### CONSUMER PRICE INDEXES: COMMODITIES AND SERVICES \*(Seasonally Adjusted)

UNITED STATES DEPARTMENT OF LABOR

BUREAU OF LABOR STATISTICS

Latest Data: NOVEMBER 1967

U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington, D. C. 20212

### CONSUMER PRICE INDEX FOR NOVEMBER 1967

The Consumer Price Index continued to climb in November, rising 0.3 percent to 117.8 (1957-59=100), for an increase of 2.8 percent since November 1966. Leading the upswing were higher prices for consumer services and nondurable goods other than food, each accounting for nearly half of the rise. The cost of durable goods advanced modestly. These advances were minimized by a less-than-seasonal decline in grocery store food prices.

The 2.7 percent advance in consumer prices that has been registered so far this year is less than the 3.2 percent increase that occurred in the first 11 months of 1966. The slightly lower rate of advance must be attributed largely to food prices which have increased only 0.7 percent this year compared with 3.8 percent in the same 1966 period. Charges for consumer services also rose at a slower rate in 1967, but prices of commodities other than foods increased more rapidly. Since March of this year, prices of durable goods and nondurables less food have each increased an average of 0.4 percent per month in comparison with a 0.3 percent rate for consumer services, about the same rate as the all items index.

### Nondurable goods other than food

Nondurables less food moved up 0.6 percent in November, largely on the strength of sharply higher prices for apparel (particularly women's and girls' wear) and gasoline, which accounted for about three-quarters of the increase for this category. So far this year, prices of nondurable goods other than foods have increased 3.4 percent, compared with a 2.7 percent rise in the first 11 months of 1966. With the exception of only two months in each year, the price rise was persistent in both years, more than half the increases occurring in the last 3 months.

Apparel prices were 0.5 percent higher than last month and more than four percent ahead of the year-ago level. Higher wholesale apparel prices, the consequence of increased industrial wages and fabric costs, coupled with strong consumer demand and the largest increase in personal income in two years, seem to be the leading factors contributing to the price rise. Because of consumer demand, retailers are experiencing little difficulty in passing on higher wholesale prices and in many instances are widening profit margins to compensate for increased store operating costs. Women's and girls' apparel prices jumped by 0.7 percent, their largest November increase since the monthly index was begun in 1947, and were 5.3 percent higher than in November 1966. Particularly significant price advances were recorded in November for street dresses, coats, and nylon hose. Men's and boys' clothing advanced by 0.4 percent to a level 3.7 percent above a year ago. Prices were higher for men's topcoats, suits, slacks, sport shirts, jackets, and work clothing. Footwear prices advanced 0.4 percent during the month and were 3.9 percent above year-ago levels.

Cigarette prices continued to advance, reflecting the effects of earlier manufacturers' increases and state and local sales tax boosts. Gasoline and motor oil prices were up 1.0 percent almost entirely because of the end of "price wars" in the Los Angeles area, with relatively minor changes in most other cities. Average prices for gasoline and motor oil are now 2.8 percent higher than a year ago. Food

2

Price fluctuations in foods are dominated to a much greater extent by changes in supply than by changes in demand. This was generally the situation in November as grocery store food prices declined 0.3 percent, mainly in response to large supplies of pork and eggs. On a seasonally adjusted basis, however, prices rose 0.2 percent, largely as a result of higher prices for fresh vegetables, a reflection of weather damage to crops earlier in the year. Prices of tomatoes, lettuce, carrots, green peppers, and celery were substantially higher. An early maturing Florida crop caused cucumber prices to drop. Strong demand for replacement of inventories brought a rise of 1.5 percent for processed fruits and vegetables. Fresh fruit prices dropped 2-1/2 percent with particularly significant decreases for grapefruit, bananas, and grapes. Meat, poultry, and fish prices fell almost 1 percent, as pork and chicken decreased seasonally, reflecting higher rates of production, seasonal marketings, and large cold storage holdings.

Beef and veal prices failed to display their usual seasonal decline, and consumer demand kept retail prices firm despite heavy supplies and lower wholesale prices. Retail fish prices were generally steady although at a relatively high level as supplies remained low. Egg prices were sharply lower as production remained high. Cold storage holdings of eggs were about 5 times greater than year-ago levels and about 50 percent above average for this month.

Over the year, retail prices of food and beverages at home decreased 0.1 percent as a 0.4 percent drop for food was partially counterbalanced by a 2.7 percent increase for alcoholic beverages at home. Prices of pork, poultry and eggs were significantly lower than a year earlier, a reflection of large supplies, while beef and veal and processed fruits and vegetables were markedly higher than a year ago.

### Services

The cost of consumer services rose 0.4 percent in November, a slightly higher rate than the 0.3 percent average since the beginning of the year. In the first 11 months of 1966, services advanced 4.5 percent. The increases in November were particularly large for medical care services, public transportation and recreational services. Rents were up 0.2 percent, mortgage interest charges continued the slow but steady upturn that has been evident since August following a two percent decline between December 1966 and July 1967, and property taxes moved slightly higher.

Medical care services were up 0.5 percent, led by a 1.6 percent rise in hospital services, the result of constantly rising costs for new equipment and more and higher paid personnel, and a 0.4 percent increase in the cost of professional services as doctors' and dentists' fees maintained their steady rise.

An increase in local transit fares in Chicago was the most important factor in the 1.2 percent rise in public transportation costs. Recreational service charges crept upward relfecting higher movie admission fees and seasonally higher bowling rates, as well as persistent increases in the costs of film developing.

Among utilities, a decline of about 0.5 percent in overall telephone charges mirrored the effect of nationwide decreases in long distance telephone rates which took place in November and served to moderate a sharp increase in water and sewer charges and a small advance in average prices for gas and electricity.

### Durable goods

So far this year durable goods prices have advanced by 2.8 percent, compared with a rise of 1.1 percent in the same period of 1966. Although almost one-third of the 1967 rise came in October, there were increases in every month except January, while in 1966 prices either declined or were unchanged in 4 of the first 11 months. New car prices rose less than is customary for November (0.3 percent) and were 2.1 percent higher than a year ago, the effect of higher prices for 1968 models and slightly lower concessions. Used car prices were down slightly due primarily to reductions for late models. Appliance prices averaged 0.9 percent higher than last November but were unchanged this month as higher prices for 1968 models were offset by close-out sales of old model merchandise. Furniture and floor covering prices rose again as manufacturers' price increases were largely passed on to consumers.

### Cost-of-living adjustments

More than 215,000 workers will receive cost-of-living escalator increases as a result of the November Consumer Price Index. Over half of these (110,000), mostly in aerospace industries, will receive 2 cents an hour based on the change in the index since August. About 85,000 meatpacking workers will receive a 6-cent increase based on the change in the index in the past 6 months. For workers in other industries, increases will range from 1 to 5 cents an hour based on quarterly or semi-annual changes in the index.

#### Table 9: Percent Change in Prices for Selected Groups in the Consumer Price Index and the Wholesale Price Index (Seasonally adjusted except where indicated)

NOTE: The price changes shown for Consumer Products and components are for roughly comparable classes of finished consumer products from the CPI and WPI. A brief description of the classes of items contained in each group is included at the end of this report. Complete listings of inclusions in the CPI and WPI groupings will be furnished on request.

\*Based on data unadjusted for seasonal variations.

### Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. 1/ The table below shows average standard errors for monthly, quarterly, and annual <u>percent changes</u> in the CPI for all items and for nine commodity groupings. The figures may be interpreted as follows: the chances are about 95 out of 100 that the percent change in the published CPI differs from the corresponding "complete coverage" change by less than twice the standard error. For any of the time period categories--i.e., monthly, quarterly, or annual--the standard errors are more or less independent of the size of the percentage changes to which they relate, within the range that has occurred in recent periods. An annual updating of the error estimates is planned.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. The table below indicates, for example, that a month-to-month change of 0.1 percent in the all-items CPI is significant (twice the standard error). Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent is almost always significant, regardless of the time period to which it relates.

### Average Standard Errors of Percent Changes in the CPI

Component	Monthly Change	Quarterly Change	Annual Change	
All items	.03	.05	.06	
Food at home	.10	.13	.13	
Food away from home	.05	.08	.16	
lousing	.05	.08	.11	
Apparel	.10	.16	.18	
Fransportation	.11	.21	.24	
fedical care	.07	.11	.24	
Personal care	.12	.19	.31	
Reading and recreation	.12	.14	.27	
Other	.10	.16	.32	

<u>1</u>/ The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," <u>Journal of the American</u> <u>Statistical Association</u>, September, 1967.

### Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence	Louisiana - Baton Rouge*	Ohio - Findlay
Alaska - Anchorage	Maine - Portland*	Oklahoma - Mangum
California - Bakersfield*	Massachusetts - Southbridge	Oregon - Klamath Falls
Colorado - Denver*	Michigan - Niles	Pennsylvania - Lancaster*
Connecticut - Hartford*	Minnesota - Crookston	South Carolina - Union
Florida - Orlando*	Mississippi – Vicksburg	Tennessee - Nashville*
Indiana - Indianapolis*	New Jersey - Millville	Texas - Austin*
Indiana - Logansport	New York - Kingston	Texas - McAllen
Illinois - Champaign-Urbana*	North Carolina - Durham*	Utah - Orem
Iowa - Cedar Rapids*	North Dakota - Devils Lake	Virginia - Martinsville
Kansas - Wichita*	Ohio - Dayton*	Wisconsin - Green Bay*

### \*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).
