George Jaszi, Director

Allan H. Young, Deputy Director

Daniel H. Garnick, Associate Director of  
Regional Economics

Edwin J. Coleman, Chief, Regional  
Economic Measurement Division

## ACKNOWLEDGMENTS

The personal income estimates were prepared under the direction of Edwin J. Coleman, Chief of the Regional Economic Measurement Division, assisted principally by Kenneth P. Berkman, Chief of the Government, Proprietary and Investment Income Branch; Elizabeth H. Queen, Chief of the Private Wage and Income Branch; Linnea Hazen, Chief of the Regional Economic Information System Branch; and Jeanne S. Goodman, staff methodologist. Important contributions in specific areas were made by the following persons.

Private nonfarm wage and salary income and private other labor income: David J. Albright, Frances E. Bake, Linda C. Barnes, Carl J. Carlson, Raymond Carlstrom, Sharon C. Carnevale, Carol E. Evans, Joe T. Franklin, Jr., Melanie B. Garfinkle, Richard H. Grayson, Mildred L. Hynson, Robert S. Klear, Thomas McCormick, Karen Meltzer, Allan J. Millican, Michael G. Pilot, William E. Reid, Jr., David P. Roth, Victor Sahadachny, Patricia A. Schmitt, David C. Warlick, and Ronald W. Wilson.

Farm income: Charles L. Ballard, Q. Francis Dallavalle, Thelma L. Ford, and Robert J. McCahill.

Government wages and salaries, government other labor income, nonfarm proprietors' income, property income, transfer payments, and personal contributions for social insurance: Timothy A. Bell, Mildred S. Burnett, Vivian G. Conklin, Thelma E. Harding, Charles A. Jolley, Gary V. Kennedy, Katherine R. Levit, Kevin F. Neyland, Evelyn C. Newman, Jeanne O'Neill, and John M. Reed.

Residence Adjustment: Wallace K. Bailey, Brian K. Bergstralh, and Dennis E. Drinka.

Disclosure avoidance procedures, component evaluation, documentation, and construction of the personal income accounts for local areas: Kathy A. Albetski, Eunice P. James, Louise T. Johnson, Paul M. Levit, Nancy L. Onderka, Ronald G. Reel, Stuart A. Schwartz, Hazel E. Turner, and Mary C. Williams.

The tables in this issue, as well as the more detailed materials distributed by the Division, are the products of the Regional Economic Information System.

Secretarial support was provided by Lela S. Lester.

Acknowledgment is also made of the services rendered by the staff of the Computer Systems and Services Division of BEA, Vincent C. Finelli, Chief. While the county income measures contained in this report are the result of the effort, experience, and cooperation of the personnel of the Bureau of Economic Analysis, they are founded ultimately on the statistical work of government agencies in general, and of private organizations as well. Particularly noteworthy for their contributions are the State Employment Security Agencies, the Bureau of the Census, the Bureau of Old Age and Survivors' Insurance, the Internal Revenue Service, the Statistical Reporting Service of the U.S. Department of Agriculture, The Veterans Administration, the Association of American Railroads, and the American Hospital Association.

Editorial service was provided by Sybella W. G'Schwend.

## INTRODUCTION

This volume presents, for the period 1971-76, the revised estimates of personal income by type of payment and of labor and proprietors' income by major industry group for the metropolitan areas and counties of the six States of the New England region. The revisions reflect the definitional and classificational revisions incorporated in the estimates made in the 1976 benchmark revision of the national income and product account (NIPA) estimates—specifically those that affected personal income. The revisions are discussed in part I of the January 1976 *Survey of Current Business* and summarized in table B.

The statistical revisions are traceable to the rebenchmarking of the NIPA estimates, which also are discussed in the January 1976 *Survey*; to the routine annual revisions of the NIPA estimates for 1973-76, which incorporated source data not available when the benchmark revision was prepared and which were published in the July 1976 and July 1977 issues of the *Survey*; and to the methodological improvements in the State estimates. The improvements in the State and county estimates consist of both more reliable estimating procedures and more current and complete data. The major data sources underlying the improved series included the 1969 and 1974 Censuses of Agriculture; the 1967 and 1972 Censuses of Governments; the Decennial 1970 Censuses of Population and Housing; and the 1967 and 1972 economic censuses—manufacturing, mining, construction, and trade and services. Some of the information from these sources had been incorporated in previous annual revisions; the present revisions use them fully and consistently. The present revisions also use information from the Internal Revenue Service (IRS), the Railroad Retirement Board, the Civil Service Commission, the U.S. Department of Agriculture (USDA), the U.S. Department of Defense, the U.S. Department of Justice, the U.S. Department of Labor's Bureau of Labor Statistics (BLS), and the State Bureaus of Employment Security.

Estimates by industry for 1975 and 1976 are based on the 1972 Standard Industrial Classification (SIC). Estimates for the years prior to 1975 remain on the 1967 SIC basis. Estimates for 1975 on the 1967 SIC basis will be available at a later date. The overlap is intended to aid those who wish to approximate a time series based on a consistent industry classification or to analyze the impact of the code changes on the industry detail. The effectiveness of the overlap is sharply limited in many areas because it is not possible to distinguish between code changes mandated by the Office of Management and Budget's 1972 revision of the Standard Industrial Classification Manual from code changes resulting from the refileing required by many State Employment Security Agencies. The refileing was instituted in an effort to incorporate code changes resulting from errors in classification or from actual changes in product activity. Because the employment and wage data provided the Bureau of Economic Analysis are tabulated by industry rather than by individual firm, it is virtually impossible to construct estimates for 1975 on a 1967 SIC code basis that are comparable with those produced for earlier years. Furthermore, the problem of establishing a linkage between the 1974 and 1975 data reported in unemployment insurance (UI) tabulations is compounded by the recession of 1975, negating any possible use of trend analysis as an aid in evaluation.

Revised county data are currently available, at a minimal cost, back to 1969. Estimates for selected years back to 1959 will be available on a revised basis by spring 1979. Persons interested in obtaining data for selected earlier years should contact the Regional Economic Measurement Division in accordance with this timetable.

### Definition of total and per capita personal income

Personal income is the current income received by residents of an area from all sources. It is measured after deduction of personal contributions for social security, government retirement, and other social insurance programs but before deduction of income and other personal taxes. It includes income received from foreign

governments. It consists of wage and salary disbursements, various types of supplementary earnings termed "other labor income," proprietors' income, rental income of persons, dividends, interest, and government and business transfer payments.

For the measurement of personal income on a regional basis, BEA assigns the income flows to the State, county, or Standard Metropolitan Statistical Area (SMSA) in which the individual resides. However, BEA also presents labor income<sup>1</sup> and proprietors' income in industrial detail by place of work since the bulk of labor and proprietors' income is reported by industry at the point of disbursement (establishment location)<sup>2</sup>. This income is then converted to a place-of-residence basis at an all-industry level.

Regional measures of labor and proprietors' income are important on both a place-of-work and a place-of-residence basis. The estimates based on place of work (where-earned), which include detail by industry, are useful in the analysis of the industrial structure of a given area. The estimates based on place of residence (where-received) are useful for the analysis of consumer markets and purchasing power.

Per capita personal income is the total personal income of residents divided by the resident population. It serves as an indicator of the nature of consumer markets and of the well-being of the residents of an area. Per capita income can vary widely from county to county and should be used with caution for several reasons. In many instances, an unusually high (or low) per capita income is temporary and results from unusual conditions such as a bumper crop, a major construction project (e.g., a defense facility, a nuclear plant, or a dam) or a catastrophe (e.g., flood, tornado, or drought). In some cases, a high per capita income is not representative of the standard of living in an area. For example, a construction project may attract a large number of high-paid workers who are included in the population count but who send a substantial portion of their wages to their dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college, correctional institution, or domiciliary medical facility) may show an unusually low per capita income, which is not necessarily indicative of the economic well-being of the noninstitutional population. Moreover, population is measured at midyear, whereas income is measured as a flow over the year. Therefore, a significant change in population during the year, particularly around midyear, can cause a distortion in the per capita figures.

### Comparison with national personal income series

The definitions underlying the local area series are, for the most part, the same as those underlying the personal income series in the national income and product accounts. The major difference is in the treatment of U.S. citizens temporarily working on assignment abroad. The national series includes not only Federal personnel—civilian and military—stationed abroad but also—since the 1976 benchmark revisions—U.S. residents employed by private U.S. firms on temporary foreign assignment. The local area series (as well as the State series) includes only persons working and/or residing in the 50 States and the District of Columbia.

Border workers are treated somewhat differently in the local area personal income series than they are in the national series although the net effect on total personal income is the same. The differences in approach are discussed in the section on residence adjustment.

<sup>1</sup>Labor income is the sum of wages and salaries plus other labor income.

<sup>2</sup>In the construction industry, point of disbursement may or may not be the actual work site. Therefore, the wage and salary estimates for the construction industry do not necessarily reflect the county of work. This is the only industry where this distinction is of importance.

## METHODOLOGY

The 30 line items shown in the published personal income tables for SMSA's and counties are derived from approximately 400 separately estimated series.

The bulk of the source materials used to prepare the county estimates was obtained from records that Federal and State government agencies maintain for their own purposes, usually to administer a program, such as unemployment insurance or social security. The remainder of the data was obtained from various censuses or from private sources, such as the Association of American Railroads.

While this approach requires processing the various inputs to adjust for differences in definition, to close data gaps, and to obtain statistical comparability among geographic units and over time, it is, nevertheless, both reliable and economical. The data are usually subject to internal review by the agency administering the program, and the cost of using data collected by other agencies for other purposes is minimal. The major alternative to BEA's present approach to income measurement would be to collect the necessary information in surveys of income recipients. The data acquired would be directly suited to the measurement of personal income. The cost, however, would be prohibitive because a very large sample would be necessary to permit reliable local area estimates.

The State and local area income estimates were made within the framework of BEA's national estimates of personal income; that is, the national totals for each of the approximately 400 income items were allocated first to the States and then to the counties in proportion to each State's or county's share of a related economic series. In some cases, national, State, and county estimates were derived from the same basic source materials; for example, wages and salaries reported for unemployment insurance purposes were used to estimate the bulk of the payroll disbursements by industry. In other instances, data that were available at the national level were not available at the local level, and in these cases an effort was made to develop an allocator that most accurately reflected the geographic distribution of the component in question. An illustration of the allocation procedure, central to the measurement of the local area income, is included in the section on wage and salary disbursements.

The following summary of methodology for each personal income component is confined to the procedures applicable to the most current period with particular emphasis on those which reflect revisions (due to changes in classification or definition, availability of new data, or improved estimating techniques). Persons interested in a detailed explanation of the classificational and definitional and statistical revisions at the national, State, and county levels of estimation are referred to the following issues of the *Survey of Current Business*: January 1976, Part I; August 1977; and June 1978, respectively.

### Wage and salary disbursements

Wage and salary disbursements consist of monetary remuneration, including compensation of corporate officers; commissions, tips, and bonuses; and receipts in kind that represent income to the recipients. Retroactive wages are counted when paid rather than when earned.

**Private nonfarm**—In a typical State, about two-thirds of total payrolls and more than 90 percent of private payrolls come under the State's unemployment (UI) program. Under the ES-202 program, every covered firm is required to report to the State's Employment Security Agency the wages and salaries paid its employees in the preceding quarter. These reports are tabulated by county and summed by industry (at the two-digit level). The quarterly tabulations, in which the individual firm's report loses its identity, are furnished to BEA where they are summed to annual totals, by industry, for each county.

Elements of payroll<sup>3</sup> excluded from coverage—such as tips or small segments of an industry—are estimated independently by county and added to the UI data. The resulting county figures form the allocating series. The BEA State estimates of wages and salaries in each industry are then disaggregated among the constituent counties in

<sup>3</sup>The value of pay-in-kind is already included in the UI payroll tabulations. However, since it is not reported separately by the employers, it cannot be identified.

direct proportion to the county distribution of the allocating series to yield the final county estimates.

One of the major revisions affecting private nonfarm wages was the reclassification of contract farm labor, as distinguished from hired farm labor, from farm to agricultural services. Independent estimates of wages of contract laborers were added to UI-reported payrolls in agricultural services. Most State programs do not cover these workers; a few have partial coverage. Adjustments were made to the UI tabulations to avoid double counting of those covered. The estimates added to the UI data were based on the proportionate distribution of expenditures for contract labor reported in the 1974 Census of Agriculture.

The list of industries considered "covered" (by BEA for estimating purposes) has been increased to include fisheries and museums, art galleries, etc. Wages in the fishing industry for the period beginning with 1972 are now based solely on UI distributions. Estimates of payrolls of museums, art galleries, etc., have been revised to reflect the geographic distribution of UI data replacing *County Business Patterns* (CBP).

Industries still treated as "noncovered" are private educational services, nonprofit membership organizations, private households, railroads, and rest of the world. County estimates of wages and salaries for *private educational services* and *nonprofit membership organizations* remain based on CBP distributions since the UI law extending coverage in 1972 excludes certain categories of nonprofit organizations. State totals of wages and salaries of workers in *private households* were allocated to counties in proportion to the product of the number of persons employed in the industry and their average income derived from data reported in the 1970 Census of Population. County estimates of wages and salaries of *railroad workers* were based on biennial employment reports of the Association of American Railroads. For the *rest of the world*,<sup>4</sup> the State totals of wages and salaries were assigned on a judgmental basis to the counties in which the major international organizations, foreign embassies, and consulates are located.

**Farm**—Farm wages were derived from the county distributions reported in the 1974 Census of Agriculture. The revised series included an estimate for salaries received by officers of corporate farms. These salaries are based on data, heretofore unavailable, collected in the 1974 Census.

**Government**—County estimates of wages and salaries of government employees were, with the exception of military payrolls, unaffected by revisions.

Wages and salaries of full-time military personnel were derived in two parts, cash pay (including allowances and allotments<sup>5</sup>) and pay in kind. The detail in which cash pay was estimated was increased to more nearly parallel the State level methodology. County estimates of military strength were constructed separately for each branch of service from data obtained from the U.S. Department of Defense and the 1970 Census of Population. The State estimates of cash pay reflect not only military strength by branch of service but also differentials in average pay separately for officers and enlisted personnel, by branch of service. The final county estimates, derived by distributing the State totals of each service branch by military strength implicitly reflect the wage differentials as well.

Pay-in-kind was allocated to the counties proportionate to cash pay.

Military payrolls were also revised to include military reserve pay, reclassified from other labor income in the national benchmark revisions. Members of the military reserve are defined as part-time military personnel and the inclusion of their pay in military wages and salaries makes their treatment consistent with that of part-time

<sup>4</sup>Rest of the world in the State and local area personal income accounts reflects the earnings of residents of the United States employed by foreign diplomatic missions and international organizations in the United States. At the national level, rest of the world has been replaced by the more inclusive foreign transactions account in which not only the earnings of U.S. residents employed by international and foreign diplomatic organizations are reflected but also the earnings of border workers (in terms of import and export of services). See section on residence adjustment for further discussion.

<sup>5</sup>The special family allotment designated as the Q allotment, which had been estimated separately, was abolished at the end of 1972.

civilian workers. Information pertaining to the geographic distribution of the Reserve is nonexistent at the county level; therefore, State estimates (based on limited data for the National Guard) are allocated to the counties by civilian resident population.

Estimates of *Federal civilian* payrolls are based on UI data for 15 States and on Civil Service Commission employment data for the remaining States. For the latter, salary differentials were introduced by weighting each agency's county employment by the agency's average salary in that State as calculated from UI data.

Estimates of *local government* wages and salaries are a composite of Census local government payroll data reported annually for the 372 largest counties and, for the remaining smaller counties, an extrapolation of the 1972 benchmark distribution constructed from local government payrolls reported in the *1972 Census of Governments*. State government estimates are based on the 1967 Census of Governments county tabulations of full-time employment of State government units, since the 1972 Census did not include comparable information.

**Other labor income.** Other labor income (OLI) consists almost entirely of employer contributions to private pension and welfare funds and directors' fees. Contributions to pension funds were allocated by wages and welfare funds by employment. Each allocation was carried out in industrial detail.

As a result of a classificational revision, the former OLI component "compensation for injuries" has been replaced by "employer contributions to privately insured workmen's compensation funds." Allocations were made in industrial detail, based on the geographic distribution of wages and salaries. (Government insured workmen's compensation funds are treated as a form of social insurance and are included in transfer payments.)

Directors' fees were allocated, in industrial detail, by wages and salaries.

**Proprietors' income**—Proprietors' income is the monetary income and income-in-kind of sole proprietorships and partnerships, including the independent professions, and of producers' cooperatives. It is treated in its entirety as received by individuals. Interest and dividends received by proprietors and rental income received by persons who are not primarily engaged in the real estate business are excluded.

Nonfarm proprietors' income for many industries are now benchmarked on Internal Revenue Service (IRS) data on the self-employed. These data were tabulated from the Social Security Self-Employment Tax forms filed by proprietors of unincorporated business. For 19 States, the self-employed data for the period 1968-72 were used for most industries. For the remaining 32 States, proprietors' income for the trade and service industries only (but which account for approximately 75 percent of total nonfarm proprietors' income) was based on the IRS self-employment data for 1968-70. Proprietors' income for the other nonfarm industries in these States were based on a combination of 1962 IRS all-industry data and the CBP data on the number of small establishments by industry and county. The CBP small establishment data were also used to extend the various benchmarks to the more current years. The 1971-72 self-employment file for the 32 States and the 1973 data for all States are being processed and will be incorporated into the estimates at a later date.

The county nonfarm proprietors' income series was derived inclusive of the capital consumption adjustment (CCAdj), a refinement introduced in the national benchmark revisions. No separate estimate of the (CCAdj) was made by the county level; however, it is implicitly incorporated in the county nonfarm proprietors' income series through its inclusion in each State's industry detail.

The addition of the net income of rural electric and telephone cooperatives to nonfarm proprietors' income posed problems at the local area level of estimation that were not present at the national and State levels. Specifically, the problems occurred in small counties that are the sites of large cooperatives. To avoid the possible distorting effect of the net income of a single large cooperative on a county that would otherwise have a small total personal income, the net income of the cooperatives was imputed to the customer-members (for the most part, residing in the surrounding counties, as well as in the county in which the cooperative is located). This imputation was made as part of the residence adjustment. Therefore, in the labor and proprietors' income series, which is by place of work, the net income of the cooperatives is included entirely in the counties in which they are located. However, for personal income, a residence-based series, the income is measured in the counties of residence of the customer-members.

Current farm proprietors' income estimates are now benchmarked on data collected in the 1974 Census of Agriculture as well as the revised U.S. Department of Agriculture (USDA) State totals of income and expense items released in July 1974.

County distributions of more than 35 components of gross income and about 13 items of production expenses were used to allocate State totals of the corresponding series. The revised USDA State totals include a number of additional expense items and

a few minor income items which had not previously been estimated, as well as some statistical changes made to cash receipts and to several expense items. Data on "other expenses" collected in the 1974 Census were used to make improvements in the estimates of many expense items including depreciation, taxes, and mortgage interest, which previously had been derived separately but on the basis of outdated and indirect data.

Estimates of total net farm income were derived by subtracting total production expenses from total gross farm income, county by county. BEA, in contrast to USDA,<sup>6</sup> includes the salaries of officers of corporate farms in production expenses. Also, as a result of a classificational revision, rents received by landlords living on farms but leasing them to operators are no longer included in farm income. They have been reclassified as rental income of persons. Farm proprietors' income was derived by subtracting estimates of corporate farm income (based on the proportion of farm acreage occupied by corporate farms in each county reported in the *1974 Census of Agriculture*) from total net farm income, separately for each county.

Estimates for postcensal years were prepared by modifying the county distributions of the various income and expense items by direct information obtained from the individual States wherever possible. Other distributions were held constant or moved forward by a related series for which data were available.

At the State and national levels, the revisions tended to lower farm proprietors' income. The effect at the county level was more diverse because agricultural production tends to be more homogeneous at the county level than at the State level and a given revision may impact on one county and not on another.

**Dividends, interest, and rent**—Dividends are cash payments by corporations organized for profit to stockholders who are U.S. persons. Personal income is the interest income of persons from all sources. Nationally, it is calculated as net interest plus interest paid by government to persons and business less interest received by government plus interest paid by consumers to business. Rental income of persons with (CCAdj) is the monetary income of persons from the rental income of real property, except the income of persons primarily engaged in the real estate business; the imputed net rental income of owner-occupants of nonfarm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources.

Dividends and monetary interest were allocated to local areas by special tabulations provided by IRS. In the absence of direct data, estimates of imputed interest and monetary rental and royalty income of persons were based on the county distributions of monetary interest.

Imputed rental income accruing to residents of owner-occupied nonfarm dwellings was derived by allocating the State totals to counties by the distribution of the value of owner-occupied homes, constructed from data reported in the *1970 Census of Housing*. State totals for postcensal years were disaggregated to counties on the basis of the benchmark distributions.

As a result of the reclassification of purchases of mobile homes from personal consumption expenditures (and expenditures for producers' durable equipment) to investment in structures, in the national accounts, rental income of persons now includes rent (monetary and imputed) from mobile homes. Monetary rent from mobile homes was merged with all other monetary rent and distributed as one series. Imputed rent for owner-occupied mobile homes was estimated separately based on 1970 Census of Housing data on number of mobile homes (including trailers).<sup>7</sup>

Monetary rental income was estimated inclusive of (CCAdj)—no independent estimate was made at the county level.

**Transfer payments**—Transfer payments to persons is income for which current services are not rendered. It consists of both government and business transfer payments. Government transfer payments include payments under the following programs: Federal old-age, survivors, disability, and health insurance; railroad retirement and unemployment insurance; government retirement; Federal and State government insured workmen's compensation; veterans, including veterans life insurance; food stamp; black lung; supplemental security (SSI); and direct relief. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included.

Total transfer payments were measured as the sum of over 50 separately estimated series. Directly reported data were used to measure about three-fourths of all transfers,

<sup>6</sup>USDA treats these salaries as a return to corporate ownership.

<sup>7</sup>Preliminary investigation revealed that the proportion of trailers to mobile homes is very small; therefore, the inclusion of trailers would have little effect on the distribution.

although the proportion varied among local areas. Reliable indirect indicators—such as veteran population, which was used to allocate selected components of veterans' benefits—were available for many of the remaining transfers.

The reclassification of workmen's compensation by type of funding (see section on other labor income) treats publicly insured funds as a form of social insurance. Therefore, Federal and State Government insured workmen's compensation plans are measured in terms of benefits (in contrast to privately insured plans which are measured in terms of employer contributions) and included in transfer payments. Separate estimates were made for federally insured workmen's compensation programs and for State government insured programs. Benefits from Federal programs were estimated at the county level by allocating State totals by residence-adjusted Federal civilian payrolls. Benefits from State government programs were estimated for the counties by allocating State totals by residence-adjusted total payrolls excluding Federal Government.

More reliable estimates were developed for several series due to the availability of new data. For example, payments under the Trade Readjustment Assistance Act were revised on the basis of direct data obtained for the current years as well as for some prior years.

**Contributions for social insurance**—Personal contributions for social insurance includes payments by employees, self-employed, and other individuals who participate in the following programs: Federal old-age, survivors, disability, and health insurance; supplementary medical insurance; State unemployment insurance; railroad retirement insurance; government retirement; and veterans life insurance.

In general, the State totals were allocated to counties by the related wages and salaries and/or proprietors' income component. The estimates were improved by the addition of separate estimates for contributions of military personnel for social insurance and for payments for supplementary medical insurance (SMI). State totals of contributions by military personnel were allocated to the counties by military payrolls; State totals of payments for SMI were allocated by county distributions of the number of persons on the SMI rolls.

#### Residence adjustment

The adjustment of labor income<sup>8</sup> from a place-of-work to a place-of-residence concept was based primarily on commuting and income data obtained from the 1970 Census of Population and on the 1972, 1974, and 1975 county wages reported by the IRS. The Census commuting data were used to calculate the proportions of labor income generated in a given county (place of work) which were received by residents of each of the surrounding counties. The 1970 relationships were used for the years 1969-76. Estimates of the gross flows of commuters' labor income from the county of work to the various counties of residence were made by multiplying the "income subject to adjustment" (ISA)<sup>9</sup> of the county of work by the residence adjustment ratios. The initial net residence adjustment for each county was the sum of the individual dollar income flows; i.e., inflows minus outflows.

<sup>8</sup>Although, conceptually, the residence adjustment is a deduction from net labor and proprietors' income, in practice, only net labor income is adjusted for residence since BEA's proprietors' income series is treated both as place of work and place of residence. The one exception, as mentioned earlier, is the income of rural electric and telephone cooperatives.

<sup>9</sup>Income subject to adjustment is defined as the sum of all the components of personal income estimated on a place-of-work basis.

Under the foregoing procedures, the net residence adjustment for a given county varies, over time, with the changes in the ISA of that county and its neighboring counties. For the period following 1970, there is the implicit assumption that the underlying commutation patterns do not change. Since this assumption is clearly not valid for all cases, the initial residence adjustments were subjected to intensive review. Census county wage data for 1969 and IRS county wage data for 1972, 1974, and 1975 were used to identify those counties that had experienced major shifts in commuting patterns. Where further adjustments were indicated by the edit routine and correlative information supported the Census and IRS data, modifications were made to the initial net residence adjustment. These modifications were based on all available information on the changes in the industrial and demographic structure of the county under adjustment.

The foregoing procedures were refined during the general revisions by introducing industry differentials in wages and number of commuters in the derivation of the residence adjustment ratios.<sup>10</sup> The availability of 1975 IRS wage data provided a more current cross-check, adding to the improved reliability of the residence adjustment.

The national benchmark revisions formalized the treatment of border workers and their earnings. At the national level, the foreign transactions account was designated to reflect the earnings of these workers in terms of import and export of services. However, at the State and county levels, the residence adjustment proved to be the more logical vehicle. Since border workers, in essence, are international commuters, the use of the residence adjustment makes the treatment of border workers consistent with those workers who commute within the territorial boundaries of the United States. Specifically, the earnings of U.S. residents working in Canada and Mexico are not included in the labor and proprietors' income series, which is a place-of-work construct. In order to include their earnings in personal income, which is by place of residence, the earnings were "residence adjusted" into the States and counties in which the workers were assumed to reside. Conversely, the earnings of Canadian, Caribbean, and Mexican residents working in the United States are included (properly) in the labor and proprietors' income series, but since they should not be included in personal income, they were removed from the States and counties of work via the residence adjustment.

#### Classification of SMSA's

The classification of SMSA's used by BEA in its personal income estimates conforms to the standards issued through February 1978 by the Office of Federal Statistical Policy and Standards of the U.S. Department of Commerce (formerly the responsibility of the Office of Management and Budget).

In New England, where SMSA's are defined officially in terms of cities and towns, satisfactory data for measuring local area income were generally available on a county basis only. Consequently, the New England metropolitan areas are county approximations of the official SMSA's (designated by OMB as NECMA's). The title of each NECMA includes each of the cities within its boundaries that is an SMSA city.

Although Vermont has no official SMSA, BEA treats Burlington as a metropolitan area.

<sup>10</sup>Gross flows were calculated separately for the following industries or groups of industries: Mining, manufacturing, transportation, and utilities; construction; trade, finance, services, and other industries; Federal civilian; military; and State and local government. However, the final net residence adjustment estimates were made only at the all-industry level.
