PINE ST., CORNER OF PEARL ST., NEW YORK.

REVIEW OF SEPTEMBER.

The improvement in affairs noted in August made further progress in September. The political outlook grew steadily more encouraging, and the financial situation became altogether assuring, gold imports continued in large volume, the strain in the money market was relieved, while the stock market was strong and materially higher. Even the mercantile markets felt the stimulus and gave evidence of a great change for the better, the price of wheat advancing sharply. In our industries generally, while the volume of trade and business necessarily remained very restricted, the tone was distinctly better and there was a marked gain in confidence. In one or two lines of trade a resumption of work by establishments previously idle was begun, this applying more particularly to the New England cotton mills.

The political developments were all favorable. The Sound Money Democrats held a National Convention at Indianapolis the early part of the month and nominated Senator Palmer of Illinois for President and General Buckner of Kentucky for Vice-President. This movement made a very strong impression on the public mind. The attendance was larger than any one had any idea it would be, and this, with the presence of so many of the leading men in the Democratic Party, made it evident that the defection from the party would be very great. It was felt too that the action of the Convention in putting a third ticket in the field would be helpful to McKinley rather than the reverse.

Still more significant however, and still more influential on the public mind, were the results of the State elections in Vermont and Maine. These had been looked forward to with great interest as an indication

of the strength of the silver sentiment. There is a large farming population in both those States, and the silver people have been addressing their appeals particularly to that class. Mr. Bryan, after the failure of his Madison Square speech, had abandoned his contemplated tour through those States, but the silver advocates nevertheless carried on a very vigorous campaign, sending speakers in great number into the territory, and of course they were opposed with equal vigor by the Republicans. The outcome of the contest, therefore, was not unnaturally regarded as furnishing a reliable test of public sentiment on the pending issue.

Both States gave enormous and unprecedented majorities for the Republican State tickets. The Vermont election came off September 1. It showed a great increase in the Republican vote and a big decrease in the Democratic vote as compared with the gubernatorial election in 1892. The Republican ticket received 53,396 votes, the Democratic only 14,905, giving a Republican plurality of 38,491 votes. In 1892 the Republican vote for Governor was only 38,918 and the Democratic vote 19,216, a plurality of but 19,702. The Maine election was held September 14 and was equally decisive. The Republican vote reached 82,749 and the Democratic only 34,288, showing a Republican plurality of 48,461, whereas at the vote for Governor in 1892 the Republican ticket received 67,609 votes and the Democratic 55,078 votes, a plurality of only 12,531. Even in Arkansas, where an election took place on September 7, the outcome was very much more encouraging than the friends of sound money had dared to hope, though the early returns conveyed the impression that the silver people had made very heavy gains in that State. The latest figures show a Democratic plurality of 55,286, against a similar plurality at the gubernatorial election in 1892 of 56,471.

The influx of gold from Europe continued and reached very large proportions, new engagements for shipment to the United States being announced almost daily. What made the movement particularly encouraging was that it was seen to be the result entirely of natural causes. The arrivals during the month were, roughly, 37 million dollars, including some amounts received at San Francisco and Boston. The larger part of these arrivals went to swell the Treasury gold reserve, which from being down close to 100 millions on September 1 stood, it was estimated, at about 126 millions October 1. The Bank of England in view of this drain of gold advanced its discount rate twice—

on the 10th from 2 per cent to 2½ per cent and on the 24th from 2½ per cent to 3 per cent. These were the first changes since February 22 1894.

As showing the great increase in confidence which occurred, the price of U. S. coupon 4s of 1925 advanced from 113½ on August 31 to 117 on September 30.

With regard to the rise in wheat, No. 2 red winter sold here in New York at 71½ September 30, against 62¾ on September 1. In cotton, the price of low middling uplands rose from 7½c. August 31 to 8½c. September 10, but on more favorable crop accounts there was a reaction to 8 cents by September 30.

As a result of the influx of gold and the revival of confidence, the money market relaxed very decidedly as the month advanced. On the Stock Exchange as high as 8 per cent for money on call was paid a number of times, but after the 21st the rate did not get above 5 per cent, and the range on the 30th was 4@5. In time money the engagements were few, and a commission of one to two per cent in addition to the rate of 6 per cent per annum had to be paid up to about the last week of the month, though the foreign bankers made loans at plain 6 per cent—that is, without a commission—but required gold notes. During the last ten days of the month the commission was no longer demanded by domestic lenders, and the rate was generally 6 to 7 per cent for all dates; foreign bankers then found it impossible to make loans on a gold note. In commercial paper dealings continued very limited, and only the very highest grades could be placed at about 9 per cent up to the last week of the month, when the rate dropped to 7 per cent for choice endorsements and 8@9 per cent for the best single names. The demand for currency from the interior continued active, and several bank failures at New Orleans created a special call at that point; towards the close of the month the demand slackened somewhat. The void created by these shipments, however, was more than filled by the receipts of gold from abroad, and the money holdings of the banks increased from \$121,819,900 on August 29 to \$126,308,200 on September 26, and the surplus reserve from \$8,836,200 to \$14,216,025. The following shows the money rates on various classes of loans for each week of the month.

Good 4 to 6 months.....			9-10	8-9

The foreign exchange market continued weak almost throughout the month. There was an abundant supply of bills, arising from breadstuffs and cotton shipments, both of which were pretty free, while at the same time the restriction of the import movement of merchandise on account of the depression in trade kept the demand for bills small. After some advance on the 1st of the month, rates declined again, and with some fluctuations the course continued downward until towards the latter part of the month, when there was a slight upward reaction. The effect of the two advances in the Bank of England rate of discount appears to have been to widen the difference between long sterling on the one hand and sight bills and cable transfers on the

other. The following shows the actual rates for exchange for every day on which a change in any class of sterling bills occurred.

On the Stock Exchange the tone was strong and, as already stated, a decided advance in prices was established. The Vermont election on the 1st of the month was a strong stimulus to the market and caused quite a considerable rise. Realizing sales made the market somewhat ragged during the second and third weeks of the month and the encouraging news from Maine contained in the morning papers of the 15th did not at first have the expected effect of starting the market upward again, but later, with all the developments favorable—large gold engagements, a steady increase in the Treasury gold reserve, easier money—the upward movement was resumed and a further large and general advance in prices occurred. Many of the investment brokers reported a better demand for the best class of bonds than for some time past. The sale of the Reading properties led to some speculation in the securities of that company. The rate war in the South between the Seaboard Air Line and the Southern Railway and other lines, which had broken out afresh after the dissolution of Judge Simonton's injunction on August 31, was again checked by the issue on the 10th of a mandatory order by Judge Emory Speer, compelling the restoration of rates, the ground for the intervention being that the cut rates violated the third section of the Inter-State Law in discriminating in favor of one locality against another.
