

U.S. DEPARTMENT OF LABOR  
 Bureau of Labor Statistics  
 Washington, D. C. 20212

The Consumer Price Index rose by 0.1 percent in December, to 108.8 (1957-59=100), the United States Department of Labor's Bureau of Labor Statistics announced today. While prices for many consumer goods and services were up a little, the advance in living costs was caused mostly by higher prices for fresh vegetables, gasoline, and used cars.

Limited supplies of tomatoes, lettuce, potatoes, and cabbage resulting from adverse weather conditions in many parts of the country brought sharply higher prices for these fresh vegetables. However, prices of oranges and other citrus fruits dropped substantially, as increased shipments from both Florida and California reached the market. Fresh beef, pork, and egg prices also declined.

Price increases for gasoline and used cars together with higher public transportation fares caused a significant advance in transportation costs, in spite of a decline in new car prices reflecting larger dealer discounts. Housing costs also rose in December on the basis of a further small climb in rents and homeownership costs, and seasonally higher heating fuel prices.

The December index was 1.1 percent above a year ago, continuing the moderate advance that has characterized consumer prices during the past several years. Prices rose slightly during 1964 on most items that consumers buy, except meats, eggs, sugar, household durables, new cars, and fuel oil. Increased charges for consumer services were again the major factor contributing to higher living costs, with the largest increases occurring in rates for hospital services, recreational services, and auto insurance premiums.

COST-OF-LIVING ADJUSTMENTS Based on the quarterly change in the national Consumer Price Index, about 45,000 workers will receive an increase of 1 cent an hour in their cost-of-living allowances. These include 30,000 aerospace workers and 6,000 chemical workers. In addition, about 1,800 transit workers will receive a 2-cent-an-hour increase, based on the quarterly change in the index for Baltimore.

OTHER BASES The Consumer Price Index for December 1964, 1964 annual averages, and the purchasing power of the consumer dollar on the bases of 1947-49 and 1939 are shown below:

<u>Base</u>	<u>Index</u>		<u>Purchasing Power</u>	
	<u>December 1964</u>	<u>Annual Average</u>	<u>December 1964</u>	<u>Annual Average</u>
1947-49=100 (or \$1.00)	133.5	132.6	\$0.749	\$0.754
1939=100 (or \$1.00)	224.7	223.2	.445	.448

:The first set of the attached tables (A-1 etc.) presents the new index :  
 :series, covering both single workers living alone and families. The anal-:  
 :ysis contained in this report is based on these tables. The index series :  
 :for families only (excluding single workers) was discontinued after :  
 :November 1964. The old series index, U.S. city average, was discontinued :  
 :after June 1964. However, indexes for several cities will be published on :  
 :the old basis for a short time. These are shown in Tables C-1 and C-2. :

1/ Area coverage includes the urban portion of the corresponding Standard Metropolitan Statistical Area (SMSA) except for New York and Chicago where the more extensive Standard Consolidated Areas are used. Area definitions are those established for the 1960 Census and do not include revisions made since 1960.

2/ Foods, fuels, and several other items priced every month in all cities; most other goods and services priced as indicated:

M - Every month.

1 - January, April, July, and October.

2 - February, May, August, and November.

3 - March, June, September, and December.

1/ The old series Consumer Price Index, U.S. city average, has been discontinued with the June 1964 publication. Contrary to original plans, Portland and Scranton will be published on the old series basis temporarily. Indexes for Cincinnati, Houston, Kansas City, and Minneapolis will be published on the old series basis for the duration of 1964 and the first part of 1965, and will be added to the new series index in 1966. The present index for Milwaukee calculated by special arrangement with the City of Milwaukee, is now published on the old series basis, and will also be added to the new series index in 1966.

2/ Foods, fuels, and several other items priced every month in all cities; most other goods and services priced as indicated:

- 1 - January, April, July, and October.
- 2 - February, May, August, and November.
- 3 - March, June, September, and December.

### Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 33 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 50 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 17 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence	Louisiana - Baton Rouge*	Ohio - Findlay
Alaska - Anchorage	Maine - Portland*	Oklahoma - Mangum
California - Bakersfield*	Massachusetts - Southbridge	Oregon - Klamath Falls
Colorado - Denver*	Michigan - Niles	Pennsylvania - Lancaster*
Connecticut - Hartford*	Minnesota - Crookston	South Carolina - Union
Florida - Orlando*	Mississippi - Vicksburg	Tennessee - Nashville*
Indiana - Indianapolis*	New Jersey - Millville	Texas - Austin*
Indiana - Logansport	New York - Kingston	Texas - McAllen
Illinois - Champaign-Urbana*	North Carolina - Durham*	Utah - Orem
Iowa - Cedar Rapids*	North Dakota - Devils Lake	Virginia - Martinsville
Kansas - Wichita*	Ohio - Dayton*	Wisconsin - Green Bay*

\*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 17 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D.C. 20212 or any of its regional offices (addresses below).
