CONSUMER PRICE INDEXES: COMMODITIES AND SERVICES

*(Seasonally Adjusted)

UNITED STATES DEPARTMENT OF LABOR

BUREAU OF LABOR STATISTICS

Latest Data: February 1967

U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington, D. C. 20212

CONSUMER PRICE INDEX FOR FEBRUARY 1967

The Consumer Price Index rose by 0.1 percent in February to 114.8 (1957-59=100), the United States Department of Labor's Bureau of Labor Statistics announced today. Higher costs of consumer services were mainly responsible for the advance. Commodity prices remained at their January level as lower prices of food offset advances in prices of other types of consumer goods. The overall index has increased only 0.3 percent in the last 4 months.

Price Changes, January to February 1967

Housing costs rose by 0.2 percent in February, largely because of higher charges for the services associated with homeownership, particularly real estate taxes and property insurance. Rents and household services, such as laundry and domestic help, also contributed to the rise. Mortgage interest rates fell slightly as restrictions on lending were eased. Medical care costs continued to rise as charges for professional care and hospital services were increased. Barber and beauty shop services and recreational services also cost more.

Apparel prices resumed their upward trend with a larger than seasonal rise in February (0.5 percent). Prices were higher for new spring lines of women's and girls' coats and for women's and children's shoes. Prices of household textiles returned to their normal levels after January white sales.

Private transportation costs increased, reflecting advances in prices of used cars and gasoline. Prices of new cars were down slightly.

Food prices went down by 0.4 percent in February, contrary to their usual seasonal movement. A sharp drop in egg prices led price reductions, which were fairly widespread. Egg prices, which ordinarily show only a slight decline in February, dropped 14 percent because supplies increased. Prices of fruits and vegetables declined by 1 percent instead of rising as they usually do. There were particularly large reductions for tomatoes, bananas, oranges, cabbage, and green peppers; on the other hand, prices of apples, potatoes, onions, and cucumbers were higher.

Prices of most cuts of pork were reduced, while prices of beef and poultry advanced. Significant price reductions were recorded for bread, flour, most dairy products, and frozen orange juice concentrate.

Price Trends, February 1966 to February 1967

The Consumer Price Index was up by 2.9 percent in February 1967 compared to a year earlier. About three-fifths of the advance was due to a rise of 5.2 percent in charges for consumer services. Of particular importance were the 9.0-percent

increase in medical care services and a 6.3-percent advance in costs of household services. Mortgage interest rates were still substantially higher than a year earlier, despite recent declines.

Food prices were 1.0 percent higher than last year, solely because of a 5.5-percent increase in restaurant meal prices. Food purchased for home consumption was down by 0.1 percent as significant declines for eggs, pork, chickens, and several fruits and vegetables were largely offset by substantial advances in prices of dairy products, cereals and bakery products and some fruits and vegetables, including potatoes, onions, and apples.

Nondurable commodities other than foods were 3 percent higher in price than in February 1966, with the largest increases reported for apparel, gasoline, reading material, and tobacco products. Durable goods prices were only 1 percent above year-earlier levels principally because of higher furniture prices.

Cost-of-Living Adjustments

As a result of the February Consumer Price Index, about 56,000 workers will receive increases in their cost-of-living allowances. For about 40,000 grocery workers in Southern California, the increase will be 2 cents an hour, based on the change in the Los Angeles-Long Beach area index over the past year. About 9,500 aerospace workers will get 1 cent an hour, based on the change in the national index since November 1966.

Approximately 150,000 other workers, mostly in aerospace industries, whose wages are also subject to a quarterly review at this time, will not receive cost-of-living increases because of contract clauses providing for a different formula for escalation.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence
Alaska - Anchorage
California - Bakersfield*
Colorado - Denver*
Connecticut - Hartford*
Florida - Orlando*
Indiana - Indianapolis*
Indiana - Logansport
Illinois - Champaign-Urbana*
Iowa - Cedar Rapids*
Kansas - Wichita*

Louisiana - Baton Rouge*
Maine - Portland*
Massachusetts - Southbridge
Michigan - Niles
Minnesota - Crookston
Mississippi - Vicksburg
New Jersey - Millville
New York - Kingston
North Carolina - Durham*
North Dakota - Devils Lake
Ohio - Dayton*

Ohio - Findlay
Oklahoma - Mangum
Oregon - Klamath Falls
Pennsylvania - Lancaster*
South Carolina - Union
Tennessee - Nashville*
Texas - Austin*
Texas - McAllen
Utah - Orem
Virginia - Martinsville
Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).
