U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington 25, D. C.

CONSUMER PRICE INDEX FOR APRIL 1958

Consumer prices in United States cities rose 0.2 percent between March and April 1958, according to the U.S. Department of Labor's Bureau of Labor Statistics. A seasonal advance in food prices, particularly fresh produce, was largely responsible for the increase, although housing, medical care, and personal care were also higher. Transportation and apparel prices declined.

The April Consumer Price Index was 123.5 (1947-49=100), 3.5 percent higher than in April 1957.

The increase of 0.7 percent in prices of food between March and April was the result of substantial price increases in the fruits and vegetables and meats, poultry, and fish groups, which more than offset decreases in the "other foods at home" and dairy products groups. The April food price index at 121.6 percent of the 1947-49 average was 6.9 percent above a year ago.

The increase of 4.5 percent in prices of fruits and vegetables represented the joint effect of seasonal influences plus a continuation of the effects of prior adverse growing conditions. Fresh fruit prices were up 9.4 percent over the month, with advances of 14.4, 9.4, and 10.4 percent for oranges, apples, and grapefruit, respectively, while banana prices dropped 6.2 percent. Fresh vegetable prices rose 2.9 percent on the average as potato prices advanced 12.6 percent, tomatoes 10.2 percent, onions 24.1 percent, and celery 20.7 percent. Green beans returned to the market at prices substantially lower than when they were last available. Carrots and lettuce declined 11.0 and 3.7 percent, respectively. Increases in prices of canned tomatoes and canned and frozen orange juice more than offset modest decreases for canned peaches and peas.

Prices of meats, poultry, and fish advanced 1.3 percent on the average with higher prices for most meats only partially offset by a 4.1 percent decrease for chicken. Bacon rose 3.2 percent in price, hamburger 5.6 percent, chuck roast 2.7 percent, round steak 2.6 percent, and frankfurters, rib roast, and pork chops about 2 percent each. Fish prices were up 0.4 percent on the average.

Egg prices dropped 6.7 percent to a national average price of 59 cents per dosen. Coffee prices were down 0.8 percent. Prices of dairy products declined 1.4 percent with fresh milk down about 2.0 percent seasonally and butter down 1.4 percent. Cereal and bakery product prices were unchanged on the average. Prices of restaurant meals rose 0.2 percent.

The housing index advanced 0.2 percent, as most of its component subgroups rose. Rent, gas and electricity, and housefurnishings were up 0.1 percent each, while household operation costs rose 0.2 percent. Homeownership costs also were higher, due largely to the increase in interest rates on VA-insured mortgages. The decline of 1.8 percent in prices of solid fuels and fuel oil resulted from seasonal reductions of 4.3 percent for anthracite and 2.4 percent for fuel oil.

OTHER COMMODITIES

AND SERVICES

The rise of 0.3 percent in costs of medical care reflected higher rates for professional services, hospital room rates, and prescriptions. Group hospitalisation premiums showed no change.

The personal care index was up 0.2 percent, largely because of higher prices for toiletries, particularly face cream.

The transportation index declined 0.3 percent as gasoline prices dropped 1.1 percent to their lowest level in 16 months. Dealers' prices of new cars fell 0.7 percent, and tires 0.9 percent. Used car prices rose 0.9 percent and there were small advances for auto insurance and local transit fares.

Apparel prices declined 0.1 percent as reductions due to clearance sales for women's coats, suits, and rayon dresses more than offset higher prices for men's slacks and suits and men's and women's shoes.

The reading and recreation index showed no change. Lower prices for television and radio sets were offset by increased rates for TV repairs and newspapers.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures the average changes in prices of goods and services typically bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Almost all prices are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1947-49 = 100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

Anna, Illinois
Camden, Arkansas
Canton, Ohio
Charleston, W. Virginia
Evansville, Indiana
Garrett, Indiana
Glendale, Arizona
Grand Forks, N. Dakota
Grand Island, Nebraska

Huntington, W. Virginia Laconia, New Hampshire Lodi, California Lynchburg, Virginia Madill, Oklahoma Madison, Wisconsin Middlesboro, Kentucky Middletown, Connecticut Newark, Ohio Pulaski, Virginia Ravenna, Chio Rawlins, Wyoming San Jose, California Sandpoint, Idaho Shawnee, Oklahoma Shenandoah, Iowa Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index is contained in BLS Bulletin 1140, "The Consumer Price Index: A Layman's Guide," which may be purchased for 20 cents at any Bureau of Labor Statistics regional office (addresses below) or from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. A more technical description of the index appears in BLS Bulletin 1168, "Techniques of Preparing Major BLS Statistical Series." Reprints of chapter 9, pertaining to the CPI, are available on request to the Bureau of Labor Statistics in Washington or at any of its regional offices.

Historical series of index numbers for the United States city average and for 20 large cities are available upon request. These series include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1947 to date.
