U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics Washington 25, D. C.

CONSUMER PRICE INDEX FOR MAY 1963

The May Consumer Price Index, at 106.2 (1957-59=100), was unchanged for the second consecutive month, the United States Department of Labor's Bureau of Labor Statistics announced today. Prices increased in May for transportation and medical care, but were lower for food, apparel, housing, and reading and recreation. The index was up by 1.0 percent from a year ago, principally because of higher prices for food and housing, although all major types of goods and services shared in the advance.

A decrease of 0.1 percent in average food prices in May was largely the result of reductions in prices of meats, poultry, eggs, and dairy products. The effect of these decreases was partly offset by price rises for most fruits and vegetables and sugar.

Meat, poultry, and fish prices declined 0.3 percent as decreases continued for all types of meats except lamb. Beef and veal prices were down 0.2 percent and pork dropped 0.4 percent, with the sharpest decreases reported for veal cutlets and ham. Lamb prices rose 3.0 percent in May and were 4.0 percent above last year.

Prices for fruits and vegetables advanced 1.7 percent, as most items were higher. Prices of oranges and orange juice continued to rise, and apples, bananas, grapefruit, onions, and tomatoes were also higher. However, there were sharp decreases for fresh corn, lettuce, and strawberries.

Prices of eggs and dairy products continued to decline, with decreases of 11.3 and 0.1 percent, respectively. Sugar prices advanced 6.2 percent and were 9.4 percent above a year ago.

Over the last year, food prices have climbed by 1.0 percent, with restaurant meals up by 2.5 percent, fruits and vegetables 4.1 percent, and cereals and bakery products 1.7 percent. Prices of meats and dairy products continued slightly lower than a year ago in May.

HOUSING

The housing index declined 0.1 percent from April to May, and was
1.0 percent above a year ago. Housefurnishings costs and electricity
were slightly lower over the month, homeownership costs decreased a little, and solid
and petroleum fuel prices dropped 1.7 percent. Household operation costs and residential
rents both increased 0.1 percent.

OTHER GOODS
Apparel prices decreased 0.1 percent in May and were 1.0 percent above last year. A decline of 0.3 percent in women's and girls' apparel prices during the month more than offset slightly higher prices for men's and boys' clothing and footwear.

The medical care index advanced 0.3 percent, as all items edged upward slightly.

The transportation index climbed 0.4 percent in May, as gasoline prices advanced 0.7 percent and used cars increased 0.3 percent. New car prices were unchanged on the average. Reading and recreation prices decreased 0.3 percent, influenced primarily by a decline in movie admission charges.

COST-OF-LIVING ADJUSTMENTS

As a result of the May index, cost-of-living allowances will increase 1 cent an hour for about 90,000 workers, primarily in the meatpacking, aerospace, and chemical industries. An additional 25,000 grocery

department employees of supermarkets will receive a 1 cent increase based on the Los Angeles index.

		1	Gelatin, flavored3 to 4 oz.	9.9	9.8

^{*} Priced only in season.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1957-59 = 100.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

Anna, Illinois Huntington, Vanden, Arkansas Laconia, New Canton, Ohio Lodi, Califor Charleston, W. Virginia Lynchburg, V. Evansville, Indiana Madison, Wise Glendale, Arizona Middlesboro, Grand Forks, N. Dakota Middletown, Grand Island, Nebraska Newark, Ohio

Huntington, W. Virginia
Laconia, New Hampshire
Lodi, California
Lynchburg, Virginia
Madill, Oklahoma
Madison, Wisconsin
Middlesboro, Kentucky
Middletown, Connecticut
Newark, Ohio

Pulaski, Virginia
Ravenna, Ohio
Rawlins, Wyoming
San Jose, California
Sandpoint, Idaho
Shawnee, Oklahoma
Shenandoah, Iowa
Youngstown, Ohio

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables for the U.S. include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
