# The Chronicle.

THE COMMERCIAL AND FINANCIAL CHRONICLE is issued every Saturday morning with the latest news by mail and telegraph up to midnight of Friday. A DAILY BULLETIN is issued every morning with all the Commercial and Financial news of the previous day up to the hour of publication.

## TERMS OF SUBSCRIPTION-PAYABLE IN ADVANCE.

Agents make no Collections. Money paid to them will be at the risk of the person paying it.

WILLIAM B. DANA & CO., Publishers, (Chronicle Buildings,)

60 William Street, New York.

and merchants who are anxious to have their means at command. Thus larger sums of money are offering in Wall Street every day than the very limited business now doing can find employment for. The money market is plethoric with capital seeking temporary borrowers and the deposits in the banks rise and fall in a very embarrassing and spasmodic manner, as the dealers are able to withdraw to lend their funds for a day or two on call. These and kindred symptoms have awakened some apprehension lest a panic should supervene. But, really, such cautious circumspection affords the very best ground of confidence. For the panic which every body expects never comes. And the short credits which are now in vogue are among the very best safeguards against such financial disasters.

### CONGRESS AND THE LOAN BILL.

It seems to be generally agreed that Mr. Morrill's loan bill in its original shape cannot pass and that Congress will have to make some important modifications to render it acceptable to the nation, or adapted for its purpose. It may, therefore, be well for us in the present stage of the discussion to keep distinctly in mind the leading objections which influence public opinion against the bill. Its faults are partly faults of omission. For instance, it prescribes no definite practical plan for restoring the currency. And yet the incalculable evils and dangers of our depreciated paper money are so ably expounded in Mr. McCulloch's recent report, that it might reasonably have been expected that any bill introduced with his sanction would have as its corner stone a clear positive provision on which the country might rely that our active paper money shall, under no circumstances whatever, receive any increase; but that it shall if possible be diminished at least 100 millions during the current fiscal year. Secondly, it makes no provision for the imperative immediate paying off of the mischievous part of the call loans, which exceed 100 millions, and as is well known are to-day more in the way of contraction and more conducive to inflation than all the rest of the short-dated obligations of the Government put together. Thirdly, the bill gives no guarantee that the compound interest notes, whose influence on the circulation is at present contractive and beneficial, shall not be converted into an expanding and inflating machinery by new active notes being paid out of the Treasury in place of old inert ones which have lost their inflating power. This has been done to some extent on the plea of saving interest. Under the new bill the practice might continue.

### THE STAGNATION OF BUSINESS.

THE general complaint in financial circles is that business is dull, and that in several important departments industrial and commercial enterprise is for the present almost arrested. Among the causes of this torpor a permanent place must be given to the incertitude as to the future course of prices. If the policy of contracting the currency is to be carried forward, then there must inevitably be a general "shrinkage" of prices and on a falling market nobody wants to buy. Every man in business is anxious to curtail his engagements not knowing what changes may be impending in prices and in private and public confidence. The agitation respecting the financial policy of the government is thus producing wide-spread depression and probably there will be no positive improvement until the course of the Treasury in reference to the currency is definitely marked out and settled by Congress.

As usually happens in cases similar to the present, an unusual amount of unemployed funds is held by capitalists

Such then are some of the sins of omission, with which the

framers of the new loan bill stand charged before the tribunal of public opinion. But this is far from being the whole case against them. The bill, if it does not go far enough where its services are wanted, goes in other directions too far. Like some powerful solvent, it applies itself to the crystallized debt, and reduces every part of it to a state of flux. Not only Seven-thirties and other Government obligations which would remain quiet and give us no trouble for two years or more are to be at will let loose upon us, and called in for liquidation; but all our 20 and 40 years securities, the entire mass of our bonded debt, may at the discretion of the Secretary of the Treasury be subjected to a similar mobilizing process. Any species of Government debt funded, semi-funded or unfunded may at will be paid off by the issue of one or a dozen other species of bonds. And these new bonds may be negotiated here or abroad at any price which the Secretary of the Treasury may from time to - time choose to fix.

These "plenary powers" have naturally elicited considerable discussion. And it has been very earnestly contended that no financial minister in any country has ever asked for, and none has ever been trusted with, such unlimited power over the public and private credit. It has also been urged that not only is there neither precedent nor law in this country for such powers, but there is no necessity for their exercise; and that in this session of Congress the work really requiring to be done is simple, and in the present and and prospective state of our own and of foreign money markets, a very much less ambitious and less sweeping measure will answer every purpose. At present it is obviously our business to deal with no other parts of the public debt than those which imperiously force themselves on our care and require to be be provided for this year, leaving to future legislation, and to larger experience the task of dealing with the future and larger obligations which mature in 1867, 1868 and later.

This advice which comes from men whose experience entitles them to a hearing, has, in combination with other obvious causes, suggested a number of more or less important amendments to Mr. Morrill's bill, all of which, we doubt not will receive due attention from the Committee of Ways and Means before any measure is reported to the House. One of these suggested modifications of the bill is now under discussion in the daily press of this city; and it has, on that account, attracted a larger share of public attention than some others of superior claims.

The novel feature of it is the authorization of a new description of gold-bearing six per cent bonds, to run 30 years. These bonds it is proposed to negotiate at not less than par, and they are not to be sold for money, but are to be exchanged for seven-thirties, compound notes, and certificates of indebtedness. These are to be valued at par and interest; and in the case of the Seven-thirties the time of conversion is to be limited to six months from the passage of the law. It is claimed that this amendment gets rid of some of the more obvious defects of Mr. Morrill's bill. No foreign loan is authorized, no vague indeterminate powers are conferred on the Secretary of the Treasury, the bill has a definite purpose to fund certain government paper, and it prescribes the precise kind of bond which shall be offered in exchange, fixing the price both of the new securities and of the old ones, which they are designed to absorb and withdraw from the hands of the public. Hence, its promoters urge that "the terms of the bargain to be offered by the government would be easily understood, and its advantages would be offered equally to all among the people who might desire to make the exchange. The wisdom of the law itself, not the discretion of the official who is to execute the law, decides the con-

for FRASER

ditions of funding; the law gives all needed information, and lays down the terms and the times, leaving nothing to the discretion of the Secretary, and thus avoiding chronic uncertainty and feverishness in the money market, and the gambling which this begets. No new loans for money would be put on the market; this would promote steadiness in the value of government bonds. The bargain for funding the outstanding notes would not be made between the Secretary and the people, through secondary agents chosen by him; but the bargain is to be made directly between the government and the people, through no agency but the provisions of the law itself."

But it may be asked why, in time of peace, we should offer to pay 6 per cent for 30 years, absolutely, when in the darkest hour of the war we never offered to guarantee this high rate of interest for more than 5 to 20 years? We are told indeed, that it is necessary that more valuable bonds than the Five-twenties should be offered in order to induce the holders of the Seven-thirties to exchange them. If this be so we had better not exchange them. They will give us no trouble for many months to come. The first series of 300 millions of these notes does not fall due till the 15th of August, 1867, and the remainder have nearly a year longer to run. Before that time arrives the improvement of the public credit and the growth of our national wealth will enable us to "shake down" all our floating securities, and we shall probably find the Seven-thirties and the Five-twenties into which, by law they are fundable, will be worth considerably higher prices than the 30-year sixes would now command if, as is proposed, 1,100 millions of them were, at short intervals, "dumped" on the market. In finance, as well as in matters of far higher import, it holds true that "Sufficient unto the day is the evil thereof." Let us be content to deal with our semi-funded debt as it comes due, and not embar rass to-day's work by complicating it with the work which belongs to the distant future.

We have only to add as our last objection to this proposed amendment that, like the bill it professes to amend, it makes no provision for paying off the demand loans and disregards altogether the work of contracting the currency; in fact, it proposes to leave all that most wants doing, and to do nothing but what can be better legislated for at a future session of Congress.

There are, as we have intimated, several other distinct amendments, some of which are open to but little objection. We refrain from discussing them at present, however, as it is not improbable that a new bill will be drawn in Committee, on the basis of not attempting too much in the way of disturbing or anticipating the payment of semi-funded obli-

gations, and of devoting the financial strength of the Treasury, for the most part, to the far more important and more conservative task of currency reform.

### THE RATE OF INTEREST IN ENGLAND.

A curious contrast is afforded by the money market reports which cross each other's path between this country and England. Here, for some time past, money has been rapidly growing easier, while in London it is as rapidly growing more stringent. This state of things is unparalleled, and its causes will well repay investigation. More than one plausible theory has been started to explain the anomaly, and the one which seems to find most favor in England is that the high rate of discount there is caused by the dangerous extension of the credits given by British houses to their American customers. Now, to us, on this side the Atlantic, this explanation loses all its plausibility. For our most experienced financial authorities tell us that as far as the most extensive patient investigation can throw light on such a question

they know that there never was a time when our importing merchants paid more promptly and were less embarrassed by foreign claims. Moreover, if there were any such large amount of floating indebtedness as is claimed, our 5 per cent money market would not keep the money here when 8 per cent or more was bid for it at home. Our foreign exchanges again, and other unmistakeable evidences of the course of trade and of the balance of credit, seem to show that since the outbreak of the war our floating British mercantile debt has seldom been in a more satisfactory condition.

It must be admitted, indeed, that for this happy turn in our foreign exchanges we are largely indebted to our cotton exports, of which the amount received at the port of Liverpool was no less than 196,149 bales from 6th October to 31st December, 1865. It is quite true that last year we imported more largely than in 1864 of British manufactures, while we sent in return less corn, flour, and provisions, less of petroleum, gold and silver, to balance the account. But it is reported that our exports of cotton in 1865 was 462,000 bales, against 197,000 bales in 1864; and this item will fully make up for our other deficiencies in exports, the respective values being \$75,000,000 and \$40,000,000 in gold. Nor is this all: our stock of cotton is probably 1,200,000 bales, and the prospects are that during the next six months, before our new stock is gathered, we shall export, on an average, 100,000 bales a month, giving us a credit in England, and offseting our current obligations to the extent of \$90,000,000 for the half year, in addition to the value of all the breadstuffs, petroleum, and other produce which we may export.

Whether we look, therefore, at our present position or at the probable course of trade for the next six months, we may safely conclude that there is no foundation whatever for the statement that has been made by the London Times, and that the cause of the rise in the Bank of England rate is to be sought rather in the excessive flow of the precious metals to the East, than to any complications arising or likely to arise out of credits and commerce here in the West.

It is, perhaps, right in this connection to mention the report which is current here, that certain British firms have exported goods heavily to Southern ports on their own account, and have had to borrow money in London in consequence of being disappointed in their returns. This class of venturers is of necessity very limited in amount, and we can find probably half a dozen New York merchants seeking accommodation here from this cause, to every one in London. The presence of a few such cases in an excited state of the public mind might lend a coloring of plausibility to an otherwise improbable story.

til within the last three months of 1865. Allowance, of course, however, should be made, in examining this statement, for the higher freight charges asked during our currency depreciation:

	Illinois	Pit'bg, F.W.	Chic. &	С. В. &	Michigan	Michigan
Years.	Central	& Chic.	Alton.	Rock I.	Central.	Southern
1860	\$2,664.848	\$2,335,354	\$938,641	\$1,181,003	\$2,025,142	\$2,068,896

	<i>x</i>					

The cause of this temporary derangement of trade and transportation having ceased to exist, we may expect a steady return of affairs to their former condition. It is of consequence to the merchants of this city and to the great transportation companies that they should comprehend just how much traffic belongs to the Mississippi; because a very important portion of that "reconstructed" trade will have to be taken out of their own hands.

In 1860 the foreign commerce of New Orleans reached the immense aggregate of \$130,735,357. In the trade with foreign ports 1,393 vessels cleared from that port, with a tonnage of 894,353. Included in the exports were 922,000,000 pounds of cotton; 890,230 lbs of hams and bacon; \$314,200 value of hides; 11,055,000 lbs of lard; 1,909,155 lbs of tallow, and \$7,434,909 of tobacco. Ever since the opening of the war, a large portion of the supply of cotton has come over the roads of the interior, at a heavy cost for transportation. Since the beginning of November the receipts by railroad at New York have averaged 2,680 bales per week; beside which, probably, equal to one-third of that amount has been brought over the interior lines into Pennsylvania and New England. The augmenting supply of steamers on the Mississippi, and the restoration of the Southern railroads may be expected to early divert this important branch of traffic almost entirely from the central trunk routes. The opening of active communication between New Orleans and the ports of Europe, South America, and the West Indies, will also afford facilities for the export of a certain amount of Western produce which, during the rebellion, has found its way to the ocean only over the railroads; and the high rates of freight now generally charged by the roads will materially stimulate that diversion of traffic.

The imports of New Orleans have always been unimportant as compared with its exports. In 1860 the total foreign imports amounted to \$22,922,777. Included in the receipts were the following commodities :

Coffee, lbs	47,687,642 Railroad do, cwt.	478,572
Cotton goods	\$2,423,550 Sheet do, lbs	1,116,564
Prunes, lbs	362,888 Molasses, gals	1,996,809
Raisins, lbs	1,810,098 Sugar, lbs	14,285,369
Glass, sq ft	2,401,374 Salt, bush	3,991,934
Bar iron, ewt	63,377 Soda ash, lbs	5,585,180
Hoon do lbs	3,275,084 Spirits, gals (about)	900,009
Hoop do, lbs	3,275,084 Spirits, gals (about)	900,009
Pig do, cwt	130,067 Wines, gals, do	3,500,000

### THE TRADE OF THE MISSISSIPPI.

THE events of the last four years appear to have almost obliterated the consciousness that we have a great natural outlet for commerce in the far South. Gradually the products which have been wont to flow on the bosom of the "Father of Waters" to the ocean, have been directed to the railroads and canals which feed the Atlantic cities; and almost unconsciously New York has been transacting an enormous trade which geographical distribution has assigned to New Orleans. This fact is well illustrated by the following, showing the gross earnings of the principal railroads leading from the Mississippi River to Chicago, and from Chicago eastward, for the years 1860-65, both inclusive. The returns for 1860 show the trade as it was before the river was closed; during 1861, the river being open part of the year, and all business paralized during the first months of the war, the full effect of the change is not seen. In 1863 the tide towards New York had fully set in, and has continued to increase un-

A certain proportion of these articles were distributed in the Southern States; but an important amount was also sent to, Memphis, St. Louis, Cincinnati and other cities for sale in the Southwest; for as many of the commodities are bulky and were brought to New Orleans as ballast at low rates of freight, and were also carried up the Mississippi cheaply for the same reason, they could be placed at the Southwestern centres at a lower cost than if sent by way of the Atlantic ports. The same considerations may be expected to operate in favor of the future diversion of this class of foreign trade to the Mississippi; and as the articles are mostly of a bulky character, the amount of transportation thus likely to change route will constitute an important deduction from the traffic of the eastern and central trunk roads and canals. The suspension of the Louisiana supply of sugar, which in 1860 was 302,205,000 pounds, and of molasses, which for the same year was 14,535,000 gallons, has necessitated a large increase in the importation of those articles; and the increased amount consequently sent from

New York to the interior has caused a large addition to the When it is considered that westward traffic of the roads. the Louisiana product of these commodities has ordinarily been equal to half the importation of them, it will be apparent that when that State resumes a liberal cultivation of the sugar cane, a large amount of this branch of trade must again revert to the Mississippi. Ordinarily, one half of our large importation of salt has entered at New Orleans and other southern ports; but during the rebellion the Western States have had to rely upon a supply coming over the central routes of transportation. This important branch of freight will also in due time revert to its former channel.

It is desirable that all interested in the trade of this port and in the large transporation corporations of the central and western states should anticipate the changes which must follow the restoration of the normal trading relations between the several sections of the Union. It would, however, be unreasonable to expect that the full effect of these changes will be immediately developed. They must be worked out gradually, the chief condition being the progress of the cotton crop; for without an adequate supply of Southern produce, there can be no basis for the supplying of the western markets through Southern cities and Southern transportation routes. Much also must depend upon the supply of the necessary shipping facilities on the Mississippi and its river connections. The following comparison shows the great disparity between the present tonnage of the ports connected with the Mississippi and that existing in 1860:

	-Regist'd	tonnage.—		-Reg.	tonnage	
Ports.	1860.	Dec, 1865.	Ports.		Dec. 1865.	
Cincinnati	33,900	30,497	Pittsburg	60,784	33,598	
Galena	6,251	2,297	st. Paul	368	3,088	
Louisville	34,551	14,100	St. Louis	64,683	86,532	
Memphis	7,668	9,849	Wheeling	17,006	9,538	
Nashville	4,595	1,183	U			
New Orleans	228,243	15,860	Total	460,599	208,642	
Paducah	2,550	2,100	Decrease		251,957	1

With this large decrease of tonnage, it is clear that much capital must be invested in providing the means of transportation, before the Mississippi can recover its former position as a leading artery of commerce.

### THE NEW HAVEN RAILROAD AND THE SCHUYLER FRAUDS.

THE long-pending legislation is this case has just been terminated by the final judgment of the New York Court of Appeals, awarding some \$900,000 to the holders of the certificates of stock fraudulently issued in 1854, by Robert Schuyler, the transfer agent and president of the company. The case is chiefly interesting from the fact that the great principle is now settled by the highest court in this State that railroad and other corporations are bound by the fraudulent acts of their own agents. This principle is of the highest possible importance to the purchasers and holders of the shares and bonds of incorporated companies, and the decision which has been arrived at meets with general approval. It will be remembered that the amount of the certificates issued by Schuyler before he absconded to Europe with his ill-gotten gains was \$2,100,000. About two years ago the holders of most of these shares wearied with the delay of a ten years lawsuit compromised their claims by accepting one share of genuine stock for two of the spurious. The capital of the company was raised from \$3,000,000 to \$4,000,000 to provide the means for this arrangement. The following circular has just been issued showing that an additional increase of capital is to be made to \$5,000,000 by the issue of new stock which is offered to registered stockholders at 75 cents on the dollar in the proportion of four new shares to every ten held to-day the 27th inst. :---

in stock in addition to the amount standing in his name on the books of this company, on Saturday, January 27th instant, by the payment to the company of seventy-five dollars on each share so allotted. *Resolved*, That notice be given to the stockholders of the action of this board, requesting them to notify the company of their acceptance of the additional stock, on or before the 20th day of February. *Resolved*, That seventy-five dollars, in cash, be paid on each share on or be-fore Tuesday, the 20th day of February, when, on such payment, certificates of full paid stock will be issued therefor. A discount at the rate of six per cent per annum will be allowed to parties paying in advance of the above date, and that

full paid stock will be issued therefor. A discount at the rate of six per cent per annum will be allowed to parties paying in advance of the above date, and that the books be closed after January 27th until February 21st. *Resolved*, that the Committee of Adjustment, raised December 26th, be request-ed to carry out the above resolution. It is believed by the board that the above plan is the best that can be adopted for the interests of the stockholders, as it increases the stock in place of increas-ing the bonds, and, consequently, the mortgage upon the property. While the board are disappointed at the result, and feel that a great injustice has been done to the original stockholders, yet they cannot but congratulate them upon the prospect of getting rid of litigation. The board have no complaint, having tested the questions at issue in the high-est court, from whence there is no appeal. The loss is heavy, yet we cannot but hope that the stockholders will be remunerated, and enjoy in peace that which has been threatened, day by day, to be taken from them. The property of the company is valuable, and, in the opinion of persons capable of judging, could not be replaced to-day for the capital and bonds outstanding when this arrange-ment shall have been completed, namely, five millions of capital and two mill-ions of bonds. ions of bonds.

G. B. CARHART, Wilson G. Hunt, JAMES J. ROOSEVELT, E. C. SCRANTON, GEO. N. MILLER,

Committee of the Board of Directors of the New York and New Haven Railroad Company.

NEW YORK, January 22d, 1856.

The anticipation has been generally entertained that a heavy fall in the price of the stock would be produced if the case terminated unfavorably to the company. So far, however, this anticipation has not been realized, and it is even contested by some persons that the removal of the oppression uncertitude which have hung threateningly over the company will rather enhance than decrease the value of their property. It will be observed that the stockholders who choose to accept the new stock offered to them at 75, are required to notify the Secretary of the Company before the 20th February.

### THE FENIAN MOVEMENT.

THE organisation existing in this country, Ireland and Canada, known as the Fenian fraternity has been occupied through its representative bodies in this city in determining where the seat of power existed, and what constituted regularity in its membership. One President had been superseded by the Senate, and another appointed in his place. Instead, however, of acquiescing gracefully in this action the deposed President demanded the adjudication of the matter by the Fenian Congress, and appears to have met with its approval. Meanwhile the Senate has convened and voted to support the new President, and appealed to the Brotherhood to sustain their proceedings. We have, therefore, practicably two associations pledged to overthrow British supremacy in Ireland, liberate Canada from the iron thraldom of the Mother Country and establish "free institutions" generally.

Of the merits of this controversy we do not care to speak. It has accomplished a schism among our Irish population, which is likely to result, in all our principal cities, in feuds, violence and riot. Already in New York, men's lives have been threatened, and protection required from the police, because of doubts expressed as to the propriety of the conduct of one or the other of the Presidents. The attempt to exe. cute some of these menaces would result in decisive measures on the part of the civil authorities. We took the occasion some weeks ago to animadvert upon this subject, declaring that the apprehensions exhibited by the British government in relation to the fraternity were not warranted. There was no good reason for suppressing newspapers or arresting Fenians. The tendency of the associa. tion was to perish of its own imbelicity. The Irish character is unstable, oscillating, and lacks the element of circumspection as a result. The Fenian organisation is too fragile to elaborate suitable material for revolution. It may crown the purposes of designing men, masking their operations under the pretext of securing Irish independence; but it cannot be successful even in keeping the secrets of the order. The British Government like the American press, can learn their councils in ample time to ensure their defeat. The

Order indeed can hardly maintain more than an ephemeral existence.

A few months ago, the readers of THE CHRONICLE will remember, the rumor was current that more than one hundred thousand Fenians had been enrolled in Ireland, and several times that number in America. The exposition of the financial operations of the Order did indeed show that a large fund had been contributed on the bonds of the New Republic. Such seeming success was, however, the signal for schism, and now this boastful army is divided, each faction alone intent on supporting its favorite for President, while the funds of the Brotherhood are being disbursed, as it is said, not for the Fenian army and navy, but at hotels and on yachts and other kindred investments. There were, however, those who augured danger from these early manifestations of strength. Reports were current that large stacks of arms had been accumulated and drills held at regular periods. In former movements for Irish liberation the Pres byterians have not participated; but eloquent rumor now declared that as the New Republic would guaranty freedom of conscience, large numbers of them had become members of the organisation. The British Cabinet seems to have been apprehensive that the Federal authorities were secretly fomenting the conspiracy in the hope that in the general distraction, Canada might, without difficulty, be absorbed by the United States. Accordingly vessels of war were dispatched to this side of the Atlantic, several prominent Fenians were transported, and James Stephens, the "Head Centre" was arrested with the evident purpose of making him an example. Stephens had the good fortune to make his escape, and being at large alarms the British authorities more than he would at the head of a formidable army.

It is not many years since the subordinates of that government had an opportunity to test the prowess of the great Head Centre. He actually on one occasion commanded two hundred patriotic men in an attack upon a stronghold in a remote corner of Ireland. Five policemen held his forces at bay all of one night, and put them to route in the morning. It may be presumed that he has acquired no extraordinary courage or military skill since that period; and in case that he has not, it will require an immense Fenian army to be recruited from all the nations, with such a champion, to endanger seriously the British rule in Ireland.

We can hardly imagine what disposition the Fenians, in the event of success, could make of their conquest. The king of Siam when making to his unlucky courtier the present of the white elephant, could embarrass him no more completely than the actual possession of Ireland would confound the liberators. It has been declared that those Irish peers who voted in the last century for the union of the two Kingdoms, were guilty of selling their country. Those who made this charge were generally men who had no country to sell, and were the more disposed accordingly to act the part of demagogues. If the descendants of these men should ever acquire possession of Ireland, they could neither keep the country, nor maintain in it a stable government. The Celtic, or as Napoleon calls them, the Latin nations, do not seem to affect a free commonwealth. Rome was never anything but a tyranny; France twice leaped from democracy to imperialism; and Ireland would lose as little time in establishing a despotism. The good sense of all reflecting men will, therefore, lead them to entertain no sympathy for the Fenian movement, or apprehension of its success.

and aire seis of philosophy received accessions by initiation and oaths of secrecy. The Chaldeans and Brahmins of the East, the Essenes of Judea, and Theapentists, Pythagoreans, Free Masons, Romanciary, and Illuminatists, and others that may be named, are examples; omitting all mention of the mysteries of Icis, the Cabriri, Orpheus, Eleusis, and the Bona Dea of the ineffable name. These associations are generally formed upon some central idea, and their mysterious character adds to their power of fascination. But we doubt whether they do more than affiliate men of similar convictions and keep up a general enthusiasm. It may be true that in the event of actual hostilities they might aid the party with which they happened to be associated, but we do not believe that they would be able to initiate a downright revolution.

In this country we have had considerable experience with these matters. The Masonic lodges, in our own revolution, incidentally and indirectly furthered its progress in many ways; but beyond that, except in a few alleged instances of capital punishment on delinquent members, the institution has been harmless.- We have also had the United Americans and the Society of the Star Spangled Banner, organizations which sprung up like mushrooms, ramified throughout every State of the Union, elected Mayors and Governors, Members of Congress and of State Legislatures, and then broke down in the effort to make a President. Our adopted citizens, whose ascendency the organizations attempted to overthrow, were greatly alarmed at their formidable dimensions; but familiarity soon wore away their fright, and now Irish and Germans fraternize cordially in the same political parties with their famed "Know-Nothing" adversaries. The Lone Star Lodges on the acquisition of Cuba and Hunters Lodges to effect the liberation of Canada are not yet forgotten.

During the rebellion the different political parties formed secret associations like the Knights of the Golden Circle, Sons of Liberty, States Rights Associations, Strong Bands, and Union Leagues. The organizations which were supposed to be arrayed against the Government miscarried in all their measures for obtaining control over it or its overthrow. The Union League itself exerts but an imperceptible influence upon public policy. The fly created about as much sensation on the horn of the ox.

England, too, had a little experience with her Chartists who fell to pieces of their own accord, and "Young Ireland," which perished at Slievegammon. Fenianism is but another outbreak, just as imposing and threatening, and just as sure to miscarry and become ridiculous. Secret political societies are ephemeral of necessity; and however frequently instituted are sure to fall speedily to pieces and become forgotten. They do not raise up statesmen and warriors for an The Golden Circle in this country failed in its emergency. conspiracy to overthrow the American Republic, and the Union League to terminate the rebellion. There is as little prospect that the Fenian Association will disturb the Government of the United Kingdom, much less establish an Irish Republic over the sea. In a brief time the adventure will become effete and degenerate into a public laughing-stock. The appellation of Fenian will dwindle to a nickname, and the organization itself will become a bugbear so ridiculous that men will be ashamed to confess that it had ever alarmed them. The Brotherhood, now severed into two factions, deadly hostile to each other, will probably be dispersed in a brief time, and then the Cabinet at London will discover, as we long since asserted would be the case, that their fears were groundless and absurd.

Secret organizations have existed in all countries at different periods of time, and while human nature remains unchanged, will continue. The socerdotal orders of the old world were afflicted in this manner, and many of the schools

### Latest Monetary and Commercial English News.

### [From our own Correspondent.]

LONDON, Wednesday, Jan. 10, 1866. The year upon which we have just entered opened unsatisfactorily as regards the Money Market; the Directors of the Bank of England, at their first weekly meeting, having been compelled to advance the minimum rate of discount to eight per cent. The public were not prepared for such a step on the part of the Bank authorities, but the changes exhibited in the weekly statement fully justify the alteration which has been made. The rate for money during the last fortnight has, therefore, been augmented to the extent of two per cent. The leading feature in this week's bank return is the increase of £2,224,373 in the amount of private securities held by the establishment, thus indicating a very active demand for money. The reserve of notes and coin has been diminished by £1,611,519, and there is also a decrease of £296,919 in the stock of bullion. The rate now current for money is two per cent higher than at the commencement of last year, when the stock of bullion held by the bank was £13,933,592, and private securities amounted to  $\pounds 21,711,507$ , the reserve being  $\pounds 8,068$ -252. The present period, therefore, as far as the Money Market is concerned, compares unfavorably with last year ; but, as regards the general condition of the country in a commercial point of view, the prospect now is certainly more encouraging then the future presented to the mercantile body at the commencement of 1865. At the opening of the year, owing to the large losses experienced in 1864, great caution had become imperatively necessary on the part of merchants here in entering into extensive engagements; an 1 the uncertainty which prevailed in the minds of most persons as to the probable results of the approaching campaign in America, had the effect of reducing the transactions in many articles of commerce to a very narrow limit, prices at the same time being very fluctuating and sensitive. This contraction of trade had its natural effect on the Money Market, viz: a fall in prices. During the first six months the quotations steadily declined, till on the 14th of June, the minimum rate of discount at the Bank of England fell to three per cent; the stock of bullion held by the establishment increasing shortly afterwards to £16,407,666. This was the lowest rate for money touched, as well as the largest supply of bullion held, during the year. At the close of July and during the months of August and September, the demand for money, as harvest work was in progress, during which about £3,000,000 was drawn from the metropolis to meet the wants of the farming community, became more active, and the quotations rose about one per cent higher. The close of September and the month of October were periods of great stringency in the Money Market, prices, in the course of ten days, having advanced to the extent of 2<sup>1</sup>/<sub>2</sub> percent. This important rise was caused by the great activity in the cotton trade, resulting in an advance in prices of from 2d. to 6d. per pound, as well as by the great demand for manufactured goods, oils and metals on the part of American buyers. Indeed the great revival in our trade with America is undoubtedly the prominent feature in our commercial history of 1365; for during the closing six months, the various markets in which American houses were purchasers became extremely active, so that prices attained a high and very remunerative point. Cotton goods, woollen goods, and all goods, metals, and oils participated extensively in this animation, the advance in their value being, as regards many articles, of a most important nature. The changes in Bank rate last year were sixteen in number, the lowest quotation being three, the highest seven per cent. The following table shows the date of these alterations, and the position of the Bank

to be very large, and are only delayed until the state of the Money Market will allow of more certainty as regards profit to the operator. At the same time American buyers are purchasing largely, and as great confidence prevails throughout the mercantile community here as to the future of America, and as the principal American buyers in our markets require, at the present time, longer credit than customary, the revival of trade now has necessarily a tendency to create a more strin-gent market for money than would have been the case were American merchants transacting business on the usual terms. Large amounts also of 5-20 bonds continue to be received here in payment of produce and manufactures, on which our own merchants obtain advances to meet some of their engagements. This being the case, it seems tolerably certain that the value of money in the immediate future must continue to rule high. The Directors of the Bank will undoubtedly lower their quotations when the state of their resources will allow of such a movement; but an easier rate for money will undoubtedly lead to considerable animation in the various branches of trade, so that they will eventually be compelled to again advance their terms. According to present appearances, it seems that during the current year, the changes in the rate of discount will be numerous, but that the quotation will not fall below five per cent.

Last year was quite as fertile in new companies as its predecessor ; the number brought forward was 287, against 282 in 1864, and 263 in 1863. The total for the last three years is therefore 832, several of which have turned out very successfully, whilst as many have undergone the process of winding up. The authorized capital, as regards last year's undertakings, amounted to £106,995,000 ; the first issues being to the extent of £12,174,790. The deposit money paid was £12,174,-790. Including the new issues of old companies, shares, called up, and premiums, together with the amounts call on the six foreign loans, viz: the Austrian for £14,600,000, the Peruvian for £9,000,000, the Brazilian for £5,000,000, the Ottoman 5 per cent. £3,636,363, the Ottoman 6 per cent. for £6,000,000, and the Italian loan for £8,000,000—the deposit money demanded of the public in the last twelve months has been of the following extent :

New companies—Deposits	£12,174,790
New issues by old companies, called up, and premiums	7,919,140
Foreign loans, called up	20,231,663
Total	£40,325,593

This large sum has naturally been one of the principal causes of the great tightness in money during the last six months; the heavy amounts continually required to meet the constant calls having compelled investors and speculators to enter the money market, and obtain advances at a high rate. The value of our National Debt has also suffered a deterioration to the extent of two per cent, partly from the fact that stock has been sold to meet the demands of these new companies, whilst, at the same time, numerous individuals have withdrawn a portion of their capital from Government securities in order to obtain the augmented rate of interest offered elsewhere.

Annexed are the returns of the circulation of the private and joint stock Banks for each of the four weeks ending November 11 and December 9:--

	Nov. 11.	Dec. 9.
Bank of England	£21,864,805	£20,803,248
Private bonds	3,133,928	2,977,276
Joint Stock Banks	2,892,421	2,789,657
Scotland	4,696,685	4,903,980
Ireland	6,887,925	6,691,240
Total	£39,475,764	£38,165,401

As compared with the four weeks ending December 10, 1864, the above figures shew an increase of £951.359 in the circulation of notes in England, and an increase of £2,047,078 in the circulation of the United Kingdom.

During the past week, owing to the continued outflow of bullion from the bank, and the rise in the bank rate of discount, the market for all our national securities has been in a very inactive state, and an almost general fall has taken place in prices. Railway shares have also been somewhat depressed, whilst most foreign securities have slightly declined in value. On the other hand, joint stock bank shares, which, in consequence of the active demand for, as well as increased value of money, are at the present moment realizing large profits, have ruled firm; enhanced prices having been obtained as regards the principal undertakings of that nature. Subjoined is a statement showing the daily prices of the chief home and foreign stocks and shares for the

The advance in the Bank rate has already had the effect of contracting the operations of merchants, and the principal markets closed Saturday with a quiet, but by no means heavy, appearance. Several articles have slightly declined in price; nevertheless, as a rule, holders of produce and manufacturers are indisposed to force sales, or to accept any material reduction; in fact, the trade of the country at the present moment is in a very healthy state, and is now only reduced to a state of inactivity by the high rates demanded for accommodation. Throughout the manufacturing districts the orders for goods to be given in, are said

The demand for money was active during the past week. At the bank, a full enquiry has been experienced, whilst in the open market, great firmness prevailed, the rates current in Lombard street being fully equal to those at the Bank of England. The following were the quotations for the best paper in the open market on Saturday:

-	30	days' bil	ls		 • • • •	 				••	8 pe	r c	ent.

The present week affairs have assumed a decidedly more satisfactory appearance, and advances have been obtained on the best commercial paper as low as  $7\frac{1}{2}$ ; the more general quotation however being  $7\frac{2}{5}$  to  $7\frac{2}{5}$ .

the rise line. The principal changes are at Paris and Amsterdam, at stand thus : which cities a rise of one per cent has taken place. The Bank of France rate, however, is still three per cent below ours, so that unless the quotation for money is again raised at Paris we may anticipate withdrawing supplies of bullion from that quarter. The last return published by the Bark of France is unfavorable, inasmuch as it shows a decrease of about £1,000,000 in the stock of bullion, and an increase of £2,840,000 in bills discounted. The quotations for money at the ntinental cities are as under :-

leading Continental C	Bank	Open market.		Bank rate.	Open market.

Messrs. Baring Brothers & Co. have issued their prospectus of the new loan for the Argentine Republic. The amount of the loan is £2.500,000, but in consequence of the present condition of the money market only one half will at present be offered to the public. The price of issue is 75, the rate of interest being 6 per cent, with a sinking fund of one per cent per annum. The proceeds of the loan are to be applied to warlike purposes, viz : to meet the expenses of the war now being carried on between the above State and Paraguay.

The rise in the rate of discount has had the effect of slightly depressing the market for cotton, but not to any serious extent. The trade at the opening of the week exhibited considerable buoyancy, and long stapled produce changed hands at  $\frac{1}{2}$  to  $\frac{1}{2}$ d per lb. advance. During the last few days the demand has become much less active, yet the closing prices Saturday were without material variation from Saturday last. The market has been kept in a healthy state by the firmness prevailing in most descriptions of manufactured goods at Manchester, so that holders are quite indisposed to force sales, or to accept any material reduction in values.

Since the close of the week, however, a fall of 1d. to 1d per pound has taken place. But taking into consideration the fact that the imports for the last four days amount to nearly 40,000 bales, and that the sales now current are high, the decline is of but little importance. Indeed, a fall of  $\frac{1}{2}d$  to  $\frac{1}{2}d$  per pound from the late highest point, under a strong importation and a tight money market, undoubtedly indicates a healthy position of the staple in question. The market has, in fact, been buoyed up by the satisfactory state of the Manchester market, the demand for grains being tolerably active at mostly full prices. Cloth, however, is quieter, but shows only a slight depreciation in value from last week. The following are the present prices of cotton at Liverpool :

I am unable to forward you any official statement of imports and exports for the twelve months, as the last returns issued by the Board of Trade only extend to the close of the month of November. Unfortunately, the returns for the twelve months are, from some u accountable cause or other, delayed to a period when they become more curious than useful, inasmuch as they come to the hands of the mercantile public not before the close of February. The figures I subjoin, however, may be useful as showing here in detail the extent of our imports and exports from old as well as new countries. India, it will be observed, has declined; we may say, naturally, considering that our imports from that country ought to have been augmented considerably under the present very remunerative prices. But it seems that India, now that America is likely to compete too freely with her, has determined on withdrawing herself from the cultivation of cotton, and on embarking with more earnestness in the cultivation of indigo, and especially oilseeds, to which her soil is so well adapted, and which returns to the grower a large share of profit for the capital embarked, the risk incurred, and the labor employed. China shows a large decrease, viz.: of rather more than 50 per cent; and as both China and Japan are now purchasers of cotton at Bombay and Calcutta, it is pretty certain our supplies from those quarters for the future have ceased. Egypt continues to increase the production of the staple in question, but it seems probable that with a future reduction in price, which must take place in the ratio, probably, of the extension of the cultivation in the Southern States, that she will determine on devoting more attention to the production of cereals, and less to that of cotton. Alexandria ouring the last few years instead of being an important shipping port for wheat and beans, has been compelled to purchase largely at the Black Sea and neighboring ports in order to secure for the population of Egypt the necessary supply of wheat. The following are the tables from the Board of Trade returns :

During the year just concluded, the market was in a most sensitive state. In the early months, and up to the close of August spinners, speculators and exporters operated cautiously, and prices declined materially, but the great increase in the American demand for goods, coupled with the uncertainty which prevailed as to the probable extent of the supplies in the Southern States, was the cause of great activity in the article, so that prices experienced a rapid rise to the extent, on the average of about 4d per lb. During the concluding months the quotations declined; but, taking into consideration the high point which had previously been attained, not to any important degree. The actual consumption in Great Britain last year was 2,034,800 bales, being an increase of 428,410 bales as compared with 1864. The comparison is as follows:

1865. 1864. There was also an increa	American. 281,100 150,730 se in the ex	East India & China. 1,049,600 958,740 cport dema	Brazil, Egypt, &c., 704,100 488,920 and by 158,49	Total. 2,034,800 1,605,390 00 bales,
as will be seen in the subjoi	ned statem	ent:		
1865 1864	American. 60,200 53,880	East India	Brazil, Egypt, &c. 153,000 88,670	Total. 890,900 732,480

The total quantity imported at Liverpool was 2,034,800 bales, show-

The imports and deliveries of cotton into and in India during the past week of each of the last three years, as well as the latest statement of stocks, were as under: 1988

Importsbales.	1804. 15,769 6,440 53,827	5,763 3,518 111,923	4,703 2,854 36,716
Stock	00,000	111,000	

The quantity of East India cotton now estimated afloat is 289,765 bales, against 249,625 bales last year.

Owing, in a very great measure, to the dampness of the weather and the consequent poor condition in which produce is brought to market the wheat trade has opened with great inactivity, and a fall of quite 1s. per quarter has taken place in prices. Yesterday, however, large samples changed hands steadily, and holders were disposed to insist on full terms; but the market, as regards all descriptions of produce, was certainly a most unsatisfactory one, and the amount of business transacted was very moderate. Besides the cause to which I have alluded above, this inactivity may be attributed to the fact that business has not as yet been entirely reopened since the holidays, and to the far more weighty fact, that of the demand of money. Our imports of produce continue very moderate, both from America and the Continent, but it may be observed that we have recently received several parcels of flour from your side, an article which has, at the present time, become quite a scarce commodity in our market. That we shall require considerable supplies of wheat is certain, because the harvest in this country last year was deficient both in quantity and in point of

quality, as compared with its two immediate predecessors. There is, however, a fair supply of old wheat in the country, and the prolific harvests of 1863 and 1864 have, to some extent, compensated for the deficiency of last season. But, at the same time, our imports of wheat and flour have fallen off considerably, and the range of prices does not increase them. For instance, the imports of wheat for ten months last year were rather more than 3,500,000 cwts., and of flour 1,100,000 cwts. less than in 1864, and with a falling off in our home produce, it seems certain that a rise in prices must occur during the next six weeks or two months, in order to attract the necessary supplies from foreign countries. I cannot see, however, that there is room for a rise of any important extent, but I think that the finest new English white wheat may advance to 55s. and new red to about 50s. per quarter. These prices would indicate an advance from the present rates of about 5s. per quarter. The average price of English wheat in England and Wales, last week, was 46s. 11d., against 37s. 10d. in 1864, and 40s. 5d. in 1863, 45s. 7d. in 1862, and 61s. 4d. in 1861. The following table shews the extent of our importations during the first eleven months of the last three years :

The last return issued by the Veterinary Department of the Board of Trade in reference to the disease amongst horned stock in Great Britain is the least unfavorable that has been published. The state-ment is for the week ending Dec. 30, and during that period 7,693 beasts were attacked by the disease. Since government commenced to report cases, it appears that 73,549 head of stock have been attacked, of which 13,931 have been killed, 41,491 have died, and 7,045 have recovered. At present the appearance of the disease has the effect of contributing to a comparatively low price for butchers' meat ; but the ultimate consequences of the disease must, without doubt, operate disasterously to the whole country. Just now the grazing community is exceedingly alarmed, and is forwarding to market beasts which they would, under other circumstances, have detained at home for one year, two, and even three years longer. Many of these beasts are disposed of at very low prices, and as a recent order in Council forbids the conveyance of stock forwarded to market back to the grazing districts, the only alternative is to sell them at a low price to the butcher, who turns them into sausages. The public-the unthinking public-congratulated itself that it was enabled to secure its Christmas supplies of beef at a tolerably low rate; but these low rates will, without doubt, be succeeded by very high quotations, unless, indeed, the foreign grazer supply us not only with large numbers, but full weight during the ensuing spring. The imports of cattle during the past eleven months of last year were 196,030 beasts against 141,778 beasts; 763,084 against 412,469 sheep; 117,766 calves against 68,777 calves; and 368,602 pigs against 300,216 pigs last year. As regards the state of the markets for colonial and foreign grocery produce, there is but little to say. The high rate of money, coupled with the holiday appearance in most departments, has had the effect of limiting transactions generally, whilst the tendency of prices has been rather in favor of the buyer. The stocks in London are as follows:

rates. On Wednesday the quarterly meeting of the members of the tin plate trade was held, and as the demand for plates had been, as well . as customers, very active, it was resolved to advance prices 2d per box. I C charcoal plates are now quoted at 33s per box, delivered at Liverpool.

The arrivals of coal into London last year, by land and water carriage, reach the enormous total of 5,903,271 tons, against nearly 5,400,000 tons in 1864.

### COMMERCIAL AND MISCELLANEOUS NEWS.

IMPORTS AND EXPORTS FOR THE WEEK .- The following are the imports at New York for the week ending (for drygoods) Jan. 18, and for the week ending (for general merchandise) Jan. 19:

\$2,650 00

New York has 1,000,000 inhabitants, and a valuation of \$600,-000,000; hence, on the average, every man, woman and child has paid last year to the General Government \$37, or 6 per cent. of the valuation. This is exclusive of the payment for stamps consumed by the people of this city.

The internal revenue collections of the whole country in the figcal years since the excise law went into operation have been as follows. The year begins on July 1, and ends on the 31st day of June :

1862-1863	\$41,003,192 93
1863-1864	. 116,850,672 44
1865-1866	. 211,119,529 17
	. As Tala 1 ha

Should the rate of increased for the current year, to July 1, be the same as that of last year over the previous one, and taking the New York returns as an index, the highest estimate of revenue from internal sources will have been attained.

CALIFORNIA GOLD RECEIPTS .- The Pacific Mail Company's steamer Henry Chauncy, from Aspinwall on the 12th inst., arrived here on the morning of 19th inst. The following is her treasure list:

MACKEREL INSPECTED IN MASSACHUSETTS .- The inspection of Mackerel the past year, says the Boston Shipping List, shows a falling off of 18,000 bbls compared with 1864, while the quantity of No. 1 is 50,000 bbls more than last year, and the inspection of 1's largely exceed any previous year since 1852. The inspection of 2's is less than half the quantity inspected in 1864, while the No. of 3's have been about the same. Notwithstanding the falling off in bbls, the superior quality of the Mackerel caught the past year, will make their value quite equal to any previous year. The following are the returns of the Inspector General :

January 19		Bbls.	Bbls.	Bbls.	Bbls.

FRIDAY NIGHT, Jan. 26.

THE MONEY MARKET:-The market exhibits a slight reaction from the extreme ease prevailing during late weeks. There is a perceptible increase in the demand for mercantile accommodation. Both the banks and private bankers are extending their purchases of paper; but still confine their operations to the most approved names, disfavoring the large amount of credits being issued by jobbers in new branches of trade. The request of some western firms for renewal of their notes has created a degree of caution respecting merchandise paper connected with that section. The weakness of the Liverpool cotton market, connected with the condition of affairs at London, has also produced a certain amount of caution toward parties in the cotton trade; but with these exceptions, the loan market shows the same general features of confidence that have hitherto existed. There is still very little western produce paper in the market. The large stock of pork in Cincinnati lies dormant, owing to prices there being nearly equal to those of New York: but so soon as packers show a disposition to mee the views of buyers here, an active westward movement of The domestic commission capital may be anticipated. merchants are employing a large amount of bills, which are readily taken at rates ranging from  $6\frac{1}{2}@9$  per cent.

The growing demand for discounts has diminished the balances available for call loans, and the rates to street borrowers are a shade firmer. We hear of no transactions below 5 per cent, and a fair proportion of call loans are supplied at 6 per cent. Although there has been an increased activity in stocks, the demand from the brokers has been strictly moderate. The last banks' statement shows a moderate increase in loans and a decrease in deposits and legal tenders; which shows the reaction from the late extreme ease above indicated. Prime bills are current at  $6\frac{1}{2}(@7\frac{1}{2}$  per cent; "good" at 8@9 per cent; and a wide range of less known paper at 10@15 per cent.

The following are the rates for the various classes of loans;

Per cent. Per cent.

[January 27, 1866.

overhangs financial affairs; and unless there should be an early revival of confidence, it is quite possible that prices may fall below the real dividend value of stocks. The passing of the loan bill is looked to as likely to produce a more settled market. The following are the closing quotations for leading stocks compared with those of last Saturday :--

UNITED STATES SECURITIES.—Governments generally have been dull and unsettled during the week. The uncertainty as to the financial measures to be adopted by Congress, the apprehension that Mr. McCulloch may prevail upon Congress, to authorize a foreign loan; and the Hibernia's news of a delicate condition of finances at London, have combined to produce a general indisposition to buy government securities. At the same time, the heavy decline in railroad stocks has produced an idea that they may become relatively cheaper than governments, producing an exchange of the latter for the former; which again has tended to foster a suspension of operations. Gold interest bonds are especially depressed, Five-twenties of 1862 have declined  $\frac{3}{4}$ , and and close weaker than any other securities. The 2d issue are 4 lower. Seventhirties have held their own firmly until the close of the week, when the price yielded  $\frac{1}{8}@\frac{1}{4}$ . The representations made to the Committee on Ways and Means, in favor of an early funding of all the short obligations of the government, produces an expectation that Seven-thirties will soon be convertible into a long six per cent bond, which tends strongly to sustain their value. Sixes of 1881 maintain their late price. Certificates of Indebtedness are in goood demand for the employment of balances, and remain at  $98\frac{3}{4}$ . Compound interest notes are in active demand from the National banks, for keeping up their reserve.

The following are the closing quotations for the leading securities:

THE GOLD MARKET.—The general course of the market has been steady. The uncertainty as to whether Congress will adopt the clause in the new loan bill authorizing a direct foreign loan keeps the market somewhat in suspense, and it is quite probable that the determining of that point of the bill will produce a slight change in the premium. The demand for customs duties has been large. The foreign bankers appear to be generally disposed to keep a good supply of specie, in view of the possibility of increasing monetary difficulties at London; and some of them have bought freely during the week. The low rates of exchange have not prevented the shipment of a considerable amount of gold. Bullion has been procurable on easy terms, so that, with the high rate of interest at London, shippers have been able to realise a slight percentage above shipments; while some have probably remitted in this form more with a view to credit than profit. The shipments on Saturday last amounted to \$680,109, chiefly in bullion; and on Wednesday the Scotia took out \$336,964. The following are the highest and lowest quotations for gold for the last six days:

Call loans:	5 (0) 6	Good endorsed bills, 3 &	
Loans on bonds & mort	6 @ 7	4 months	
Prime endorsed bills, 2		do single names	8 @ 9
months	6%@ 7%	Lower grades	10 @15

RAILROAD AND MISCELLANEOUS STOCKS .- The downward movement in railroad shares commenced two weeks ago, and temporarily checked last week, has been continued, and the list shows an average decline of 3@4 per cent. Speculative holders appear to have made no effort to raise the fall, but have readily sold out, apparently from a conviction that, in the fear of the recent falling off in earnings, and the less hopeful prospects of the roads, late values could not be longer sustained. The street is less subject than usual to speculative combinations, and the fall in prices is less due to clique operations than to natural causes. The tone of the market is still weak, and although prices now average about 8 per cent lower than at the opening of January, dealers do not appear confident that the bottom has been reached. There is, however, a very large outstanding "short" inter\_ est, which may serve as the basis of an upward reaction. The depression is fostered by the general uncertainty that

1			

The return shows a decline of 25,183,000f. in the coin and bullion compared with the previous week. A larger fall might have been expected, considering that on the one hand the discounts increased 69,975,000f, and that the rate of interest was 3 per cent lower than at London. In the circulation of notes there is an augmentation of 69,975,000f and in deposits of 9,146,000f.

### Commercial Times. The

### COMMERCIAL EPITOME. FRIDAY NIGHT, Jan. 26, 1866.

With a partial revival of demand for consumption in some of the leading staples, there has been an effort to revive the speculative tone. But success has been very partial. A general improvement in prices cannot be noted, and the volume of trade is not sufficient to relieve the impression of dullness that has prevailed. No one will buy to day more than he thinks he can sell to morrow at a profit. There is no disposition to add to stocks.

Cotton has been depressed by the Liverpool news, but closes steady. Breadstuffs have been a shade firmer, and more active for flour, but depressed and lower for grain.

In Provisions, the speculation in Pork is based upon probable short supply, and an imperative demand from Great Britain. The -packing operations at Western markets are far behind previous years, but for the last three weeks the receipts of hogs have been in excess of last year; the number is not only increased, but their weight; and there are indications that the supply will be kept up to a date unusually late. There is no considerable demand for "hog products," and none in prospect except at a material decline in prices. Naturally, the market is very feverish, but in Pork only has there been any marked decline as compared with last week. Beef has been firm, Butter quiet; but in Cheese we notice large sales on English orders by the Asia, and prices have improved.

Groceries are irregular; Coffees, Teas, and Spices have been quite active, and gold prices are better ; but in Sugar great dullness prevailed, with a steady decline ; and Molasses has been drooping.

Naval stores have declined under liberal receipts; but at the decline large orders for Europe have been executed, and the market closes quiet.

Oils dull and heavy.

Hides have been active, especially at to-day's market, but at easier prices for dry, while slaughters have been steady. Leather has been quiet.

Metals have been very quiet.

the news by the Hibernia caused a a further decline of one cent, a though some decline in the Liverpool market had been anticipated. Quotations became very irregular and unsettled, with a strong disposition to realize on the part of many, and lots could be picked up at prices considerably under current quotations. We hear of a full line being offered at 4c decline from bids for the same line last week. At to day's market there was rather more steadiness, with a fair business. Sales of the week 16,000 bales. The following are closing quotations: N. O.

The question as to the probable amount of Cotton we shall have for export the next six or eight months becomes of great interest in view of the discussion now being carried on in England with respect to the American trade. We gave a statement on the first of January as to the stock on hand at that time at the different ports, showing it to be about 600,000 bales. Probably the same figures will represent the present stock. The amount which has already come forward is about as follows :

	Before	Since	Totai
From	1st Sept.	1st Sept.	to date.
North and South Carolina	25,829	64,000	89,829

red thousand bales to meet the home consumption and the export demand.

It is difficult to state with certainty the amount our spinners are using. We have returns from the Massachussets cotton mills for the year ending last May, and their consumption, according to those returns, was, for that year, one hundred and sixteen thousand seven hundred bales. We think that a liberal estimate for the consumption of of the mills for this year would be five hundred thousand bales; or say, three hundred thousand bales to the first of August, leaving over one hundred thousand bales a month for export, which, at \$150 in gold per bale, would amount to \$15,000,000 a month.

The receipts of cotton at the different ports the past few weeks have been fair, but not so large as was anticipated by some. The deliveries at Mobile from the Bigbee and Warior have been liberal, but at New Orleans there has been a falling off. This is probably owing partly to the bad condition of the roads, to the recent holidays, and to the fact that the Red River has been insuffcient to allow the larger boats to go up. The following has been the course of receipts at New Orleans, Mobile and Galveston for the four

d for FRASER

LIVEBPOOL, Jan. 13th.-The stringent and uncertain state of the Money Market has had a very prejudicial effect on cotton, and American being very freely offered was in some cases forced down 1d to 11d per 1b. At this reduction buyers came forward, and the market became steady at a recovery of <sup>1</sup>/<sub>2</sub>d to <sup>8</sup>/<sub>4</sub>d. Manchester was depressed in the beginning of the week, but has shown more firmness with the improvement in our market.

### BREADSTUFFS.

There has been a better demand for flour the past week. The purchases for the Southern States are quite liberal; and, the regular trade, and more favorable intelligence from Great Britain, have served to strengthen the market.

Wheat has been in better milling demand, but the sales of the week are only about 14,000 bushels. Prices are now twenty cents per bushel below the highest prices of December, without stimulating the export demand.

Corn has further declined, with a moderate export demand. Holders have had to contend with lower prices in Philadelphia and Baltimore.

Oats have been active for the past three or four days, with a rerecovery of two or three cents per bushel.

Rye was dull. Barley has declined. Peas continue nominal. The following are the closing quotations :

LIVERPOOL, Jan. 13-At Tuesday's market there was more inquiry for wheat at the decline of Friday; but flour and Indian corn were with-out any improvement Yesterday some sales of Wheat were made at better prices than were obtainable on Tuesday. At to days market there was a more general demand for wheat, and on the low qualities of American, of which the late receipts have largely consisted, and which had been much pressed, there was a recovery of 1 to 2d per cental. Flour was still difficult to sell. Indian corn was in better request and sold readily at an advance of 6d per quarter.

### THE DRY GOODS TRADE.

FRIDAY, P. M., Jan. 26, 1866.

The Dry Goods trade has continued dull throughout the week. Jobbers have made great efforts to dispose of their surplus stocks at a concession of five to seven per cent. but without bringing any demand. Agents have few goods on hand, the manufacturers preferring to keep them at their mills rather than press them upon the stagnant market. Winter trade is over and Spring trade is very backward. The only demand there is is on the part of small dealers to supply their immediate wants. Everybody is waiting for the break which most suppose inevitable in all classes of merchandize. Waiting, but is still held in abeyance by the unsettled state of the financial world,

With the dull trade and decline in cotton the prices we give are

entirely nominal, though agents refuse to make any change. Should the present condition of the market continue they will be materially lower, and perhaps very soon may be ten or twelve per cent below the nominal quotations of to-day.

BROWN SHEETINGS and SHIRTINGS are inactive in agents' hands. Jobbers have pressed sales to some extent rather than risk their large stocks in an uncertain future, and have made sales of Standards as low as 29 cents in hopes to create a demand, but for a few pieces only at a time, fearing that speculators would buy at their offerings. But there are no buyers at that figure even. We repeat our figures of the last two weeks as those still given by agents and the only ones to be had in the absence of sufficient demand to determine a market. Standards are quoted at 334. That is the price for Appleton A, Atlantic A, Indian Head A, Amory, Lawrence C, Amoskeag A, and Stark A, Indian Head E 48 inch sell at 50, Nashua fine C 40 inch 32, do D 30, Barrington 40 inch 26, Augusta Mills 4-4 32, do 7-8 26, Indian Head B 30 inch 28, Nashua extra A 36 inch 31<sup>1</sup>/<sub>2</sub>, Wauchusetts 33, Indian Orchard W 33 inch 26, do BB 33 inch 28, do C 37 inch 30, do N 36 inch 32, do P 36 221,

Chicago	7,120,465	8,438,394	15,214	18,931
St. Louis, Alton, & Terre		, ,		
Haute	2,084.070		9,924	
	-,			

AMERICAN CENTRAL RAILWAY OF ILLINOIS .- This railroad, it appears, is likely to become a reality. The company proposing to construct the work have advertised the grading, masonry, &c., and

intend to commence operations immediately. The road will extend from New Boston, on the Mississippi, to the Indiana State Line, in the direction of Wayne City: The distance to be overcome is about 190 miles on a line intermediate between the Chicago and Rock Island, and the Toledo, Peoria, and Burlington Railroads.

MASSACHUSETTS RAILROADS .- The following table shows the earnings, expenses, and profits of the principal railroads of the commonwealth of Massachusetts during the year closing November 30, 1865:

1000.			
Railroads.	Earnings.	Expenses.	Profits.
Boston and Maine	\$1,393,848	\$967,395	\$476,453
Eastern	1,277,075	905,150	371,925
Boston & Providence	1,221,104	854,771	366,333
Old Colony & Newport	1,209,018	725,549	483,469
Fitchburg	993,693	679,439	314,254
Norwich & Worcester	714,057	472,142	241,915
Boston & Lowell	752,605	580,373	172,232
Cheshire	629,621	564,572	65,049
Connecticut River	533,108	316,757	216,351
			-
Total Gross	8 724 129	6.066.148	2.657.981

This shows the average expenses of operating to have been 69.5 per cent. of the gross earnings.

MONTGOMERY AND ERIE RAILROAD .- A company to construct a railroad from Montgomery to Goshen, on the Erie Railway, was formed on the 2d inst., with a capital of \$130.000. The road will be 101 miles in length, and when completed, will open up the richest section of Orange County to easy access from New York.

NORTHERN CENTRAL AND ERIE RAILROADS .- The Northern Central Railroad, says the Elmira Gazette, have purchased the Northern Division of the Erie Railway (from Elmira to Canandaigua), and during the coming season intend laying the narrow guage track of the road on that line, so as to enable them to send through trains from Baltimore to Niagara Falls.

COMPARATIVE MONTHLY EARNINGS OF PRINCIPAL RAILROADS.
