U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington 25, D. C.

CONSUMER PRICE INDEX FOR FEBRUARY 1962

Note: The Consumer Price Index is now computed with the 1957-59 average equal to 100. The February index was 128.6 on the former base of 1947-49=100.

The Consumer Price Index rose by 0.3 percent in February, to a new high of 104.8 (1957-59=100), the U.S. Department of Labor's Bureau of Labor Statistics reported today. A contraseasonal rise in food prices was the most important cause. Higher prices for household textiles, sporting goods, and apparel also contributed to the advance. Consumer prices in February averaged 0.9 percent higher than a year ago, with services continuing to account for the major share of the increase.

The rise of 0.6 percent in average food prices in February was due mainly to greater than seasonal advances for fresh fruits and vegetables and for poultry, as well as contraseasonal increases for beef products and eggs. Fresh milk prices were off seasonally.

As a result of the February increase, the food index, at 103.1 (1957-59=100) was nearly back to the record level of 103.4 reached in July 1961, but was up by only 0.2 percent over February 1961. Average prices for foods purchased for home consumption were down slightly from February 1961, while prices for restaurant meals were higher.

Prices of fresh vegetables increased by more than 4 percent in February, representing on the average, their largest advance in one month since 1951. Sharply higher prices for some vegetables, particularly onions and lettuce, reflected the reduced winter crop, a result of the freeze in December and January in major producing areas. There were also seasonal price reductions for tomatoes and green beans.

Fresh fruit prices averaged more than 3 percent higher over the month. Advances in citrus prices largely reflected crop losses due to the December and January freezes. Compared with a year earlier, February prices of fresh fruits were up by an average of 1.1 percent due largely to increases for oranges and bananas. Fresh vegetables increased by only 0.1 percent over the year, with lower prices for white potatoes almost out-weighing higher prices for most other vegetables.

Prices of meats, poultry, and fish averaged 0.8 percent higher in February, due chiefly to higher chicken prices attributable to a cut back in poultry production. A rise in beef and veal prices marked a continuation of the contraseasonal trend begun last September. However, average prices for beef and veal products were still 1 percent below the level of February 1961.

Declines in average prices for milk reflected competitive pressures stemming from continuing surplus milk production, with price decreases in some cities being ordered by State milk commissions.

Higher prices for housefurnishings and household operation accounted for nearly all of the 0.2 percent gain in housing costs between January and February. Costs of home ownership were down slightly. Retail prices of housefurnishings rose for the first time since October 1961, with increases reported for both mondurable and durable household goods. Higher prices for textile furnishings marked a return to "regular" levels following traditional January "white sales." Further small gains for remts were generally attributed to higher maintenance costs and increased property taxes.

APPAREL AND OTHER GROUPS

clothing.

The index for apparel rose by 0.2 percent between January and February as price increases for some items of women's apparel and for men's and boys' clothing more than offset declines in prices for footwear and other apparel. The rise in prices for women's and girls' apparel reflected chiefly seasonal influences. Resumption of regular prices for men's and boys' wool suits, following seasonal reductions in January and increases for men's undershirts, nylon hose, and boys' shirts, were the principal factors in the advance in prices of men's and boys'

An increase of 0.4 percent in the medical care index was due mainly to higher fees for professional services.

The reading and recreation index rose by 0.6 percent as higher prices for newspapers, sporting goods, and movie admissions were more than sufficient to overcome continuing competitive decreases for television receivers.

Prices for transportation were stable in February, on the average, as lower prices for new and used cars offset increases for gasoline, auto insurance, and registration. Reductions in prices of new cars resulted primarily from larger concessions by dealers. While demand for new cars was reportedly good, new car inventories were slightly more than 1 million cars.

COST-OF-LIVING ADJUSTMENTS

On the basis of the national index, about 77,000 workers, mainly employees of aircraft missile firms, are scheduled to receive 1 cent an hour increases in wage rates. Cost-of-living adjustment allowances

for another 12,000 workers, employed chiefly in metalworking establishments, will remain unchanged.

> Notice: The following January 1962 indexes on the 1947-49 base were revised as shown:

Cereals and bakery products	141.4
Fruits and vegetables	124.3
Housefurnishings	102.7
Apparel	109.1
Footwear	142.7
Transportation	149.4
Public	
Commodities less food	115.9
Services	154.4
Services less rent	156.6
Transportation services	
Other goods and services	133.6

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1957-59 = 100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

Anna, Illinois
Camden, Arkansas
Canton, Ohio
Charleston, W. Virginia
Evansville, Indiana
Garrett, Indiana
Glendale, Arizona
Grand Forks, N. Dakota
Grand Island, Nebraska

Huntington, W. Virginia Laconia, New Hampshire Lodi, California Lynchburg, Virginia Madill, Oklahoma Madison, Wisconsin Middlesboro, Kentucky Middletown, Connecticut Newark, Ohio Pulaski, Virginia Ravenna, Ohio Rawlins, Wyoming San Jose, California Sandpoint, Idaho Shawnee, Oklahoma Shenandoah, Iowa Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables for the U.S. include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
