

U.S. DEPARTMENT OF LABOR
J. D. Hodgson, Secretary
BUREAU OF LABOR STATISTICS
Geoffrey H. Moore, Commissioner

the consumer price index

a monthly report on consumer price movements including statistical tables and technical notes.

THE CONSUMER PRICE INDEX FOR FEBRUARY 1971

The Consumer Price Index rose 0.2 percent in February to 119.4 percent of its 1967 base. The increase in January was 0.1 percent. The effects of higher prices for food, apparel, and most consumer services were moderated by declines in mortgage interest rates, and prices of used cars and gasoline. The February CPI was 4.8 percent higher than it had been a year ago, less than the 6.3 percent rate in February 1970, and the smallest 12-month rise since February 1969.

The seasonally adjusted increase in February was also 0.2 percent. This rate was the same as the increase last July and August and below monthly increases ranging from 0.3 to 0.6 percent during the September-January period. Food prices increased 0.4 percent, the largest rise since last May. Prices of commodities other than food edged down 0.1 percent. Prices of consumer services rose 0.2 percent, the smallest rise since mid-1967.

 $\underline{1}/$ All percent changes are computed from 1967=100 indexes. Percent changes for services are based on unadjusted indexes.

Food

Retail food prices, which usually decline slightly in February, rose 0.3 percent because of higher prices of food purchased in grocery stores as well as restaurant meals and snacks consumed away from home. Prices of grocery store foods, which usually register a small decline in February, rose 0.4 percent. In January, they averaged unchanged instead of showing their usual large seasonal advance. Except for increases in September and December 1970 and February 1971, prices of grocery store foods had been declining since May 1970.

Prices of fresh fruits and vegetables rose substantially in February. The mid-January freeze in Florida, which cut supplies of green peppers, cucumbers, cabbage, tomatoes, and citrus fruits, was largely responsible for the increase. Prices of beef and veal rose more than is usual for February as production and cold storage holdings declined over the month. Contrary to their usual seasonal increases, pork, poultry and egg prices declined in February. The decrease in pork prices was not as great as it has been in recent months. Pork production fell in February, but cold storage holdings increased. Prices for poultry declined for the second consecutive month, because of increased production of frying chickens. Egg prices dropped as stocks of shell eggs increased 6 percent during January.

Instead of declining as they usually do in February, prices of dairy products increased 0.1 percent. Heavy demand for cheese was largely responsible for the rise. Prices for most cereal and bakery products continued to advance in February. White bread, used as a price leader to encourage sales, posted the only price decline.

Prices of restaurant meals and snacks consumed away from home increased 0.4 percent in February, about the same as the average monthly rise since mid-1970, and smaller than the rise during the first six months of 1970. Over the year, prices of restaurant meals increased 6.0 percent, compared with a rise of 0.4 percent in the prices of grocery store foods. Restaurant owners usually attribute higher prices to higher operating costs. The increase in wages is one contributing factor. On February 1, the Federal minimum wage increased to \$1.60 an hour from \$1.45 for restaurant workers who were brought under the Fair Labor Standards Act of 1966. In the past 3 years, average hourly earnings for nonsupervisory workers in eating and drinking places increased about 7 percent each year.

Commodities less food

The seasonally adjusted decline in prices of nonfood commodities was the first since July 1965. The February decline of 0.1 percent compares with an increase of 0.2 percent in January and increases of 0.3 to 0.6 percent during the last 4 months of 1970. Prices of durables also declined 0.1 percent on a seasonally adjusted basis in February as prices of used cars and homes fell. Average new car prices which advanced steadily during the preceding 7 months were unchanged as dealer concessions on new cars increased about as much as they usually do in February. Production and sales of new cars continued to recover from low levels recorded during the General Motors strike. Inventories rose in February but were still slightly below the February 1970 level.

Prices of household durables increased 0.3 percent in February; prices were unchanged in January and up 0.1 percent in December. Furniture prices, which were down 0.3 percent in January, rose by the same amount in February. Many sales prices were returned to regular levels and higher prices were reported on new lines of furniture as a result of earlier wholesale price increases. The increase in steel prices was an important factor in the rise at both wholesale and retail in furniture items such as bedding which contain large amounts of steel. Retail prices of floor coverings, continued to rise, in part, as a result of higher wholesale prices of vinyl floor products. Prices of most major home appliances rose again.

In February, retail prices of nondurable goods other than food were the same as in January on a seasonally adjusted basis and 0.1 percent higher than those for December 1970. Prices of gasoline declined, but prices of most other groups of commodities, particularly women's apparel, rose after seasonal adjustment. The decrease in gasoline prices occurred chiefly on the West Coast and in Detroit.

Despite a decline in prices of footwear, retail apparel prices rose 0.3 percent, seasonally adjusted, in February. The increase, which followed a decline of 0.2 percent in January, was less than the increases recorded in the fall of 1970. Prices of women's apparel advanced 0.7 percent in February and men's apparel edged up only 0.1 percent; they both fell in January. Women's spring coats, blouses, and cotton slacks showed large increases. Some items of men's clothing were higher, but others were on sale.

Services

The rise in charges for consumer services slowed noticeably in February from the 0.6 percent average monthly increase for the past 10 months. This slowing resulted entirely from the decline of 0.5 percent in the household service category which, in turn, was due to a substantial drop in mortgage interest rates.

After a decline of 1.4 percent in January, mortgage interest rates fell 3.0 percent in February to a level 0.5 percent lower than a year ago. This decline marked the first time since January 1967 that mortgage rates were lower than year-earlier levels. Improvement in the mortgage market in the second half of 1970 resulted in a lowering of the interest rate ceiling on FHA (excluding 0.5 percent for insurance) and VA loans early in December from 8.5 to 8.0 percent. The ceiling was reduced again in early January to 7.5 percent and in mid-February to 7.0 percent. The February decline in the CPI for mortgage interest rates reflected the early January reduction in the VA rate ceiling and the December reduction in the FHA rate ceiling as well as some decreases in rates on conventional mortgages. Usually a lag of 1 month in VA mortgage and 2 months on FHA mortgages occurs before a majority of loans are made predominantly at the lower rates.

Charges for most other household services continued to rise. The increase of 0.6 percent in rent in February was almost as large as it was in December. In both of these months, the rent index was influenced by the increase for both controlled and uncontrolled rental units approved last fall in New York City. Rent was also higher in other cities such as Detroit and San Diego. Residential gas and electricity rates increased in a number of cities. Higher interstate telephone rates, which applied to all 48 contiguous States, were largely responsible for the 1.0 percent increase in residential telephone rates.

Costs of transportation services continued to advance sharply. Auto insurance rates increased 2.8 percent in January and rose another 3.0 percent in February. Higher premiums for both physical damage and liability insurance went into effect in a number of cities. Parking fees advanced 2.4 percent in February, considerably more than in recent months. Private lot and municipal parking rates were raised in cities such as Detroit, New York, Seattle, and Baton Rouge. One of the factors contributing to increases in municipal fees has been the growing need of cities for additional revenues.

Charges for medical care services rose 0.7 percent, about the same as the average monthly rise over the past year. Fees for professional services and cost of most services connected with hospital care continued to rise in February. Among other services, the cost of funeral services rose 1.0 percent as a result of higher prices for caskets.

Seasonally adjusted monthly percent changes in the index and some of its major components for the past 6 months are given in the following tabulation:

	February	January	December	November	October	September

 $\underline{1}/$ All percent changes are computed from 1967=100 indexes. Percent changes for services are based on unadjusted indexes.

Cost-of-Living Adjustments

Approximately 551,000 workers will receive cost-of-living wage increases based on the national or city Consumer Price Indexes for February. About 530,000 workers, including 527,000 employees in the trucking industry, will receive annual hourly pay increases ranging from 3 to 8 cents based on the national index. An additional 13,000 employees in various industries will get quarterly, or semiannual pay increases of 2 to 7 cents also based on the national index.

About 5,500 retail and wholesale bakery employees in New York will receive a pay increase of 2 percent based on the index for the New York-Northeastern New Jersey area.

Approximately 17,000 other workers whose escalator reviews are tied to the February index will not receive an adjustment because they have already received the maximums stipulated in their contracts.

A NOTE ABOUT CALCULATING INDEX CHANGES

Effective with the February 1970 release, and continuing thereafter, percent changes expressed as annual rates will be computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Movements of the indexes from one date to another are usually expressed as percent changes rather than changes in the index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The following example illustrates the computation of index point and percent changes.

Index Point Change		Percent Change
February 1971 CPI (1967=100) less January 1971 index index point difference =	119.4 119.2 0.2	Index point difference divided by the index for the previous period: $\frac{119.4 - 119.2}{119.2} \times 100 = 0.2$

Effective with the July 1970 release, and continuing thereafter, seasonally adjusted percent changes in the U.S. All Items Index will be based on seasonal adjustment factors and seasonally adjusted indexes carried to two decimal places. This procedure will help to eliminate rounding error in the percent changes.

^{1/} Area coverage includes the urban portion of the corresponding Standard Metropolitan Statistical Area (SMSA) except for New York and Chicago where the more extensive Standard Consolidated Areas are used. Area definitions are those established for the 1960 Census and do not include revisions made since 1960.

Note: The Consumer Price Index cannot be used for measuring differences in living costs among areas; it indicates price change within areas. Estimates of differences in living costs among areas are found in the family budgets.

^{2/} Foods, fuels, and several other items priced every month in all cities; most other goods and services priced as indicated:

M - Every month.

m - Every month.

Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. 1/ The table below shows standard errors for monthly, quarterly, and annual percent changes in the CPI for all items and for nine commodity groupings based on 1970 averages. The figures may be interpreted as follows: the changes are about 95 out of 100 that the percent change in the CPI as computed differs from the corresponding "complete coverage" change by less than twice the standard error.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. The table below indicates, for example, that a month-to-month change of 0.1 percent in the all-items CPI is significant. Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent is almost always significant, regardless of the time period to which it relates.

Average Standard Errors of Percent Changes in the CPI Based on 1970 Data

Component		Standard Error		
Component	Monthly Change	Quarterly Change	Annual Change	
All Items	.04	.06	.09	
Food at home	.08	.13	.18	
Food away from home	.11	.21	.36	
Housing	.06	.10	.19	
Appare1	.15	.26	.29	
Transportation	.10	.16	.19	
Medical care	.12	.15	.29	
Personal care	.13	.23	.34	
Reading and recreation	.11	.17	.23	
Other goods and services	.10	.16	.41	

This replaces the table of average errors based on 1969 data which was included in the CPI report through December 1970.

^{1/} The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," Journal of the American Statistical Association, September 1967.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1967=100, and are also available on the base of 1957-59=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence
Alaska - Anchorage
California - Bakersfield*
Colorado - Denver*
Connecticut - Hartford*
Florida - Orlando*
Indiana - Indianapolis*
Indiana - Logansport
Illinois - Champaign-Urbana*
Iowa - Cedar Rapids*
Kansas - Wichita*

Louisiana - Baton Rouge*
Maine - Portland*
Massachusetts - Southbridge
Michigan - Niles
Minnesota - Crookston
Mississippi - Vicksburg
New Jersey - Millville
New York - Kingston
North Carolina - Durham*
North Dakota - Devils Lake
Ohio - Dayton*

Ohio - Findlay
Oklahoma - Mangum
Oregon - Klamath Falls
Pennsylvania - Lancaster*
South Carolina - Union
Tennessee - Nashville*
Texas - Austin*
Texas - McAllen
Utah - Orem
Virginia - Martinsville
Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices (addresses below).
