### CONSUMER PRICE INDEX FOR NOVEMBER 1965

The Consumer Price Index rose by 0.2 percent in November, the U.S. Department of Labor's Bureau of Labor Statistics announced today. At 110.6 percent of the 1957-59 average, the index was at a new record high, 1.7 percent above November 1964. Prices increased over the month for nearly all major categories of consumer goods and services.

### Price Changes, October - November 1965

Housing costs continued to move upward, principally the result of a 0.4 percent rise in homeownership costs. Transportation costs advanced 0.3 percent over the month. There was a 1.0 percent increase in new car prices which resulted from the continuing shift to 1966 models, on which dealers offered smaller discounts than on their remaining stocks of 1965 models. Gasoline and motor oil prices and automobile insurance rates also increased, partially offset by a seasonal decline in used car prices.

Apparel prices averaged 0.3 percent higher in November. The continuing price rise in fall and winter clothing and footwear generally reflects recent factory increases due to higher material and labor costs.

Higher fees for professional medical services and hospital room rates, together with price increases for toilet goods, newspapers, magazines, and textbooks were chiefly responsible for the rise in health and recreation costs.

Food prices remained unchanged for the second consecutive month, as increases in fresh vegetable prices were offset by decreases for fresh fruits and meats. Supplies of green peppers, tomatoes, celery, and lettuce dropped seasonally. Potato prices rose following three consecutive monthly decreases, as yields were less than anticipated because of early freezing weather in Idaho and extreme summer drought in Maine. Prices of fresh fruits declined over the month, influenced chiefly by a drop in banana prices resulting from larger supplies. Prices of oranges and grapefruit also declined sharply over the month, as supplies from large fall crops became available. However, the close of harvesting in California was reflected in higher grape prices. Prices of meat declined 0.4 percent, on the average, in response to increased supplies. The downward movement of all beef and veal prices was attributed to larger supplies and slackening demand caused by the approach of the holiday season. The temporary decline in pork prices, particularly evident in prices of bacon, resulted from seasonally increased production. (Advances in wholesale prices of hogs and pork since October have not yet been reflected in the Consumer Price Index.)

### Price Changes, November 1964 - November 1965

The November index was 1.7 percent higher than in the previous November. Services and food contributed most heavily to this rise. Prices of most services continued their persistent advance during the year, led by household services, automobile insurance rates and medical care services. Services as a whole averaged 2.6 percent above a year ago. Most of the increase in food prices was due to higher prices for meats, led by a 22.1 percent increase in pork prices, as a result of reduced supplies and strong demand. Pork production for the first 10 months of 1965 was about 9 percent less than for the same period in 1964. However, total red meat production was down 3 percent for the same period and retail prices of meats as a whole averaged 10.9 percent higher than a year earlier. The only offsetting influence in food prices was a 2.7 percent decline in prices of fruits and vegetables. Fresh fruit prices decreased 5.4 percent over the year, primarily a result of increased production of oranges, grapefruit, and grapes. Fresh vegetable prices declined nearly 4.0 percent over the year, influenced chiefly by a drop of 12.5 percent in potato prices. Increased supplies forced the price of onions, cabbage, carrots, cucumbers, and peppers downward also.

Although all major components of the index advanced in price over the year, significant declines were noted in new cars, household durables, and toilet goods, partly reflecting the cut in Federal excise taxes, and also in used cars.

COST-OF-LIVING As a result of the National Consumer Price Index for November, over <u>ADJUSTMENTS</u> 200,000 workers will receive increases in their cost-of-living allowances, as follows:

38,000 workers, mostly in aerospace industries, will receive 1 cent an hour, and 80,000, also mostly aerospace workers, will receive 2 cents an hour, all based on the quarterly change in the index.

86,000 meatpacking workers will receive 3 cents an hour, based on the semiannual index change.

In addition, 4,300 workers in Battle Creek, Michigan, will receive a 2-cent increase based on the quarterly change in the Detroit index and 3,000 transit workers will receive 2-1/2 cents based on the quarterly change in the index for Washington, D. C.

OTHER BASES The Consumer Price Index for November 1965 and purchasing power of the consumer dollar on the bases of 1947-49 and 1939 are shown below:

Base	Index	Purchasing Power
1947-49=100 (or \$1.00)	135.7	\$ 0.737
1939=100 (or \$1.00)	228.4	.438

### Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 33 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 50 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1957-59=100, and are also available on the bases of 1947-49=100 and 1939=100.

The national index (the United States city average) includes prices from the 17 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence	Louisiana - Baton Rouge*	Ohio - Findl <b>a</b> y
Alaska – Anchorage	Maine - Portland*	Oklahoma - Mangum
California - Bakersfield*	Massachusetts - Southbridge	Oregon - Klamath Falls
Colorado - Denver*	Michigan - Niles	Pennsylvania – Lancaster*
Connecticut - Hartford*	Minnesota - Crookston	South Carolina - Union
Florida - Orlando*	Mississippi – Vicksburg	Tennessee - Nashville*
Indiana - Indianapolis*	New Jersey – Millville	Texas - Austin*
Ind <b>iana -</b> Log <b>a</b> nsport	New York - Kingston	Texas - McAllen
Illinois - Champaign-Urbana*	North Carolina - Durham*	Utah - Orem
Iowa - Cedar Rapids*	North Dakota - Devils Lake	Virginia – Martinsville
Kansas - Wichita*	Ohio - Dayton*	Wisconsin - Green Bay*

### \*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 17 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D.C. 20212 or any of its regional offices (addresses below).
