

1982-84 reference base introduced

U.S. DEPARTMENT OF LABOR

Ann McLaughlin, *Secretary*

BUREAU OF LABOR STATISTICS

Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS

Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year \$16 domestic, and \$20 foreign. Single copy domestic, \$6; foreign, \$7.50. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Price Movements

January 1988

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.3 percent before seasonal adjustment in January to a level of 115.7 (1982-84=100). For the 12-month period ended in January, the CPI-U increased 4.0 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.3 percent in January prior to seasonal adjustment. The January 1988 CPI-W level of 114.5 was 4.1 percent higher than the index in January 1987.

The January 1988 indexes for the CPI-U and CPI-W on a 1967=100 reference base were 346.7 and 341.0, respectively.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.3 percent in January following a 0.2 percent increase in December. Energy prices declined for the second consecutive month and food prices increased less than in December. The CPI-U excluding food and energy, however, rose 0.5 percent in January after increasing 0.2 percent in December. Shelter costs, reflecting a sharp increase in the cost of lodging while out of town, advanced 0.6 percent for the second consecutive month. Increases in the indexes for medical care, entertainment, and other goods and services were substantially larger in January than in December.

The index for food and beverages rose 0.3 percent in January. Grocery store food prices, which increased 0.6 percent in December, rose 0.2 percent in January. A sharp turnaround

in the index for fruits and vegetables, coupled with another decline in the index for meats, poultry, fish, and eggs, more than offset larger increases in the other grocery store food groups. Fresh fruit and vegetable prices declined 0.9 percent in January after increasing 6.9 percent in December. Meat prices declined for the fifth consecutive month. In January, beef prices decreased 1.4 percent and pork prices, 0.5 percent. However, poultry prices—up 1.0 percent—registered their first increase since August. Egg prices also advanced in January following sharp declines in the fourth quarter of 1987. The 1.1-percent advance in the cereal and bakery products component was the largest monthly rise since January 1981. Increases in the indexes for dairy products and other food at home—up 0.7 and 0.5 percent, respectively—were larger than in recent months. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—each rose 0.3 percent in January.

The housing component rose 0.4 percent in January following a 0.3-percent increase in December. A turnaround in the index for household furnishings and operations and another large increase in shelter costs—up 0.6 percent—were only partially offset by a decline in the index for fuel and other utilities. Within shelter, renters' costs rose 1.1 percent, homeowners' costs 0.4 percent; and maintenance and repair costs, 0.4 percent. The large increase in renters' costs resulted from a 3.2-percent rise in charges for lodging while out of town. Residential rents rose 0.4 percent. (See page 4, "Adjustment of shelter indexes for aging effects.") All three major household fuels recorded declines in January.

Other goods and services9	.6	-.5	.5	.3	.5	1.3	8.9	6.3

Fuel oil prices declined 0.6 percent; charges for electricity, 0.3 percent; and natural gas, 0.1 percent. Among other utilities, the index for telephone services rose 0.1 percent as increases in charges for local calls and intrastate toll calls more than offset a 2.4-percent decrease in charges for interstate toll calls. The index for household furnishings and operations increased 0.3 percent in January following a 0.1-percent decline in December.

The transportation index, reflecting decreases in motor fuel prices and in the costs associated with the purchase of new and used cars, declined for the second consecutive month. Gasoline prices were down 1.6 percent in January after decreasing 1.7 percent in December. New car prices declined 0.2 percent in January. After increasing nearly 10 percent in the fourth quarter of 1987, the cost of financing new cars turned down in January by 0.7 percent. Used car prices declined 0.1 percent. The index for public transportation, reflecting a decrease in airline fares, declined 0.2 percent. On the other hand, charges for automobile insurance rose 1.5 percent, their largest increase since October 1986.

The medical care component rose 0.8 percent in January, its largest increase in nearly 2 years. The index for medical care commodities—prescription drugs, nonprescription drugs,

and medical supplies—rose 0.6 percent. The index for medical care services rose 0.8 percent, with the costs of hospital rooms and physicians' services up 1.2 and 1.0 percent, respectively.

The index for apparel and upkeep increased 0.1 percent in January following a 0.8-percent decline in December. End of season price reductions for clothing items were about normal for January.

The index for entertainment rose 0.6 percent in January following a 0.1-percent increase in December. Charges for entertainment services, principally reflecting a sharp increase in fees for club membership, rose 0.9 percent in January.

The index for other goods and services advanced 1.1 percent in January. A 2.8-percent increase in prices for tobacco products accounted for most of the advance. Prices for toilet goods and personal care appliances rose 1.0 percent.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers also rose 0.3 percent in January.

Scheduled Release Dates			
Consumer Price Index data are scheduled for initial release on the following dates:			
Index month	Release date	Index month	Release date
February	March 23	May	June 21
March	April 20	June	July 22
April	May 20	July	August 23

Consumer Price Indexes Shift to New Reference Base in 1988

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967=100, or any other base through December 1981, have been rebased to 1982-84=100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last previous rebasing of CPI data occurred

in February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics (BLS). For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and forthcoming *Journal of Business and Economic Statistics*, and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and forthcoming, *Journal of Urban Economics*. These papers are available from the BLS on request.

² For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285), forthcoming.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.² The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect. The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977=100 base except for the U.S. which is on a 1967=100 base.

³ Indexes on a December 1982=100 base.

⁴ Indexes on a December 1986=100 base.

- Data not available.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977 = 100 base except for the U.S. which is on a 1967 = 100 base.

³ Indexes on a December 1984 = 100 base.

⁴ Indexes on a December 1986 = 100 base.

- Data not available.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 91 urban areas across the country from about 60,000 housing units and approximately 21,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 91 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross calculations of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measures price change from a designated reference date, 1967, which equals 100.0. An increase of 203 percent, for example, is shown as 303.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$30.30.

For further details see *BLS Handbook of Methods, Vol. II*, "The Consumer Price Index," Bulletin 2134-2, April 1984 and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	315.5
Less previous index	303.5
Equals index point change	12.0
Percent Change	
Index point difference	12.0
Divided by the previous index	303.5
Equals	0.040
Results multiplied by one hundred	0.040 x 100
Equals percent change	4.0

Homeownership Changes

The Consumer Price Index (CPI) has been changed to incorporate a rental equivalence measure of homeowners' costs in accordance with plans announced by the Bureau of Labor Statistics (BLS) on October 27, 1981. For the CPI for All Urban Consumers (CPI-U), this change was effective with release of the index for January 1983 and for the CPI for Urban Wage Earners and Clerical Workers (CPI-W), it was effective with the release of the January 1985 index. The rental equivalence approach calculates shelter costs of homeowners based on the implicit rent owners would have to pay to rent homes that they own. The old method calculated homeownership as home purchase, mortgage interest costs, property taxes, property insurance, and maintenance and repairs. The new homeownership component was introduced into both the CPI-U and the CPI-W in such a manner that in each case the indexes using the old and new methodologies were equal in the so-called "link month"—December 1982 for the CPI-U and December 1984 for the CPI-W. For more information, see the *CPI Detailed Report* for January 1983, pp. 7-13.

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will appear. NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices, except for electricity, are collected monthly by BLS representatives in the urban areas priced for the CPI. Electricity prices are collected monthly on mail questionnaires by the Department of Energy for BLS. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P-2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are

calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas and for 500 kilowatt hours of electricity (table P-1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, to provide data for place-to-place price comparisons, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a per gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

- 1 therm = 100,000 BTU'S (U.S. Department of Energy).
- 1 kwh = 3,412 BTU'S (Edison Electric Institute)
- 1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted, however, that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will

not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from BLS Regional Offices or from the Washington Office upon request.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

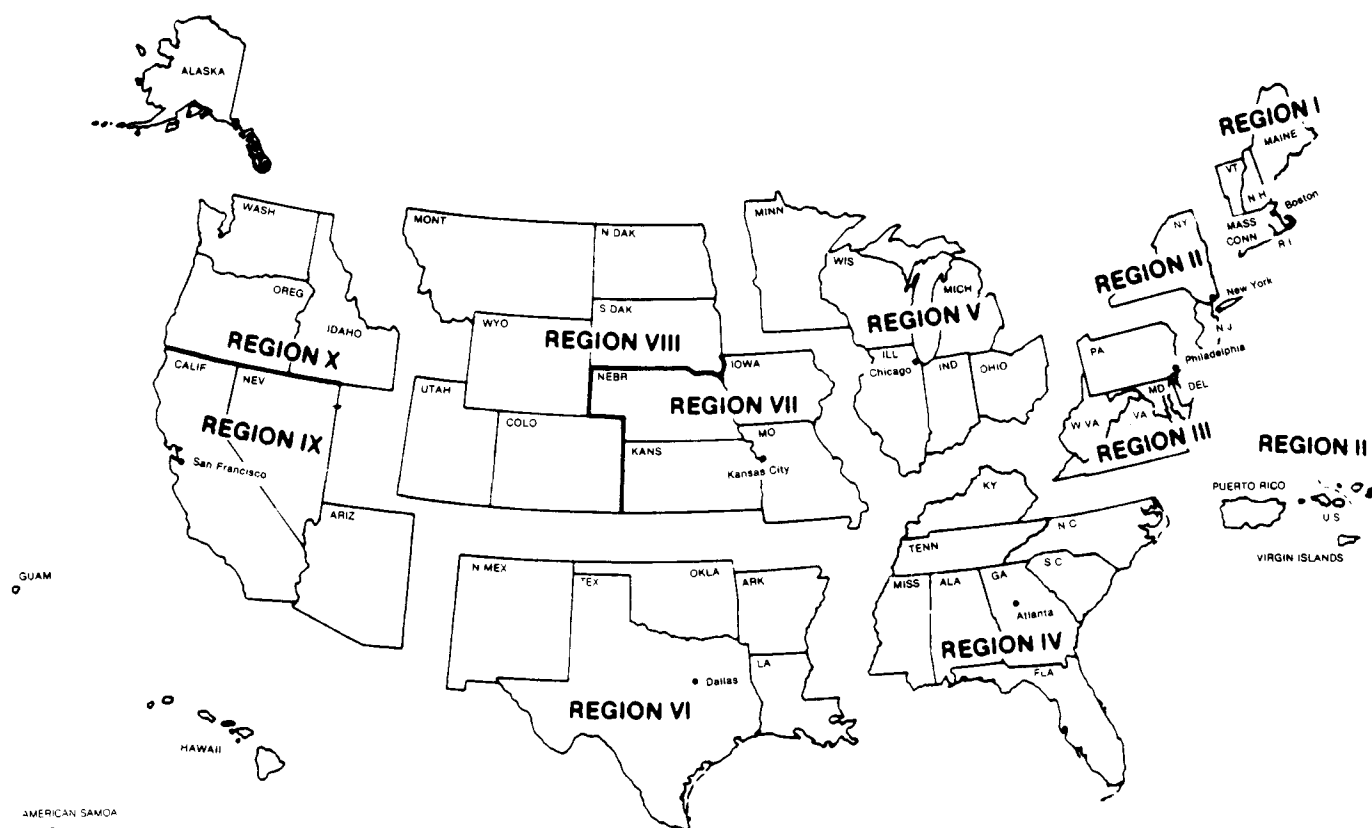

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data; e.g., data from 1983 through 1987 were replaced at the end of 1987. The seasonal movement of the all-items index and 43 other aggregations is derived by combining the seasonal movement of 50 selected components. Each year, the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 50 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, unadjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period.
