## U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics <br> Washington 25, D. C.

CONSUMER PRICE INDEX - FEBRUARY 1955

The Consumer Price Index remained unchanged in February 1955 at 114.3 percent of the 1947-49 average for the third consecutive month, according to the U.S. Department of Labor's Bureau of Labor Statistics. The index was down 0.6 percent from a year ago and, during the year, its range has been less than one index point.

FOOD For the second consecutive month average retail food prices rose slightly ( 0.2 percent), but the rise was not general among all cities or among all foods. Food costs averaged higher in 27 cities, lower in 17 , and were unchanged in 2 of the 46 cities. Major influences on the average change were the substantially higher prices of eggs and poultry and considerably lover prices of coffee, bacon, and ham. However, slight increases were reported for all important groups of food purchased for consumption at home except dairy products. Prices of restaurant meals were virtually unchanged over the month.

The 14.3 percent increase in the price of eggs, unusual for February, reflected lower production, and followed several months of sharp declines, which krought egg prices in January to the lowest January level since 1950. The 6.7 percent rise in poultry prices continued last month's sudden upturn, which reflected the continued decrease in marketings from smaller numbers of young chicks raised. Pork prices again declined with the pressure of larger supplies. Reductions in prices of bacon and ham were reported in most cities, although prices of pork chops were unchanged on the averape.

Consumers in all 46 cities benefited from sharp reductions in coffee prices, with decreases renging from 2.0 to 12.8 percent and averaging 8.3 percent, following Brazil's boosting of subsidies to exporters and lower wholesale prices in United States markets. The average city frice of coffee in mid-February was 97 cents per pound compared with the peak of $\$ 1.23$ last August. Tea prices again advanced. Retail prices of fruits and vegetables increased slightly. Prices of frozen orange concentrate and canned orange juice, as well as oranges, dropped consistently throughout the Nation. Prices of apples were higher and prices of potatoes, sweetpotatoes, celery, and tomatoes also increased, while prices of carrots, lettuce, and green oeans went down from mid-January to mid-February. The index for cereals and bakery products continued to advance, rising 0.3 percent between January and February, largely because of higher bread prices. Competitive price cutting for milk was reported in some cities.

HOUSING The housing index was unchanged, from January at l19.6, as lover home-ownership costs balanced small increases in residential rents and prices of housefurnishings, gas and electricity, coal and fuel oil.

Residential rents continued their slow rise (up 0.2 percent from January), but are only 1.4 percent higher than in February 1954 , compared with an advance of 5.3 percent from February 1953 to February 1954. Housefurnishings also edged up 0.2 percent from January, with rises in furniture prices and household textiles following the January sales. Lomer prices were reported for electrical appliances.

OTHER COMMODITIES AND SERVICES

Apparel prices were up fractionally ( 0.1 percent) between January and February. The reinstatement of regular prices for men's suits in some cities, following January sales, accounted for part of this increase. Prices of women's and girls' clothing and hosiery were little changed.

Transportation costs averaged lower than in January, as used car prices declined and dealers in more cities reported new or increased concessions on new cars. Gesoline prices increased in a few cities. Reading and recreation costs showed an overall decline of 0.5 percent, primarily because of sale prices for toys and sporting equipment. The cost of medical care increased slightly ( 0.2 percent), chiefly as the result of large increases in group hospitalization premiums in two large cities.

1/ Formerly published as sweet gherkins.

The Consumer Price Index measures the average change in prices of goods and services customarily purchased by city wage-earner and clerical-worker families. Index numbers are presented on the base $1947-49=100$, and show the average increase or decrease in prices from the 1947-49 average. For the convenience of users, indexes are also calculated on the base 1935-39 $=100$.

About 300 items are priced for the index to estimate the average change in prices of a fixed quantity of goods and services from one period to the next. Among these are all the important items that wage and clerical workers buy, and they are selected so that their average price change will be representative of the price changes on all items. Prices are collected in 46 cities which are representative of all cities in the United States.

Foods, fuels, rents, and a few other items are priced every month in eacn city. Prices of most other goods and services are obtained every month in the 5 largest cities, every 3 months in 16 other large cities and in 9 medium-sized cities, and every 4 months in 16 small cities. In each city, prices are reported by representative retail stores and service establishments patronized by wage and clerical worker families.

Indexes are calculated for all cities combined (the U.S. city average) and for each of the 20 largest cities. No separate index numbers are calculated for the following 26 medium-sized and small cities which are included in the U.S. average:

| Anna, Illinois | Huntington, W. Virginia | Pulaski, Virginia |
| :--- | :--- | :--- |
| Camden, Arkansas | Laconia, New Hampshire | Ravenna, Ohio |
| Canton, Ohio | Lodi, California | Rawlins, Wyoming |
| Charleston, W. Virginia | Lynchburg, Virginia | San Jose, California |
| Evansville, Indiana | Madill, Oklahoma | Sandpoint, Idaho |
| Garrett, Indiana | Madison, Wisconsin | Shawnee, Oklahoma |
| Glendale, Arizona | Middlesboro, Kentucky | Shenandoah, Iowa |
| Grand Forks, N. Dakota | Middletown, Connecticut | Youngstow, Ohio |

In the calculation, price changes on individual items are weighted by their importance in wage-earner and clerical-worker family spending. City data are combined by weighting with 1950 population data to arrive at the U.S. city average.

Comparison of city indexes shows only that prices in one city changed more or less than in another. City indexes do not measure differences in price level between cities.

A detailed description of the index containing lists of items priced, their weights, cities included, and an explanation of the index calculation, its uses and limitations, is available in Bureau of Labor Statistics Bulletin No. 1140 - "The Consumer Price Index - A Layman's Guide," for sale by the Superintendent of Documents, Jnited States Government Printing Office, Washington 25, D. C. Price 20 cents.

A more technical description of the Consumer Price Index is available upon request to the Bureau of Labor Statistics, U. S. Department of Labor, Washington 25, D. C.

Historical series of index numbers for the U.S. city average and 20 individual large cities are available upon request. These series include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1947 to date.
