The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$28 domestic, and \$35 foreign. Single copy \$5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$125 in contiguous U.S. and Hawaii, \$135 in Alaska and Canada.

Price Movements

March 1983

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.1 percent before seasonal adjustment in March. The March level of 293.4 (1967=100) was 3.6 percent higher than the index in March 1982.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.2 percent in March, prior to seasonal adjustment, to a level of 293.0 (1967=100). For the 12-month period ended in March, the CPI-W has increased 3.7 percent. The CPI-W is used for indexing Social Security and some other Federal payments. It is also commonly used as an escalator in collective bargaining agreements.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers registered a 0.1 percent increase in March, following a decline of 0.2 percent in February. The small increase in March was attributable to an acceleration in the food and beverage and transportation components. The food and beverage index rose 0.6 percent in March, due to a sharp weather-induced increase in fresh vegetable prices. The transportation index, following a substantial drop in February, was unchanged in March, principally because of a much smaller decline in gasoline prices. Price changes in other major categories of consumer spending partially offset this acceleration. The housing and apparel and upkeep components declined slightly, while the indexes for medical

care, entertainment, and other goods and services advanced more slowly than in February.

During the 3 months ended in March, the CPI-U rose at a seasonally adjusted annual rate of 0.4 percent, about the same as during the fourth quarter of 1982. A substantial decline in the transportation component, due to the drop in gasoline prices, kept the quarterly increase in the overall CPI small. The decline in transportation, combined with smaller increases in the medical care and other goods and services components, virtually offset the moderate acceleration in the housing, food and beverages, and apparel and upkeep categories.

Grocery store food prices advanced 0.9 percent in March, more than in the entire preceding 12 months. A 4.4 percent increase in the index for fruits and vegetables was almost entirely responsible for the increase. In particular, fresh vegetable prices rose sharply, reflecting reduced supplies caused by the rainstorms in California and Florida. Other major grocery store food groups, however, continued to register moderate changes. The index for meats, poultry, fish, and eggs rose 0.2 percent, as small declines in beef, pork, poultry, and fish prices were more than offset by a 7.7 percent increase in egg prices. The index for dairy products was unchanged, while prices for cereal and bakery products—up 0.4 percent—rose only slightly more than in February. The other two components of the food and beverages index—restaurant meals and alcoholic beverages—rose 0.2 and 0.7 percent, respectively, in March.

The transportation component was unchanged in March, following four consecutive monthly declines. Declines in the indexes for gasoline, public transportation, and automobile finance charges were offset in March by increases in new and used car prices and automobile insurance. Gasoline prices declined 1.0 percent in March and were 17.4 percent below their peak level of 2 years ago. A decline in airline fares, the fourth in the last 5 months, was responsible for the 0.2 percent decrease in public transportation. Automobile finance charges—down 1.9 percent—declined for the eighth month in a row. On the other hand, new and used car prices rose 0.7 and 0.9 percent, respectively, following seasonal adjustment.

The housing index declined 0.1 percent in March, following no change in February. A decline in the index for fuel and other utilities was responsible for the decrease. Shelter costs were unchanged, and the index for household furnishings and operation registered a small increase. Fuel oil prices—down 5.2 percent—declined for the fourth consecutive month and more than offset the 1.5 percent increase in charges for utility (piped) gas. During the past 15 months, natural gas prices have increased nearly 30 percent. The index for electricity was unchanged in March. Within the shelter component, homeowners' costs were unchanged while renters' costs rose slightly. The index for maintenance and repairs, which pertains to both renters and homeowners, also rose slightly in March.

The March increase of 0.5 percent in the medical care component follows increases of 0.8 percent in each of the preceding 3 months. The index for medical care commodities, which includes prescription and non-prescription drugs and medical supplies, rose 1.0 percent. Within medical care services, charges for professional services and hospital rooms rose 0.4 and 0.7 percent, respectively.

The index for apparel and upkeep declined 0.1 percent in March, following an increase of 0.5 percent in February. The entertainment index rose 0.3 percent in March, following an increase of 0.4 percent in Febru-

ary. The smaller March increase in entertainment services, principally due to a decline in prices for admissions to concerts and plays, more than offset the larger increase this month in prices for entertainment commodities, in particular newspapers, magazines, periodicals, and books.

The 0.3 percent increase in the other goods and services component was the smallest since October 1979. Cigarette prices, which had increased 19.3 percent from September 1982 through February, advanced 0.1 percent in March. Personal care goods and services were unchanged, following a 0.7 percent increase in February.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.3 percent, following a decline of 0.2 percent in February. A larger increase in the housing component (up 0.4 percent in March, compared with 0.1 percent in February), an increase of 0.5 percent in food and beverage prices (following no change in February), and a much smaller decline in transportation costs (down 0.2 percent, compared with 1.7 percent) were largely responsible for the acceleration from February to March. The index for apparel and upkeep also rose slightly more in March—up 0.5 percent. On the other hand, the medical care component moderated substantially, increasing 0.4 percent in March. The entertainment and other goods and services categories both registered increases of 0.3 percent.

The 0.3 percent rise in the CPI-W compares with an increase of 0.1 percent in the CPI-U. The CPI-U uses the new rental equivalence measure, which was unchanged in March, to measure shelter costs of homeowners. Homeownership in the CPI-W, which uses house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs, rose 0.8 percent in March. Increases in house prices, property insurance, property taxes, and mainte-

nance and repair costs more than offset a decline in mortgage interest rates.

Announcement to Users: Homeownership Changes

Effective with release of the index for January 1983, the Bureau of Labor Statistics changed the way homeowner costs are measured in the CPI-U to rental equivalence. The rental equivalence approach calculates homeowner costs of the shelter based on the implicit rent owners would have to pay to rent the homes they own. The old method calculated homeowner costs as home purchase, mortgage interest costs, property taxes, property insurance and maintenance and repair.

As previously announced, the CPI-W will be changed to rental equivalence effective with data for January 1985. The CPI experimental measures, known as the CPI-U, X-1 through CPI-U, X-5 are no longer being published.

The new homeowners' cost component has been introduced into the CPI-U in such a manner that the indexes using the old and new methodologies are equal in the so-called link month—December 1982. A similar technique will be employed for the CPI-W in December 1984. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, BLS will make available to users, for a 6-month overlap period, calculations based on the old method of homeownership. In the case of the CPI-U, the overlap period will run from January to June 1983; for the CPI-W, the overlap period will run from January to June 1985.

The new homeowners' cost component is similar to the one used in the CPI-U, X-1, with 4 important re-

finements. First, BLS has calculated a set of owner weights for the individual units in the CPI rent sample. These new weights make the rent sample represent owner occupied housing and permit the calculation of a rent change estimate for homeowners.

Second, the Bureau has augmented the rent sample in order to enhance the rental equivalence measure. This new sampling is concentrated in areas where the housing is predominantly owner-occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units.

Third, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, has been recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs have been modified to be consistent with the rental equivalence concept. This enhancement has improved the quality of the national CPI's rental equivalence weight and provides weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month has been expanded to accommodate the calculation, with complete item and geographic detail, and with proper geographic weighting for the rental equivalence approach. BLS will continue to work on other refinements in the statistical estimating techniques used in the rental equivalence measure. See tables C and D for a description of changes in the index structure. For further detail, see the January or February 1983 issues of this report.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas.

Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar.

Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

²⁰ Revised indexes for Boston: Nov. 1982=209.8; Ann. Avg. 1982=207.9; Jan. 1983=207.2
²¹ Revised indexes for Boston: Ann. Avg. 1982=317.2; Jan. 1983=324.5
²² Revised index for Boston: Jan. 1983=309.3
²³ The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.
²⁴ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.
²⁵ Index on a June 1978=100 base in San Diego, Calif.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$22.20.

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

| Index Point Change | |
|-----------------------------------|-----------|
| CPI | 236.4 |
| Less previous index | 233.2 |
| Equals index point change: | 3.2 |
| Percent Change | |
| Index point difference | 3.2 |
| Divided by the previous index | 233.2 |
| Equals: | 0.014 |
| Results multiplied by one hundred | 0.014x100 |
| Equals percent change: | 1.4 |

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changes, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation

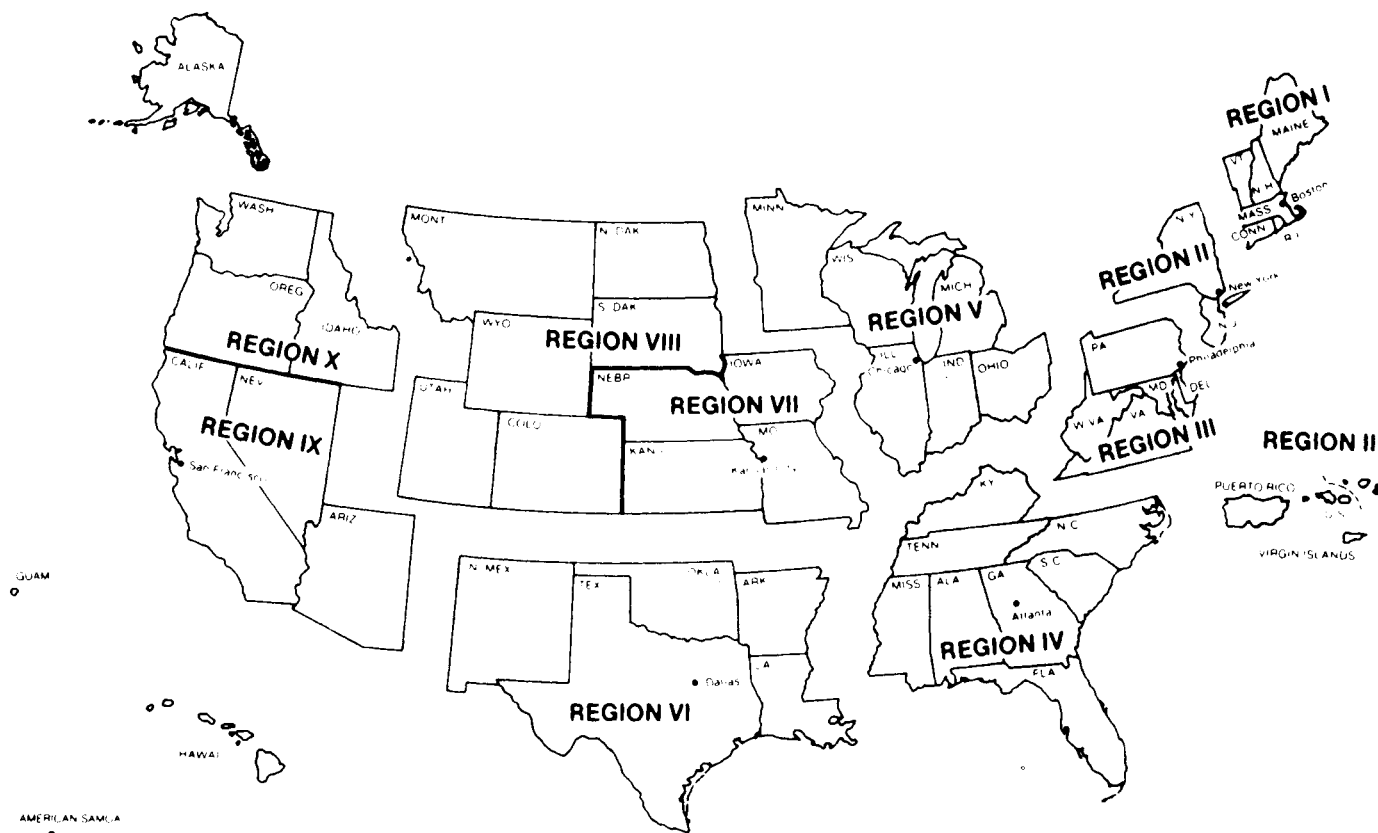

purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.
