ACKNOWLEDGEMENTS

The personal income estimates were prepared under the direction of Edwin J. Coleman, Chief of the Regional Economic Measurement Division, assisted principally by Kenneth P. Berkman, Chief of the Government, Proprietary, and Investment Income Branch; Elizabeth H. Queen, Chief of the Private Wage Income Branch; Linnea Hazen, Chief of the Regional Economic Information System Branch; and Jeanne S. Goodman, staff methodologist. Important contributions in specific areas were made by the following persons:

Private nonfarm wage and salary income and private other labor income--Linda C. Barnes, Michael E. Bartell, Carl J. Carlson, Joe T. Franklin, Richard H. Grayson, Mildred L. Hynson, Robert S. Klear, Myles J. Levin, Arletha Mason, Thomas McCormick, Karen Meltzer, Alan J. Millican, Carol Evans, Evelyn C. Newman, Michael G. Pilot, Saundria W. Pitts, William E. Reid, Jr., Victor Sahadachny, Austin L. Schmitt, David C. Warlick, and Patricia A. Schmitt.

Farm income--Thelma L. Brown, Q. Francis Dallavalle, and Gordon H. Lester, Jr.

Government wages and salaries, government other labor income, nonfarm proprietors' income, property income, transfer payments, and personal contributions for social insurance--Wallace K. Bailey, Charles L. Ballard, Vivian G. Conklin, Dennis E. Drinka, Thelma E. Harding, Arthur H. Jacoby, Kevin F. Neyland, Virginia K. Olin, and Katherine Richardson.

Residence adjustment--Wallace K. Bailey and Brian K. Bergstralh.

The tables in this issue, as well as the more detailed materials distributed by the Division, were prepared by Kathy A. Albetski, Eunice P. James, Louise T. Johnson, Paul M. Levit, Nancy L. Onderka, Ronald G. Reel, Stuart A. Schwartz, Hazel E. Turner, and Mary C. Williams.

The secretarial work was provided by Lela S. Lester.

Acknowledgement is also made of the services rendered by the staff of the Computer Systems and Services Division of BEA, Vincent C. Finelli, Chief. While the county income measures contained in this report are the result of the effort, experience, and cooperation of the personnel of the Bureau of Economic Analysis, they are founded ultimately on the statistical work of government agencies in general, and of private organizations as well. Particularly noteworthy for their contributions are the State Employment Security Agencies, the Bureau of the Census, the Bureau of Old Age and Survivors' Insurance, the Internal Revenue Service, the Statistical Reporting Service of the U.S. Department of Agriculture, the Veterans Administration, the Association of American Railroads, and the American Hospital Association.

LOCAL AREA PERSONAL INCOME: 1970-75

INTRODUCTION

This volume presents, for the years 1970-75, estimates of personal income by type of payment and estimates of labor and proprietors' income by major industry group for the SMSA's and counties, as well as for Alaska's census divisions, of the six States of the Far Western region. Persons interested in obtaining similar data for a specific area for selected earlier years (1929, 1940, 1950, 1959, 1962, 1965-69) should contact the Regional Economic Measurement Division.

Definition of total and per capita personal income

Personal income is the current income of residents of an area from all sources. It is measured after deduction of personal contributions to Social Security, government retirement, and other social insurance programs but before deduction of income and other personal taxes. It includes income received from business; Federal, State, and local governments; households; institutions; and foreign governments. It consists of wages and salaries (covering all employee earnings, including executive salaries, bonuses, commissions, payments in kind, incentive payments, and tips); various types of supplementary earnings termed "other labor income" (the largest item being employer contributions to private pension, health, and welfare funds); the net incomes of owners of unincorporated businesses (farm and nonfarm, with the latter including the incomes of independent professionals); net rental income; royalties; dividends; interest; and government and business transfer payments (consisting, in general, of disbursements to persons for which no services are rendered currently, such as unemployment benefits, Social Security payments, Medicare benefits, retirement pay of governmental programs, and welfare and relief payments).

For the measurement of personal income on a regional basis, BEA assigns the income flows to the State, county, or SMSA in which the individual resides. However, BEA also presents labor 1/ and entrepreneurial income in industrial detail by place of work since the bulk of labor and proprietors' income is reported by industry at the point of disbursement (establishment location).2/ This income is then converted to a place-of-residence basis at an all-industry level.

1/ Labor income is the sum of wages and salaries plus other labor income.

2/ In the contract construction industry, point of disbursement may or may not be the actual work site. Therefore, the wage and salary estimates for the construction industry do not necessarily reflect the county of work. This is the only industry where this distinction is of importance.

Regional measures of labor and proprietors' income are important on both a place-of-work and place-of-residence basis. The estimates based on place of work (where-earned), which include detail by industry, are useful in the analysis of the industrial structure of a given area. The estimates based on place of residence (where-received) are useful for the analysis of consumer markets and purchasing power.

Per capita income can vary widely from county to county. Those with either extremely high or low per capita incomes are generally the small counties. In many instances, an unusually high (or low) level of per capita income is temporary and results from unusual conditions such as a bumper crop, a major construction project (i.e., a defense facility, a nuclear plant, or a dam), or a catastrophe (i.e., flood, tornado, or drought). In some cases, a high per capita income is illusory (for example, when a construction project brings in a large number of high-paid workers who live near the site and are included in the population count, but who send a substantial portion of their wages to their dependents living at their permanent homes in other counties). Conversely, counties with heavy institutional populations may show unusually low per capita incomes.

In addition, because population is measured as of one date, whereas income is measured as a flow over the calendar year, a significant change in population during the year, particularly after July 1, can cause a distortion in the per capita figure.

Comparison with the National Income series

Traditionally, the local area personal income estimates are conceptually the same as those in the personal income series in the national income and product accounts. The single exception has been that the national accounts include income paid by the Federal Government to its military and civilian personnel temporarily stationed abroad; whereas the local area estimates exclude such income. However, the national income and product accounts have recently undergone major conceptual and statistical revisions (published in Parts I and II of the January 1976 issue of the Survey of Current Business). These changes are not reflected in the local area estimates appearing in this set of volumes. The Regional Economic Measurement Division will complete its benchmark revisions of State and local personal income, paralleling the national revisions, during late 1977 (State income) and early 1978 (county and SMSA income), at which time the revised regional personal income series will be published.

METHODOLOGY

The following summary description of methodology generally pertains to the current estimates. For most income items, recent estimates are more reliable than those for earlier years because more and better data are available for the later years.

Almost 400 series of separate estimates go into the derivation of the 30 line items shown in the published personal income tables for the SMSA's and counties.

The bulk of the source materials used to prepare the county estimates was obtained from records that Federal and State government agencies maintain for their own purposes, usually to administer a program, such as unemployment insurance or Social Security. The remainder of the data was obtained from various censuses or from private sources, such as the American Hospital Association or the Association of American Railroads.

While this approach requires processing the various inputs to adjust for differences in definition, to close data gaps, and to obtain statistical comparability among geographic units and over time, it is, nevertheless, both reliable and economical. The data are usually subject to internal review by the agency administering the program, and the cost of using data collected by other agencies for other purposes is minimal. The major alternative to BEA's present approach to income measurement would be to collect the necessary information in surveys of income recipients. The data acquired would be directly suited to the measurement of personal income. The cost, however, would be prohibitive because a very large sample would be necessary to permit reliable local area estimates.

The State and local area income estimates were made within the framework of BEA's national estimates of personal income; that is, the national totals 3/ for each of the 385 income items were allocated first to the States and then to the counties in proportion to each State's or county's share of a related economic series. In some cases, national, State, and county estimates were derived from the same basic source materials; for example, wages and salaries reported for unemployment insurance purposes were used to estimate the bulk of the payroll disbursements by industry. In other instances, data that were available at the national level were not available at the local level, and in these cases an effort was made to develop an allocator that most accurately reflected the geographic distribution of the component in question.

The allocation procedure is so central to the measurement of local area income that an illustration of it in some detail is justified. In a typical State, about two-thirds of total payrolls and nearly 90 percent of private payrolls come under the State's unemployment insurance (UI) program. Under the ES-202 program, every covered firm is required to report to the State's Employment Security Agency the wages and salaries paid its employees in the preceding quarter. These reports are tabulated by county and summed by industry (at the two-digit level). The quarterly tabulations, in which the individual firm's report loses its identity, are furnished to BEA which then sums them to annual totals, by industry, for each county.

Prior to 1972, taxable payrolls of employers with too few employees to be covered by the UI program were obtained from reports of the Social Security Administration (Old Age and Survivors Insurance program) and used to adjust the UI data. Since 1972, however, no firm is exempt from UI coverage because of size except certain nonprofit organizations. Therefore, the small firm

---

3/ National totals may not agree because of recent revisions of the national income and product accounts (see page 2).

adjustment is no longer necessary. Other elements of payroll 4/ excluded from UI coverage--such as tips or small segments of an industry--are estimated independently by county and added to the UI-OASI data. The resulting county figures form the allocating series. The BEA State estimates of wages and salaries in each industry are then disaggregated among the constituent counties in direct proportion to the county distribution of the allocating series to yield the final county estimates.

Wages and salaries

The following paragraphs touch briefly on the measurement of payrolls not covered by UI 5/ and of certain nonwage components.

Fisheries were treated as "covered" in 22 States at the county level. Estimates for the remaining fishing States were based on either modified UI data or County Business Patterns (CBP) distributions of first-quarter payrolls in the industry. County estimates of wages and salaries for private educational services and nonprofit membership organizations continued to be based on CBP distributions since the UI law extending coverage in 1972 excludes certain categories of nonprofit organizations. Furthermore, because of certain anomalies in the UI and CBP distributions for museums, art galleries, etc., which have not as yet been fully resolved, estimates for this industry group also continued to be CBP-based.

State totals of wages and salaries of workers in private households were allocated to counties in proportion to the product of the number of persons employed in the industry and their average income derived from data reported in the 1970 Census of Population. County estimates of wages and salaries of railroad workers were based on biennial employment reports of the Association of American Railroads. The distributions of farm wages were derived from county wage data reported in the 1969 Census of Agriculture. For the rest of the world, the State totals of wages and salaries 6/ were assigned to the counties in which the major international organizations, foreign embassies, and consulates are located.

Federal civilian payrolls were based on UI data for 15 States and on Civil Service Commission employment data for the remaining States. For the latter, salary differentials were introduced by weighting each agency's county employment by the agency's average salary in that State as calculated from UI data.

4/ The value of pay in kind is already included in both the UI and OASI payroll tabulations. However, since it is not reported separately by the employers, it cannot be identified.

5/ Forestry and hospitals are considered "covered" industries since 1972.

6/ Based on a geographic percentage distribution of the estimated total expenditures, including payrolls, of international and foreign governmental organizations for maintaining offices in the United States. This distribution was supplied by the Balance of Payments Division of BEA.

Military payrolls were estimated in three components. Cash pay and pay in kind were based on a distribution of military strength derived from data obtained from the U.S. Department of Defense and the 1970 Census of Population. Allowances and allotments were allocated by a combination of military strength and civilian population, with the former weighted twice as heavily as the latter. Civilian population was included to take account of the substantial volume of pay allotments that military personnel remit to their dependents. The two-to-one weighting system was derived from tabulations of actual disbursements on a State basis. Military allowances and allotments form the only component of wages and salaries that is credited directly to a recipient other than the employee.

A 1972 benchmark county distribution of local government wages and salaries was constructed from local government payroll data reported in the 1972 Census of Governments. Estimates for the years following 1972 are a composite of Census local government payroll data reported annually for the 372 largest counties and an extrapolation by population of the 1972 benchmark for the remaining smaller counties. State government estimates were based on the 1967 Census of Governments county tabulations of full-time employment of State government units, since the 1972 Census did not include comparable information.

Other labor income

Employer contributions to private pension, health, and welfare funds account for 85 percent of other labor income. Contributions to pension funds were allocated by wages and salaries, and health and welfare funds by employment. Each allocation was carried out in considerable industry detail to achieve proper weighting. The remaining items of other labor income were allocated by payrolls, employment, or population.

Proprietors' income

Proprietors' income for the trade and service industries (which together account for approximately 75 percent of total nonfarm proprietors' income) was based on Internal Revenue Service (IRS) data on the self-employed for 1968-70. These data were derived from the Social Security Self-Employment Tax Form filed by proprietors of unincorporated businesses. Their inclusion has increased considerably the reliability of the estimates of nonfarm proprietors' income. The 1970 data were extrapolated to 1973 by OASI data on the number of small establishments as published in CBP.

Proprietors' income for the other nonfarm industries was based on a combination of 1962 IRS all-industry data and the CBP data on the number of small establishments by industry and county. The latter, available annually, were also used to extrapolate the 1962 distribution to 1973. In each instance, the sum of the preliminary county distributions was adjusted to equal the relatively more accurate State control totals.

The 1974 and 1975 estimates for all nonfarm industries were based on the 1973 distributions because 1974 CBP small establishment data were not yet available.

Farm proprietors' income was based mainly on the 1969 Census of Agriculture. County distributions of 35 components of gross income and about 45 items of farm production expenses were used to allocate State totals of the corresponding series. These State totals were provided by the U.S. Department of Agriculture. Subtraction of total production expenses from the total gross farm income, county by county, yielded total net farm income. Estimates of corporate farm income were subtracted from total net farm income to obtain farm proprietors' income. Estimates for postcensal years were prepared by modifying the county distributions of the various income and expense items by information obtained from the individual States wherever possible. Other distributions were held constant or moved forward by a related series for which data were available.

To those accustomed to gauging the importance of farming by the size of cash receipts, farm earnings (labor and proprietors' income) in a given county may seem low. However, two points must be considered. First, farm earnings do not measure receipts from farming, but only the net personal income generated in the industry; that is, farm earnings are the sum of farm wages, supplementary farm labor income, and net profits of farm operation. A large part of total farm receipts is used to purchase supplies and services--such as fertilizer, machinery, and fuel--produced by other industries.

Second, in areas where corporate farms predominate, labor and proprietors' earnings will be comparatively small, since the only part of corporate farm profits included in labor earnings is wages and salaries and other labor income. No corporate farm profits are included in labor earnings. Indeed, only a small part of corporate profits--dividends paid to stockholders--is included in personal income, and dividends are not identified by industry or county of origin.

Dividends, interest, and rental and royalty income

Dividends and monetary interest were allocated to local areas by special tabulations provided by IRS. In the absence of direct data, estimates of imputed interest and monetary rental and royalty income of persons were based on the county distributions of monetary interest.

Imputed rental income accruing to residents of owner-occupied nonfarm dwellings was derived by allocating the State totals to counties by the distribution of the value of owner-occupied homes, constructed from data reported in the 1970 Census of Housing. The 1971-75 State totals were disaggregated to counties on the basis of the benchmark distributions.

The 1972 estimates of rental income (both monetary and imputed) for New York and Pennsylvania include adjustments for losses incurred due to flood damage resulting from Hurricane Agnes.

Transfer payments

Total transfer payments were measured as the sum of over 50 separately estimated series. Directly reported data were used to measure about three-fourths of all transfers, although the proportion varied among local areas. Reliable

indirect indicators--such as veteran population, which was used to allocate selected components of veterans' benefits--were available for many of the remaining transfers.

Personal contributions for social insurance

Personal contributions for social insurance--a negative component of personal income--generally were allocated to counties by the related wage and salary and/or proprietors' income component.

Residence adjustment

The adjustment of labor income 7/ from a place-of-work to a place-of-residence concept was based primarily on commuting and income data obtained from the 1970 Census of Population and on the 1972 and 1974 county wages reported by the Internal Revenue Service. The Census commuting data were used to calculate the proportions of labor income generated in a given county (place of work) which were received by residents of the surrounding counties. The 1970 relationships were used for the years 1971-75. Estimates of the gross flow of commuters' labor income from the county of work to the various counties of residence were made by multiplying the "income subject to adjustment" (ISA) 8/ of the county of work by the residence adjustment ratios. The initial net residence adjustment for each county was the sum of the individual dollar income flows; i.e., inflows minus outflows.

Under the foregoing procedures, the net residence adjustment for a given county varies, over time, with the changes in the ISA of that county and its neighboring counties. For the period following 1970, there is the implicit assumption that the underlying commutation patterns do not change. Since this assumption is clearly not valid for all cases, the initial residence adjustments were subjected to intensive review. Census county wage data for 1969 and IRS county wage data for 1972 and 1974 were used to identify those counties that had experienced major shifts in commuting patterns. Where further adjustments were indicated by the edit routine and correlative information supported the Census and IRS data, corrections were made to the initial net residence adjustment. These corrections were based on all available information on the changes in the industrial and demographic structure of the county under adjustment.

7/ Although, conceptually, the residence adjustment is a deduction from net labor and proprietors' income, in practice, only net labor income is adjusted for residence since BEA's proprietors' income series is treated both as place of work and place of residence.

8/ Income subject to adjustment is defined as the sum of all the components of personal income estimated on a place-of-work basis.

Per capita income

Per capita income is computed by dividing the residence-adjusted total personal income by population estimates. For 1971 forward, the population data are provided by the Bureau of the Census for July 1 of each year. 9/

BEA attempts, with varying degrees of success, to make its total personal income series geographically consistent over time. In some cases, this is difficult to do because of the annexation of territory of one jurisdiction by another, leading to discontinuities in the population data. This leads to an understatement or overstatement of the per capita estimates for the years prior to annexation. In those instances where such errors are significant, the per capita income estimates are suppressed.

It should be noted that the considerable differences between BEA's estimates of per capita income and Census' estimates are due to differences in definition of income, collection mode, and method of computation. For example, Census computes 1969 per capita income by dividing 1969 total money income by 1970 total population, whereas BEA derives its 1969 per capita income by dividing 1969 total personal income by 1969 total population.

Classification of SMSA's

The classification of SMSA's used by BEA in its personal income estimates conforms, with a few exceptions, to the standards issued through February 1977 by the Office of Management and Budget (OMB).

A more detailed explanation of sources and methods used in preparing the county and SMSA personal income estimates are introduced in Volume 1 of this series.

STATISTICAL SECTION

Personal Income by Major Sources, 1970-75

UNITED STATES	1970	1971	1972	1973	1974	1975
