U.S. DEPARTIENT OF LABOR<br>Bureau of Labor Statistics<br>Washington 25, D. C。

CONSUMER PRICE INDEX FOR MAY 1959
Consumer prices in United States cities increased 0.1 percent between April and May 1959, according to thc U.S. Department of Labor's Bureau of Labor Statistics. Mbst of the increase was the result of advances in costs of housing, apparel, medical care, and personal care, although all major groups of goods and services were higher. Prices of commodities were unchanged on the average, but services rose 0.3 percent. The Consumer Price Index at 124.0 percent of the 1947-49 average reached a new record high, 0.3 percent above the May 1958 level.

HOUSING A rise of. 0.1 percent in housing costs reflected advances in prices of home repair and maintenance items, increased bills for gas and electricity, and higher rates for insurance on houses. Residential rents were unchanged on the average for the first time since February 1957. Higher charges for painting and repair services were mainly responsible for the rise in home maintenance costs, although there were some increases reported for paint, plumbing supplies, and lumber. The solid fuels and fuel oil group index dropped 2.5 percent; prices of both coal and fuel oil were seasonally lower. Housefuraishings prices declined 0.1 percent as traditional white sale prices for household textiles more than offset higher prices for some furniture and appliances. Household operation averaged unchanged with reductions in prices of laundry soaps and detergents and some scattered advances in rates for laundry and dry cleaning services.

APPAREL
Prices of all classes of apparel were higher in May, led by an advance of 0.3 percent for footwear, especially men's and children's shoes. Prices of men's suits advanced, following earlier sales, and there were scatiered increases reported for sumner suits, slacks, work shirts, and work gloveso Higher prices were reported for women's and girls' cotton dresses and nylon hose, but prices of women's underwear and rayon dresses were lower.

FOOD
Average food prices, which had declined in eight of the past nine months, increased 0.1 percent in May because of higher prices of restaurant meals as well as seasonally higher prices for fresh fruits and vegetables which largely offset reductions in egg and coffee prices. The food index at 117.7 was 3.2 percent lower than a year ago and 3.3 percent below the July 1958 peak.

Fruit and vegetable prices rose 1.6 percent over the month, with prices of fresh fruits and vegetables up 2.5 percent. Fresh fruits advanced 2.8 percent as prices of oranges, bananas, grapefruit, and apples averaged 3 to 5 percent higher. Strawberry prices, responding to more plentiful supplies, declined 14.0 percent. Fresh vegetable prices advanced 2.1 percent with potatoes up 13.1 percent, as supplies of last year's crop dwindled and a smaller new crop began to reach the market. Prices of tomatoes and celery averaged about $6 \frac{1}{2}$ percent higher. However, onion, lettuce, and green bean prices were down 15.9 percent, 6.2 percent, and 6.0 percent, respectively. Canned fruit and vegetable prices rose, largely because of continued increases in prices of canned orange juice. All frozen fruits and vegetables registered decreases.

Prices of meats, poultry, and fish increased 0.1 percent as moderate increases for most cuts of meat more than offset slightly lower prices of chickens and fish.

Prices of ceresis and bakery products increased 0.3 percent as bread prices were up 0.3 percent and cookies 0.5 percent.

Restaurant mal raices rose 0.3 percent.

Egg prices, decreasing for the eighth consecutive month, dropped 6.4 percent, mach more than their usual seasonal decline, as supplies continued plentiful. Coffee prices, declining for the 16th consecutive month, were down 2.9 percent. Dairy products declined 0.3 percent as prices of most items were lower.

OTHER COMWDITIES The medical care group index rose 0.4 percent, primarily because of AND SERVICES —increased fees for services of physicians. There were also some increases in prices of prescriptions and drugs and in rates for hospital services.

Transportation costs were up 0.1 percent, with higher prices for used cars, auto repairs, and auto insurance. Prices were lower for gasoline, tires, and new cars.

A rise of 0.5 percent in personal care was due mainly to higher prices for men's haircuts in several cities.

Higher prices for newspapers in Cleveland were largely responsible for an increase of 0.1 percent for reading and recreation. Movie admission charges were slightly lower. Other goods and services increased partly because of an additional increase in cigarette taxes in New York City.

Labor D.C. - BLS58-0332

## Brief Explanation of the GPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city fanilies of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Almost all prices are obtaijed by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1947-49=100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

Anna, Illinois<br>Camden, Arkansas<br>Canton, Chio<br>Charleston, W. Virginia<br>Evansville, Indiana<br>Garrett, Indiana<br>Glendale, Arizona<br>Grand Forks, N. Dakota<br>Grand Island, Nebraska

Huntington, W. Virginia<br>Laconia, New Hampshire<br>Lodi, California<br>Lynchburg, Virginia<br>Madill, Oklahoma<br>Madison, Wisconsin<br>Middlesboro, Kentucky<br>Middletown, Connecticut<br>Newark, Chio

Pulaski, Virginia
Ravensa, Ohio
Rawlins, Hyoming
San Jose, California
Sandpoint, Idaho
Shawnee, Oklahoma
Shenandoah, Iowa
Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index is contained in BLS Bulletin 1140, "The Consumer Price Index: A Layman's Guide," which may be purchased for 20 cents at any Bureau of Labor Statistics regional office (addresses below) or from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. A more technical description of the index appears in BLS Bulletin 1168, WTechniques of Preparing Major BLS Statistical Series." Reprincs of chapter 9, pertaining to the CPI, are available on request to the Bureau of Labor Statistics in Washington or at any of its regional offices.

Historical series of index numbers for the United States city average and for 20 large cities are available upon request. These series include index mabers for all Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
