FOREWORD

To respond to the increasing demand for regional economic measures, the Bureau of Economic Analysis (BEA) began publishing *LOCAL AREA PERSONAL INCOME* in 1976. Personal income is a comprehensive economic measure that covers income by type and broad industrial source. Because estimation methods for the total and its component parts are the same for all States and local areas, comparisons among all the geographic units covered are facilitated. Personal income represents a measure of the size of the local area consumer markets; when presented by industrial source, it can also be interpreted as a measure of the size of industrial markets.

Summary personal income statistics have been regularly published in the *SURVEY OF CURRENT BUSINESS*, and standard tabulations of both personal income and employment estimates have been provided on request (on a reimbursable basis) from the Regional Economic Information System. This publication significantly expands the availability of BEA's annual personal income estimates for counties by making them available on a regular basis in a comprehensive, yet compact and low-cost form.

Daniel H. Garnick
Associate Director for Regional Economics

ACKNOWLEDGMENTS

The personal income estimates presented in this publication were produced by the Regional Economic Measurement Division, Bureau of Economic Analysis (BEA), under the direction of **Edwin J. Coleman**, Chief and **Linnea Hazen**, Assistant Chief. The estimates were the result of a divisionwide effort. The names of the Division personnel and telephone numbers are included for the reader's convenience for directing questions and requests to the appropriate party.

This publication was prepared by the Regional Economic Information System (REIS) Branch. **Stuart A. Schwartz** managed the production effort, including preparation of input for electronic composition of tables and text. **Dannelet Teske**, Current Business Analysis Division, provided editorial control. **Ruth Rice**, of the Department of Commerce Composition Division, coordinated the effort within the Publication Services, and provided advice and assistance in all phases of the publication effort. Other electronic composition assistance was provided by **Beverly Schoch,** Composition Division. The text was updated by **Wallace K. Bailey**. Secretarial support was provided by **Valeria A. Hamilton** and **Hilda G. Tolson**. The charts were designed and prepared by **Kathy A. Albetski** with editorial advice and assistance from **Patti Trujillo**, Current Business Analysis Division. The State maps were provided by the Geography Division, Bureau of the Census, and were revised where necessary by **Donald Parschalk**, Current Business Analysis Division. Other graphics assistance was provided by **Karin Berndt,** Current Business Analysis Division.

Estimates of civilian labor income (wages and salaries and other labor income) were prepared by the Regional Wage Branch, under the supervision of **Elizabeth H. Queen**, Chief. Major responsibilities were assumed by **Sharon C. Carnevale, Carol E. Evans, Michael G. Pilot, Toui Chen Pomsouvan, William E. Reid, Jr., Victor Sahadachny, James M. Scott, Philip F. Simon**, and **Renee V. Solterer**.

Estimates of Federal military income, transfer payments, and personal contributions for social insurance were prepared by the Quarterly Income Branch, under the supervision of **Robert L. Brown**, Acting Chief. Major responsibilities were assumed by **John M. Reed** and **Isabelle B. Whiston**.

Estimates of dividends, interest, rent, and proprietors' income were prepared by the Proprietors' Income Branch. Major responsibilities were assumed by: **Kenneth P. Berkman** (farm income), **Arthur L. Sensening** (nonfarm proprietors' income), and **Charles E. Jolley**.
The residence adjustments, component aggregations, and assembly of public-use tabulations and data files were performed by the Regional Economic Information System (REIS) Branch, under the supervision of **David W. Cartwright**, Chief, and **Vivian G. Conklin**, Assistant Chief. Major responsibilities were assumed by **Wallace K. Bailey** and **Paul M. Levit**.

While the county income measures contained in this publication resulted from the effort, experience, and cooperation of BEA personnel, their ultimate foundation was the statistical work of other government agencies as well as private organizations. Particularly noteworthy for their contributions were the State Employment Security Agencies, various State agencies administering income maintenance programs, Bureau of Labor Statistics, Bureau of the Census, Economic Research Service of the U.S. Department of Agriculture, Internal Revenue Service, Office of Research and Statistics of the Social Security Administration, Veterans Administration, and Association of American Railroads.

INTRODUCTION

This volume is part of a nine-volume set published annually by the Regional Economic Measurement Division of the Bureau of Economic Analysis (BEA). The set presents, for local areas, BEA's estimates of total and per capita personal income as well as additional detail on the sources of personal income by type and major industry. There are six major components of personal income: Wage and salary disbursements; other labor income; proprietors' income; rental income of persons, dividends, and personal interest income; transfer payments; and personal contributions for social insurance. The sum of three of these major components (wage and salary disbursements, other labor income, and proprietors' income) is termed "earnings" and is presented for the major industry groups. A description of each of the six major components and how they are estimated is contained in part II of the methodology section. A discussion of the characteristics and applications of these personal income estimates is contained in part I of the methodology section. Estimates are for the most recent year (the calendar year ending approximately 18 months prior to publication date) and the preceding 5 years.

The estimates presented in these volumes reflect the 1980 national income and product account (NIPA) comprehensive revisions of personal income, which were extended to the State personal income series in July 1981. (The NIPA revisions are described in the December 1980 issue of the *SURVEY OF CURRENT BUSINESS*.) The revised local area series also reflects distributional revisions made possible by the availability of new or more timely data at the county level. A detailed description of the sources and methods used in making the estimates is presented in volume 1 of the set. Volumes 2-9 contain a summary statement of methodology. These statements of methodology are intended to give the user a basis for evaluating the reliability of the estimates and the necessary information for determining their suitability for various applications.

Volume 1 of the set is a national volume presenting estimates for the United States as a whole and for all the regions, States, and Standard Metropolitan Statistical Areas (SMSA's). In addition, it contains the detailed methodology, charts and tables showing the distribution and changes in total personal income for regions, appendixes showing the county definitions of SMSA's, and samples of tables available through the Regional Economic Information System.

The primary tables presented in this edition (tables 1 and 4-6 in this volume) differ from those presented in previous editions. They have been revised to improve the presentation of total and per capita personal income, to add estimates of nonfarm personal income (total personal income (TPI) less farm earnings), and to improve the distinction between place of residence and place of work.

Each of volumes 2-9 presents estimates of one of the eight BEA regions: New England, Mideast, Great Lakes, Plains, Southeast, Southwest, Rocky Mountain, and Far West. A single regional volume includes estimates for the United States, the region, the States, SMSA's, and counties of the region, and a summary methodology.

This volume presents 1976-81 personal income estimates for all regions, States, and SMSA's of the United States, as well as a detailed description of the sources of data and methods of estimation used in producing the county estimates.

In addition to the statistical tables, these volumes include several analytic aids.

- County outline maps prepared by the Bureau of the Census are presented for each State and for the Washington, D.C., metropolitan area. These maps serve not only to separate the data into State groupings for easy reference, but aid the reader in locating counties and metropolitan areas. The maps for New England States are modified by BEA to show New England County Metropolitan Areas (NECMA's) rather than SMSA's. Volume 1 includes maps of the United States that show 1981 per capita income levels for regions and for States.
- Pie charts show for each region and State the distribution of 1981 TPI within the area. The charts show up to four of the largest SMSA's or State portions of SMSA's in each State; the sum of the remaining SMSA counties, if any; and the sum of the nonmetropolitan counties in the State. It should be noted that the charts show only the portion of each SMSA that lies within that State, whereas the tables present data for entire SMSA's.
- Bar charts for each region show percent changes in TPI from 1977 to 1981 for the U.S., and for each State in the region. Similar charts are presented for each State showing percent changes for the United States, the State, and each portion of the State that is represented in the pie chart.
- Two analytic tables are included for each region. The first table shows the 20 counties with the largest and the smallest 1981 per capita income in the region. The second table shows percent changes in TPI and per capita income for the States of that region.

The BEA Regional Economic Information System

The personal income tables contained in the nine-volume set, as well as other standard tabulations discussed below, are available from the BEA Regional Economic Information System (REIS). REIS is the term applied to the data files, computer programs, and staff established for the maintenance, management, and distribution of the regional data base. This system currently contains approximately 27 million separate estimates covering about 3,500 areas.

Data availability

REIS includes an active information retrieval service, that provides a variety of standard and specialized analytic tabulations for counties and specified combinations of counties. A sample set of standard tabulations available through this system is included in volume 1 as appendix B. All of the tabulations are available in magnetic tape, microfiche, and computer printout form. The REIS data base currently includes the following data sets:

Quarterly State personal income.—These estimates, available approximately 4 months after the close of the subject quarter, are published regularly in the January, April, July, and October issues of the *SURVEY*. As of April 1983, quarterly estimates are available from the first quarter of 1948 through the fourth quarter of 1982.

Annual State personal income.—Annual estimates for States are published twice each year. Preliminary estimates of total and per capita personal income, derived from the quarterly estimates, are published in the April issue of the *SURVEY* (4 months after the close of the subject year). A revised set of estimates, based on more complete data and therefore more reliable, is presented in greater detail in the August issue of the *SURVEY*. Tabulations at the 2-digit Standard Industrial Classification (SIC) code level are available (as of August 1983) through REIS for 1958-82. Estimates for years 1929-57 have been revised, and tabulations (1-digit SIC code level) are available through REIS.

Annual State disposable personal income.—Annual estimates of total and per capita disposable personal income for States are released as a companion series to the revised annual State estimates of personal income and are published in the August issue of the *SURVEY*. The State disposable personal income series is consistent with the State personal income series for 1948 and subsequent years.

Annual county personal income.—These estimates, published in this volume, become available approximately 16 months after the close of the subject year. Summary statistics are published in the April issue of the *SURVEY*. Estimates are available annually for 1965-81 and for selected years back to 1929.

Transfer payments.—The component estimates of transfer payments by county are unpublished. However, tabulations of transfer payments by type of program are available from REIS for the years corresponding to the county personal income series.

Farm income and expenditures.—These estimates of gross receipts and expenditures of farms, which underlie the net farm income estimates in the State and county personal income series, are unpublished. However, tabulations for the years 1969-80 are available from REIS.

Average annual employment for States and counties.—These unpublished estimates are a companion series to the personal income estimates. They are constructed from similar sources using the same concepts and definitions. Tabulations are available from REIS for 1967-81.

Disclosure avoidance

Much of the data underlying the personal income estimates is obtained directly from Federal and State government administrative records, with the condition that BEA observe the Federal and State regulations established to safeguard the privacy of individuals and individual businesses. The BEA personal income estimates are therefore subjected to rigorous scrutiny to determine if any data cells might disclose the activities of a single firm or reporting unit. Such cells are suppressed in

the final tabulations. Because of the difficulty of adequately protecting against the inadvertent disclosure of confidential information, it is BEA's policy to release estimates for 2-digit SIC code industries for regions and States only and for 1-digit SIC code industies for counties, SMSA's, and all other geographic areas aggregated from the county estimates.

BEA user group

In addition to responding to specific data requests addressed to it, REIS distributes estimates through a group of universities and State agencies officially designated as BEA users. This group was created by a congressional directive to provide BEA's personal income and related series to university bureaus and State agencies on a no-cost basis. Each of the 182 users receives a full set of standard tabulations for the relevant State, its counties, and its metropolitan areas on the condition that the organization will in turn distribute the data within its State. This congressional directive encourages utilization by universities and State agencies of data that are comparable for all States and counties and consistent with national totals. This enhances the uniformity of analytic approaches taken in economic development plans and programs and improves the ability of the recipient agencies to assess sub-State economic developments and to service their local clientele.

METHODOLOGY

This methodology is divided into two parts. Part I provides background information (including definitions, characteristics, and applications) pertaining to the State and local area personal income series. Part II provides a detailed description of the sources and methods used for estimating each of the personal income components, by county, for the period 1969-80.

PART I.—BACKGROUND INFORMATION

Definitions and concepts

Personal income.—The personal income of an area is the income received by, or on behalf of, all the residents of the area. It includes the income received by persons from all sources, that is, from participation in production, from transfer payments, from government and business, and from government interest, which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions, private noninsured welfare funds, and private trust funds. Proprietors' income is treated in its entirety as received by individuals. Life insurance carriers and private noninsured pension funds are not counted as persons, but their saving is credited to persons. Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance.

Persons.—Persons, in the national and regional accounts, are defined as individuals, nonprofit institutions, private noninsured welfare funds, and private trust funds. The last three are referred to as "quasi-individuals." These are organizations that either serve individuals directly (nonprofit institutions) or serve on their behalf (such as private trust funds). Nonprofit institutions are considered to "reside" at their geographic locations (although appropriate source data for estimating the institutions' income are largely unavailable). The residence of a private trust fund or similar entity, however, is considered to be identical to that of its beneficiary, and its income (whether distributed or retained) is attributed to, and measured at, the beneficiary's place of residence.

Place of measurement.—For regional economic measurement, income may be recorded either by place of work (where earned) or by place of residence (where received). Personal income, by definition, is a measure of income received; therefore BEA's estimates of TPI reflect the State, county, and SMSA of residence of the income recipients. A detailed description of the SMSA classification as used by BEA is presented in appendix A.

The earnings measure that BEA presents in industry detail for States, counties, and SMSA's reflects place of work. These individual industry estimates are useful for the analysis of the industrial structure of a given area.

The bulk of the income data basic to preparing the estimates of earnings is reported by industry in the State and county in which the business establishment is located. These data are subsequently adjusted to a place-of-residence basis for inclusion in the personal income measure.

Rental income of persons, dividends, personal interest income, and transfer payments are estimated from data that are reported where they are received. There is no relevance to a where-earned classification for transfer payments. However, "dividends, interest, and rent" converted to a where-earned basis (if data were available to make the conversion) could be added to earnings to provide a rough proxy of income originating from current production.

Industry classification.—The industry detail in which the estimates of labor and proprietors' income are presented is in accordance with the SIC established by the Office of Management and Budget (OMB). However (as footnoted in the tables), the estimates for the years 1976-81 are based on the 1972 SIC and the estimates for the years previous to 1975 (available from REIS) are based on the 1967 SIC. It is not possible for BEA to provide 1975 estimates on a 1967 SIC code basis, as well as on the 1972 SIC codes, because of problems in reconciling differences in the data from the unemployment insurance system. BEA is unable to distinguish between code changes due to OMB's revision of the SIC and code changes due to refiling required periodically of employers by the State Employment Security Agencies (ESA's). The latter incorporates changes due to errors in classification and/or changes in product activity.

Per capita personal income.—Another measure of income presented by BEA in its tables is per capita income. This is the TPI of the residents of a given area divided by the resident population of the area. In computing per capita income for the counties, BEA uses Bureau of the Census county population totals as of July 1, which are available for 1971-79 and for 1981. Midyear county population for the years preceding 1971 were estimated by BEA (based on a combination of census midyear State population data, the census April 1970 benchmark county population, and county population data supplied by the individual States). BEA estimated midyear 1980 population based on the 1980 census and on unpublished data on refugee population from the Bureau of the Census.

Per capita personal income serves as an indicator of the quality of consumer markets and of the economic well-being of the residents of an area. This measure, however, can vary widely from county to county and should be used with caution for several reasons.

In many instances, an unusually high (or low) per capita income is the temporary result of unusual conditions, such as a bumper crop, a major construction project (e.g., a defense facility, nuclear plant, or dam), or a catastrophe (e.g., a tornado or drought). In some cases, a high per capita income is not representative of the standard of living in an area. For example, a construction project may attract a large number of highly paid workers who are included in the population but who send a substantial portion of their wages to dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college, correctional institution, or domiciliary medical facility) may show an unusually low per capita income, which is not necessarily indicative of the economic well-being of the noninstitutional population.

Moreover, population is measured at midyear, whereas income is measured as a flow over the year; therefore, a significant change in population during the year, particularly around midyear, can cause a distortion in the per capita figures.

In counties where farm income predominates, additional considerations should be taken into account. Farm proprietors' income, as measured for personal income, reflects returns from current production; it does not measure current cash flows.

Sales out of inventories, though included in current gross farm income, are excluded from net farm income because they represent income from a previous year's production. Additions to inventories are included in net farm income at current market prices; therefore, farmers' attempts at regulating their cash flows by adjusting inventories are not reflected in BEA's farm proprietors' income estimates. Yet it is this regulation of cash flows by farmers that extends their earnings cycle and allows them to survive losses or lowered income for 2 or 3 years.

In counties that are characterized by small population and almost total dependence upon farming, the per capita income will react more sharply to the vagaries in weather, world market demand, and changing government policies related to agriculture than in counties where the sources of income are more diversified.[1]

It should be noted that the substantial differences between BEA estimates of per capita income and Census Bureau estimates are due to differences in definition of income, collection mode, and method of computation. For example, the Census Bureau computes 1979 per capita income by dividing 1979 total *money* income by *April 1980* total population, whereas BEA derives its 1979 per capita income by dividing 1979 total *personal* income by *July 1979* total population.

Relationship between the national and regional estimates

The definitions underlying the State and local area estimates are, for the most part the same as those underlying the personal income estimates in the NIPA's. The major difference is in the treatment of U.S. citizens temporarily working on assignment abroad. The national estimates include not only Federal personnel—civilian and military—stationed abroad, but also U.S. residents employed by private U.S. firms on temporary foreign assignment. The State and local area estimates include only persons working and/or residing in the 50 States and the District of Columbia.

International border workers are treated somewhat differently in the State and local area personal income estimates than they are in the national estmates, but the net effect on TPI is the same. Further information on border workers is included in the section on the residence adjustment in part II.

Another difference between the national and regional accounts relates to the classification of income into farm and nonfarm categories. In the national accounts, farm personal income consists of farm earnings and agricultural net interest; in the regional accounts, farm personal income equals farm earnings.

The national estimate for each individual component of personal income is used as a control total for the State estimates; i.e., the State estimates when summed to an all-State total must equal the national estimate of the same item (modified, where necessary, for differences in definition). Similarly, the county estimates when summed must equal the related State estimate.

Revisions.—The local area estimates of personal income released in each April issue of the *SURVEY* are consistent with State estimates published in the same issue. The State estimates are preliminary annual and quarterly estimates for the most recent year (for which area estimates are not available) and revised annual estimates for earlier years. The revised State estimates supersede the estimates published in the preceding August issue of the *SURVEY*. The State and local area estimates are routinely revised in at least each of the 2 years following their initial release. The State revisions occur twice each year. These revisions incorporate more complete information for States and local areas, as well as revised national totals.

Comprehensive revisions are initiated periodically—approximately every 5 years—at the national level and extended, where appropriate, to the State and local area levels. The comprehensive revisions at the State and local area levels include distributional changes made possible by availability of new or more current data, as well as the definitional, classificational, and statistical changes at the national level.

The most recent comprehensive revisions were presented and described at the national level in the December 1980 SURVEY; at the State level in the July 1981 SURVEY; and at the local level in 1975-80 edition of *Local Area Personal Income*. The estimates presented in this edition reflect routine revisions back through 1977.

Historical development

BEA's work on regional income estimation began in the midthirties with the construction of a series of "State income payments" to individuals. State income payments were defined as the sum of wages and salaries, proprietors' income, dividends, personal interest income, rental income (the last three components, in aggregate, were referred to as "property income"), and "other income." They were produced as part of a broad effort to explain the processes and structure of the Nation's economy in the thirties. During the forties and early fifties, extensive work in locating data sources and implementing methodology resulted in the production of the more comprehensive annual measure, State personal income. State personal income differs from State income payments in several important ways: (1) Personal income includes six major components in contrast to the four categories of income payments (other labor income and transfer payments replaced "other income" and the component "personal contributions for social insurance" was added as an explicit deduction); (2) personal income includes greater component detail and a broader range of income-in-kind and imputed income items; and (3) the definition of transfer payments is expanded to include transfers by business.

During the sixties, work on the development of quarterly estimates of State personal income was completed. The first set of State quarterly estimates as a continuous series was published in the December 1966 issue of the *SURVEY*.

BEA began work on sub-State estimates in the midfifties, but the estimates were confined to a relatively small number of counties in the mideastern and plains States. This work on local area measurement was expanded in the midsixties, and resulted in a historical series of personal income for selected years 1929-62 for the SMSA's and for the non-SMSA counties. Estimates for counties within SMSA's were developed in the early seventies and published for the first time in the April 1975 *SURVEY*. BEA now prepares annual estimates of personal income and related (unpublished) estimates of employment for each of the SMSA's and all of the more than 3,100 counties and county equivalents in the United States.

Characteristics

Geographic structure.—Estimates are prepared independently for States and counties only. Estimates for all other geographic areas below the State level are made by aggregating the county estimates in the appropriate combinations. This building block approach provides BEA with the flexibility necessary for meeting the needs of the wide variety of users of local area data. It also permits estimates for areas whose boundaries change over time—such as SMSA's—to be presented on a consistent geographic definition for all years for analytic purposes. Because estimates are made only for local areas that can be defined in terms of counties, the metropolitan areas for the New England States in BEA's local area personal income series are not the officially designated SMSA's, but rather the alternative NECMA's developed by OMB. Whereas New England SMSA's are defined in terms of cities and towns, the NECMA's are approximations of SMSA's in terms of counties. (A more detailed description of the NECMA's is included in appendix A).

Scope and timing of source materials.—The estimates are constructed from nearly 400 individually estimated income items based on data gathered from diverse sources. The bulk of the materials used to prepare the estimates is data generated as the byproduct of Federal and State government programs (administrative records data). The remainder comes from the various censuses and from nongovernment sources. Among the more important sources of the administrative record data used by BEA are the State unemployment programs of the Employment and Training Administration of the U.S. Department of Labor, the insurance programs of the U.S. Social Security Administration (SSA), and the Federal tax program of the U.S. Department of the Treasury. The two most important censuses utilized are those for agriculture and population. The information obtained from administrative records and censuses yields more than 90 percent of the data needed for the preparation of the State and local area income estimates.

BEA supplements these basic statistics with data of lesser quality, scope, and relevance. To adjust for gaps and deficiencies in the poorer quality data, indirect procedures and value judgments are sometimes employed. The impact of these indirect procedures and judgments on the reliability of the individual State and local area estimates has varied over the 53-year estimating span because of regional differences and changes in industrial composition. It is not possible, therefore, to provide measures of the error introduced into the income estimates by the indirect procedures.

Where data are delayed (either systematically or occasionally) and are not available in time to be incorporated into the current estimating cycle, preliminary estimates are prepared using the previous year's county distribution. The preliminary estimates are subsequently revised during the next estimating cycle to incorporate the delayed data.

Because the estimates are made from existing statistical information, they can be prepared annually and in considerable detail at relatively low cost. However, because the data are generated from programs not primarily designed for income measurement, it is necessary for BEA to adjust the data for definitional differences and for deficiencies. The alternative would be for BEA to collect the necessary information in surveys of income recipients. The surveys would provide data directly suited for the measurement of personal income, eliminating the necessity of adjusting the inputs

[1] U.S. Department of Agriculture statistics show an increasing trend among farm operators to supplement their income from nonfarm sources. Since 1974, the national averages indicate that, for families operating farms with sales under $20,000, off-farm income has exceeded income from farming.

for definitional and other previously mentioned reasons. The costs associated with this approach, however, would be prohibitive because a very large sample would be necessary to permit reliable local area estimates. The use of administrative record data has the additional advantage that it does not add to the reporting burden of businesses and households.

The allocation procedure.—The estimates of State and local area personal income are characterized by the systematic use of the allocation procedure in their preparation. The State estimates are made by allocating the U.S. total for each income item (estimated for the national personal income series) to the States in proportion to each State's share of a related economic series. In a similar manner, the State estimates are allocated to the counties in proportion to each county's share of a related economic series. In some cases, national, State, and county estimates are constructed from the same basic source, as for example, wages and salaries reported under the various State unemployment insurance (UI) programs. In other cases, data that are available at the national and State levels are not available at the county level, and allocators prepared from related, but indirect, data are used to reflect the geographic distribution of the income item among the counties. An example of this is veterans' payments. At the national and State levels direct information is available on payments to veterans under various government programs, but for many of these programs, such information is not tabulated at the county level. Where the direct data are not available, county veteran population, an indirect allocator, is used to distribute the State total to the counties.

The use of the State estimates as control totals in conjunction with the allocation procedure imparts additional reliability to the county estimates because most components of personal income can be estimated more reliably for States than for smaller geographic areas. It also permits, if necessary, the use of a different allocator, in each State, to distribute an income item to the counties without impairing the interstate comparability of the estimates.

Electronic edit procedures.—In making the estimates, several million administrative records are put into the system annually. Although these records are usually encoded and processed by the agency administering the program generating these records (thereby reducing the cost to BEA in terms of time and labor), there are still possibilities for error in the data. Because it is not possible to verify each individual record or accept the various administrative record files at their face value, BEA has developed several computerized edit routines to locate major errors in the source materials, either directly or through examination of preliminary estimates based on the sources. At many stages of the estimating process, data are collected and arrayed for visual inspection in patterns designed to give the analyst a frame of reference for judging the quality of the data. At some stages, the data are screened by computer, and only items that exceed specified edit parameters are flagged for further review. An example is the "6-year average wage check" used to screen the estimates of wages and salaries together with the companion employment series. This routine lists the records (2-digit SIC industries) where, for at least 1 year, the average wage exceeds edit parameters. The edit parameters are established separately for each industry group. A higher limit is used for mining, construction, and finance than for the other groups of industries.

When an important anomaly is discovered in the data, and when it cannot be traced to an explicit error in BEA's data processing and estimating procedures, the matter may be referred back to the agency that supplied the source data. Alternatively, a more reasonable estimate may be prepared from another data source.

Applications

Because of their depth of component detail, geographic flexibility, and annual availability, BEA's estimates of personal income and derivative measures have a broad range of application. They are widely used in both the public and private sectors. In general, they are used to measure and track the levels and types of income flows received or earned by individuals residing or working in a specific political subdivision or microeconomy. They provide a local area data base for economic decisionmaking and for the implementation of programs requiring an analysis of the economic activities or the economic well-being of the residents of a particular area.

In recent years, there has been an increasing use of personal income (or a derivative) as a variable in formulas for allocating Federal funds to States and local areas and for determining the amount of matching funds for Federal-State programs. The personal income estimates (State and county) are the basic source of the money income series prepared by BEA for the Census Bureau's intercensal per capita money income estimates required for the General Revenue Sharing Program.[2] A partial list of other Federal programs using BEA's personal income statistics for the allocation of Federal funds or for determining matching grants includes the National School Lunch program, various U.S. Public Health Service rehabilitation programs (including drug abuse prevention and treatment of alcoholics), U.S Department of Education grant programs (as, for example, vocational education and libraries), the Medical Assistance program (Medicaid), and the Aid to Families with Dependent Children (AFDC) program.

Personal income is also one of the measures used in evaluating the socioeconomic impact of many Federal programs. It is widely used by Federal agencies in preparing environmental impact statements required by the National Environmental Policy Act of 1969 and the Federal Land Policy and Management Act of 1976.

Federal agencies use estimates of local area personal income as input into econometric models for projecting program needs. For example, the Food and Nutrition Service, U.S. Department of Agriculture (USDA), uses them to project the number of persons eligible for domestic food programs; the U.S. Department of Energy uses them to produce indicators in an energy demand forecast model; and the U.S. Water Resources Council uses them to project the future regional requirements from the Nation's water resources.

State and local governments have also increased their use of the personal income estimates. The estimates are being used as input in economic resource profiles and in econometric models developed for planning purposes. They are often used to project tax revenues and future needs for public services. Legislation that limits a State's expenditures or tax authority by the level of, or changes in, State personal income has been enacted, or is pending, in a number of States.

University schools of business and economics, often working under contract for State and local governments, reproduce BEA personal income data in statistical abstracts or similar reports. These publications are distributed to local government agencies, regional councils, private research groups, businesses, and individuals within the service region.

Businesses also use the estimates of local area personal income. For example, they are used to evaluate additional or alternative market areas for established products, to forecast prospects for marketing new products, to determine areas for relocation or decentralization, and to analyze comparative production costs in relation to consumer ability to pay.

[2] Money income differs from personal income as follows: money income excludes income-in-kind, imputed income, and income of quasi-individuals—which are included in the personal income definition. Furthermore, it includes items that are excluded from the personal income definition—income from private pensions and annuities, cash benefits from private workmen's compensation insurance, regular contributions for support received from individuals not residing in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance.

PART II.—SOURCES AND METHODS OF ESTIMATION

Wage and Salary Disbursements

Wage and salary disbursements consist of monetary remuneration of employees, including compensation of corporate officers, commissions, tips and bonuses, and pay-in-kind that represents income to the recipient. They are measured before deductions for Social Security contributions, union dues, or other purposes. All disbursements in the current period are covered. Retroactive wages are counted when paid rather than when earned.[3]

[3] While the timing of wages when paid is a clear conceptual feature of personal income measurement, the difference between wages earned and wages paid has been negligible in recent years.

The contributions made by employees under the various social insurance programs, although counted in wage and salary disbursements, are not part of the personal income total. They are excluded by means of the deduction made for "personal contributions for social insurance."

Estimates of wage and salary disbursements (which account for more than 61 percent of all personal income) are, except for transfer payments, more complete and reliable than those for any other type of income. Because of their sizable weight in the total income flows, they impart a large measure of reliability to the estimates of aggregate income. For the private sector, the wage and salary component covers employees of all nonfarm business establishments, private households, hospitals, private educational, social service, and nonprofit institutions, and farms. All government employees are covered by the measure, including State, local, and Federal govern-

ments (both civilian and military) and U.S. residents who are employed in the United States by international organizations, foreign embassies, and consulates.

Table A.—Relative Importance to Total Personal Income of Wage and Salary Disbursements, by Component, United States, 1981*

	Dollars (000,000)	Percent of TPI
Total personal income[1]	**2,406,545**	**100.00**
Wage and salary disbursements[2]	**1,485,459**	**61.73**
Farm	11,001	.46
Other industries[3]	5,679	.24
Mining	29,478	1.22
Construction	79,856	3.32
Manufacturing	384,876	15.99
Durables (selected)		
Lumber and furniture	16,301	.68
Primary metals	27,841	1.16
Fabricated metals	30,488	1.27
Machinery except electrical	53,250	2.21
Electrical equipment and supplies	40,077	1.67
Motor vehicles and equipment	20,447	.85
Transportation excluding motor vehicles	26,467	1.10
Nondurables (selected)		
Food and kindred products	29,013	1.21
Textile mill products	10,625	.44
Apparel and other fabric products	13,000	.54
Paper and allied products	14,508	.60
Printing and publishing	21,416	.89
Chemicals and allied products	26,304	1.09
Petroleum refining	5,971	.25
All other manufacturing, n.e.c.	49,168	2.04
Transportation, communications, and public utilities	113,332	4.71
Railroads	12,822	.53
Trucking and warehousing	24,802	1.03
Other transportation	24,662	1.02
Communications and public utilities	51.046	2.12
Wholesale and retail trade	247,973	10.30
Wholesale trade	105,253	4.37
Retail trade	142,720	5.93
Finance, insurance, and real estate	88,626	3.68
Services	249,384	10.36
Hotels and other lodging places	10,828	.45
Business and repair services	57,087	2.37
Amusement and recreation	11,129	.46
Personal services and private households	15,546	.65
Professional and social services	154,794	6.43
Government and government enterprises	275,254	11.44
Federal civilian	63,423	2.64
Federal military[4]	27,602	1.15
State and local	184,229	7.66

* Detail may not add to higher level totals because of rounding.
[1] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.
[2] Includes wages received by border workers employed in the United States.
[3] Includes agricultural services, forestry, fisheries, and other.
[4] Includes military reserves.

"Covered" private wages and salaries

The bulk of the county data used to estimate wage and salary disbursements is obtained from the ES-202[4] tabulations of the administrative records of each State UI program supplied by the State ESA's. Under the UI program, every covered firm is required to file quarterly tax reports with the State ESA having jurisdiction. These quarterly UI reports include the wages and salaries disbursed by each firm for the reporting quarter as well as the number of full- and part-time workers employed in each of the 3 months of the quarter.[5]

As part of its data acquisition program, BEA obtains from each State ESA 2- or 3-digit (SIC coded) tabulations of quarterly wages and monthly employment, which, after editing and correcting, form the basis for approximately 95 percent of private nonfarm wage and salary disbursements. Until 1972, more than half of the States excluded from mandatory coverage establishments with less than four employees (referred to as "small firms"). Beginning with the first quarter of 1972, the UI coverage of payrolls and employment was extended to cover most firms in all but a few industries. Except for nonprofit organizations (for which mandatory coverage extends to those with four or more employees), firms of all sizes—falling under the provisions of the Federal Unemployment Tax Act—are now covered.

Beginning in 1978, coverage was further extended to include agricultural workers employed by large farms and employees of nonprofit elementary and secondary schools that are not religiously affiliated.

Adjustments to "covered" wages and salaries.—The UI industry data reported by the State ESA's have had to be supplemented and modified in several ways to derive a complete measure of wages and salaries in "covered" industries for the county personal income estimates.

Small firm adjustments.—Prior to 1972, small firms were excluded from UI coverage by the differing size-of-firm provisions of the individual State laws. Estimates for the noncovered firms' payrolls through 1971 were based on 1962 and 1965 data from the Old Age and Survivors Insurance (OASI) program, as tabulated for the annual Census Bureau publication *County Business Patterns (CBP)*.[6] The ratio of CBP first-quarter payrolls of small firms to CBP first-quarter payrolls of larger firms was calculated for each 2-digit SIC industry in each county. These ratios were applied to the corresponding UI-reported annual payroll data (for larger firms only) to yield estimates of small-firm annual payrolls by industry and county. The resulting small-firm estimates in 1962 and 1965 were extended to later years by the change in UI-reported payrolls, with allowance for changes in State UI laws affecting small-firm coverage. A more detailed discussion of the small-firm adjustment appears in the 1974-79 edition of this publication.

Nonclassified industry adjustment.—Both the UI and OASI tabulations regularly show minor amounts of payroll that have not been assigned to an industry. Because the industrial classification scheme followed in the national, State, and county income estimates does not permit a nonclassified category, it was necessary to adopt a convention to allocate such nonclassified payrolls among the industry groups. This particular adjustment of the reported UI industry data is usually quite small—about one-tenth of 1 percent on a national basis.[7] Furthermore, no error is introduced into the State and county wage estimates because the adjustment involves only apportionment by industry of amounts reported for particular States and counties.

Adjustment for noncovered elements of UI-covered industries.—The noncovered elements for which BEA presently makes adjustments include: tips (taxicabs, eating and drinking establishments, hotels and other lodging places, personal services, and amusement and recreational services); commissions received by insurance solicitors and real estate agents; and payrolls of electric railways, railroad carrier affiliates, and the Federal Reserve Board. Tips are covered by the various UI laws. BEA assumes that this form of income payment is subject to considerable underreporting and therefore makes estimates of additional tips in industries where tipping is most customary. Separate estimates for each of the noncovered elements are made at both the national and State levels (based on either direct data or from relevant secondary source materials). The estimates are added to the UI-reported payrolls in the related industry to produce the final estimate for the industry. County estimates, however, are made by allocating the State total, *inclusive* of the adjustment, by the distribution of the payrolls reported by UI for the appropriate industry. Independent estimates of the noncovered elements are not made for counties because of the lack of relevant data.

Contract farm labor (as distinct from hired farm labor) is classified as an agricultural service. Because most State UI programs do not cover, or only partially cover, this group of workers, BEA makes an independent estimate of wages of contract farm laborers and adds it to the UI-reported wages in agricultural services. The State and county estimates are based on the proportional distribution of expenditures for contract labor reported in the census of agriculture. Adjustments are made to reflect UI data for California (beginning with 1976) and for Florida and Arizona (beginning with 1978) when complete or near-complete UI coverage of contract farm labor became effective in those States.

[4] ES-202 is the Federal report that summarizes the data from the quarterly tax reports filed by employers under the various State UI programs. However, it is commonly used to refer to the program of compiling the wage and employment data.

[5] The value of pay-in-kind is included in the UI payroll tabulations; however, because it is not reported separately by the employers, it cannot be isolated from cash pay.

[6] The two major sources of data for the *CBP* are the IRS form 941, filed quarterly by employers covered under the Federal Insurance Contributions Act (FICA), and the annual organization surveys, which provide establishment employment and payroll data for multi-establishment employers.

[7] The size of the "unclassified" payrolls increased somewhat in 1972 because of extended coverage to small firms, but has remained relatively constant at the new level.

Noncovered private wages and salaries

In addition to the small segments of UI-covered industries that are outside the scope of the State UI programs, a group of industries is referred to as "noncovered." At one time or another, this group has included: forestry; fisheries; railroads; private households; hospitals; private educational services; museums, art galleries, etc.; nonprofit organizations; farms; and "other."[8] Over the years, as the various UI laws have been amended, the number of industries that are considered "noncovered" has diminished. Currently, of the private nonfarm sector, only railroads, private households, and "other" are treated as "noncovered" in making the county estimates of wages and salaries.

A description of the procedures used in making the county estimates of wages in each of the noncovered industries is provided in the following sections.

Private nonfarm wages and salaries.—Forestry, fisheries, hospitals, educational services, museums, and nonprofit membership organizations were brought under more complete coverage by the 1972 changes in the UI laws. Nonprofit organizations, however, are still not fully covered. The amended provisions did not extend coverage to religious organizations, nonprofit organizations with fewer than four employees, nor to nonprofit schools other than institutions of higher education. The recent amendment to the UI law that went into effect in 1978 extended coverage to nonprofit elementary and secondary schools not affiliated with a religious group.

Forestry and museums, art galleries, etc.—Both industries have been classified as "covered" begining with 1972. Consequently, the wages for 1972-81 are based on the UI ES-202 tabulations. For the years preceding 1972, the wages were estimated by extrapolating the 1972 UI-based benchmark back by the annual change in the prerevision estimates (which were based on *CBP* first-quarter wage data) and making a final adjustment to sum to the State totals.

Fisheries.—This industry has also been classified as "covered" beginning with 1972, and wages for 1972-81 are based on UI tabulations. The pre-1972 estimates of wages at the State level were made from a combination of direct and indirect data. The 1967 wage data from the 1967 Census of Commercial Fisheries and the 1972 UI-reported wages were used as benchmarks. Estimates for the intervening years were made by an interpolation procedure using the relationship between wages and value of catch. County estimates were made in a more *ad hoc* fashion. County UI tabulations of wages reported in the fishing industry prior to 1972 were evaluated on a State-by-State basis to determine their adequacy (in terms of their proportional distribution within the State) for use as allocators. In general, the UI data for 1969-71 were used to allocate State estimates to the counties in States with large fishing industries. For the other States, the 1972 UI county distributions were used to allocate the State totals for all the years 1969-71.

Private educational services.—Since 1972, mandatory coverage under the UI program has extended to almost all private establishments providing educational services. The major gap in coverage has been for the elementary and secondary schools. Elementary and secondary schools operating for a profit have been covered, and since 1978, *nonprofit* elementary and secondary schools, with the important exception of those affiliated with a religious group, are also covered.

The 1978-81 county estimates of wage and salary disbursements in private education are based on the geographic distribution of UI private education payrolls. Estimates for 1972 and prior years are based on the distribution of *CBP* private education payrolls. Estimates for 1973-77 were prepared from a straight-line interpolation using the 1972 *CBP*-based benchmark and the 1978 UI-based benchmark as end points, and adjusting the resulting series to agree with the independent State estimates of wage and salary disbursements in private education. In the interpolation between 1972 and 1978, modifications were made so that the estimates for 1975-77 would approximately reflect the 1972 SIC and the estimates for 1973 and 1974 would reflect the 1967 SIC.

The decision to use the proportional distribution of the UI county tabulations in preference to the *CBP* (even though the *CBP* reflects the more complete coverage—resulting from the elective coverage provisions—of OASI) was made as a result of a reevaluation of the two sets of data by the Regional Wage Branch.

A comparison of the proportional geographic distributions of payrolls in service industries that have equally complete coverage under the UI and the OASI programs revealed considerable discrepancies between the two sets of data. Some of the discrepancy is explained by the difference in the treatment of geographically unallocated records. Other possible explanations are differences of interpretation and application of industrial codes and in the establishment reporting.

Even though, in recent years, the State ESA's have been providing 3- and 4-digit industry detail at the county level, it has not been possible to duplicate the State estimating procedure for the county estimates. (The State estimates are based on *CBP* data for elementary and secondary schools, because of better OASI coverage, and on UI data for the remainder.) At the county level, *CBP* data for elementary and secondary schools are often unavailable because of the need to suppress 3-digit detail in many small counties to avoid disclosures; therefore, at the county level of estimation, the choice in favor of UI was made for consistency. The estimates of private educational services now share a common approach in the underlying geographic and industrial classification with the estimates for most other service industries.

Nonprofit membership organizations.—Under the provisions of the most recent amendment to the Federal Unemployment Tax Act, UI coverage is mandatory for nonprofit organizations with four or more employees; however, in 19 States, the State law includes nonprofit organizations under the general "one or more" provision. Under both Federal and State UI laws, religious organizations are exempted from mandatory coverage. Coverage under the OASI program is greater than under UI to the extent that the elective coverage provisions of OASI have encouraged a high rate of participation among those who are not under mandatory coverage. Although the clergy are covered by OASI, they are absent from the *CBP* data base because, under the SSA classification scheme, they are considered self-employed.

The 1978-81 county estimates of wage and salary disbursements for nonprofit membership organizations are based on the distribution of UI nonprofit payrolls. The estimating procedures for the years prior to 1978 are the same as described for private educational services, as is the rationale for changing the basic source of data from *CBP* to UI.

Railroads.—The railroad industry is covered by its own retirement and unemployment insurance programs administered by the Railroad Retirement Board. There are, therefore, no UI or OASI data upon which to base estimates of wages and salaries in the railroad industry. Moreover, there are no suitable data available from the Railroad Retirement Board for making county estimates of wages. BEA bases its county estimates of wages in the railroad industry on the geographic distribution of an employment series developed from biennial reports on employment in class 1 railroads (line-haul and switching and terminal companies) prepared by the Association of American Railroads (AAR). These reports include information on employment for selected SMSA counties (which account for approximately 75 percent of all railroad employment) and a residual "all other," for each State. BEA disaggregates the residual in each State to the appropriate counties in proportion to the geographic distribution of railroad employment reported in the 1970 Census of Population. County employment series for the years between AAR reports are approximated by straight-line interpolation. The employment series are used to allocate the State estimates (made from more direct data) of wages and salaries in the railroad industry. The use of employment as a county allocator of wages is somewhat more acceptable for railroads than for most industries because the regional differences in wage rates are minimized by the tendency to negotiate wages in the railroad industry on a nationwide basis.

Private households.—Because of the lack of local area statistics related to private household workers, other than the income and employment data reported in the 1970 Census of Population, BEA's estimates for 1969-81 are based on an allocator developed from the 1970 census. A 1969/70 benchmark distribution for allocating the State totals of wages and salaries received by private household workers was computed as the product of the number of private household workers in each county and an estimated mean earnings. The mean earnings of persons employed by private households was derived from Census Bureau tabulations of 1969 earnings of persons by income-size class and by industry. Such averages could be prepared only for the State and for each SMSA with a population of 250,000 or more. An estimate of the average earnings for all other areas combined was made from the residual data derived from subtracting the SMSA data from the State totals. This average was used for all counties not included in the reported SMSA's.

[8] "Other" is the designation for "rest of the world," in the component classification used in the State and local area accounts. Although it reflects wages paid to U.S. residents by international organizations, foreign embassies, and consulates located in the United States, it has been the convention to include it with private nonfarm industries rather than with government.

The number of private household workers (other than unpaid family workers) in each State and SMSA with a population of 250,000 or more was tabulated directly from the 1970 census. The SMSA employment numbers were disaggregated into estimates for the constituent counties on the basis of the 1970 census county distribution of private household workers in the labor force. (Although labor force and employment are different measures, in this particular case the difference was not important.) The residual employment number for the counties outside the reported SMSA's was also disaggregated among the appropriate counties by the 1970 census county employment distribution. Data from the 1980 Census of Population will be incorporated as soon as they become available.

Hospitals.—Due to the extended coverage provisions of the UI tax laws, effective in 1972, hospitals are classified as covered. Estimates of monetary wages and salaries for 1972-81 reflect UI tabulations of payrolls. Estimates for years prior to 1972 were made from data collected by the American Hospital Association in its annual survey of hospitals. Information on payroll expenses was reported by most hospitals surveyed; in cases where they were not, BEA prepared estimates from information reported on employment or number of beds. A comparison of estimates for 1972 made from each set of source materials revealed that the results were sufficiently similar so that no wedging or adjustments were necessary to bridge the estimates for the two time periods.

A small amount of pay-in-kind is included in the estimates of total wages and salaries for hospitals. An explanation and description of the methodology are included in the section on pay-in-kind appearing at the end of this chapter on wage and salary disbursements.

"Other."—This term, as it appears in the industry detail of the State and local area income tables, refers to U.S. residents employed by international organizations and foreign embassies and consulates located in the United States. It differs from "rest of the world" (the industry designation appearing in the national tables) to the extent that "rest of the world" additionally includes international border workers, i.e., U.S. residents working across the border in Canada or Mexico and foreign residents working in the United States.

In the State and local area estimates, border workers are reflected through the residence adjustment process. The procedure used to reflect the earnings of border workers in the State and local area personal income series is described in the section on the residence adjustment.

The State and local area estimates of "other" are made by allocating the appropriate national total by an estimated geographic distribution of administrative expenditures of international organizations and foreign diplomatic missions in the United States. This distribution was prepared on a one-time basis by the Balance of Payments Division, BEA. Because of the absence of related data, the reliability of the estimates for this subcomponent of wage and salary disbursements is of low order, even at the national level. However, the dollar amounts involved are so small that the effect on the reliability of the wage component, even at the county level, is negligible.

Farm wages and salaries.—BEA estimates of farm wages and salaries include cash pay and pay-in-kind of hired farm labor and salaries of officers of corporate farms. They do not include pay of contract farm labor, which is classified as part of agricultural services. County estimates of cash wages of hired farm labor are made by allocating State totals, estimated by USDA and adjusted to the BEA definition, by county distributions from the census of agriculture. Allocators for 1969 and 1974 were taken directly from the censuses of agriculture. The county allocators for 1970-73 were constructed by straight-line interpolation between the census benchmarks. The 1974 benchmark distribution is used to allocate the State totals for the years 1974-81.

Salaries of corporate farm officers were reported for the first time in the 1974 Census of Agriculture. The 1974 county distribution was used to allocate the State estimates for all years.

Pay-in-kind of hired farm labor is estimated by allocating State totals to the counties on the basis of the number of workers on farms 150 days or more in a year, reported in the census of agriculture.

Government wages and salaries

Civilian government wages and salaries.—Almost all civilian government employment is now covered by the UI program. The county estimates of civilian government wages and salaries incorporate UI-reported payrolls in most States for the most recent years. Full UI coverage was extended to State and local governments (exclusive of elected officials and members of legislatures and the judiciary) effective January 1, 1978. However, the quality of UI-reported data continues to vary by State and by level of government. U.S. Office of Personnel Management (OPM) data and census of governments data are used in many cases to extend UI-based estimates to earlier years. Table B indicates the extent and timing of the use of UI-reported wages for these components.

Table B.—Introduction Year for Unemployment Insurance Data as Basis for Government Wage and Salary Estimates

State	Federal civilian	State government	Local government
Alabama	1977	1978	1978

Wisconsin	–	–	1978
Wyoming	1967	1978	1979

Federal civilian wage and salary disbursements.—The 1977-81 county estimates for most States reflect payroll data reported by Federal agencies under the Unemployment Compensation for Federal Employees (UCFE) program. However, a relatively large residual payroll unassigned to specific counties completely precludes the use of UCFE in three States and precluded its use for years prior to 1977 in many other States (see table B). The county estimates for cases where UCFE data are not used are based on county distributions of employment by agency, reported by OPM, weighted by a State average wage for each agency calculated from UCFE payroll and employment data.[9]

State government wage and salary disbursements.—The 1978-81 county estimates for all but eight States incorporate the UI-reported State government payrolls. The estimates for the remaining eight States are based on the geographic distribution of full-time employees in State government reported in the 1967 Census of Governments. For three States (Alaska, Idaho, and

[9] OPM data are also used to strengthen the UCFE-based estimates in a few cases. In Minnesota, New York, North Carolina, and West Virginia, OPM data for the Postal Service are substituted for the UCFE distributions. In Virginia, the UCFE data are adjusted to agree with the OPM county distributions of the civilian employment of the U.S. Department of Defense.

New York), UI-reported payrolls have been available since 1967. For the remaining 39 States, however, the use of UI-reported payrolls was made possible by the extension of mandatory coverage of the UI programs to State and local government employees effective January 1978. For these 39 States, the county estimates for years prior to 1978 are based on interpolation between 1967 census-based and 1978 UI-based estimates.

Local government wage and salary disbursements.—The 1978-81 county estimates are based on UI-reported local government payrolls in all States except Illinois. (However, in seven States, the 1979 UI distribution was used for both 1978 and 1979 estimates. See table B.) These estimates are made separately for the education and noneducation sectors and combined to a local government total. In all but two States (Idaho and Alaska), estimates for years prior to 1978 were derived from straight-line interpolations between October payroll distributions from the 1972 Census of Governments and the 1978 UI-based estimates.[10]

Military wages and salaries.—This category includes the cash pay and pay-in-kind of full-time military personnel and of the members of the military reserves. The wages and salaries of the full-time military personnel were estimated in two parts, cash pay and pay-in-kind, for the years 1974-81 and in three parts prior to 1974, to reflect the "Q" allotment (terminated during 1973).

The 1977-81 county estimates of military cash pay are based on 1980-81 county payroll estimates by branch of service, prepared by the U.S. Department of Defense (DOD), and a county distribution of Coast Guard military personnel, prepared by the U.S. Department of Transportation. Independently derived national and State totals for each branch of service are distributed to counties on the basis of the DOD payroll estimates. The 1979 estimates of total military cash pay were prepared from the 1980 county distribution and extended back through 1977 using DOD military strength data. The estimates for years prior to 1977 have not been revised, and the county distributions continue to be based primarily on the DOD military strength data for major installations. The estimates for Coast Guard payrolls and for the pay of DOD military personnel not assigned to major installations were prepared from the county distribution of armed forces personnel in the 1970 Census of Population, adjusted to exclude personnel assigned to major installations.

In most cases where a military installation extends across county boundaries, the entire payroll is assigned to the county that contains the headquarters. In a few cases, the estimates for 1977-81, based on DOD payroll estimates, are inconsistent with the estimates for 1969-76, either because an installation has been assigned to a different county or because the county distribution of payrolls differs significantly from the county distribution of military strength. Where this occurs, it is noted on the relevant table. The estimates prior to 1977 will be revised to be consistent with the current estimates at a later date.

The "Q" allotment (until its termination) was measured in the State and local area personal income series at the location of the beneficiary rather than of the military person from whom the allotment originated.

Pay-in-kind measures the value of the food and clothing received by enlisted personnel.[11] State estimates are made by allocating the national totals of pay-in-kind by the geographic distribution of enlisted personnel. Because information for enlisted personnel are not shown separately from officers by county, the State estimates of pay-in-kind are allocated to the counties by cash pay (1977-81) or by total military strength (1969-76).

There is little information, direct or indirect, available for estimating military reserve pay below the State level. State estimates of reserve pay inclusive of supplies and equipment received (pay-in-kind) are based on direct data supplied by DOD. The county distribution of military reserve pay is assumed to be in proportion to the distribution of the civilian resident population within each State.

Pay-in-kind

The wage and salary estimates for selected industries include allowances for the food, clothing, and lodging paid in kind to employees, which represent income to them. The concept of valuation is cost to the employer. Market value to the employee would be a preferable concept for some purposes, although it is more elusive and less subject to quantitative determination.

This area of wage imputation is rather imprecise and involves a number of difficult decisions that can be settled only in a pragmatic fashion. For instance, the imputation is confined to food, clothing, and lodging because other types of perquisites, such as medical and recreational services, are generally less important and cannot be estimated satisfactorily from available data.

Pay-in-kind is a relatively important elements of wages in the military and farming sectors; therefore, the description of how it is estimated for inclusion in the local area personal income estimates is discussed with the other elements of military and farm wages and salaries in the preceding sections.

The following discussion is, therefore, confined to the private nonfarm sector. Payment in the form of food or food and lodging is still customary to some extent in eating and drinking places, hotels, private households, water transportation, hospitals, private education, and private nonprofit organizations.

In terms of national income accounting, the imputation of wages is depicted in the accounts as though the pay-in-kind had taken the form of cash flows. In the sample case of food furnished restaurant workers, the imputation assumes that the employer, instead of furnishing his employees with free food, pays them corresponding amounts of cash wages, and the employees, in turn, use these wages to buy items previously purchased by the employer. Employees' wages and business sales to consumers (recorded in personal consumption expenditures) are raised by equivalent amounts. Omission of the imputation would understate the measures of personal income, personal consumption expenditures, and total output. It would also understate the real earnings of employees receiving food relative to those paid wholly on a cash basis.

Separate distributions of payments in cash and in kind of private nonfarm wages and salaries in the "covered" industries are not available for States or counties. Although the value of pay-in-kind is included in the payroll totals tabulated from the UI and OASI administrative records, employers are not required to report it separately. Separate estimates of pay-in-kind are made by BEA for several noncovered industries for inclusion in the wage and salary component of personal income (in addition to farm and military) namely, private households, nonprofit membership organizations, and private educational services. A separate estimate is also made for hospitals, even though it is a "covered" industry. It reflects the food, lodging, and clothing received by members of religious orders working in hospitals but excluded from UI coverage. Pay-in-kind in private education and nonprofit organizations also reflects the value of food, lodging, and clothing received by personnel who are members of religious orders. The practice of providing these perquisites as part of wages to lay employees has, for the most part, has been discontinued.

State estimates of pay-in-kind in private education, hospitals, and nonprofit organizations are based on the geographic distributions of selected categories of Catholic clergy and members of religious orders, which are published annually in the *Official Catholic Directory* (for example, for private education: full-time teaching priests, teaching brothers, teaching sisters, etc.; for nonprofit organizations: resident pastors, diocesan priests, etc.). County estimates, however, are allocated in proportion to the distribution of cash wages because no relevant data are available.

Pay-in-kind for private households is estimated at the State and county levels in proportion to cash wages because of the lack of related data.

Other Labor Income

Other labor income (OLI) is a supplement to wages and salaries and consists primarily of employer contributions to private pension and welfare funds and to privately insured workmen's compensation funds. Other items included are directors' fees, compensation to prison inmates, jury and witness fees, other judicial fees, and marriage fees paid to justices of the peace, for which little or no data are available. However since employer contributions currently account for 99 percent of OLI nationally, the lack of data relating to these other items does not seriously impair the measurement of personal income.

Employer contributions to private pension funds.—These payments made by employers on behalf of their employees are most often directly related to wages. The proportion of the employer contribution to the payroll tends to vary by industry; therefore, the estimates were made in considerable industrial detail, using the geographic distribution of wage and salary disbursements to allocate national totals to States and State totals to counties. Except for a small amount of annuity payments made by some State and local governments on behalf of certain employee groups (usually teachers), there is no government participation in private pension plans.

[10] In Idaho, the estimates for 1972 and earlier years are based on a series prepared by Professor W. Lamar Bollinger, College of Idaho. The Alaska estimates are UI-based for all years and the Illinois estimates are based on census of governments data for all years.

[11] The clothing imputation is confined to "standard" issues; it does not include clothing and equipment designed for use on special duties or under unusual conditions.

Table C.—Relative Importance to Total Personal Income of Other Labor Income, by Component, United States, 1981*

	Dollars (000,000)	Percent of TPI
Total personal income[1]	**2,406,545**	**100.00**
Other labor income	**140,347**	**5.83**
Employer contributions to privately administered workmen's compensation funds	15,834	.66
Employer contributions to private pension plans	60,244	2.50
Employer contributions to welfare funds (including Supplementary Unemployment Benefit funds)	62,211	2.59
All other[2]	2,058	.09

* Detail may not add to higher level totals because of rounding.
[1] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.
[2] Includes directors' fees, compensation of prison inmates, marriage fees to justices of the peace, jury and witness fees, and other judicial fees.

Employer contributions to private welfare funds.—Employer contributions to private welfare funds (group life insurance, group health insurance, and supplementary unemployment insurance) tend to vary by industry, but are usually unrelated to wages. Therefore, the State and county estimates are made in industrial detail using the geographic distribution of employment in the related industry to allocate the national and State totals. Government participation in private welfare plans, on behalf of government employees, is considerably greater than is government participation in private pension plans.

Employer contributions to privately administered workmen's compensation funds.—The task of estimating these contributions is more complex than it is for the contributions to pension and welfare funds because the amount of premiums paid for workmen's compensation insurance is largely governed by an occupational hazard factor. Variations among industries are related primarily to the proportion of hazardous occupations within each industry rather than to the wage level or employment. Annual data related to premiums paid to private insurance carriers underwriting workmen's compensation plans are available by States from the National Council on Compensation Insurance. The National Income and Wealth Division, BEA, provides national estimates of premiums paid, by industry. State estimates of premiums paid, by industry, are reconciled with the national industry estimates of premiums paid (initially allocated to States by wages) and with the State all-industry totals of premiums paid.[12] Estimates of benefit payments made under self-insured plans and of court-awarded payments to railroad workers and seamen (not covered by either State or Federal workmen's compensation laws) are combined with the premium payments to equal total employer contributions to privately administered workmen's compensation funds.[13]

No actual information on the county distribution of these payments is available. The county estimates for employer contributions by industry for total privately administered workers' compensation funds are based on the corresponding county distributions of wage and salary disbursements by industry.

Directors' fees.—The State and county estimates of directors' fees are made in industry detail and based on the assumption that their geographic distribution is proportional to the distribution of wages and salaries in the applicable industry.[14]

All other OLI.—State and county estimates for the remaining 1 percent of OLI (compensation to prison inmates, jury and witness fees, other judicial fees, and marriage fees paid to justices of the peace) are made using indirect data as allocators: prisoner population, number of crimes committed, and civilian population.

Proprietors' Income

Proprietors' income is the monetary income and income-in-kind of proprietorships and partnerships, including producers' cooperatives. It is treated in its entirety as received by individuals. Interest and dividends received by proprietors and rental income received by persons who are not primarily engaged in the real estate business are excluded from proprietors' income. (They are, however, included in personal income as personal interest income, dividends, and net rental income of persons, respectively.)

Nationally, nonfarm proprietors' income is shown both with and without two adjustments: the inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). The IVA is made necessary because, under the business accounting practices generally followed for tax reporting purposes, inventories are charged to cost of sales in terms of original cost rather than in terms of current market prices. In periods of changing prices, this practice results in gains or losses reflecting differences between replacement cost of goods taken out of inventory and their recorded acquisition cost, rather than reflecting current production, which is the appropriate measure for national income purposes. The IVA represents the difference between current replacement cost and the "book value" of inventories charged to cost of sales. In general, the adjustment is negative during periods when prices of goods carried in inventory are rising and positive when inventory prices are falling.

The purpose of the CCAdj is to put tax-return-based capital consumption allowances on an "economic" basis, that is, valued at replacement cost (rather than original cost) and measured consistently with respect to service lives of assets and the depreciation formula.[15] Neither adjustment is necessary for the farm proprietors' income because the estimates for inventory change and depreciation are already valued in a manner consistent with NIPA accounting.

Table D.—Relative Importance to Total Personal Income of Proprietors' Income, by Component, United States, 1981*

	Dollars (000,000)	Percent of TPI
Total personal income[1]	**2,406,545**	**100.00**
Proprietors' income[2]	**123,958**	**5.15**
Farm	23,161	.96
Nonfarm	100,797	4.19
Agricultural services, forestry, and fisheries	1,424	.06
Mining	2,647	.11
Construction	13,481	.56
Manufacturing	2,481	.10
Transportation, communications, and public utilities	5,025	.21
Wholesale and retail trade	21,294	.88
Finance, insurance, and real estate	3,837	.16
Services	50,608	2.10
Business services	15,076	.63
Professional and social services	35,532	1.48

* Detail may not add to higher level totals because of rounding.
[1] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.
[2] Includes the capital consumption adjustment.

Nonfarm proprietors' income

Nonfarm proprietors' income for many industries is benchmarked on Internal Revenue Service (IRS) data on the self-employed. These data are tabulated from the Social Security Self-Employment Tax forms filed by proprietors of unincorporated businesses. The IRS self-employment data were used in 18 States to prepare estimates (for 1968-72) for nonfarm proprietors' income in each major industry. For the remaining 32 States, the IRS self-employment data (1968-70) were used only for trade and services (trade and services together account for about 70 percent of all nonfarm proprietors' income). Estimates for the other nonfarm industries are based on a combination of 1962 IRS data for all industries and *CBP* data on the number of small establishments by industry and county. The *CBP* small-establishment data are also used to extend the various benchmarks to the more current years. The IRS self-employment file for the 32 States and the most current file for all States are being reviewed and will be incorporated into the estimates at a later date.

Because there are no State or county data available upon which to base independent estimates of the IVA and CCAdj, the assumption is made that each is distributed geographically in the same proportion as the nonfarm proprietors' net income.

[12] The reconciliation is made using a procedure in which elements of a two-dimensional matrix are alternately made to sum to geographic and industry control totals—through allocation—until the desired degree of balance is achieved. Usually one set of control totals is designated as fixed and governs the final distribution. In this case, the industry totals are fixed.

[13] In the case of self-insured workmen's compensation plans and court-awarded compensation for injury, benefits and employer contributions are identical.

[14] Approximately three-fourths of all directors' fees occur in finance, insurance, and real estate.

[15] For a more detailed discussion, see "The National Income and Product Accounts of the United States: Revised Estimates 1929-74," *SURVEY* 56 (January 1976): Part I, and Allan H. Young, "New Estimates of Capital Consumption Allowances in the Benchmark Revision of GNP," *SURVEY* 55 (October 1975): 14.

The county estimates of the net income of rural electric and telephone cooperatives are based on data from the annual report of the Rural Electrification Administration. The estimates for the electric cooperatives reflect the distribution of the metering points within the service area of each cooperative (including the county where the cooperative is located). For the telephone cooperatives, the estimates reflect the distribution of the dwellings of the customer members.

Farm proprietors' income

The net income of farm proprietors is computed as the total gross income of all farm operators minus total production expenses. It is modified to reflect current production through a change-in-inventory adjustment and to exclude the income of corporate farms and salaries paid to corporate officers. Copies of county tables showing estimates of farm income and expenses in detail (see appendix B) are available from the REIS.

The concepts underlying the BEA (national and regional) estimates of farm income are generally the same as those underlying the national and State farm income estimates of the USDA. The major definitional difference between the two sets of data relates to corporate farms. The USDA totals include corporate farms, whereas BEA, in its personal income series, measures farm proprietors' income, which, by definition, excludes corporate farms. BEA also classifies the salaries of officers of corporate farms as part of farm wages and salaries; USDA treats the corporate salaries as returns to corporate ownership and part of total returns to farm operators.

A further difference between the two sets of estimates is the national capital consumption allowance for noncorporate farms. BEA adjusts the USDA estimates from a declining-balance type of depreciation (used by the USDA) to a straight-line depreciation (consistent with BEA's estimates for other industries). At the county level, no separate estimates of capital consumption allowance are made.[16]

The total net farm income estimates measure income arising out of the current year's production in the farm sector. To arrive at this level, income is adjusted by the value of the net change during the year in farm inventories of livestock and crops held for sale. If farmers sell crops in the current year that were produced in prior years, cash receipts from marketing will be overstated by the amount of sales from storage; the amount held in inventory will decline; and the value of the net change in inventories will be negative. Conversely, if farmers store more of current output than they sell from storage, the amount held in inventory will rise; cash receipts from current output will be understated; but the value of the net change in inventories will be positive. In either case, the correction yields a measure of farm income reflecting current production.

The methods used to estimate farm proprietors' income at the county level rely heavily on quinquennial data obtained from the 1969 and 1974 Censuses of Agriculture and on selected annual county data prepared by the State offices affiliated with the Statistical Reporting Service (SRS), USDA.[17] The latter data are used, wherever possible, to bridge the intercensal gap. In addition to these basic sources, data from other sources within the USDA, such as the Agricultural Stabilization and Conservation Service, are utilized in the preparation of a fairly detailed income and expense statement covering all farms in each State and county (appendix B).

Although a substantial amount of farm data is reported to the IRS, it is of limited use for local area income estimation. In addition to the inadequate size of the IRS sample there are several other serious obstacles to the use of the IRS farm data. The diversity of accounting methods that underly the tax reports filed by small independent proprietors makes it difficult to calculate net income on any uniform basis. Furthermore, the tax concepts of income and deductions are not comparable with the national income accounting concepts. Finally, the IRS tabulations do not adequately cover the income of many farmers in the lower income brackets.

The benchmarks for the farm proprietors' income estimates are data collected in the 1969 and 1974 Censuses of Agriculture as well as on the USDA State totals of income and expense items. County distributions of 19 components of gross income and 13 categories of production expenses are used to allocate the corresponding State series.

Gross income includes the following separately estimated items: (1) Cash receipts from farm marketing of crops and livestock (in component detail), (2) payments to farmers under the several government payment programs, (3) the value of food and fuel produced and consumed on farms, (4) the gross rental value of farm dwellings, (5) the value of the net change in the physical volume of farm inventories of crops and livestock, (6) income from custom work and other agricultural services performed by farm operators, and (7) income from recreational services.[18]

Cash receipts from marketing is the most important component of gross farm income. The USDA includes some 150 different commodities and generally has production, marketing, and price data available for preparing the estimates on a State basis. However, except for 15 States, annual county estimates of cash receipts by component are not available.[19]

To offset this lack of current county data, estimates of cash receipts from marketing are made by summing the USDA State estimates of cash receipts from individual commodities into the groups for which value-of-sales data are reported by county in the census of agriculture. These aggregates are then allocated by the related census county distribution. Estimates for intercensal years are either based on supplemental county estimates of annual production of selected field crops, available from the State SRS offices, or were calculated by straight-line interpolation between the census benchmarks and adjusted to State USDA levels.

All State and national estimates prepared by the USDA, except for livestock marketed and purchased and other expenses, were used as control totals in making county allocations. Because interfarm, intra-State transfers are compensating income and expense items when State accounts are aggregated, the USDA excludes these transactions in its estimates of cash receipts from marketing livestock and expenses of livestock purchased. However, such transactions are not necessarily between farms within a county, and estimates of both income and expenses (equal at the State level) are made by BEA and distributed among counties by two different allocators. Income is allocated by cash receipts for livestock, and expenses are distributed by livestock purchased. Similarly, for net rent within each State, the distribution of rent received is different from that of rent paid (data for both are reported in the census of agriculture).

Estimates of income from custom work, recreational services, and rental of farmland are prepared from similar information reported by counties in the censuses of agriculture. Tabulations of total government payments to farmers by county are available from the Agricultural Stabilization and Conservation Service on an annual basis.

No direct information is available by county for estimating the imputed income items: value of home consumption and gross rental value of farm dwellings. The county estimates of home consumption are made using the distribution of the number of farms reported in the census of agriculture to allocate the State estimates to the counties. Gross rental value is estimated using the distribution of the census-reported value of farm land and buildings to allocate the State estimates.

The value of the change in inventories by county is estimated separately for livestock and for crops. For those States reporting the number of cattle and calves and hogs and pigs on farms, by county, as of January 1, the year-to-year changes in inventory numbers are incorporated into a county allocating series to distribute the State estimates of the change in livestock inventories. In cases where annual county estimates of the number of animals on farms as of January 1 are unavailable, the county distributions of the number of livestock units on farms reported in the censuses of agriculture are used to allocate the annual State totals. This procedure is duplicated to provide estimates of the value of the change in poultry inventories.

The value of the change in crop inventories is estimated in several ways, depending upon the type of information available for a given State. State totals of the value of the change in crop inventories are allocated to counties by one of the following measures: county crop production data reported in the 1969 and 1974 Censuses of Agriculture (interpolated for intercensal years and held constant for 1974-81); BEA county estimates of cash receipts from marketing of crops; or county estimates of the annual change in the quantity of crops on farms. The latter series is derived by computing the year-to-year change between successive annual county distributions of quantity of crops on farms (approximated by disaggregating State totals of quantity on farms by county data on crop production, available from the SRS offices).

Production expenses are estimated by county for 13 items using direct allocators from the 1969 and 1974 Censuses of Agriculture.[20] Many expense items—including

[16] See paragraph on production expenses.

[17] The SRS was previously part of the Economics, Statistics, and Cooperatives Service.

[18] Recreation services income is received for providing facilities for fishing, hunting, camping, etc.

[19] The States for which county estimates of cash receipts were available are Alabama, Arizona, California, Colorado (for crops only), Hawaii, Illinois, Kansas, Montana, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Texas, and Wisconsin.

[20] The 13 items are: purchases of feed, livestock and poultry, seed, fertilizer and lime, pesticides, and petroleum products; cash wages, perquisites, contract labor expenses; machine hire and customwork; animal health costs (included in "other expenses" prior to 1974), and all other expenses (i.e., mainly "overhead" items such as taxes, mortgage interest, electricity, telephone, depreciation, etc.).

taxes, mortgage interest, and depreciation are combined and allocated by the "other expenses" series reported in the 1974 Census of Agriculture.

Estimates of production expenses in the intercensal years were derived by straight-line interpolation. For the postcensal years, the 1974 benchmark distributions are used to allocate the State totals for each year.

By definition, farm proprietors' income includes only the net farm income accruing to proprietorships and partnerships. The foregoing procedure produces a measure of total net farm income; therefore, an adjustment is made to exclude the net farm income of corporate farms (including officers' salaries). The adjustment, made separately for each individual county, where appropriate, is based on the proportional division of acreage between corporate and noncorporate farms reported for each county in the 1969 and the 1974 Censuses of Agriculture. The adjusted net farm income is modified so that the county estimates, when summed to State totals, equal the related independently derived State estimates.

Dividends, Interest, and Rent

Dividends are cash payments by corporations, organized for profit, to stockholders who are U.S. residents. Interest is the monetary and imputed interest income of persons from all sources. Imputed interest represents the excess of income received by financial intermediaries, from funds entrusted to them by persons, over income disbursed by these intermediaries to persons. Part of imputed interest reflects the value of financial services rendered persons by financial intermediaries without charge. The remainder is the property income withheld by life insurance companies and mutual financial intermediaries on the account of persons, such as the addition of income to policyholder reserve held by life insurance companies.

Rental income of persons (with CCAdj) is the income of persons (except those primarily engaged in the real estate business) from the rental of real property and mobile homes; the imputed net rental income of owner-occupants of nonfarm dwellings (including mobile homes); and the royalties received by persons from patents, copyrights, and the rights to natural resources. The CCAdj is discussed in the prefatory statement of the proprietors' income section.

Table E.—Relative Importance to Total Personal Income of Dividends, Interest, and Rental and Royalty Income, by Component, United States, 1981*

	Dollars (000,000)	Percent of TPI
Total personal income[1]	**2,406,545**	**100.00**
Dividends, interest, and rents and royalties	**425,370**	**17.68**
Dividends	62,510	2.60
Interest	328,982	13.67
Monetary	236,915	9.84
Imputed	92,067	3.83
Rents and royalties[2]	33,878	1.41
Monetary	23,957	1.00
Imputed	9,921	.41

* Detail may not add to higher level totals because of rounding.

[1] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.

[2] Includes the capital consumption adjustment.

Dividends and interest

The State and county estimates of dividends and monetary interest reflect the 1969, 1972, 1974, 1975, 1977, and 1979 IRS Individual Master File (IMF) tabulations of dividends and monetary interest reported on individual income tax returns.[21] For years in which IMF tabulations are available, the estimates are based directly on them; for the intervening years, the estimates are prepared by straight-line interpolation between the IMF benchmarks. Estimates for the years following the latest IMF benchmark are based on the geographic distribution of the most recently available IMF tabulations.

[21] The State estimates of dividends and monetary interest are made separately for: receipts by individuals, receipts by nonprofit institutions, and receipts by fiduciaries. The IMF data are used only for receipts by individuals.

The State estimates of imputed interest are made separately by source (type of financial intermediary: commercial banks, saving and loan associations, credit unions, mutual savings banks, life insurance companies, and other). The individual estimates are summed to State totals of all imputed interest. Information reflecting the geographic distribution of imputed interest below the State level is unavailable; therefore, the county estimates are made by distributing the State estimates of imputed interest among the counties in proportion to the county distribution of monetary interest.

Rental income

Monetary rent.—The rental income component of personal income is a net measure of rent. State-level tabulations of the net rental income of persons are available from the IRS *Statistics of Income (SOI),* but these data are subject to large sampling error for the smaller States and account for only 25 percent (or less) of the amount estimated for the national personal income accounts. Although the IMF tabulations include only gross rent, they are prepared from the entire file of individual income tax returns and, therefore, are not subject to sampling error. The State methodology incorporates the IMF gross rent as a supplement to the *SOI* net rent data. The county estimates are based on the distribution of gross rent reported in the IMF county tabulations (1975, 1977, and 1979). The estimates for the intervening years are prepared by a straight-line interpolation between the IMF benchmarks. The county estimates for the years following the latest available IMF benchmark are based on the county distribution from the last IMF benchmark. Estimates for the years preceding the first IMF gross rent year were made by extrapolating that distribution back by the annual change in personal income (adjusted to exclude farm proprietors' income and rental income).

Selected estimates, for years in which IMF data were not available, were adjusted to reflect, for the area involved, the unique circumstances that significantly affected real estate values and, therefore, net rent (monetary and imputed). No explicit adjustment was made to estimates that were prepared from the most timely IRS data, because the income reported on the tax returns presumably reflected the impact of the disaster (or other circumstance). In 1980, downward adjustments were made to the rent estimates for Dade County, Florida, and for seven counties in Washington State. The adjustments were made to reflect the extensive damage to real estate caused by the Miami riots and by the volcanic erruption of Mt. St. Helens. In 1972, adjustments to rent estimates were made for the several counties in New York and Pennsylvania that suffered flood damage in the wake of Hurricane Agnes. Some of these adjustments are based upon assistance information supplied by the Regional Offices of the Federal Disaster Assistance Administration.

Royalty income.—The State estimates of royalty income are based on the State distribution of royalty income reported in the *SOI.* The *SOI* amounts account for approximately 90 percent of the national BEA estimate of royalty income. The difference is allocated among the States, in proportion to the number of returns with royalty income reported (for each State) in the *SOI.* The estimated State share of the underreported amount is added to the *SOI*-reported amount to produce the final State estimate of royalty income. Since data on the county distribution of royalty income are not available, the State totals are allocated by the county estimates of monetary interest.

Imputed rent.—County estimates of nonfarm imputed net rent are prepared in two parts: owner-occupied mobile homes and all other owner-occupied nonfarm dwellings. Imputed rent for farm dwellings is classified with farm proprietors' income.

Estimates of imputed rent for owner-occupied mobile homes (State and county) are made by allocating the national total, inclusive of the CCAdj, for each year, by the geographic distribution of the number of mobile homes and trailers reported in the 1970 Census of Housing. (A preliminary review indicated that the proportion of trailers to mobile homes was too small to affect the distribution.)

Estimates of imputed rent for all other owner-occupied dwellings are prepared by allocating State totals, inclusive of the CCAdj, to the counties by the 1970 estimated market value of owner-occupied, single-family nonfarm homes. The estimated market value was derived separately for each county, as the product of the number of owner-occupied, single-family, nonfarm dwellings and the related median value reported in the 1970 Census of Housing.

Adjustments are made to the imputed rent estimates to reflect unique circumstances affecting property values. This is done in each case where a similar adjustment was made to monetary rent and in cases where adjustments to monetary rent are made unnecessary due to the availability of current IMF data. The 1977-81 imputed rent estimates for California and for its counties are increased to reflect the impact of Proposition 13.

Transfer Payments

Transfer payments are income payments to persons, generally in monetary form, for which they do not render current services. The component includes payments by government and business to individuals and nonprofit institutions.

Currently, transfer payments account for about 14 percent of TPI. As a component of the State and county personal income series, it reflects the sum of more than 50 separately estimated items. Approximately 75 percent of total transfer payments is measured on the basis of directly reported data. The remainder, for the most part, is estimated on the basis of reliable indirect indicators.

The remainder of this section is arranged in classificational order, listing each separately estimated item of transfer payments accompanied by a brief explanation of the item and a description of how it is estimated for the county personal income series.

Table F.—Relative Importance to Personal Income of Transfer Payments, by Component, United States, 1981*

	Dollars (000,000)	Percent of TPI
Total personal income[1]	**2,406,545**	**100.00**
Transfer payments	**336,334**	**13.98**
Government payments to individual civilians	286,403	11.90
Retirement, disability, and health insurance	228,644	9.50
OASDI	138,689	5.76
Railroad retirement and disability	5,304	.22
Federal employees' retirement	18,163	.75
State and local government employees' retirement	17,000	.71
Medical insurance payments[2]	43,671	1.81
Workmen's compensation benefit payments (Federal and State administered funds)	3,182	.13
Other government disability insurance and retirement pay[3]	2,635	.11
Unemployment insurance payments	16,586	.69
State unemployment insurance payments	14,667	.61
Unemployment insurance for Federal civilian employees (UCFE)	222	.01
Unemployment insurance for railroad employees	266	.01
Other unemployment insurance benefits[4]	1,431	.06
Educational and training assistance payments[5]	4,992	.21
Income maintenance payments	35,262	1.47
Supplemental security income payments[6]	8,598	.36
Payments to families with dependent children (AFDC)	13,360	.56
General assistance payments	1,460	.06
Food stamp payments	10,097	.42
Other assistance payments[7]	1,747	.07
Other payments to individual civilians[8]	919	.04
Government payments to retired military, veterans, and their dependents	29,803	1.24
Veterans' pensions and military retirement payments by Federal Government	26,317	1.09
Educational assistance to veterans, dependents, and survivors[9]	1,945	.08
Federal Government life insurance payments	1,316	.05
Other government payments to veterans, dependents, and survivors[10]	225	.01
Payments to nonprofit institutions	10,491	.44
Federal Government	3,307	.14
State and local governments	4,426	.18
Business	2,758	.11
Other business transfer payments	9,637	.40

* Detail may not add to higher level totals because of rounding.

[1] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.

[2] Medicare and State government buy-ins for medical insurance.

[3] Payments to beneficiaries of State disability programs, beneficiaries of the Panama Canal Construction Annuity Act, and black lung payments.

[4] Includes payments to jobless individuals qualifying under the Trade Readjustment Assistance Program, the Redwood Employee Protection Program, the Public Service Employment Program, the Transitional Benefits Program, and unemployment insurance payments to veterans.

[5] National Science Foundation fellowships, other Federal fellowships, subsistence payments to State Marine School cadets, interest subsidy payments on higher education loans, basic education opportunity grants, and job corps payments.

[6] Federal basic payments, hold harmless, and State government supplementation payments.

[7] Refugee assistance payments (Cuban and Southeast Asian refugees), foster home care, payments for earned income tax credit (where credit exceeds tax paid), emergency assistance and energy assistance.

[8] Bureau of Indian Affairs payments, education exchange, payments for Alaska Native Claims Settlement Act, payments to victims of crime, compensation of survivors of public safety officers.

[9] Veterans' readjustment payments and educational assistance to wives and widows of veterans.

[10] Payments to paraplegics, payments for autos for disabled veterans, veterans' aid, and veterans' bonus payments made by State and local governments.

Government payments to individual civilians

Retirement, disability, and health insurance benefits:

Old Age, Survivors, and Disability Insurance (OASDI) benefits.—This item measures the total cash benefits paid during the year, including monthly benefits paid to retired workers, dependents, and survivors, and special payments to persons 72 years of age and over; lump sum payments to survivors; and disability payments to workers and their dependents.

Estimates of OASDI benefits at the county level are based on SSA tabulations of the amount of monthly benefits paid to those in current payment status as of December 31, by county of residence of the beneficiaries. Beginning with 1974, similar tabulations became available for the census divisions of Alaska. For the years prior to 1974, estimates for the census divisions were made by using the 1974 distribution to allocate the Alaska State totals.

Railroad employee retirement and disability benefits.—This item represents payments to retired and disabled railroad employees and their survivors under the provisions of the Railroad Retirement Act. The Railroad Retirement Board provided county tabulations of benefit payments for 1 month in 1971. The benchmark distribution, extrapolated to earlier years and later years by the annual change in the county distributions of OASDI benefits, is the basis for the county estimates of these benefits payments.

Federal employee retirement benefits.—This component includes payments made to, or on behalf of, former employees of the Federal Government covered by the civil service retirement and disability funds or by special contributory and noncontributory retirement systems. Beginning with 1971, ZIP-code distributions of combined payments for 1 month in each year have been provided by OPM. The data are summed to county totals and used to distribute the State totals for the related years. For years prior to 1971, the benchmark was extrapolated back by the change in OASDI benefits.

State and local government employee retirement benefits.—At present, retirement payments to State and local government employees and their survivors, including lump sum payments and withdrawals, represent a slightly smaller share of TPI than do the retirement payments to Federal civilian employees and their survivors.

In the absence of direct data, county estimates are made by allocating the State estimates by the county distributions of State and local government wage and salary disbursements adjusted to a place of residence. BEA has been aware of the need to improve the quality of the estimates of this important item and is continuing its efforts to locate information that will more accurately reflect the county distribution of income from State and local government retirement plans. Several States have recently begun supplying retirement benefit data by county. The data are being evaluated for future use.

Medical insurance payments.—These payments reflect benefit payments to individuals from programs sponsored by Federal, State, and local governments. County estimates of benefits received from the hospital insurance and supplementary medical insurance provisions of Medicare are based on the SSA-reported dollar amounts disbursed by Medicare to persons for reimbursement of medical and hospital expenses incurred. Due to the lag in the availability of the data, the estimates for the most recent year reflect the previous year's distribution. Data for the Alaska census divisions did not become available until 1975; therefore, the estimates for the Alaska census divisions for the years prior to 1975 were made by using the 1975 benchmark distribution to allocate the Alaska State estimate for each year.

Also included in this category are the State and local government "buy-ins," i.e., the premiums for the Supplementary Medical Insurance program of Medicare that are paid by State and local public assistance agencies for aged persons receiving welfare. County estimates of these payments are derived by allocating State totals by SSA county tabulations of the number of persons enrolled in the Supplementary Medical Insurance program.

Workmen's compensation benefit payments.—Benefit payments from publicly administered workmen's compensation insurance derive from both the Federal and State levels of governments. Federal Government employees are covered under the Federal Employees Compensation Act, administered by the Employment Standards Administration of the U.S. Department of Labor. This agency has provided BEA with county tabulations of the payments made to Federal employees annually, beginning with 1972. These tabulations are used to allocate the State estimates of benefits paid from federally

funded workmen's compensation insurance. Estimates for years prior to 1972 were made by extending the 1972 distribution back by the annual change in residence-adjusted BEA county estimates of Federal civilian wages and salaries.

Benefit payments made from State workmen's compensation funds include payments made in States where workmen's compensation insurance is exclusively State administered, in States where State-administered insurance for workmen's compensation is competitive with private insurance, and in all States having Second Injury Funds. Second (or Subsequent) Injury Funds have been established by legislation, enacted in the various States, designed to encourage employment of handicapped workers. The employer is assured responsibility only for disability that a worker incurs from present employment. The difference between the payment due for the full degree of impairment (reflecting the combined effect of injury sustained from previous employment and injury from present employment) and the amount due for the injury received in the course of present employment is paid out of the Second Injury Fund.

Benefit payments disbursed from State workmen's compensation funds are published in the Census Bureau's annual report, *Finances of State Government*, on a statewide basis only. In the absence of direct data for local areas, the State totals are allocated to the counties by the BEA county estimates of total wages and salaries—modified to exclude Federal payrolls and adjusted to a place-of-residence basis.

Other government disability insurance and retirement pay.—This category consists of black lung benefits and temporary disability payments.

Black lung benefits are the monthly cash payments (authorized by the Federal Coal Mine and Safety Act of 1969) paid to coal miners who are totally disabled by black lung disease. Payments are also made to eligible dependents and survivors of miners whose deaths were caused by the disease.

Beginning with 1979, the county estimates for all States are based on annual SSA county tabulations of benefit payments for the month of June. The estimates for 1975-78 for the counties of 17 States (which together account for approximately 95 percent of total black lung benefit payments each year) are based on similar SSA tabulations. For 1970-74, for which county tabulations were not available from the SSA, the county estimates for the 17 States were prepared by extrapolating the 1975 estimates (for each county) back to 1970 by the change in the number of persons 65 years and older receiving Old Age, Survivors, Disability, and Health Insurance (OASDHI) benefits. For the 34 States for which there were no county tabulations prior to 1979, the county estimates for 1970-78 are based on extrapolations similar to that described for the 17 States.

Temporary disability payments are weekly cash benefits, from State-administered programs, received by workers who are unemployed because of nonoccupational illness or accident. Such programs are in effect in only four States: Rhode Island, California, New York, and New Jersey. County estimates of benefit payments are made by allocating the State totals to counties in proportion to the distribution of civilian population.

UI payments:

State UI payments.—These are the cash benefits from State-administered UI programs. The provisions governing eligibility, timing, and amount of benefit payments vary among the States. No central standards for benefits were incorporated into the Federal-State system as they were for coverage and financing. State totals are allocated to counties by benefit data supplied by the State ESA's. While most States report benefits directly by county, a few report by local (district) office. In the latter case, local office statistics are distributed among the counties within the jurisdiction of the district office in proportion to unemployment reported by counties in the 1970 Census of Population. Current unemployment data are supplied by some States, but not on a consistent basis. Wherever possible, the State-supplied data are used in place of the less-current census data for disaggregating the district office totals to counties. In cases where the State is unable to supply the county data in time to meet the publication deadline, a preliminary set of estimates is made (to be revised the following year to incorporate the delayed county data). The preliminary county estimates are prepared by extrapolating the preceding year's estimate forward by the change in the number of persons unemployed during the year reported by the U.S. Department of Labor.

Unemployent compensation for Federal employees.—The UI program for Federal employees is a Federal program, but administered by the State ESA's acting as agents of the U.S. Government. State ESA's in 25 States now supply either county or local office data on unemployment compensation paid to Federal employees. Where county data are available, State totals are allocated directly. Local office data are disaggregated using the procedure outlined in the preceding section on State UI benefits. For the remaining States, BEA residence-adjusted estimates of Federal civilian payrolls are used as county allocators.

Unemployment compensation for railroad employees.—The railroad UI program is administered by the Railroad Retirement Board for railroad workers. Benefits are payable to railroad workers for unemployment due to sickness as well as for lack of work under a Federal formula applicable throughout the country. The county estimates are made by allocating the State totals in proportion to the county distribution of railroad wages and salaries.

Other UI payments.—This category includes unemployment compensation for veterans (UCX), trade readjustment allowances, and the benefits arising from three interim programs in aid of the jobless: the Redwood Employee Protection program, the Public Service Employee program, and the Transitional Benefits program.

Data on benefit payments under *UCX* are available from the State ESA's in 25 States. These data were incorporated into the estimates using procedures similar to those described for State UI payments. For States not providing this information, the estimates are based on the county distribution of total veteran population.[22]

Trade readjustment allowances are payments to workers who have become unemployed because of the adverse effects of increased imports resulting from trade arrangements permitted under the provisions of the U.S. Trade Expansion Act. State and county estimates are based on calendar-year data on payments made, tabulated by "petition" (location of plant). The tabulations are supplied by the U.S. Department of Labor, which administers the program. The tabulations are residence adjusted by BEA to approximate a geographic distribution based on place of receipt.

The *Redwood Employee Protection program* is in aid of workers made jobless, during the period May 31, 1977, to September 30, 1980, by the expansion of the Redwood National Park in California. The benefits (which include weekly lay-off benefit payments, severance payments, and vacation replacement payments, as well as continuation of health and welfare coverage, accrual of pension rights and credits, and retraining) generally extend to September 30, 1984—although, for any given beneficiary, the benefits can terminate earlier. The Employment and Training Administration (ETA), U.S. Department of Labor, has information on the annual amount of payments made in the State, but not for the counties; therefore, the county estimates are based on the ETA approximation that 85 percent of the payments flow to Humboldt County and the remaining 15 percent flow to Del Norte County.

The *Public Service Employment program* provided extended unemployment assistance to unemployed public service workers ineligible for extended compensation under any other Federal or State UI program. The program was authorized through 1979, but payments extended into 1980. The State ESA's made the payments and were reimbursed by the Federal Government. The amounts of benefits paid were available from the ETA by States, but not for counties. The county estimates were made by allocating the State amounts to the counties in proportion to the distribution of the benefit payments under the State UI program.

The *Transitional Benefits program* provides for unemployment compensation benefits to jobless workers, newly eligible for benefits under the State UI program (agricultural workers, private household workers, and State and local government employees), during the first 6 months after the extended coverage became effective (January 1, 1978). The State ESA's were reimbursed by the Federal Government for the payments made during the transition period. The amount of benefits paid were available from the ETA by States, but not for counties. The county estimates were made by allocating

[22] The Veterans Administration periodically issues reports on the number of veterans by place of residence and by period of service (broadly classified, for example, as WWI, WWII, Korean Conflict, etc.). BEA estimates the veteran population by straight-line interpolation between the benchmark county distributions.

the State amounts to the counties in proportion to the distribution of the payments under the UI program.

Educational and training assistance payments:

Federal fellowship payments.—This component reflects only the subsistence portion of fellowships, which is paid directly to the individual. The far larger portion is given by the Federal Government directly to the schools. The latter is classified as either transfer payments to nonprofit institutions or Government grants-in-aid (depending upon whether the school is privately or publicly administered).

Separate estimates are made for the National Science Foundation (NSF) grants to outstanding science students, payments to State Marine School cadets, and all other Federal fellowships. Estimates of the NSF grants are prepared from annual NSF tabulations of the number of students receiving NSF fellowships by institution. County allocating series for distributing the State estimates to counties are constructed by classifying the institutions by county and summing the number of recipients to county aggregates. Because of the lack of direct data, the county estimates of all other Federal fellowships are made by distributing the State estimates to the counties in proportion to civilian population. The county estimates of the Federal Government subsistence payments to cadets attending the six State Marine Schools authorized by the Maritime Academy Act of 1958 are made by assigning State estimates to the county in which each school is located.

Basic Education Opportunity grants.—This program, inaugurated in 1973, provides grants for the education and training of persons with low incomes. Estimates of payments made under this program are based on tabulations of dollar amounts authorized for disbursement (which differ only slightly from the actual amount disbursed), by location of institution, prepared annually by the U.S. Department of Education. The payments are classified by county and summed to county totals by BEA. The resulting distributions are used to allocate the related State totals to counties.

Interest subsidy on higher eduction loans.—These are the periodic payments made by the Federal Government to commercial lending institutions on behalf of individuals who receive low-interest deferred loans from these institutions for payment of expenses of higher education. The State estimates are based on Department of Education tabulations of interest payments on guaranteed student loans for selected calendar years. The county estimates reflect the distribution of civilian population.

Job Corps benefits.—These are the monthly payments for living expenses for economically disadvantaged persons between the ages of 16 and 21 enrolled in designated vocational and educational training programs. Also included are adjustment allowances issued to trainees upon the successful completion of their training. The State estimates are based on ETA calendar-year tabulations of the amount of allowances and allotments disbursed to Job Corps enrollees. The county estimates reflect the distribution of civilian population.

Income maintenance payments:

Supplemental Security Income (SSI) payments.—This component includes payments to individuals made by both the Federal and State governments under the provisions of Title XVI of the Social Security Act. Effective January 1974, the SSI Program for the Aged, Blind, and Disabled replaced the separate programs (see next item), which had been operating under the Federal-State welfare system (matching Federal grants are made to the States for payments to persons eligible for public assistance). The State estimates are made from unpublished SSA State tabulations of annual disbursements for the three categories of SSI benefits: Federal basic benefits, Federal hold-harmless benefits, and State supplementations.[23] At the county level, the three categories are combined, and the estimates are based on the county distribution of the number of persons on the SSI rolls.

Old Age Assistance, Aid to the Blind, and Aid to the Disabled.—These programs operated under the Federal-State welfare system until replaced in 1974 by the more inclusive SSI program. County estimates were prepared from information on dollar amounts disbursed, by program, provided by the various State Departments of Welfare and by the National Center for Social Statistics of the U.S. Department of Health and Human Services.

AFDC.—This program operates under the Federal-State welfare system whereby matching Federal funds are provided to the States for payments to persons in need of public assistance. It remains independent of SSI. Estimates for all years are prepared from direct data provided by the various State Departments of Welfare and by the National Center for Social Statistics.

General assistance.—This refers to aid furnished by State or local governments to needy individuals or families who do not qualify for help under federally aided assistance programs. There is no Federal financial participation in this program. Estimates for all years are prepared from direct data available from the various State Departments of Welfare and from the National Center for Social Statistics.

Food Stamp Act payments.—The estimates for the years prior to 1979 measure the net value of the bonus coupons to qualifying households. Beginning with 1979, they measure the full value of the coupons; this reflects the revision in the Food Stamp program, which eliminated the requirement of a cash payment in conjunction with obtaining food stamps. The estimates are based on USDA county tabulations of the value of the bonus coupons distributed for each month. The data are summed, by BEA, to calendar-year totals and the resulting distributions are used to allocate the State totals to the counties.

Other income maintenance payments.—These are payments for refugee assistance, the earned income tax credit, foster home care, and emergency assistance.

Refugee assistance payments represent the financial assistance for resettlement paid to Cuban refugees (authorized by the Immigration and Refugee Assistance Act of 1962) and to Vietnamese refugees (authorized by the Indochina Refugee Assistance Act of 1975). Annual data by county were available from most State Departments of Welfare, particularly those in States that have the largest concentration of refugees. For States that did not provide information on refugee assistance payments, each State estimate was allocated to the 10 most populous counties in direct proportion to civilian population. Beginning with 1979, refugee assistance payments are no longer included in transfer payments. Since 1978, the payments have been made directly to the provider of the service or goods—on behalf of the individual on the refugee assistance rolls; previously, the payments had been made to the individual. Payments to the provider are classified as vendor payments, which, by definition, are not included in personal income.

Eligibility for the *earned income tax credit* is determined by the size of adjusted gross income or earned income and certain household characteristics. Only the excess of the tax credit over the tax liability is counted as a transfer payment component. The State estimates are derived from IRS tabulations of the amount of payments disbursed to each State. Similar data are not available for local areas. County estimates are made by allocating the State estimates by county distributions derived from 1970 census data on earnings of families in poverty status.

Foster home care payments are made by State and local governments to families with foster children. County estimates are derived in proportion to the geographic distribution of children 18 years of age and under, as reported in the 1970 Census of Population.

The *Emergency Assistance* program extends assistance to families with at least one child and not covered by AFDC. Each family is eligible only once every 12 months and the coverage is for a maximum of 30 days. The program is optional for each State; currently, 25 States have these programs. Data reflecting emergency assistance payments by county form the basis for the estimates in 17 States. For the other eight States, the State totals were distributed to the counties in proportion to the related distribution of general assistance payments.

[23] The State mandatory payments are those resulting from the legislative provision that the State must provide a supplementary payment to any individual who, because of special needs or other reasons, had a December 1973 payment higher than the amount he would have received under the basic Federal SSI program. The optional payments are those resulting from the provision that a State may voluntarily elect to provide benefits above the Federal basic SSI payments. Both State supplementation payments may be either federally or State administered. States choosing to accept Federal administration of their supplementation payments are protected by a hold-harmless provision. This provision minimizes the financial burden of the supplementation payments for the affected States. In general, the amount to be paid by the State is limited to the State's non-Federal share of selected public assistance expenditures in calendar-year 1972 (with some adjustments); the difference is paid by the Federal Government.

Other payments to individual civilians:

Special payments to selected individuals.—This category includes short-term benefit payments to selected individuals. For 1975, it reflects the one-time payment of $50 to individuals receiving OASDHI, SSI, or Railroad Retirement benefits authorized by the Tax Reduction Act of 1975. County estimates were made by distributing the estimates to counties in proportion to the number of persons 65 years and older on the OASDHI and SSI rolls (tabulations were supplied by the SSA). For 1976 and 1977, it reflects the payments to victims of the Teton Dam disaster. The total dollar amount of payment was allocated for the Idaho counties in the path of the flood in proportion to civilian population. In 1979, the payments are refunds, paid to residents of Wisconsin out of the State surplus, based on the amount of real estate taxes paid. (This payment is classified as a transfer payment rather than a tax refund, because the real estate tax is a business tax—a deduction from gross rent to derive net rent. It is not a personal tax.) The estimates are based on actual amounts paid, supplied by the State.

Energy assistance payments.—These programs provide assistance to needy individuals and families to help defray the cost of home heating and other necessary home fuel consumption. One program, effective in 1980 only, was administered directly by the Federal Government; the others are federally funded, but administered by the States. The federally administered program consisted of grants made to SSI recipients. The State estimates of this component are based on SSA tabulations of the amounts disbursed. The county estimates reflect the geographic distribution of SSI enrollment. The State-administered programs may involve grants made to individual consumers or direct payments to the fuel vendors supplying the beneficiaries. Disbursements in the latter category are classified as vendor payments and are excluded from personal income. The size of a transfer payment component estimate for a State-administered program therefore depends on the method of disbursement as well as on the amount disbursed; in States that use only the vendor payment method, the estimate size is zero. The State estimates of grants to energy consumers are based on SSA data and on information received directly from 18 large States. The county estimates for all States are based on SSI enrollment.

Payments resulting from the Alaska Native Claims Settlement Act of 1971.—The law provides for "the fair and just settlement of all claims by Natives and Native groups in Alaska based on aboriginal land claims." Settlement was to be made through the granting of land rights to groups of Natives and through money payments to resident and nonresident Natives.

The benefits that are included in transfer payments are the money payments disbursed to individuals. For the period 1973-75, payments were made only to eligible Alaska Natives residing in Alaska. Beginning in 1976, eligibility for payments was extended to Alaska Natives residing in other States. The Alaska State totals for all years are distributed among the census divisions on the basis of the Alaska Native population reported in the 1970 Census of Population. The 1980 census data will be incorporated when available. Estimates of the total amount distributed to eligible Natives not residing in Alaska are based on information provided by the Seattle Office of the Thirteenth Regional Corporation.[24] This aggregate is distributed among the other 49 States and the District of Columbia by the number of persons enrolled under the Act, by State of residence, as of March 1976 and March 1979. Estimates for 1977 and 1978 are the product of straight-line interpolation between the March 1976 and 1979 distributions. Because of the lack of sub-State information relative to the location of residence of these individuals, the county estimates are made by allocating the State totals to the 10 most populous counties within each State in proportion to civilian population.

Compensation of survivors of public safety officers.—These are benefits deriving from a Federal program that compensates survivors of State and local government employees, such as policemen and firemen killed in the line of duty. The benefit payment is a lump sum of $50,000 for each claim. Tabulations of the number of claims by city and State are available from the Law Enforcement Assistance Administration of the U.S. Department of Justice. The tabulations are used to distribute national and State totals.

Compensation of victims of crime.—These payments derive from various State programs. Currently at least one-half of the States have instituted such programs and the number is increasing. Estimates (national and regional) for this component begin in 1975. The national and State estimates are based on the information received in response to a direct inquiry sent to all States by the Government Division, BEA. Twenty-seven States have reported amounts disbursed, but only five have reported payments by counties. For the States with no county data reported, the county estimates are based on the distribution of civilian population.

Other miscellaneous assistance payments.—These include benefits from the education exchange program and from selected programs of the Bureau of Indian Affairs, U.S. Department of the Interior. In the absence of any direct or reliable indirect data, estimates are made in proportion to related population distributions.

Government payments to retired military personnel, veterans, and their dependents

Veterans pensions and military retirement payments:

Veterans pension and compensation.—This item consists primarily of compensation to veterans for disability and payments to their survivors (including indemnity payments to survivors of veterans who were in the Armed Forces on or after June 27, 1950). Those eligible for benefits include veterans of all wars as well as those who served in peace time and incurred service-connected disabilities. Veterans with nonservice-connected disabilities who are permanently and totally disabled and meet specified income requirements are also eligible for benefits.

A benchmark allocating series was constructed from a 1972 ZIP-code distribution of veterans pension payments for 1 month, compiled by the Veterans Administration (VA). Similar tabulations of more current information are unavailable. The ZIP-coded data, summed to county levels and extrapolated to earlier and later years by the annual change in total veteran population, are used to distribute the State totals of this component.

Military retirement payments.—This component reflects the payments received by career military personnel including fleet reserve pay. Fleet reserve pay and military retirement pay are combined and estimated as one series at both the State and county levels. Beginning in 1972, county estimates are based on the annual ZIP-coded tabulations of 1 month's payments supplied by DOD. The ZIP codes are summed to county aggregates and used to allocate State totals. The 1972 benchmark was extrapolated back by OASDI benefit payments.

Educational assistance to veterans, dependents, and survivors:

Educational assistance to spouses and children of disabled and deceased veterans.—Because of the absence of any direct or reliable indirect information, county estimates are derived by allocating State totals in proportion to civilian population.

Veterans readjustment benefits.—These are the educational allowances and subsistence payments made to veterans of the post-Korean Conflict period while attending school. These payments are authorized under the Veterans Readjustment Act of 1966. County estimates are made by allocating the State totals by the county distribution of veterans of the post-Korean Conflict period reported by VA.

Federal Government life insurance payments:

Included in this component are: (1) Death benefits paid under the National Life Insurance Act to survivors of veterans of World War II, the Korean Conflict, and the Vietnam era; (2) death benefits paid from the Government Life Insurance fund to survivors of veterans of World War II; and (3) special dividends disbursed to veterans holding National Service Life Insurance policies. County estimates of these benefit payments are based on the annual county distributions of total veteran population.

Other government payments to veterans, dependents, and survivors:

County estimates of payments to parapalegics and payments to disabled veterans for automobiles and other conveyances are based on distributions of veteran population.

Payments made by State and local governments to veterans, in the form of assistance to indigent veterans and bonuses, are estimated by using the geographic

[24] The Alaska Native Claims Settlement Act established regional corporations through which benefit payments were to be disbursed to eligible individuals. The Thirteenth Regional Corporation is the one that services Alaska Natives residing outside Alaska.

distribution of veterans of the post-Korean Conflict period to allocate State totals.

Payments to nonprofit institutions

These are payments made by Federal, State, and local governments as well as by business (corporate gifts to nonprofit institutions). Reliable data for estimating these payments at the State and county levels are unavailable. Except for State and local government foster care payments, all county estimates are based on the geographic distribution of civilian population. Estimates of foster care payments are based on the 1970 census distribution of children 18 years old and under.

Business transfers to individuals

In addition to corporate gifts to nonprofit institutions, business transfer payments include personal injury payments made by business to individuals other than employees, consumer bad debts, cash prizes, and unrecovered thefts from business of cash and capital assets.

The availability of data for estimating these items at all three levels (national, State, and county) is extremely limited. The national estimates are of varying quality and the validity of the estimates below the national level is questionable; however, except for liability payments and consumer bad debts, the amounts involved are so small that their effect on the reliability of the transfer payment component, as a whole, is negligible.

Except for consumer bad debts, the State and county estimates of business transfer payments to individuals are based on the geographic distribution of the civilian population.

State estimates of consumer bad debts are made for retail trade, selected services, commercial banks, and all others. County estimates are made only for total consumer bad debts because of the limited availability of county data. The county estimates are based on the county distribution of retail sales reported in the 1972 and 1977 Censuses of Business. The estimates for 1977-81 are based on the 1977 distribution; the estimates for 1972-76 are based on a straight-line interpolation between the two census benchmarks.

Personal Contributions for Social Insurance

Contributions made by individuals under the various social insurance programs are excluded from personal income by handling them as explicit deductions. Payments by employees and the self-employed (farm and nonfarm) are included in this component. Also included are the contributions that are sometimes made by employers on behalf of their employees (i.e., those customarily paid by the employee, but, under special arrangement, paid by the employer). These contributions though viewed as part of total earnings of employees are not actually received by them in the current period. In the national income accounts, they are recorded as receipts of social insurance funds in the government sector.

Table G.—Relative Importance to Total Personal Income of Personal Contributions for Social Insurance, by Component, United States, 1981* **

	Dollars (000,000)	Percent of TPI
Total personal income[1, 2]	**2,406,545**	**100.00**
Less: Personal contributions for social insurance	**104,439**	**4.34**
Contributions to old age, survivors, disability, and health insurance	90,413	3.76
Employee contributions[3]	80,696	3.35
Self-employed contributions	6,017	.25
Supplementary medical insurance contributions	3,700	.15
Railroad employee contributions	698	.03
Federal employee retirement contributions	3,921	.16
State and local government employee retirement contributions	7,618	.32
Government life insurance contributions[4]	729	.03
State unemployment insurance and temporary disability contributions	1,060	.04

* This table has meaning only in the perspective of giving statistical balance to similar tables, appearing at the beginning of each section, for the various types of payments that make up personal income. The absolute amounts in this table, however, do give an indication of the size of the personal contributions components being estimated.

** Detail may not add to higher level totals because of rounding.

[1] After deduction of personal contributions from sum of all personal income payments.

[2] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.

[3] Includes contributions by the military.

[4] Premium payments for veterans' life insurance.

The employee portion covers contributions for OASDHI, State UI, railroad retirement insurance, temporary disability insurance, and Federal, State, and local public employee retirement systems. Contributions of the self-employed relate to OASDHI. Also included in personal contributions are premium payments for veterans life insurance and supplementary medical insurance. Government life insurance for veterans is classified as social insurance because the insurance program operates through a fund administered by the Federal Government. In contrast, the government life insurance program for Federal Government employees operates through private insurance carriers and is included in personal income as a component of OLI (employer contributions to private welfare funds).

Contributions made by self-employed individuals are paid annually along with their Federal income taxes. Employee contributions to most social insurance programs are collected in a manner similar to taxes on wages and salaries in that they are withheld at the source of disbursement under the laws of the Federal Government and of some State and local governments. However, the amounts of such taxes are counted as part of personal income—as though first received by the employee and then paid to the government. This is in line with the overall definition of personal income as a before-tax measure. Admittedly, the difference in treatment accorded withheld taxes and social insurance contributions is somewhat arbitrary.

In general, the State totals are allocated to counties by the payroll or proprietors' income series. Exceptions to this general procedure are: Contributions for veterans life insurance—estimated by allocating State totals by veteran population; contributions made to State UI and temporary disability programs applicable in only a few States—estimated by allocating State totals by civilian population; and supplementary medical insurance payments—estimated by allocating State totals by SSA tabulations of the number of persons enrolled in the program.

Residence Adjustment

"Residents" defined

The meaning of the term "resident individual" requires some explanation. Military personnel are considered residents of the State and county in which they are stationed, even though they may consider themselves permanent residents of another area. Similarly, civilian employees are counted as residents of the State and county in which they live and work or *from* which they *commute* to work, regardless of the area they consider to be their permanent residence. By the same token, members of the Armed Forces and civilian employees who are located away from their State or county of usual residence are not counted as residents of that State or county in the measurement of personal income. If they are located overseas, they are excluded altogether.

BEA measures the labor income of seasonal migrant workers in the regions in which the work is performed. No attempt is made to adjust the data to reflect a concept of "permanent" or legal residence. Rather, the wages of seasonal migrant workers are combined with the wages of nonmigrants and are assigned to the States and counties where the workers live while earning the wages. However, the wages of a worker on a short temporary assignment away from his home office or usual place of work are measured as if he had worked continuously at his usual place of employment.

In short, individuals actually residing in a State or county, civilian and military personnel alike, are counted as residents. This generalization does not mean that the personal income estimates for a particular State or county include the income of tourists or others in similar temporary status (such individuals are not counted as residents). The concept of residence is based essentially on physical rather than usual, permanent, or legal residence. It differs from the Census Bureau concept mainly in the treatment of seasonal and short-term workers. The Census Bureau includes many such workers at their usual place of residence (rather than where they were on April 1). BEA assigns the wages of these workers to the area where they resided while performing the work.

Residence adjustment procedures

To estimate the total and per capita personal income of residents in a local area, all personal income components must be put on a place-of-residence basis. Wages and salaries, OLI, and personal contributions for social insurance (except for a few segments) are estimated initially from data that were reported by place of work. These estimates require adjustment to convert them to a place of residence. The segments excluded from adjustment because they are initially estimated by place of residence are: Wages and OLI in the farm and private household sectors; the "Q" allotments portion of military pay (prior to 1974); military reserve pay; personal

contributions for veterans life insurance and for supplementary medical insurance; and contributions by the self-employed for OASDHI. The sum of the personal income components estimated on a place-of-work basis is referred to as income subject to adjustment (ISA).

The 1977-81 residence adjustment estimates were prepared by updating and extending the 1977-80 estimates presented in the previous issue of this publication. A simplified approach was used because no new information on intercounty commuting was available. Direct commuting information is most recently available from the 1970 Census of Population. Residential data that indirectly indicate commuting changes for 1981 (wages and salaries reported to IRS) will not be available to BEA until later in 1983.

The simplified approach used for the 1981 estimates assumed no change in intercounty commuting rates from 1980 to 1981. The ratio of 1980 net residence adjustments to 1980 ISA (net adjustment ratio) was applied to 1981 ISA and forced to sum to independently derived totals for BEA economic areas.[25]. The results were reviewed and modified for cases where large changes in ISA indicated that the no-commuting-change assumption may have been invalid. The 1977-80 estimates were prepared with the assumption that commuting did not change from the previous estimates. The net adjustment ratios for each year were applied to the revised ISA's for each county. The results were forced to sum to economic area totals and were reviewed, particularly for cases with large ISA revisions, to preclude unreasonable results.

The following paragraphs describe the estimation procedures for the previous (1970-80) estimates, upon which the current estimates are based. The same methodology, restricted to commuting flows between counties in different economic areas, was used to construct the economic area totals used as controls in the simplified methodology.

The residence adjustment for each county was measured as the total inflows of commuters' labor income minus the total outflows. Each gross flow was derived as the product of the ISA in the county of work multiplied by a residence adjustment factor. The residence adjustment factor is defined as the ratio of the wages of workers who work in the county, but reside in another county (in-commuters), to the total wages of all employees working in the county (resident and nonresident).

Benchmark residence adjustment factors were computed separately for civilian workers and for military personnel. Rough industry differentials were introduced into the residence adjustment factors for civilian workers from special tabulations of wages classified by industry for commuting flows of 50 or more workers, prepared by the Bureau of the Census from information collected in the 1970 census. For in-commuting flows of less than 50 workers, the residence adjustment factors were computed from 1970 census commuting data at the all-industry level. The residence adjustment factors for the military were computed from a comparative analysis of DOD data on military personnel by major installation and Census Bureau data from the 1970 census on military personnel by place of residence.

The residence adjustment procedure, for the most part, appropriately reflected the net flow of commuters' labor income in counties that had not experienced either large economic or demographic changes since 1970. There were, however, situations where the results were inadequate, such as, a large construction project in a rural county or rapid growth in an outlying suburban area. To identify such areas and to devise appropriate modifications of the initial residence adjustment, these estimates were subjected to an intensive review and analysis. Census Bureau county wage data for 1969 and IRS county wage data for 1972, 1974, 1975, 1977, and 1979 were among the series used to document major shifts in county commuting patterns since 1970. For the most part, adjustments were made only if other economic indicators supported the IRS or Census Bureau data. When such adjustments appeared to be justified, all available information related to the changes in industrial and demographic structure of the counties was utilized for determining both the size of the additonal adjustment and the county to receive the compensating adjustment.

Special procedures were used to estimate the earnings received in Alaska by migrant workers from other States and to assign the earnings to the States and counties where the workers were assumed to have their permanent residences. The adjustment factors used in these procedures, which were derived from 1957 tax return data tabulated by the Alaska Department of Taxation, represent the proportions of wages paid in Alaska by each of 10 groups of industries to migrant workers from other States. These factors were multiplied by the corresponding ISA components for each year to derive State-level outlfow estimates. The results were modified to take account of major developments, such as the pipeline construction of the mid-1970's and the petroleum development that began then. The State-level outflows were assigned to the Alaska census divisions where the particular industries were most important. Census divisions with small labor forces specializing in one or two industries were given greater weight than populous census divisions with diversified economies. The extra amounts of outflows derived for pipeline construction were attributed to six census divisions where the construction took place.

International border workers are treated as commuters in the State and local area personal income series; therefore, their earnings are reflected through the residence adjustment. The outflow of earnings of foreign workers (Canadian, Mexican, and Caribbean) was estimated on the basis of data from the U.S. Immigration and Naturalization Service, the U.S. Department of Labor, and the 1974 Census of Agriculture. The small amounts of earnings of U.S. residents commuting to work in Canada and the United Kingdom (inflows) were assigned to States and counties on a judgment basis.

A more complete description of the residence adjustment procedure and the problems involved is included in the previous edition of this publication.

[25] The BEA economic areas are 183 groupings of economically related counties that cover the entire United States. For a more detailed discussion, see appendix B in volume 1 in the 1974-79 issue of this publication.

Table 1.—Personal Income for the United States by Type and Industry, 1976–81

[Thousands of dollars]

FOOTNOTES

[D] Not shown to avoid disclosure of confidential information; data are included in totals.

[L] Less than $50,000; data are included in totals.

[1] Total personal income less farm earnings (labor and proprietors' income) equals nonfarm personal income.

[2] Consists of wage and salary disbursements, other labor income, and proprietors' income. Wages and salaries based upon data furnished by individual bureaus of employment security.

[3] Adjustment for international border workers: income of U.S. residents working outside the United States, less income of foreign residents working in the United States.

[4] Includes the capital consumption adjustment for rental income of persons.

[5] Includes the capital consumption adjustment for nonfarm proprietors.

[6] Includes wages and salaries of U.S. residents working for international organizations in the United States.

[7] Far West Region totals exclude Alaska and Hawaii.

[8] The estimates for Federal military earnings have been revised for the years 1977-81. The new methodology utilizes improved data sources. In some instances, the estimates for years prior to 1977 are not consistent with those for 1977-81. For a more detailed explanation, see discussion in part II of the methodology section.

[9] The revised estimates of 1977-81 Federal military earnings for this area are sufficiently different from the estimates for earlier years that a discontinuity in the time series between 1976 and 1977 exists for total and per capita personal income, as well as for Federal military earnings (labor and proprietors' income), government earnings, nonfarm earnings, and total earnings. See footnote 8.

APPENDIX A.—STANDARD METROPOLITAN STATISTICAL AREAS

The classification of Standard Metropolitan Statistical Areas (SMSA's) used by BEA in its personal income estimates conforms to the standards issued through July 1982 by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, for all but the New England States.

In New England, where SMSA's are defined officially in terms of cities and towns, satisfactory data for measuring local area income were generally available on a county basis only. Consequently, the New England metropolitan areas used by BEA are the New England County Metropolitan Areas (NECMA's) as designated through July 1982 by the Office of Management and Budget. The title of each NECMA includes the cities within its boundaries that are SMSA cities.

The geographic definition of each SMSA is held constant over the entire period for which the estimates are made. That is, counties included in an SMSA as of July 1982 are also included in each of the earlier years, even though they may not have been officially part of the SMSA. This concept is appropriate since the objective is a series that describes the income structure and income experience of a given area.

The importance of the metropolitan area redefinitions is underscored when one considers that SMSA's (defined in terms of 1940 criteria) accounted for only 64.3 percent of total personal income in the nation in 1979, whereas SMSA's as currently defined accounted for 79.8 percent of total personal income in 1979.

The alternative to adhering to the fixed-boundary concept would have been to permit the SMSA boundary to vary. In theory, this alternative would be especially useful in studying the economic characteristics of the urbanized portion of the population. However, the variable-boundary concept was eliminated for several reasons. Because SMSA's were first defined in 1949, mainly on the basis of data from the 1940 Census of Population, the fixed-boundary concept was the only choice for the 1929—50 span, unless a major study were undertaken to delineate SMSA's using the 1950 Census of Population. Moreover, although variable-boundary SMSA's might serve satisfactorily in measuring the national trend of urbanization for benchmark years, annual series for individual SMSA's would be quite erratic as boundaries were changed.

The component counties of each of the SMSA's and NECMA's are listed on the following pages.

Worcester, Massachusetts

APPENDIX B

TABLES AVAILABLE FROM THE REGIONAL ECONOMIC INFORMATION SYSTEM

TABLE	DESCRIPTION	TIME SERIES
TABLES AVAILABLE FOR U.S., REGIONS, AND STATES		
Quarterly Series (Seasonally adjusted at annual rates)		
State Summary Table (Table 1)	Total personal income	1948:I-82:IV
Quarterly Wages and Salaries (Table 2)	Wages and salaries for major industry groups by place of work	1948:I-82:IV
Quarterly Personal Income (Table 2A)	Major sources of personal income by place of residence, earnings by place of work	1948:I-82:IV
Annual Series		
State Summary Tables (State Tables 1-3)		1929-81
Table 1.00	Total personal income - summary	
Table 1.01	Total personal income - percent change	
Table 2.00	Per capita personal income - summary	
Table 2.01	Per capita personal income - percent of U.S.	
Table 3.00	Population - summary	
Detailed Components of Personal Income	Wages and salaries by 2 digit SIC code industries, other categories of personal income by major component	1958-81
Personal Income by Major Source and Earnings by Industrial Source	Derivation of personal income, Earnings by 2-digit SIC code industry	1958-81 1948-57* 1929-47**
Employment by Type and Industrial Source	Total number of jobs by type, wage and salary jobs by 2 digit SIC code industry	1967-81
State Disposable Income	Total and per capita disposable income	1948-81
Personal Tax and NonTax Payments	Payments by type and level of government	1948-81
TABLES AVAILABLE FOR COUNTIES AND COUNTY GROUPINGS (ANNUAL SERIES)		
County Summary Tables (County Tables 1-3)		1959, 62, 65-81
Table 1.00	Total personal income - summary	
Table 1.01	Total personal income - average annual growth rate	
Table 2.00	Per capita personal income - summary	
Table 2.01	Per capita personal income - percent of U.S.	
Table 3.00	Population - summary	
Per Capita Income Rankings	Counties ranked in U.S. and by BEA Region	1981
Regional Economic Profiles	Summary of income and employment by place of work and by place of residence	1967-81
Personal Income by Major Sources and Earnings by Industrial Source	Derivation of personal income, Earnings by 1 digit SIC code industry	1959, 62, 65-81
Employment by Type and Broad Industrial Source	Total number of jobs by type, wage and salary jobs by 1 digit SIC code industry	1967-81
Transfer Payments by Major Source	Selected types of transfer payments by major program	1959, 62, 65-81
BEA Farm Income and Expenditures	Selected categories of farm income and expenditures	1969-81

* State estimates of earnings for years 1948-57 are available only for 1-digit SIC code industries.

** State estimates of earnings for years 1929-47 are available only for 1-digit SIC code industries on a place of residence basis. (Similar estimates for later years are on a place of work basis).

SAMPLE TABLES FOR STATES AND REGIONS
QUARTERLY TOTAL PERSONAL INCOME

TABLE 1-TOTAL PERSONAL INCOME, STATES AND REGIONS

FOOTNOTES FOR TABLE 2A:

1/ ESTIMATES BASED ON 1967 SIC.
2/ ESTIMATES BASED ON 1972 SIC.
3/ NONFARM PERSONAL INCOME IS DEFINED AS TOTAL PERSONAL INCOME LESS FARM LABOR AND PROPRIETORS' INCOME.
4/ EARNINGS (LABOR AND PROPRIETORS' INCOME) CONSISTS OF WAGE AND SALARY DISBURSEMENTS, OTHER LABOR INCOME, AND PROPRIETORS' INCOME.
5/ INCLUDES CAPITAL CONSUMPTION ADJUSTMENT.
6/ WAGES AND SALARIES BASED UPON DATA FURNISHED BY INDIVIDUAL STATE BUREAUS OF EMPLOYMENT SECURITY.
7/ INCLUDES WAGES AND SALARIES OF U.S. RESIDENTS WORKING FOR INTERNATIONAL ORGANIZATIONS IN THE U.S.
8/ THE ESTIMATES FOR MILITARY EARNINGS HAVE BEEN REVISED FOR THE YEARS 1977-82. THE NEW METHODOLOGY UTILIZES IMPROVED DATA SOURCES. IN SOME INSTANCES, THE ESTIMATES FOR YEARS PRIOR TO 1977 ARE NOT CONSISTENT WITH THOSE FOR 1977-82.
9/ ADJUSTMENT FOR BORDER WORKERS: INCOME OF U.S. RESIDENTS WORKING ACROSS U.S. BORDERS LESS INCOME OF FOREIGN RESIDENTS WORKING IN THE U.S.

ESTIMATES BASED ON 1972 STANDARD INDUSTRIAL CLASSIFICATION.
(ESTIMATES FOR 1958-80 HAVE BEEN REVISED TO REFLECT THE 1980 COMPREHENSIVE NIPA REVISIONS.)

3/ NONFARM PERSONAL INCOME IS DEFINED AS TOTAL PERSONAL INCOME LESS FARM LABOR AND PROPRIETORS' INCOME.
4/ EARNINGS (LABOR AND PROPRIETORS' INCOME) CONSISTS OF WAGES AND SALARIES PLUS OTHER LABOR INCOME PLUS PROPRIETORS' INCOME.
6/ INCLUDES THE CAPITAL CONSUMPTION ADJUSTMENT FOR RENTAL INCOME OF PERSONS.
7/ PAYMENTS TO BENEFICIARIES OF STATE DISABILITY PROGRAMS, BENEFICIARIES OF THE PANAMA CANAL CONSTRUCTION ANNUITY ACT.
8/ INCLUDES PAYMENTS TO SEPARATED EMPLOYEES OF RAILROADS, THE FEDERAL GOVERNMENT, AND THE MILITARY SERVICES; SPECIAL BENEFITS PAID TO FORMER PUBLIC SERVICE EMPLOYEES, REDWOOD EMPLOYEES, & TRANSITIONAL UNEMPLOYMENT; AND BENEFITS PAID UNDER THE TRADE ADJUSTMENT ASSISTANCE ACT.
9/ NATIONAL SCIENCE FOUNDATION FELLOWSHIPS, OTHER FEDERAL FELLOWSHIPS, SUBSISTENCE OF STATE MARINE SCHOOL CADETS, HIGHER EDUCATION LOANS, INTEREST AND SUBSIDY PAYMENTS, BASIC EDUCATION OPPORTUNITY GRANTS, AREA REDEVELOPMENT PAYMENTS, MDTA PAYMENTS, JOB CORPS PAYMENTS.
10/ PRIOR TO 1974, AID TO AGED, BLIND, AND DISABLED.
11/ REFUGEE ASSISTANCE PAYMENTS (INCLUDES CUBAN AND SOUTHEAST ASIAN REFUGEES), GENERAL ASSISTANCE, EMERGENCY ASSISTANCE, CIVILIAN WAR ASSISTANCE AND ENEMY ALIENS, FOSTER HOME CARE IN PUBLIC FACILITIES, SPECIAL PAYMENTS TO SELECTED INDIVIDUALS (1975 "$50. PAYMENT"), AND PAYMENTS FOR EARNED INCOME TAX CREDIT (WHERE CREDIT EXCEEDS TAX PAID).
12/ BUREAU OF INDIAN AFFAIRS PAYMENTS, EDUCATION EXCHANGE, PAYMENTS FOR ALASKA NATIVE CLAIMS SETTLEMENT ACT, PUBLIC SAFETY OFFICERS' SURVIVORS.
13/ VETERANS' SUBSISTENCE ALLOWANCE & VETERANS' READJUSTMENT PAYMENTS, EDUCATIONAL ASSISTANCE TO WIVES AND WIDOWS OF VETERANS.
14/ GOVERNMENT LIFE INSURANCE, MILITARY AND NAVAL INSURANCE, SERVICEMEN'S INDEMNITY PAYMENTS, PAYMENTS TO PARAPLEGICS, PAYMENTS FOR AUTOS FOR DISABLED VETERANS, PAYMENTS TO WAR ORPHANS, CHILDREN OF DISABLED VETERANS, PRISONERS OF WAR, VETERANS' AID AND VETERANS' BONUS PAYMENTS BY STATE AND LOCAL GOVERNMENTS.
15/ INCLUDES THE CAPITAL CONSUMPTION ADJUSTMENT FOR NONFARM PROPRIETORS'.
16/ INCLUDES WAGES AND SALARIES OF U.S. RESIDENTS WORKING FOR INTERNATIONAL ORGANIZATIONS IN THE U.S.
17/ UNDER THE 1972 SIC CODE, ORDNANCE WAS RECLASSIFIED INTO FOUR 2-DIGIT INDUSTRIES: FABRICATED METAL PRODUCTS, ELECTRIC AND ELECTRONIC EQUIPMENT, TRANSPORTATION EQUIPMENT, AND INSTRUMENTS AND RELATED PRODUCTS.
18/ THE ESTIMATES FOR FEDERAL MILITARY EARNINGS HAVE BEEN REVISED FOR THE YEARS 1977-80. THE NEW METHODOLOGY UTILIZES IMPROVED DATA SOURCES. IN SOME INSTANCES, THE ESTIMATES FOR YEARS PRIOR TO 1977 ARE NOT CONSISTENT WITH THOSE FOR 1977-81.

(D) - NOT SHOWN TO AVOID DISCLOSURE OF CONFIDENTIAL INFORMATION.
(L) - LESS THAN $50,000 (DATA ARE INCLUDED IN TOTALS).

(D) NOT SHOWN TO AVOID DISCLOSURE OF CONFIDENTIAL INFORMATION
ESTIMATES BASED ON 1972 STANDARD INDUSTRIAL CLASSIFICATION.
3/ NONFARM PERSONAL INCOME IS DEFINED AS TOTAL PERSONAL INCOME LESS FARM LABOR AND PROPRIETORS' INCOME.
4/ EARNINGS (LABOR AND PROPRIETORS' INCOME) CONSISTS OF WAGE AND SALARY DISBURSEMENTS, OTHER LABOR INCOME, AND PROPRIETORS' INCOME.
6/ INCLUDES CAPITAL CONSUMPTION ADJUSTMENT.
7/ INCLUDES WAGES AND SALARIES OF U.S. RESIDENTS WORKING FOR INTERNATIONAL ORGANIZATIONS IN THE U.S.
8/ UNDER THE 1972 SIC CODE ORDNANCE WAS RECLASSIFIED TO FOUR 2-DIGIT INDUSTRIES: FABRICATED METAL PRODUCTS, ELECTRIC AND ELECTRONIC EQUIPMENT, TRANSPORTATION EQUIPMENT, AND INSTRUMENTS AND RELATED PRODUCTS.
9/ THE ESTIMATES FOR FEDERAL MILITARY EARNINGS HAVE BEEN REVISED FOR THE YEARS 1977-80. THE NEW METHODOLOGY UTILIZES IMPROVED DATA SOURCES. IN SOME INSTANCES, THE ESTIMATES FOR YEARS PRIOR TO 1977 ARE NOT CONSISTENT WITH THOSE FOR 1977-80.

WAGE AND SALARY EARNINGS PER JOB	10,180	10,789	11,457	12,523	13,822	15,252
AVERAGE EARNINGS PER NONFARM PROPRIETOR 6/	11,951	13,209	14,408	15,575	15,631	16,197

1/ TOTAL PERSONAL INCOME LESS FARM LABOR AND PROPRIETORS' INCOME.
2/ TOTAL LABOR AND PROPRIETORS' INCOME LESS PERSONAL CONTRIBUTIONS FOR SOCIAL INSURANCE ADJUSTED TO PLACE OF RESIDENCE.
3/ INCLUDES SUPPLEMENTAL SECURITY INCOME PAYMENTS, PAYMENTS TO FAMILIES WITH DEPENDENT CHILDREN (AFDC), GENERAL ASSISTANCE PAYMENTS, FOOD STAMP PAYMENTS, AND OTHER ASSISTANCE PAYMENTS, INCLUDING EMERGENCY ASSISTANCE.
4/ TYPE OF INCOME DIVIDED BY POPULATION YIELDS A PER CAPITA FOR THAT TYPE OF INCOME.
5/ INCLUDES ONLY PERSONS WHO ARE PRIMARILY SELF-EMPLOYED.
6/ THIS RATIO TENDS TO OVERSTATE THE SELF-EMPLOYED INCOME PER PROPRIETOR BECAUSE THE INCOME ACCOUNT IS MORE COMPREHENSIVE THAN THE NUMBER OF PROPRIETORS (SEE FOOTNOTE 5).
