CONSUMER PRICE INDEX FOR SEPTEMBER 1965

The Consumer Price Index rose by 0.2 percent in September, the United States Department of Labor's Bureau of Labor Statistics announced today. Increases in housing costs and apparel prices caused the index to advance, in spite of lower food and automobile prices. At 110.2 percent of its 1957-59 average, the September index was 1.7 percent above a year ago. Although most consumer goods and services have risen in price since September 1964, prices have declined for many food items, utility rates, appliances, new and used cars, and toilet goods, partly because of reductions in Federal excise taxes on some of these items.

During the past ten years, the September index has increased eight times and remained unchanged twice.

Housing costs rose 0.4 percent in September. Bills paid by telephone users in California returned to regular levels, following rebates in August, but the new telephone rates still are lower than they were a year ago. Residential rents increased in several cities and fuel prices rose seasonally.

Apparel prices were up moderately in September, especially for wool coats, suits, and slacks. Shoe prices also advanced, by as much as \$1.00 a pair for men's and women's shoes at retail, reflecting higher leather prices primarily. Transportation costs as a whole remained unchanged, as lower prices for new and used cars offset increases in prices of gasoline and automobile insurance premiums. Medical care costs also were stable for the first time in a year.

Retail food prices averaged 0.4 percent lower in September in spite of a 0.5 percent increase for restaurant meals and other food away from home. Prices of fresh vegetables fell sharply below month-earlier levels, largely because potato prices dropped almost 32 percent to a level 15 percent below September 1964. Prices of most other fresh vegetables also declined with seasonally larger supplies. Fresh fruit prices declined chiefly because of increased supplies of apples, grapes, grapefruit, and fresh orange juice. Retail prices of meats, poultry, and fish remained unchanged on the average, halting the upward trend of the previous eight months. However, seasonally higher prices were recorded for eggs and for dairy products, especially ice cream.

COST-OF-LIVING ADJUSTMENTS About 19,500 workers, mostly interstate bus drivers, will receive increases in their cost-of-living allowances based on the national Consumer Price Index for September. The increase will be 1 cent an hour for most workers, based on the quarterly change in the index; and will range up to 3 cents an hour for some workers, based on the change since last March.

About 4,000 workers will receive an added 2 cents an hour, based on the quarterly change in the New York City index.

OTHER BASES The Consumer Price Index for September 1965 and purchasing power of the consumer dollar on the bases of 1947-49 and 1939 are shown below:

<u>Base</u>	<u>Index</u>	<u>Purchasing Power</u>
1947-49=100 (or \$1.00)	135.2	\$ 0.740
1939=100 (or \$1.00)	227.6	.439

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 33 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 50 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 17 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence	Louisiana - Baton Rouge*	Ohio - Findlay
Alaska - Anchorage	Maine - Portland*	Oklahoma - Mangum
California - Bakersfield*	Massachusetts - Southbridge	Oregon - Klamath Falls
Colorado - Denver*	Michigan - Niles	Pennsylvania - Lancaster*
Connecticut - Hartford*	Minnesota - Crookston	South Carolina - Union
Florida - Orlando*	Mississippi - Vicksburg	Tennessee - Nashville*
Indiana - Indianapolis*	New Jersey - Millville	Texas - Austin*

Illinois - Champaign-Urbana*	North Carolina - Durham*	Utah - Orem
Iowa - Cedar Rapids*	North Dakota - Devils Lake	Virginia - Martinsville
Kansas - Wichita*	Ohio - Dayton*	Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 17 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D.C. 20212 or any of its regional offices (addresses below).
