought nothing about slavery. The popular instinct had overcome sentiment; every one felt that the breaking-up of the Union would involve a general disintegration of society, and endanger our political existence. Every measure that was adopted grew out of that conviction. Nor did they waver till the ægis of the constitution again protected the whole country, with not a star dropped from the national banner, or a rod taken from our territory.

If we could not let a State withdraw from the Union, the same reasons exist for not requiring it to remain in territorial dependence, or in an anomalous military subjection. A colonial system cannot grow up without concentrating power in the hands of the President, and changing the entire character of our government. Our fathers engaged in revolution because of the oppression incident to their colonial dependence.

Many of our worthiest citizens distrust the good faith of the men so recently in arms against their countrymen, and perhaps embittered against them by reason of the cruelties of the war, seem to be apprehensive that an early rehabilitation of the State governments would be accompanied with efforts to resuscitate the doctrine of secession, and continue alive the institution of slavery. They ask, accordingly, for delay till some security shall be assured against future rebellion.

But the Southern people would be unlike every other people in the world, if they could now be planning other policy than that of recuperation. Having just sustained a crushing defeat, their armies disbanded and not capable of being again assembled, the system of slavery annihilated, and the question of the right of secession forever determined by the verdict of the war, they have neither time nor strength to waste on other than economical and industrial issues. It is the part of wisdom to meet them on this ground, and to encourage their efforts to resume their normal relations with their fellow-citizens of the other States.

President Johnson's letter to Major General Slocum solves the problem heretofore considered so difficult: **THE PEOPLE MUST BE TRUSTED WITH THEIR GOVERNMENT.** It is the determination of the controversy; and experience, we are confident will show it to be the safest policy as well as the most successful.

A sweeping exercise of the policy of confiscation appears to us to be directly calculated to retard the organization of Southern industry. Colonists will not establish themselves, nor capitalists invest their money, where the title to property is in dispute. However beneficial confiscation may have been as a war measure, its operation has not been so salutary as to warrant the Government in its continuance. It has enriched individuals and demoralized the public service, but the money derived from it by the National Treasury, as in the example of New Orleans, has been contemptibly small. Badly as our countrymen have erred, it cannot be judicious to drive them to occupy vagabond positions in society. Let them resume the functions of citizenship, and an influx of population will ensue, and a revival of commerce be exhibited which will restore the country to more than its former prosperity, and effect the reorganisation of society upon a proper basis.

## THE HOOSAC TUNNEL.

THE project of a tunnel through the Hoosac Mountain was entertained by leading men of Massachusetts over forty years ago. New York had almost completed her Grand Canal from Erie to the Hudson, and they now entertained the idea of continuing this artificial water communication from Troy to Boston Harbor. Accordingly commissioners were appointed in 1825, who reported in favor of a route for the proposed canal westward by way of Fitchburg, Miller and Deerfield rivers, and through the Hoosac mountain, and onward to the Hudson. The report says:

"There is no hesitation in deciding in favor of a tunnel. Even if its expenses should exceed the other mode of passing the mountain, a tunnel is preferable for the reasons which have been assigned. And that formidable barrier once overcome, the remainder of the route from the Connecticut to the Hudson presents no unusual difficulties in the construction of a canal, but in fact the reverse, being remarkably feasible."

Fortunately for Massachusetts, the era of railways opened soon afterward, and the attention of her enterprising citizens was turned in this direction. A charter was obtained in 1848, authorizing the continuation of a Road from the terminus of the Vermont and Massachusetts Railroad at or near Greenfield, through the valleys of the Deerfield and Hoosac rivers to the State line, there to unite with a railroad running to Troy. The capital stock of the company was fixed at \$3,500,000, and it was allowed seven years to complete the proposed road. It had been estimated that \$2,000,000 would be ample for the construction of the tunnel, and the residue for the road and equipment.

The first proposition was to construct the tunnel of dimensions sufficient for two railway tracks, twenty four feet by twenty-and a half; but the act of 1854 specified that it might be built for one track or more. In 1859 the Legislature directed it to be excavated fourteen feet in breadth by eighteen in height. Since the surrender of the road and tunnel to the State, the original design has been assumed.

The company failed, however, to obtain subscriptions to their stock, and determined upon an appeal to the Legislature. An act was obtained in 1854, lending the credit of the State for two millions of dollars, on condition that \$600,000 should be subscribed, and 20 per cent paid. The towns lying on the route of the railroad were also authorized to take stock to the amount of three per cent of their valuation; and the contractors undertook to procure the required subscriptions.

These schemes were not very successful, and an act was obtained in 1860 authorizing the application of \$650,000 of the Tunnel Loan to monthly payments for the construction of the road. Thus the State, under the pretext of lending its credit, became charged with the entire outlay. It was also discovered that the contractors had succeeded in over-drawing their account. The State Engineer finally, in July, 1861, refused to give his certificate to any more bills, and the work was abandoned.

The Legislature at its next session passed an act authorizing the appointment of three commissioners, who received from the company on the 4th of September, 1862, the remainder of all the property of the corporation. They now made an investigation of the whole subject, and in their report declared the feasibility of the grand enterprise of tunneling the Hoosac mountain, the necessity of the enlargement so far as it had already been constructed, and also the necessity on the part of the State of taking into its own hands the enterprise, controlling its own agents, and making them responsible. Their conclusions were accordingly accepted as part of the policy of the State.

The Hoosac mountain, which is pierced by the tunnel, has two summits, with a valley between them about two and

half miles wide. The eastern summit is about 6,100 feet from the eastern portal of the tunnel, and 1,415 feet above the grade of the road; and the western summit 6,700 feet from the western portal, and 1,704 feet above grade. The rock, so far as the tunnel had been driven when the State Treasurer took possession, 2,394 feet from the eastern end, is a mica and talcose slate, with occasional veins of quartz. President Hitchcock declared the whole mountain to be made up in the same way. He believed that no soil would be found unless it was where a valley comes down from above. The rock at the western portal was apparently similar to that on the eastern side; and the shaft which had been driven down to the line of the tunnel disclosed the same general appearance. The whole length of the tunnel as ascertained by actual survey was 25,574 feet, a little less than five miles.

The work upon the tunnel had been commenced in 1855 under contract, by Edward W. Serrell, of the city of New York. The next year Messrs. E. W. Serrell & Company agreed to construct the whole road and tunnel for \$3,500,000, but the company was not able to comply with the conditions. In July, 1856, a new contract was made with H. Haupt & Company to do the work for \$3,880,000. The company again proving unable to fulfill the terms, the contractors assumed the labor of collecting and procuring subscriptions themselves, receiving \$2,000,000 in State bonds to be appropriated exclusively to the work upon the tunnel; \$900,000 in mortgage bonds of the company, and \$1,100,000 in cash, so far as cash subscriptions could be procured, and the residue in stock. The work on the road and tunnel was now vigorously prosecuted. But the contractors appear to have depended rather on their influence with the Legislature than on the amounts to be raised by subscription, for means to carry on their enterprise. By ingenious representations they succeeded in obtaining \$131,000 more than they were entitled to receive, when attention was aroused, and the State authorities refused to honor their draft.

The work already performed on the tunnel when the State took possession was found to be imperfect in several particulars. The eastern end tunnelling, the western shaft, and the tunnelling at the western end were not in a straight line. The western shaft was about ten feet too far to the northward; and the west and east workings were not parallel to each other, but running to a point at some distance north of this line and near the middle of the tunnel. The excavation as made did not conform to any particular line or grade; nor was any part of it, except the end sections, cut so large as the smallest size prescribed by the act of 1859. Under such circumstances, if a track should be laid through it, crooked to conform to its line and undulating to conform to its grade, it would be too small to pass an ordinary grade without litting.

It appears to have been contemplated to build the tunnel of a small size, and enlarge it afterward if the business warranted the additional outlay. But the Commissioners declared against such a policy. A tunnel with a single track, especially on a road intended for a great through line, is liable to serious objections. Embarrassing delays must frequently occur; and any interruption or break-down in passing through it would be attended with great inconvenience and danger. The smoke and steam from the locomotive engine, when at rest, would soon fill a part of the tunnel; and in case that the locomotive and cars should run off the track, they would occupy the whole space and be difficult of removal; even to make communication from one end of the tunnel to the other would be very difficult.

While being enlarged it could not be used to advantage,

and the cost would be out of proportion to the value of such use. Once only, therefore, should the work of construction be performed.

The work upon the tunnel was resumed in October, 1863, under the auspices of the State of Massachusetts. The policy of this change seems to have been justified by the experience already had. It is true that works constructed by States are expensive. Changes in their management often occur with changes in their civil administration; men being frequently, as is the case with the canals of New York, placed over them because of their political influence, rather than their peculiar fitness. Great waste is the inevitable result. But the losses thus incurred have been small in comparison with those resulting from a loan of credit to companies of doubtful responsibility.

The report of the Commissioners gives the following estimate of the cost of the tunnel: for construction, \$2,696,229; interest during construction, \$522,094—total, \$3,218,323. The time required for the work is very uncertain, but after a diligent calculation, it was fixed by Mr. Storow at eight years from the period of resumption.

A new line was run for excavation, through the western shaft and through the centre-point of the axis of the old tunnel. This rendered it necessary to abandon the working at the western end; but the width having been increased from fourteen to twenty-four feet, about all the work done in the old fell within the line of the enlarged section of the new tunnel.

At the date of the last report, no further progress had been made, in the penetration of the mountain at the eastern end of the tunnel. The labor was expended in new-grading the bottom and constructing a drain. It is also contemplated to lay four pipes; one to carry air for ventilation, one to carry air for a power, a third to convey illuminating gas, and the fourth to carry water under a hydraulic pressure to supply the drills.

The location of the western portal has been changed three hundred feet from the place designated by the Commissioners, and the grade lowered nineteen feet from that proposed by them—thus bringing the eastern and western portals to the same level.

An open cut has been made in steps one above another. Great quantities of quicksand, water, and flint boulders were encountered. Large quantities of this bad earth have been removed to arrive at the point where the new tunneling was to begin. Beneath this earth, the workmen found a species of rock, soft like clay, and the engineer was confident that this would continue till they arrived at the slate of which the mountain is composed. The average cost of the work per month is from \$25,000 to \$30,000. Laborers are employed at five points, namely: the dam across the Deerfield river, the eastern end enlargement, the central shaft, the western shaft, and the western end.

The railway companies directly interested in the construction of the tunnel, as joining them into one straight line from Boston to the West, namely, the Vermont and Massachusetts Railroad Company, the Fitchburg Railroad Company, and the Troy and Boston Railroad Company have contracted with the Commonwealth of Massachusetts to pay 20 per cent of their gross earnings upon passenger and freight business passing over any part or the whole of the Troy and Greenfield Railroad, to repay the cost of construction and interest. This condition does not apply, however, to that part of the road west of North Adams.

The Commonwealth, on its part, stipulates that when the moneys so received from these roads shall make the net earnings of the Troy and Greenfield Railroad more than six per cent of the cost of its construction and equipment, or the gross

earnings more than thirteen per cent, for one year the amount so paid by the other companies shall be reduced to that amount. If, for four consecutive years, the earnings of the Troy and Greenfield Railroad amount to six per cent net, or 13 per cent, gross, in each separate year, upon the cost of construction, the other companies will be released from further payments. For the purposes of this contract the cost of the road, tunnel and equipments is fixed at \$968,862 on the 1st of January, 1863, added to the further cost of their completion; and five per cent interest shall be charged semi-annually into the cost every January and July.

The construction of this tunnel is an ambitious effort on the part of Massachusetts to attract to her metropolis a share of the Western trade, now expected to assume greater proportions than ever before. Her agriculture and her commerce depend upon her manufactories, and hence the necessity to reduce the cost of transportation. Besides, Boston would be enabled to participate in the exporting of Western produce.

It has been ascertained that the locomotive that would haul 87 tons on the Western Railroad would take 102 tons on the tunnel route—which is a saving of about five per cent of the cost of transportation. During the winter months, particularly if there should be no breaking of bulk at Troy, Boston by this means would afford advantages for foreign export a little less than those of New York, and her merchants would be able to remove the difference. Boston is 200 miles nearer Liverpool. With the increased commerce of the West, it is apparent, therefore, that the tunnel route, when opened, will have an ample business, warranting the anticipations of its sanguine friends.

There is no occasion for apprehension that the tunnel route will affect seriously the operations of parallel lines. Formerly the canals of New York and Pennsylvania constituted the avenues of transportation between the East and West. Since then, four railways, the New York Central, the New York and Erie, the Baltimore and Ohio, and the Pennsylvania Central were in turn brought into use without seriously affecting the other avenues of transportation. The same thing was observed in New England with reference to the Western Railroad, the Vermont Central, the Rutland, and the Portland routes.

By the time the tunnel shall be completed, the public interest requiring it will doubtless have grown large enough to pay for the outlay. The impulse which the new line will give to business will soon lead to its full employment, and make up in any loss experienced by its competitors. Such has been the experience elsewhere.

The great tunnel when completed will challenge the admiration of the world. As a triumph of engineering skill and American energy our citizens will point to it with pride. It will be a conquest of peace; human effort vanquishing the everlasting hills. For ages it will constitute an imperishable monument of enterprise, persistence, and statesmanlike foresight.

#### CHILDREN'S ENDOWMENTS.

It is particularly noticeable that nearly all those schemes which we now-a-days look upon and claim as resulting from the development of the science of Life Contingencies, were more or less anticipated by the earlier writers on the subject. Take the case of endowments for children—a good and wise provision in many cases—and we find the practice applied in a familiar manner nearly two hundred years ago, in illustrating the practice of usury, vide "*A discourse upon Usury by waie of dialogue and oracions, for the better varietie and more delight of all those that shall read this treatise, by Thomas Wilson, Doctor of the Civil Lawes, one of the Maisters of his Majesties honourable Court of Bequests, Imprinted at*"

London by Roger Warde, dwelling near Holbourne Conduit, at the sign of the Talbot. — 1584." Wherein the writer says: "A merchant lendeth to a Corporation or a Company an hundred pound, which Corporation hath by statute a grant, that whosoever lendeth such a summe of money, and hath a childe of one yeere, shall have for his childe, if the same childe doe live till he be full fifteene years of age, 500 li (£) of money; but if the childe die before that time, the father to lose his principal for ever, whether is this merchant an usurer or no? The lawe saith, if I lend purposely for gaine, notwithstanding the peril and hazards, I am an usurer."

Nevertheless, because the practice of endowments is not a new one, is no good reason that it should not be a good one, and we notice with pleasure that it has recently been introduced into this country.

Endowment companies afford an opportunity and an inducement to heads of families, guardians, and others charged by nature or by law with the maintenance or education of children, to provide for sons the means of education, or the capital necessary to the establishment or prosecution of a business; and for daughters the marriage portion or other settlement suitable to their station in life, by the periodical payment of fixed contributions.

The principle upon which endowment schemes are based, is that of mutual inheritance, or an adjustment by which the longer livers among certain beneficiaries succeed to the rights of the shorter livers, or of those who prematurely retire from their adhesion to the scheme, from causes other than death, is the same as that prevailing among the *Tontine Associations* of Europe. But few instances of the Tontine scheme are known to have been carried out in this country, the principal one having been devised in 1792-4 to erect a building in Wall Street by the aid of 203 shares at \$200 each, which, through the death of nearly all the original subscribers, has fallen into the hands of two or three survivors. In Europe, however, they have been very popular, and at times have even been used as measures of public finance.

The *Caisse Paternelle* (Family Endowment Fund) of Paris is now the most celebrated institution of the kind in Europe, and it is the peculiar features of this institution which have been reproduced here, and which, we venture to think, will, in time, become very popular. The plan and advantages of it can best be explained by using an illustration.

A parent has a child who is just born, and for whose future welfare he is naturally most solicitous. By the payment of ten dollars entrance money, and \$39.47 per year premium until the child is twelve years of age, he secures the payment to it, when it shall have attained the age of eighteen years, of the sum of one thousand dollars.

If the child dies during the first five years of insurance the company retains the entrance money and premium; if it dies after the policy has been running five years all entrance money and premiums paid within or for the first five years of membership will be returned to the parents or other heirs, but without interest. This plan may be modified. The entrance fee may be made larger, and this would make the annual premiums smaller. So also would the payment of the endowment at the age of twenty-one or twenty-four, instead of that of eighteen. Thus for an endowment of one thousand dollars, payable at the age of twenty-four years, with entrance money at \$100, the annual fee from the date of birth would be but \$16.18, and would cease at the eighteenth year. Again, instead of beginning at the date of birth, the insurance may be effected at any time, at a proportionate premium. In the latter case, on a child of three years of age, the annual premium instead of \$16.18 would be \$23.95; on a child of ten years \$43.91, on one of fifteen years \$75.26. And, in addition to all this, comes the child's participation in the gain

of the company derived from forfeitures of premiums and entrance money from children who have died during the first five years of their insurance, and derived also from other sources, such as premiums forfeited by discontinuance, &c. Under favorable circumstances to the Company this participation on a one thousand dollar policy might amount to an additional seven hundred and fifty dollars; and, under any circumstances, it will amount to something.

In regard to non-payment of premiums, the provision is usually very liberal. Three months' grace is allowed before forfeiture takes place, and on policies of at least five years standing, one year's grace is given, if, in addition to all arrearages, with interest, the insurer also pays a fine of one per cent on the endowment insured. Failing to do this, he may secure a new policy for an amount less than the original, but equivalent to the premiums paid. No medical examinations are required, and very little expense is incurred in the management of the business.

This, then, is a brief outline of the scheme of children's endowments, a scheme destined, perhaps, to furnish a new and profitable employment for capital in this country, and an easy and much needed provision for children.

Like all other schemes of insurance, its practical effect is to distribute among many, who each can bear his share of them without inconvenience those hardships from which but few are ordinarily exempt, and which, when unalleviated, often prove to be unsupportable burdens.

#### THE WOOL MANUFACTURERS IN COUNCIL.

THE National Association of Wool Manufacturers held its first annual convention in Philadelphia during the week ending September 9th, and the proceedings have furnished matter for thought and argument among persons connected with the trade. The Wool Growers have their conventions every year, in certain States, and they are rapidly enlisting the attention of every one who is engaged in sheep raising. It would seem that the interest of wool growers and wool manufacturers ought to be so near, that a joint assemblage of those who supply the raw product, and of those who use it, would only be natural. But for years there has been increasing a feeling of estrangement between wool growers and wool dealers, and those who use the material which they furnish. Perhaps the wool growers started the difficulty by assembling in their own separate conventions. Such a course would naturally separate the two branches of business, and the wool manufacturers may have been justified in forming an association for the protection of their own interests. We need not speculate further upon these matters. It is enough to say that the wool manufacturers have embodied themselves in their own systematic form of organization. The Association is young, and it does not yet, as it is expected that it will do, embrace every manufacturer of wool in the United States. Two hundred and one members formed its strength at the meeting held this month, but the publication of the proceedings will have a tendency to add largely to the membership.

The officers of the Association have discovered from the returns of the United States Assessors, that there are 1,704 woolen manufacturers in the United States. To obtain from these parties returns of their business was a most important object. Circulars were addressed to all in interest, and 746 replies had been received from manufacturers in twenty-one States. The large operators replied freely, but the smaller manufacturers have not responded as promptly. What has been received is most important, but the returns are by no means full. The figures supplied by the 746 respondents to the Secretary of the Association show that these 746 factories last year used 118,727,600 pounds of wool, of

which 84,283,550 pounds were home products, and 38,087,600 imported.

Had there been full returns from the 1,704 manufacturers in the United States, the total would probably have been from one half to two thirds greater in the amount of foreign and domestic wool used. The number of sheep in the Atlantic States and California in 1864, were 99,298,965, and they furnished 121,589,076 pounds of wool; there was imported in the same year, in New York, 56,874,128 lbs.

The United States Revenue returns show the value of the whole return of woolen goods manufactured during the year ending June 30, 1864, including as well members of the Association as those who are not, was in value \$121,863,250 83.

The woolen manufacture has been heavily stimulated by the necessities of the United States for clothing for the army and navy. We find the following estimate of the amount used by Government.

Yards of kersey used in 1862.....	21,716,383
Yards of kersey used in 1863.....	20,885,512
Pounds of wool used in 1862.....	51,431,770
Pounds of wool used in 1863.....	61,273,894

A matter which was not discussed before the Convention, but which is of the utmost importance, is, whether this prodigious manufacture can hold its own. The unloosing of the cotton product of the South may have an effect in depressing the demand for woolen goods. The withdrawal of the United States Government from the market as a purchaser will have much more. But, on the other hand, it must not be forgotten that the discharged soldiers will nearly all want new clothing, and in great proportion of wool. The South is ragged and dilapidated in its wardrobe. Woolen goods are needed to repair the losses by war, and the lapse of time. The whole South will have to be reclothed. These influences must stimulate the woolen manufacture for some years, and not only keep it up to the present figures, but even push it beyond them.

## Foreign News.

## GREAT BRITAIN.

LONDON AND LIVERPOOL DATES TO SEPTEMBER 11.

The favorable harvest weather has imparted more animation to the London Stock Exchange, and although transactions are still limited, the market has a more healthy tone than has been observed for some weeks.

The trade returns of Calcutta and British Burmah have been published, and show great progress in the year ending April last. The sea borne trade of Calcutta was £45,441,738, or five millions sterling more than the previous year. Of this, £34,301,541 was merchandise, and £11,140,296 treasure; and of the merchandise, £12,193,852 consisted of imports, and £22,107,589 of exports. The trade of Calcutta has doubled in eleven years.

It has been determined by government that the principal lines of railway in India are to have double lines, and that the Great Indian Peninsula Railway, as far as Jubbulpore, will forthwith be constructed in that way.

Advices from Constantinople give a favorable account of the progress being made in the conversion of the Internal debt. The total amount of all classes of stock "converted" to date, is £3,500,000.

It is apprehended that some considerable losses may fall on such of the London insurance companies as undertake foreign business, by the conflagration of Constantinople.

A prospectus has been issued of the Redland's Estate Company, with a capital of 80,000*l*, (half to be first subscribed), in shares of 10*l*, for the purpose of purchasing the Redland's-farm Estate of 110 freehold acres at Reading, for 33,500*l*, and laying it out and subdividing it for re-sale in building lots.

At Manchester an improved business has been done during the week in manufactured goods of nearly all widths. Some descriptions of sheetings receded slightly. Domestics are in good demand, and prices are sustained. Stocks are generally light, and a general impression prevails that the tide has turned, and that higher prices will rule for the next few months.

Large orders from America for mixed fabrics have caused activity in the Yorkshire markets, and some manufacturers are engaged up to the end of the year. Should a more active demand for Russia make itself felt for double yarn, as is usual at this time of the year, the prices would, in all probability, rise considerably.

All departments of the hardware trade at Birmingham are active, considering the fall season. The fancy branches—such as jewelry, best electro-pl. te, and papier-mache ware—are all more active, principally to supply the wants of the export trade. The makers of metallic bedsteads are everywhere brisk, and for cast hollow ware and wrought iron enamel articles for domestic use, there appears to be no lack of orders at the foundries throughout the district. The foreign orders for local products are well sustained, a good amount of business both as to bulk and value being done to the colonies, and some few orders for America are coming in by each succeeding steamer. A more cheerful feeling pervades the metal trade, and it seems to be generally admitted that copper smelters have seen the lowest range of prices for some time to come. The tin-plate trade is steadily recovering from a long period of depression, and a good demand from America is exercising the natural effect of sending up quotations.

At Nottingham the highest prices for lace and hosiery yarns being maintained, and all appearance of easier rates having disappeared, some considerable orders have been placed. It must, however, be confessed that in most branches of the lace trade, manufacturers find it almost impossible to obtain advances proportionate to the present high rates of material both in silk and cotton. It is always difficult to increase the price of fancy articles, although that is being done now. The demand for plain goods is so moderate that prices remain almost stationary. There has been a little more activity in the warehouses during the last few days, which is expected to increase. In hosiery the orders on hand for export are very considerable, and there is a fair demand for home consumption. Prices are advancing.

There is no improvement in Sheffield for Steel. The demand for cutlery is scarcely so brisk, though still active. For saws, files, and tools some large orders have come to hand by the last mails, some firms having received orders which will occupy them for several months. Good orders continue to arrive from Canada, notwithstanding the lateness of the season, and a little more is doing with France, Spain, and some other continental markets. Though, generally, the advices from Bombay are unsatisfactory, there are considerable orders in hand for tools for India, and the Australian market yields fair orders, especially for tools. At home, the markets for goods for domestic use are quiet, but there is a fair demand for tools, machinery, and steel, and a large demand for railway material.

From Dewsbury the accounts are better, and the indications are that there will be a good trade all through the season. Orders continue to be received for goods required for home consumption; and as an evidence of the magnitude of the transactions, the warehouses are daily relieved of a large number of bales. Witneys are having a good run, pilots of a superior quality sell freely, and six-quarter cheviots also are in active demand. A marked improve-

ment has taken place in the carpet trade, and the result is that nearly all the machinery is at work. Makers of white blankets and fancy wrappers are doing a brisk business. Low foreign wools are in good request. The staple commodities, shoddy and mungo, are selling freely, with no material change in prices. Rags of all kinds are steady in value, and no difficulty is experienced in effecting sales. Cotton warps meet with a ready sale, at prices slightly in favor of the seller. Dyers and finishers are fully occupied.

There has been a large quantity of wool sold at Bradford during the week. Quotations are  $\frac{1}{4}$ d. per pound dearer than a week ago. In worsted yarns there is an active demand for home use. Manufacturers are just now requiring a considerable amount of yarn to cover the large orders which are coming in. For export there is also a better demand, and spinners could have abundance of orders at anything like old prices; but they are generally asking an advance, and this is either refused or reluctantly yielded. Business is thus, in many instances, prevented, and the needs of shippers are supplied out of remaining stocks or old contracts. The advance in wool, however, compels spinners to ask more money, and there is every prospect, with the influx of orders from abroad, of their speedily obtaining it. The export demand is chiefly for 28's and 30's single, and for twofold 36's. There is still extraordinary activity in pieces. The American merchants especially operate extensively, and as they give out immense orders for distant delivery, the home and foreign merchants, who operate much more sparingly and cautiously, are obliged to place orders for next spring, in order to secure a prospect of delivery for that season. Makers of lenos, glaces, and almost all light fancy goods, are fully engaged for several months to come. The same state of things exists in plain goods, but to a less extent. Prices are hardening.

At Wolverhampton a large amount of business has been transacted. For finished iron there is still a good demand for all but inferior plates and common bars; but there are some small makers who are complaining of shortness of orders.

## THE CONTINENT.

PARIS DATES TO SEPTEMBER 9.

Some influential financiers in Paris have brought forward a plan for the establishment of a clearing-house in that city. The project, however, has not yet received the assent of the great banking houses, without whose approval it will fall to the ground.

From the monthly custom returns it appears that the value of the imports for consumption during the first seven months of the current year amounted to 1,532,973,000*f*; same period of 1864, 1,383,710,000*f*; of 1863, 1,348,827,000*f*. The value of the exports of French production in the first seven months of 1865 was 1,664,445,000*f*; same period in 1864, 1,703,807,000*f*; of 1863, 1,430,751,000. From these returns it will appear that there has been an increase in the imports and a decrease in the exports for the present year.

Much interest has been excited in Paris by the conviction of M Letocard, an ex-receiver of registration dues, for embezzlement to the amount of 500,000*f*. His embezzlements began shortly after he entered on his functions, and soon assumed immense proportions. For a long time he evaded detection by falsifying his accounts. The authorities were, however, at last informed that the prisoner had purchased a chateau and land at Chartrettes, near Melun, for 112,000*f*., on which he expended 160,000*f*. in improvements, and lived there in grand style, keeping three or four carriages, and receiving an immense number of visitors. An investigation was accordingly instituted, but the prisoner soon became aware of it and absconded. The persons charged with examining his accounts discovered that he had systematically falsified his books, merely entering 1*f*. 50*c*. when he received 150*f*.; 3*f*. 50*c*. instead of 3,459*f*. 50*c*., and so on till the total of his embezzlements amounted to at least 490,490*f*. between 1861 and the month of November, 1864. The prisoner, being hotly pursued, surrendered, and was sentenced to 15 years' hard labor, and to pay a fine equal to one-fourth of the restitution he has to make to the State.

The improvement in trade in Paris and in the manufacturing districts continues. The shopkeepers of Paris are profiting largely by the number of visitors passing through, and the manufacturers in Alsace and Normandy might expect larger sales were not their stocks of goods so light. Even the ironmasters, who, it was said, were to be ruined by free trade, are not grumbling. The last accounts from Mulhausen mention a rise of 2*c*. on calicoes.

The fall in the price of grain last week has become general. Since the fall in prices there has been scarcely any business transacted at Marseilles, Nantes, Dunkirk, or Bordeaux. There was a rise of a few centimes on wheat at Rouen, in consequence of some purchases for England.

The vintage has generally commenced in France, and promises to be very fine, both in respect to quality and quantity.

Figs and peaches are so plentiful in the valley of the Charentes that it is said a vast quantity is left to perish, although the growers give them freely to anybody who will accept them.

The Credit Foncier of Paris has negotiated an advance of £400,000 to the Porte on the security of the unissued bonds of the last £4,000,000 five per cent loan. The deposit-value of the bonds is, we learn, fixed at 42, with the right of redemption within six months from the receipt of the loan by the Malieh.

Advices from Alexandria explain the mission of Nubar Pasha to Paris.

The affair of the Sugar Refining Company at Marseilles, carried on under the name of Charles Rostand & Co., had, after an inquiry which lasted two months, ended in the prosecution of the manager, M. Rostand, before the Tribunal of Correctional Police. The President delivered a judgment condemning M. Rostand for embezzlement and unjustifiable bankruptcy, to one year's imprisonment, 25f. fine, and payment of the costs.

The subscription for the new Dresden Bank, for which only one million thalers was asked, amounts to 31,000,000.

The German corn markets remain inactive. Prices are firm, but there is no demand for exportation. The tobacco and wine crops have a very promising appearance.

A plan for the complete revision and adjustment of Austrian finances is now under the consideration of the imperial authorities. Austrian stocks are dull in nearly all the European markets, in consequence of the unpopularity of the recent convention with Prussia. The half-yearly report of the Austrian Credit Bank is favorable, and shows a clear profit of 6½ per cent; still there is very little demand for the shares.

M. Stubenrauch, Professor of Law at the University of Vienna, and a member of the municipal council of that city, has committed suicide with his wife, in consequence of the discovery of a deficit of 21,000 florins, (52,500 fr.) in the funds of the Savings Bank, of which he was director. His second son has disappeared from Vienna.

The Bank of Prussia has raised its rate of discount for commercial bills to five per cent, and for loans on merchandise to five and a half.

The weekly returns of the Bank of France, showing a decline of 52,000,000f in discounts, and of 66,752,000f in circulation, created an uneasy impression, in consequence of the evidence afforded by these figures, of dulness in trade. In a financial point of view, however, the returns were regarded as eminently satisfactory, the increase in bullion being 4,738,000f, and in deposits 25,407,000f.

Mr. Behie, the French Minister of Trade and Agriculture, has presented a report on the cattle disease, tracing the disease to a Russian source, and showing that it can be propagated. In consequence of this disease, the Emperor has issued a decree prohibiting the importing and transit of cattle and fresh hides; suppressing fairs and gatherings of animals, and adopting stringent precautions against the development of this disease.

Subscriptions have been invited for £400,000, in bonds of the Bay of Havana and Matanzas Railroad. They are to bear 7 per cent interest, and are offered at 90. The object is to enable the company to purchase the Coliseo line, which runs from Matanzas to Bemba, 35 miles, and which places them in connection with the general railway traffic of the island. The Havana and Matanzas line is 54 miles, and cost £1,056,000, and the security of the new bonds is to consist of a first mortgage on the Coliseo line and a mortgage on the Havana and Matanzas, subject only to prior claims of £350,000. The gross revenue of the two lines was last year £214,200, and it has been increasing steadily at the rate of 20 per cent per annum.

In the shipping trade an active business is anticipated in the fall at more remunerative prices.

## COMMERCIAL AND MISCELLANEOUS NEWS.

The following are the imports at New York for the week ending (for dry goods) September 14, and for the week ending (for general merchandise) Sept. 15:

	1863.	1864.	1865.
Dry goods.....	\$1,231,689	\$630,342	\$4,020,412
Gen'l merchandise.....	2,015,390	2,042,682	3,817,968
Total for the week.....	\$3,247,079	\$2,673,024	\$7,838,380
Previously rep'ted.....	125,789,130	168,182,243	125,988,449

Since Jan. 1.....\$129,036,209 \$160,855,267 \$133,826,829

In our report of the dry goods trade will be found the imports of dry goods for one week later.

The following is a statement of the exports (exclusive of specie) from the port of New-York to foreign ports, for the week ending Sept. 19th and since January 1st:

	1862.	1863.	1864.	1865.
For the week.....	\$4,134,421	\$2,646,366	\$5,148,484	\$3,704,475
Previously rep'ted.	98,705,612	124,797,724	156,519,052	111,204,359
Since January 1 ..	\$102,840,033	127,444,090	161,667,536	114,908,834

In the commercial department will be found the official detailed statements of the imports and exports for the week.

The following will show the exports of specie from the port of New York for the week ending Sept. 16, 1865:

Sept. 13—Steamer City of Manchester, Liverpool—	
Gold bars.....	\$63,156
" 14—Steamer Europe, Havre—

TRADE WITH THE SOUTH — ORDER FROM SECRETARY McCULLOCH.  
—The following important circular, relative to southern trade, has just been issued by the Secretary of the Treasury:—

TREASURY DEPARTMENT, Sept. 18, 1865.

In the circular issued by this Department, on June 21, 1865, reference was made to the provision contained in section 46, of the Internal Revenue act of June 30, 1864, conferring upon the Secretary of the Treasury discretionary power in regard to the assessment, levy, time, and manner of collection of taxes in the States lately in insurrection.

Under the authority given by that section it was then stated that the department, without waiving in any degree the rights of the Government in regard to taxes heretofore accruing, would not insist at present upon their payment, so far as they were payable prior to the establishment of a collection district embracing the territory in which the tax payer resided.

It was further provided that manufactured articles found in the hands of a purchaser, which were satisfactorily shown to have passed from the manufacturer before the establishment of the district, should not be subject to tax, unless transported beyond the limits of the State lately in insurrection. No exception was then made in favor of articles which had remained in the possession of the manufacturers, and thus become liable to the tax imposed by the existing law.

The Department, preferring to test the practical workings of the regulation before exercising its power of modification in this important particular, representations since made relative to the hardship of this discrimination between manufacturer and purchaser have been corroborated by careful inquiry, and induce the conviction that a further exemption is justifiable and advisable.

It is found that considerable quantities of manufactured products have been retained by the manufacturer in his own hands as the safest mode of investing his property until the return of peace; that this retention was determined on, and carried out without the knowledge or opportunity of knowledge of the law subjecting this property to heavy taxation on sale, and that a large part of the manufactures so retained having been much deteriorated in value by the lapse of time and want of proper attention would not now sell for a sum equal to the tax.

A state of things so destructive to the usefulness of property, and to the prosperity of the manufacturing classes, is as adverse to the integrity of the government as to those of the community. For these reasons, it is hereby ordered that all articles, in whatsoever hands found, which can be shown to the satisfaction of the assessor to have been manufactured before the establishment of the district, shall be held free from the present assessment or collection of tax, unless transported beyond the limits of the States late in insurrection.

Manufacturers of articles liable to seizure for want of inspection marks will present to the assessor evidence that such articles were manufactured prior to the establishment of the district; and the assessor, if satisfied, will cause such articles to be so marked as to be identified and sold without liability to seizure.

All articles transported beyond the limits of the States lately in insurrection will be subject to the tax due under the law in force at the time they were manufactured.

Signed, H. McCULLOCH,  
Secretary of the Treasury

REDEMPTION OF NATIONAL BANK NOTES.—The following letter issued from Baltimore, with regard to National Bank note redemption, has been sent us for publication:

SIR: Your attention has no doubt been drawn to the subject of the redemption of national bank currency, which is now attracting much notice in monetary circles.

Fully recognising the generally admitted necessity of some radical modification of the present system, (which establishes nineteen redemption points,) it is desirable to adopt a plan that will ensure permanence of action, absolute security both to the banks and to the bill-holders, equal among the banks in its obligations and benefits; reducing the cost of redemption to a minimum, and avoiding all sectional jealousies among the banks themselves.

A proposition to attain these objects has been submitted to the honorable Secretary of the Treasury, who suggests that it be presented "to other bankers before the meeting of Congress, and, if it should be approved, steps can be taken to obtain the necessary amendment of the

act." He expresses the opinion "that it would be easier to induce all the banks to redeem in the city of New York, than to bring about an agreement for redemption at other points, unless the points should be so numerous as to prevent the accomplishment of the object desired."

Your attention is respectfully asked to the following outline of a plan for redemption of national bank notes:

Establish by act of Congress, in the city of New York, (the real center of our monetary affairs,) a National Redemption Bank, with an adequate capital, and with the banking privileges, except the right to issue circulating notes.

This capital to be owned by all the national banks of the United States, in proportion to the amount of their respective capitals; and the managers to be appointed by them.

The primary object of the institution to be the redemption of the national bank currency at par in the city of New York, as well as at its respective points of issue—which, it is generally conceded, will realize the fundamental idea of the national bank system; that is, to furnish a national currency of equal value in every part of the nation.

The details are such as will occur to the minds of experienced and practical bank officers.

To secure unanimity of action, the law must be imperative to oblige all the national banks to become stockholders.

The position which the Redemption Bank would occupy would naturally attract to it an extensive business, enabling it to realize at least sufficient to defray expenses, if not also to yield reasonable dividends on the stock. But whether it shall yield a profit or become a charge, the national banks should share either, as the object is to perfect a system on which they depend for existence.

Respectfully presenting to you these propositions, which are not intended for the particular benefit of any section or locality, but for the entire national bank system.

THE ATLANTIC TELEGRAPH.—The Atlantic Telegraph Company have called a meeting of their shareholders for the 14th of Sept., for the purpose of creating the necessary capital, to which they propose to attach a preferential dividend of 12 per cent, to enable them to lay a new cable next Spring and complete the old one. They entertain no doubt that the small sum required to be subscribed for will be readily taken up by the shareholders, seeing that for this additional outlay they will obtain the fulfilment of their most sanguine expectations, even though one cable only should be permanently established. What are the prospects of success may, in some measure, be judged by the following statement of what they say has been demonstrated by the experiments already made:

"It was proved by the expedition of 1858 that a submarine telegraph cable could be laid between Ireland and Newfoundland, and messages transmitted through the same.

"By the expedition of 1865 it has been fully demonstrated—

"1. That the insulation of a cable improves very much after its submersion in the cold deep water of the Atlantic, and that its conducting power is considerably increased thereby.

"2. That the steamship Great Eastern from her size, and consequent steadiness, and from the control over her, afforded by the joint use of paddles and screw, renders it safe to lay an Atlantic cable in any weather.

"3. That the egress of a cable in the course of being laid from the Great Eastern may be safely stopped on the appearance of a fault, and with strong tackle and good hauling in machinery, the fault may be lifted from any depth between Ireland and Newfoundland, and cut out on board the ship, and the cable respliced, and laid in perfect condition.

"4. That in a depth of over two miles, four attempts were made to grapple the cable. In three of them the cable was caught by the grapnel, and in the other the grapnel was fouled by the chain attached to it.

"5. That the paying out machinery used on board the Great Eastern worked perfectly, and can be confidentially relied on for laying cables across the Atlantic.

"6. That with the improved telegraphic instruments for long submarine lines, a speed of more than eight words per minute can be obtained through such a cable as the present Atlantic between Ireland and Newfoundland, as the amount of slack actually paid out did not exceed 14 per cent., which would have made the total cable laid between Valentia and Heart's Content less than 1,900 miles.

"7. That the present Atlantic cable, though capable of bearing a strain of 7 tons, did not experience more than 14 cwt. in being paid out into the deepest water of the Atlantic between Ireland and Newfoundland.

"8. That there is no difficulty in mooring buoys in the deep water of the Atlantic between Ireland and Newfoundland, and that a buoy, even when moored by a piece of the Atlantic cable itself, which had been previously lifted from a depth of over 2,000 fathoms, has ridden out a gale.

"9. That more than four miles of the Atlantic cable have been recovered from a depth of over two miles, and that the insulation of the gutta-percha covered wire was in no way whatever impaired by the depth of water, or the strains to which it had been subjected by lifting and passing through the hauling in apparatus.

"10. That the cable of 1865, owing to the improvements introduced into the manufacture of the gutta-percha core, was more than one hundred times better insulated than cables made in 1858, then considered perfect and still working.

"11. That the electrical testing can be conducted at sea with such unerring accuracy as to enable the electricians to discover the existence of a fault in less than a minute after its production or development, and very quickly to ascertain its position in the cable.

"12. That with a steam engine attached to the paying out machinery, so as to permit of hauling in the cable immediately a fault is discovered, it could be recovered even before it had reached the bottom of the Atlantic, and repaired at once."

## The Bankers' Gazette.

We give in our BULLETIN from day to day lists of bonds, &c., lost and the dividends declared, with times of opening and closing books. These tables will be continued daily, and on Saturday morning, such as have been published through the week in the BULLETIN, will be collected and published in the CHRONICLE. Below will be found those published the last week in the BULLETIN.

FRIDAY, September 22, 1865, P. M.

THE MONEY MARKET.—The market has been steady and quiet throughout the week. The local demand for money is quite limited; but there has been an active movement of currency toward the West and South, and a partial drain Eastward also. Speculation is dull, and the operations of the Treasury Department appear not to be of a character to affect the supply of currency. There is no redundancy of money at any point; and the increasing volume of trade is compelling the employment of individual credits to a much larger extent than at any period since 1861.

The result has been that, during the last few weeks, the amount of paper offering for discounts has materially enlarged; especially in the paper from the dry goods and grocery trades. As yet, there is no large amount of produce paper on the market. The supply of cotton bills is much less than might be supposed from the large stock of cotton now at this port—estimated at 100,000 to 120,000 bales. This is, perhaps, to be accounted for from the fact that most of the cotton has to be paid for in cash, and is in the hands of wealthy holders, so that there is little money borrowed upon it. This explanation, however, implies that a large amount of money—gold and currency—must have gone into the South, and will account for the scarcity reported at all points in the North. The inquiry for paper is less active than last week, lenders having well supplied themselves during the late activity. The rates remain about the same as a week ago. We note for good names as follows:

	Per Cent.		Per Cent.
Dry Goods.....	7 a ..	Bankers.....	6 1/2 a 7
Grocers.....	7 a ..	Produce Commission...	8 a 10
Cotton bills.....	7 1/2 a 9		

RAILROAD AND MISCELLANEOUS SECURITIES.—Railroad stocks opened dull and weak, but close with more activity and at higher prices. The depression of the market is not owing to any general doubt respecting the intrinsic value of railroad securities; on the contrary, the steadily increasing earnings of the roads, at a time when a falling-off was expected by many, is strengthening confidence in this class of

securities, and is at least a bulwark against any permanent decline, if it does not prove to be the basis of a future advance. The real cause of the depression is the fact that there is no public demand for railroad stocks, the large public loans having apparently satisfied the present wants of investors. The stocks are thus left upon the hands of professional operators, who are compelled to hold them, while their business is constantly changing them around.

Yesterday and to-day, there has been more outside demand for railroad stocks; and the street operators have availed themselves of the chance for producing a general movement, with a view to sustaining public interest in the market. Prices are generally  $\frac{3}{4}$  to  $1\frac{1}{2}$  per cent higher than a week ago.

Erie is more active, but very unsettled in value, owing to the uncertainty as to the intentions of the operator who is understood to hold a controlling interest in the stock: a good line of "shorts" has been put out. The speculative interest in Ohio and Mississippi certificates is less active; but the price remains steady, closing at  $28\frac{1}{2}$ . Nothing has yet transpired respecting the rumored purpose of amalgamating the road with the Atlantic and Great Western. Milwaukee and Prairie du Chien has advanced steadily, with moderate sales, and closes firm at  $54\frac{1}{2}$ . Chicago and North Western, notwithstanding its large earnings, continues at the quotations current for many weeks past. Coal stocks are firmer, the high price of coal, and the increasing demand, having encouraged hope of improved dividends. Cumberland has advanced  $2\frac{1}{2}$ . The latest sales of Pennsylvania were at 160.

Atlantic Mail and Pacific Mail have been excited, owing to the amalgamation of the two companies. Under the arrangement between the two corporations, \$2,000,000 of the \$10,000,000 of stock of the Pacific Co., viz.: \$1,000,000 of full paid and \$1,000,000 of Scrip Stock, on which 50 per cent is acknowledged to be paid, is to be issued on the 1st November, to the Trustees of the Atlantic Mail Company in consideration of the transfer of their entire property and good will to the Pacific Company, and the future dividends on this \$2,000,000 of Stock, are to be paid over to the Trustees holding the Stock in trust for the benefit of the Atlantic Mail Corporation. Meanwhile the latter Corporation is perpetuated for a given period of time, and will make its own dividends to the shareholders.

The following have been the closing quotations for leading stocks at the beginning, middle and close of the week:—

	Sept. 16.	Sept. 19.	Sept. 22.
Canton Company.....	39%	—	40%
Quicksilver.....	48%	47%	48%

Milwaukee and Prairie du Chien.....	50	53	54%
Ohio and Mississippi Certificates.....	28%	27%	28%

**UNITED STATES SECURITIES.**—Government securities have been in steady demand. The gold bearing stocks have been especially firm, owing to the continued demand from abroad, and the growing scarcity of the old issues of Five-Twenties. They are now the highest priced security among the war issues; and the steady rise in price induces holders to change them for other securities which pay equal interest upon a lower principal. Large amounts have been changed for the new issue of 5-20's, producing a scarcity of the latter, and an advance of price; the quotation has risen from  $105\frac{1}{2}$  last Saturday to  $106\frac{1}{2}$  to-day, the present difference between the old and new issues being  $1\frac{1}{2}$  per cent.

Sixes of 1881 are steady, closing at 108. Ten-Forties are firmer, closing at  $\frac{3}{4}$  advance upon our last quotation.

Seven-Thirty Treasury notes have been offered freely, and are comparatively weak. The first series closes at  $99\frac{3}{4}$ , and the third at 99.

Certificates of Indebtedness are firm at  $98\frac{3}{4}$  for new.

The Secretary of the Treasury to-day announces that, on and after Monday next, the November interest on Five-Twenty bonds, will be payable at the Sub-Treasuries.

The following have been the closing quotations for the leading government securities at beginning, middle, and close of the past week:

	Sept. 16.	Sept. 19.	Sept. 22.
U. S. 6's, 1881 coup.....	107%	107%	108
U. S. 5-25's, c. o. iss.....	107%	107%	108%
U. S. 5-20's, c. n. iss.....	105%	105%	106%
U. S. 10-40's, comp.....	94	94	94%
U. S. 7-30 Treas. Note 2nd Series.....	99%	99%	99%
U. S. 6's, certif. n. iss.....	98%	98%	98%

Compound interest notes are selling at par and half the accrued interest.

**GOLD MARKET.**—The demand for gold has been active, and the premium steady. The purchases for customs have been at the rate of about half a million per day. At the same time, there have been moderate purchases for export. The advance in foreign exchange to about the specie shipping point has strengthened the premium, and appears likely to produce a further advance. The announcement of the anticipation of the November interest upon Five-twenties, amounting to \$18,197,085, has not appreciably affected the premium. In former cases of anticipation of interest the presentation of coupons for payment before the day of maturity has been very limited, for the very important reason that bonds without coupons are not saleable at the Stock Exchange.

The export of specie from this port on Saturday and Wednesday last amounted to \$366,800.

The following have been the highest and lowest quotations for gold on each of the last six days:

	Highest.	Lowest.		Highest.	Lowest.
Sept. 16.....	143 $\frac{1}{2}$	142 $\frac{1}{2}$	Sept. 20.....	143 $\frac{1}{2}$	143 $\frac{1}{2}$
Sept. 18.....	143 $\frac{1}{2}$	143 $\frac{1}{2}$	Sept. 21.....	144 $\frac{1}{2}$	143 $\frac{1}{2}$
Sept. 19.....	144	143 $\frac{1}{2}$	Sept. 22.....	143 $\frac{1}{2}$	143 $\frac{1}{2}$

The transactions for last week at the Custom-house and Sub-treasury were as follows:

	CUSTOM HOUSE. Receipts.	SUB-TREASURY. Payments.	Receipts.
Sept. 11.....	\$447,195 04	\$2,916,071 15	\$3,356,341 30
Sept. 12.....	553,407 25	4,884,135 64	5,247,821 60
Sept. 13.....	696,325 66	1,183,409 78	1,764,014 37
Sept. 14.....	413,652 27	1,765,512 83	2,518,004 63
Sept. 15.....	368,845 79	4,457,257 46	5,428,319 03

Balance in Sub-treasury on morning of Sept. 11th.			68,235,442 76

\$88,010,034 90

Deduct payments during the week..... 16,669,259 80

Balance on Saturday evening..... \$71,340,775 10

Increase during the week..... 3,105,332 34

**FOREIGN EXCHANGE.**—The scarcity of merchants' bills has produced an advance on the rates of exchange. The supply of bills is quite inadequate for the wants of importers, and bankers are therefore drawing against gold bars and specie. A comparison of exports and imports at the ports of New York, Boston and New Orleans, for the last fourteen weeks, shows a balance of about \$12,000,000 to be due to Europe; and as much of this will require early liquidation, it would appear very improbable that exchange will rule below the specie point for a few weeks.

The following are the closing quotations:

Bankers' Sterling, 60 days.....	109% @ 110	Antwerp.....	5.17% @ 5.15
Bankers' Sterling, 3 days.....	110% @ ...	Swiss.....	5.16% @ 5.15

The deviations from the returns of the previous week are as follows:

Loans.....	Inc. \$1,362,539	Circulation.....	Inc. \$290,408
Specie.....	Inc. \$48,336	Net Deposits.....	Dec. 1,551,776
Legal Tenders.....	Dec. 8,167,499		

The most notable feature in the statement is the increase of \$848,335 in the specie line; the amount of gold taken into the Sub-Treasury for customs, during the week, having been nearly two and a half millions, while there have been no arrivals from Aspinwall. This movement indicates that the Sub-Treasury has sold gold freely during the week. The legal tender line shows a loss of over three millions, chiefly owing to the demand for currency West.

For the corresponding period of the last three years the same items compare as follows:

	Loans and Discounts.	Specie.	Circulation.	Deposits.
1862.....	\$159,299,288	37,863,037	9,789,060	148,680,453
1863.....	209,679,456	31,014,411	5,414,643	185,576,199
1864.....	186,317,519	20,185,315	4,169,513	146,378,542
1865.....	215,552,381	14,604,159	9,104,550	177,501,735

The following comparison shows the totals of the Banks' Statements for each week of the current year since April 1:

	Loans.	Specie.	Circulation.	Deposits.	Legal Tenders.	Clearings.
Apr. 1.....	204,458,355	20,584,665	4,888,980	173,304,491	42,989,382	509,148,691

**NATIONAL BANKS.**—The following National Banks were authorized during the week ending Saturday, Sept. 16:

Names.	Locations.	Capital.
Raleigh National Bank of North Carolina.....	Raleigh, N. C.....	\$50,000
First.....	Lynchburg, Va.....	100,000
Atlanta National Bank.....	Atlanta, Ga.....	100,000
National Bank of Huntsville.....	Huntsville, Ala.....	100,000

Capital of new banks..... \$350,000  
Previously authorized..... 394,960,333

Aggregate Capital..... \$395,310,333

The amount of circulation issued to National Banks for the week ending Sept 16 was \$3,421,350; which, added to the previous issues, makes the aggregate amount at that date \$183,402,870.

The following comparison shows the progress of the national banks, in respect to number, capital and circulation, from February, 1865, to latest dates:

Date.	Banks.	Capital.	Circulation.
Feb. 18, 1865.....	815	186,041,735	73,555,380
Mar. 4, ".....	855	192,949,736	99,325,600
" 18, ".....	908	202,944,486	104,750,540
Apr. 1, ".....	973	225,246,300	111,634,670
" 22, ".....	1,041	246,051,170	119,961,800
May 6, ".....	1,117	264,954,170	126,360,330
" 20, ".....	1,172	281,868,820	130,680,170
June 3, ".....	1,212	298,971,020	135,607,060
" 17, ".....	1,297	310,295,891	140,797,755
July 1, ".....	1,378	340,938,000	146,927,975
" 15, ".....	1,447	364,020,756	154,120,015
Aug. 5, ".....	1,504	377,574,281	165,794,440
" 19, ".....	1,580	390,000,000	172,664,460
Sept. 2, ".....	1,549	394,104,333	177,487,220
" 9, ".....	1,556	394,960,333	179,981,520
" 16, ".....	1,560	395,310,333	183,402,870

**FOREIGN BANKING.**—The following is the statement of the Bank of England for the week ending Sept. 6, 1865:

ISSUE DEPARTMENT.	
Notes issued.....	£28,072,140
Government debt.....	£11,015,100
Other securities.....	3,634,900
Gold coin and bullion.....	13,422,140
	£28,072,140
BANKING DEPARTMENT.	
Proprietors' capital.....	£14,553,000
Rest.....	3,739,107
Public deposits.....	5,985,710
Other deposits.....	14,207,995
Seven day & other bills.....	534,273
	£39,020,085
Government securities.....	£10,384,209
Other securities.....	21,365,336
Notes.....	6,370,405
Gold and silver coin.....	900,135
	£39,020,085

The preceding accounts, compared with those of the previous week, exhibit:

An increase of circulation of.....	£108,327
A decrease of public deposits of.....	109,075
A decrease of other deposits of.....	284,039
No change in Government securities.....	—
An increase of other securities of.....	108,620
A decrease of bullion of.....	167,337
An increase of rest of.....	231,070
A decrease of reserve of.....	271,012

The following is the return of the Bank of France, made up to Sept. 7th. The return for the previous week is added:

DEBTOR.		Sept. 7, 1865.	August 31, 1865.

## The Commercial Times.

## COMMERCIAL EPITOME.

FRIDAY NIGHT, Sept. 23.

There is a sluggish tone to trade. The great demand for goods for consumption, which has prevailed, with scarcely an interruption, for two months or more, seems to have paused, and the course of prices has become irregular. In such staples as the supplies are but moderate, speculation sustains, and even advances quotations, in others, in which speculation has forced up prices to such a point as stopped consumption, there is a serious decline; steadiness and inactivity are, however, the most prominent features of trade circles.

Cotton remains firm under accumulating stocks. Breadstuffs are among the staples which have advanced, from small supplies and pressing demand.

Provisions have been very irregular. The speculation in Pork drags, although the Commissioner of the Agricultural Department at Washington states that the number of hogs fattening are only two-thirds as large as last year, when there was a great deficiency as compared with the preceding years. But there has been a great advance in Lard and Butter, chiefly speculative. Beef and Cheese are in active export demand, but prices are no higher. The impression is gaining ground that Great Britain will be a large buyer of provisions at high prices.

The Grocery trade has shown far less activity, if we except a movement in Rice based on an advance in foreign markets. There is a demand in this market for Rice to go to Southern markets, whence we formerly drew our supplies. Although Coffee, Sugars, Molasses and Teas have been less active, there has not been the slightest abatement in the firmness of prices. Stocks are generally reduced, and we are quite likely to be drawn upon to supply neighboring cities, which have heretofore imported their own supplies.

Metals have been less buoyant, though firm. Calcutta goods have somewhat advanced, there having been a large quantity destroyed by fire. This is the third time the market for these goods has been advanced this summer, by the burning of bonded warehouses. Hides and Leather have been firm, but inactive. Oils have brought more money, with a large business in Crude Whale. Naval Stores have been about steady. Petroleum and Whisky have advanced. Freights have been very dull, and rates for grain to British ports have materially declined.

The receipts of domestic produce for the week, and since July 1 have been as follows:

## RECEIPTS OF DOMESTIC PRODUCE FOR THE WEEK, AND SINCE JULY 1.

	This week.	Since July 1.		This week.	Since July 1.
Ashes, pkgs.....	124	3,600	Spirits turpentine	985	7,209

85s. at which there are buyers. Rape firm, foreign brown for this month's delivery sells at £46 10s, English brown £45@£45 10s, foreign refined

£48@£48 10s, refined cotton, buyers at £34@£36, as to quality and position; sales of crude have been made for next month's deliveries at £28; Madras ground nut £13@£14. Olive in improved demand, sales of Mogadore at £48@£48 10s, closing with rather buyers at the latter price; a quantity of Seville has changed hands at £50, and business is passing in Malaga at £51 10s; Gallipoli nominally £54. Cocoa nut: demand has improved, especially for Ceylon, of which there are now buyers at 43s@43s 6d generally asked, Cochin 45s 6d. Palm scarce, fine Lagos is worth 38s@39c as to tares; Palm Nut 53s 6d.

Rice inactive for landed parcels. Three floating cargoes sold, viz.: two Rangoon, together 1 500 tons at 12s for U K, and one Necranzie, 1,500 tons at 11s also for this country.

LEAD dull, common pig £19@19 10s.

RUM quiet, 150 casks sold at 1s 8½d@1s 9d for Demerara, and 116 puns 180 hhds Mauritius at 1s 7d proof.

SALTPETRE is lower; 2,200 bags Bengal sold at 23s for 5½d to 3½d per cent, and 50 tons for arrival at 24s.

SPICES—Pepper, black, 2,000 bags Singapore found buyers from 3d @3½d. 1,600 bags Penang realised 3d for Trang kind. 160 bags Tellicherry brought 4½d for fine. 330 bags Singapore white mostly found buyers at 5½d for ord. 340 bags Zanibar cloves brought from 3½d@3½d for fair. Ginger, 600 cases cochin mostly sold from 67s@68s for mid rough. 430 bags African were bought in at 36s. 300 cases Cassia Lignea found buyers from 87s@89s for common to good pile one. 70 cases nutmegs sold from 1s@1s 3d for small, and from 1s 5d@1s 6d for middling.

SUGAR has been in good request at improving prices, and to day's closing rates are generally 6d@1s per cwt above our last quotations. The sales of British West India have comprised 4500 hhds, including at public sale 407 hhds 62 tierces 77 barrels Barbadoes from 31s@26. 8621 bags Mauritius sold at 27s 6½@31s for brown, 32s 6d@34s for yellow, and 5s@37s for grey semi crystallised. 619 bags Bengal sold at 34s 6d for yellow syrups, and 56s@37s 6d for white Benares. 1994 bags Madras brown syrups sold at 28s@29s, but 3170 bags common Jaggery were bought in. Privately 12,200 bags Mauritius sold at 29s 6d@31s for brown, 32s 6d@38s for yellow semi crystallised, 3200 bags date Bengal at 29s@31s 6d, and 5000 bags Madras Jaggery at 26s 6d@27s. Foreign: 300 hhds, 47 tierces, 69 boxes, 60 bags Cuba Muscovado were realized at 29s 6d@33s; 674 hhds, 281 barrels Porto Rico principally sold at 32s 6d@37s for grocery. The private transactions comprise 2100 boxes Havana at 34s@37s 6d, 400 hhds Cuba Muscovado at 31s@32s 6, 576 hhds, 20 barrels Porto Rico at 31s@35s, 36,000 bags clayed Manila at 31s@31s 6d, 44,000 bags unclayed ditto at 28s 6d@28s 9d, and seven floating cargoes, all for U. K., viz five Havana, together 12,339 boxes No. 11½ to 13½ at 26s@27s, all fully insured, and two Cuba Muscovado, 419 hhds at 23s, 197 boxes No. 10 at 24s 6d, 752 hhds at 23s, 2000 boxes No. 13½ to 14 at 27s, landing and invoice weights.

TALLOW—The market is not so firm, and a decline of fully 6d per cwt has been submitted to; St. Petersburg Y. C. closes at 45s 6d on the spot or October to December, 46s 6d December, and same price January to March.

TEA.—20,900 pkgs have been sold at public auction, nearly all without reserve, and without material alteration in prices. Good Common Congou 1s@1s 1d per lb.

SPELTER quiet at £21 12s 6d cash.

TIN—Blocks 93s, bars 94s, refined 97s. Foreign: Straits 88s@88s 6d, Banca 91s@92s.

#### COTTON.

The market has been in the aggregate quite active the past week, and till Wednesday, showed great strength, but latterly, under advices of continued liberal supplies at the southern markets, and a pause in the Liverpool market, there has been more disposition to realize and less speculative audacity. There has been a pretty general decline in cotton goods, but goods have ruled relatively so much higher than raw cotton, that a very heavy decline may occur without materially diminishing our spinning demand.

The market opened dull to-day, but, after the sale by the Government, became active, and closed firm at last week's quotations. The sales of 1,500 bales Mobile cotton, by order of the Government, to day, went off at the following prices: Good middling, 48½c; strict middling, 46½c; low middling, 44½c. a 44½c; good ordinary, 42c. a 42½c. The sales in this market for the week foot up 16,000 bales. We quote:

	Upland.	Florida.	Mobile.	N.O. & Tex.
Ordinary, per lb.....	34	35	35	36
Good Ordinary.....	39	39	39	40
Middling.....	45	45	45½	46
Good Middling.....	48	49	49	49
Middling fair.....	50	51	51	52

The receipts of cotton at this market have been as follows:

From	Bales.	From	Bales.
New Orleans.....	9,064	North Carolina.....	2,421
Mobile.....	1,828	Norfolk, &c.....	296
Florida.....	2,350	Per Railroad.....	2,059
Savannah.....	3,694	Foreign ports.....	331
Charleston.....	1,060		

Total for the week..... 22,903  
Previously reported..... 207,870

Total since July 1st..... 280,778

The exports, last week, were as follows:

To Liverpool.....	5,294
To Havre.....	510
Total for the week.....	5,804
Previously reported.....	30,267
Total since July 1.....	36,071

The Acting Secretary of War has given notice that the telegraphic lines at the south, are re opened to public communications, but there is as yet no improvement in mail facilities. Our latest mail dates from New Orleans, last evening, were no later than from Liverpool. The deficiency in the receipts at New Orleans, are more than made up by the increase at other ports. At Mobile, for the three days ending the 13th, the receipts were 7,000 bales; and for September to that date inclusive, 18,000 bales. Middlings 40c. At Columbus, on the 10th, Cotton 16a18c. for gold, and 23a25c. for currency; and business restricted by scarcity of currency and difficulty of transportation. Stock, 5,500 bales. From Montgomery, Ala., we learn that the freight on Cotton to Mobile has been reduced to \$5 per bale. At Atlanta, Geo., on the 15th inst. Cotton was quoted at 27a 30c, currency.

NEW ORLEANS.—A late telegram quotes middlings at 45c. The following is the latest mail reports under date of the 11th:

Notwithstanding the return of fine weather to-day there has been very little movement in the market, the sales reported not exceeding 800 bales, embracing 312 taken by one party, and 200, 159 and some smaller lots by others. The prices paid show a decline from Friday's currency of about 1c. per lb., and we now quote ordinary at 32 @ 34c., good ordinary at 37 @ 38, low middling at 40 @ 41, and middling at 42 @ 44. There was, however, only a limited amount to be had at these figures, the bulk of the stock being held at previous rates.

#### COTTON STATEMENT.

The New Orleans correspondent of the Boston Post writes as follows concerning the cotton crop of Louisiana:

"In the planting regions rains have been very heavy and continuous in consequence cotton-picking, which was going forward briskly and successfully, has been temporarily suspended, and what is worse, the worm has begun to work badly. In many parts of Louisiana and Mississippi, as also in Texas, its ravages have been extensive, and though the season is late for the worm's operations, many fears are entertained it will seriously lessen the crop. It is very unfortunate that some of the rain we are now having did not come earlier in the season. It would have given greater vigor to the growth, both of cotton and cane, the latter of which has suffered severely from drought, and at the same time it would have spared us the evils with which it threatens us at the present time.

The almost daily reports of the revival of cotton mills throughout New England and addition of new ones to the numbers are eagerly copied here and attract much attention. The ready consumption of cotton is very gratifying to the planter and factor, and does more than anything else to bind the two interests and sections together. The pressing demand from Liverpool is another gratifying fact, and the two together have gone far towards giving hope to business and advancing prices. Cotton is fast putting on his coronet again.

Shreveport dates to 5th September, quote cotton 18 a 22c. The river had fallen and stocks were accumulating.

GALVESTON.—We have the Galveston Bulletin of Sept. 9th, from which we take the following:

#### COTTON STATEMENT, GALVESTON, SEPT. 9.

	This Year.	1860 51.
Stock on hand 1st September, 1865.....	13,057	3,118
Received at this port to date.....	3,272	1,197
" at other ports.....	811	115

On hand and shipboard not cleared ..... 16,070 3,688

NASHVILLE, TENN.—Dates to the 16th report:

"The cotton crop of Middle Tennessee, as is now definitely ascertained, will not be more than one half as large as it would have been had the weather in August not been so dry. What there is of the crop will be better than usual. Sales the past two days of 150 bales at 30@35c. per lb. We quote extremes at 25@35c per lb.

SAVANNAH, GA.—Dates to the 15th report:

UPLANDS.—We notice an improved market with an advance of ½ to 1c per lb. on the better grades, it is fully 1c per lb. This advance was

made on Wednesday, and at the close of business this day, it was fully sustained. Very little fair cotton is offering, and we are without quotations of this grade. We quote the market as follows:—Ordinary 27½@28 per lb; Middling 34@36 per lb; Good Middling 37½@39 per lb. SEA ISLANDS.—Continue without change. Ordinary Sea Islands are selling from 55 to 70 cents per lb; the better grades 80 to 90 cents per lb.

The Australasian's dates to the 11th bring the following intelligence:

LIVERPOOL.—A general improvement in the trade of the manufacturing districts has caused an active demand for cotton this week on the part of spinners. Exporters and speculators have also been freely in the market; so that the aggregate sales of the week have been very large, amounting to 113,680 bales, of which spinners have taken more than their usual proportion, viz., 63,990 bales, exporters 28,360, and speculators 21,330 bales, but the demand has been so freely met from day to day that scarcely any improvement in prices has taken place. East Indian and Egyptian have advanced ½d. to ¾d. per lb, but the quotations for American are no better than on this day week. American advices to hand to-day per "Etna," reporting increased receipts at the Southern ports, have imparted a quieter tone to the market, and yesterday's prices are barely maintained, to-day's sales, 10,000 bales, being only about half of the daily average of the week.

## BREADSTUFFS.

The limited supplies that have come upon the market, owing to the interruption of transportation on the Erie Canal, and the low water in the Hudson River, with a better demand from the local and Eastern markets, have led to a material advance in prices of flour, wheat, and corn, under which European orders cannot be filled, although freights have declined 2d per bushel from the current rate of last week. Confidence of speculative holders is much strengthened, as the efforts of the Western combination to prevent supplies coming forward have been in a great measure successful, and this market approximates more nearly to the prices ruling at the West. There is some increase in the deliveries of wheat and flour at the Western receiving markets; but of corn there has been this week a slight decrease, as will be exhibited in the tables prepared.

At to day's market prices showed a general advance; closing quiet at the following quotations:

Flour, Superfine State and Western. ....per bbl.	\$7 25 @ \$7 65
do Extra State.....	7 90 @ 8 25

By the arrival of the Australasian, we have foreign dates to the 10th inst., bringing the following intelligence:

LONDON.—The brilliant and charming weather of the past ten days has rarely been experienced so late in the season, therefore farmers could not possibly have had a more desirable time for finishing up the harvest. Monday's market—under the influence of fine weather the trade was quite inanimate; English Wheat was a slow sale at 1s. decline on old, and 2s. to 3s. on new. The samples shown of the latter were soft, damp, and slightly sprouted. American and Canadian in restricted demand, and where sales were pressed 1s. to 2s. per quarter cheaper.

Flour, barrels—Owing to the smallness of the supply prices are maintained.

The Floating Grain Cargo Trade.—The continuance of favorable weather has nearly panic-struck this department, and buying for some days has all but ceased. Wheat, either off coast or for forward shipment, may be called 2s. to 3s. cheaper, and as a large fleet is daily expected an active trade is not anticipated until its arrival. Maize is also less active, notwithstanding the increasing bad accounts of potatoe disease. Ibrail can be bought for forward shipment at 28s. 6d. to 29s. per 480 lbs.

At to day's market new English Wheat was a slow sale at 1s. to 2s. and foreign at 1s. per quarter decline from Monday's rates. Barrel Flour is 1s. cheaper.

LIVERPOOL.—The weather since the date of our last circular has been uninterruptedly fine and hot, most favorable for the completion of harvest; and a large quantity of grain has been carted in much better condition than the earlier secured portion of the crop. The trade has ruled quiet, with a downward tendency in the price of Wheat and Flour and even the increasing reports of the spread of potatoe disease, have

\* Only four days' receipts.

failed to prevent Indian Corn participating in the decline, the supply being very liberal.

At Tuesday's market, only a limited business was done in Wheat, at a decline of 3d. to 4d. per cental on American Spring, but Winter Red and White descriptions were not more than 1d. to 2d. lower. Flour was dull and 1s. per sack lower, but there was no change in the value of barrels. Only a retail business was done in Indian Corn, at a decline of 3d. to 6d. per qr.

At to-day's market, the hot weather produced the usual effect on the minds of buyers, but as holders were firm, Tuesday's prices were repeated for Wheat, on a very moderate business. Flour was quiet, and prices rather in favor of buyers. Indian Corn met a retail demand, at a decline of 6d. per qr.

## THE DRY GOODS TRADE.

As anticipated, last week, the Dry Goods market presents a material change in condition. The anxiety to run up prices, noticeable for the previous two weeks, culminated at the close of last week, and a reaction, as damaging as the other was inflating, took place. For the past week trade has been almost at a standstill. There are no goods in first hands of any amount, consequently they are not called upon to make that reduction in price which would be necessary to sell goods at this time. The jobbers, acting upon the dullness in trade, or to call back a trade which high prices had frightened away, have reduced prices very largely and suddenly. Not so much, perhaps, in expectation of selling goods, for there are no goods in market, but in prospect of buying at reduced figures as their orders arrive. Goods will accumulate, of course, to some extent over and above the present slight demand, and it is in anticipation of this that jobbers force down the prices of what they have not. The trade seems to be acting upon that unsettled spasmodic principle of accumulating at low and suddenly exhausting at high figures; and the game is a very pretty one for jobbers to play at. Of course, in the unsettled stagnant condition of the trade, agents decline to make prices of any kind of goods, holding to those of last week, waiting for the market to settle to some legitimate basis. The fact of yesterday and to-day being observed as holidays by a large portion of the trading community, has added to the general dullness. With the jobbers there must be some action to recover the lost trade, and, with no goods on hand, they are safe in returning to the prices of three weeks ago. On Thursday goods were marked down for a second time in the week, and those figures may be taken as some criterion as to what the agents will be compelled to do in the next few days. Standard goods were held at 37½ by agents on Friday last, and are sold at 31 by jobbers to day. The high prices of the past few weeks have caused manufacturers to crowd their production to the utmost of their capacity, and the accumulation of all grades of goods must be felt at no distant day, unless the present reduction has the effect to bring a renewed activity with the jobbers. Whether this will be the effect or not, depends upon how well supplied the country merchants are with goods. Jobbers do not anticipate any considerable activity for the present, though agents profess great confidence in the fall trade.

BROWN SHEETINGS AND SHIRTINGS have been dull and inactive for the past week, and though prices are not to be had of agents, the prices of jobbers are pretty sure indication of what they can buy for. The stock of standard brown goods is light, but slowly accumulating. There are no transactions beyond previous engagements. Agents profess to ask the same prices for these goods that they did last week, but there being none on hand prices cannot be determined until the market settles. Indian Orchard, Lawrence C, Indian Head, Stark A, Appleton A, and Amoy were held last week at 37½, and the last sales took place at those figures, but jobbers are to-day selling them at 31. Phoenix Co's 39 inches sell at 34 by the agents; 36 inches at 32; Eagle 3-4 25; Grafton 28 in. 28½;

Shetucket B 27 inches 24; and A 30 inch at 23. The lower grades of brown sheetings are accumulating.

BLEACHED SHEETINGS AND SHIRTINGS have been proportionately higher for the whole season than brown goods, and the supply not as good, but the present reaction has been quite as effective with these goods as others. The goods were scarce and largely sold ahead, so that no prices can be fixed, but goods held last week at 60 by agents now sell by jobbers at 52½. This is the case with New York Mills, and the other makes have fallen in proportion, Conoe 27 inches is held at 27½.

DRILLS are accumulating, and the demand is lessened in the general dullness, and prices have fallen off slightly, though to what figures cannot be ascertained to-day. Laccnia, Peppercells, Boott and India were held last week at 38½, and are now sold by jobbers at about the same figures. Globe and Park Mills sell at 47½.

CORSET JEANS have held their high prices generally, as goods are scarce and desirable.

CANTON FLANNELS are also scarce and desirable, though there is little demand with the present stagnation in trade. Agents will give no prices; jobbers are selling them at a reduction of from two to eight cents from last week.

PRINT CLOTHS are quiet with little doing, partly from the unsettled state of the dry goods market, and partly from the fact that there is a great scarcity of goods. There is no reported reduction in prices. The Providence sales for the week past included 35,000 pieces at 24c to be made, and 27 a 27½ on hand.

PRINTS are extremely dull, with the general dullness of trade, and the holidays of an important portion of traders. The prices of prints have more sensibly decreased than with most other goods, and the supply is greater. Spragues are held at 31c for Madders and Rubies, a reduction of three cents since last week; Green and Blue and White at 32c; and solid colors at 31c, a reduction of five cents from last week. Those same goods are sold by jobbers at 27 a 30c. There is no change reported for Garners, Amoskeag, Lowell or Wamsutta, but jobbers are selling them at 25 a 27c.

GINGHAMS have felt the dullness less than some other goods, and there is less change in prices to note.

MOUSLIN DELAINES are dull, and prices declined, though agents report no variations. Jobbers are selling them at 4½ cents off from last week's prices.

WOOLEN GOODS are also in less demand from the dullness of the trade in cotton goods, and the holidays of that portion of the trading community before referred to. The demand for light woollens is slight, though that for dark goods is more steady.

FOREIGN GOODS are in less demand, and will remain so until a more settled condition of the domestic market. The auction sales have been less spirited, and prices have materially fallen off from those obtained last week. Messrs. Haggerty & Co. held an auction sale on Tuesday, which included Saxony woven dress goods, silk, &c. The catalogue contained a large variety of seasonable fabrics, but the bidding was less spirited, and many styles were sold below the prices obtained at previous sales. Small plaid labahs brought 33½ a 34½, striped lenato 35 a 35½, satin striped Sparta 37½ a 38, mohair solid checks 36½, black and white check chally 44, small plaid piona 37½, small figured guatateria 38½ a 39, targuitia do 41, rolanti a soie rich silk plaids, on crepe ground 50, lustrine a soie 53½, mousseline a soie in stripes 41 a 52½, double width broganza a soie silk plaids 57, Cicilla a soie in black plaids 50 a 63, 27 inch fancy flannels, all wool 46½ a 53½c, solid colors Paris drap cotele, 75c, 20 inch heavy colored all boiled poult de soie \$1.52 a \$1.60, extra super quality do \$1.77½, 28 inch Lyons colored gross grain \$2.05 a \$2.13, do evening dress \$1.87 a \$2.07.

Messrs. Wilmerdings & Mount held an auction sale on Tuesday also, at which a large catalogue of Woollens was offered. There was a fair company of buyers present, and the sale passed off at satisfactory prices. Heavy striped silicias were duplicated at 39 cents net, linen duck brought 23 cents 4 mos, Lyons all silk fancy velvet vestings \$2.60 a \$3.87½, heavy black satinets 77½, 64 black beavers \$1.10, 64 Union beaver cloth \$1.30 a \$1.40, 64 all wool do \$2.40, fancy Scotch tweeds \$3, 64 do coatings \$2, 64 fancy Scotch cassimere \$1.87½, Aix la Chapelle black and colored moskows \$4.70 a \$4.80, fine dalia castor \$4.37½, fine French velours were duplicated at \$5.25, 64 English coatings, sold as are, \$3.50, velour cloakings \$2.25 a \$2.30, extra heavy fancy cassimeres \$2, all wool castor beaver \$2.55, President's cloth \$3.

A sale by Messrs. Rudderow, Jones & Co., was an offering of miscellaneous goods, and, although the catalogue contained a great variety of seasonable fabrics, the demand was not active, and the prices realized were below those of earlier sales. Common plain mixed merino shirts and drawers brought \$8.25 a \$8.50 per doz, German wool ½ hose \$3.12½, black coat bindings \$4.25 a \$6.12½ per gros, Oxford mixed cassimeres \$1.30 a \$1.35, Harris fancy do \$2.42½, common Italians 27½ a 29c, fancy English vestings \$1.55 a \$1.90, double and twist all wool cassimeres \$2.15, 3-4 all wool Scotch plaids \$1.80 a \$2.12½, 6-4 all wool American black beavers \$2.70 a \$2.90.

On Wednesday Messrs. Haggerty & Co., held a sale of British dress goods &c., including many seasonable styles, and the sale was well attended, but there was very little spirit manifested among the buyers, and the prices obtained showed a decided falling off from the highest rates of the season. 4-4 pure liens brought 35c, 27-inch stripped ravens duck 22½ a 27c, 26 inch glass cloth 22c, 40-inch Russia sheetings 29c, 27-inch fine bleached toweling all linen 22½c, 40 inch heavy striped bagging 15a 17½c, Victoria lawn, 22c, Swiss mull 25½ a 31c, super fancy dress goods 40a 42c, worsted checks 25c, black and white shepherds' plaid 34c, high colored silk checks 39c, all wool printed French mousseline de laine 62½ a 65c, super black alpacas 31½ a 37c, 6-4 real do \$1.12½.

Another sale by Messrs. Townsend, Montant & Co., of French goods, comprising shawls, bombazines, mous de laine, silks, &c., contained a fair assortment of the various fabrics, but the company of buyers present was small, and there seemed to be very little disposition to purchase. The sale dragged heavily, a large portion of the goods were passed, and the sales were made at reduced rates.

#### IMPORTATIONS OF DRY GOODS AT THE PORT OF NEW YORK.

The importations of dry goods at this port for the week ending September 21, 1865, and the corresponding week of 1864, have been as follows.

#### THE CATTLE MARKET.

The supply of beef cattle received here this week is six hundred and twelve head more than last, but prices are higher and the demand very good. The improvement is most noticeable on the choice to prime grades, which are comparatively scarce, and were readily taken up by butchers at the rates demanded by owners.

The stock has again been largely in the hands of speculators, who, encouraged by their success on last week's market, bought pretty freely at the West at full figures, and were determined to realize a profit. On the medium and common lots there is no marked change from the opening rates of last week, though the sales were at better figures than the closing quotations of Tuesday of last week. The cooler weather prevailing was of some benefit to sellers.

At the close Thursday there was stock in the yards unsold, and an air of dullness prevailed. We quote inferior to common at 9½ to 13½ cents; fair to prime at 15 to 17½ cents; extra at 18 to 18½ cents; and a few very choice Kentucky steers are said to have sold at 19 cents. The average of all sales is about 14½ cents.

Milch cows are without essential change, though good lots, if here, would sell quickly at full figures.

Veal calves are in good demand, the arrivals light, and prices extremely firm and rather buoyant. Prime grades are particularly sought after. We quote at 10½ to 12 cents for common to good, 12½ to 13 cents for prime, 13½ cents for extra, and occasionally a very fine fat calf sells at 14 cents.

Sheep met with a good demand and are of better quality, and this week an advance in pelts has given holders an advantage, and prices are again higher. At the close there is some dullness, but the full figures of the advance are demanded. We quote extra at 8½c, good to prime 7 a 8c, and common 6 a 6½c. Lambs, in sympathy with sheep, have also advanced, and prime lots are now worth 10½c. The quality is good.

Swine are in good request, and with moderate arrivals and more favorable weather prices are better. We quote corn-fed at 13 to 13½ cents, and distillery-fed 13 to 13½ cents, live. The receipts for the week are 6,176 beeves, 122 cows and calves, 1,366 veals, 22,073 sheep and lambs, and 11,150 swine—showing an increase of 612 beeves, 230 veals, 1,126 sheep and lambs, and 658 swine, and a decrease of 28 cows and calves.

## PRICES CURRENT.

## WHOLESALE.

All goods deposited in public stores or bonded warehouses must be withdrawn therefrom, or the duties thereon paid within one year from the date of the original importation, but may be withdrawn by the owner for exportation to Foreign Countries, or may be transhipped to any port of the Pacific, or Western Coast of the United States, at any time before the expiration of three years from the date of the original importation, such goods on arrival at a Pacific or Western port, to be subject to the same rules and regulations as if originally imported there; any goods remaining in public store or bonded warehouse beyond three years shall be regarded as abandoned to the Government, and sold under such regulations as the Secretary of the Treasury may prescribe. Merchandise upon which duties have been paid may remain in warehouse in custody of the officers of the customs at the expense and risk of the owners of said merchandise, and if exported directly from said custody to a Foreign Country within three years, shall be entitled to return duties, proper evidence of such merchandise having been landed abroad to be furnished to the collector by the importer, one per centum of said duties to be retained by the Government.

In addition to the duties noted below, a discriminating duty of 10 per cent. ad val. is levied on all imports under flags that have no reciprocal treaties with the United States.

On all goods, wares, and merchandise, of the growth or produce of Countries East of the Cape of Good Hope, when imported from places this side of the Cape of Good Hope, a duty of 10 per cent. ad val. is levied in addition to the duties imposed on any such articles when imported directly from the place or places of their growth or production; Raw Cotton and Raw Silk excepted.

The tar is all cases to be 2,240 lb.

**Ashes**—Duty: 15 ¢ cent ad val. Produce of the British North American Provinces, free.

# The Railway Monitor.

**IMPERIAL MEXICAN RAILWAY.**—This great work which is to connect Vera Cruz with the capital is progressing rapidly, under the supervision of Col. Talcot, Engineer-in-Chief, who, with his staff have surveyed and located about 120 miles. The works were begun under the contracts about Feb. 1, 1865, and up to July 1, the contractors had expended about \$1,003,230 on construction. At that time the number of persons employed, since largely increased, amounted to 5,850. The portion of the road between Mexico and Puebla is to be finished if possible this year. The Company will pay \$1,250,000 extra for hauling up the rails, rolling stock, etc., so that the upper part of the line may be completed at once. Fifty miles of the railway telegraph are finished and in working order. This telegraph is of the very best kind in every respect (Morse's system), with cast iron posts and the latest improvements known to science.

**WASHINGTON AND GEORGETOWN RAILROAD.**—The passenger transportation on this road is immense, 8,751,119 persons, or 23,702 per day having traversed it during the year ending with June last. The Company own 88 cars and 600 horses, and employ, as drivers, conductors and stablemen, nearly 400 hands, at a daily expense of \$1,000, or thereabouts.

**CHICAGO, IOWA AND NEBRASKA RAILROAD.**—This road, which is an extension of the Fulton division of the Chicago and Northwestern Railroad, is now being operated to Boonesboro, 202 miles west from the Mississippi River, and 32 miles beyond Nevada, the last stopping place. The uncompleted length of the line to the Missouri River is a further distance of 130 miles.

**PITTSBURG, COLUMBUS AND CINCINNATI RAILROAD.**—This line, composed of the Pittsburgh and Steubenville, and the late Steubenville and Indiana railroads, will be fully opened on the 1st of Octo-

ber. The splendid iron bridge across the Ohio at Steubenville is completed. It is about half a mile long, and spans the river about ninety feet above low water mark. By this cut-off across the great bend of the Ohio, around which the route as hitherto gone, a considerable shortening of the distance has been effected. This perfects one of the great through routes from Cincinnati to New York by which twenty-six miles of travel are saved, and passengers are enabled to reach these cities one train earlier than by any other route. The whole distance from Cincinnati to New York by the Little Miami, Steubenville, Pittsburg and Allentown route is 744 miles, and the only change of cars is at Pittsburg.

**UNION PACIFIC RAILROAD BONDS.**—Secretary McCulloch, in reply to an inquiry addressed him by J. B. Hudsonson, as to whether the obligation of the government to pay at maturity its bonds issued under the acts of July 1, 1861 and July 2, 1864, in aid of the construction of the Union Pacific Railroad, is absolute, or contingent upon the performance by the corporations of their obligations, says—"From an examination of the terms of the accounts and the various provisions therein made in respect to the issue of these bonds, I am satisfied that the faith of the government is pledged to their redemption, without regard to whether the obligations of the railroad company are fulfilled or not." This settles the matter of the federal responsibility to redeem these securities in any event.

**WASHINGTON TO RICHMOND.**—The first through train since the close of the war, via the Orange & Alexandria Railroad, left Washington for Richmond on the evening of the 11th inst.

**IOWA CENTRAL RAILROAD.**—The work of construction on this road was commenced at Cedar Falls on the 19th inst., and will be pushed to its completion as rapidly as men and money can accomplish it. This road will fill up the distance now existing between the Minnesota Central and the North Missouri railroads, and complete the great line projected between St. Paul and St. Louis.

A correspondent of the *N. Y. Herald*, in its issue of the 19th inst., suggests the propriety of admitting Insurance Stocks to the Stock Board. We fully endorse the suggestion, and believe its adoption would result advantageously to holders. The actual value of these Stocks depends chiefly on the condition of the net assets of the Companies respectively, but hitherto their market value has been determined by casual sales at auction, and long periods may elapse from sale to sale. Were the list called once or twice a week, the difficulty would be remedied, and the public placed in possession of reliable quotations. The calling of scrip would also be an improvement, and at once do away with the back-parlor transactions and cooking manipulations of brokers and interested operators, who now monopolise the buying and selling thereof.

## MARINE AND FIRE INSURANCE.

## METROPOLITAN INSURANCE CO.,

No. 108 Broadway, New York.

Cash Capital..... \$1,000,000  
Assets July 1, 1865..... 1,400,000

This Company insures, at customary rates of premium against all Marine and Inland Navigation Risks on Cargo or Freight; also against loss or damage by Fire.

If Premiums are paid in Gold, Losses will be paid in Gold.

The Assured receive twenty-five per cent of the net profits, without incurring any liability, or in lieu thereof, at their option, a liberal discount upon the premium.

All losses equitably adjusted and promptly paid.  
Scrip Dividend declared Jan. 10, 1865,

FIFTY PER CENT.

JAMES LORIMER GRAHAM, President.  
ROBERT M. C. GRAHAM, Vice President.  
EDWARD A. STANSBURY, 2d Vice Pres.  
JOHN C. GOODRIDGE, Secretary.

## LIFE AND ENDOWMENT POLICIES

are issued on the Mutual plan. All the profits in this department are divided *pro rata* among the Policy Holders. All policies to be *incontestable* after five years from date, and non-forfeitable after two annual payments. A loan of one-third of the amount of premiums will be made; also, thirty days' grace given payment of premiums.

## GENERAL ACCIDENT POLICIES

are granted, covering accidents of all descriptions, including the travelers' risk. If issued

## WITHOUT COMPENSATION,

they provide for death, if caused by accident; but in case of injury only, the insured receives no compensation. If granted

## WITH COMPENSATION,

the full amount assured is payable to the family in case of death caused by accident and occurring within three months from the date of injury. Or, in case of injury causing disability, the insured receives a weekly compensation until he is able to attend to his business, such time not to exceed twenty-six weeks. The policy covers all forms of Dislocations, Broken Bones, Sprains, Bruises, Cuts, Gunshot Wounds, Burns and Scalds, Bites of Dogs, Assaults by Burglars, Robbers, or Murderers, the action of Lightning or Sun-stroke, the effects of Explosions, Floods, and Suffocation by Drowning or Choking, and all other kinds of accidents.

## TEN DOLLARS

secures a general Accident Policy for

TWO THOUSAND DOLLARS,

with a Weekly Compensation of

TEN DOLLARS.

## TRAVELERS' INSURANCE TICKETS

for any length of time, from one day to twelve months are on sale at the various Railroad and Steamboat Ticket Offices and Agencies.

## MARINE RISKS AND SPECIAL VOYAGES.

Policies are granted insuring against death by accident while sailing in steamer or sailing vessels; also for special voyages.

Full information, together with Tables of Rates, &amp;c., can be obtained at the Home Office, or by application to the State Agent.

## CHEAP AND PLEASANT SUMMER TRAVEL.

## RARITAN AND DELAWARE BAY RAILROAD.

NEW YORK TO CAMDEN,

# THE MANHATTAN LIFE INSURANCE COMPANY.

NOS. 156 AND 158 BROADWAY, N. Y.

Capital..... \$2,500,000

Cash Capital and Accumulation..... 2,550,000

Losses Paid..... 1,000,000

Dividends Paid to Policyholders..... 750,000

From the great success of this Company, they are enabled to offer superior advantages to policy-holders. Life-policies are issued, payable in annual, or in one, five, or ten annual installments; also, non-forfeiture endowment policies, payable in ten annual payments, which are paid at death, or on arriving at any particular age. Life insurance, as an investment, has no superior, as it has saved millions of dollars to the insured, and thousands of families from ruin. Dividends are paid to policy-holders, thus enabling them to continue their policies, if otherwise unable to do so.

This favorable feature has been the means of saving many policies that would have been forfeited for want of means to continue them, and, in several instances, families, once wealthy, have thus been saved from utter ruin.

HENRY STOKES, Pres. C. Y. WEMPLE, Secretary  
J. S. HALSEY, Ass. Sec. S. N. STEBBINS, Actuary.
