U.S. DEPARTMENT OF LABOR<br>Bureau of Labor Statistics Washington 25, D. C.

## CONSUMER PRICE INDEX FOR MARCH 1961

The Consumer Price Index remained unchanged in March at 127.5 (1947$49=100$ ), as lower average prices for commodities offset higher service rates, the United States Department of Labor's Bureau of Labor Statistics reported today. The index continued to reflect the over-all stability which has characterized consumer prices since last October. Most changes where they did occur between February and March were relatively small. The more important declines were for food and transportation, especially used cars. Advances were recorded for housing and reading and recreation, primarily higher movie admissions. Compared with a year earlier, average retail prices have advanced 1.4 percent and remained at the record highs of February 1961 and December 1960.

FOOD
Lower prices for eggs, fresh vegetables, and dairy products combined with a contraseasonal decline in prices of meats, were largely responsible for the 0.2 percent decrease in the total food index. However, the index for all foods, at 121.2 , was 3.0 percent higher than a year earlier. Further seasonal increases in egg production were reflected in a decline of nearly 5 percent in average egg prices, with decreases reported in nearly all cities. Egg prices, however, were approximately 17 percent above year ago levels, reflecting the results of substantial reductions in laying flocks during 1960.

Meat prices declined an average of 0.4 percent as prices of practically all cuts of beef and pork decreased moderately. The drop in prices was attributed in part to more plentiful supplies, particularly of pork products. Meat prices were still about 5 percent above comparable levels of a year ago, largely due to substantial increases in prices of pork products.

Nearly all dairy products, led by American processed cheese, declined over the period, primarily in response to seasonal influences.

The index of prices for fruits and vegetables rose by 0.5 percent over the period, with small but widespread advances for most items except fresh vegetables. Frozen fruits and vegetables, with an increase of 1.2 percent, registered the greatest gain, principally because of a significant increase in prices of frozen orange concentrate, reportedly due to light production. Fresh fruit prices advanced, mainly reflecting higher prices for apples. Fresh vegetable frices declined on the average, led by a 10 percent decrease in prices of lettuce.

Retail prices of fats and oils rose by 1.9 percent, as all items within this group showed increases, continuing the advance begun in October 1960. Strong export demand and increased government purchases have been important factors contributing to higher prices for edible fats and oils.

HOUS ING
The small advance of 0.1 percent in the housing index was due largely to increases in home purchase costs, housefurnishings, and household operation. Nearly all of the remaining elements of housing were unchanged over the period, including residential rents, gas and electricity, and solid and petroleum fuels. The increase in retail prices of housefurnishings was due to higher prices of household textiles and other nondurable housefurnishings. Average prices of household durable goods were unchanged. In the household operation index, higher water rates more than offset a decline for soaps and detergents.

TRANSPORTATION A decline of 0.3 percent in transportation prices resulted primarily from lower prices for used cars and gasoline. The decline in dealers' selling prices of used cars followed a sharp advance in February. Gasoline prices
showed mixed movements throughout the country, with the net effect being a decrease of 0.5 percent. Prices in Midwest cities, particularly Kansas City, Houston, and St. Louis, returned to regular price levels with the termination of price wars. On the West Coast, however, price wars in such cities as Portland, Seattle, and Los Angeles resulted in sharp reductions in gasoline prices. The weakness in West Coast prices was ascribed to seasonally higher inventories, storage limitations and intensified competition.

READING AND A 0.6 percent rise in the reading and recreation index stemmed almost

RECREATION;
APPAREL AND OTHER GROUPS
entirely from higher charges for movie admissions in several cities as other components within this group registered only minor changes.

Seasonal influences, including the early Easter this year, were primary factors in a rise in apparel prices over the period. Price advances for women's and girls' apparel accounted for much of the overall increase as average prices for shoes and "other" apparel declined.

Scattered increases in fees for professional services and hospital room rates accounted for nearly all of the 0.1 percent increase in medical care costs. Over the year, the medical care index has advanced by 3.0 percent, with increased fees for professional services and higher hospitalization insurance rates leading the rise.

COST-OF-LIVING Earnings of about 150,000 workers, including employees of some major ADJUSTMENT aircraft and missile companies, are subject to review on the basis of the March Consumer Price Index. However, none of these workers will receive an adjustment in earnings, either on a monthly or quarterly basis, since the March Consumer Price Index at 127.5 remained unchanged from February 1961 and December 1960 levels.

## Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1947-49:100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

| Anna, Illinois | Huntington, W. Virginia | Pulaski, Virginia |
| :--- | :--- | :--- |
| Camden, Arkansas | Laconia, New Hampshire | Ravenna, Ohio |
| Canton, Ohio | Lodi, California | Rawlins, Wyoming |
| Charleston, W. Virginia | Lynchburg, Virginia | San Jose, California |
| Evansville, Indiana | Madill, Oklahoma | Sandpoint, Idaho |
| Garrett, Indiana | Madison, Wisconsin | Shawnee, Qklahoma |
| Glendale, Arizona | Middlesboro, Kentucky | Shenandoah, Iowa |
| Grand Forks, N. Dakota | Middletown, Connecticut | Youngstow, Ohio |
| Grand Island, Nebraska | Newark, Ohio |  |

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau' of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.

BLS Regional Offices
