the consumer price index

a monthly report on consumer price movements including statistical tables and technical notes.

THE CONSUMER PRICE INDEX FOR JULY 1971

The Consumer Price Index rose 0.2 percent in July to 121.8 of its 1967 base. Lower prices for apparel and some other nonfood commodities moderated the effects of higher prices for food, tobacco products, and household and medical care services. The July CPI was 4.4 percent higher than a year ago.

On a seasonally adjusted basis, the increase in the July index was also 0.2 percent. The rate of increase in the indexes for food and for nonfood commodities each slowed to 0.1 percent. Charges for services advanced 0.5 percent, the same as in June.

For the 6 months ending in July the CPI rose at a seasonally adjusted annual rate of 3.9 percent, compared to 4.9 percent for the 6 months ending in January 1971, and 5.5 percent for the 6 months ending in July of last year. In the 3 months ending in July, the CPI rose at a seasonally adjusted annual rate of 4.9 percent, compared with 2.8 percent for the 3 months ending in April. The average of these 3-month changes approximates, of course, the 6-month change for the period ending in July 1971.

Food

Prices of food purchased in grocery stores rose 0.6 percent in July. All but 0.2 percent of the increase was due to seasonal factors. Egg prices rose substantially and large increases were posted for bakery products and some dairy products. Increases in pork, beef, and fruit and vegetable prices were not as large as usual for July.

Prices of meats averaged 0.5 percent higher with less-than-seasonal increases of 0.4 percent for beef and veal, and 1.1 percent for pork. Beef and veal production during June increased 9 percent over May and stocks in cold storage rose 2 percent compared to decreases of 10 and 7 percent in June 1970 and 1969 respectively. The rise in pork prices was smaller than usual as supplies were ample to meet the demand.

Fruit and vegetable prices rose 0.7 percent, about half the usual July increase. Fresh fruit prices moved upward more than seasonally, but fresh vegetable prices declined contraseasonally in July. The early completion of the citrus harvest in Florida and smaller shipments from Arizona limited grapefruit and orange supplies. Small early season crops caused grapes to be introduced at higher prices. Lower prices for fresh vegetables, particularly, green peppers, cucumbers, cabbage, and white potatoes, were caused by greater-than-usual supplies. Prices of processed fruits and vegetables rose 0.9 percent as a result of low stocks of most processed fruit and vegetable items. Retail prices of frozen orange juice continued to rise in response to additional price increases at wholesale.

Egg prices averaged 6.2 percent higher as production and cold storage holdings declined in June. Prices of dairy products rose instead of declining seasonally. Sharp price increases for evaporated milk and ice cream, and fractional advances in prices of delivered milk and cheese more than offset small price declines for skim milk, whole milk purchased at grocery stores, and butter. Retail prices of evaporated milk continued to adjust to a wholesale price increase of over 5 percent in May.

Prices of restaurant meals and snacks continued their more moderate rate of advance that began in April 1970. Restaurant meal prices rose 0.4 percent and prices of snacks rose 0.6 percent.

Commodities less food

The index for nonfood commodities declined 0.1 percent in July, chiefly as a result of lower prices for apparel, textile housefurnishings, gasoline, and autos—both new and used. These declines more than offset increases for items such as tires, tobacco products, books, and magazines. Prices of houses and household durables rose at a slower pace than in recent months. On a seasonally adjusted basis, the nonfood commodity index rose 0.1 percent. This advance compares with changes in the first 6 months of this year which have ranged from a decline of 0.1 percent to increases of 0.2 to 0.3 percent except in May when the increase was 0.7 percent.

Summer clearance sales were responsible for most of the July decline of 0.7 percent in apparel prices. Clearance sales, which started in June mostly on women's and girls' apparel, spread in July to men's and boys' apparel. Sale prices were extensive in men's year-round and tropical suits, shirts, and slacks, and in women's dresses, skirts, and bathing suits. In the women's apparel category, declines were offset partially by higher prices for undergarments, gloves, and handbags. Women's and girls' shoe prices, which moved down in June, declined further in July as additional stores began to clear out seasonal and discontinued styles. Scattered sales also were reported in July in men's and boys' shoe prices. Mid-year white sales were an important factor in the decline of 0.8 percent in prices of textile housefurnishings.

Gasoline prices, which advanced in May and June, declined 0.8 percent in July. Widespread price wars underscored the inability of the petroleum industry to maintain their "normal" posted prices for gasoline. Partial restoration in the chronic price war cities such as Chicago, San Francisco, and Pittsburgh, was wiped out by price wars in Detroit and a number of other cities.

After advancing in the preceding 4 months, used car prices began their seasonal decline in July. The decline of 0.1 percent in new car prices, however, was smaller than usual for July. Dealers' concessions, which rose sharply from February through April, have remained relatively stable over the past 3 months. After moving down slightly in the first 6 months of this year, tire prices rose 1.2 percent in July. Prices this July were 3.4 percent above July of last year. Higher costs for labor and materials, and rising distribution and transportation costs contributed to the increase in tire prices.

Prices for household durables rose 0.1 percent in July compared with increases of 0.3 to 0.4 percent from January through June. The slowdown occurred primarily because furniture prices remained unchanged in July, after advancing steadily since January. End-of-season sales for some items, particularly aluminum folding chairs, offset continued increases for other items such as bedroom furniture and baby cribs. Prices of floor coverings edged down 0.1 percent as a result of weak demand for soft surface floor coverings. Household appliance prices, which had increased strongly in the quarter ending in June, moved up 0.1 percent. Prices of other household durables rose 0.3 percent in July. Significant price increases in the group were registered for venetian blinds and stainless steel flatware. These increases were offset partially by price decreases for electric drills, lawn mowers, and carpet sweepers.

In other categories of nonfood commodities, prices of tobacco products rose a substantial 1.3 percent because of higher state and local taxes in some areas and a new tax in New York City. Newspaper prices advanced 0.3 percent because of higher labor and truck maintenance costs.

Services

Over four-fifths of the 0.5 percent rise in the services index resulted from increases in household and medical care services. Charges for household services other than rent rose 0.7 percent, about the same as in May and June. Telephone rates, which accounted for about a third of the July increase, rose 2.3 percent, largely the result of a substantial increase in New York State. The mortgage interest rate index, which had trended down in the first 6 months of this year, rose 0.3 percent in July. The increase was entirely due to higher rates for conventional mortgages. Rates for FHA and VA backed mortgages remained unchanged at the officially established ceilings of 7.5 and 7.0 percent respectively. Reflecting annual rate changes in some cities, property taxes rose 0.5 percent; property insurance rates advancing 1.1 percent, continued the sharp upward pace which began in March of this year. Charges for domestic service and home repairs were also higher. The increase of 0.8 percent in home repair charges, although substantial, was about half as large as in June.

Charges for medical care services rose at about the same rate as the average monthly increase this year. Reflecting the most recent round of mid-year labor contract negotiations, hospital daily service charges were up 1.2 percent. Dentists' fees rose 0.9 percent--much sharper than in recent months; costs for dental supplies, especially filling materials, contributed to the rise. Physicians' fees rose 0.3 percent.

Charges for transportation services rose slightly in July, mostly due to higher charges for auto repairs. The increase in charges for transportation services for the 3-month period ending in July was the smallest since mid 1969. The rise in auto insurance rates this year, which was substantial through April, tapered off in May and June and was a slight 0.1 percent in July. Parking fees showed no change in July for the second consecutive month. Local transit fares also were unchanged in July--the third month of stability.

NOTE: The July index is based entirely on prices prevailing before the wage-price freeze was announced by the President on August 15. The August index will be based on prices collected both before and after the freeze because pricing for the CPI is done throughout the month.

Seasonally adjusted monthly percent changes in the index and some of its major components for the past 3 months, 3-month changes for the past half year, and 6-month changes for the past year are given in the following tabulation:

	l-month change			change ending 971	6-month	6-month change ending:

^{*} Not seasonally adjusted.

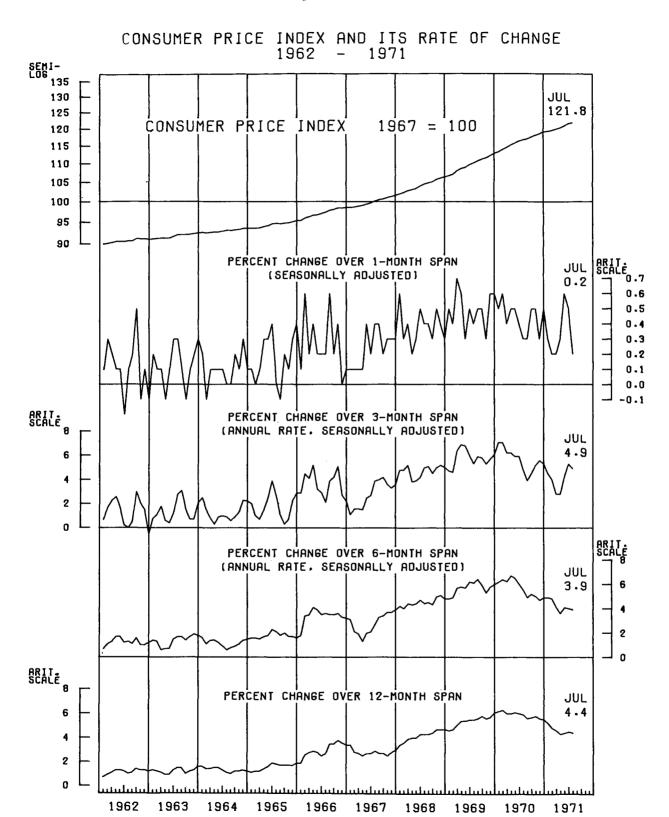

A NOTE ABOUT CALCULATING INDEX CHANGES

Effective with the February 1970 release, and continuing thereafter, percent changes expressed as annual rates will be computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Movements of the indexes from one date to another are usually expressed as percent changes rather than changes in the index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The following example illustrates the computation of index point and percent changes:

Index Point Change		Percent Change
July 1971 CPI (1967=100) less June index index point difference =	$\begin{array}{c} 121.8 \\ \underline{121.5} \\ 0.3 \end{array}$	Index point difference divided by the index for the previous period: $\frac{121.8 - 121.5}{121.5} \times 100 = 0.2$

Effective with the July 1970 release, and continuing thereafter, seasonally adjusted percent changes in the U.S. All Items Index will be based on seasonal adjustment factors and seasonal adjusted indexes carried to two decimal places. This procedure will help to eliminate rounding error in the percent changes.

Also includes hotel and motel rates not shown separately.

Also includes home purchase costs not shown separately.

Also includes pine shelving, furnace air filters, packaged dry cement mix, and shrubbery not shown separately. 4/ Also includes venetian blinds, window shades, nails, carpet sweepers, utility pails, air deodorizers, steel wool scouring pads, envelopes, reupholstering, and moving expenses.

^{5/} Also includes radios at 6/ Priced only in season. 7/ Also includes men's sw Also includes radios and television sets, shown separately under reading and recreation.

^{7/} Also includes men's sweaters, sport shirts, women's and girls' lightweight coats, women's slacks, cocktail dresses, bathing suits, girls' robes, cotton and polyester blend skirts, shorts, earrings, and zippers not shown separately.

^{8/} Also includes storage batteries and drivers' license fees not shown separately.
9/ Includes prices for water pump replacement, motor tune-up, automatic transmission repair, exhaust system repair, front end alignment, and chassis lubrication.

^{10/} Also includes outboard motors, nondurable toys, college tuition fees, paperback books, and college textbooks, not shown separately.

Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. 1/ The table below shows standard errors for monthly, quarterly, and annual percent changes in the CPI for all items and for nine commodity groupings based on 1970 averages. The figures may be interpreted as follows: the chances are about 95 out of 100 that the percent change in the CPI as computed differs from the corresponding "complete coverage" change by less than twice the standard error.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. The table below indicates, for example, that a month-to-month change of 0.1 percent in the all-items CPI is significant. Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent is almost always significant, regardless of the time period to which it relates.

Average Standard Errors of Percent Changes in the CPI Based on 1970 Data

Component				
	Monthly Change	Quarterly Change	Annual Change	
All Items	.04	.06	.09	
Food at home	.08	.13	.18	
Food away from home	.11	.21	.36	
Housing	.06	.10	.19	
Apparel	.15	.26	.29	
Transportation	.10	.16	.19	
Medical care	.12	.15	.29	
Personal care	.13	.23	.34	
Reading and recreation	.11	.17	.23	
Other goods and services	.10	.16	.41	

This replaces the table of average errors based on 1969 data which was included in the CPI report through December 1970.

^{1/} The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," Journal of the American Statistical Association, September 1967.

Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 Standard Metropolitan Statistical Areas (SMSA's) and 17 smaller cities, which were chosen to represent all urban places in the United States, including Alaska and Hawaii. They are collected from grocery and department stores, hospitals, filling stations, and other types of stores and service establishments which wage earners and clerical workers patronize.

Prices of foods, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the 5 largest SMSA's and every 3 months in other SMSA's and cities. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items which change in price infrequently. Prices of most other goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. SMSA and city data are then combined in the total index with weights based on the 1960 populations of SMSA's and cities they represent. Index numbers are computed on the base 1967=100, and are also available on the base of 1957-59=100.

The national index (the United States city average) includes prices from the 23 SMSA's for which separate indexes are published in this report, as well as from the following additional locations:

Alabama - Florence
Alaska - Anchorage
California - Bakersfield*
Colorado - Denver*
Connecticut - Hartford*
Florida - Orlando*
Indiana - Indianapolis*
Indiana - Logansport
Illinois - Champaign-Urbana*
Iowa - Cedar Rapids*
Kansas - Wichita*

Louisiana - Baton Rouge*
Maine - Portland*
Massachusetts - Southbridge
Michigan - Niles
Minnesota - Crookston
Mississippi - Vicksburg
New Jersey - Millville
New York - Kingston
North Carolina - Durham*
North Dakota - Devils Lake
Ohio - Dayton*

Ohio - Findlay
Oklahoma - Mangum
Oregon - Klamath Falls
Pennsylvania - Lancaster*
South Carolina - Union
Tennessee - Nashville*
Texas - Austin*
Texas - McAllen
Utah - Orem
Virginia - Martinsville
Wisconsin - Green Bay*

*Standard Metropolitan Statistical Area

Comparisons of indexes for individual SMSA's show only that prices in one location changed more or less than in another. The SMSA indexes cannot be used to measure differences in price levels or in living costs between areas.

A description of the index and historical tables of index numbers for the United States city average and for 23 large SMSA's are available on request to the Bureau of Labor Statistics, Washington, D. C. 20212 or any of its regional offices.
