U.S. DEPARTMENT OF LABOR<br>Bureau of Labor Statistics<br>Washington 25, D. C.

## CONSUMER FRIGE INDEX FOR MARCH 1959

Consumer prices in United States cities remained at their Febiruary level in March, according to the U.S. Department of Labor's Bureau of Labor Statistics. Lower food prices offset increases for most other groups of goods and services. Average prices of goods and services other than food advanced 0.2 percent, with durable cormodities and nondurables less food each up 0.3 percent, and services up 0.1 percent. The March Consumar Price Index was 123.7 (1947-49=100), 0.3 parcent higher than in March 1958.

FOOD
Food prices dropped 0.4 percent between February and March, due
largely to lower prioes for pork, eggs, and fresh vegetables. The food index at 117.7 was 2.6 percent below a year ago, and 3.3 parcent below the July 1958 peak.

Meat, poultry, and fish prices declined 1.2 percent, led by pork products which have fallen in price in each of the past 8 months. Increased pork supplies brought the price of pork chops down 3.7 percent, bacon 2.8 percent, and ham 1.9 percent. Prices of most cuts of beef, veal, and lamb were moderately lower.

Egg prices dropped 3.1 percent. The price of coffee fell 1.0 percent, and fats and oils 1.1 percent. Prices of cola drinks, hovever, were 3.0 percent higher.

Fruit and vegetable prices declined 0.4 percent on the average, with fresh vegetables down 2.3 percent and fresh fruits up 0.8 percent. Prices of most fresh vegetables were lower because of increased shipments from southern areas. Lettuca prices fell 14.4 percent, green beans 13.0 percent, celery 6.3 percent, and potatoes 3.0 percent. However, onion prices rose sharply as fewer onions were moved to market from storage and the new spring crop from Texas was retarded by adverse weather conditions. The rise in fresh fruit prices was due largely to a 4.6 percent seasonal increase in prioes of apples. Citrus fruits and bananas registered moderate price decreases.

Cereal and bakery products inereased 0.2 percent mainly because of an 0.4 percent increase in the price of bread, while prices of dairy products declined 0.2 percent as a result of a seasonal drop in the price of fresh milk.

Prices of restaurant meals continued upward with a rise of 0.2
percent.
TRANSRORTATION Transportation costs rose 0.4 percent, mainly as a result of advances
of 1.6 percent in prices of used cars and 1.0 percent for gasoline. New car prices were unchanged. Prices of tires were lower, due to sales and increased trade-in allowances. Public transportation costs edged up 0.1 percent because of a rise in transit fares in Philadelphia.

HOTSTMG The housing group index was up 0.2 percent, with higher prices for household operation, home maintenance costs, and rent. A rise of 0.5 percent in household operation reflected higher water rates, further increases in prices of laundry and dry cleaning services, and higher telephone rates. Prices of home repair and maintenance items rose 0.4 percent, as increases were reported for lumber, plumbing equipment, and painting and repair services. Rents were up 0.1 percent, with small increases in most cities surveyed. The solid fuels and fuel oil group showed a rise of 0.2 percent, while bills for gas and electricity were unchanged on the average.

Housefurnishings prices remained at their February level, as slight reductions in prices of some furniture and appliances offset higher prices for sheets, curtains, and drapery fabrios.

OTHER COMMODITIES Apparel prices rose 0.3 percent, due chiefly to higher prices for AND SERVICES footwear and wonen's and girls' apparel. The rise in footwear reflected higher prices for men's, women's, and children's shoes and shoe repair serfices. Higher prices for women's rayon and cotton dresses were partially offset by reductions in prices of women's spring coats.

Reading and recreation costs were up 0.2 percent, principally because of higher charges for novie admissions.

The medical care index was 0.1 percent higher, with continued advances in fees for professional and hospital services.

Personal care and other goods and services each declined 0.1 percent.

Labor D.C. - BLS58-0332

## Brief Explanation of the CPI

The Conswmer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the morement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker fanilies patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other comodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Almost all prices are obtaixed by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family apending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1947-49=100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medim-sized and small cities:

Anna, Illinois<br>Camden, Arkansas<br>Canton, Chio<br>Charleston, W. Virginia<br>Evansville, Indiana<br>Garrett, Indiana<br>Glendale, Arizona<br>Grand Forks, N. Dakota<br>Grand Island, Nebraska

Huntington, W. Virginia
Laconia, New Hampshire
Lodi, California
Lynchburg, Virginia
Madill, Oklahoma
Madison, Wisconsin
Middlesboro, Kentucky
Middletown, Connecticut
Newark, Ohío

Pulaski, Virginia
Ravenna, Chio Rawlins, Wyoning San Jose, California Sandpoint, Idaho Shawnee, Oclahoma Shenandoah, Iowa Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index is contained in BLS Bulletin 1140, WThe Consumer Price Index: A Layman's Guide," which may be purchased for 20 cents at any Bureau of Labor Statistics regional office (addresses below) or from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. A more technical description of the index appears in BLS Bulletin 1168, "Techniques of Preparing Major BLS Statistical Series." Reprints of chapter 9, pertaining to the CPI, are available on request to the Bureau of Labor Statistics in Washington or at any of its regional offices.

Historical series of index numbers for the United States city average and for 20 large cities are available upon request. These series include index mambers for all Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
