U.S. DEPARTMENT OF LABOR<br>Bureau of Labor Statistics<br>Washington 25, D. C.

## CONSUMER PRICE INDEX FOR JULY 1963

The Consumer Price Index increased by 0.5 percent in July to a new high, the United States Department of Labor's Bureau of Labor Statistics announced today. Prices advanced for most major types of goods and services, with substantial increases reported for food and gasoline. The July index, at $107.1(1957-59=100)$, was 1.5 percent above a year ago, primarily because of higher prices for food, housing, medical care, and tobacco.

FOOD
Sharp increases in prices of pork and fresh vegetables were the major
cause of a 1.1 percent rise in average food prices in July. Season-
ally low supplies of apples and drought-shortened supplies of lettuce and tomatoes caused their prices to advance. Watermelon prices were substantially lower as production reached its seasonal peak in July. Fresh orange prices continued to decline in July from the high levels which they reached earlier this year, but frozen orange juice concentrate and canned orange juice prices continued to advance.

Meat prices averaged higher because pork prices jumped by more than 5 percent as hog marketings declined seasonally. In spite of their increase in July, average pork prices still were a little lower than a year ago. Beef and veal prices also advanced moderately in July, but were lower than last year at the same time. Prices of eggs were up as production dropped seasonally.

Soft drink prices rose significantly, reflecting earlier advances in industrial sugar prices. Retail prices of sugar dropped in July, but remained 35 percent above a year earlier. On the whole, food prices averaged 2.3 percent higher than a year ago, primarily because of price increases averaging 8 percent for fruits and vegetables, nearly 2 percent for bread, and more than 4 percent for eggs.

HOUSING
The housing index edged up 0.1 percent in July, to a level 1.1 percent above a year earlier. Costs of homeownership continued to rise slightly because of increasing costs of upkeep. Residential rents, gas and electricity, and housefurnishings prices averaged unchanged over the month. Costs of housekeeping services advanced and coal prices were also up slightly.

```
OTHER GOODS
AND SERVICES
```

Transportation costs averaged 0.4 percent higher from June to July. Price increases for gasoline were partially offset by declines in new car prices. Costs of medical care were slightly higher than last month because of increased physicians' and dentists' fees and higher room rates in hospitals. Reading and recreation became somewhat more costly, primarily as a result of higher costs of movie admissions. Prices of tobacco products increased by 0.4 percent in July and were 3.9 percent above last year at the same time. Apparel prices averaged unchanged over the month.

```
COST-OF-LIVING As a result of the July national index, cost-of-living allowances,
ADJUSTMENTS
As a result of the July national index, cost-of-living allowances, based on quarterly reviews, will increase by 1 to 3 cents an hour for about \(1,025,000\) workers, primarily in the automotive, aerospace, and the farm and construction equipment industries. Increases for an additional 25,000 workers, largely in the trucking and cartage industry where most reviews are semiannual or annual, range from 1 to 8 cents. Another 16,000 employees will receive \(2 \frac{1}{2}\) to \(4 \frac{1}{2}\) cents an hour based on reviews of city indexes.
```

## Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by city families of wage earners and clerical workers. It is based on prices of about 300 items which were selected so that their price changes would represent the movement of prices of all goods and services purchased by wage and clerical families; they include all of the important items in family spending. Prices for these items are obtained in 46 cities which were chosen to represent all urban places in the United States; they are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage-earner and clerical-worker families patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 46 cities. Prices of most other commodities and services are collected every month in the 5 largest cities and every 3 months in other cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each city are averaged together with weights which represent their importance in family spending. City data are then combined in the total index with weights based on the 1950 populations of cities they represent. Index numbers are computed on the base 1957-59 $=100$.

The national index (the United States city average) includes prices from the 20 large cities for which separate indexes are published in this report, as well as from the following 26 medium-sized and small cities:

| Anna, Illinois | Huntington, W. Virginia | Pulaski, Virginia |
| :--- | :--- | :--- |
| Camden, Arkansas | Laconia, New Hampshire | Ravenna, Ohio |
| Canton, Ohio | Lodi, California | Rawlins, Wyoming |
| Charleston, W. Virginia | Lynchburg, Virginia | San Jose, California |
| Evansville, Indiana | Madill, Oklahoma | Sandpoint, Idaho |
| Garrett, Indiana | Madison, Wisconsin | Shawnee, Oklahoma |
| Glendale, Arizona | Middiesboro, Kentucky | Shenandoah, Iowa |
| Grand Forks, N. Dakota | Middletown, Connecticut | Youngstown, Ohio |
| Grand Island, Nebraska | Newark, Ohio |  |

Comparisons of city indexes show only that prices in one city changed more or less than in another. The city indexes cannot be used to measure differences in price levels or in living costs between cities.

A description of the index and historical tables of index numbers for the United States city average and for 20 large cities are available on request to the Bureau of Labor Statistics in Washington or any of its regional offices (addresses below). The historical tables for the U.S. include index numbers for All Items, Food, Apparel, and Rent for periods from 1913 to date; and for other groups of goods and services from 1935 to date.
