# Price Movements

January 1976

The Consumer Price Index rose 0.2 percent in January before seasonal adjustment to 166.7 percent of its 1967 base. The CPI in January was 6.8 percent higher than in January 1975.

## Seasonally adjusted changes

On a seasonally adjusted basis, the CPI rose 0.4 percent in January. This compares with an average monthly increase of 0.6 percent in the last 3 months of 1975. Higher charges for a wide variety of consumer services were responsible for most of the rise in the January CPI. Prices of some foods and fuels declined.

The food index declined 0.2 percent in January after seasonal adjustment. This was the first decline in 5 months and followed increases of 0.6 percent in each of the 2

preceding months. Prices of grocery store foods—which account for the major portion of the food index—declined 0.4 percent after seasonal adjustment. Pork and poultry fell sharply in January. Prices for beef and fresh vegetables declined in January following increases in December. The cereal and bakery products index increased for the first time since mid-1975, and the prices of dairy products continued to rise. Prices of restaurant meals and snacks away from home rose 0.8 percent after seasonal adjustment, the largest increase since early 1975.

The index for commodities other than food increased 0.2 percent in January after seasonal adjustment. This increase compares with a 0.4 percent rise in December and increases of 0.3 percent in each of the prior 3 months. The slower rise in January reflected declines, after seasonal adjustment, in the indexes for gasoline and motor oil and

<sup>1</sup> Seasonal adjustment factors have been recalculated to reflect developments during 1975. For this reason, some of the seasonally adjusted figures shown above and elsewhere in this

release differ from those previously reported. In addition, changes have been made in the procedures used to seasonally adjust the CPI and its major components. See page 27 for details.

fuel oil and coal. The new car index declined slightly in January, following large increases in recent months. The used car index, however, increased slightly in January, following 4 months of small declines. The index for apparel commodities rose more than in December. Among nonfood commodities, tobacco products continued to rise rapidly, and increases for appliances, floor coverings, and toilet goods were larger than in recent months.

The services index increased 1.1 percent in January after seasonal adjustment. Charges for consumer services increased 0.6 percent in December and 1.0 percent in November. All major service categories, except rent, increased more in January than in December. Household services other than rent increased 1.0 percent in January, reflecting in part the postal rate increase which went into effect on December 31. A large part of the 2.2-percent rise in the transportation services index resulted from a sharp increase in automobile insurance rates. The medical care index increased 1.2 percent compared with 1.0 percent in December.

#### Monthly change in detail (not seasonally adjusted)

*Food.* The index for food purchased in grocery stores declined 0.1 percent in January, before seasonal adjustment. The decline was due primarily to lower prices for pork and poultry. Sugar prices continued to decline along with other foods such as salad oil, margarine, and cola drinks. These declines were partially offset by price increases for fresh vegetables, dairy products, eggs, and coffee.

Pork prices—which usually show a large rise in January—declined 4.3 percent before seasonal adjustment. This was the third consecutive monthly decline. Consumer demand for pork slackened in late 1975 because of high prices and increased supplies of beef and poultry. With sluggish movement of pork products at the retail level, cold storage holdings rose from September 1 to December 1, 1975, and produced downward pressure on prices in the wholesale market. Poultry prices declined a contraseasonal 2.4 percent in January as supplies were ample for the demand.

Beef prices increased 0.1 percent, much less than usual for January. Although beef prices have been fluctuating since mid-1975, the overall trend has been downward as a result of record beef production. Commercial cattle slaughter during the final quarter of 1975 was a record 11.1 million head, 5 percent higher than the previous record of the third quarter and 10 percent above a year earlier. The increased level was due to heavy slaughter of nonfed steers, heifers, and cows. Fed steers and heifers made up only about 46 percent of October-December slaughter, compared with almost 50 percent last summer and almost 80 percent in 1972 and 1973. Although placements of cattle on feed generally have been up since the spring of 1975, all the increase has gone into inventories and fed cattle marketings have remained low.

Fresh fruits and vegetable prices also usually show large increases in January. This January, fresh vegetable prices rose 1.8 percent, less than they usually do. Prices rose sharply for onions, cabbage, and celery, but large supplies of cucumbers, peppers, tomatoes, and lettuce resulted in lower prices for these fresh vegetables. Fresh fruit prices showed no change as a 3.5-percent decline in prices of fresh oranges largely offset increases in prices for apples and other fruits.

The index for cereal and bakery products decreased 0.1 percent in January before seasonal adjustment. The decrease reflected lower prices for rice resulting from record U.S. and world rice crops for the 1975-76 season. Lower costs of ingredients, particularly sugar, contributed to declines in prices of some bakery products such as layer cake and cinnamon rolls, but bread prices increased in January.

The rapid rise in prices of dairy products, which began after mid-1975, continued into January of this year. The major reason for the increase has been the residual effect of past increases in the cost of fluid milk. The rise in fluid milk prices reflected reduced output resulting from cutbacks of high nutrient feeds. Prices of dairy products at the producers' level began to move up in the spring of 1975 and continued to rise rapidly through the rest of 1975, for an increase of 16.8 percent for the 12 months ending in December 1975. At the retail level, prices of dairy products rose 6.6 percent from December 1974 to December 1975. In January 1976, producers' prices for dairy products declined as prices of fluid milk at the farm level moved down for the first time since mid-1975. Butter prices, particularly, fell sharply as a result of increasing competitive pressure from margarine. Margarine prices have been declining due to abundant supplies of domestic and foreign oils.

*Commodities other than food.* The index for nonfood commodities declined 0.3 percent in January, before seasonal adjustment. Prices declined for clothing, used cars, and gasoline. Prices were higher for tobacco products, houses, and some other commodities such as toilet goods, housekeeping supplies, household durables, and home maintenance and repair commodities.

Apparel prices declined 1.7 percent, somewhat less than usual for January. Prices declined for seasonal items such as men's and boys' coats, slacks, sport jackets and suits, and for women's and girls' coats and wool skirts. Clearance sales of women's and girls' dresses, however, were less widespread than in January 1975. Also, prices increased for some basic items such as men's undershirts, handkerchiefs, and boys' dungarees made of cotton or cotton blend fabrics. Clearance sales accounted for declines in prices of textile housefurnishings, particularly sheets and pillows.

The used car index declined in January for the fourth consecutive month. The January decline of 3.3 percent was somewhat smaller than is usual for this month. The new car index increased 0.1 percent before seasonal adjustment,

compared with increases of 2.1, 1.1, and 2.7 percent in the 3 preceding months. After seasonal adjustment the new car index declined for the first time since July 1975. Increases in concessions for 1976 model cars just about offset higher prices for a few 1976 model cars that were priced for the first time in January.

Instead of the usual sharp rise, the index for gasoline and motor oil declined 0.2 percent in January—the fourth consecutive monthly decline—due to continued excess of refinery supplies over demand. Efforts by both non-major brand and major brand refiners to gain a larger percentage of the consumer market have contributed to lower prices. Nonmajor brand stations can sell gasoline at lower prices because they deal with supplies directly and have lower operating overheads. To meet this competition, the major brand refiners are cutting prices and boosting retail sales incentives. A number of oil companies, especially on the East Coast, are providing cost incentives such as rent cuts (a leased gasoline station's rent is based on gallons pumped per month) to help dealers maintain profit margins while lowering prices to meet competition. The recent trend to self-service pumps at many service stations also has resulted in lower prices to consumers and lower costs to dealers. Most service stations that have switched to "split island" service have maintained their sales volume and improved their margins. After moving up rapidly in the second half of 1975, the index for fuel oil and coal increased just 0.1 percent in January, a much smaller increase than is usual for January.

Among household durables, furniture and bedding prices declined in January. Bargain prices were available as retailers attempted to clear out inventories to make room for new stock ordered at the winter markets. Prices of floor coverings advanced sharply in January reflecting increases in manufacturers' prices due to higher costs for materials and energy. Appliance prices also increased in January. Manufacturers have raised prices to maintain profit margins in the face of continued slack in housing starts and weak demand in the appliance replacement market. Prices of tobacco products rose 0.8 percent in January, following a larger increase in December. The major cause of these advances was the passing through of wholesale price increases of 2 to 3 cents per pack throughout the industry last November. Price rises of 1 to 4 cents at wholesale often trigger increases of as much as 5 cents in retail

prices, particularly in the vending machine segment of the industry.

**Services.** The services index rise of 1.0 percent in January reflected higher charges for a wide range of services. Charges for transportation services rose 2.3 percent—the third substantial rise within the past 6 months. Auto insurance rates rose 5.7 percent in January, reflecting higher rates in Massachusetts, Texas, and other states. Auto registration fees rose 1.5 percent. Automobile repair charges rose 1.4 percent, a larger increase than in recent months.

Charges for household services other than rent increased 0.9 percent in January. A large part of this increase was due to a 24.6-percent rise in postage rates which was effective December 31, 1975. First-class postage for letters rose from 10 cents to 13 cents, while first-class postcards increased from 7 cents to 9 cents. In addition, the third-class single-piece rate went up 30 percent and parcel post increased nearly 10 percent. Other housekeeping services such as domestic services and laundry flatwork also increased sharply in January. Among utility charges, water and sewerage charges rose 1.5 percent; natural gas charges rose 0.7 percent—considerably less than in recent months; electricity declined 0.3 percent; and telephone charges declined 0.7 percent as the Federal excise tax was reduced from 7 to 6 percent. Other household services such as property taxes, property insurance, and home maintenance services continued to increase. Mortgage interest rates edged up 0.1 percent, much less than in each of the 3 preceding months. Charges for rent rose 0.4 percent, about the same as in recent months.

The index for medical care services rose 1.2 percent in January, the sharpest 1-month advance since early 1975. Physicians' fees rose 0.7 percent, easing somewhat from increases of over 1 percent in December and November. Charges for hospital services, however, rose 2.2 percent, as greater overhead costs, including higher malpractice insurance premiums, boosted semiprivate and operating room charges 2.3 and 2.6 percent respectively. Charges for ancillary services such as intravenous solutions, X-rays, laboratory tests, electrocardiograms, and physical therapy all rose substantially.

Charges for other services such as drycleaning, laundering men's shirts, and men's haircuts also rose more in January than in recent months. Part of the increase for these and other services such as housekeeping services may be due to the January increase in the minimum wage.

<sup>1</sup> Seasonally adjusted indexes are dependently derived and, therefore, seasonal factors are not available in advance. See note on page 27 for further information.

<sup>2</sup> Series is not seasonally adjusted.

## Note on New Seasonal Adjustment Procedures

As announced earlier, effective with release of the index for January 1976, the procedures used for seasonally adjusting the CPI have been changed.

1. Seasonally adjusted values for the 11 indexes listed below are now derived by adding together their seasonally adjusted components. This procedure replaces the former practice of seasonally adjusting the all items CPI and its major components independently of each other. The new procedure, for example, will eliminate those situations in which seasonally adjusted changes in major components of the index are inconsistent with seasonally adjusted changes in the all items index.

### All Items

#### Commodities

##### Food

##### Food at home

##### Commodities less food

##### Nondurables less food

##### Apparel Commodities

##### Nondurables less food and apparel

##### Durables

#### Services

##### Services less rent

The 11 series will be derived by adding together seasonally adjusted values for the following index components:

Cereals and bakery products

Meats, poultry, and fish

Dairy products

Fruits and vegetables

Other food at home

Food away from home

Alcoholic beverages

Fuel oil and coal

Other nondurables

Household durables

New cars

Used cars

Men's and boys' clothing

Women's and girls' apparel

Footwear

Other apparel commodities

Gasoline and motor oil

Tobacco products

Other durables

Rent

Household services less rent

Transportation services

Medical care services

Other services

For example, the seasonally adjusted index for the food at home component will be derived by aggregating the seasonally adjusted values of its five major components: cereal and bakery products; dairy products; meats, poultry and fish; fruits and vegetables; and other food at home. The seasonally adjusted index for all items will be derived by aggregating the seasonally adjusted values for all 24 components. As a result of the new procedure, seasonal adjustment factors for the 11 series named will not be available in advance as they were under the former procedure. Implicit seasonal adjustment factors can be derived by dividing the unadjusted index by the seasonally adjusted index and multiplying the result by 100.

2. Except for these 11 series, estimates of seasonal adjustment factors will continue to be produced independently of each other. However, the method used to produce estimates of seasonal adjustment factors has been replaced by the X-11 Seasonal Adjustment Method developed at the Bureau of the Census.

3. Annual revisions of seasonal factors and seasonally adjusted indexes will be released with the January index instead of with the April index as in the past.

4. All seasonally adjusted series have been revised back to January 1967. No revisions have been made to seasonally adjusted indexes before 1967.

## Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 major statistical areas and 17 smaller cities, which were chosen to represent all urban places in the United States. They are collected from about 18,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments.

Prices of food, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the five largest areas and every 3 months in other areas. Prices of most goods and services are obtained by

personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 23 areas.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services bought by urban wage earners and clerical workers has risen from \$10 in 1967 to \$12.20.

## A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Seasonally adjusted percent changes in the U.S. All Items Index are based on seasonal adjustment factors and seasonally adjusted indexes carried to two decimal places. This procedure helps to eliminate rounding error in the percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month

period. BLS does not publish annual rates based on data for 1 month.

<i>Index Point Change</i>	
CPI	123.8
Less previous index	<u>123.2</u>
Equals index point change:	0.6
<i>Percent Change</i>	
Index point difference,	<u>0.6</u>
Divided by the previous index,	123.2
Equals,	0.005
Results multiplied by one hundred	0.005×100
Equals percent change:	0.5

## A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred, since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing

climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

## Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI.<sup>1</sup> The table below shows standard errors for monthly, quarterly, and annual *percent*

**Average standard errors of percent changes in the CPI based on 1975 data**

Component	Standard error		
	Monthly change	Quarterly change	Annual change
All items . . . . .	.04	.06	.13
Food at home . . . . .	.10	.17	.38
Food away from home . .	.11	.22	.36
Housing . . . . .	.08	.12	.26
Apparel and upkeep . . . .	.16	.22	.28
Transportation . . . . .	.07	.11	.13
Medical care . . . . .	.13	.17	.36
Personal care . . . . .	.14	.22	.46
Reading and recreation . .	.11	.16	.37
Other goods and services . . . . .	.08	.11	.22

*changes* in the CPI for all items and for nine commodity groupings based on 1974 averages. The figures may be interpreted as follows: The changes are about 95 out of 100 that the percent change in the CPI as computed differs from the corresponding "complete coverage" change by less than twice the standard error.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. As the table indicates, for example, a month-to-month change of 0.1 percent in the all-items CPI is significant. Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent for a 1-month period is almost always significant.

This replaces the table of average errors based on 1974 data which was included in the CPI report through December 1975.

<sup>1</sup> The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," *Journal of the American Statistical Association*, September 1967.

The map shows the following regions and their constituent states:

- REGION I:** Alaska, Hawaii
- REGION II:** New England (VT, NH, ME, MA, CT, RI), New York
- REGION III:** PA, NJ, DE, MD, VA, WV, NC
- REGION IV:** SC, GA, AL, MS, FL, TN
- REGION V:** WI, IL, MI, IN, OH, KY
- REGION VI:** TX, OK, AR, LA, NM
- REGION VII:** MO, KS, NE, IA, MN
- REGION VIII:** MT, WY, CO, UT, ND
- REGION IX:** CA, NV, AZ, ID
- REGION X:** WA, OR, ID

Major cities marked on the map include San Francisco, Dallas, Chicago, New York, Philadelphia, and Atlanta.
