

U.S. DEPARTMENT OF LABOR  
Bureau of Labor Statistics  
Washington, D. C. 20210

CONSUMER PRICE INDEX FOR JUNE 1964

The initial report on the revised Consumer Price Index, which has been updated to reflect the buying patterns of wage earners and clerical workers in the 1960's, was published for January 1964. The first set of tables (A-1, etc.) presents the new index series covering both families and single workers living alone. The analysis contained in the text of this report is based on these tables. Table B-1 presents a new index series for families only (excluding single workers). Both series A and series B have been linked to the old series as of December 1963 to provide continuous series. The old series, presented in the third set of tables (C-1, etc.) will be discontinued after June 1964. Documents describing the new index series and the major differences between them and the old series are available on request.

The Consumer Price Index rose by 0.2 percent in June, the United States Department of Labor's Bureau of Labor Statistics announced today. Seasonally higher prices for food were chiefly responsible for the increase. Housing and transportation costs also advanced over the month.

At 108.0 percent of its 1957-59 average, the June index was 1.3 percent higher than a year ago. Prices of most consumer goods and services have advanced over the year, except for meats, eggs, sugar, fuel oil, and new cars.

FOOD Food prices rose seasonally by 0.7 percent in June, primarily because of higher prices for fresh fruits and vegetables. Smaller increases were reported for poultry and coffee.

Prices of fresh fruits and vegetables advanced 7.1 percent mainly because of a sharp rise in potato prices, reflecting continued short supplies of old-crop potatoes in storage and delays in spring and summer crops due to adverse weather conditions. Prices of lettuce, cabbage, cucumbers, carrots, green peppers, and spinach also advanced as their development was retarded by cool weather in the West and drought in the East. Watermelons returned to the market at prices substantially higher than at the end of last season, and apple prices rose seasonally. Grapefruit prices advanced as supplies diminished because the Florida harvest neared completion. Prices of tomatoes, strawberries and bananas were lower in June, when supplies became more plentiful.

Poultry prices advanced, reflecting strong demand, and pork products also rose in price after a 9-month decline. Prices of most cuts of beef continued their decline. Coffee prices continued to rise, but eggs, sugar, and frozen fruit drink concentrates were lower.

HOUSING Housing costs advanced 0.2 percent, chiefly as a result of higher home ownership costs and a slight increase in rents. Fuel prices dropped seasonally.

OTHER GOODS AND SERVICES Transportation costs rose 0.1 percent in June, largely because of continuing seasonal increases in used car prices. Dealer's selling prices of new cars declined somewhat, and gasoline prices averaged slightly lower.

Prices of apparel and health care and recreation were unchanged over the month, on the average.

COST-OF-LIVING ADJUSTMENTS About 55,000 workers, mostly in aircraft manufacturing and interstate bus transportation, are scheduled to receive increases of 1 cent an hour, based on the quarterly change in the national index. In addition 1,800 transit workers are scheduled for an increase of 1 cent an hour, based on the quarterly change in the Baltimore index.

1/ Area coverage includes the urban portion of the corresponding Standard Metropolitan Statistical Area (SMSA) except for New York and Chicago where the more extensive Standard Consolidated Areas are used. Area definitions are those established for the 1960 Census and do not include revisions made since 1960.

2/ Foods, fuels, and several other items priced every month in all cities; most other goods and services priced as indicated:

M - Every month  
1 - January, April, July, and October  
2 - February, May, August, and November  
3 - March, June, September, and December

			Chocolate bar-----1 oz.	5.2	5.2
			Eggs, Grade A, large-----doz.	48.5	49.3
			Gelatin, flavored-----3 to 4 oz.	10.4	10.4

\* Priced only in season.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 33 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 50 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 17 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence	Louisiana - Baton Rouge*	Ohio - Findlay
Alaska - Anchorage	Maine - Portland*	Oklahoma - Mangum
California - Bakersfield*	Massachusetts - Southbridge	Oregon - Klamath Falls
Colorado - Denver*	Michigan - Niles	Pennsylvania - Lancaster*
Connecticut - Hartford*	Minnesota - Crookston	South Carolina - Union
Florida - Orlando*	Mississippi - Vicksburg	Tennessee - Nashville*
Indiana - Indianapolis*	New Jersey - Millville	Texas - Austin*
Indiana - Logansport	New York - Kingston	Texas - McAllen
Illinois - Champaign-Urbana*	North Carolina - Durham*	Utah - Orem
Iowa - Cedar Rapids*	North Dakota - Devils Lake	Virginia - Martinsville
Kansas - Wichita*	Ohio - Dayton*	Wisconsin - Green Bay*

\*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 17 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20210 or any of its regional offices (addresses below).
