BUREAU OF LABOR STATISTICS Arthur M. Ross, Commissioner

CONSUMER PRICE INDEXES: COMMODITIES AND SERVICES

U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington, D. C. 20212

CONSUMER PRICE INDEX FOR APRIL 1966

The Consumer Price Index stood at 112.5 (1957-59=100) in April, four-tenths of one percent above its March level, the United States Department of Labor's Bureau of Labor Statistics reported today. This was a smaller advance than that which occurred in February, and the same as that reported for March.

Price Changes, March-April 1966

Consumer service prices as a whole went up 0.8 percent in April. About a third of this increase was caused by restoration of the excise tax on telephone services. In addition, interest rates rose on F.H.A. and V.A. mortgages, medical care costs were up by 0.4 percent, and charges were raised on several other kinds of services, such as baby sitters, barber and beauty shops, and automobile insurance.

Apparel prices advanced by an average of 0.5 percent, somewhat more than the usual seasonal increase for April. Shoe prices continued to rise, and men's tailored clothing for spring and summer wear came on the market showing higher price tags.

Food prices averaged only slightly higher in April, with an advance of 0.1 percent. Prices of dairy and bakery products rose, and fresh fruits were generally higher. Fresh vegetables also averaged slightly higher; potatoes, onions, tomatoes, cucumbers, and green peppers rose in price as cool, rainy weather retarded crop development in the spring vegetable growing areas. On the other hand, prices of asparagus, lettuce, and celery dropped in price, as supplies increased seasonally.

Meat prices were off a little (about 1-1/2 percent), mostly because of a 5-1/2 percent drop for pork. Beef and veal moved up slightly. Egg prices declined about 2-1/2 percent.

A strong market for used cars brought a larger price increase (1.7 percent) than usual for April, when the spring driving season opens. New car prices also moved up 0.3 percent because of restoration of the excise tax from 6 percent to 7 percent. Tobacco prices advanced nearly 1 percent, reflecting higher cigarette prices announced earlier by manufacturers.

Price Trends, April 1965 to April 1966

Nearly one-half of the rise of 2.9 percent in the Consumer Price Index over the past year was caused by a 6 percent climb in food prices, especially meats which averaged 17-1/2 percent higher. Poultry prices also were up by 11 percent. Another major contributing factor was the rise, averaging more than 3 percent, in charges for many consumer services, notably auto insurance, mortgage interest, real estate taxes, medical services, housekeeping services, and various types of repair services. A 6 percent advance in cigarette prices resulted largely from tobacco taxes being raised in 22 States last year.

On the other hand, prices of new and used cars, appliances, and toilet goods were down from a year ago in April. In part, this was a result of reduction or removal of excise taxes.

Cost-of-Living Adjustments

More than a million workers will receive cost-of-living wage increases as a result of the April Consumer Price Index. About 975,000 in automobile and automotive

parts, farm and construction equipment, and aerospace industries, will receive 4 cents an hour, based on the change in the national index since January. About 75,000 others will receive increases ranging from 1 to 3 cents an hour also based on the quarterly change, and another 5,000 from 3 to 6 cents based on the annual change in the national index.

Upwards of 17,000 transit workers will receive increases of 3-1/2 to 8 cents an hour based on quarterly changes in indexes for Chicago, Pittsburgh, and Boston.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence Alaska - Anchorage California - Bakersfield* Colorado - Denver* Connecticut - Hartford * Florida - Orlando* Indiana - Indianapolis* Indiana - Logansport Illinois - Champaign-Urbana* Iowa - Cedar Rapids* Kansas - Wichita*

Louisiana - Baton Rouge* Maine - Portland* Massachusetts - Southbridge Michigan - Niles Minnesota - Crookston Mississippi - Vicksburg New Jersey - Millville New York - Kingston North Carolina - Durham* North Dakota - Devils Lake Ohio - Dayton*

Ohio - Findlay Oklahoma - Mangum Oregon - Klamath Falls Pennsylvania - Lancaster* South Carolina - Union Tennessee - Nashville* Texas - Austin* Texas - McAllen Utah - Orem Virginia - Martinsville Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).
