U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington 25, D. C.

CONSUMER PRICE INDEX FOR OCTOBER 1962

The Consumer Price Index receded slightly from its September peak, with a decline of 0.1 percent in October, the United States Department of Labor's Bureau of Labor Statistics announced today. Lower meat prices were primarily responsible for the decline. The Consumer Price Index for October, at 106.0 percent of the 1957-59 average (130.1 on the former base of 1947-49=100), was 1.3 percent higher than a year earlier, mostly because of price increases for food and services.

Food prices fell 0.5 percent between September and October 1962, largely because of a more than seasonal decline of 2.2 percent in meat prices, as farmers resumed unrestricted marketing of livestock. Prices dropped for all cuts of beef and pork, particularly fresh pork cuts, bacon, chuck roast, sirloin steak, and rib roast.

Fruit and vegetable prices were lower seasonally. Prices of apples and lettuce were off sharply, but prices of oranges and tomatoes advanced. Prices of dairy products, cereals and bakery products, and most other foods rose slightly over the month.

Since October 1961, food prices have risen by 1.8 percent, led by advances for meats, poultry, and fish (4.6 percent); fruit and vegetables, (2.6 percent); and cereals and bakery products (2.2 percent).

OTHER GOODS

AND SERVICES

automobile dealers offered smaller discounts on the new 1963 models than on the Outgoing 1962 cars. Prices of automobile insurance and tires were also higher, while prices of used cars and gasoline declined.

Apparel prices were up 0.3 percent, as higher prices were reported for men's suits, slacks, work clothing, and under-wear, women's coats, suits, and nylon hose; and girls' cotton dresses.

A decline of 0.5 percent in the reading and recreation group index was due mainly to reductions in movie admission charges following the showing of special features, although prices of radios and television sets were also slightly lower.

Housing costs edged up 0.1 percent, with advances of 0.2 percent for rent and 1.1 percent for solid and petroleum fuels.

Medical care prices averaged 0.2 percent higher in October as increases for physicians' fees, hospital rooms, and hospitalization insurance more than offset declines for prescriptions and drugs. The personal care index also rose slightly over the month as price increases for barber and beauty shop services outweighed declines for toilet goods.

ADJUSTMENTS

Wages of 985,000 workers will be increased by 1 cent an hour based on the rise in the index over the quarter ended in October. Of these, 780,000 are in the automobile and automobile parts industries (the majority at General Motors Corp., Ford Motor Co., and Chrysler Corp.), 110,000 are in the farm equipment industry, and most of the remainder are employed by the aerospace industry and a variety of metal-working firms. Increases of 2-4 cents an hour will go to 11,000 other workers as a result of quarterly, semiannual, or annual reviews using the national index.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1957-59 = 100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

Anna, Illinois Camden, Arkansas Canton, Ohio Charleston, W. Virginia Lynchburg, Virginia Evansville, Indiana Garrett, Indiana Grand Forks, N. Dakota Middletown, Connecticut
Grand Island Nebrocks Grand Island, Nebraska

Huntington, W. Virginia Laconia, New Hampshire Lodi, California Madill, Oklahoma Madison, Wisconsin Middlesboro, Kentucky Newark, Ohio

Pulaski, Virginia Ravenna, Ohio Rawlins, Wyoming San Jose, California Sandpoint, Idaho Shawnee, Oklahoma Shenandoah, Iowa Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables for the U.S. include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
