### PROGRESS TOWARD UNIFORMITY IN STREET RAILROAD OPERATIONS.

The many consolidations of street railroads which have taken place in the last year have served to bring into prominence the lack of uniformity in equipment and operating appliances. The prevailing diversity of practice has been a natural result of the conditions under which street railroads have been developed. Settled practice could hardly be expected in essential features, and much less in the multitude of details arising in the application of electricity to such a new and extensive use as has been the case in street transit travel. This lack of uniformity has not unnaturally appealed to the managers of consolidated properties as needing correction.

It has therefore happened that the first work undertaken after consolidation has been the effort to formulate standards of practice, and to modify equipment and appliances to conform with the new rules. The advantages of uniformity and interchangeability in the tracks and rolling stock of steam railroads have long been recognized. The same necessity has not existed among street railroads, while the manner of their building and the expansion of electric mileage have precluded the idea of a standard practice. A heterogeneous assortment of motors, cars, powerhouse machinery, etc., could be put up with by small lines without much apparent inconvenience or lack of economy; they become impossible when these lines are merged to form an extensive system. Such a merger has involved the reconstruction of a good many roads long before that work would have been undertaken if they had continued to be operated as independent lines. An interesting illustration of this development of the effort to secure uniformity in

street railroad practice is afforded by the policy of the Metropolitan in operating the Third Avenue Company. It was in evidence previously in the merger of the various separate electric lines in Brooklyn under the control of the Brooklyn Rapid Transit Co. It may indeed be seen in any large system formed by the merger of a number of independent lines.

These consolidations may be attributed in part to the economies possible in operating cost by introducing standard equipment of all sorts, which in considerable degree admits of a greater utilization of the property needed in furnishing car service. Even without consolidations two factors were tending toward securing a voluntary standardizing of electric railroad equipment, which the managers of consolidated properties have merely taken advantage of. First, the development of electric traction had been so rapid that roads which had been in operation a few years had begun to feel the need of bringing their properties into better condition, while secondly only within the last year or two has there been practice that could be regarded as fixed or final in power generation or distribution in track construction or in rolling stock. Whatever may be the progress in any of these departments in coming years, it may be safely said that the changes from the practice now established in each department on the best-built modern roads will be merely a development, and not revolutionary. This consideration warrants, if it does not demand, that old-fashioned equipment be discarded on all lines where capital can be raised to carry out reconstruction. It has been fortunate that so much of this reconstruction work has been in charge of consolidated companies operating a considerable mileage. That situation has emphasized the advantages and economies of standardization, and has facilitated agreement among different companies. Moreover, it has placed the reconstruction and the selection of appliances in the charge of the officers who may be assumed to have had the largest experience in street railroad management, and therefore who best know the requirements of the service.

It hardly needs to be said that the great majority of the electric lines in this country have been built by engineers who for the most part had little or no previous experience in similar work. In meeting many of the problems they had to overcome, they were unable to appeal to previous experience either of their own or of other engineers. It followed that difficulties had to be solved by original investigation, aided

by personal ingenuity. As a consequence the natural tendency to individuality has emphasized diversity in the construction work of each company, those in charge being thrown largely upon their own judgment and resources. A fact which helps to interpret this situation is that the development of electric traction comprises a period of scarcely ten years. The system has grown so rapidly that individual ideas and much experimental work were an obvious necessity. The advantages of electric traction were so important that it was worth while to risk a considerable investment rather than wait for the working out of better methods. Under these circumstances it could not be otherwise than that many of the devices should be temporary and soon supplanted by different processes.

With practice now finally settled in many respects, and smaller companies merged into larger ones, it is likewise natural that street railroad managers should turn to uniformity of methods as the phase of the operating problem which most demands attention. Power houses and their machinery, means of distributing power, roadway construction and rolling stock all offer many opportunities to simplify operations and promote economy. Moreover, the need of having standard equipment must be more forcibly impressed upon a manager of a consolidated railroad when every line placed under his control has each its peculiarities in all these departments. Type and weight of rail, methods of bonding, feeder distributing systems, power-house machinery—all may differ so widely that it is not possible to harmonize their operations and secure best economy without substituting one type for the multitudinous methods which are found in use.

#### *GRADE-CROSSING PROTECTION.*

The City of Cleveland is proposing to abolish the steam and street-railroad grade-crossings within the city, like so many other cities in the East. Such a work, however, is costly, and the city authorities, as in so many other cases where improvements are proposed, do not seem willing to fairly meet the expenditure involved, but try to shift the burden. The Cleveland officials have proposed that the street railways should bear about 35 per cent of the cost of removing grade-crossings, the remaining portion of the cost being borne by the steam railroads. This suggestion is manifestly unfair, for the city will benefit more directly than the railroads from doing away with grade-crossings. In some Eastern States, notably Massachusetts and New York, this has been distinctly recognized and met by the States and the local communities, directly benefited by the abolishing of grade-crossings, agreeing to pay fixed proportions of the cost of the work. Obviously this is the more reasonable arrangement.

To force the railroads, whether steam or street surface lines, to bear the entire burden of the change of line involved in removing grade-crossings is unfair. It is a heavy burden even when shared with the State or city, and moreover it is a burden largely created by the growth of traffic in a city to which the railroad may have been the chief contributing cause. The Cleveland proposition, too, involves another objectionable feature in that the consent of the railways does not seem to have been sought to the proposed removal of crossings. Whatever may be the outcome of the Cleveland negotiations, it is desirable that street

railway managers should consider the possibility of their companies being called upon to incur expenditures in removing or changing the location of their tracks at crossings with steam railroads. The development of traffic on electric car lines within city limits and their extension, long distances beyond, has naturally greatly increased the number of crossings and added to the danger of accidents. Now that the period of busy traffic has been reached, the frequency of accidents between street and steam cars calls renewed attention to the problem of decreasing the number of such crossings and the liability of collisions.

Change of grade to avoid the crossings of steam railroad tracks is of course out of the question, except in large cities, where unfortunately the cost is the greatest. It is important, however, to recognize a public sentiment in the more developed States for the separation of highways and steam railroad tracks. Wherever such a plan is carried out, involving the rebuilding of street-car tracks, the transit company will necessarily be required to spend large sums. The cost of relaying its tracks is a large item even where it is not called upon to bear any share of the general cost of the improvement. Almost invariably, however, it is required to contribute some substantial portion of the total expenditure. Even if it be admitted that it is proper that the street railway should bear part of the cost, the fact cannot be overlooked that there is a constant tendency to increase the proportion, and in some cases the towns will attempt to mulct the street railways in the whole cost properly falling upon the municipality.

Street-railway managers in the more developed States where the removal of highway and railroad crossings is likely to be vigorously pushed should arrange to have the proportion of the burden which it is possible to fix upon the railroad settled by general statute, and not left to an assumed sense of justice in the authorities of the individual municipalities. The outcome of having no general laws which may be applied is seen in the case of the Ohio city referred to, with its demand that the city be relieved of the cost of an improvement of which it is the chief beneficiary.

Even where there is no possibility of change in the grade of railroad tracks, it may be questioned whether all street railway managers have made as careful provision as is desirable to protect their cars from being struck by locomotives while on steam railroad crossings. In fact, usually there is practically no protection at such crossings beyond the little afforded by the conductor running ahead a few feet and hastily glancing up and down the railroad tracks. Steam-railroad managers have been taught by long experience how unreliable dependence upon employes' carefulness and fidelity soon becomes. The frequency of accidents at crossings between trains and street cars is sufficient commentary upon the non-effectiveness of such reliance. The liability of serious casualties should be sufficient to induce every street-railway manager to provide the most efficient mechanical appliances to safe-guard such crossings. One serious accident will call for more damages in settlement than would equip the whole line with the best signaling appliances. An increasing number of companies is providing signal apparatus at crossings of steam-railroad tracks, and their efficacy and economy are easily proved.

### EXPRESS AND FREIGHT SERVICE ON ELECTRIC LINES.

The past winter a considerable field for the electric street railways has been developed in the express and freight service to the convenience of the public and to their own profit. A year ago the plan was merely tentatively discussed, although a few companies had undertaken to experiment in the carriage of express matter or light freight in a limited way. Now, however, nearly a dozen roads in various parts of the country are carrying express or freight, or both, as a regular branch of their business. The subject has indeed come up for general discussion, and it is noticeable that instead of the expected opposition on the part of the public at large, the efforts of those managers who have considered it advisable to undertake the service have been quite cordially supported. If more companies have not taken up the plan, it is due less to the possibility of opposition by the public than to the indifference of the managers themselves, or to local conditions which prevent the plan being put in force. This point naturally has to be considered.

Freight service, or even the carriage of light express packages, is not possible on all lines. It may be that the chances of making the experiment a success are remote, or that the character of the travel over the company's lines makes it impossible to consider the development of a freight line. The essential business of a street railway is the transportation of passengers. Everything must be subordinated to that. It is the most profitable work a street railway can carry on, and its development demands and should have the best energies of each company's officials. It is only when the passenger travel has been developed, for the time being, as fully as the particular circumstances of a line permit, that the inauguration of a freight service deserves attention. But to many companies the opportunities thus offered are considerable and the incidental expense is not large and can be regulated within limits. The revenue from express and freight to many lines may appear as largely net profit, for often the service is conducted at such hours as to utilize power and facilities which otherwise at those hours would be non-productive.

In Brooklyn many plans have been proposed to use the street tracks for a systematic service, and it has been asserted within a week that a definite proposal has been taken up by the managing officials. Express cars have been regularly operated by one of the general express companies. The questioning of the street railway company's right to permit the use of such a service over its tracks brought out a comprehensive acknowledgment of the company's powers by a Supreme Court judge which may prove particularly valuable in the future. The peculiar traffic conditions of Brooklyn and the location of the street railway tracks seem to offer advantages for freight traffic not usually found in a large city. These are sufficient to account for the numerous plans to run freight cars over the different lines. The Brooklyn Rapid Transit Company has several special cars hauling heavy rails and other construction material for its own use, and a general freight car besides the special express cars, so that it is gathering experience in the handling of freight which may be of advantage at any time that a comprehensive freight-carrying plan is formulated.

In Connecticut, where trolley development has proceeded at a rapid pace, both in extent of mileage built and in the merger of roads, a carefully-planned freight service is operated by a number of the larger roads. The important districts between Stamford and New Haven and between Bridgeport and Ansonia have a well-organized light freight and express service. It has been of chief advantage perhaps to farmers and fruit growers, who send their produce to market by the electric roads, securing convenient and expeditious transit, which is particularly important and beneficial to them because of the perishable character of their shipments. The farming communities which have benefited so much by the building of electric roads through the greater accessibility of town and country have been the chief gainers in such development of freight service on these lines as has been reached. At Cleveland, with its extensive system of interurban roads and terminals concentrated in the city, a service for handling freight shipments of farm produce has been highly organized by a separate company operating over all the roads. This company reports that it handles between 800 and 1,000 ten-gallon milk cans daily on the 50 or 60 miles of interurban roads over which it operates. Such a statement gives a graphic idea of the development of business possible under favorable conditions.

Freight service is conducted on a more or less comprehensive plan by street railways at Newburg, N. Y.; Dayton and Youngstown, O.; Indianapolis; between Buffalo and Lockport, N. Y.; at Waterloo, Ia.; Toronto, and by one of the Chicago suburban lines, among others. In Massachusetts during the past winter a bill was introduced to specifically authorize street railways to carry freight. It failed of passage, but apparently more because it was not actively supported than because there was any special objection to granting the privilege. But that such a bill should be brought forward in so conservative a State as Massachusetts is evidence that the proposal for freight service on electric street railroads meets a public demand.

### STORAGE BATTERIES AS A STREET MOTIVE POWER.

Two recent incidents, apparently of contrary import, have attracted renewed attention to the utilization of storage batteries as a motive power for street railways. In Chicago the important suburban line which has been thus operated announces a change of power to the overhead trolley. As the Chicago installation was the most important in this country, the decision to change the system seemed to mean that storage batteries could not compete with the trolley and other methods of street-car propulsion. However, shortly after the news was published of the abandonment of storage batteries in Chicago, the President of the Metropolitan Street Railway in New York stated that he was equipping one of the important Metropolitan cross-town lines with the same power. As the Metropolitan has experimented on a large scale with practically every feasible system of motive power, its decision so lately arrived at to experiment again with storage batteries is significant and important. This would be so in any event, but it is particularly interesting at the present time, because the Metropolitan Company has a parallel cross-town line operated with compressed air cars.

These two transit systems, then, will be tested under as similar conditions as can exist in street rail road operation. The results as to the comparative economy of the two methods will be of peculiar value, not only as to the relative merits of one system as compared with another, but as compared with the electric underground and the overhead trolley. The tests will be not only under similar conditions as to volume of traffic, length of line, etc., but under the conditions most favorable to develop the economy of each system. If excellent results are not obtained by both systems in these installations, it is not likely that either will be considered longer as of utility for street-car transit under any practical conditions. The fact, however, that the Metropolitan Company is now making such a large investment in storage-battery and compressed-air cars is significant that both kinds of power have strong claims to recognition as desirable methods for operating street railways. Theoretically, in fact, either power answers most of the requirements of street railway work.

Perhaps the most important consideration is that every car is a separate operating unit, carrying its own power. Accidents, hence, affect but an individual car, and do not cause a suspension of service on an entire operating division or the whole line. This is of course likely to happen, and indeed does occur, with electric underground, overhead trolley, cable, or other mechanical traction systems depending upon assembled machinery as the source of power.

No roadway construction is necessary to increase first cost or maintenance expenses, and the cost of generating the power is moderate. One difficulty in developing either system for practical use has been in regulating the distribution of the power so that it should be sufficiently effective and economical. Whether that problem has been now properly and sufficiently solved the Metropolitan Company's experience will soon determine. That there are good reasons to suppose it has been may be taken for granted or the Metropolitan Company would not have authorized the heavy expenditure required for the equipment of these two lines with two systems of motive power which are used nowhere else in this country on a large scale.

Yet, it is interesting to recall that both compressed air and storage batteries promised some years ago to contest with the overhead trolley for superiority as an

efficient and economical system for street-car transit. That possibility long ago passed; the question of their utilization has now narrowed to installations where the use of the overhead trolley or its economical substitute, the underground electric system, are not practicable or desirable. The overhead trolley is not permitted on Manhattan Island, and street railway managers elsewhere may have to face a public demand ultimately for the removal of overhead wires from the chief thoroughfares of large cities. To meet these conditions the electric underground system has been developed; but the first cost is so heavy that although it is cheap and efficient to operate, the search for another substitute keeps up. It is this special demand which has revived the present interest in compressed air and storage batteries. The Metropolitan Company finds that the cost of track-construction for electric underground system is so enormous on cross-town lines, because of the many gas and water mains to be removed, as to be prohibitive.

At equal cost of construction, maintenance and operation, compressed air would be a more desirable motive power than storage batteries, because of its greater adaptability to branch lines. The Chicago experiment has in fact proved that storage batteries as a street motive power must be confined to a very narrow set of conditions. Its field will be limited to lines of comparatively short length and without branches. In Chicago storage-battery power was efficient and economical on the originally-built road; but the line was located in a suburban district, and the development of the territory called for the construction of extensions and branches from the old main line. The storage-battery cars could not be run over these various routes with the operating economy of the main line and because of the difficulty of recharging. The line being equipped with accumulators by the Metropolitan has a heavy traffic, and the round trip is well within the mileage limits of the batteries. The trips can be so regulated that the charging will be made with the least possible delay and at one station, so that the investment for fixed plant will be reduced to the minimum. Under these conditions storage batteries should afford an economical means of moving cars, and their cleanliness, noiselessness, freedom from mechanical apparatus, which is one objection to compressed air, make them otherwise desirable as a street motive power.

## SECURITIES AND REPORTS.

This is one of our four SUPPLEMENTS. In using the series it is to be remembered that they are inter-dependent publications, complete only as a whole. If utilized together, and with the fresh items of news the CHRONICLE contains from week to week, the investor will have all the information he needs in seeking a safe and remunerative lodgment for his money.

Street Railways forcibly illustrate this inter-dependence. Such roads obviously rely for their income, and therefore in great part for the value of their securities, upon the population and activity of the country they serve. Hence constant reference to our STATE AND CITY SUPPLEMENT will be found necessary by those wishing to purchase the stocks and bonds of street roads. Population, assessed valuation, tax rate, total debts of the counties, cities and minor municipalities are given at length in that publication, every one of which items is an essential fact contributing more or less to any correct estimate of the amount of suburban travel a given road commands.

The ABBREVIATIONS used in our Street Railway statements will be found explained in a table immediately following the last statement in this SUPPLEMENT.

A full INDEX which shows where each railway will be found is also given on the closing pages.

AND IN 1870 WAS 21,789.

**ATLANTA RAILWAY & POWER—**A trolley road.  
ORGANIZATION—This is the old Atlanta Consolidated Street Railway, incorporated in 1891 and name changed as above July 1, 1899. A consolidation with the Atlanta Railway and the other street car lines in Atlanta had been arranged under the new name; but injunctions prevented the consummation of the plan, and in Jan., 1900, the scheme was abandoned.—V. 70, p. 125.

The Trust Company of Georgia (Joel Hurt, Prest.) owns both the Atlanta Railway & Power and the Atlanta Railway.

A sharp contest was in progress in 1899 between the Atlanta Railway & Power Co., representing the consolidated lines of Atlanta, and the Collins Park & Belt RR., which latter was seeking franchises covering the principal streets of Atlanta. In August, 1899, the Collins Park road was successful in obtaining its franchises.

The \$2,025,000 of Atlanta Consolidated St. Ry. 5s of 1899 are to be called in 1901. Until then company has stipulated to pay no dividends. V. 70, p. 1018. \$2,250,000 of the new issue

ROAD AND PLANT.—Operates 52 miles of main track and 13 miles of sidings and second track.

Company in May, 1900, was seeking franchise from City for public and commercial electric lighting (part of the proceeds of the new bonds being intended to provide the means for this purpose), but in June, 1900, it was reported that the company would not accept the terms proposed by the Aldermanic Board.—See V. 70, p. 1194.

**ATLANTA RAPID TRANSIT.—**An electric road.

ORGANIZATION—Formerly the Collins Park & Belt RR. June 1, 1900, owned and operated 13 miles of track, laid with 90-lb. girder rails, in and around Atlanta. Much new mileage projected. Constitutes an opposition line to the old roads, namely the Atlanta Railway & Power and the Atlanta Railway. In 1899 was granted franchises by Atlanta City Council on 7 miles of streets within the city limits, 2.2 miles of which have already been built and put in operation. See V. 69, p. 491. Franchise provides that in case of consolidation with another road both companies are to pay 5 per cent of gross receipts to city. Also, that company cannot be subjected to any tax on gross receipts until the Atlanta Ry. & Power Co. can be compelled to pay the same tax. Construction on the rest of road and extensions is temporarily held up by litigation. The routes laid out render necessary the condemnation of tracks of the Atlanta Ry. & Power. The latter to prevent this applied for an injunction. Judge Newman, of the U. S. District Court on May 1, 1900, decided in favor of the Rapid Transit, but the Ry. & Power Co. has appealed. In June, 1900, Rapid Transit Co. began selling 3 tickets for 10 cents.

**MASSACHUSETTS ELECTRIC COMPANIES.**—Electric light and street railways.

ORGANIZATION—Formed in May, 1899. Is not an incorporated company, but a voluntary association managed by a board of fifteen trustees, who hold the title to its assets. Messrs. E. Rollins Morse & Bro. and Tucker, Anthony & Co. of Boston, who promoted the combination, in June, 1899, in offering some of the stock for public subscription [\$1,000 of preferred and \$500 common was offered for \$1,050], stated that "the Declaration of Trust contains strict provisions against the creation of any indebtedness whereby any shareholder or trustee can be held to any personal liability." The following is a list of the companies originally controlled, also including those since added. For details regarding their earnings and condition, see statements below. A good many of these separate companies have since ceased to exist, having been amalgamated with others in accordance with the plan of the management to combine the various properties into a few large companies. Roads already merged are designated by an asterisk (\*) prefixed to the name. In June, 1900, the consolidation of the three Newport companies had not taken place, although a bill permitting the same had passed the R. I. Legislature.

The Brooklyn Rapid Transit Company in April, 1899, also acquired, through one of its constituent companies, all the franchises and properties of the former Brooklyn & Brighton Beach RR. Co., and this has now been converted into an electric road. The company also then leased for the period of 999 years the Prospect Park & Coney Island RR., the New York & Coney Island RR. and the Prospect Park & South Brooklyn RR. in November, 1899, also acquired from the Reorganization Committee of the Kings County Elevated Railway Co. and Fulton Elevated Railway Co. all the preferred and common stock of the newly-organized company which has succeeded to those properties. In exchange \$2,000,000 of the stock of the Brooklyn Rapid Transit Co. was given. The capital stock of the new Kings County Elevated Company is \$2,800,000 preferred and \$6,000,000 common, and the company has an authorized bonded indebtedness of \$7,000,000 in 4% bonds, of which only \$5,000,000 has been issued, making the total fixed charges of the new company as acquired by the Brooklyn Rapid Transit Co. \$200,000 per annum.

The Brooklyn City RR. Co. is held under a 999-year lease, dated Feb. 14, 1893, guaranteeing all charges and 10 per cent dividends on \$12,000,000 of stock. The lease is nominally to the Brooklyn Heights RR. Co. but practically to the Brooklyn Rapid Transit Co., since that company owns the entire capital stock of the Brooklyn Heights Company and guarantees payment of dividends to lessor, as said above. In 1898 the Heights Company leased also the Brooklyn Queens County & Suburban RR., theretofore operated separately. On April 1, 1899, the Heights Company leased the Brooklyn Union Elevated RR. Co. for one year for \$100,000 and fixed charges, and also on the same date the Nassau Electric RR. for one year for \$150,000 and fixed charges. On Feb. 13, 1900, a lease of the Nassau Electric to the Heights Co. was made for 999 years. See terms under Nassau Electric.

In April, 1900, the Brooklyn Heights Company began suit against the Brooklyn City RR. to recover about \$2,000,000 for failure to fulfill obligations claimed to be imposed by the terms of the lease between the two companies.

In the reorganization of Long Island Traction the old \$30,000,000 stock paid an assessment of \$10 per \$100 share, the old stock being reduced to \$20,000,000, and \$7,000,000 of 5 per cent bonds being authorized, against \$3,000,000 of Long Island Traction.

In his annual report President Rossiter estimated the entire net fixed charges for the year beginning July 1, 1899 (including the Kings County Elevated), at \$3,406,000.

STOCK—Stock authorized is \$45,000,000; issued \$45,000,000. The stock was formerly held in a voting trust, but this terminated January 1, 1900, and control is now vested in the owners of the shares.

The Rapid Transit stockholders voted Feb. 11, 1899, to increase the stock from \$20,000,000 to \$45,000,000.—V. 68, p. 185, 329.

In April, 1899, stockholders were given the privilege of subscribing to the extent of 7% of their holdings for Brooklyn Rapid Transit

stock at par, the proceeds of this issue of stock being used in the acquisition of the Brighton Beach Railroad properties and the electrical reconstruction of those properties, as well as of the leased properties of the Prospect Park & Coney Island RR. Co. and allied lines. The total amount thus issued was \$2,713,900.

Bonds—Of the \$7,000,000 fifty-year gold 5s of 1895, \$1,875,000 took up collateral trust notes, \$3,000,000 went to stockholders for the assessment; balance for future requirements of the road. For description of property covered by the mortgage see V. 62, p. 1138. The Central Trust Co. is mortgage trustee. In December, 1897, bonds for \$1,217,000 were listed, issued for purchase of Sea View RR. and for extensions and improvements.—V. 65, p. 1219. In October, 1893, \$227,000 additional were listed. See application in full, V. 67, p. 904.

Brooklyn City RR. mortgage of 1891 is for \$6,000,000 and is a first lien on the old Brooklyn City road and a consol. lien on the lines acquired by consolidation in 1890. Of the \$6,000,000 issued, \$4,373,000 are in the hands of the public and the balance is held in the guaranty fund.

The total authorized issue of first consolidated mortgage gold 5s of the Brooklyn Queens County & Suburban RR. is \$4,500,000, of which \$1,666,000 are reserved for extensions, on which they will be a first lien. Of the \$2,834,000 outstanding, \$2,255,000 in 1893 were endorsed with the guaranty of the Brooklyn Heights RR. Co. as to principal and interest, and in January, 1899, provision was made for guaranteeing the remainder on the payment of ten dollars per bond. Both B. Q. C. & S. loans are subject to call in 1916.

The Sea Beach Ry. 1st 4s also are guaranteed as to principal and interest by the Brooklyn Rapid Transit Co.—V. 65, p. 1219.

The company in 1899 opened several new routes to Coney Island, among them one from Hamilton Ferry to the Island, another from the Bridge to Brighton Beach (surface route); also from Broadway Ferry to Brighton Beach, besides beginning the running of through trains to Manhattan Beach via the Elevated road. On May 29, 1900, increased the fare to Coney Island to 10 cents on the Sea Beach and Culver lines, the extra fare being collected at 22d Ave. Only one fare is charged from 39th Street Ferry or Hamilton Ferry to the Island. See V. 70, p. 1248, as to right to collect the extra fare.

On Nov. 1, 1899, began giving transfers between the elevated and surface roads at certain points of juncture between the two, but discontinued transfers at the same points from one surface road to another. In Feb., 1900, on the recommendation of the State Railroad Commissioners, this last arrangement was modified so as to grant optional transfers (good for either the surface roads or the elevated line) at 65th St. and 3d Ave., and 36th St. and 5th Ave. On May 29, 1900, began giving all its various transfers on Sunday, previously withheld on that day.

GENERAL FINANCES—During the year ended June 30, 1899, the Company added to its property 233 miles of track, elevated and surface, and the acquisition of the Kings County Elevated gives 22 additional miles. All of the properties thus acquired were secured through the issue of new Brooklyn Rapid Transit stock and entail no new fixed charges for such purchase except the rental to be paid for the Prospect Park & Coney Island RR. (\$40,000 per year) from the time the lease of that property went into effect—June, 1899. Moreover, all the properties whose stocks have been acquired by the B. R. T. Co. have recently had their fixed charges greatly reduced by process of reorganization.

REPORT—The annual report will be found in the CHRONICLE of August 26, 1899. The method of operation is to have all the railroad companies leased to the Brooklyn Heights Railroad Company, which is the operating company, and the income of the Brooklyn Rapid Transit Company consists of the surplus profits of the Brooklyn Heights Company, and such moneys as it may receive from the stocks and bonds held by it. The table below gives the operating statement of the Brooklyn Heights Company for the year ending June 30, 1899, with comparison for the preceding year, and includes the operation of the Brooklyn Heights Railroad Company, the Brooklyn Queens County & Suburban Railroad Company, the Brooklyn City Railroad Company and the Sea Beach Railway Company for the entire fiscal year, and of the Brooklyn Union Elevated Railroad Company and Nassau Electric Railroad Company for three months only of the fiscal year. For purposes of better comparison the figures of the leased companies for the corresponding period of the preceding year are combined with those of the Heights Company, although they were not at that time a part of the Brooklyn Rapid Transit system.

**ORGANIZATION**—Incorporated October 21, 1893, for 50 years. The West & South Towns St. Ry. (formerly leased) was purchased in May, 1896, and consolidated. BONDS (\$500 and \$1,000 each) authorized \$3,000,000, reduced from \$10,000,000 in Dec., 1896.—V. 63, p. 1114.

On Sept. 7, 1899, instituted two-cent fares on its branch lines (selling 12 tickets for 25 cents), without transfer, however, to main line.

On April 14 President J. H. Witbeck filed a bill for the appointment of a receiver, and on the 17th Frank H. Sellers, of the Title Guaranty & Trust Co., Chicago, was appointed receiver. A reorganization committee consisting of James P. Black, Lyman M. Paine and Glenn E. Plumb, proposed that bondholders surrender one-half or more of their bonds for cancellation, accepting double the amount in stock. It was thought that from 30 to 50 per cent of the bonds could thus be retired. The May interest on the \$1,154,000 of 1st mortgage 5s was passed, pending reorganization.

### CHICAGO UNION TRACTION.—Cable and electric.

**ORGANIZATION**—Incorporated in Illinois June 3, 1899, by the Elkins-Widener Whitney syndicate and purchased for \$10,000,000 cash the holdings of stock of Chas. T. Yerkes in the West Chicago and North Chicago roads. These holdings consisted of \$3,200,000 West Chicago stock and \$2,000,000 North Chicago stock. Subsequently the

two systems were leased, the West Chicago for a yearly rental equal to 6 per cent on the stock and the North Chicago for a rental equal to 12 per cent on the stock, the leases being dated June 1, 1899. By a tripartite agreement entered into on the same date the Union Traction Company's holdings of stock of the two roads are to remain in trust with the Illinois Trust & Savings Bank of Chicago "for all time" as security for the leases.—See V. 68, p. 1131.

On April 14, 1900, negotiations for the acquisition of the Chicago Consolidated Traction were consummated. The Union Traction paid \$45 in bonds of the Chicago Consolidated Traction bearing 4½ p. c. interest and guaranteed by Union Traction and \$1 50 in cash for each share of the consolidated company's stock. In April, 1900, it was reported that \$13,500,000 of the total issue of \$15,000,000 stock of the Consolidated Traction had been turned over under this plan.—V. 70, p. 791.

**STOCK AND BONDS**—The \$12,000,000 preferred stock was subscribed for at par, a bonus of 50 per cent, however, being given in common stock.—V. 68, p. 1225. There was thus \$2,000,000 cash left after the payment of \$10,000,000 to Mr. Yerkes, and this \$2,000,000 is to be spent for improvements and extensions of the lines acquired.

In December, 1899, both issues of stock were listed on the New York Stock Exchange. V. 69, p. 1299.

In April, 1900, one mile of track was in operation from Dearborn Station south to Seventeenth Street. The company agrees to pay the city 5 p. c. of gross for second five years of franchise, 7½ p. c. for third five years and 10 per cent for last five years. Interest payable at Northern Trust Co.

Trustees of 1st mortgage were Farmers' Loan & Trust Co. of N. Y. and American Trust & Savings Bank, Chicago. In June, 1898, the Equitable Trust Co. was appointed in place of Farmers' Loan & Trust Co., the latter having been held incompetent to act, but case appealed to U. S. Court.—V. 66, p. 1237; V. 67, p. 75. On March 26, 1900, the U. S. Supreme Court decided that an injunction against proceeding to foreclose a mortgage in a Federal Court which has first acquired jurisdiction over the property cannot be granted by a State Court in which suit is brought for a removal of the trustee. It did not pass upon the question of the right of the Trust Company to act.

Note.—The total issue of old first mortgage bonds was \$7,574,000, of which in 1900 \$834,000 had not assented to readjustment plan of 1895. Of these last \$102,000 were in the treasury, while \$605,000 held by Mr. William Ziegler were until lately in litigation and receiving no interest; the balance, \$127,000, was allowed to receive interest at 3 per cent per annum, or 60 per cent of face of coupons. Holders of first 5s who assented to plan received in exchange for their principal 60 per cent in guaranteed debentures and 15 per cent in incomes. The validity of the Ziegler bonds has been upheld. V. 70, p. 176, 687. In June, 1900, the Ziegler bonds were purchased by Blair & Co. for \$610,000 (their face value), the accumulated interest, viz., \$172,000, having previously been paid. This has ended the litigation and will allow readjustment of the company's finances.—V. 70, p. 1149.

Stock—In May, 1896, trust certificates representing Lake Street stock for \$5,009,300 were offered to stockholders of Columbia Construction Co. at \$18.90 a share; the stock itself will be held in a ten-year voting trust.—V. 62, p. 908.

Bonds—The gold debentures are secured by deposit of the old bonds with the Northern Tr. Co.; their p. and i. are guaranteed by the Northwestern Elevated RR. Co. When all the old bonds have been exchanged, they will be reissued to the extent of 60 per cent, and the balance canceled.

ROAD—Owns in Chicago a double-track elevated railway, Market Street from Madison Street to Lake Street, thence to the Western city limits, being 6 2-5 miles, equal to 14¼ miles of single track. Connects with Suburban RR. for traffic outside the city. V. 65, p. 236. Trains began running over the Loop line in March, 1897. In 1898 acquired franchise for 1 mile road elevated and 1½ miles surface, which will be

built by the Cicero & Harlem Ry. Co. (which see below); this piece was opened April, 1899.

**NORTHWESTERN ELEVATED RR.—**

ORGANIZATION—This road was promoted by a syndicate headed by Blair & Co. of New York, who, in Dec., 1898, advanced \$4,500,000 to build the road. Loan was secured by a deposit of all the stock and bonds of the company. On Dec. 29, 1899, a new mortgage was authorized as below and the previous mortgage canceled. With the proceeds the Blair loan was paid off March 1, 1900, thus releasing the holdings of stock, which were subsequently distributed among the shareholders of the Columbia Construction Co. Both classes of stock, however, have been lodged in a voting trust, as more fully stated in a subsequent paragraph. Stockholders of the Columbia Construction Co. had the right to take the bonds at 99.

All the right of way is owned in fee, except at street crossings. Road was to be completed Jan. 1, 1900, but Chicago Common Council (V. 70, p. 39, 76, 125,) granted extension of time to complete sub-structure to May 31, 1900, and to Jan. 1, 1901, for the building of stations. A payment of \$100,000 was exacted for the extension. Road was formally opened for business on May 31, 1900. V. 70, p. 1049.

**JERSEY CITY HOBOKEN & PATERSON RY.—An electric system.**

This is a consolidation Nov., '99, of practically all the trolley roads in the northern part of New Jersey except the North Jersey Street Railway, and this latter is controlled by the same interests, namely the Shanley-Young syndicate. V. 69, p. 955. The Jersey City Hoboken & Paterson comprises the following roads:

- Jersey City Hoboken & Rutherford Electric.
- North Hudson County (controlling the Hudson & Bergen Traction and the Pavonia Horse RR.).
- Palisades RR.
- Paterson Central Electric.
- Paterson Horse RR.
- Paterson Passaic & Rutherford Electric.
- Paterson Railway.
- Saddle River Traction.
- White Line Traction, formerly the New Jersey Electric.

All the roads enumerated have been completely merged in the Jersey City Hoboken & Paterson, with the exception of the Paterson Railway and the North Hudson County Railway, and in these two cases practically all the stock has been acquired, and merger is to be made presently.

STOCK AND BONDS.—The company made a mortgage for \$20,000,000, as described below. Of the new bonds, \$10,800,000 are outstanding at the present time. These have been used to acquire the stocks of the various roads absorbed, to retire the \$2,459,375 White Line Traction five per cent ad-interim mortgage, and to take up the \$404,000 of North Hudson County debenture 6s which were called for payment Feb. 1, 1900, and the \$300,000 of Paterson City Railway 2d general 6s called for payment April 1, 1900. The remaining old bonds are not subject to call, but it is expected will be largely retired by voluntary exchange for the new bonds.

**INDIANAPOLIS STREET RAILROAD.**—A trolley system.

ORGANIZATION.—Incorporated in Indiana, March 7, 1899. After acquiring the Citizens' Street RR. of Indianapolis and the City Railroad, made a contract with the City of Indianapolis agreeing to surrender the rights and franchises of both companies and accept a new franchise running only thirty-four years. The contract also provides that cash fares are not to exceed five cents, with free transfers, and tickets are to be sold at the rate of six for twenty-five cents and twenty-five for one dollar.

The company also binds itself to pay over to the city (which is to expend it on the public works) the sum of \$30,000 yearly, from 1899 to 1925, and \$50,000 yearly, from 1926 to 1932, inclusive, the contract expiring in 1933—see V. 68, page 723. The city gets the right to purchase the property "at any time within two years and not later than one year before the expiration of this contract," nothing to be paid for the value of the franchise.

Under the plan of consolidation the stock of the Citizens' RR. was exchanged for Indianapolis Street Ry. securities, but the bonds of the Citizens' RR. remained undisturbed. Citizens' stockholders got a \$1,000 4 p. c. gen. mtg. bond of the Indianapolis Street RR. and \$200 in Indianapolis Street RR. stock for every 20 shares of Citizens' stock. As to the three-cent-fare case, which the U. S. Court of Appeals decided in favor of the Citizens' Co. in Dec., 1897, see SUPPLEMENT of Nov., 1898, and V. 64, p. 842, 1180; V. 65, p. 51, 181, 1172

After much skirmishing an ordinance was finally passed Jan. 2, 1900, providing for the sale of 25 tickets for \$1 and 6 tickets for 25 cents, good only during commission hours until January 1, 1905, and thereafter good during all hours; and the city is to have the right (on determining to avail of it during the last six months of 1930) to purchase the property Dec. 31, 1934. In return for these concessions the franchises of the company are extended until Dec. 31, 1934.—V. 70, p. 39.

**METROPOLITAN STREET RAILWAY**—Cable, underground trolley, horse.

ORGANIZATION—Chartered in 1893, and by consolidation, lease and otherwise has acquired control of practically all the street railways of Manhattan Island except the Manhattan Elevated. The latest acquisition is the purchase and lease in 1900 of the Third Avenue Railroad.

The Metropolitan Street Ry. has absorbed by consolidation the following companies, embracing the "lines owned."

IN 1893—	IN 1894 AND 1895—
Houst. West St. & Pavonia Ferry.	Metropolitan Crosstown.
Chambers St. & Grand St. Ferry.	Lexington Ave. & Pav. Ferry (Cable).
Broadway Railway.	Columbus & 9th Ave. RR. (Cable).
South Ferry RR.	

In addition the companies shown in the table of mileage as "leased etc.," have been acquired from time to time by lease or stock ownership. The latest acquisitions are: In July, 1896, the New York & Harlem RR.; in 1897 the Central Crosstown (including Christopher and 10th Street) and Second Avenue. The miles of track operated has thus been increased as follows: From 80 in 1893 to 131 in 1894, to 140 in 1895, to 172 in 1896, to 227 in 1899. The acquisition in 1900 of the Third Avenue system adds 173 miles more of track, making a grand total of 400 miles of track.

The Elm Street Connecting Railway Co. was incorporated in May, 1900, in the interest of the Metropolitan Street Ry. to build a line on Elm St. from Centre St. to Great Jones St. and through Lafayette Place, a distance of 6,000 feet, as a short route for the Fourth Avenue line.

In March, 1900 (V. 70, p. 584), purchased in the open market a controlling interest in the Third Avenue Railroad and in May, 1900, took a lease of the same.

**New Electric Lines.**—The company in June, 1900, was using its underground electric system on Eighth Avenue line from 158th to Battery Place; over the entire Fourth Avenue line; over the greater portion of the Second Ave. line; over the 23d Street line and over the Sixth Ave. line via 59th Street and Amsterdam Ave. The Broadway cable also is being prepared for operation with the same motive power.—V. 66, p. 337, 520, 616; V. 67, p. 530, 736, 956.

In August, 1899, began to operate the Twenty-eighth Street and Twenty-ninth Street lines exclusively with air-power cars, and is expected to use this kind of motive power on the other cross-town lines in the course of time, except the 23d St. line.

As to the relative earning capacity of the horse, cable and underground electric lines of the system see President Vreeland's statement in V. 67, p. 956; also V. 69, p. 489.

The New York Gas & Electric Light, Heat & Power Co., incorporated in Nov., 1898, with capital of \$25,000,000, will distribute to the public, together with its own current, the surplus current of the Metropolitan St. Ry.—V. 67, p. 1263. The Metropolitan St. Ry. is largely

interested in the International and American Air Power Co.—V. 68, p. 130. In November, 1899, President Vreeland was quoted as saying that the American Air Power Co., to the presidency of which he had just been elected, and which operates the compressed-air cars run over the cross-town lines, had been "practically under the control of that company since its formation." V. 69, p. 1060.

THIRD AVENUE RAILROAD—Underground trolley.

ORGANIZATION.—Chartered Oct. 8, 1853. A cable road from Dec. 5, 1893, but in 1899 changed to underground trolley—the 125th Street line Sept. 29, 1899, the Third Avenue line above 65th Street Oct. 22, 1899, and the Third Avenue line below 65th Street on Nov. 19, 1899. In Jan., 1900, the electric line between 125th and 162d streets was completed. In Nov., 1895, purchased control of the 42d Street Manhattanville & St. Nicholas Ave. line. See V. 61, p. 872, 926. Control of Dry Dock E. B. & B. was obtained Aug. 23, 1897. (V. 65, p. 194). In January, 1898, a majority of the stock of Union Ry., N. Y., was purchased.—V. 66, p. 135. In Sept., 1898, Union Ry. purchased Yonkers RR. V. 67, p. 635. In April, 1899, the Tarrytown White Plains & Mamaroneck Ry. was acquired.—V. 68, p. 674.

A traffic agreement, which went into effect April 29, 1899, has been entered into between the Manhattan Elevated and the Third Avenue Railroad system [comprising the Third Avenue RR., the Dry Dock East Broadway & Battery, the 42d St., Manhattanville & St. Nicholas Avenue RR. and the Union Railway lines], providing for an extensive scheme of transfers at cross-town junctions, and also at the terminal points of the two systems. The transfers are granted for an additional fare of 3 cents, making the cost of the entire journey 8 cents. For the latter sum a passenger can thus ride from the City Hall and South Ferry to Yonkers, New Rochelle and Mt. Vernon.—V. 68, p. 672, 872.

Owing to failure of negotiations for a new loan to take care of a large floating debt which had accumulated and to provide means for pressing needs, the Third Avenue Railroad was on Feb. 28, 1900, placed in the hands of Hugh J. Grant as receiver. On March 19, 1900, it was announced that the Metropolitan Street Railway had purchased control of the road in the open market and would provide for the rehabilitation of the company. Arrangements were at once concluded through a syndicate, represented by Kuhn, Loeb & Co., for the sale of \$35,000,000 of the \$50,000,000 new mortgage described below, and on May 24 the property was restored to the company, passing into the possession of the Metropolitan Street Railway Company as owners.

Lease.—In April, 1900, the Metropolitan Street Railway Company took a lease of the property for 999 years. For the first four years Third Avenue stock will receive only the net income above expenses and fixed charges; the next two years 5 per cent is to be paid on the stock; the succeeding four years 6 per cent; thereafter 7 per cent.

The St. Louis & Suburban system alone of the street car lines in St. Louis has not been acquired; \$3,000,000 of the new 4s, however, will be reserved for the sole purpose of retiring its bonds in case its purchase should at any time be thought desirable. The 4 per cent loan is secured by all the stocks of the constituent companies, or by direct mortgage lien upon their property and franchises in so far as purchased.

The new mortgage bears date Sept. 20, 1899, and the bonds mature July 1, 1934, with interest payable January and July at the St. Louis Trust Company, Trustee. Bonds are for \$1,000 each and coupon, with privilege of registration of principal. They cannot be called. Messrs. Brown Bros. & Co. offered the bonds for sale in Feb., 1900.

Lease Guaranty.—The St. Louis Transit Co., besides leasing all the lines of railway of the United Railways Co. of St. Louis, guarantees the payment of interest upon all the new 4s as well as on the bonds of the constituent companies, and also 5 per cent, payable semi-annually, upon the preferred stock of the United Company.

Exchange of Stock.—The St. Louis Transit Co. has exchanged its stock (172,502 shares) for the common stock of the United Railways Company of St. Louis, share for share, in consideration of a payment to it by the stockholders of the United Railways Co. of \$11 per share. This furnished the Transit Co. a cash capital of \$1,897,522 free from all obligations except those under its lease.

**ABBREVIATIONS, ETC.**

The terms and abbreviations employed in this SUPPLEMENT are explained in the following :

"STOCK & BONDS"—Under these words are shown—

"STOCK"—The amount of stock authorized immediately follows the word "stock", and against this is the par value of single shares, viz : "Stock, \$200,000—\$100", means stock, total issue authorized by charter or by act of legislature, \$200,000, divided into shares of \$100 each; "f. p." following the amount given as outstanding means "full paid."

"Pref." means "preferred stock." "Pref. 6 p. c. cum." means preferred stock entitled to dividends of 6 per cent per annum, such dividends if not paid accumulating, all dividends due and unpaid to be paid in full for each and every year before the common stock receives anything. "Pref. 6 p. c. non-cum." means simply that the stock is entitled to 6 per cent per annum if earned, but that if unearned in any year the dividend for that year will not be paid subsequently.

"BONDS"—"Mort." or "M." means mortgage. "Consol." or "con. M." means consolidated mortgage. "Gen. M." means general mortgage. The amount next following is the total authorized amount that can be issued under the mortgage. The word "gold" is usually spelled out, but in some instances is contracted to "g," while "cur." means currency.

"Conv." means convertible into stock. "S. f." means sinking fund. "e." means coupon; "e.\*" means coupon but may be registered as to principal; and "e.\*sr." means that registered certificates without coupons as well as coupon bonds are outstanding. The letters "p. m." mean per mile, so \$15,000 p. m. means that the issue of bonds is restricted to \$15,000 for each mile of track. "Guar." means guaranteed, and "guar. p. & i. (end.)" means guaranteed as to principal and interest, the guaranty being endorsed on each bond.

"DATE"—The date of issue on the face of the bonds is indicated under the word "date."

"INTEREST"—Under this heading is given the rate per cent yearly of the interest payable on the bonds or (if guaranteed) of the dividend payable on the stock; also the months when the interest or dividend is payable, thus, "6 J - J" means 6 per cent per annum payable January and July; correspondingly, "F - A" is used to mean February and August; "M - S" means March and September, and so on, while "Q - J" means quarterly beginning in January and "Q - F" quarterly beginning in February. [The day when the interest payment is due can generally be determined by noticing when the loans mature, the day of the month there given being in most cases the same as for one of the interest dates.]

"ROAD"—The word "track" means in Street Railway parlance all track, whether main line, siding, switch or second track. "Rails are 80-lb. girder" means that each rail weighs 80 pounds to the yard.
