U.S. DEPARTMENT OF LABOR<br>Bureau of Labor Statistics<br>Washington 25, D. C.

## CONSUMER PRICE INDEX FOR FEBRUARY 1961

Prices of consumer goods and services in United States cities rose by 0.1 percent in February to $127.5(1947-49=100)$, erasing the decline recorded in January, according to the United States Department of Labor's Bureau of Labor Statistics. Nearly every major group participated in the advance, with increases for medical care, reading and recreation, food, and apparel contributing most to the overall gain in prices. No major group registered a decline, but both the transportation and the other goods and services groups remained unchanged, reflecting offsetting price movements for major items within each group. The February index was 1.5 percent above a year earlier and matched the record level reported for December 1960.

Higher average prices for used cars, fresh fruits, household textiles, hospitalization and surgical insurance, and movie admissions were among the items which exerted the strongest influence on the upward movement of the index over the month. Price decreases were noted for eggs, gasoline, services associated with home ownership, new cars, and household durables.

MEDICAL CARE The 0.6 percent increase in average prices for medical care resulted primarily from higher rates for hospitalization insurance and surgical insurance. However, professional fees and hospital room rates also advanced. Lower average prices for prescriptions and drugs marked a continuation of the gradual decline which began last June. The February index for medical care, at 159.4 , was 3.0 percent above levels of a year ago.

Higher average prices for fresh fruits, processed fruits and vegetables, and poultry combined with further increases for restaurant meals to effect a slight rise of 0.1 percent in average food prices. However, these increases were almost nullified by lower egg prices. The index for all foods, at 121.4, was 3.4 percent above a year earlier and close to the postwar high of 121.7 reached in July 1958.

Retall prices of all fruits and vegetables averaged 0.9 percent higher than in January. Substantial increases for fresh oranges, frozen orange juice concentrate, canned orange juice, and apples contributed materially to the overall rise in the group index, with increases for these items attributable either to seasonal influences or to limited supplies. Fresh vegetable prices averaged lower primarily because of significant declines for lettuce and tomatoes.

A 0.2 percent increase in average prices of meats, poultry, and fish in February stemed from higher prices for chickens and fish, which overcame a slight decline in prices of meats--chiefly pork products. Demand for chickens was reportedly strong and consequently prices advanced, although supplies were above a year earlier levels Cereals and bakery products also rose by 0.2 percent with higher prices for bread, the most important item in the group, accounting for nearly all of the increase.

Seasonal increases in egg production resulted in a substantial reduction in average egg prices. Production however, continued at levels well below a year earlier and prices in February were about 26 percent above February 1960. Dairy product prices were down from January due almost entirely to seasonal reductions in fresh milk prices.

READING AND
RECREATION

The reading and recreation index rose by 0.4 percent in February, following a slight decline in January, to reach a new high. A rise of 1.1 percent in the cost of movie admissions, was due to reported
increased operating costs in a number of cities and the showing of special features in several cities. Higher newspaper prices also contributed to the increase. Over the year, prices for reading and recreation have risen by 1.7 percent reflecting higher average prices for movie admissions ( 6.4 percent) and newspapers ( 4.0 percent). On the other hand, prices of every other priced item except television repairs decreased.

APPAREL Apparel prices, which have shown a general upward movement since the latter part of 1958, except for seasonal clearance sales, rose by 0.2 percent in February. Seasonal advances for women's spring suits and girls' dresses were mainly responsible for the apparel increase. These increases were partly offset by scattered lower prices for other items of women's wear and a small decline in average prices for men's and boys' apparel.

HOUSING, TRANS- The small advance of 0.1 percent in the housing group resulted from PORTATION, AND nearly offsetting price movements for major sectors. Prices of nonOTHER GROUPS durable household goods rose by 2.8 percent over the month as prices of household textiles returned to regular prices following the termination of the January "white sales." Prices of solid and petroleum fuels rose by 1.2 percent over the period. Rents also continued to move up with two-thirds of the cities showing moderate increases; however, lower prices were reported for major elements of home ownership costs. Prices of furniture, appliances, and other household durables declined by 0.4 percent, the largest monthly decline for household durables since March 1958. Prices of nearly all items in this category showed decreases as widespread special sales, competitive markdowns, and other price concessions were in evidence.

The transportation group remained stable from January to February as higher prices for used cars and public transportation counterbalanced lower prices for gasoline and new cars. The strength in used car prices, up 4.0 percent, was due in large part to some improvement in demand for used cars and a reported decline in inventories to approximately normal levels for this time of year. Lower gasoline prices were largely attributable to increasing inventories, with the most significant reductions occurring in the Midwest, Southwest, and Pacific areas. In a few places there was a recovery from prior price-war levels. The 0.8 percent drop in new car prices was about normal for the month. Retail selling prices of both new and used cars included in the index remained below year-ago levels.

OVER-THE-YEAR Every major group, except transportation, participated in the 1.5 perCHANGES cent average advance from the February 1960 level; however, a 3.4 percent gain in retail food prices, chiefly h1gher average prices for pork and eggs, accounted for more than 60 percent of the overall rise. In addition, higher shelter costs contributed significantly to the advance. Lower car prices were responsible for nearly the entire decline of 0.9 percent in the transportation index. The only additional decreases of real significance were those registered by household durables and sporting goods.

COST-OF-LIVING Cost-of-living escalator allowances for about 120,000 workers, mainly ADJUSTMENTS employees of aircraft-missile firms and various other metal working enterprises, are subject to review on the basis of the February national Consumer Price Index. However, since the February index of 127.5 was only 0.1 percent higher than the level reached 3 months earlier, only about 30,000 workers will receive an increase, virtually all amounting to 1 cent an hour, on a quarterly basis.

On the basis of the Los Angeles index of 131.4 for February, an additional 10,000 employees of retail food stores in southern California will receive increases amounting to 9 cents an hour for all employees except box boys, who are to receive $4 \frac{1}{2}$ cents an hour. These increases, the first in a series of semiannual adjustments, were determined by the change in the city index since November 1958.

LABOR - D. C.

## Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important icems in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base $1947-49=100$.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

```
Anna, Illinois
Camden, Arkansas
Canton, Ohio
Charleston, W. Virginia
Evansville, Indiana
Garrett, Indiana
Glendale, Arizona
Grand Forks, N. Dakote
Grand Island, Nebraska
```

Huntington, W. Virginia Laconia, New Hempshire Lodi, California Lynchburg, Virginia
Madill, Oklahoma
Madison, Wisconsin
Midalesboro, Kentucky
Middletown, Connecticut
Newark, Ohio

Pulaski, Virginia Ravenna, Ohio Rawlins, Wyoming San Jose, California Sandpoint, Ideno Shawnee, Qklahoma
Shenandoah, Iowa
Youngstown, Onio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables include index numbers for All. Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
