FOREWORD

The estimates in the *Local Area Personal Income* volumes constitute one of the most extensive bodies of annual economic information that is available for the Nation's counties and metropolitan areas. They are as current and comprehensive as the source data permit. The estimates and the accompanying statement of the sources and methods, including definitions, make these volumes a basic reference tool for those interested in regional economics.

Because the estimation methods and data sources for the components of personal income are generally the same for all counties and metropolitan areas, the estimates are comparable for geographic areas. They are also conceptually and statistically consistent with the State and national estimates. The personal income estimates presented in these volumes cover the most recent year (1982) and the preceding 5 years. This annual publication of the Bureau of Economic Analysis makes these estimates available on a regular basis in a convenient and low-cost form.

Daniel H. Garnick
Associate Director for Regional Economics

ACKNOWLEDGMENTS

The personal income estimates presented in this publication were produced by the Regional Economic Measurement Division, Bureau of Economic Analysis (BEA), under the direction of Edwin J. Coleman, Chief, and Linnea Hazen, Assistant Chief. The estimates were the result of a divisionwide effort.

Estimates of civilian labor income (wages and salaries and other labor income) were prepared by the Regional Wage Branch, under the supervision of Elizabeth H. Queen, Chief, and Carol E. Evans, Assistant Chief. Major responsibilities were assigned to Sharon C. Carnevale, Michael G. Pilot, Toui Chen Pomsouvan, James M. Scott, and Philip F. Simon. Contributing staff members include E. Frances Bake, Susan M. Clark, C. Brian Grove, Eddie L. Key, Russell C. Lusher, William E. Reid, Jr., Victor Sahadachny, Renee V. Solterer, Arthur W. Stigile, Mary Ruth Stritehoff, Adrienne G. Tejler, and Jaime Zenzano.

Estimates of Federal military income, transfer payments, and personal contributions for social insurance were prepared by the Quarterly Income Branch, under the supervision of Robert L. Brown, Chief. Major responsibilities were assigned to John M. Reed and Isabelle B. Whiston. Contributing staff members include Thelma E. Harding and Marianne E. Ziver.

Estimates of dividends, interest, rent, and proprietors' income were prepared by the Proprietors' Income Branch under the supervision of Arthur L. Sensenig, Assistant Chief. Major responsibilities were assigned to Charles A. Jolley and James M. Zavrel. Contributing staff members include Linda M. Ball, Debra A. Blanchard, Richard H. Grayson, Nita Robyn Hamill, and Ellen M. Wright.

The residence adjustments, assembly of public-use tabulations and data files, and preparation of this publication were performed by the Regional Economic Information System (REIS) Branch, under the supervision of David W. Cartwright, Chief, and Vivian G. Conklin, Assistant Chief. Major responsibilities were assigned to Kathy A. Albetski, Wallace K. Bailey, and Stuart A. Schwartz. Secretarial support was provided by Valeria A. Hamilton. Contributing staff members include Regina A. Hall, Eunice P. James, Louise T. Johnson, Gary V. Kennedy, Judith A. Schramm, Albert Silverman, James P. Stehle, and Mary C. Williams.

While the county income measures contained in this publication resulted from the effort, experience, and cooperation of BEA personnel, their ultimate foundation was the statistical work of other government agencies as well as private organizations. Particularly noteworthy for their contributions were the State Employment Security Agencies, the various State agencies administering income maintenance programs, the Bureau of Labor Statistics, the Bureau of the Census, the Statistical Reporting Service of the U.S. Department of Agriculture, the Internal Revenue Service, the Office of Research Statistics of the Social Security Administration, the Veterans Administration, and the Association of American Railroads.

INTRODUCTION

This volume is part of a nine-volume set published annually by the Regional Economic Measurement Division of the Bureau of Economic Analysis (BEA). The set presents, for local areas, BEA's estimates of total and per capita personal income, as well as additional detail on the sources of personal income by type and major industry. There are six major components of personal income: Wage and salary disbursements; other labor income; proprietors' income; personal interest income, personal dividend income, and rental income of persons; transfer payments; and personal contributions for social insurance. The sum of three of these major components (wage and salary disbursements, other labor income, and proprietors' income) is termed "earnings" and is presented for the major industry groups. A description of each of the six major components and how they are estimated is contained in part II of the methodology section. A discussion of the characteristics and applications of these personal income estimates is contained in part I of the methodology section. The estimates presented are for the most recent year (the calendar year ending approximately 18 months prior to the publication date) and the preceding 5 years.

The estimates presented in these volumes reflect the 1980 national income and product account (NIPA) comprehensive revisions of personal income, which were extended to the State personal income series in July 1981. (The NIPA revisions are described in the December 1980 issue of the *SURVEY OF CURRENT BUSINESS*.) The revised local area series also reflects distributional revisions made possible by the availability of new or more timely data at the county level. A detailed description of the sources and methods used in making the estimates is presented in volume 1 of the set. Volumes 2-9 contain a summary statement of methodology. These statements of methodology are intended to give the user a basis for evaluating the reliability of the estimates and the necessary information for determining their suitability for various applications.

Volume 1 of the set is a national volume presenting estimates for the United States as a whole, for all the regions and States, and for metropolitan areas. In addition, it contains the detailed methodology; tables that show the distribution and changes in total personal income for regions; and appendixes that show the county definitions of metropolitan areas, describe the new metropolitan area classification scheme, and present samples of tables available through the Regional Economic Information System.

Each of volumes 2-9 presents estimates of one of the eight BEA regions: New England, Mideast, Great Lakes, Plains, Southeast, Southwest, Rocky Mountain, and Far West. A single regional volume includes estimates for the United States, the region, the States, Metropolitan Statistical Areas (MSA's), Primary Metropolitan Statistical Areas (PMSA's), and counties of the region, and a summary methodology. Estimates for Consolidated Metropolitan Statistical Areas (CMSA's) appear only in volume 1.

This volume presents the personal income estimates for the period 1977-82 for the United States, for the Great Lakes region, for the five States of the region, and for the counties and metropolitan areas of each State. This volume also includes a summary description of the sources and methods used in producing the county estimates. Two analytic tables are included. The first table shows the 20 counties with the largest and the smallest 1982 per capita income in the region. The second table shows percent changes in TPI and per capita income for the States of the region.

The BEA Regional Economic Information System

The personal income tables contained in the nine-volume set, as well as other standard tabulations discussed below, are available from the BEA Regional Economic Information System (REIS). REIS is the term applied to the data files, computer programs, and staff established for the maintenance, management, and distribution of the regional data base. This system currently contains approximately 28 million separate estimates covering about 3,500 areas.

Data availability

REIS includes an active information retrieval service that provides a variety of standard and specialized analytic tabulations for counties and specified combinations of counties. A sample set of standard tabulations available through this system is included in appendix B of volume 1. All of the tabulations are available in magnetic tape, microfiche, and computer printout form. The REIS data base currently includes the following data sets:

Quarterly State personal income.—These estimates, available approximately 4 months after the close of the subject quarter, are published regularly in the January, April, July, and October issues of the *SURVEY*. As of April 1984, quarterly estimates are available from the first quarter of 1948 through the fourth quarter of 1983.

Annual State personal income.—Annual estimates for States are published twice each year. Preliminary estimates of total and per capita personal income, derived from the quarterly estimates, are published in the April issue of the *SURVEY* (4 months after the close of the subject year). A revised set of estimates, which is based on more complete data and is therefore more reliable, is presented in greater detail in the August issue of the *SURVEY*.

Tabulations for 1929-57 at the 1-digit Standard Industrial Classification (SIC) level and for 1958-82 at the 2-digit SIC level are available in the 1984 issue of *State Personal Income*. Also included in *State Personal Income* are quarterly State personal income for 1948-82, annual State disposable personal income for 1948-82, a history of the development of the State estimates, and a detailed description of the sources and methods used to prepare these estimates for the most current years.

Annual State disposable personal income.—Annual estimates of total and per capita disposable personal income for States are released as a companion series to the revised annual State estimates of personal income and are published in the August issue of the *SURVEY*. The State disposable personal income series is available for 1948 and subsequent years.

Annual county personal income.—These estimates, which are published in this volume, become available from REIS approximately 16 months after the close of the subject year. Summary statistics are published in the April issue of the *SURVEY*. Estimates are available annually for 1965-82 and for selected years back to 1929.

Transfer payments.—The component estimates of transfer payments by county are unpublished. However, tabulations of transfer payments by type of program are available from REIS for the years corresponding to the county personal income series.

Farm income and expenditures.—These estimates of the gross receipts and expenditures of farms, which underlie the net farm income estimates in the State and county personal income series, are unpublished. However, tabulations for the years 1969-82 are available from REIS.

Average annual employment for States and counties.—These unpublished estimates are a companion series to the personal income estimates. They are constructed from similar sources using analogous concepts and definitions. Tabulations are available from REIS for 1967-82.

Disclosure avoidance

Much of the data underlying the personal income estimates is obtained directly from Federal and State government administrative records, on the condition that BEA observe the Federal and State regulations established to safeguard the privacy of individuals and businesses. The BEA personal income estimates are therefore subjected to rigorous scrutiny to determine if any data cells might disclose the activities of a single firm or individual. Such cells are suppressed in the final tabulations. Because of the difficulty of adequately protecting against the inadvertent disclosure of confidential information, it is BEA's policy to release estimates for 2-digit SIC industries for regions and States only and for 1-digit SIC industries for counties, metropolitan areas, and all other geographic areas aggregated from the county estimates.

The disclosure-avoidance approach used for the metropolitan area tables has been changed from that used in previous years. The new approach allows the publication of the new metropolitan area definitions and the release of nonstandard aggregations of counties, such as the metropolitan and nonmetropolitan summation tables in this publication. Under the new approach, the metropolitan area total for each industry will represent one of three situations. In cases where there are no county suppressions, the actual metropolitan area total will be shown. In cases where the dollar amount of county suppressions is small relative to the sum of all the metropolitan area's counties, a partial metropolitan area total is shown with an "*" indicator flag; in these cases, the amount shown constitutes the major portion of the actual total. In cases where the dollar amount of the county suppressions is

large enough to seriously impair the partial total, the entire amount is suppressed with a "D"

This change in procedure results in an increase in the number of metropolitan area suppressions for this year only. This result will change next year as further refinements that will yield substantially fewer county and metropolitan area suppressions are made in the disclosure-avoidance procedures.

BEA user group

In addition to responding to specific data requests, REIS distributes estimates through a group of universities and State agencies officially designated as BEA users. This group was created by a congressional directive to provide BEA's personal income and related series to universities and State agencies on a no-cost basis. Each of the 186 users receives a full set of standard tabulations for the relevant State, its counties, and its metropolitan areas on the condition that the organization will in turn distribute the data within its State. This congressional directive encourages utilization by universities and State agencies of data that are comparable for all States and counties and consistent with national totals. This enhances the uniformity of analytic approaches taken in economic development plans and programs and improves the ability of the recipient agencies to assess sub-State economic developments and to service their local clientele.

METHODOLOGY

This methodology is divided into two parts. Part I provides background information (including definitions, characteristics, and applications) pertaining to the State and local area personal income series. Part II provides a summary description of the sources and methods used for estimating each of the personal income components, by county, for the most recent 3 years.

PART I.—BACKGROUND INFORMATION

Definitions and concepts

Personal income.—The personal income of an area is defined as the income received by, or on behalf of, all the residents of that area. It consists of the income received by persons from all sources: from participation in production, from transfer payments from government and business, and from government interest. Persons, in this definition, are individuals, nonprofit institutions, private noninsured welfare funds, and private trust funds. Personal income is derived as the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, personal dividend income, personal interest income, rental income of persons with capital consumption adjustment, and transfer payments, less personal contributions for social insurance.

Persons.—Persons, in the national and regional accounts, are defined as individuals, nonprofit institutions, private noninsured welfare funds, and private trust funds. The last three are referred to as "quasi-individuals." These are organizations that either serve individuals directly (nonprofit institutions) or are established on their behalf (such as private trust funds). Nonprofit institutions are considered to "reside" at their geographic locations (although appropriate source data for estimating the institutions' income are largely unavailable). The income of private trust funds and private noninsured welfare funds, however, is considered to be received on behalf of their beneficiaries, and (whether distributed or retained) is measured as if received directly by the beneficiaries.

Place of measurement.—For regional economic measurement, income may be recorded either by place of work (where earned) or by place of residence (where received). Personal income, by definition, is a measure of income received; therefore, BEA's estimates of TPI reflect the State, county, and metropolitan area of residence of the income recipients. A detailed description of the metropolitan area classification as used by BEA is presented in appendix A in volume 1.

The earnings measure that BEA presents in industry detail for States, counties, and metropolitan areas reflects the place of work. These industry estimates are useful for the analysis of the industrial structure of a given area.

The bulk of the income data basic to preparing the estimates of wages and salaries, other labor income, and personal contributions for social insurance is reported by industry in the State and county in which the business establishment is located. These data are subsequently adjusted to a place-of-residence basis for inclusion in the personal income measure. For proprietors' income, the place of business of the proprietor is assumed to be the same as the place of residence of the proprietor. Rental income of persons, personal dividend income, personal interest income, and transfer payments are estimated from data that are reported where they are received. There is no relevance to a where-earned classification for transfer payments. However, "dividends, interest, and rent" converted to a where-earned basis (if data were available to make the conversion) could be added to earnings to provide a rough proxy of income originating from current production.

Industry classification.—The industry detail in which the estimates of earnings are presented is in accordance with the SIC established by the Office of Management and Budget (OMB). However (as footnoted in the tables), the estimates for the years 1975-82 are based on the 1972 SIC and the estimates for the years previous to 1975 (available from REIS) are based on the 1967 SIC. BEA attempted to provide 1975 estimates on a 1967 SIC code basis, as well as on the 1972 SIC code basis, but was unable to reconcile because of problems in reconciling differences in the data from the unemployment insurance system. BEA was unable to distinguish between code changes attributable to OMB's revision of the SIC and code changes attributable to refiling required periodically of employers by the State Employment Security Agencies (ESA's). The latter incorporates changes due to errors in classification and/or changes in product activity.

Per capita personal income.—This measure of income is the TPI of the residents of a given area divided by the resident population of the area. In computing per capita income for the counties, BEA uses Bureau of the Census county population totals as of July 1, which are available for 1971-79 and for 1981-82. Midyear county population for the years preceding 1971 were estimated by BEA based on a combination of census midyear state population data, the census April 1970 benchmark county population, and county population data supplied by the individual states. BEA estimated midyear 1980 population based on the 1980 census and on unpublished data on refugee population from the Bureau of the Census.

Per capita personal income serves as an indicator of the quality of consumer markets and of the economic well-being of the residents of an area. This measure, however, can vary widely from county to county and should be used with caution for several reasons.

In many instances, an unusually high or low per capita income is the temporary result of unusual conditions, such as a bumper crop, a major construction project (e.g., a defense facility, nuclear plant, or dam), or a catastrophe (e.g., a tornado or drought). In some cases, a high per capita income is not representative of the standard of living in an area. For example, a construction project may attract a large number of highly paid workers who are included in the population but who send a substantial portion of their wages to dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college, prison, or State mental hospital) may show an unusually low per capita income, which is not necessarily indicative of the economic well-being of the noninstitutional population.

Moreover, population is measured at midyear, whereas income is measured as a flow over the year; therefore, a significant change in population during the year, particularly around midyear, can cause a distortion in the per capita figures.

In counties where farm income predominates, additional considerations should be taken into account. Farm proprietors' income, as measured for personal income, reflects returns from current production; it does not measure current cash flows. Sales out of inventories, though included in current gross farm income, are excluded from net farm income because they represent income from a previous year's production. Additions to inventories are included in net farm income at current market prices; therefore, farmers' attempts at regulating their cash flows by adjusting

inventories are not reflected in BEA's farm proprietors' income estimates. Yet it is this regulation of cash flows by farmers that extends their earnings cycle and allows them to survive losses or lowered income for 2 or 3 years.

In counties that are characterized by small population and a high level of dependence upon farming, the per capita income will react more sharply to the vagaries in weather, world market demand, and changing government policies related to agriculture than in counties where the sources of income are more diversified.[1]

It should be noted that the substantial differences between BEA estimates of per capita personal income and Census Bureau estimates of per capita money income are due to differences in definition of income, collection mode, and method of computation. For example, BEA derives its 1979 per capita personal income by dividing 1979 total personal income by July 1979 population, whereas the Census Bureau computes 1979 per capita money income by dividing 1979 total money income by April 1980 population. The Census Bureau uses this method because the income question in the decennial census relates to the previous year's income. For consistency, this relationship is maintained in the intercensal years.

Relationship between the national and regional estimates

The definitions underlying the State and local area estimates are, for the most part, the same as those underlying the personal income estimates in the NIPA's. The major difference is in the treatment of U.S. residents temporarily working abroad. The national estimates include not only Federal personnel—civilian and military—stationed abroad, but also U.S. residents who are employed by private U.S. firms and are on temporary foreign assignment. The State and local area estimates include only persons residing in the 50 States and the District of Columbia.

International border workers are treated somewhat differently in the State and local area personal income estimates than they are in the national estimates, but the net effect on TPI is the same. Further information on border workers is included in the section on the residence adjustment in part II of the detailed methodology in volume 1.

Another difference between the national and regional accounts relates to the classification of income into farm and nonfarm categories. In the national accounts, farm personal income consists of farm earnings and agricultural net interest; in the regional accounts, farm personal income is limited to farm earnings.

The national estimate for each individual component of personal income is used as a "control" for the State estimates; i.e., the State estimates when summed must equal the national estimate of the same item (modified, where necessary, for differences in definition). Similarly, the county estimates when summed must equal the related State estimate.

Revisions.—The preliminary annual estimates of State personal income for the preceding calendar year, published in the April issue of the *Survey,* are derived from the State quarterly series. In August, more reliable annual estimates are published. These estimates are developed independently of the quarterly series and are prepared in more component detail, primarily from Federal and State government administrative records. The August estimates are subsequently revised to incorporate newly available information used to prepare the current local area estimates. These revised State estimates are published the following April, together with the consistent local area estimates. The State and local area estimates emerging from this process are subject to further revision for several years (the State estimates in August and April and the local area estimates in April only) to incorporate changes in the national totals and more complete information for States and local areas.

Approximately every 5 years the estimates will be changed to incorporate a comprehensive revision in the national income and product accounts and to incorporate new or more current State or local area information. The most recent comprehensive revisions were presented and described at the national level in the December 1980 *SURVEY*; at the State level in the July 1981 *SURVEY*; and at the local level in the 1975-80 edition of *Local Area Personal Income.* The estimates presented in this edition reflect routine revisions back though 1980.

Historical development

BEA's work on regional income estimation began in the midthirties with the construction of a series of "State income payments" to individuals. State income payments were defined as the sum of wages and salaries, other labor income and relief, entreprenurial withdrawals, and dividends, interest and net rents and royalties. (The last three items, in the aggregate, were referred to as "property income.") They were produced as part of a broad effort to explain the processes and structure of the Nation's economy in the thirties. During the forties and early fifties, extensive work in locating data sources and revising methodology resulted in the production of the more comprehensive annual measure, State personal income. State personal income differs from State income payments in several important ways: (1) Personal income includes six major components, in contrast to the four categories of income payments (other labor income and transfer payments replaced "other labor income and relief," and the component "personal contributions for social insurance" was added as an explicit deduction); (2) personal income includes greater component detail and a broader range of income-in-kind and imputed income items; and (3) personal income includes transfers by business.

During the sixties, work on the development of quarterly estimates of State personal income was completed. The first set of State quarterly estimates as a continuous series was published in the December 1966 issue of the *SURVEY.*

BEA began work on sub-State estimates in the midfifties, but the estimates were confined to a relatively small number of counties in the mideastern and plains States. This work on local area measurement was expanded in the midsixties, and resulted in a historical series of personal income for selected years 1929-62 for the metropolitan areas and for the nonmetropolitan counties. Estimates for counties within metropolitan areas were developed in the early seventies and published for the first time in the April 1975 *SURVEY.* BEA now prepares annual estimates of personal income and related (unpublished) estimates of employment for each of the metropolitan areas and all of the more than 3,100 counties and county equivalents in the United States.

Characteristics

Geographic structure.—Estimates are prepared independently for States and counties only. Estimates for all other geographic areas below the State level are made by aggregating the county estimates in the appropriate combinations. This building block approach provides BEA with the flexibility necessary to meet the needs of the wide variety of users of local area data. It also permits estimates for areas whose boundaries change over time—such as metropolitan areas—to be presented on a consistent geographic definition for all years for analytic purposes. Because estimates are made only for local areas that can be defined in terms of counties, the metropolitan areas for the New England States in BEA's local area personal income series are not the MSA's, CMSA's, and PMSA's, which are defined in terms of cities and towns, but rather the alternative New England County Metropolitan Areas (NECMA's) developed by OMB. (A more detailed description of the NECMA's is included in appendix A in volume 1.)

Scope and timing of source materials.—The estimates are constructed from nearly 400 individually estimated income items based on data gathered from diverse sources. The bulk of the materials used to prepare the estimates is data generated as the byproduct of Federal and State government programs (administrative records data). The remainder comes from the various censuses and from nongovernment sources. Among the more important sources of the administrative record data used by BEA are the State unemployment programs of the Employment and Training Administration, Department of Labor, the social insurance programs of the Social Security Administration (SSA), and the Federal tax program of the Department of the Treasury. The two most important censuses utilized are are those for agriculture and population. The information obtained from administrative records and censuses yields more than 90 percent of the data needed for the preparation of the State and local area income estimates.

BEA supplements these basic statistics with data of lesser quality, scope, and relevance. To adjust for gaps and deficiencies in the poorer quality data, indirect procedures and value judgments are sometimes employed. The impact of these indirect procedures and judgments on the reliability of the individual State and local area estimates has varied over the 54-year estimating span because of regional differences and changes in industrial composition. It is not possible, therefore, to provide measures of the error introduced into the income estimates by the indirect procedures.

Where data are delayed (either systematically or occasionally) and are not available in time to be incorporated into the current estimating cycle, preliminary estimates are prepared using the previous year's county distribution. The preliminary estimates are subsequently revised during the next estimating cycle to incorporate the delayed data.

Because the estimates are made from existing statistical information, they can be prepared annually and in considerable detail at relatively low cost. However, because the data are generated from programs not primarily designed for income

[1] U.S. Department of Agriculture statistics show an increasing trend among farm operators to supplement their income from nonfarm sources. Since 1974, the national averages indicate that, for families operating farms with sales under $20,000, off-farm income has exceeded income from farming.

measurement, it is necessary for BEA to adjust the data for differences in content (definition and coverage) and geography. The alternative would be for BEA to collect the necessary information in surveys of income recipients. The surveys would provide data directly suited for the measurement of personal income in terms of content and geographic detail. The costs associated with this approach, however, would be prohibitive because a very large sample would be necessary to permit reliable local area estimates. The use of administrative record data has the additional advantage that it does not add to the reporting burden of businesses and households.

The allocation procedure.—The estimates of State and local area personal income are characterized by the systematic use of the allocation procedure in their preparation. The State estimates are made by allocating the U.S. total for each income item (estimated for the national personal income series) to the States in proportion to each State's share of a related economic series. In a similar manner, the State estimates are allocated to the counties in proportion to each county's share of a related economic series. In some cases, national, State, and county estimates are constructed from the same basic source, as for example, wages and salaries reported under the various State unemployment insurance (UI) programs. In other cases, data that are available at the national and State levels are not available at the county level, and allocators prepared from related, but indirect, data are used to reflect the geographic distribution of the income item among the counties. An example of this is veterans payments. At the national and State levels, direct information is available on payments to veterans under various government programs, but for many of these programs, such information is not tabulated at the county level. Where the direct data are not available, county veteran population, an indirect allocator, is used to allocate the State total to the counties.

The use of the State estimates as control totals in conjunction with the allocation procedure imparts additional reliability to the county estimates because most components of personal income can be estimated more reliably for States than for smaller geographic areas. It also permits, if necessary, the use of a different allocator in each State to distribute an income item to the counties without impairing the interstate comparability of the estimates.

Electronic edit procedures.—In making the estimates, several million administrative records are put into the system annually. Although these records are usually encoded and processed by the agency administering the program generating these records (thereby reducing the cost to BEA in terms of time and labor), there are still possibilities for error in the data. Because it is not possible to verify each individual record or accept the various administrative record files at their face value, BEA has developed several computerized edit routines to locate major errors in the source materials, either directly or through examination of preliminary estimates based on the sources. At many stages of the estimating process, data are collected and arrayed for visual inspection in patterns designed to give the analyst a frame of reference for judging the quality of the data. At some stages, the data are screened by computer, and only items that exceed specified edit parameters are flagged for further review. An example is the "6-year average wage check" used to screen the estimates of wages and salaries together with the companion employment series. This routine lists the records (2-digit SIC industries) where, for at least 1 year, the average wage exceeds edit parameters. The edit parameters are established separately for each industry group. A higher limit is used for mining, construction, and finance than for the other groups of industries.

When an important anomaly is discovered in the data, and when it cannot be traced to an explicit error in BEA's data processing and estimating procedures, the matter may be referred back to the agency that supplied the source data. Alternatively, a more reasonable estimate may be prepared from another data source.

Uses of county and metropolitan area estimates

In general, the county and metropolitan area estimates are widely used in the public and private sector to measure and track levels and types of incomes received by persons living or working in a county or metropolitan area. They provide a framework for the analysis of each local area's economy and serve as the basis for decisionmaking in both the public and private sectors.

Personal income is also one of the measures used in evaluating the socioeconomic impact of public and private sector initiatives. It is widely used in preparing environmental impact statements required by the National Environmental Policy Act of 1969 and the Federal Land Policy and Management Act of 1976.

Federal agencies use estimates of local area personal income as input into econometric models for projecting program needs. For example, the Food and Nutrition Service, U.S. Department of Agriculture (USDA), uses them to project the number of persons eligible for domestic food programs; the Department of Energy uses them to produce indicators in an energy demand forecast model; and the Water Resources Council uses them to project the future regional requirements from the Nation's water resources.

State governments, individually or as members of Regional Commissions, make extensive use of the estimates. They are used to measure the economic base of State planning areas and in econometric models developed for various planning purposes. They are also used to project local tax revenues and future needs for public utilities or services.

University schools of business and economics, often working under contract for State and local governments, reproduce BEA personal income data in abstracts or similar reports. These publications are distributed to local government agencies, regional councils, private research groups, businesses, and individuals within the service region.

Businesses and labor also use the estimates. For example, businesses use them to evaluate markets for new or established products, and to determine areas for location, expansion, and contraction of their activities. Trade associations and labor organizations use them for product and labor market analyses.

PART II.—SOURCES AND METHODS

Wage and salary disbursements

Wage and salary disbursements are defined as the monetary remuneration of employees, including compensation of corporate officers; commissions, tips, and bonuses; and receipts-in-kind that represent income to the recipients. Retroactive wages are counted when paid rather than when earned.

Private nonfarm.—In a typical State, approximately 95 percent of private, nonfarm payrolls come under the State's UI program. Under the program, every firm covered by UI is required to report to the State's ESA the wages and salaries paid its employees in the preceding quarter. These reports are tabulated by county and summed by industry (at the 2-, 3-, or 4-digit SIC level). The quarterly tabulations, in which the individual firm's report is no longer identifiable, are furnished to BEA, where they are summed to annual totals, by industry, for each county.

Elements of payroll excluded from coverage—such as tips or small segments of an industry—are estimated independently at the State level and added to the UI-reported data for the appropriate industry.[2] The BEA State estimates of wages and salaries in each industry are then allocated among the constituent counties in direct proportion to the related county distribution of the UI-reported data to yield the final county estimates.

Independent estimates of wages of contract farm laborers, based on the geographic distribution of expenditures for contract labor reported in the 1974 Census of Agriculture, are added to the UI-reported payrolls in agricultural services. Most State UI programs do not cover these workers; a few have partial coverage. Adjustments to avoid double-counting are made to the UI tabulations where appropriate.

Industries presently treated as noncovered at the county level are private households, railroads, and "other." State totals of wages and salaries of workers in *private households* are allocated to counties in proportion to the product of the number of persons employed in the industry and their average income; the underlying data are from the 1970 Census of Population. Data from the 1980 Census of Population will be incorporated in the next comprehensive revision.

County estimates of wages and salaries of *railroad workers* are based primarily on the geographic distribution of railroad workers obtained from biennial employment reports of the Association of American Railroads. The use of employment as a county distributor of wages is more acceptable in the case of railroads than for most industries because the regional differences in wage rates are minimized by the tendency to negotiate wages in the railroad industry on a nationwide basis.

Other is the designation used in the State and local area level accounts to reflect U.S. residents employed by international organizations and foreign embassies and consulates located in the United States. It differs from the "rest of the world"

[2] The value of pay-in-kind is included in the UI payroll tabulations (to the extent that employers comply with the requirement to report it). However, because it is not reported separately by the employers, it cannot be isolated from cash pay.

designation in the NIPA's to the extent that the latter also includes international border workers. The treatment of border workers in the local area estimates is included in the description of the residence adjustment at the end of the methodological section.

Farm.—Estimates of cash wages of hired farm labor, pay-in-kind, and the salaries of officers of corporate farms are made separately, based on related county data from the 1974 Census of Agriculture.

Civilian government.—County estimates of Federal civilian and State and local government wages are now based on UI data in most cases. (State and local governments came under full UI coverage in January 1978). Where UI data are not used, estimates of Federal civilian wages are based mainly on data from the Office of Personnel Management (OPM), and State government wage estimates are based on census of governments data. For a discussion of the estimates for earlier years for each level of government in each State, the reader is referred to volume 1.

The 1977-82 estimates of *Federal civilian* wages and salaries in all but two States are based on data from the Unemployment Compensation for Federal Employees (UCFE) program. In two States, the estimates are based on OPM annual employment data for each major Federal agency by county, weighted by the agency's average salary in the State (calculated from UCFE data).[3]

The 1978-82 county estimates of *State government* wages and salaries in all but seven States are based on UI wage data. In the remaining seven States, the county estimates are based on the distribution of full-time State government employees reported in the 1967 Census of Governments.[4] The 1978-82 county estimates of *local government* wages and salaries are based on UI data in all States except Illinois.

Military.—Wages and salaries of *full-time military* personnel are derived in two parts, cash pay (including allowances) and pay-in-kind. The 1979-82 estimates for both components are based on 1980 Department of Defense (DOD) estimates of military payrolls by branch of service and on a distribution of Coast Guard military strength prepared by the Department of Transportation. Independently derived national and State totals for each branch of service were distributed to counties on the basis of the DOD payroll estimates. The 1979 estimates were extended back through 1977 based on DOD annual military strength data for major installations. The estimates for earlier years have not been revised. This break in methodology and data sources between 1976 and 1977 results in discontinuities in the military wage and salary estimates. In some instances, there are discontinuities in TPI. The estimates prior to 1977 will be revised to be consistent with the current estimates at a later date.

Military reserve pay (including pay-in-kind) is estimated for counties by allocating State estimates (based on DOD data) in proportion to the geographic distribution of civilian resident population.

Other labor income

Other labor income (OLI) consists almost entirely of employer contributions to private pension and private welfare funds, including employers' payments for privately administered workers' compensation insurance, and directors' fees. County estimates of contributions to welfare funds excluding workers' compensation are estimated, in industrial detail, by allocating the State estimates in proportion to the geographic distribution of employment in each industry. Directors' fees, contributions to pension funds, and payments for privately administered workers' compensation insurance are estimated, in industrial detail, in proportion to the geographic distribution of wages and salaries in the related industry.

Proprietors' income

Proprietors' income is the monetary income, including income-in-kind, of proprietorships and partnerships and of tax-exempt cooperatives. Dividends and monetary interest received by proprietors of non-financial business and rental income received by persons not primarily engaged in the real estate business are excluded from proprietors' income. (They are included in dividends, interest, and rent.)

Nonfarm proprietors' income.—The estimates of proprietors' income for many industries are benchmarked on Internal Revenue Service (IRS) data on the self-employed. These data are tabulated from Schedule SE (Computation of Social Security Self-Employment Tax) filed by proprietors of unincorporated businesses. The self-employment data are presently incorporated into the estimates of nonfarm proprietors' income for all major industries in 18 States. For the remaining 32 States, the IRS self-employment data are only incorporated into the estimates for trade and services (which together account for approximately 70 percent of all nonfarm proprietors' income). The estimates of proprietors' income for the other nonfarm industries, in the 32 States, are based on 1962 IRS-based benchmarks that have been extrapolated to the later years by *County Business Patterns* data on the number of small establishments by industry and county.

Nonfarm proprietors' income is estimated for States and counties inclusive of the inventory valuation adjustment (IVA) and the capital consumption adjustment (CCAdj). Unlike the national personal income series, the State and local personal income series provide no separate estimates of either adjustment (because of insufficient related data below the national level). The IVA and CCAdj are necessary because the business accounting conventions used for tax-reporting purposes are not appropriate for personal income measurement. The IVA changes the value of inventory charged to cost of sales from original cost to replacement cost. Somewhat similarly, the CCAdj adjusts the value of depreciation from original cost to replacement cost and, additionally, adjusts the service lives of fixed capital assets from the tax reporting convention to a consistent economic basis.

The county estimates of the net income of rural electric and telephone cooperatives are based on data from the annual report of the Rural Electrification Administration. The estimates for the electric cooperatives reflect the distribution of metering points within the service area of each cooperative (including the county in which the cooperative is located). For the telephone cooperatives, the estimates reflect the distribution of the dwellings of the customer-members.

Farm proprietors' income.—The net income of farm proprietors is computed as the gross income of all farm operators minus total production expenses. It is adjusted to reflect current production through a change-in-inventory adjustment and to exclude the net income of corporate farms and the salaries paid to the corporate officers.

Farm proprietors' income estimates are benchmarked on data collected in the 1974 Census of Agriculture and USDA State totals of income and expense items. However, the USDA estimates of depreciation for noncorporate farms are changed from a declining-balance basis (used by the USDA) to a straight-line basis (consistent with BEA's estimates of depreciation for nonfarm industries).

County distributions of the components of gross income and production expense are used to allocate annual USDA-based State totals of the corresponding series. County allocators for the postcensal years are prepared by modifying the benchmark county distributions of the various income and expense items by direct information obtained from the States wherever possible. Distributions for which no current direct data are available are either held constant or moved forward by an indirect, but related, series for which county data are available.

By definition, farm proprietors' income includes only the income of proprietorships and partnerships; therefore, an adjustment is made to exclude the net farm income of corporate farms (including the salaries of officers of corporate farms). The corporate officer salaries are included in the farm wage component of personal income. The corporate adjustment is proportional to corporate farm acreage in each county reported in the 1974 Census of Agriculture.

Dividends, interest, and rent

Dividends are payments in cash or other assets excluding stock by corporations organized for profit to noncorporate stockholders who are U.S. residents. Interest is the monetary and imputed interest income of persons from all sources. Rent is the monetary income of persons from the rental of real property and mobile homes, except the income of persons primarily engaged in the real estate business (which is classified as nonfarm proprietors' income); the imputed net rental income of owner-occupants of nonfarm dwellings (including mobile homes); and the royalties received by persons from patents, copyrights, and rights to natural resources.

County estimates of dividends and of monetary interest are based on the amounts reported to the IRS and tabulated from its Individual Master File (IMF). County estimates of net monetary rental income (inclusive of the CCAdj) reflect IMF tabulations of gross rent. In the absence of direct data, the estimates of royalties are based on the county distributions of monetary interest.

Imputed rental income accruing to residents of owner-occupied nonfarm dwellings is derived by allocating the State totals to counties by the distribution of the value of owner-occupied homes, constructed from data reported in the 1970 Census of Housing. State totals for postcensal years are distributed to counties on the basis of the benchmark distributions. The county estimates of imputed rental income from owner-occupied mobile homes are estimated separately, based on the geographic distribution of the number of mobile homes and trailers reported in the 1970 Census of Housing. Data from the 1980 Census of Housing will be incorporated in the next comprehensive revision.

[3] The two States for which the county estimates for all years are based on OPM data are Tennessee and Wisconsin.

[4] The seven States for which 1967 Census of Governments data are used for all years are Illinois, Michigan, Minnesota, New Jersey, Rhode Island, Tennessee, and Wisconsin.

Transfer payments

Transfer payments to persons are defined as income payments to persons for which they do not render current services. Government transfer payments include payments under the following programs: Federal old-age, survivors, disability, and hospital insurance; supplementary medical insurance; State UI; railroad retirement and UI; government retirement; Federal and State government-insured workers' compensation; veterans benefits, including veterans life insurance; food stamps; black lung; supplemental security income; and direct relief. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included. The principal business transfers are liability payments for personal injury, corporate gifts to nonprofit institutions, and consumer bad debts.

Total transfer payments are measured as the sum of over 50 separately estimated series. Directly reported data are used to measure about three-fourths of all transfers, although the proportion varies among local areas. Reliable indirect indicators—such as veteran population, which is used to allocate selected components of veterans benefits—are available for many of the remaining transfers.

Contributions for social insurance

Personal contributions for social insurance include payments by employees, self-employed, and other individuals who participate in the following programs: Federal old-age, survivors, disability, and hospital insurance; supplementary medical insurance; State UI; temporary disability; railroad retirement; government retirement; and veterans life insurance. Personal contributions for social insurance are included in the measure of earnings by type; however, they are excluded from personal income by explicit deduction.

In general, the State totals are allocated to counties by the wages and salaries or proprietors' income component. Exceptions to this general procedure are contributions to veterans life insurance—allocated by veteran population; contributions to State UI and temporary disability programs (applicable in only a few States)—allocated by civilian population; and supplementary medical insurance—allocated by the number of persons enrolled in the program.

Residence adjustment

Wage and salary disbursements, OLI, and personal contributions for social insurance, except several minor subcomponents, are estimated from data that are reported by place of work.[5] The sum of the personal income components estimated on a place-of-work basis, which is referred to as "income subject to adjustment" (ISA), is adjusted to a place-of-residence basis for personal income measurement. The residence adjustments are measured as the income of residents of the subject county who work in another county ("inflows") minus the income of residents of other counties who work in the subject county ("outflows").

Intercounty flows of commuters' earnings are estimated for each year by applying commuting ratios from the 1970 Census of Population to the ISA for the current year, for each county. The resulting flows are summed to a preliminary inflow, outflow, and residence adjustment for each county. The preliminary adjustments are reviewed and modified for cases where the 1970 commuting rates and patterns appear to have changed. A number of data sources indicating economic and demographic changes for county residents are used to identify the size and direction of modifications to the preliminary adjustments. The most important of these sources are current-year population estimates from the Census Bureau, and IRS tabulations of wages and salaries by county of residence, which are available to BEA every other year, with a 1-or 2-year time lag (the most recent data available are for 1981).

The residence adjustment procedure used for Alaska differs substantially from the foregoing methodology. Because of the unusually large number of out-of-State workers employed in a variety of industries in Alaska (for example, the North slope petroleum industry), special procedures are used to reflect the unique characteristics.

International border workers are treated as commuters in the State and local area personal income series; therefore, their earnings are reflected through the residence adjustment. The outflow of earnings of foreign workers (Canadian, Mexican, and Caribbean) is estimated on the basis of data from the Immigration and Naturalization Service, the Department of Labor, and the 1974 Census of Agriculture. The small amounts of earnings of U.S. residents commuting to work in Canada and the United Kingdom (inflows) are assigned to States and counties on a judgment basis.

The 1980-82 estimates for selected local areas in Virginia and for the District of Columbia reflect substantial interim revisions to the residence adjustments, based largely on 1979 wage and salary data from the 1980 Census of Population. These revisions are confined to exactly offsetting changes within pairs or clusters of closely related jurisdictions, usually independent cities and adjacent counties. In some instances, the revisions create a temporary break between 1979 and 1980 in the BEA historical estimates of total and per capita personal income.

The interim revisions to the residence adjustments will be extended to selected counties in all States effective with the 1983 estimates. Comprehensive revisions, based on 1980 census journey-to-work data, will be made as part of the next set of comprehensive revisions to the national and regional personal income estiamtes.

A more complete description of the residence adjustment procedures and the problems involved is included in the detailed "Sources and Methods" published in volume 1.

[5] Proprietors' income is treated as being on a place-of-residence basis, although there are indications that, for many urban counties, proprietors' income reflects a mix of place of work and place of residence.

Per Capita Personal Income, 1982

UNITED STATES $11,100
Great Lakes Region $11,037

$11,000-$12,999
$10,000-$10,999
$9,000- $9,999

FOOTNOTES

(L) Less than $50,000.

(D) Not shown to avoid disclosure of confidential information; estimates are included in totals.

* The estimate shown here constitutes the major portion of the true estimate.

[1] Total personal income less farm earnings equals nonfarm personal income.

[2] Earnings consists of wage and salary disbursements plus other labor income plus proprietors' income. Wages and salaries are based on data furnished by individual State Employment Security Agencies.

[3] Personal contributions for social insurance are implicitly included in the estimates of earnings by type and industry. However, they are not included in personal income and therefore are subtracted from earnings in computation of personal income.

[4] Includes adjustment for border workers: income of U.S. residents working across U.S. borders less income of foreign residents working in the United States.

[5] Includes the capital consumption adjustment for rental income of persons.

[6] Includes the inventory valuation and capital consumption adjustments.

[7] Includes fishing, hunting and trapping, and wages and salaries of U.S. residents working for international organizations and for foreign embassies and consulates located in the United States.

[8] Far West Region totals do not include Alaska and Hawaii.

[9] Cibola County, NM was separated from Valencia County in June 1981, but in these estimates, Valencia includes Cibola through the end of 1981.

[10] The 1980-82 estimates for per capita personal income reflect a correction to census population. Estimates for earlier years remain uncorrected. The corrections may be large enough to cause a discontinuity between 1979 and 1980 in the historical series of per capita personal income.

[11] The 1980-82 estimates for residence adjustment reflect interim revisions and are inconsistent with estimates for earlier years. The revisions may be large enough to cause a discontinuity between 1979 and 1980 in the historical series of total and per capita personal income.
