JUVENILE-COURT STATISTICS, 1928

THE COURTS COOPERATING

The second annual report of juvenile-court statistics is compiled from information supplied by 65 courts cooperating with the Children's Bureau in the plan for obtaining uniform statistics of delinquency, and dependency and neglect cases dealt with by juvenile courts.¹ The number of courts participating in the plan is steadily On July 1, 1929, 104 courts were known to be using the increasing. cards and 46 more had been supplied with cards and were therefore presumably cooperating.

Sixty-five courts sent in statistical data for the entire calendar year 1928, as compared with 43 for the year 1927.² The names of the 65 courts reporting for 1928, with the largest city or town in the area served by each court, are given in Appendix A, page 31. For convenience each court will be designated hereafter only by the territory over which it has jurisdiction. The number of cases dealt with by each court during the year is shown in Table 1-38,882 delin-quency cases, 16,289 dependency and neglect cases, and 10,429 cases of children discharged from probation or supervision during the year. Although all the courts have jurisdiction over both delinquency cases and dependency or neglect cases, cards for delinquency cases only were obtained from three of these courts, and one court reported only dependency or neglect cases. No cases of delinquency, dependency, or neglect were reported for two localities from which records of children discharged from probation or supervision were received. Only 62 of the 65 courts, therefore, reported cases of delinquency, 53 courts reported cases of dependency and neglect, 45 courts reported cases of children discharged from probation or supervision. These figures, representing the number of courts reporting each type of case, will be used in the tables and discussion in this report.

As the cards were usually sent by the probation office associated with the court, the organization of this office and its relation to the court affect the completeness with which the work of the court, as to both type and number of cases, is reported.³ Most of the failures

cards back to the bureau. Cards are returned to the bureau for tabulation at least once a year, and pret-erably several times each year. The Children's Bureau prepares from the cards a set of tables on printed forms for each court. These are sent to the courts for use in annual reports, if desired. The facts presented in these tables include charges, places of care pending hearing, manner of dealing with cases, and dispositions. The number of different children dealt with, the number of repeaters, and certain social facts are also shown. For cases discharge from probation or supervision the length of the probation or supervision period and the reason for discharge are given. If it so chooses a court may compile its own tables in accordance with the Chil-dren's Bureau plan, instead of sending in cards. ² Juvenile-Court Statistics, 1927. U. S. Children's Bureau Publication No. 195. Washington, 1929. ³ In some localities the probation office is a separate organization.

1

¹ The basis of the plan is the filling out of statistical eards: A yellow card for each case of delinquency disposed of during a calendar year; a blue card for each case of dependency or neglect disposed of; and a white eard for each case of a child discharged from probation (in delinquency cases) or from supervision (in dependency or neglect cases). The yellow and blue cards differ only in the lists of charges and disposi-tions. The cards have been so arranged that little clerical work is involved; most of the information is entered by checking. Cards and a bulletin of instructions are furnished by the Children's Bureau without charge to cooperating courts, as are franks or addressed envelopes requiring no postage for use in mailing eards back to the bureau. Cards are returned to the bureau for tabulation at least once a year, and pref-erably several times each year.

to report all types of cases were due to divided responsibility in checking cards and returning them to the Children's Bureau. Twenty of the courts did not send records of children discharged from probation or supervision. It is probable that in some of these courts the probation records were incomplete. In others, cases may have been allowed to become inactive without dismissal or removal from the list or index of active cases.

Another situation that affects the number of cases reported by a court is the extent to which records are kept of unofficial work. Unofficial cases may be defined as cases adjusted informally by the judge, referee, or probation officer without being placed on the court calendar by the filing of a petition or other legal paper for adjudication by the judge or referee. All the courts were asked to report such cases, but none was reported by 25^4 of the courts reporting delinquency cases. (See Table I, p. 33.) It is probable that in many of these courts some complaints are adjusted unofficially without any records being made.

Table 1 shows wide variation in the relative number of delinquency and of dependency or neglect cases dealt with during the year. This variation is due in part to the extent to which local agencies other than the court are caring for dependent and neglected children.

TABLE 1.-Number of cases of each type; cases of boys and girls dealt with by 65 specified courts during 1928-Continued

Most of the courts reporting have county-wide jurisdiction, but a few are serving a city only.⁵ In most of the State of Utah the juvenile courts are organized on a district basis, each district including several counties.⁶ Although cards were received from a number of courts in several States, Utah is the only State from which records from all the juvenile courts in the State were received.

About half the reporting courts (31) shown in Table 1 were serving areas having 100,000 or more population. The court serving the

⁵ New York City includes 5 boroughs or counties, each of which has a subdivision of the court. ⁶ The courts for each of the remaining counties, although not organized on a district plan, have been dealt with in two groups for statistical purposes: "Carbon County" and "Other counties,"

area having the smallest population was in a county having about 13,000 population.

The maximum age of original jurisdiction of these courts varied from 16 to 18 years. Of the 65 courts 25 had jurisdiction over children under 16 years of age; 7 4 had jurisdiction under 17 years; 8 and 24 had jurisdiction under 18 years.9 Of the remaining 12 courts, 11 had jurisdiction over delinquent and dependent and neglected boys under 16, delinquent girls under 18, and dependent and neglected girls under 17; 10 and 1 (Orange County, Tex.) had jurisdiction over delinquent boys under 17, delinquent girls up to 18, and dependent and neglected children up to 16 years of age.

⁷ Bridgeport and Hartford, Conn.; Hudson County and Mercer County, N. J. (girls under 17 may be committed by the juvenile court to the State home for girls); Buffalo, Chemung County, Clinton County, Columbia County, Delaware County, Erie County, Franklin County, Monroe County, Clinton County, Ontario County, Orange County, Erie County, and Westchester County, N. Y.; Buncombe County and Winston-Salem, N. C.; Allegheny County, Berks County, Lycoming County, Montgomery County, and Philadelphia, Pa.; and Greenville County, S. C.
 ⁸ District of Columbia; Caddo Parish and Ouachita Parish, La.; and Jackson County, Mo.
 ⁹ Polk County, Lowa (this court has concurrent original jurisdiction up to 21 years but seldom exercised this privilege); Hennepin County, Ramsey County, Hamilton County, Minn.; Auglaize County, Montgomery County, and Sandusky County, Chier, Hamilton County, Mahoning County, Montgomery County, and Sandusky County, Ohio; first district, second district, third district, fourth district, fifth district, County, Wash.
 ¹⁹ Adams County, Clarke County, Clay County, Jennings County, Lake County, Marion County, Monroe County, Nation County, Mane County, Mane County, Monroe County, Nation County, Mane County, Marion County, Monroe County, Clarke County, Monroe County, Montgomery County, Steuben County, Vermillion County, and Wayne County, Ind.

DELINQUENCY CASES

The tables which summarize the information in regard to the 38,882 delinquency cases reported by 62 juvenile courts, show a very close agreement with the tables prepared on the basis of 28,387 cases reported by 42 courts for the calendar year 1927. Although some differences were found in the cases reported by individual courts which sent cards for both years, the combined figures seem little affected by these variations or by the addition of data from more courts. Because of the similarity of the findings in the two years only the significant points of difference will be noted.

Since approximately a third of the cases were reported by courts in New York City and Philadelphia, an analysis was made of the extent to which the policies and procedures in these courts may have affected the combined figures for all courts. On the whole, the figures obtained from these two courts correspond fairly closely with the average of the figures from all other courts except in a few instances which will be discussed in connection with the tables in which they occur.

DELINQUENCY RATIOS

The ratios of delinquent children to 1,000 children of juvenile-court age in the estimated population have been calculated for courts serving areas having 100,000 or more estimated population which reported their cases to the Children's Bureau during either 1927 or 1928. These ratios are shown in Table 2.

Several factors other than variation in the amount of delinquency affect the ratios in a given locality. In this connection the age jurisdiction of the court is of special importance. Although in a number of courts having jurisdiction over children under 18 years of age the delinquency ratios were low, they would have been materially lower if children 16 and 17 years of age had been excluded; these children constituted about a third of the children reported by such courts (Table 3), whereas children of 16 and 17 years constituted a much smaller proportion of all the children of juvenile-court age in the localities.

Although all the courts for which ratios were calculated were serving populations of 100,000 or more, 5 of these ¹¹ were situated in cities of less than 50,000 population. The proportion of nonurban residents in the population of the area over which the court has jurisdiction materially affects the number of cases brought before the court unless the organization of the court provides for definite services throughout the area of its jurisdiction; even then it is probable that fewer cases in proportion to the population will be found in nonurban areas, though little statistical evidence on this subject is available. In the 9 localities ¹² in which one-fourth or more of the population served by the courts were living in rural areas, the delinquency ratios for boys were below 10 except in Kent County, Mich., Montgomery County, Ohio, and the State of Utah.

¹¹ Lake County, Ind.; Orange County, N. Y.; Montgomery County, Pa.; Greenville County, S. C.; Dane County, Wis. ¹² Kent County, Mich.; Orange County, N. Y.; Montgomery County, Ohio; Berks County and Mont-gomery County, Pa.; Greenville County, S. C.; Pierce County, Wash.; Dane County, Wis.; and the State of Ulah

of Utah.

TABLE 2.—Ratio of delinquent boys and girls to 1,000 estimated population of juve-nile-court age of the same sex and color dealt with by certain specified courts reporting for 1927 and 1928 1

¹ Includes courts serving cities or counties having 100,000 or more estimated population except St. Louid County, Minn., which reported for only the southern half of the county and Cuyahoga County, Ohid which reported unofficial cases for only 9 months of 1928. Color is shown for those courts serving cities or counties of this size having at least 10,000 or 10 per cent colored population in 1920.
 ³ Not reported.
 ⁴ Figures incomplete, children whose cases were pending on Jan. 1, 1927, not included.
 ⁴ Figures for white and colored children not reported separately.
 ⁶ Includes Salt Lake, Summit, and Toogle Counties.

The extent to which the court is relied upon to deal with children exhibiting conduct problems is possibly the most significant factor to be considered in analyzing delinquency ratios of juvenile courts. The relation between the juvenile court and the police department varies greatly in different localities. In some places all children arrested by the police are referred to the juvenile court, whereas in others the police themselves deal with many children, especially those committing minor offenses and violating traffic rules. school department may deal with nearly all truancy problems through its own agencies, or it may refer large numbers of attendance cases to the court. If the school system includes such facilities for constructive work with problem children as a child-study department, visiting teachers, and well-trained attendance officers, it is probable that many cases, including other behavior problems as well as truancy, which would otherwise be dealt with by the courts will be cared for by the schools.¹³ The extent to which agencies doing case work with problem children or their families are available in the community and the place which the court holds in the estimation of social agencies and the public also influence the number of children referred. Another closely related factor is the amount of unofficial work done by the court and the completeness with which this work is reported. The amount of unofficial work done is partly dependent on court policy and procedure and partly on the number of minor cases accepted by the court.

Some indications of the situations in the communities for which delinquency ratios have been calculated are shown in several of the tables of this report. The table showing source of complaint in delinquency cases (Table IV, p. 46) gives some evidence of the relation of the court to other agencies. One indication of the extent to which the court is regarded as a general agency for dealing with conduct problems of children is the proportion of cases involving very young children. (See Table IIa, p. 36.) The extent to which minor cases are referred to the court is another indication. Although it is difficult to determine the seriousness of an offense committed by a child from the charge preferred or from the manner of dealing with it, some indication of the extent to which minor cases are referred may be obtained from the tables showing charges (Tables VIa and VIb, pp. 50 and 52) and the table showing the percentage of cases handled unofficially (Table I, p. 33).

Ratios have been calculated separately for white and colored children for all courts serving areas in which 10 per cent or more than 10,000 of the population were colored. As is shown in Table 2, the ratios for colored children are consistently higher than for white children, with the exception of those for girls in two southern courts (Memphis, Tenn., and Greenville County, S. C.). The highest ratio for colored boys was in the District of Columbia, and the highest ratio for colored girls was in Montgomery County, Ohio. The lowest ratios for both colored boys and colored girls were in Greenville County, S. C.

The extent to which a high delinquency ratio for colored children affects the general delinquency ratio of the court will depend upon

¹³ The practice in some jurisdictions of proceeding against the parents in cases of truancy reduces the number of children brought to court on that charge.

the relative number of white and colored children in the community. The greatest variations in 1928 between the ratios for all boys' cases and all girls' cases and those for white boys and girls are found in the District of Columbia and in Norfolk, Va. In both these cities the colored group comprises more than 25 per cent of the total population.

No conclusions as to the community conditions that lie back of the delinquency ratios in different localities can be formulated from this statistical material, but it furnishes the basis on which studies of the actual conditions existing in these communities can be planned more intelligently.

Slight variations in ratios during the two years are shown for most of the courts. In some instances the small increase or decrease may be the normal variation from year to year in the number of cases coming before the court; in others the difference may be due to more complete reporting or to changes in court policy or personnel which affected the number of cases reported. Delinquency ratios for several successive years will give much valuable information as to trends in juvenile delinquency.

CHILDREN INVOLVED IN THE CASES 14

Age and sex.

As a number of the children came before the courts more than once, the 38,882 delinquency cases reported for 1928 by the 62 courts represented 34,764 children—29,151 boys and 5,613 girls. The extent to which the age period of original jurisdiction of the court affected the number of children coming before the court is shown in Table 3. The children of 16 and 17 years constituted nearly a third of the total number of children before the courts having jurisdiction over children under 18 years of age, and nearly equaled the number of 14 and 15 year old children who constituted the largest group in courts having a lower age jurisdiction.

A few children beyond the age of original jurisdiction were reported by the courts. This may be explained by the fact that some courts have jurisdiction beyond the age of original jurisdiction in certain situations; for example, a case in which the offense was committed before the age limit was reached, even though the case did not come to the attention of the court until afterward, and a case in which a child made a ward of the court before reaching the age limit was before the court on a new charge. All but five of the courts reported some cases of children under 10 years of age, most of them boys. In 32 courts reporting 50 or more children these children under 10 constituted more than 5 per cent of all the children appearing before the court for delinquency. (See Table IIa, p. 35.)

¹⁴ In this section information about the child contained in the record of the first case disposed of during the year was used.

TABLE 3.-Ages of boys and girls dealt with in delinquency cases by 62 courts during 1928, and age limitation of original court jurisdiction 1

¹ Only 59 of the 62 courts reporting delinquency cases reported girls' delinquency cases. ² Includes truancy cases in Westchester County, N. Y. (where jurisdiction to 17 years authorized by the state-wide education law is exercised); also certain cases of girls to 17 years in Hudson and Mercer Counties, N. J. (where the juvenile court may commit girls of this age to the State school for girls). ³ Less than 1 per cent.

Color and nativity.

Absence of information for the communities included as to age distribution according to color, nativity, and nativity of parents makes impossible a comparison of the percentages of white and colored children, native and foreign-born children, and children of foreign or mixed parentage coming before the courts, with the percentages of children of the same ages, and race, nativity, and parentage in the population of the area served by the 62 courts reporting delinquency cases. Although this exact comparison with children of juvenile-court age can not be made, comparisons with the total population in the reporting area are of interest.

In the total population ¹⁵ in the jurisdiction area 95 per cent were white and 5 per cent were colored, including both negro and other colored races. Table 4a shows, however, that the proportion of colored children appearing before the courts was 16 per cent, more than three times as large as in the total population. The percentage of colored girls was slightly higher than the percentage of colored boys.

Foreign-born white children constituted a very small proportion of the children before the courts in 1928.¹⁶ (Table 4a.) Comparison

Fourteenth Census of the United States, 1920, vol. 3, Population. Washington, 1922.
 A larger percentage of the children reported in 1927 were classified as foreign born.

can not be made with the 24 per cent foreign-born white population in the jurisdiction area of the reporting courts since adults constitute a much larger percentage of the foreign-born than of the native-born population in the United States.

TABLE 4A.—Color and nativity of boys and girls dealt with in delinquency cases by 62 courts during 1928

Only 59 of the 62 courts reporting delinquency cases reported girls' delinquency cases.
 Includes 16 boys and 2 girls colored other than negro.

The largest proportion of the delinquent children dealt with by the courts were native-born white boys and girls. Information as to the nativity of their parents was obtained for most of these children. Table 4b shows the nativity of parents reported for the native-born white boys and girls. An interesting difference is shown between the boys and the girls. Less than half of the girls (45 per cent) had parents one or both of whom were foreign born, and the percentage is slightly lower than that of the native-born females of foreign or mixed parentage in the white population of the reporting area (48 per cent). More of the boys (56 per cent) had parents at least one of whom was foreign born, and the percentage was much higher than that of the native-born males of foreign or mixed parentage in the white population of the reporting area (47 per cent). Accordingly, it may be said that the delinquency rate among native-born boys of foreign or mixed parentage was high.

Where living when referred to court.

A rather striking difference is shown in Table 5 between the proportions of boys (71 per cent) and of girls (52 per cent) who were living with both their own parents at the time they committed the offenses for which they were brought to court in the first delinquency case disposed of during the year. This would seem to indicate that the lack of normal family life is a more significant factor in the delinquency of girls than of boys. The difficulties which bring girls into court are usually more serious in character and more closely related to home conditions than the difficulties of boys.

Previous court experience.

Only information regarding the number of times children were dealt with as delinquents in previous years, that is, prior to the first case disposed of during 1928, has been tabulated. Table 6 shows that 78 per cent of the boys and 87 per cent of the girls were before the court for the first time in 1928. Apparently the greater part of the work of the courts is with children dealt with for the first or the second time rather than with repeated offenders. The extent to which these children were before the courts more than once during 1928 is indicated by a comparison of the total number of delinquency cases disposed of in 1928 (38,882) with the number of children involved (34,764).

The courts were asked to report as a separate case each time a child was dealt with on a new offense. It is impossible to formulate a definition which does not permit some difference in the interpretation of "new offense." Some probation offices in dealing with a child who is under the care of the court and commits a new offense do not consider it a new case unless the new offense is so serious that the probation officer can not deal with it and refers the child to the judge.

Others consider as a new case the reference of a child to the judge for general lack of progress or adjustment of conditions that may have arisen, when no new offense may have been committed.

SOURCES OF COMPLAINT

The sources of complaint and especially the extent to which such sources as parents and relatives, other individuals, and social agencies refer cases to the courts are some indication of whether the court is regarded as the agency to deal with all conduct problems or only those more serious ones where authority which only the court has is needed. The percentage of cases referred from specified sources as shown in Table 7 is definitely affected by the inclusion of New York and Philadelphia. (See Table IV, p. 46.) The percentage of cases in which the source of complaint was the police was much higher in these two cities than the average for all other courts, and the percentage of complaints made by the school department was much lower.

Although some cases of delinquency come directly to the attention of probation officers, the number reported in 1928 is larger than would be expected. It is possible also that courts may have reported in some cases the person signing the petition rather than the person making the original complaint, thus reporting "probation officer" as the source in cases actually referred by others. The fact that in some courts serving rural districts probation officers are sometimes also law-enforcing officers in their communities may account for this in part.

 1928

PLACES OF CARE PENDING HEARING OR DISPOSITION

The facilities used by the 62 courts for the detention of delinquent children varied greatly in different localities. Less than half the 62 courts reported the use of detention homes, and most of these were situated in cities or counties of 100,000 or more population. A number of the courts serving less populous districts which reported a few dependent or delinquent children held in a detention home may have used this name for some institution used primarily for another Courts that had no detention-home facilities provided for purpose. the detention of children in a variety of ways. The institutional resources of private agencies were used by a number of courts, notably by the New York City court. Boarding-home care had not been developed to any extent by any of the courts, although a few children were detained in boarding homes in a number of localities. Many of the courts using boarding homes also had detention-home facilities. A few courts stated that a "detention room" for children was located in the courthouse or in the jail. Detention in the same building as the jail was classified as detention in jail.

Table 8 shows that more than half the children were not detained, but were left in their own homes or their cases were disposed of on the day the complaint was made. For the children who were detained a marked difference is shown in the type of detention used for those under 16 years of age and for older children. A smaller percentage of the older children than of the younger children were detained in detention homes and other institutions, and a larger percentage were detained in jails. It is probable that a number of the children detained in jail were held for short periods, possibly not overnight, although the instruction to courts using the cards was that a child held for a few hours only should not be considered detained. Nevertheless, the detention of 1,305 children, 548 of whom were under 16 years of age, in jails and police stations shows the widespread use of these places for holding young children and the urgent need for more adequate provision for meeting this problem. The percentage of children detained in institutions other than detention homes reflects

96776°-30-2

the use of this method of detention by the New York City court, since more than nine-tenths of the children detained in "other institutions" were in New York City. (See Table V, p. 48.)

CHARGES

Although an attempt is being made to secure uniformity in the use of terms, the charges on which children were dealt with as delinquents by the courts give a very incomplete picture of their behavior prob-lems. A child may have committed several offenses at or about the

same time but be referred to the court on only one of them. The specific offense with which he is charged may be much less serious than offenses discovered in the course of the social investigation. When the case is investigated before the filing of a petition instead of afterward, the formal charge is usually more accurate, but even in such cases the offense stated in the complaint may reflect the desire of the court to protect the child. For instance, in some courts a girl is charged with incorrigibility instead of a sex offense, and Table VIa seems to show that a boy is sometimes charged with mischief instead. of stealing. These differences in the attitudes and practices of the courts are shown very clearly by the character of the charges in the

cases reported by each court. (See Tables VIa, VIb, pp. 50, 52.) It is generally accepted that the offenses with which boys and girls are charged represent different delinquency problems. Table 9a shows that "stealing or attempted stealing" and "acts of carelessness or mischief" were the most usual charges in boys' cases, whereas the closely related charges of "running away," "ungovernable or beyond parental control," and "sex offense" appeared more often in girls' cases.

¹ Only 59 of the 62 courts reporting delinquency cases reported girls' delinquency cases. ² Less than 1 per cent.

Running away was a larger problem in New York City and in Philadelphia than in most of the other localities, and the inclusion of such cases from these courts materially increased the percentage of children charged with this offense. On the contrary, the number of children referred to these two courts on truancy charges was very small and correspondingly lowered the percentage of children charged with truancy.

The interests and pursuits of children of different ages are reflected in the types of offenses which they commit. Table 9b shows that the offenses committed by girls under 12 years of age corresponded more closely to those committed by boys of those ages than did the offenses of older girls. The percentage charged with "acts of carelessness and mischief" decreased steadily as the age of the children increased, while sex offenses and the violation of the liquor or drug law or intoxication, constituted an increasing percentage of the offenses charged in both boys' and girls' cases, from the lower to the higher age groups. A most interesting difference is shown in the ages of boys and girls charged with being ungovernable. The largest percentages of boys charged with this offense were in the age groups under 10 and 10, under 12 years, whereas among the girls the age group under 10 showed a smaller percentage than any other. Truancy among the boys and running away among the girls occurred more often among the children of 14, under 16 years, than among the children of any other age group. Stealing, the most common charge, appeared approximately in the same proportions of boys' cases in all age groups, although the type of stealing changed as the boys grew older.

³ Not shown, as number of cases is less than 50.

Official cases.

DISPOSITIONS

Table 10a shows the extent to which different types of dispositions were used in official cases by the courts reporting delinquency cases. Placing the child on probation was the disposition most often used. The number of children whose cases were dismissed or continued indefinitely¹⁷ was also large, as was the number committed to institutions. Only about one-eighth of the cases were disposed of in other ways than by one of these three methods. Although about the same percentage of boys and of girls were placed on probation, the percentage of cases dismissed or continued indefinitely was larger for boys than for girls, and the percentage of commitments to institutions was higher for girls. Other slight differences in the methods of dealing with boys' and girls' cases are shown in Table 10a.

Individual courts showed wide variation in the extent to which different types of dispositions were used. (See Tables VIIa, VIIb, pp. 55, 57.) Such variations are due in many instances to differences in court procedure and practice. For instance, the number of official cases dismissed or continued indefinitely is small if cases are investigated before the filing of a petition and trivial cases are dealt with unofficially or dropped. The proportion of cases in which the child is placed on probation is influenced by several factors, among them the number of cases dismissed or continued indefinitely upon first hearing, the extent to which unofficial probation is used, the local institutions available for short-time commitments, and the care with which children are selected for probation both as to those likely to profit by it and as to the court's facilities for giving adequate supervision.

The percentage of children's cases dismissed or continued indefinitely and the percentage of cases in which the children were committed to institutions were slightly affected by the cases reported from the New York and Philadelphia courts. The dispositions made by these courts as compared with those of all the other courts included a larger percentage of cases dismissed or continued indefinitely and a smaller percentage of children committed to institutions. The dispositions of the cases reported in 1927 compared fairly closely with those shown in Table 10a for 1928. In 1927 a slightly larger percentage of the cases were dismissed or continued indefinitely, with a corresponding decrease in those in which the children were placed on probation.

¹⁷ The classification "case dismissed" was used for cases closed without further action, cases referred to other courts for commitment to institutions for the feeble-minded, and cases dismissed because of lack of jurisdiction in the juvenile court. Cases were considered as "continued indefinitely" when no further action was taken or supervision given the children, but when jurisdiction was maintained so that if a like situation arose later the case might be brought into court again without the filing of a new petition. Cases of children placed on probation to parents or committed to institutions with commitment suspended when no further action was contemplated were also classed as "continued indefinitely."

TABLE 10A.—Disposition in boys' and girls' official delinquency cases dealt with by 61 courts during 1928 1

¹ Only 61 of the 62 courts reporting delinquency cases reported official delinquency cases. Of these 61 courts only 57 reported girls' official delinquency cases. ² Less than 1 per cent.

³ Applies only to runaways or children living away from own home at time referred to court.

Both the age of a child and the character of his offense affect the disposition of his case. Table 10b shows the dispositions of the cases by the age of the child, and Table 10c shows the relation between the offenses charged and the disposition of the cases.

Except for the larger percentage of boys under 10 years of age whose cases were dismissed or continued indefinitely and the steadily increasing percentage who were committed to institutions in each higher age period, no significant variations occur in the dispositions made of cases of boys under 16 years of age. A comparison of the dispositions in the cases of boys 16 and over and of each age group under 16 shows that a smaller percentage in the older than in the younger groups were dismissed or continued indefinitely or were placed on probation. In a larger percentage of the cases of older boys commitments to institutions were made or fines were imposed or costs ordered. The percentage of cases of boys 16 or over referred for criminal prosecution was small, and these constitute the majority of the cases dealt with in this way.

Possibly because of the differences in the kinds of offenses with which girls under 12 were charged as compared with older girls, a much larger percentage of the cases of girls in the age groups under 10 and 10, under 12 years of age were dismissed or continued indefinitely.

As in boys' cases, commitment to institutions constituted an increasing percentage of the dispositions from the lower to the higher age periods.

JUVENILE-COURT STATISTICS, 1928

Table 10c shows that with a few striking exceptions the treatment for different types of offenses was quite similar in boys' and girls' cases. Dismissal or indefinite continuance was the type of disposition most often used when the charge was injury or attempted injury to person, act of carelessness or mischief, and in a group of miscellaneous charges classed as "other." Probation was the most usual disposition for both boys and girls charged with stealing running away, and being ungovernable or beyond parental control. In cases of children committing sex offenses the contrast between the methods of dealing with boys and girls is marked. probation being used most often for boys and commitment to an institution for girls. In truancy cases the most usual disposition for girls was dismissal or indefinite continuance, and for boys placement on probation.

Unofficial cases.

Thirty-nine of the 62 courts reporting delinquency cases disposed of cases unofficially, one court having dealt with all its cases in this Table 11 shows that a large percentage of these cases were wav. dealt with either by adjusting the difficulty or apparently by dropping the case without action of any sort. A small percentage of the children were placed on unofficial probation, and a still smaller group were referred to institutions and agencies. Runaways returned home also constituted a small percentage of the cases.

TABLE 11.—Disposition in boys' and girls' unofficial delinquency cases dealt with by 39 courts during 1928 ¹

Only 39 of the 62 courts reporting delinquency cases reported unofficial delinquency cases; 37 of the 39 reported boys' cases and 34 reported girls' cases.
 Applies only to runaways or children living away from own home at time referred to court.
 The majority of these cases were dismissed, dropped, or closed with a warning.

DEPENDENCY AND NEGLECT CASES

Dependency and neglect cases constituted a smaller part of the work of the courts than delinquency cases except in 1118 of the smaller courts. Ten courts dealing with delinquent children did not report dependency and neglect cases. The practice in some courts of filing the complaint against the adult responsible for dependency or neglect instead of instituting proceedings in the name of the child is one of the factors influencing this situation. In some localities only those cases of dependency and neglect requiring commitment or other legal adjudication of custody or of parental obligation were brought as a rule to the attention of the court, whereas in other communities the court was the principal or only local agency caring for such children.19 As 45 per cent of the dependency and neglect cases were reported by the New York and Philadelphia courts, the methods used by these courts in dealing with such cases definitely affect the total figures.

CHILDREN INVOLVED IN THE CASES

The 16,289 dependency and neglect cases represented 15,825 children in 8,153 families. Tables 12, 13a, 13b, and 14 show the age, sex, race, nativity, parentage, and whereabouts of children dealt with in dependency and neglect cases. Nearly as many girls as boys were dealt with in these cases. The numbers of children of all age groups under 16 years coming before the courts showed little variation. The number who were 14 or over was slightly smaller than the number in the lower age groups, although all the courts had jurisdiction over dependency and neglect cases involving children under 16 years of age and some had jurisdiction over children to 18 years of age.

A comparison of Tables 13a and b with Tables 4a and b shows some interesting contrasts in the color, nativity, and parentage of children dealt with in dependency or neglect cases and in delinquency cases. As to color a slightly larger proportion of the dependent or neglected children than of the delinquent children were white, although the percentage of colored children referred to the court for these causes as well as for delinquency was about three times as high as the percentage of colored persons (5 per cent) in the total popula-The percentage of foreign-born children tion served by the courts. was even smaller in dependency and neglect cases than in delinquency cases. A significant difference shown in Tables 13b and 4b is that the proportion of the native-born children of native parentage referred to the courts because of dependency or neglect was much larger than the proportion of the same ancestry who were before the court because of delinquency.

Nearly three-fourths of the children dealt with by the courts in dependency or neglect cases came from families in which the home had (Table 14.) been broken by death, divorce, desertion, or other cause.

¹⁸ Another court reported only dependency cases.
¹⁹ Cases of mothers' allowances, which frequently are administered by courts, are not included in the tabulations.

SOURCES OF COMPLAINT AND CHARGES

Since several children in a family may be referred to court at the same time on the same charge and from the same source, the family rather than the child has been used as the base of comparison in Tables 15 and 16. Each family was counted only once for each time it was dealt with by the court on a new charge involving one or more of the children.

It is to be expected that social agencies would be one of the most important sources of reference in dependency and neglect cases. In some localities the court prefers to have such cases investigated first by a social agency so that only those actually needing court action are brought to court. In other localities the court undertakes the initial work and receives complaints from any interested persons, including parents and relatives. Table 15 shows that in the areas reporting, complaints were filed in about equal proportions by social agencies and by parents and relatives, these two groups being the source of complaint in three-fourths of the cases.

In more than a third of the cases the charge specified some form of neglect on the part of parents or guardians (abandonment or desertion, abuse or cruel treatment, improper conditions in the home). A still larger proportion of the families were referred for dependency primarily. The courts were asked to interpret the term "insufficient parental care," as well as "financial need," as inability rather than neglect to provide for children. Less than one-tenth of the families were referred to the court for consideration of problems related to the custody of children and a slightly smaller proportion were referred for "other" reasons.

PLACES OF CARE PENDING HEARING OR DISPOSITION

The detention of dependent and neglected children presents problems different from those involved in the detention of delinquent children. All the courts reporting the use of detention homes used also boarding homes or institutions other than detention homes. Although a number of courts used "other institutions" for the detention of children, four-fifths of the cases of children so detained were in New York City and Philadelphia. (See Table X, p. 64.) As is shown by a comparison of Table 8 and Table 17, the percentage of children who were left in their own homes or whose cases were disposed of on the same day was only slightly larger in dependency and neglect cases than in delinquency cases.

⁸ Excludes cases of children held in jails, police stations, or detention homes.

DISPOSITIONS

Although the majority of the dependency and neglect cases were official, 28 courts reported some unofficial cases. The extent to which individual courts dealt unofficially with dependency and neglect cases varied considerably. (See Table I, p. 33.) Although the Philadelphia court had more official than unofficial cases, the unofficial cases reported by this court constituted one-half of the total unofficial cases.

As is shown by Tables 18 and 19, some definite action such as committing the child to an institution or agency or placing him under supervision of the court or some individual was taken in three-fourths of the official cases, whereas placement or supervision of the child was advised in only one-fifth of the unofficial cases. Two-thirds of the unofficial cases were disposed of by making some adjustment of the difficulties involved.

¹ Only 28 of the 53 courts reporting cases of dependency and neglect reported unofficial dependency and ² The majority of these cases were dismissed, dropped, or closed with a warning.

CASES OF CHILDREN DISCHARGED FROM PROBATION OR SUPERVISION

Cases of delinquent children discharged from probation were reported by 45 courts and cases of dependent or neglected children discharged from supervision by 20 courts, 2 reporting only cases discharged from probation or supervision and not reporting cases of children coming before the court during the year. The majority of the cases were official; only 621 of the 8,493 probation cases and 21 of the 1,936 supervision cases were unofficial.

No constant relation seems to exist between the number of children placed on probation or under supervision by the different courts and the number discharged from probation or supervision. (See Tables XIII, XVI, pp. 70, 74.) In three courts the number discharged from probation was larger than the number placed under the care of probation officers. In most courts, however, the number placed on probation exceeded the number discharged. Some courts apparently do not terminate probation at any definite time but allow cases gradually to become inactive. In these courts cases may remain on the list or index of active cases long after active supervision of the child has ceased and are reported "discharged" from care only at times of general review Unless this review is made at regular intervals the numof the files. ber of cases discharged may vary greatly from year to year. In a few courts, notably in New York City, the only cards filled out for cases discharged from care were for children who had come to the attention of the court during the time that the Children's Bureau cards had been in use. As contact with some of the cases may have extended beyond this period, the number reported as discharged is small.

Tables 20 and 21 show that a large proportion of the children under care of the probation departments were discharged because of improvement in conduct or because further supervision seemed unnecessary. About a tenth of the delinquent children, however, were discharged because of having reached the age limit of court jurisdiction rather than voluntarily discharged because of good behavior. Failure of probation as indicated by commitment to an institution for delinquent children is shown in about one-seventh of the cases. Some interesting differences are shown in Tables XIV and XVII (pp. 71, 75) as to the duration of the probation or supervision period in children's cases in different courts.
