CONSUMER PRICE INDEXES: COMMODITIES AND SERVICES *(Seasonally Adjusted)

UNITED STATES DEPARTMENT OF LABOR BUREAU OF LABOR STATISTICS

Latest Data: JANUARY 1968

U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington, D. C. 20212

CONSUMER PRICE INDEX FOR JANUARY 1968

The Consumer Price Index rose 0.3 percent in January for the fourth month in succession. The increase was the largest for January since 1958. The index, at 118.6 (1957-59=100), was 3.4 percent higher than in January 1967.

Higher prices were reported for all major classes of consumer goods and services except apparel, which declined considerably less than usual for January. The advancing cost of most consumer services accounted for about half of the January rise and most of the remainder was attributed to higher food prices. Among the important contributors to higher prices for services were postage, automobile registration and licensing fees, mortgage interest, and professional medical care. More than two-fifths of the index rise in the past 12 months resulted from increasing charges for services. Prices of nondurable commodities less food have been responsible for about one-fourth of the rise. The remainder of the advance has been ascribed to higher prices for food and durable goods.

Food

Food prices in grocery stores climbed 0.8 percent in January. This advance reflected chiefly lower supplies of fresh fruits and vegetables (which accounted for over four-fifths of the increase), frying chickens, and dairy products. Significantly higher prices were recorded for tomatoes, cucumbers, carrots, and lettuce; increases ranged between 15-1/2 and 36 percent, largely due to poor weather and reduced acreage. Ample supplies of green peppers from Florida and Mexico caused an 11.4 percent decline for this item, and potato prices were also slightly lower. Fresh fruit prices increased slightly. Smaller cold storage holdings drove apple prices up 5.8 percent; oranges, responding to freeze damage in California and the prospect of a reduced crop, advanced 4.1 percent; bananas decreased nearly 10 percent. Continuing tight stock positions for canned fruit cocktail and pears were largely responsible for pushing the prices of processed fruits and vegetetables higher.

Beef and veal prices moved moderately higher as production declined, but were offset, on a seasonally adjusted basis, by lower pork prices. Cold storage holdings remained high despite a drop in production.

Poultry prices averaged one percent higher, as increased prices for frying chickens outweighed lower prices for chicken breasts and turkey. Over the year, poultry prices have advanced one percent, due wholly to price increases in the past two months as the rate of chicken production has fallen. Dairy products were up 0.3 percent almost entirely because of higher fresh milk and butter prices as production expanded less than usual. Egg prices declined seasonally.

<u>Services</u>

The cost of consumer services continued its upward trend in January, increasing 0.5 percent over December. The rate of advance, which had been relatively constant during the first two quarters of 1967, has quickened in the past several months. Expenses incident to operating an automobile jumped sharply in a number of cities as liability insurance premiums were increased and some states boosted automobile registration and drivers' permits fees. Housekeeping services were up 2.4 percent from December, primarily because of the increase in first and third class postal rates. Charges for medical care services

continued upward, advancing 0.7 percent mainly on the strength of higher doctors' and dentists' fees and hospital service charges. Home maintenance and repair services, mortgage interest and real estate taxes were all higher, as were rent, hotel and motel charges, and personal care services.

Durable goods

Durable goods prices rose 0.2 percent in January as nearly all durable commodities posted increases. Used car prices were up 0.8 percent (3.7 percent, seasonally adjusted) reflecting heavy demand, particularly for older models. New car prices dropped 0.3 percent although on a seasonally adjusted basis they were up 0.4 percent which reflected an advance in manufacturers' suggested retail prices and dealer concessions which were smaller than usual for this time of year. After adjustment for installation of front shoulder belts and other safety changes required on autos sold on and after January 1, 1968, suggested retail prices rose an average of \$11.51.

Most major appliances, especially automatic washing machines, refrigerator-freezers and gas stoves had higher price tags, reflecting the second round of wholesale price increases in the past six months. Television sets, particularly black and white portables, also were higher. Furniture and floor covering prices continued their upward movement as demand remained strong and the effects of higher material, labor, and freight charges were passed on to the consumers.

Nondurable goods other than food

Ending of a price war in Los Angeles was the primary factor behind a 1.2 percent rise in gasoline and motor oil in January; the only other noteworthy increase occurred in Wichita. Fuel oil prices were also high as severe weather and accompanying strong demand, coupled with some tightness in supply, resulted in increased prices in practically all cities in which oil is an important heating fuel.

Apparel prices declined 0.8 percent in response to clearance sales, particularly for women's winter clothing. Despite this reduction, apparel prices on a seasonally adjusted basis, were 0.3 percent above the December level which indicated that sale price reductions were not as steep or widespread as in the past. Footwear prices were up 0.2 percent (0.6 percent seasonally adjusted).

Cost-of-Living Adjustments

The January Consumer Price Index rise brought pay boosts to more than 615,000 workers. About 450,000 employees in the trucking industry, including general freight, automobile hauling and some tank trucking and cement hauling drivers, received 3-cent increases based on the change in the index since July 1967. Three-cent quarterly increases went to about 100,000 workers in aerospace, automotive parts, and some metal-working firms. Workers in some other industries received increases ranging from one to four cents, based on quarterly or semi-annual changes in the index.

NOTE: The price changes shown for Consumer Products and components are for roughly comparable classes of finished consumer products from the CPI and WPI. A brief description of the classes of items contained in each group is included at the end of this report. Complete listings of inclusions in the CPI and WPI groupings will be furnished on request.

^{*}Based on data unadjusted for seasonal variations.

Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. 1/ The table below shows average standard errors for monthly, quarterly, and annual percent changes in the CPI for all items and for nine commodity groupings. The figures may be interpreted as follows: the chances are about 95 out of 100 that the percent change in the published CPI differs from the corresponding "complete coverage" change by less than twice the standard error. For any of the time period categories—i.e., monthly, quarterly, or annual—the standard errors are more or less independent of the size of the percentage changes to which they relate, within the range that has occurred in recent periods. An annual updating of the error estimates is planned.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. The table below indicates, for example, that a month-to-month change of 0.1 percent in the all-items CPI is significant (twice the standard error). Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent is almost always significant, regardless of the time period to which it relates.

Average Standard Errors of Percent Changes in the CPI

Component	Monthly Change_	Quarterly Change	Annual Change
All items	.03	.05	.06
Food at home	.10	.13	.13
Food away from home	.05	.08	.16
Housing	.05	.08	.11
Appare1	.10	.16	.18
Transportation	.11	.21	.24
Medical care	.07	.11	.24
Personal care	.12	.19	.31
Reading and recreation	.12	.14	.27
Other	.10	.16	.32

^{1/} The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," Journal of the American Statistical Association, September, 1967.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence
Alaska - Anchorage
California - Bakersfield*
Colorado - Denver*
Connecticut - Hartford*
Florida - Orlando*
Indiana - Indianapolis*
Indiana - Logansport
Illinois - Champaign-Urbana*
Iowa - Cedar Rapids*
Kansas - Wichita*

Louisiana - Baton Rouge*
Maine - Portland*
Massachusetts - Southbridge
Michigan - Niles
Minnesota - Crookston
Mississippi - Vicksburg
New Jersey - Millville
New York - Kingston
North Carolina - Durham*
North Dakota - Devils Lake
Ohio - Dayton*

Ohio - Findlay
Oklahoma - Mangum
Oregon - Klamath Falls
Pennsylvania - Lancaster*
South Carolina - Union
Tennessee - Nashville*
Texas - Austin*
Texas - McAllen
Utah - Orem
Virginia - Martinsville
Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).

	Consumer Price Index	Wholesale Price Index
ALL ITEMS	All commodities and services	All Commodities
CONSUMER PRODUCTS	All commodities except home purchase, used cars, food and beverages away from home, newspapers, magazines and books.	Nondurable and durable commodities ready for use by home consumers except a few individual consumer products included in WFI groupings of commodities purchased primarily by industrial firms.
Nondurable	All nondurable commodities except food and beverages away from home and newspapers, mage-zines and books.	A combination of indexes listed below. 1/
Food and beverages at home	Food at home, alcoholic beverages at home.	Fresh and dried fruits and vegetables, nuts, and eggs from the farm products group; and the processed foods and feeds group, excluding crude vegetable oils and manufactured animal feeds.
Apparel and accessories	Apparel, footwear, and accessories. 2/	Apparel and some fabrics and sewing materials, leather footwear, leather gloves, rubber footwear, watches and clocks, jewelry.
Household furnishings and supplies	Home maintenance nondurables, fuel oil and coal, textile housefurnishings, housekeeping supplies.	Textile housefurnishings, fuels for home use (except gas), soap and synthetic detergents, sanitary papers and health products, matches, pens and pencils, and prepared paints, and miscellaneous housekeeping supplies.
Gasoline and motor oil	Gasoline and motor oil.	Gasoline and automotive motor oil.
Other nondurables	Drugs and pharmaceuticals, toilet goods, recreational nondurables, tobacco products.	Pharmaceutical preparations, cosmetics and other toilet preparations, tobacco products, personal brushes, and recreational items such as toys, film, and playing cards.
Durable	All durable commodities except home purchase and used cars.	A combination of indexes listed below. 1/
New passenger cars	New cars.	Passenger cars.
Appliances	Household appliances, radio and TV.	Home electronic equipment, room heaters, and house- hold appliances, excluding electric lamps.
Furniture and floor coverings	Furniture and floor coverings.	Household furniture and floor coverings.
Other durables	Home maintenace durables, other house- furnishings, tires, recreational durables, except radio and TV.	Other durable commodities throughout the WPI which are used for home maintenance, including some household goods, tires and tubes, outboard motors, equipment for home workshops and home gardens, recreational items such as photographic equipment, sporting and athletic goods, musical instruments, and phonograph records, electric lamps, typewriters, luggage and small leather goods, and caskets and morticians goods.
CONSUMER SERVICES	All consumer services.	
Insurance and finance	Mortgage interest, taxes and insurance, automobile insurance and other auto expenses. 3/	
Rent	Rent of home or apartment.	
Utilities and public transportation	Gas and electricity, telephone, water and sewer, public transportation.	
Housekeeping and home maintenance services	Housekeeping and home maintenance services.	
Medical care services	Medical care except drugs and prescriptions.	
Personal care services	Personal care services.	·
Other services	Hotels, apparel services, auto repairs and maintenance, recreational services, reading and educational services, personal expenses.	
WHOLESALE PRICES		
Type of product Farm Product Processed foods and feeds Industrial commodities Industrial materials and equipment		Same as the Wholesale Price Indexes for major groups.
Stage of Processing at wholesale Finished goods Consumer Producer Intermediate materials, supplies, and components Crude materials	•	The Wholesale Price Stage of Processing Indexes. The Consumer Finished Goods index differs from the Consumer Products index in weighting structure and is based on a larger sample of commodities.

^{1/} The classification by durable and nondurable commodities is based on CPI classification and is not necessarily the same as the WPI classification in the Indexes by Durability of Product
2/ Same as apparel commodities.
3/ Includes registration and license fees and parking fees.
