The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$28 domestic, and \$35 foreign. Single copy domestic, \$5; foreign, \$6.25. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$125 in contiguous U.S. and Hawaii; \$135 in Alaska and Canada.

Price Movements

January 1984

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.6 percent before seasonal adjustment in January, to a level of 305.2 (1967=100). For the 12-month period ended in January, the CPI-U increased 4.1 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.4 percent in January, prior to seasonal adjustment. The January level of 302.7 (1967=100) was 3.6 percent higher than the index in January 1983. The CPI-W is used for indexing Social Security and some other Federal payments. It is also commonly used as an escalator in collective bargaining agreements.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.6 percent in January. This compares with a 0.2 percent rise in December and an average monthly increase of 0.4 percent since the first quarter of 1983. About one-half of the January increase was due to sharply higher prices for food, particularly for beef, pork, poultry, eggs, fresh fruits, and vegetables. The housing component rose more than in December as prices for telephone services and for fuel oil increased substantially. The transportation index—reflecting a decline in motor fuel prices and stable new car prices—rose moderately again in January. Other major categories of consumer spending increased the

same or more in January than in December.

The January advance of 1.6 percent in the food and beverage component follows a 0.4 percent rise in December and compares with an average monthly increase of 0.2 percent since the slowdown in overall prices began in late 1981. Grocery store food prices rose 2.4 percent in January. The food groups which had contributed to the earlier moderation were largely responsible for the January acceleration. Beef and veal prices rose 3.5 percent in January, following a decline of 2.5 percent from September 1981 through December 1983. Pork prices, which had increased less than 2 percent in the same 27-month period, rose 5.2 percent. Fresh fruit prices rose 7.8 percent in January compared with 3.8 percent over the period since September 1981. In January, prices for eggs rose 21.3 percent, poultry 3.7 percent, and fresh vegetables 7.0 percent. From the fall of 1981 until early summer 1983, prices for eggs, poultry, and fresh vegetables had shown little change. The sharp January food price runups reflect the effects of summer drought, avian influenza outbreaks among poultry, and severe winter weather. Although substantially more moderate, most other major grocery store food groups also advanced more in January than in recent months. The indexes for restaurant meals and alcoholic beverages both increased 0.2 percent.

The housing component advanced 0.5 percent in January, following an increase of 0.2 percent in December. The index for fuels and other utilities, which

declined in December, rose 1.2 percent in January and was primarily responsible for the acceleration. The cost of telephone services advanced 5.2 percent in January as local charges rose sharply, largely reflecting rate restructuring. The 2.6 percent rise in fuel oil prices was the largest monthly increase in nearly 3 years. Despite the January increase, fuel oil prices were still more than 10 percent below their peak level of April 1981. Electricity charges rose 0.4 percent in January. Partially offsetting these increases was a 1.1 percent decline in natural gas prices. Shelter costs rose 0.3 percent, with both renters' and homeowners' costs up 0.4 percent. Maintenance and repair costs increased 0.6 percent. The index for household furnishings and operations was unchanged in January, following an increase of 0.4 percent in December.

The transportation index rose 0.2 percent in January, the same as in December. Gasoline prices—down 1.1 percent in January—declined for the fourth consecutive month and are now 11.9 percent below their peak level of March 1981. New car prices were unchanged in January, continuing the moderate behavior evident since the introduction of the 1984 models. Prices for motor oil were also unchanged in December, while tire prices declined 4.2 percent. On the other hand, used car prices rose 1.2 percent in January and have increased nearly 15 percent in the last 12 months. Automobile insurance costs also rose 1.2 percent in January. The index for public transportation, which declined in December, advanced 2.5 percent in January, largely as a result of sharp increases in intercity bus fares and mass transit charges in the New York metropolitan area.

The 0.7 percent rise in the medical care component compares with an average monthly increase of 0.5 percent during 1983. The index for medical care commodi-

ties, which includes prescription drugs, non-prescription drugs, and medical supplies, rose 0.7 percent. The cost of medical care services advanced 0.8 percent. Charges for physicians' fees and hospital rooms increased 1.1 and 0.6 percent, respectively.

The index for apparel and upkeep rose 0.3 percent in January, after registering no change in December. Smaller than usual seasonal declines for many clothing items caused the seasonally adjusted increase.

The entertainment index continued its moderate behavior, increasing 0.2 percent in January. The indexes for reading materials and admission fees both registered declines. The other goods and services component rose 0.7 percent in January, following a 0.5 percent increase in the preceding month. A 1.5 percent rise in the prices for tobacco products was principally responsible for the acceleration.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.5 percent in January, following an increase of 0.1 percent in December. The 0.5 percent rise in the CPI-W compares with an increase of 0.6 percent in the CPI-U. In the CPI-U, the homeowners' cost index—which uses a rental equivalence approach—rose 0.4 percent in January. Homeownership in the CPI-W, which is based on house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs, declined 0.3 percent in January. Declines in house prices and mortgage interest rates more than offset increases in property taxes, property insurance, and maintenance and repair costs.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas.

Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas.

Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

¹ The population size classes are aggregations of areas which have urban population as defined below:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes

A-1 and A-2.

² Indexes on a December 1982=100 base.

³ Indexes on a June 1978=100 base.

⁴ New series: includes direct pricing of new trucks and motorcycles as of September 1982.

⁵ Excludes motor oil, coolant, and other products as of January 1983.

¹ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined below:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

² Indexes on a December 1982=100 base.

³ Indexes on a June 1978=100 base.

⁴ Excludes motor oil, coolant, and other products as of January 1983.

¹ The population size classes are aggregations of areas which have urban population as defined below:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

² Indexes on a January 1981 = 100 base.

³ Indexes on a June 1978 = 100 base.

⁴ New series: includes direct pricing of new trucks and motorcycles as of September 1982.

⁵ Excludes motor oil, coolant, and other products as of January 1983.

¹ Regions are defined as the four Census regions.
 The population size classes are aggregations of areas which have urban population as defined below:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.

D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.
² Indexes on a January 1981=100 base.
³ Indexes on a June 1978=100 base.
⁴ Excludes motor oil, coolant, and other products as of January 1983.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area in-

dexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); "The Revision of the Consumer Price Index," by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), "Revisions in the Medical Care Service Component of the Consumer Price Index," by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Homeownership Changes

Effective with release of the index for January 1983, the Bureau of Labor Statistics changed the way homeowner costs are measured in the CPI-U to rental equivalence. The rental equivalence approach calculates homeowner costs of the shelter based on the implicit rent owners would have to pay to rent the homes they own. The old method calculated homeowner costs as home purchase, mortgage interest cost, property taxes, property insurance, and maintenance and repair.

As previously announced, the CPI-W will be changed to rental equivalence effective with data for January 1985. The CPI experimental measures, known as the CPI-U, X-1 through CPI-U, X-5 are no longer being published.

The new homeowners' cost component was introduced into the CPI-U in such a manner that the indexes using the old and new methodologies were equal in the so-called link month—December 1982. A similar technique will be employed for the CPI-W in December 1984. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, the BLS made available calculations for the CPI-U from January to June 1983 based on the old method of homeownership. A 6-month overlap period for the CPI-W will also be made available to users; it will run from January to June 1985. For further details see "Changing the Homeownership Component of the Consumer Price Index to Rental Equivalence," *CPI Detailed Report*, January 1983.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics

publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1979 through 1983 were replaced at the end of 1983. The seasonal movement of all items and 44 other aggregations is derived by combining the seasonal movement of 51 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 51 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last five years, but the seasonally adjusted indexes will be used before that period. If any of the 51 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted data will be used for the last five years, but not seasonally adjusted indexes will be used before that period.
