CONSUMER PRICE INDEX FOR APRIL 1969

The Consumer Price Index rose to 126.4 (1957-59=100) in April as prices increased 0.6 percent. Although increases were generally widespread, most significant advances during the month were for consumer services other than rent, particularly home mortgaging costs, and food, which continued its sharp climb from February.

The rise since January (1.9 percent) was the largest for a 3 month period since 1956. Higher service charges, particularly for household repairs and other household service costs, and higher durable goods prices were the primary factors in this year's first quarter advance.

Since April a year ago, the index has risen 5.4 percent for the largest 12 month increase since 1951. Service charges accounted for nearly half the advance, but non-durable commodities also accounted for a substantial portion.

Services

Service charges increased 0.8 percent in April; they caused almost half of the total price rise. Household services other than rent continued their sharply accelerated rate of advance, which became noticeable in March. Costs of mortgaging homes continued to rise as FHA insured rates increased sharply and conventional mortgage rates rose. Substantial increases also were reported for all types of home repair services. The overall rise of 0.7 percent for maintenance and repair services, though substantial, was only half the increase recorded in March. Electric bills averaged 0.9 percent higher, nearly twice the March rise; residential gas and telephone rate increases also contributed to the higher cost of utilities. Personnel shortages brought higher charges for domestic help. Residential property taxes rose, but property insurance rates decreased slightly.

Medical care services advanced a significant 0.8 percent, one of the sharpest rises recorded in recent years. Dentists' fees led the advance; average increases were about 2 percent. Hospital room rates advanced but at a slightly slower pace than the increases recorded from January through March.

Hotel and motel room rates increased mainly because of increases in the Western States, but smaller increases were reported in all other regions. Rents of houses and apartments advanced 0.3 percent for the third consecutive month.

Other consumer services also averaged higher. Recreational services jumped as movie fees were increased substantially; higher fees for beauty shop services were the principal factor in the rise in personal care services. Widespread increases brought an advance for automobile insurance rates; drycleaning charges were raised again, and legal fees also were up.

Food

Higher prices for meats, poultry, fish, eggs, fruits, and some vegetables helped push food prices up 0.7 percent in April; food eaten away from home advanced another 0.6 percent.

Meat prices rose 1.8 percent and were responsible for over 70 percent of the increase in prices of food bought in grocery stores. Prices of beef and veal were up an average of 3 percent in response to strong consumer demand, and pork products, ham, also moved higher, even though production rose.

Despite an increase in production, egg prices rose 1.5 percent in April, as a result of strong Easter demand. Most prepared and partially prepared foods also

registered gains, particularly potato products, which reflected diminished stocks available to processors. Strong demand for low supplies was a significant factor in higher prices for chocolate products; previous wholesale increases were reflected in higher prices for sugar and instant coffee. Higher prices for fresh fruits outweighed price reductions for fresh vegetables.

Fresh vegetable prices averaged lower in April in response to increased supplies. The sharpest reductions were 15 percent for green peppers, 18 percent for tomatoes, and 11 percent for asparagus. Consumers also paid less for dairy products, although the decline was smaller than usual. Ice cream was a bargain because of widespread sales promotions, and milk prices also were lower. Fats and oils, corn flakes, white bread, tea bags, regular coffee, and baby foods were some of the other items whose prices were down in April.

Nondurable Commodities Other Than Food

Nondurables less food rose 0.4 percent in April, and slowed perceptibly from their March pace.

Apparel commodities prices rose 0.5 percent, half the rate recorded for March. Prices for men's and women's clothing continued to go up but at reduced rates. Increases were reported for men's tailored clothing, still in strong demand, and women's seasonal cotton clothing, introduced at higher prices than at the end of last year. These, coupled with higher prices on staple year-round items, were the prime factors in the advance during April. Spring coat clearances helped to moderate the rise. Boys' clothing prices increased, but girls' apparel prices dropped as stores made sharp cuts on light-weight coats to liquidate stocks.

Seemingly insatiable demand for more stylish clothing has been an important factor enabling retailers to pass on price increases for apparel and footwear. Footwear prices rose 0.6 percent for the second month; children's shoe prices moved up strongly but the largest increases were recorded for women's shoes.

A March increase in wholesale prices of gasoline and motor oil was passed along at retail in a substantial number of cities, but competitive price reductions in the Los Angeles area were a moderating influence. The rise of 0.5 percent was significantly less than the 2.2 percent rise in March.

Toilet goods prices rose for the third consecutive month, mainly because of higher prices for face powder and facial tissue. The end of traditional white sales as some stores raised prices above their pre-sale levels, brought a 0.9 percent hike in the textile housefurnishings index. Prices were increased significantly for home delivered newspapers and king size cigarettes and fractional increases were recorded for drugs and prescriptions.

Durables

The steep rise in prices for durable commodities, recorded in the previous 2 months due chiefly to used cars, slowed to a 0.3 percent increase in April.

Increases for all types of household durables accounted for most of the rise. Higher prices were recorded for furniture, appliances, floor coverings, and other housefurnishings.

After posting increases of over 6 percent in both February and March, used car prices gained only 0.5 percent in April. This modest increase was counterbalanced by an equal decline in new car prices when dealers raised their concessions to purchasers. New

tires posted gains of 0.8 percent in April and retreads also were up.

Cost-of-Living Adjustments

Approximately 117,000 workers will receive cost-of-living pay increases based on the April Consumer Price Index. About 62,100 workers, mostly in the aerospace, motor-vehicles and parts, farm machinery, and office machinery industries will receive hourly increases ranging from 3 to 7 cents an hour, based on the rise in the national index between January and April. An additional 35,500 workers will receive wage increases based on annual or semiannual reviews of the national Consumer Price Index, the largest group of these being classified employees of the State of Wisconsin. In addition, 17,700 local transit workers in Chicago, Boston, and Pittsburgh will receive 5 or 6-cent hourly increases, based on the 3-month advance in the indexes for the respective areas. An estimated 43,000 workers in various industries who would otherwise receive cost-of-living increases, will not receive them this month because they already have received the maximums stipulated in their contracts.

 9/ Also includes recapped tires and drivers' license fees not shown separately.

 10/ Includes prices for water pump replacement, motor tune-up, automatic transmission repair, exhaust system repair, front end alignment, and chassis lubrication.
- 11/ Also includes outboard motors, nondurable toys, college tuition fees, paperback books, and college textbooks, not shown separately.

A NOTE ABOUT CALCULATING INDEX CHANGES

Movements of the indexes from one date to another are usually expressed as percentage changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percentage changes are not. The following example illustrates the computation of index point and percentage changes:

Index P oi nt Change		Percentage Change			
April 1969 CPI (1957-59=100)	126.4	Index point difference divided by the			
less March 1969 index	125.6	index for the previous period:			
Index point difference =	.8	$\frac{126.4 - 125.6 \times 100}{125.6} = .6 \text{ percent}$			

Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. 1/ The table below shows standard errors for monthly, quarterly, and annual percent changes in the CPI for all items and for nine commodity groupings based on 1968 averages. The figures may be interpreted as follows: the chances are about 95 out of 100 that the percent change in the CPI as computed differs from the corresponding "complete coverage" change by less than twice the standard error. Data also are shown in terms of the relative error of the standard error of percent changes. The relative errors tend to decrease markedly for successively longer time periods, as expected.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. The table below indicates, for example, that a month-to-month change of 0.1 percent in the all-items CPI is significant. Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent is almost always significant, regardless of the time period to which it relates.

Standard and Relative Errors of Percent Changes in the CPI Based on 1968 Data

Component		Standard Er	ror	Relative Error			
	Monthly Change	Quarterly Change	Annual Change	Monthly Change	Quarterly Change	Annual Change	
All items	.03	.05	.08	.08	.04	.02	
Food at home	.08	.13	.24	.18	.13	.08	
Food away from home	.08	.15	.18	.17	.11	.04	
Housing	.05	.08	.13	.12	.06	.03	
Apparel	.15	.22	.31	.21	.14	.06	
Transportation	.06	.10	.15	.17	.16	.05	
Medical care	.10	.13	.24	.20	.09	.04	
Personal care	.13	.19	.47	.30	.16	.12	
Reading and recreation	.09	.13	.22	.22	.11	.05	
Other goods and services	.08	.17	.36	.29	.19	.08	

This replaces the table of average errors based on 1967 data which was included in the CPI report through December 1968.

 $[\]underline{1}/$ The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," <u>Journal of the American Statistical Association</u>, September 1967.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence Alaska - Anchorage California - Bakersfield* Colorado - Denver* Connecticut - Hartford* Florida - Orlando* Indiana - Indianapolis* Indiana - Logansport Illinois - Champaign-Urbana* Iowa - Cedar Rapids* Kansas - Wichita*

Louisiana - Baton Rouge* Maine - Portland* Massachusetts - Southbridge Michigan - Niles Minnesota - Crookston Mississippi - Vicksburg New Jersey - Millville New York - Kingston North Carolina - Durham* North Dakota - Devils Lake Ohio - Dayton*

Ohio - Findlay Oklahoma - Mangum Oregon - Klamath Falls Pennsylvania - Lancaster* South Carolina - Union Tennessee - Nashville* Texas - Austin* Texas - McAllen Utah - Orem Virginia - Martinsville Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).
