JUVENILE-COURT STATISTICS

For the Year Ended December 31, 1934

AND

FEDERAL JUVENILE OFFENDERS

For the Year Ended June 30, 1935¹

SOURCE OF INFORMATION

This report includes the eighth annual report on juvenile-court statistics and the third report on Federal juvenile offenders. Part I, Juvenile-Court Statistics, is based on juvenile-court reports for the calendar year 1934 supplied by individual courts and by State departments dealing with juvenile-court and probation work that cooperate with the Children's Bureau by supplying information on juvenile delinquency, dependency and neglect, and children's cases of other types dealt with by juvenile courts.

Part II, Federal Juvenile Offenders, presents information on juveniles under 19 years of age who violated Federal laws and came to the attention of Federal authorities during the fiscal year ended June 30, 1935. These statistics of Federal juvenile offenders have been compiled by the Bureau of Prisons of the United States Department of Justice.

PART I—JUVENILE-COURT STATISTICS FOR THE YEAR ENDED DECEMBER 31, 1934

DEVELOPMENT OF STATISTICAL REPORTING

THE COOPERATING COURTS

The report on juvenile-court statistics for 1934 includes reports from the juvenile courts of 4 entire States (Connecticut, Massachusetts, Rhode Island, and Utah); from areas of Indiana and New York comprising 76 and 93 percent, respectively, of the population of those States; from 39 courts in 19 other States; and from the District of Columbia. In all, reports from 334 courts are included. Seventy-four of the courts serve areas of 100,000 or more population and 260 serve less populous districts.

The area served by the courts for which reports have been received includes roughly 37,000,000 inhabitants, or 29 percent of the population of the United States. It includes 50 percent of the population of the United States living in cities of 10,000 or more population and 10 percent of the population living in districts containing no cities of this size. The reporting area is particularly representative of large cities. It includes 63 percent of the population of the United States living in cities of 100,000 or more population (table A).

The geographic distribution of the courts included in the 1934 report is shown in the accompanying map (p. IV). Most of the courts are in States east of the Mississippi River; but the States immediately west of the Mississippi are represented by six courts, and courts in all States on the western coast are included. The courts for the entire State of Utah give representation to the Mountain Division.

¹ Estimated as of July 1, 1934.

The information for 1934 was drawn from the records of 107,790 cases of juveniles dealt with by these 334 courts. These cases include

2

66,651 delinquency cases, 22,499 dependency and neglect cases, and 1,150 cases of special proceedings.² The statistics presented also include 17,490 cases of children discharged from probation or supervision during the year.

These records of cases of juveniles are reported to the Children's Bureau under two systems-directly by individual courts and under a State-wide system. A court cooperating individually sends to the Bureau a card for each case disposed of by the court during the These cards are tabulated in the Bureau, and tables showing vear. all the essential facts for the cases are returned to the court. Under the State-wide system the courts furnish the State welfare department or other State agency concerned with juvenile-court work or probation service with information regarding their cases, and the State office consolidates the material and supplies the Children's Bureau with an annual report for each court in the State. Much more detailed information regarding cases is obtainable under the system of reporting by individual courts than under the State-wide plan.

For each of the 8 years during which the plan for promoting and assembling uniform statistics has been in operation, the number of courts reporting, the number of States represented, and the population included in the reporting areas are shown in tables B, C, and D. The number of cases of the various types reported by the courts each year appear in table E.

TABLE B.—Number of courts reporting under a State-wide system, number reporting individually, and number of States represented; courts that served areas with 100,000 or more population, and those that served areas with less than 100,000 population; 1 1927-34

They include cases of petitions for commit-ment of feeble-minded children, adoption cases, controversies regarding custody of a child, children held as material witnesses, and certain other types. ² Exclusive of New York City, for which a complete report was not available.

STATE-WIDE REPORTING

The early plan for the collection of juvenile-court statistics on a Nation-wide scale was based on reports from individual courts. Many of the States had provision by statute for reports from the courts to a State welfare department or other State agency concerned with juvenile-court or probation work. In the first years of the activity many State departments undertook to stimulate the interest of judges and probation officers in the plan for Nation-wide statistics and to urge the direct cooperation of the individual courts with the Children's Bureau. The inclusion in the first year (1927) of the District of Columbia and 42 courts situated in 15 States and serving areas comprising 15 percent of the population of the United States is direct evidence of immediate enthusiasm and interest on the part of both the State departments and the courts.

All the reports for 1927 were received through direct cooperation with individual courts. Through the interest of the Juvenile Court Commission the entire State of Utah was included as early as 1928, the commission sending in a card for each case dealt with by the courts. Connecticut in 1931 was the first State to report to the Children's Bureau on summary forms through a State agency. Massachusetts and New York³ began reporting under the State-wide plan in 1932, and New Jersey and Rhode Island were added in 1933. New Jersey, which compiled its delinquency records for 1933 as a Civil Works Administration project, was not able to continue its cooperation in 1934. Indiana was added to the reporting area in 1934.

REPORTS FROM INDIVIDUAL COURTS

In the early years of the activity individual courts were admitted to the reporting area without regard to the size of the community served. As the program developed, however, the expense of direct Federal contact with small courts handling only a few children's cases during the year came to be disproportionately great, and the policy was adopted of gradually limiting direct reports to the Children's Bureau to courts serving areas of 100,000 or more population. Only a few courts serving areas with less than 100,000 population are still included under the individual plan; these are courts which are expected to be included under State-wide reporting at an early date or in which other special circumstances exist. For 14 courts that served areas with 100,000 or more population in States that reported under a State-wide system, reports for 1934 were also available on an individual basis.

On account of the desirability of having the detailed information that is obtainable only through cooperation with individual courts and the necessity of having records over a period of years for the study of trends in juvenile delinquency, effort has been directed toward the continuance of the cooperative relationship with all courts serving areas of 100,000 or more population that began reporting in the early years. Changing conditions within the courts have often made this difficult, but reports are available for 18 courts for the entire period 1927-34 and for 30 courts for 1929-34. This continuation of direct cooperation is evidence not only of the desire of the courts to maintain the Federal relationship but also of the realization by the communities of the necessity for a statistical basis for planning and carrying on activities for the protection of children.

TRENDS IN JUVENILE-DELINQUENCY RATES 4

Juvenile-delinquency rates 4 are essentially a direct expression of the amount of delinquency dealt with by the courts that was brought to their attention by individuals and organizations concerned with the welfare and protection of both the children and the community. The rates of the courts are determined not only by the amount of delinquency in the respective communities served but also by the policies of the police department and other agencies in referring cases to the courts, the intake procedure of the courts-particularly the extent to which they undertake to deal with minor cases-the relationship

³ Exclusive of New York City, which sends a card for each case directly to the Children's Bureau. ⁴ Variations in juvenile-delinquency rates must be interpreted with caution especially during the de-pression years because, in addition to the factors discussed in this paragraph, the population estimates which form the base of the rates are somewhat unreliable owing to the shifts in population since the United States census of April 1, 1930.

of the courts to other agencies in the community, and the extent to which the community provides services for children which tend to reduce the necessity for court action. The delinquency rate for boys and for girls-the number of children dealt with in delinquency cases per 10,000 children of the same sex and of juvenile-court age-is shown in table F for the group of 18 courts reporting from 1927 to 1934 and for the group of 30 courts reporting from 1929 to 1934. The delinquency rate is shown for 44 individual courts in table G for each year for which the courts have sent reports to the Children's Bureau; 42 of these courts cooperated in both 1933 and 1934. Each of the courts discussed in this section on trends in delinquency rates served an area with 100,000 or more population.

TABLE F.-Juvenile-delinquency rates 1 per 10,000 boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more population,² and that reported throughout specified periods

¹ Rates are based on population estimated as of July 1 of each year except 1934; no estimate for 1934 is available, and the rates for this year are based on the estimate as of July 1, 1933.
³ Rate not computed because number of colored delinquent children was not reported.
⁴ Rate not computed because the ages of the majority of boys and girls were not reported.
⁵ Based on official cases only, because unofficial cases were not reported in previous years.

JUVENILE-COURT STATISTICS, 1934

DELINQUENCY RATES FOR BOYS AND FOR GIRLS

The trend in the delinquency rate for boys has been downward since 1930 in the group of 18 courts reporting throughout the period from 1927 to 1934 and in the group of 30 courts reporting from 1929 to 1934. The decrease from 1933 to 1934 shown in the rate for boys in both these groups of courts, however, was due essentially to the marked reduction which occurred in the rate for boys in New York City.⁵ The exclusion of New York City from each of the groups of courts for both 1933 and 1934 brings for boys in each group of courts a significantly higher rate for 1934 than for 1933.

In the group of 42 courts that served areas with 100,000 or more population, and that reported individually to the Bureau in both 1933 and 1934 (see table G, p. 8), the same downward tendency appears in the rates for boys in 1934 (162 in 1933 and 159 in 1934) as is shown in the reporting groups of 18 and 30 courts discussed above, and the exclusion of New York City from the group of 42 courts similarly brings higher rates for 1934 (184) than for 1933 (178). The area served by the group of 42 courts included approximately 2,154,-000 boys of juvenile-court age, 555,000 or 26 percent of whom resided in New York City. About 1,599,000 boys lived in the area served by the remaining 41 courts.

Although the general trend in the rates for this group of 41 courts is upward, only 15 courts showed significantly higher rates in 1934 than in 1933. The rates for 7 courts were significantly lower and the rates for 19 courts either were identical or showed differences so small that they are unimportant. The area served by courts with significant increases in 1934 included only 29 percent of the total number of boys of juvenile-court age living within the area served by the 41 courts, whereas the courts with significantly lower rates included 17 percent, and those with no change included 54 percent of the boys of juvenile-court age.

The 15 courts which had significantly higher juvenile-delinquency rates for boys in 1934 than in 1933 were Bridgeport, Conn.; Lake, Marion, and Vanderburgh Counties, Ind.; Polk County, Iowa; Caddo and Orleans Parishes, La.; Hennepin County, Minn.; Mercer County, N. J.; Erie and Rensselaer Counties, and Syracuse, N. Y.; Allegheny County, Pa.; and Pierce and Spokane Counties, Wash. The 7 courts with significantly lower rates in 1934 than in 1933 were San Francisco, Calif.; Dade County, Fla; Hamilton and Montgomery Counties, Ohio; third district of Utah; Norfolk, Va.; and Milwaukee County, Wis.

The juvenile-delinquency rates for girls for 1934 in courts serving areas of 100,000 or more population were slightly higher than in 1933, both in the group of 17 courts reporting from 1927 to 1934 and in the 30 courts reporting from 1929 to 1934. The slightly higher rates for 1934, however, cannot be considered important—they follow a drop in

⁶ In New York City the juvenile-delinquency rate for 1934 for all boys and for white boys showed a significant decrease when compared with the rate for 1933. The rate for Negro boys for 1934 was slightly but not significantly higher than in 1933. The juvenile-delinquency rate for all girls showed little change, but for colored girls there was a significant increase. Rates for white girls were not significantly different in the 2 years. The changes in New York City were due primarily to a lessened intake of cases referred on account of acts of carelessness or mischief in one borough.

1933 as compared with 1932 and the increases only bring the 1934 figures back to the 1932 level.

In the group of 42 courts reporting in both 1933 and 1934 the rate for girls was 28 for 1934 and 27 for 1933—a difference again too small to be considered important. The rates for these courts exclusive of New York City (which included approximately one-fourth of the girls of juvenile-court age in the area served by the courts) were likewise not significantly different for the 2 years. Among these 42 courts reporting in both 1933 and 1934 there are 8 in which the rates were significantly higher in 1934 than in 1933, 2 courts in which the rates for 1934 were significantly lower than in 1933, and 32 courts in which the rates for the 2 years were not significantly different. The 8 courts cooperating in both 1933 and 1934 which had significantly higher juvenile-delinquency rates for girls in 1934 were Mobile County, Ala.; Bridgeport, Conn.; Erie County, New York City, and Syracuse. N.Y.; Hamilton County, Ohio; and Berks and Montgomery Counties, The 2 courts with significantly lower rates for girls in 1934 than Pa. in 1933 were Dade County, Fla., and the third district of Utah. The delinquency rates for boys and for girls in 1934, as table G

The delinquency rates for boys and for girls in 1934, as table G shows, varied widely from court to court for the 44 courts serving areas with 100,000 or more population and reporting individually for the year. The rates for 1934 for boys varied from 449 per 10,000 boys of juvenile-court age in Mahoning County, Ohio, to 26 in Montgomery County, Pa. Erie and Rensselaer Counties, N. Y., occupied the middle positions with rates of 143 and 145, respectively. Rates for girls in these 44 courts varied within a narrower range. The maximum, 95 per 10,000 girls of juvenile-court age, occurred in Hamilton County, Ohio, the minimum, 4, in Montgomery County, Pa. Baltimore, Md., and Vanderburgh County, Ind., each with a rate of 33, and Hennepin County, Minn., with a rate of 35, occupied the middle positions.

DELINQUENCY RATES FOR WHITE AND FOR NEGRO CHILDREN

In courts that serve areas having a large number of Negroes the racial constitution of the population of the area is of importance in connection with the work of the court. The delinquency rates for white and for Negro boys and girls-the number of children dealt with in delinquency cases per 10,000 children of juvenile-court age and of the same race and sex-are shown in table H for the group of 14 courts cooperating from 1927 to 1934 and for the group of 19 courts cooperating from 1929 to 1934. The delinquency rates are shown by individual courts in table I for each year of the period 1927-34 during which the courts have cooperated with the Children's Bureau. The courts included in the tables are those that served areas of 100,000 or more total population and 10,000 or more Negro population and that reported individually. The tables show that the rates for both Negro boys and Negro girls dealt with in delinquency cases were in all instances markedly higher than those for white children of the same sex.

JUVENILE-COURT STATISTICS, 1934

TABLE H.—Juvenile-delinquency rates ¹ per 10,000 white and Negro boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more total population and 10,000 or more Negro population 2 and that reported throughout specified periods

 TABLE I.—Juvenile-delinquency rates 1 per 10,000 white and Negro boys and girls of juvenile-court age dealt with by courts that served areas with 100,000 or more total population and 10,000 or more Negro population 2 and that cooperated in 1934; 1927-34—Continued

¹ Rates are based on population estimated as of July 1 of each year except 1934; no estimate for 1934 is available, and the rates for this year are based on the estimate as of July 1, 1933. ⁴ According to the 1930 census.

^a Rate not computed because number of Negro delinquent children was not reported.
⁴ Rate not computed because number of Negro delinquent children was not reported.
⁴ Based on official cases only, because unofficial cases were not reported in previous years.

Digitized for FRASER https://fraser.stlouisfed.org Federal Reserve Bank of St Louis JUVENILE-COURT STATISTICS, 1934

The juvenile-delinquency rates for white boys in both groups of courts have shown continuous decreases in recent years. The 1934 rate for white boys in each group of courts was significantly lower than that shown for 1933. It was also significantly lower in 1934 than in 1933 in the group of 24 courts that served areas with 100,000 or more population and 10,000 or more Negro population and that reported individually in both 1933 and 1934. (See table I.) The rate for white boys in this group of 24 courts was 115 in 1934 as compared with 123 in 1933. In all three groups of courts, however, the marked decrease in 1934 in New York City was the dominating factor. The exclusion of New York City brings rates for each group for 1934 which are not significantly different from those which prevailed in 1933.

Significant increases in juvenile-delinquency rates for white boys appeared in 5 of these 24 courts cooperating in both 1933 and 1934. These 5 courts were Mobile County, Ala.; Lake and Marion Counties, Ind.; Erie County, N. Y.; and Allegheny County, Pa. Significant decreases for white boys appeared in 7 courts—Dade County, Fla.; Fulton County, Ga.; New York City; Hamilton and Montgomery Counties, Ohio; Philadelphia, Pa.; and Norfolk, Va.

Among Negro boys in both groups of courts that have cooperated over a period of years, the 1934 rates were significantly higher than those that prevailed in 1933. In New York City there was no significant change in the juvenile-delinquency rates for Negro boys in 1934 as compared with 1933 and its inclusion, therefore, does not affect the upward tendency of the rates. This significant increase in the juvenile-delinquency rates for Negro boys in 1934 was preceded by a small increase in 1933 as compared with 1932 which was not sufficient to be statistically significant. The rates for Negro boys in both groups of courts decreased through 1932 from the maximum rate in 1929.

In the group of 24 courts cooperating in both 1933 and 1934 the rate for Negro boys was 511 for 1934, as compared with 486 in 1933. Five of these twenty-four courts had significantly higher rates in 1934 than in 1933—the District of Columbia; Lake County, Ind.; Orleans Parish, La.; Erie County, N. Y.; and Philadelphia, Pa. Three courts— Dade County, Fla.; Hamilton County, Ohio; and Norfolk, Va.—had significantly lower rates for 1934 than for 1933.

Increases in the rates for white girls in 1934 as compared with 1933 appeared in all three groups of courts. The increase in each of the groups of courts was, however, relatively small and cannot be considered of great importance in view of the fact that it was sufficient only to bring the 1934 rates to the 1932 level. In the group of 24 courts cooperating in both 1933 and 1934 the rate for white girls was 19 for 1934 as compared with 18 in 1933. The exclusion of New York City from each of the groups of courts has little effect upon the rates for the 2 years. No marked change in the frequency of court work with delinquent white girls was evident either in the New York City court or in the groups of courts outside of New York City.

Of the 24 courts reporting in both 1933 and 1934, 19 courts showed no significant difference in the rates for these 2 years for white girls. Only 5 courts had significantly higher rates in 1934 than in 1933— Mobile County, Ala.; Marion County, Ind.; Erie County, N. Y.; Hamilton County, Ohio; and Montgomery. County, Pa.

No marked change appeared in the juvenile-delinquency rates for Negro girls in 1934 as compared with 1933. In all 3 groups of courts the 1934 rates were somewhat higher than in 1933, but the difference in the rates for the 2 years was not sufficient to be statistically significant except in the group of 19 courts cooperating from 1929 to 1934. In the 3 groups of courts, exclusive of New York City, there was no significant difference in the rates for the 2 years. In the 24 courts cooperating in both 1933 and 1934 the rate for Negro girls was 97 in 1934, as compared with 92 in 1933. Only 3 of these 24 courts showed significantly different rates for 1933 and 1934. These 3 courts were New York City and Montgomery County, Ohio, in both of which the rates for Negro girls were significantly higher for 1934 than for 1933, and Dade County, Fla., in which the rate for 1934 was lower than that for 1933.

The rates for both white and Negro boys and girls varied widely from court to court (table I). The maximum rate in 1934 for white boys (417) appeared in Mahoning County, Ohio, and the minimum (23) in Montgomery County, Pa. The maximum for Negro boys (989) appeared in Mahoning County, Ohio, and the minimum (78) in Greenville County, S. C. The rates for white girls varied from 77 in Hamilton County, Ohio, to 2 in Montgomery County, Pa. Rates for Negro girls varied from 242 in Hamilton County, Ohio, to 15 in Greenville County, S. C.

AGE UNDER WHICH JUVENILE COURT HAS ORIGINAL JURISDICTION

As has been pointed out earlier, the character of the community services available to children and the policies of the courts and other agencies markedly affect the rates. In juvenile-delinquency rates the age of original juvenile-court jurisdiction is an important factor. The age of original jurisdiction of a court is established by State law and is in most instances uniform throughout a State, although for a few courts the maximum age of jurisdiction has been set by special provision at a higher or lower age level than that of the State as a Among the 44 courts that served areas of 100,000 or more whole. population and that reported individually in 1934 (see table B, p. 3, and table G, p. 8), 23 had jurisdiction under 16 years,6 6 had jurisdiction under 17 years, 13 had jurisdiction under 18 years, and 2 had jurisdiction over all persons under 21 years of age. Table J shows the juvenile-delinquency rates for all boys and girls of juvenile-court age and for boys and girls 7 to 15 years of age dealt with by courts that reported individually and that had jurisdiction beyond the sixteenth birthday and by race for the courts of this group that served areas with 10,000 or more Negroes in the total population.

The rates in table J for children 7 to 15 years of age, inclusive, may be compared with the rates for courts having jurisdiction under 16 years that appear in tables G and I. Wide variation is shown in the rates for children 7 to 15 years of age dealt with by courts that have jurisdiction beyond the sixteenth birthday and also in the total

.

⁶ Mobile County, Ala.; Bridgeport and Hartford, Conn.; Fulton County, Ga.; Allen, Lake, Marion, St. Joseph, and Vanderburgh Counties, Ind. (Indiana courts have jurisdiction over boys under 16, girls under 18); Baltimore, Md.; Hudson and Mercer Counties, N. J.; Erie, Monroe, Rensselaer, and Westchester Counties, New York City, and Syracuse, N. Y.; Allegheny, Berks, and Montgomery Counties, and Philadelphia, Pa.; and Greenville, S. C.

TABLE J.—Age under which juvenile court has original jurisdiction and juvenile-delinquency rates ¹ per 10,000 white and Negro boys and girls of juvenile-court age and for those 7 to 15 years of age, inclusive, dealt with by courts that had jurisdiction beyond the sixteenth birthday and that served areas with 100,000 or more population in 1934²

¹ Rates are based on population estimated as of July 1, 1933; no estimate for 1934 is available.
 ² Population according to the 1930 census; rates for white and for Negro boys and girls are shown for areas with 10,000 or more Negro population.
 ³ Based on official cases only.

JUVENILE-COURT STATISTICS, 1934

rates for courts that have original jurisdiction only up to the sixteenth birthday. In those courts with jurisdiction beyond the sixteenth birthday the juvenile-delinquency rates both for boys and girls 7 to 15 years old were invariably lower than the rates for boys and girls of all ages within the court's jurisdiction. In courts having 10,000 or more Negroes in the population the same situation appeared among white and among Negro boys and girls.

Chart I.—Juvenile-delinquency rate at each year of age per 10,000 white and Negro boys and girls 7 to 15 years of age dealt with by 41 courts that served areas with 100,000 or more population and that reported throughout the period 1932-34

DELINQUENCY RATES BY AGE OF CHILD

Delinquency rates, by age, for white and Negro boys and girls from 7 to 15 years, inclusive, are shown in chart I and table K. These are average annual rates for the 3-year period 1932–34. They include all children 7 to 15 years of age dealt with by 41 courts that served areas with 100,000 or more population and that reported for each of these 3 years. The population of the area served by these 41 courts included 4,193,771 children 7 to 15 years of age (1,970,043)

¹ According to the 1930 census. ² Estimated as of July 1, 1933.

white boys, 1,939,969 white girls, 136,961 Negro boys, and 146,798 Negro girls). The total population of the area served was 24,382,900.

As both the chart and the table show, delinquency rates for each of the four groups of children were lowest at the younger ages, and increased with each added year to age 15, the oldest age for which rates are presented. In every age period the rates for Negro boys were in excess of those for other children. High rates for Negro boys appeared even in the early ages. They were almost invariably four or five times as high as the rates for white boys. The rate at age 15 was 1,040 for Negro boys as compared with 300 for white boys. Among white boys, as among Negro boys, the tendency for the delinquency rate to increase obviously began with the early ages, and the increase with age was well marked. The rates for white boys, although lower at every age than those for Negro boys, were in excess of those for either white or Negro girls. The rates for Negro girls were invariably four or five times as high as those for white girls. By age 12, the rates for Negro girls exceeded those for white girls of age 15. The rate for Negro girls at age 15 was 257 as compared with 61 for white girls of this age. The rates for white girls were relatively low at all ages. Very few white girls under 13 or 14 years of age were dealt with by courts in delinquency cases.

SUMMARY

Juvenile-delinquency rates are a direct expression of the amount of delinquency dealt with by the courts among children of juvenile-court age. They are not an expression of the total amount of delinquency in the community because many agencies work with children who present problems of delinquency, and the number of children brought to court depends on the work of the organizations assisting with the problems and on the attitude of the community toward both the organizations and the court. The rates also depend unquestionably on the service the court gives to the children who are brought to its attention.

The delinquency rates of the individual courts vary within a wide range. Part of the variation is due to the composition of the community with respect to race; part is due to the difference in maximum age of the children over whom the court has original jurisdiction.

The downward trend in delinquency rates for boys shown from 1929 or 1930 onward continued in 1934 in the groups of 18, 30, and 42 courts reporting throughout varying periods, but the decrease in 1934 was due essentially to the marked reduction in the number of boys dealt with by courts in New York City. In these reporting areas, exclusive of New York City, delinquency rates for boys showed a definite increase in 1934 as compared with 1933. In the groups of 14, 19, and 24 courts (exclusive of New York City) in which the racial composition of the population was an important factor, the

delinquency rates for white boys were approximately identical for the years 1933 and 1934, but the delinquency rates for Negro boys in 1934 were significantly higher than in 1933. The New York City rate for white boys showed a marked decrease in 1934, but there was little change in the number of Negro boys dealt with by the court.

Delinquency rates for girls showed neither definite upward nor downward tendency. The slight increases that prevailed in 1934 as compared with 1933 were sufficient only to bring the figures to the 1932 level. They suggest primarily that the downward trend which has prevailed in the past few years has been checked. In the group of courts (exclusive of New York City) serving areas in which the racial composition of the population was an important factor, the increase in the rates for both white and Negro girls is shown by analysis to have been small and of no statistical significance. The variation in the rate for white girls in New York City was also unimportant, but the rate for Negro girls indicates a significant increase in the frequency with which Negro girls were brought into court in delinquency cases.

TRENDS IN DELINQUENCY CASES

In this section, which presents trends in delinquency cases, the main body of the material is for the 30 courts serving areas of 100,000 or more population which have cooperated each year of the period 1929–34. For this group of courts material is presented showing the number of cases disposed of each year, the age of the boys and girls dealt with, the place the child was living when referred to court, the place of care pending hearing or disposition of the case, and the disposition made by the court. Analysis by age, reason for reference, and previous court experience of children dealt with is presented for delinquency cases which were disposed of by 29 of the 30 courts during 1934.

NUMBER OF CASES AND OF CHILDREN

A smaller number of delinquency cases was disposed of in this group of 30 courts in 1934 than in any previous year of the period for which figures are available (table L). The total for the year 1934 was only a little smaller than that for either 1933 or 1932 but was markedly smaller than that for any earlier year. Fewer boys' cases were disposed of than in any prior year. The number of girls' cases was greater than in 1933 but considerably less than in 1929, 1930, or 1931. It was practically the same as in 1932.

In these 30 courts, 23,959 boys were dealt with in the 28,156 boys' cases and 4,504 girls in the 4,969 girls' cases disposed of in 1934. The case ratios for 1934—85 boys per 100 boys' cases and 91 girls per 100 girls' cases—were approximately the same as those of earlier years. The smaller number of boys per 100 boys' cases than of girls per 100 girls' cases shows that boys were dealt with more frequently than

girls in two or more delinquency cases which were disposed of by the court during a year; in other words, that there was greater recidivism among the boys. The difference between the ratios for the two sexes arises from such basic factors as differences in the behavior problems of the two sexes, differences in the opportunity for delinquency in the community, and differences in the degree of protection which the family and the community afford to boys and girls. The attitude of the community and the court itself toward desirability of referral to court is unquestionably an important factor. The practice of the court with regard to the disposition of cases (a larger percentage of the girls referred to court were committed to institutions) also affects the relative frequency with which boys and girls are referred to court more than once during the period of a year.

 TABLE L.—Number of boys and girls dealt with in delinquency cases disposed of by

 30 courts that reported throughout the period 1929–34

Many of the individual courts showed a marked change between 1934 and 1933 in the number of cases disposed of (table M). Nineteen courts showed an increase in the total number of boys' cases disposed of. Among the courts disposing of more than 250 cases in 1934 in which the increase in the number of boys' cases amounted to 25 percent or more were Erie County, N. Y., 105 percent; Bridgeport, Conn., 51 percent; and Allegheny County, Pa., 25 percent. The maximum percentage of decrease in boys' cases in 1934 as compared with 1933 appeared in New York City, and in Norfolk, Va., 22 percent. Hamilton County, Ohio, showed a decrease of 19 percent; Kent County, Mich., 17 percent; Montgomery County, Ohio, 14 percent; and the third district of Utah, 11 percent.

Twenty of the courts showed a larger number and 10 courts a smaller number of girls' cases disposed of in 1934 than in 1933. The number of girls' cases disposed of by the great majority of the individual courts was so small that the annual change was of little significance. Of the courts disposing of 250 or more girls' cases in 1934, two showed an increase of 10 percent or more (New York City, 10 percent, and Hamilton County, Ohio, 19 percent); whereas no court disposing of 250 or more girls' cases showed a decrease of as much as 10 percent.

¹ Includes only official cases because court did not report unofficial cases every year.

UVENILE-COURT

STATISTICS,

AGES OF BOYS AND GIRLS

The age distribution of the boys dealt with in the cases disposed of was very similar each year, although there was a slight tendency toward less frequent appearance of boys under 12 years in court and a more frequent appearance of boys of 16 and over (table N). Approximately two-thirds of the boys dealt with each year were from 12 to 15 years of age. In 1934, 17 percent of the cases were those of boys under 12 years, 68 percent were of boys 12 to 15 years of age, and 15 percent were of boys of older ages.

The girls dealt with in delinquency cases in 1934, as in previous years, were generally older than the boys. Of the cases dealt with in 1934, 21 percent were of girls 16 years and over—a smaller proportion than in any previous year. Cases of girls of these ages constituted between 22 and 25 percent of the girls' cases disposed of each year from 1929 to 1933.

HOME CONDITIONS

The number of cases in which the children were living in homes of normal composition and the number living in broken homes are shown in table O. Information as to the place the child was living when referred to court was more nearly complete in 1934 than in any previous year. In each year of the 6-year period from 1929 to 1934 the children were living in their own homes in 92 percent of the cases for which the information was obtained, and in 8 percent of the cases the children were living in other places.

Somewhat fewer cases were referred to court in 1934 than in 1933 or 1929 in which the child was living with both his own parents and in homes with one parent and a stepparent. A slightly larger number in 1934 than in 1933 or 1929 were cases of children from homes in which there was only one parent, the increase being mainly in the number of cases of children coming from homes in which the parents were living apart rather than in the number of those from homes which were broken by the death of either the father or the mother.

REASONS FOR REFERENCE TO COURT

The reasons for referring delinquency cases to court are shown in table P. The reasons for reference of boys' cases and girls' cases differed markedly. In all the years of the period for which the information is presented boys' cases were referred most frequently on account of stealing, acts of carelessness and mischief, and traffic violations, whereas girls' cases were referred most frequently on account of being ungovernable, for sex offenses, and running away—offenses in girls' cases which will be recognized as closely allied.

The proportion of the boys' cases referred on account of stealing in 1934 (46 percent) was larger than in any previous year of the period. The proportion referred for acts of carelessness and mischief and traffic violations (29 percent) was smaller than in either 1933 or 1932. The percentages referred on account of running away and being ungovernable (7 percent for each offense) in 1934 were approximately the same as in previous years.

The same proportion of girls' cases were referred for the group of related offenses—being ungovernable, sex offenses, running away, and truancy—in 1934 as in 1933 (74 percent). But the reason for reference was stated to be running away in 20 percent of the cases in 1934, as compared with 16 percent in 1933, and the percentage referred on account of being ungovernable was 28 in 1934, as compared with 30 in the previous year. The percentage of girls' cases referred on account of running away was larger than in any previous year, and the number referred on this account (983) was greater than any year since 1931. The proportion of girls' cases referred on account of sex offenses was the same (16 percent) in 1934 as in 1933; prior to 1933

sex offenses had invariably represented 19 or 20 percent of the total girls' cases for which reason for reference to court was reported.

 TABLE P.—Reason for reference to court in boys' and in girls' delinquency cases

 disposed of by 30 courts that reported throughout the period 1929-34¹

¹ Includes only official cases for Franklin County, Ohio, and Pierce County, Wash., because these courts did not report unofficial cases every year.

Table P1 shows the types of reasons for which boys were most frequently referred to court during the period under review for each of the 30 cooperating courts. The number of girls' cases is not shown because the number of cases referred for the different reasons was very small. Among the courts referring 100 or more boys' cases for stealing in either 1933 or 1934 marked increases in the number in 1934 (10 percent or more) appeared in Bridgeport, Conn.; Lake County, Ind.; Polk County, Iowa; Caddo Parish, La.; Hennepin and Ramsey Counties, Minn.; Mercer County, N. J.; Erie and Westchester Counties and New York City, N. Y.; Multnomah County, Oreg.; and Allegheny County, Pa. The drop in the boys' cases referred on account of acts of carelessness or mischief and traffic violations from 9,864 in 1933 to 8,236 in 1934 was due mainly to the reduction in the number referred on this account in New York City and in Philadelphia. Cases of truancy, running away, and being ungovernable increased from 5,024 in 1933 to 5,315 in 1934. A somewhat larger number of such cases were referred on this account in 1934 than in 1933 in New York City (1,126 and 925) and in Philadelphia (1,111 and 1,019). Among the courts disposing of 100 or more cases referred for truancy, running away, and being ungovernable in either 1933 or 1934 increases of 10 percent or more in 1934 as compared with 1933 occurred in Bridgeport, Conn.; Marion County, Ind.; Erie County and New York City, N. Y.; Mahoning County, Ohio; and Multnomah County, Oreg.

TABLE P1.—Number of boys' delinquency cases, referred for specified reasons, disposed of by 30 courts that served specified areas and that reported throughout the period 1929-34

¹ Includes only official cases because court did not report unofficial cases every year.

27

JUVENILE-COURT STATISTICS, 1934

PLACE OF DETENTION CARE

The proportion of cases in which the child was detained overnight or longer pending hearing or disposition of the case was somewhat greater in 1934 than in 1933 (40 percent of the boys' cases and 50 percent of the girls' cases in 1934 as compared with 37 percent and 48 percent, respectively, in 1933).

The proportion of cases in which boys were detained overnight or longer was larger in 1934 than in any other year since 1930. Girls were detained in a larger proportion of cases in 1934 (50 percent) than in 1933 (48 percent), but 1933 was the year having the minimum percentage; the proportion of cases of girls detained in the preceding years either exceeded or was the same as that for 1934. In both boys' and girls' cases in 1934 the detention home was the most usual place of care-60 percent for boys and 58 percent for girls who were detained and for whom place of care pending hearing was reported. Other institutions stood in second place (29 percent for boys and 37 percent for girls). Jails and police stations were used infrequently as places of detention but were used more frequently for boys (7 percent of the cases) than for girls (1 percent of the cases). Boarding or other family homes were used in only 4 percent of both boys' and girls' cases.

The use of boarding or other family homes and the use of other institutions for detention of boys were more frequent in 1934 than in Girls were more often detained in detention homes and in other 1933. institutions in 1934 than in 1933. A few more boys were detained in jails in 1934 than in 1933 (734 in 1934; 708 in 1933). The increase in the number is obviously quite small, but it is in contrast to the drop in every year from 1930 to 1933 (table Q).

TABLE Q.—Place of care pending hearing or disposition in boys' and girls' delin-quency cases disposed of by 30 courts that reported throughout the period 1929-34¹

¹ Includes only official cases for Franklin County, Ohio, and Pierce County, Wash., because these courts

did not report unofficial cases every year. ³ Includes cases of children cared for part of the time in detention homes and part of the time elsewhere, but excludes cases of children also held in jails or police stations. ³ Includes a few cases of children cared for part of the time in jails or police stations and part of the time elsewhere.

⁴ Includes a few cases of children held in more than 1 place of care but in places other than detention homes, jails, or police stations.

In 1934 practically all the courts except those of Minnesota and New York State used detention homes for the majority of children detained (table Q1). The New York State courts, except the one in Erie County, mainly used other institutions, whereas Erie County detained all but two of its children in boarding or other family homes. In Mercer County, N. J., all the children detained, and in Hudson County, N. J., all but one were taken care of in detention homes. In Ohio, although the majority of the children were detained in detention homes, the use of jails and police stations was frequent except in Hamilton County, where only two children were detained in such places. Jails or police stations were also frequently used for children in Caddo Parish, La.; Hennepin and Ramsey Counties, Minn.; Multnomah County, Oreg.; Greenville County, S. C.; and the third district of Utah. In several of these courts, however, the number of cases of children cared for in jails or police stations in 1934 was smaller than in 1933.

In connection with the study of place of detention care it must be kept in mind that the courts must use for detention care the places that have been provided for the purpose by the community. The figures, of course, also reflect the attitude of the courts, because the community's appreciation of the desirability of providing the better types of places of care for children who require detention is dependent, at least in part, upon the amount of emphasis that the court places on the need for adequate provision.

30

DISPOSITION OF CASES

A smaller proportion of both boys' and girls' cases was dismissed, adjusted, or held open without further action in 1934 than 1933 (table R). The proportion of boys' cases dismissed (49 percent) in 1934 was less than in either 1933 (54 percent) or 1932 (51 percent) but was greater than in 1929 (46 percent). In 31 percent of the boys' cases both in 1934 and in 1929 the boy was placed on probation, a larger percentage than in any intervening year. In a slightly larger proportion of cases boys were committed or referred to institutions in 1934 (10 percent) than in either 1933 (8 percent) or 1932 (9 percent).

For girls a small decrease in 1934 as compared with 1933 appeared in the percentage of cases disposed of by dismissal or adjustment and in cases disposed of by placement under the supervision of a probation officer. A somewhat larger percentage of the cases of girls were disposed of by commitment or referral of the girl to an agency or individual in 1934 than in any previous year of the period.

TABLE R.—Disposition of case in boys' and girls' delinquency cases disposed of by 30 courts that reported throughout the period 1929–34 ¹

¹ Includes only official cases for Franklin County, Ohio, and Pierce County, Wash., because these courts did not report unofficial cases every year.

Study of the disposition of cases in the individual courts (table R1) shows that the smaller number of cases dismissed, adjusted, or held open without further action in 1934 as compared with 1933 was due primarily to the marked drop in the number so disposed of by the New York City court—2,704 cases in 1934 as compared with 4,308 in 1933. Thirteen other courts, however, including Philadelphia, dismissed fewer cases during the year. On the other hand, 16 courts disposed of more cases by these methods in 1934 than in 1933. Among the courts in which a markedly larger number of cases (150 or more) were dismissed, adjusted, or held open without further action in 1934 than in 1933 were Bridgeport, Conn.; Polk County, Iowa; and Erie County, N. Y.

 ² Includes only official cases because court did not report unofficial cases every year.

Digitized for FRASER https://fraser.stlouisfed.out Federal Reserve Bank of St. Louis JUVENILE-COURT STATISTICS, 1934

32

The total number of cases in which the child was placed under the supervision of a probation officer was 8 percent greater in 1934 than in 1933. Twenty-two of the individual courts placed a larger number of children on probation in 1934 than in the preceding year.

The use of institutional care was more frequent in 1934 than in 1933. In the group of courts as a whole the number of children committed or referred to institutions in 1934 was 14 percent greater than in 1933. Nineteen courts disposed of more cases by commitment or referral of the child to an institution, one court disposed of exactly the same number in both years, and 10 courts disposed of fewer cases by this method.

PREVIOUS COURT EXPERIENCE

For the year 1934 tabulations have been prepared for 29 of the 30 courts 7 showing the age, race, and reason for reference to court of children who were dealt with for the first time in delinquency cases and for the children who had been dealt with previously in delinquency cases disposed of by the court. The analysis presented includes only cases of children 7 to 15 years of ago for whom information was obtained as to whether or not the child had ever been dealt with previously in a delinquency case. Cases of children 16 years of age and over were excluded from the analysis because not all the courts have original jurisdiction over children of these ages. The tabulations include 18,008 cases of boys (14,574 cases of white boys and 3,434 cases of Negro boys) and 3,196 cases of girls (2,370 cases of white girls and 826 cases of Negro girls). They include 12,601 cases of boys and 2,601 cases of girls which involved children who had had no previous court experience and 5,407 cases of boys and 595 cases of girls in which the children had been dealt with previously by the court in delinquency cases. The previous delinquency cases of the children who had had previous court experience occurred either in 1934 or in earlier years. No information is available with regard to the cases which would show either age at date of reference to court or the reason for reference of the previous delinquency case.

Of the children dealt with in delinquency cases, boys more frequently than girls had had previous court experience. Among the boys' cases 70 percent and among the girls' cases 81 percent were cases in which the child had had no previous case disposed of (chart II). In other words, 30 percent of all boys' cases and 19 percent of all girls' cases were cases in which the child had had court experience previously in 1934 or in earlier years. A larger proportion of the cases of white boys (73 percent) than of Negro boys (58 percent) were first delinquency cases. The difference in the relative frequency of first court experience for both white and Negro girls was smaller than for either white or Negro boys; 83 percent of the cases of white girls and 78 percent of the cases of Negro girls were first delinquency cases. But Negro girls dealt with by the courts had been involved in previous delinquency cases more frequently than white girls.

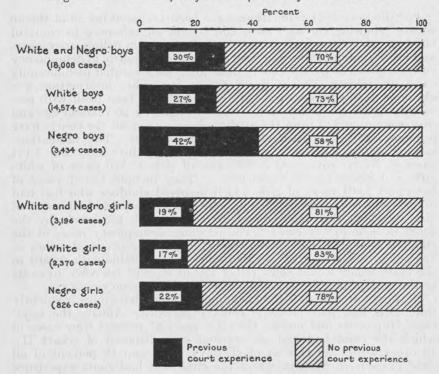

Table S shows the age distribution and previous court experience of white and of Negro boys and girls dealt with by the courts in delinquency cases. In every group the great majority of the cases (60

⁷ The courts included are all those that cooperated each year of the period 1929-34 except Philadelphia, which reports to the Children's Bureau not through cards but through tables from which information in the same detail as for other courts consequently could not be brought together.

JUVENILE-COURT STATISTICS, 1934

percent or more) were those of children 13 to 15 years of age; a much larger proportion of the girls (79 percent) than of the boys (69 percent) were of these older ages. Among both white and Negro boys and girls the children of these older ages formed a larger proportion of the children who had had previous court experience than of the children who had had no previous court experience. The white boys were of these ages in 67 percent of the cases of those dealt with for the first time and in 79 percent of those who had been dealt with previously; the Negro boys, in 60 percent of the cases of those dealt

Chart II.—Previous court experience of white and of Negro boys and girls 7 to 15 years of age dealt with in delinquency cases disposed of by 29 courts in 1934

with for the first time and in 69 percent of those dealt with previously. The white girls were in this age group in 78 percent of the cases of those dealt with for the first time and in 88 percent of those dealt with previously; the Negro girls, in 77 percent of the cases of those dealt with for the first time and in 84 percent of those dealt with previously.

In cases of boys with as well as those without previous court experience the reason for reference was generally stealing or acts of carelessness or mischief (table T). For both white and Negro boys stealing was the reason for reference in a larger proportion of cases in which the boy had been dealt with previously than of those in which he was dealt with for the first time. Acts of carelessness or mischief, however, constituted the reason for reference in a larger proportion

of cases of both white and Negro boys dealt with for the first time than in cases of boys dealt with previously. The proportion of cases referred for other reasons was relatively small, and the differences between first and previous court experiences were too slight for sound conclusions. However, for both white and Negro boys there was a slightly larger percentage of cases of truancy and for white boys a slightly larger percentage referred for being ungovernable among those having previous court experience than among those dealt with for the first time.

TABLE S.—Age when referred to court and previous court experience of white and Negro boys and girls; delinquency cases of boys and girls 7 to 15 years of age for whom a report was obtained as to previous court experience in cases disposed of by 29 courts ¹ in 1934

¹ All the courts that served areas with 100,000 or more population and that cooperated throughout the period 1929-34 except Philadelphia, which did not furnish this information.

Among girls the group of closely allied offenses—truancy, running away, being ungovernable, and sex offenses—accounted for almost three-fourths of the cases disposed of. (See table T.) Cases of these types formed a larger proportion of the cases both of white and of Negro girls who had been dealt with in previous delinquency cases (83 and 81 percent, respectively) than of those who had not been dealt with in previous delinquency cases (72 and 70 percent, respectively). In the group referred for truancy, running away, and being ungovernable, the boys who had had no previous court experience were 13 to 15 years of age in about the same proportion of cases as were those who had been dealt with previously (71 and 72 percent, respectively). (See table U1.) However, among those referred for acts of carelessness or mischief and for stealing, the boys were of these older ages in a larger proportion of the cases involving previous court experience (acts of carelessness or mischief, 74 percent, and stealing, 78 percent) than in cases of boys dealt with for the first time (acts of carelessness or mischief, 59 percent, and stealing, 67 percent).

TABLE T.—Reason for reference to court and previous court experience of white and Negro boys and girls; delinquency cases of boys and girls 7 to 15 years of age for whom a report was obtained as to previous court experience in cases disposed of by 29 courts¹ in 1934

36

Girls who had had previous court experience who were referred on account of such offenses as truancy, running away, being ungovern-able, and sex offenses were on the whole a little older than girls dealt with for the first time on these charges (table U2). The differences in percentage, however, were small. Cases of girls 13 to 15 years of age comprised 90 percent of the cases in which the girls had had previous court experience and 85 percent of the cases in which the girls had had no previous court experience. The number of cases of girls with previous court experience referred for other reasons, such as stealing and acts of carelessness and mischief, were too few to warrant consideration by age.

TABLE U1.—Age when referred to court, reason for reference, and previous court experience of boys; delinquency cases of boys 7 to 15 years of age for whom a report was obtained as to previous court experience in cases disposed of by 29 courts 1 in 1934

TRENDS IN DEPENDENCY AND NEGLECT CASES

Twenty-eight courts have reported dependency and neglect cases throughout the period 1929-34 (table V). The number of dependency and neglect cases and the percentage change in each year as compared with the preceding year in cases disposed of by these 28 courts were as follows:

Year	Number	Percent in- crease (+) or decrease (-) as com- pared with preceding year	Year	Number	Percent in- crease (+) or decrease (-) as com- pared with preceding year
1929 1930 1931	14, 863 15, 012 14, 473	+1 -4	1932 1933 1934	13, 188 12, 810 13, 030	$^{-9}_{-3}_{+2}$

Digitized for FRASER https://fraser.stlouisfed.org Federal Reserve Bank of St. Louis

12 years

15 years

13 years_____

14 years

In 1934 more dependency and neglect cases were disposed of than in 1933, but the number of cases was less than in 1932 and every other prior year. The 1934 number was 13 percent less than in 1930, the year in which the maximum number of dependency and neglect cases was disposed of by the 28 courts, and 12 percent less than in 1929, the first year of the period under review. In 1934, 17 of these 28 courts disposed of more, and 11 courts of fewer cases of dependency and neglect than in 1933. The difference in the number of cases disposed of, however, by most courts was small. Of courts disposing of 100 or more cases in 1933, only 6 (Marion County, Ind.; Polk County, Iowa; Ramsey County, Minn.; Monroe County, N. Y.; Montgomery County, Ohio; and Multnomah County, Oreg.) showed increases of 10 percent or more, and only 8 (San Diego County, Calif.; District of Columbia; Erie, Rensselaer, and Westchester Counties, N. Y.; Franklin and Hamilton Counties, Ohio; and Allegheny County, Pa.) showed decreases of 10 percent or more in the number of cases disposed of in 1934 as compared with 1933.

¹ Includes only official cases because court did not report unofficial cases every year.

General economic and social conditions are reflected in the number of dependency and neglect cases reported by courts, but community conditions have varied widely, and the factors operating in the local communities obviously were the main determinants of the number of dependency and neglect cases referred to and disposed of by the individual courts during the period.

During some years of the period under review factors associated with the depression, such as the ability of the family to secure employment, the availability of relief from public and private sources, and the funds that have come into the communities in the form of work programs, have unquestionably affected the number of dependency and neglect cases. In some communities there has been a tendency to provide social treatment for cases without recourse to the court. In many communities the pressure of emergency relief and welfare problems due to the depression has made it impossible to take cognizance of situations which in more normal times would have been brought to the attention of the courts.

Tables W, X, and Y show the age distribution of the children, the marital status of the parents and the place where the child was living when referred to court, and the disposition of the cases for the group of courts during the period 1929–34. Table Z shows the number of children committed or referred to institutions, agencies, or individuals by each of the 28 courts during the period under review.

PART II.—FEDERAL JUVENILE OFFENDERS FOR THE YEAR ENDED JUNE 30, 1935

SOURCE OF INFORMATION

Information with regard to juveniles under 19 years of age who violated Federal laws and came to the attention of Federal authorities is presented for the year ended June 30, 1935. The statistics presented have been compiled by the Bureau of Prisons of the Department of Justice from reports received from United States probation officers, from United States marshals, and from Federal institutions which received Federal juvenile offenders by court commitment. The publication of these statistics is a continuation of the cooperation of the Children's Bureau with the Department of Justice in furthering that Department's program for the treatment of Federal juvenile offenders according to juvenile-court principles.

The information presented for the year ended June 30, 1935, includes statistics for all Federal juvenile offenders under 19 years of age: (1) Offenders brought to the attention of the United States probation officers; (2) offenders received in jails and held pending trial; (3) offenders discharged from detention who had been held in jails and other institutions pending trial; and (4) offenders placed under supervision of United States probation officers and those received under sentence in jails and in Federal institutions.

The statistics on Federal juvenile offenders presented in this report differ from those presented in Children's Bureau Publication No. 226 and No. 232 in that they are for a fiscal year rather than for a calendar year, and in that the compilations by the Bureau of Prisons were made directly from original sources rather than from the juvenile index file, which was the basis for the statistics compiled by the Children's Bureau.¹ The statistics compiled by the Bureau of Prisons give some information not hitherto available on the movement of cases brought to the attention of the United States probation officers, on offenders received in jail pending trial, and on offenders discharged from detention who had been held in jails and other institutions pending trial.

FEDERAL JUVENILE OFFENDERS BROUGHT TO THE ATTENTION OF UNITED STATES PROBATION OFFICERS

The reports from the United States probation officers compiled in the Bureau of Prisons by the office of the Supervisor of the Probation System, United States Courts, show that 2,501 cases of Federal juvenile offenders under 19 years of age were under the attention of the United States probation officers during the year ended June 30, 1935. These cases include 2,219 new cases referred to them during the year

¹ Statistics compiled by the Children's Bureau from the juvenile index file were published in Children's Bureau Publication No. 226, Juvenile-Court Statistics and Federal Juvenile Offenders, 1932; and No. 232, Juvenile-Court Statistics and Federal Juvenile Offenders, 1933.

and 282 cases carried over from the previous year. Of the total 2,501 cases, 2,071 were disposed of during the year and 430 were carried over to the next fiscal year.

These statistics include all Federal juvenile offenders brought to the attention of United States probation officers in Puerto Rico and in the 72 Federal judicial districts in the 48 States in which United States probation officers were on duty during the year. (These 72 districts include 91 percent of the population of the 48 States.) The statistics also include a large proportion of the Federal juvenile offenders in the 12 judicial districts in the United States in which no probation officer was on duty during the year, as Federal juvenile offenders committed to jails in these districts are regularly referred to United States probation officers on duty in adjoining districts. They exclude offenders in these 12 districts who were not referred to United States probation officers in adjoining districts and also offenders in the District of Columbia, as the administrative relationship of the District of Columbia courts to the Department of Justice differs from that of other Federal courts.

TABLE B.—Total cases and movement of cases of Federal juvenile offenders brought to the attention of United States probation officers in each Federal judicial district during the year ended June 30, 1935—Continued

The procedure of the United States Bureau of Prisons insures that these statistics include practically all cases of Federal juvenile offenders in districts with United States probation officers and a large proportion of cases of offenders in districts without United States probation officers. The Bureau of Prisons currently receives reports both from United States probation officers and from United States marshals with respect to juvenile offenders brought to their attention. These reports are checked against each other by the use of the juvenile index file and the names of juvenile offenders not already shown on the reports of the probation officers are immediately transmitted to them by the Bureau of Prisons through the office of the Supervisor of the Probation System. During the year ended June 30, 1935, 20 percent of the cases of juvenile offenders brought to the attention of United States probation officers were referred by the office of the Supervisor of the Probation System, and 80 percent of the cases were referred directly by authorities in the Federal judicial districts. Table B shows for the year ended June 30, 1935, the number of cases carried over from the previous year, the number of new cases referred, the number of cases disposed of during the year, and the number of cases not disposed of at the end of the year in each Federal judicial district in which a probation officer was on duty.

Cases of Federal juvenile offenders brought to the attention of United States probation officers came particularly from the South (table C).

Of the total of 2,501 cases, 70 percent were in Federal judicial districts in the three southern divisions; of the 2,071 cases disposed of, 68 percent were in these geographic divisions, which include only 34 percent of the population 15 to 18 years of age, inclusive, in the 48 States and Puerto Rico. The proportion of cases in the four northern divisions (23 percent) was relatively small as compared with the proportion of the population 15 to 18 years of age, inclusive (56 percent). In 16 States 50 or more cases of Federal juvenile offenders brought to the attention of United States probation officers were disposed of during the year. These States are:

Cases pose during		Cases posec during	tof
Texas	252	New York	81
Kentucky	146	Arkansas	79
Alabama	124	West Virginia	79
Georgia	121	Illinois	78
North Carolina	112	Missouri	64
Louisiana	96	Florida	61
Mississippi	95	South Carolina	52

¹ Very few Federal juvenile offenders are under 15 years of age.
 ² Excludes the District of Columbia because the administrative relation of the District of Columbia courts to the Department of Justice differs from that of other Federal courts.
 ³ Excludes the District of Columbia.

⁴ Less than 1 percent.

Information with regard to the type of offense committed is not available for all the juveniles brought to the attention of United States probation officers. Many of these offenders, however, were unquestionably included among juveniles received in jails pending trial, juveniles received for supervision by probation officers, and juveniles received under sentence in jails or in Federal institutions. The offenses with which these groups of juveniles were charged are discussed in later sections (pp. 98 and 105).

Cases of Federal juvenile offenders brought to the attention of United States probation officers are usually disposed of by Federal authorities. Of the 2,071 cases disposed of, only 180 (9 percent) were diverted to State authorities. Cases dismissed, no-billed, or nol-prossed, and cases in which the juvenile was found not guilty constituted 20 percent of the total cases disposed of. The juvenile was placed on probation in 27 percent of the cases; in most instances (25 percent of the cases) probation to a United States probation officer was the only disposition. The other 2 percent includes offenders who were to be placed on probation after serving terms in jails or Federal institutions, and offenders placed under the supervision of a probation officer prior to deportation. Juveniles were committed to jails and Federal institutions in 30 percent of the cases. In 14 percent the commitments were for a year or less; in 16 percent the period of commitment exceeded a year (table D).

As was stated in the previous paragraph, 9 percent of the 2,071 cases disposed of were diverted to State authorities. During the year ended June 30, 1933, only 5 percent of the 2,478 cases were so disposed of. This represents a small but statistically significant gain in the proportion of cases so disposed of in accordance with the policy of the Department of Justice. At the same time, these figures show clearly that the actual accomplishment with respect to the diversion of cases has not come up to original expectations.

It is none the less true that the department's policy has been carried out insofar as was feasible under existing conditions. The failure to divert a larger proportion of cases has been largely due to the following obstacles: (1) State facilities for the care of juveniles are lacking or inadequate in many localities; (2) where adequate facilities exist, they frequently are not available for the older juveniles, especially those 18 years of age, who make up a large percentage of the Federal juvenile offenders. Such older juveniles, therefore, in many cases can be more effectively handled by the Federal courts than by State courts; (3) Federal probation service is frequently preferable to the use of the available State facilities; (4) likewise, the facilities available to the Federal Government for institutional treatment are often superior to those available to the States.

These obstacles have made it necessary to keep the great majority of Federal juvenile cases under Federal control, in the interest both of the juvenile offenders and of the Government.

Disposition of case	Number	Percent distribu- tion
Total cases	2,071	100
Diverted to State authorities Disposed of by Federal authorities	180 1, 891	9 91

Juvenile fined	30	1
Juvenile committed	² 622	30
1 year or less More than 1 year	285 337	14 16
Other disposition of case	255	15

TABLE D.—Disposition of cases of Federal juvenile offenders brought to the attention of United States probation officers during the year ended June 30, 1935

¹ Of these, 46 were under 16 years of age, 73 were 16, 170 were 17, 221 were 18, and 4 were 19 or over. ³ A total of 698 juvenile offenders under 19 years of age were committed under sentence, including 76 whose cases were not brought to the attention of the United States probation officers. Of the 698 offenders, 23 were under 15 years of age, 32 were 15, 88 were 16, 187 were 17, and 368 were 18.

FEDERAL JUVENILE OFFENDERS RECEIVED IN JAILS AND HELD PENDING TRIAL

The information available for the year ended June 30, 1935, with regard to Federal juvenile offenders received in jails to be held pending trial includes the age and sex of the offender and the offense charged. Similar information is also presented for the year ended June 30, 1934. The number of juvenile offenders received in jails pending trial during the year ended June 30, 1935, was 1,524. The number was considerably greater than during the year ended June 30, 1934 (1,167). It was less than during the year ended June 30, 1933 (2,147). Offenders under 19 years of age constituted 5 percent of the total number of offenders received in jails and held pending trial during each of the years ended June 30, 1935 and 1934, and they constituted 4 percent of the total number of offenders in the year ended June 30, 1933.

Of the 1,524 juveniles received in jails to be held pending trial in the year ended June 30, 1935, 1,413 (93 percent) were boys and 111 This is practically the same sex distribution as in 1934, were girls. when the total number of juveniles received (1,167) included 1,077 boys (92 percent) and 90 girls. The boys received in jails were as a rule older than the girls. Of the girls received, 33 percent in 1935 and 37 percent in 1934 were under 17 years of age, whereas only 27 percent and 25 percent of the boys were of these ages in 1935 and 1934, respectively. Juveniles of 18 years constituted the largest group of offenders of each sex in both years; in 1935, 44 percent of the boys and 48 percent of the girls were 18 years of age; in 1934, 47 percent of the boys and 44 percent of the girls were 18 years of age. The figures show a slightly larger proportion of younger offenders among

the boys in 1935 than in 1934. The difference in the age distribution of the girls in the 2 years is of no importance in view of the small number of girls received in jails during both years (table E).

	Offenders received in jail and held pending trial

Year ended June 30, 1934 Total	1, 167	100	1,077	100	90	100		
Under 15 years 15 years 16 years 17 years 18 years	56 61 181 318 551	5 5 16 27 47	46 54 165 301 511	4 5 15 28 47	$ \begin{array}{r} 10 \\ 7 \\ 16 \\ 17 \\ 40 \end{array} $	11 8 18 19 44		

 TABLE E. — Age and sex of Federal juvenile offenders received in jails and held pending trial during the years ended June 30, 1934 and 1935

The offense with which juveniles received in jails to be held pending trial were most frequently charged in both years was violation of the liquor laws-42 percent in 1935 and 26 percent in 1934. Second in frequency was violation of the Immigration Act, which was charged in 14 percent of the juvenile cases in 1935 and 16 percent in 1934. The offense third in frequency was violation of the Motor Vehicle Theft Act-13 percent in 1935 and 15 percent in 1934. Violation of the postal laws was charged in 8 percent of the cases in 1935 and 7 percent in 1934. Such statistical material as is available for early years indicates that violations of postal laws and of the Motor Vehicle Theft Act were the most frequent offenses.² Violation of the laws against counterfeiting and forgery was charged in 7 percent and 6 percent of the juvenile cases, in 1935 and 1934, respectively. No other type of violation was charged in as many as 5 percent of the cases in either year (table F).

The marked increase in the total number of juveniles received in jails pending trial in 1935 (1,524) as compared with 1934 (1,167) arises mainly from the increase in the number of offenders charged with violation of the liquor laws. This offense was charged in 631 juvenile cases in 1935 as compared with 306 in 1934. Slight increases also appear in the number of other offenses frequently charged. Violation of the Immigration Act was charged in 210 cases in 1935 as compared with 184 in 1934; charges of violation of the Motor Vehicle Theft Act also show an increase—204 in 1935 as compared with 176 in 1934.

² Juvenile-Court Statistics and Federal Juvenile Offenders, 1932, p. 51.

Postal-law violations were charged in 114 juvenile cases in 1935 as compared with 82 in 1934. Counterfeiting or forgery was charged in 102 cases in 1935 and 72 cases in 1934.

FEDERAL JUVENILE OFFENDERS HELD PENDING TRIAL WHO WERE DISCHARGED FROM DETENTION

The information for the year ended June 30, 1935, regarding Federal juvenile offenders detained pending trial who were discharged from detention includes offenders under 19 years of age in the 48 States, Alaska, and Puerto Rico. The total number of Federal juvenile offenders discharged from detention was 1,800 (1,688 boys and 112 girls). Of these, 1,751 were in the 48 States, 42 were in Alaska, and 7 were in Puerto Rico.

These 1,800 Federal juvenile offenders include all those discharged during the year—both those received for detention prior to the beginning of the year and those received during the year. They do not include offenders received for detention who were not discharged during the year.

The information available with respect to Federal juvenile offenders detained pending trial who were discharged during the year includes the Federal judicial district in which the juvenile was detained, place and length of detention prior to trial, and type of discharge from detention.

Federal juvenile offenders detained pending trial were discharged from detention in all the Federal judicial districts except Hawaii. In Federal judicial districts having no probation officers on duty during the year 90 offenders detained pending trial were discharged. The geographic distribution according to the district in which these offenders were discharged from detention is quite similar to that shown for Federal juvenile offenders brought to the attention of United States probation officers (see tables B and C) and is not included in the tables presented.

Most of the Federal juvenile offenders discharged from detention had been held in local jails (88 percent of the boys, 87 percent of the girls). Federal jails had been used for detention of 11 percent of the boys. No girls were held in Federal jails. The small proportion of juveniles held in Federal jails is accounted for by the fact that there are such jails only in Alaska, Puerto Rico, Louisiana, Michigan, New York, and Texas. Although it is the policy of the Bureau of Prisons to avoid the use of jails for the detention of juveniles whenever possible, and an effort has been made to have them placed in the custody of local juvenile detention homes or in such other places of detention as are provided by local authorities, juveniledetention homes were used for only 2 percent of the boys and 8 percent of the girls. Other institutions were not used for any of the boys, but 5 percent of the girls were held in them (table G).

¹ Less than 1 percent.

Information as to the periods of detention in jails and other places prior to trial shows that almost a third (581 of the 1,800 juveniles) were held a month or more; 116 were held 3 months or more, and 12 for 6 months or longer. For only 6 percent of the juveniles were arrangements effected for discharge on the day on which they were detained. Girls as well as boys were detained for long periods. (table H).

 TABLE
 H.—Length of detention pending trial of Federal juvenile offenders of each sex discharged from detention during the year ended June 30, 1935

Long periods of detention were frequent among juvenile offenders released on bail or recognizance as well as among offenders who were not released by these methods. Of the offenders released on bail or recognizance 8 percent were held a month or more prior to release, and 18 percent 2 weeks or more. Although these are long periods of detention in view of the fact that release was effected on bail or recognizance, such long periods were much less frequent among these offenders than among other offenders who were detained. Of the offenders not released on bail or recognizance 46 percent were held a month or longer (table I).

TABLE I.—Length of detention pending trial and release on bail or recognizance in cases of Federal juvenile offenders discharged from detention during the year ended June 30, 1935

¹ Includes 628 juveniles released on bail and 26 released on recognizance.

The average period of detention has been computed by the Department of Justice for boys and for girls detained 1 day or longer for all the Federal districts of the 48 States combined and for each district individually. The computations show that the average period of detention for boys who were detained 1 day or longer in the districts of the 48 States was 28.5 days; for girls it was 32.9 days. The periods of detention pending trial varied greatly among the districts. Of the districts in which 25 or more boys were discharged from jails and other places of detention, the western district of Missouri shows the longest average period for boys (64.7 days). The southern district of Florida shows the next to the longest period (41.3 days). For the eastern district of Oklahoma the average was 39.5 days. In contrast to these long periods of detention the average number of days of detention for boys in the northern district of Georgia, the southern district of New York, and the eastern district of Louisiana was 8.6, 14.0, and 19.4, respectively.

In Federal districts in which 25 or more boys were discharged from detention who had been held 1 day or longer, the average number of days of detention pending trial for the boys held 1 day or longer was as follows:

Federal district	Number of boys	A verage number of days of de- tention	" Federal district	Number of boys	A verage number of days of de- tention
Missouri: Western	27	64.7	Maryland	28	25. 6
Florida: Southern	39	41.3	Arizona	41	24.4
Oklahoma: Eastern	41	39.5	South Carolina: Eastern	44	24.4
Mississippi: Southern	65	39.0	Kentucky: Eastern	69	22.0
Illinois: Northern	34	33. 6	Texas: Northern	29	21.9
Louisiana: Western	32	32.9	Oklahoma: Western	25	21.1
Alabama: Northern	40	31.1	Georgia: Middle	29	20.7
Oklahoma: Northern	25	30. 6	Arkansas: Eastern	31	20.3
Mississippi: Northern	26	30. 4	Louisiana: Eastern	44	19.4
Texas: Southern	39	27.8	New York: Southern	29	14.0
West Virginia: Southern	64	27.1	Georgia: Northern	30	8.6
Texas: Western	129	26.5			

The most frequent type of discharge from detention was release on bail or recognizance. Thirty-six percent of the juveniles (626 boys and 28 girls) were released in this manner, which was not, of course, a final disposition of the case. Two hundred and seventy-six offenders (15 percent) were transferred under sentence to Federal penitentiaries, reformatories, or State institutions; 253 (14 percent) were sentenced to jails; 215 (12 percent) were placed on probation; the cases of 194 (11 percent) were dismissed; and 60 (3 percent) were transferred to immigration authorities. Other types of discharge used for smaller numbers of juveniles were transfers to another Federal district (36), sentence suspended (18), fine paid (10), juvenile escaped (9), juvenile died (2),³ and other type or type not reported (73). (Table J.)

³ Both boys died in hospital while technically in custody awaiting trial.

FEDERAL JUVENILE OFFENDERS PLACED ON PROBATION AND THOSE RECEIVED UNDER SENTENCE IN JAILS AND IN FEDERAL INSTI-TUTIONS

Federal juvenile offenders placed on probation and those received in jails and Federal institutions under sentence comprise the great majority of offenders for whom Federal authorities continue responsibility and supervision after disposition of the case. They include all offenders under 19 years of age received from courts by United States probation officers for supervision during the year, and all Federal offenders of these ages received under sentence in county and city jails, Federal jails, prisons, reformatories, and prison camps.⁴

During the year ended June 30, 1935, the courts placed 510 Federal offenders under 19 years of age under the supervision of United States probation officers, committed 338 to jails, and committed 269 to Federal institutions. The figures include all Federal juvenile offenders whose cases were disposed of by these three methods in the Federal judicial districts of the 48 States, of Alaska, Hawaii, and Puerto Rico. The jail commitments include all juveniles who were sentenced to jail, both those previously held pending trial and those not held pending trial.

The number of juveniles whose cases were disposed of by each of these three methods was larger during the year ended June 30, 1935, than during the preceding year (table K). Relatively few girls' cases were disposed of by these methods in either year. The increase is general throughout all the age periods (table L).

⁴ During the year ended June 30, 1935, 63 Federal juvenile offenders were committed to the National Training School for Boys, 1 to the National Training School for Girls, and 28 to State institutions. During the calendar year 1933, 89 Federal juvenile offenders were committed to these places. During the year ended June 30, 1934, the number of persons of all ages committed to these places was 82 (National Training School for Boys, 41; State institutions, 41).

The information with respect to age of juvenile offenders shows that those placed under the supervision of United States probation officers in the year ended June 30, 1935, were generally younger than those committed to jails, and that a larger proportion of the juveniles committed to jails were of the younger ages than of those committed to Federal institutions other than jails. In each of these groups there were more juveniles 18 years of age than of any other age, but in 1935 they constituted only 43 percent of the juvenile offenders placed under the supervision of United States probation officers as compared with 56 percent of those sentenced to jails and 64 percent of those committed to Federal institutions. In general the age distribution of offenders whose cases were disposed of by each of these three types of disposition in 1934 and in 1935 is similar. Jail sentences are practically always for a year or less, whereas Federal institutions are used for individuals committed for a year or longer.

Information with regard to type of offense is available for these three groups of juvenile offenders for the year ended June 30, 1935, and also for the preceding year. Comparison of the number of juveniles charged with the various offenses each year shows that the larger number of offenders placed on probation, of those received in jails, and of those received in Federal institutions in 1935 than in 1934 arose mainly from the greater frequency of cases involving violation of the liquor laws in 1935. Some of the increase in the number of each group of offenders, however, was due to the larger number of cases involving other types of violations such as violation of the Motor Vehicle Theft Act, postal laws, and laws against counterfeiting and forgery (table M).

TABLE M.—Offense charged in cases of Federal juvenile offenders placed under the supervision of United States probation officers and offenders received under sentence in jails and in Federal institutions during the years ended June 30, 1934 and 1935

Includes Federal, county, and city jails.
 Includes penitentiaries, reformatories, and prison, reformatory, and correctional camps.
 Based on 336 juveniles for whom offense was reported.
 May include a few cases that were not violations of the Car Seal Act.

⁶ Less than 1 percent.
⁶ Based on 369 juveniles for whom offense was reported.
⁷ Does not include any cases of violation of the White Slave Traffic Act.

105

Violations of the liquor laws were of considerable importance among all three groups of offenders, but they formed the largest proportion of the offenses only among the group of juveniles placed on probation. Among juveniles received in jails under sentence, violations of the Immigration Act stood first. None of the juveniles violating the Immigration Act were placed on probation; nearly all of them were deported. Among juveniles sentenced to Federal institutions, the most frequent offense in both 1935 and 1934 was violation of the Motor Vehicle Theft Act.

SUMMARY AND CONCLUSION

The statistics compiled for Federal juvenile offenders by the United States Bureau of Prisons for the year ended June 30, 1935, include all Federal juvenile offenders under 19 years of age—offenders brought to the attention of the United States probation officers, offenders received in jails and held pending trial, offenders discharged from detention who had been held in jails and other institutions pending trial, and offenders placed under supervision of United States probation officers and those received under sentence in jails and in Federal institutions. The statistics available have been presented for all these groups for the year ended June 30, 1935, and also certain comparable statistics for the year ended June 30, 1934.

It has been shown in the several sections of this report that no group includes all the offenders who violated Federal laws and were dealt with by Federal authorities during the year. The statistics, however, include a sufficiently large proportion of the offenders to warrant general conclusions as to the trend in the total number of juveniles brought to the attention of Federal authorities, the types of offenses, and the disposition of the cases by the Federal authorities.

It would appear from these statistics that a larger number of juveniles violated Federal laws and were brought to the attention of Federal authorities in the year ended June 30, 1935, than in the year ended June 30, 1934; a larger number of offenders were received in jails to be held pending trial in 1935 than in 1934; a larger number were placed on probation; and a larger number were received under sentence in jails and in Federal institutions.

The increase in the number of offenses appeared among juveniles of each age. The figures suggest, however, that the increases were somewhat larger among juveniles under 17 years than among juveniles of 17 and 18 years. Juveniles 17 and 18 years of age, however, comprised, as in previous years, the great majority of Federal juvenile offenders.

The increase in the number of offenders apparently arose mainly from the greater frequency of cases involving violation of the liquor laws, but increases also appeared in other important types of offenses, such as violations of the Motor Vehicle Theft Act and of the postal laws.

A slightly larger proportion of juveniles were transferred to State authorities in the year ended June 30, 1935, than in the year ended June 30, 1933. The possibility of transfer is definitely limited by the lack of facilities for care in many localities. The policy of the Department of Justice with respect to the transfer of juvenile offenders to State authorities, when such transfer is to the best interest of the juvenile and the Federal Government, has been carried out insofar as was feasible under existing conditions.
