Consumer Price Index: U.S. City Average and Selected Areas

U.S. DEPARTMENT OF LABOR<br>W. J. Usery, Jr., Secretary

bUREAU OF LABOR STATISTICS
Julius Shiskin, Commissioner
OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Assistant Commissioner

The CPI Detailed Report is a monthly report on consumer price movements including statistical tables and technical notes.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Subscription price per year:
$\$ 9.00$, domestic
$\$ 11.00$, foreign
$\$ .75$, single copy

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics.

## Price Movements <br> April 1976

The Consumer Price Index rose 0.4 percent in April before seasonal adjustment to 168.2 percent of its 1967 base. The April CPI was 6.1 percent higher than in April 1975.

## Seasonally adjusted changes

On a seasonally adjusted basis, the CPI rose 0.4 percent in April. The April rise was larger than the increases of 0.1 percent in February and 0.2 percent in March primarily because food prices rose in April, following declines in each of the previous 3 months. Prices turned up in April for many types of food purchased in grocery stores, notably fresh vegetables, pork, poultry, and dairy products. Fresh fruit and coffee prices continued to advance. Although beef prices moved down, the decline was much smaller than in February or March.

The index for nonfood commodities continued to rise moderately in April- 0.3 percent after seasonal adjustment,
the same as the average monthly increase since last August. Price rises for major consumer items such as apparel and household durables remained relatively moderate and the increase in new car prices was smaller than in recent months. Used car prices, however, rose rapidly for the third consecutive month and the index for fuel oil and coal rose for the first time in 6 months. The gasoline and motor oil index continued to decline, but the decline was much smaller than earlier in the year.

The services index increased 0.5 percent in April after seasonal adjustment. The April rise was slower than in recent months because of smaller increases for many types of services such as auto insurance, medical care, natural gas, electricity, housekeeping, apparel, personal care, and recreational services.

## Monthly changes in detail

Food. The index for food purchased in grocery storeswhich usually declines in April-increased 0.2 percent.

Table A. Percent changes in CPI and components, selected periods

| April. | . 4 | . 4 | . 3 | . 6 | . 6 | . 3 | . 3 | . 5 | 2.9 | 6.1 |

Prices for fresh fruits and vegetables and coffee advanced sharply, while prices declined for meats, fats and oil products, and cereal and bakery products. Prices of dairy products averaged unchanged.

Fresh vegetable prices rose contraseasonally and fresh fruit prices rose more than they usually do in April. Higher prices for green peppers, tomatoes, and strawberries were partly due to smaller supplies from Mexico. Potato prices rose in response to strong export demand and record low supplies held in storage in the Eastern States. Reduced supplies and good demand resulted in higher prices for apples and grapefruit.

Retail prices for coffee rose substantially, as earlier increases in wholesale prices were passed through. Wholesale prices for green and roasted coffee continued to move up in April; producing countries were offering small supplies of coffee at very high prices and roasters were holding buying to a minimum-a situation which has existed since the mid-1975 frost damage to Brazilian crops.

Sugar prices, which had declined steadily during the preceding 6 months, increased slightly in April after earlier advances in wholesale prices this year. Lower estimates of world sugar production and withholding of supplies by producing countries were primarily responsible for the rise in prices. In April, wholesale sugar prices fell again as inadequate storage facilities and a need for foreign exchange forced the Dominican Republic to alter its holding policy. Swift settlement of a strike by Panama Canal workers also contributed to lower wholesale prices in April as did an estimate that European sugar beet acreage will be up 3.4 percent in the 1976-77 crop season.

Beef and pork prices at retail continued to decline in April reflecting earlier declines at the wholesale level. However, after falling substantially in the first 3 months of this year, wholesale beef prices rose over 14 percent and cattle prices over 16 percent in April. This price upswing stemmed from reductions in cattle marketings and beef production at a time when demand was expanding. Increased demand was triggered in part by the threat of a strike by the Teamsters Union; retailers attempted to build inventories before a stoppage of transportation. Wholesale pork and hog prices also increased in April, as hog marketings were curtailed while farmers tended to field work throughout the Corn Belt. The rise in cattle prices was an important factor supporting higher prices for hogs.

Among cereal and bakery products, flour prices continued to decline due to lower wheat prices and heavy promotional activity by retailers. Rice prices fell for the eighth consecutive month due to lower wholesale prices brought about by decreased export demand and record U.S. rice production. Lower ingredient costs led to price reduction for white bread, layer cake, and cinnamon rolls. Among dairy products, prices for milk and cheese declined, but prices increased for butter and other processed dairy products.

The index for food away from home-restaurant meals and snacks-rose 0.5 percent in April, about the same as in recent months.

Commodities less food. The index for commodities other than food rose 0.6 percent in April before seasonal adjustment. About half of this rise was due to a 5.6 percent increase in used car prices. Prices rose more moderately for many other nonfood commodities except gasoline, fuel oil, and new cars, which declined.

The index for apparel increased 0.5 percent, slightly more than usual for April. Footwear prices continued to rise rapidly- 1.0 percent for the third consecutive month. Manufacturers' prices for footwear have been moving up steadily since mid-1975 in response to good demand and rising materials costs. Prices of other apparel items increased a seasonal 0.4 percent. Prices for housekeeping supplies and toilet goods rose in response to higher costs for labor, transportation, and raw materials. Higher ingredient and marketing costs accounted for the rise in prices of drugs and prescriptions such as adhesive bandage strips, cough syrup, cold tablets, anti-infectives, and antispasmodics.

Among household durables, furniture prices increased 0.4 percent in April, following a rise of 0.7 percent in March-about as much as they usually do in these months. Prices for most furniture items rose moderately in April. There were large increases, however, for sofas which reflected rises in costs of upholstery fabric and for aluminum chairs which reflected increases in aluminum and plastic materials. Prices for floor coverings rose 0.4 percent in April, less than in recent months, due to clearance sales. Continuing the steady uptrend of the past year, appliance prices increased 0.5 percent. The upsurge of consumer buying has allowed many wholesale price increases to be passed along to consumers.

The new car index decreased 0.1 percent in April. This decrease, however, was somewhat smaller than usual for this time of year-an indication that discounts to customers have not been so large as they usually are in the spring. Although sales of subcompacts are lagging, producers have been unable to keep pace with the very strong market for compacts and intermediate cars.

Gasoline prices declined in April for the seventh consecutive month. The contraseasonal decline of 0.4 percent (for regular, premium, and unleaded combined) resulted from continued efforts by major brand and independent gas stations to maintain market shares. Fuel oil prices declined 0.4 percent, less than is usual for April.

Services. The services index rose 0.3 percent in April before seasonal adjustment, half as much as in February or March. Increases of 0.4 percent for transportation services and 0.5 percent for medical care services were noticeably smaller
than in recent months. Auto insurance rates rose 0.8 percent-considerably less than in each of the preceding 6 months. From September 1975 through March 1976, auto insurance rates had risen almost 25 percent. Auto repair charges increased 0.4 percent, about the same as in recent months and much less than in late 1975 and early 1976. Following a large rise in March, local transit fares were unchanged in April. Physicians' fees rose 0.7 percent and dentists' fees 0.2 percent-less than in recent months. Hospital service charges rose 0.6 percent in April; this rise compares with increases of 2.2 percent in January, 1.5 percent in February, and 0.9 in March.

Charges for rent rose 0.4 percent, the same as in March. The increase of 0.2 percent for household services other than rent was down from 0.4 percent in both February and March. Charges for water and sewerage, domestic and laundry services, and property insurance each rose about 1.0 percent. Postal charges rose 0.7 percent due to an increase in prices of money orders which went into effect on April 18. Reflecting higher costs for both labor and materials, charges for home maintenance and repair services continued to move up. Natural gas rates rose 0.6 percent. Mortgage interest costs declined as a result of lower interest rates on both conventional and VA loans.

## Brief Explanation of the CPI

The Consumer Price Index (CPI) measures average changes in prices of goods and services usually bought by urban wage earners and clerical workers. It is based on prices of about 400 items which were selected to represent the movement of prices of all goods and services purchased by wage earners and clerical workers. Prices for these items are obtained in urban portions of 39 major statistical areas and 17 smaller cities, which were chosen to represent all urban places in the United States. They are collected from about 18,000 establishments grocery and department stores, hospitals, filling stations, and other types of stores and service establishments.

Prices of food, fuels, and a few other items are obtained every month in all 56 locations. Prices of most other commodities and services are collected every month in the five largest areas and every 3 months in other areas. Prices of most goods and services are obtained by
personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain local transit fares, public utility rates, newspaper prices, fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of all wage earners and clerical workers. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 23 areas.

The index measures price changes from a designated reference date-1967-which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services bought by urban wage earners and clerical workers has risen from $\$ 10$ in 1967 to $\$ 12.20$.

## A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Seasonally adjusted percent changes in the U.S. All Items Index are based on seasonal adjustment factors and seasonally adjusted indexes carried to two decimal places. This procedure helps to eliminate rounding error in the percent changes.

Percent changes for 3 -month and 6 -month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12 -month
period. BLS does not publish annual rates based on data for 1 month.

## A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred, since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year-such as price movements resulting from changing
climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

## Reliability of Percent Changes in the CPI

A system of "replicated" samples introduced into the index structure in the 1964 revision permits an estimate of sampling error for the CPI. ${ }^{1}$ The table below shows standard errors for monthly, quarterly, and annual percent

Average standard errors of percent changes in the CPI based on 1975 data

| Component | Standard error |  |  |
| :---: | :---: | :---: | :---: |
|  | Monthly change | Quarterly change | Annual change |
| All items | . 04 | . 06 | . 13 |
| Food at home | . 10 | . 17 | . 38 |
| Food away from home | . 11 | . 22 | . 36 |
| Housing | . 08 | . 12 | . 26 |
| Apparel and upkeep | . 16 | . 22 | . 28 |
| Transportation. | . 07 | . 11 | . 13 |
| Medical care | . 13 | . 17 | . 36 |
| Personal care | . 14 | . 22 | . 46 |
| Reading and recreation | . 11 | . 16 | . 37 |
| Other goods and services | . 08 | . 11 | . 22 |

changes in the CPI for all items and for nine commodity groupings based on 1974 averages. The figures may be interpreted as follows: The changes are about 95 out of 100 that the percent change in the CPI as computed differs from the corresponding "complete coverage" change by less than twice the standard error.

Because the CPI is rounded to one decimal place, some ambiguity may arise in interpreting small index changes. As the table indicates, for example, a month-to-month change of 0.1 percent in the all-items CPI is significant. Because of rounding, however, a change of this size in the published index might result from a much smaller change in the unrounded value. Hence, any particular change of 0.1 percent may or may not be significant. On the other hand, a published change of 0.2 percent for a 1 -month period is almost always significant.

This replaces the table of average errors based on 1974 data which was included in the CPI report through December 1975.

The method of deriving these estimates is described in a paper by Marvin Wilkerson, "Measurement of Sampling Error in the Consumer Price Index," Journal of the American Statistical Association, September 1967.
