Price Movements

The Consumer Price Index For All Urban Consumers (CPI-U) rose 1.4 percent before seasonal adjustment in February to 236.4 (1967=100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 1.4 percent before seasonal adjustment in February to 236.5 (1967=100). The CPI-U was 14.1 percent higher and the CPI-W was 14.2 percent higher than in February 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-U rose 1.4 percent in February, the same as in January. This compares with an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI, except food and apparel, rose 1.0 percent or more for the second consecutive month, with rising energy and home-ownership costs accounting for over two-thirds of the February increase.

The transportation component registered the largest increase as gasoline prices rose 7.3 percent, following a 7.4 percent increase in January. The housing component also continued to increase substantially, primarily reflecting higher mortgage interest rates and prices for household fuels. The food and beverage index was unchanged in February, following a 0.1 percent increase in January.

The sharp rise in gasoline prices accounted for over four-fifths of the 2.8 percent increase in the transportation

index in February. Prices for other petroleum products, such as motor oil and coolant, also rose substantially—2.5 percent—in February. Prices for new cars advanced 1.2 percent, following an increase of 1.4 percent in January. Used car prices declined 0.5 percent. Automobile finance charges continued to increase sharply—up 1.7 percent—and charges for automobile insurance rose 1.3 percent. The index for public transportation continued to increase substantially, but the rise was the smallest since last June.

The 1.4 percent increase in the housing index continued the sharp upward trend evident since early 1979. In February, home financing costs rose 2.9 percent, reflecting an increase of 2.2 percent in mortgage interest rates and 0.4 percent in house prices. The increase in house prices was the smallest since August 1978. The indexes for both property insurance and household maintenance and repairs increased 1.5 percent. The 12-month percent changes for five experimental measures of housing costs can be found in tables C and D. In February, prices for household fuels rose 2.9 percent. Fuel oil prices rose 5.1 percent, following a 5.3 percent increase in January, and the index for gas and electricity rose 2.1 percent.

The index for grocery store foods declined 0.4 percent in February, after seasonal adjustment, following a decline of 0.2 percent in January. The decrease was due primarily to sharp declines in the prices for fresh vegetables, pork, poultry, and eggs. These declines were partially offset by increases in most other grocery store foods. cereal and bakery products, sugar, and carbonated drinks continued to increase sharply. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.7 and 0.4 percent, respectively, in February.

The medical care index increased 1.5 percent in February continuing the acceleration evident during the past several months. Professional services rose 1.7 percent as fees for physicians' services rose 1.6 percent and dental services advanced 1.8 percent. Charges for hospital rooms also rose sharply, up 1.6 percent in February.

The index for apparel and upkeep rose 0.6 percent, following an increase of 0.9 percent in January. Prices for jewelry, luggage, and sewing materials combined rose 3.8 percent and accounted for over two-thirds of the apparel increase. Increases in prices for precious metals and petroleum based materials were primarily responsible for the rise. Clothing prices were about unchanged on average in February. Apparel services continued to increase but not by as much as in January.

The index for entertainment rose 1.2 percent in February, following a 1.0 percent increase in the preceding month. Higher prices for sporting goods and equipment, and toys, hobbies, and other entertainment goods were primarily responsible for the increase.

The other goods and services component rose 1.0 percent in February, following an increase of 1.1 percent in January. The increase was largely due to higher prices for banking and personal care services.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI-W rose 1.4 percent in February, the same as in January. This compares with an average monthly increase of slightly more than 1.0 percent during 1979. All major components of the CPI-W, except for food and apparel, rose 1.0 percent or

more for the second consecutive month, with rising energy and homeownership costs accounting for over two-thirds of the February increase.

The transportation component registered the largest increase as gasoline prices rose 7.3 percent, following a 7.2 percent increase in January. The housing component also continued to increase substantially, primarily reflecting higher mortgage interest rates and costs for household fuels. The food and beverage index was unchanged in February, following a 0.2 percent increase in January.

Prices for new cars advanced 1.2 percent, following an increase of 1.4 percent in January. Used car prices declined 0.5 percent. Automobile finance charges continued to increase sharply—up 1.5 percent—and automobile insurance rose 1.2 percent. The index for public transportation rose 0.9 percent in February, the smallest rise since last June.

The 1.4 percent increase in the housing index continued the sharp upward trend evident since early 1979. In February, home financing costs rose 2.9 percent, reflecting an increase of 2.3 percent in mortgage interest rates and 0.3 percent in house prices. The house price increase was the smallest since August 1978. The index for property insurance increased 1.5 percent in February, following a 1.3 percent increase in January. In February, prices for household fuels rose 2.8 percent. Fuel oil prices rose 5.2 percent, following a 5.3 percent increase in January, and the index for gas and electricity rose 2.0 percent.

The index for grocery store foods declined 0.3 percent in February, after seasonal adjustment, following a decline of 0.2 percent in January. The decrease was due primarily to a sharp decline in the prices for fresh vegetables, pork, poultry, and eggs. These declines were partially offset by increases in most other grocery store foods. Prices for cereal and bakery products, sugar, and carbonated

drinks continued to increase sharply. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.5 and 0.7 percent, respectively, in February.

The medical care index increased 1.5 percent in February, continuing the acceleration evident during the past several months. Professional services rose 1.6 percent as fees for physicians' services rose 1.5 percent and dental services advanced 1.7 percent.

The index for apparel and upkeep rose 0.9 percent, following an increase of 0.8 percent in January. Prices for jewelry, luggage, and sewing materials rose 3.4 percent and accounted for over one-third of the apparel increase. Increases in prices for precious metals and petroleum based

materials were primarily responsible for the increase. Prices for women's and girls' and infants' and toddlers' clothing also advanced in February. Charges for apparel services continued to increase but not by as much as in January.

The index for entertainment rose 1.2 percent in February, following a 0.8 percent increase in the preceding month. Higher prices for sporting goods and equipment, and toys, hobbies, and other entertainment goods were primarily responsible for the increase.

The other goods and services component rose 0.9 percent in February, compared with an increase of 1.4 percent in January. The February increase was largely due to a 3.1 percent increase in the index for personal expenses, primarily banking services.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.

C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Regions are defined as the four Census regions.
 The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.

D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

| Index Point Change | |
|-----------------------------------|--------------|
| CPI | 189.8 |
| Less previous index | <u>189.2</u> |
| Equals index point change: | 0.6 |
| Percent Change | |
| Index point difference | <u>0.6</u> |
| Divided by the previous index | 189.2 |
| Equals: | 0.003 |
| Results multiplied by one hundred | 0.003x100 |
| Equals percent change: | 0.3 |

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1975 through 1979 will be replaced at the end of 1978. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing

units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.
