

CPI Detailed Report

April 1984

U.S. Department of Labor
Bureau of Labor Statistics

U.S. DEPARTMENT OF LABOR
Raymond J. Donovan, *Secretary*

BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, *Associate Commissioner*

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$28 domestic, and \$35 foreign. Single copy domestic, \$5; foreign, \$6.25. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$125 in contiguous U.S. and Hawaii; \$135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

April 1984

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.5 percent before seasonal adjustment in April, to a level of 308.8 (1967=100). For the 12-month period ended in April, the CPI-U increased 4.5 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.3 percent in April, prior to seasonal adjustment. The April level of 304.1 (1967=100) was 3.1 percent higher than the index in April 1983. The CPI-W is used for indexing Social Security and some other Federal payments. It is also commonly used as an escalator in collective bargaining agreements.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers advanced 0.5 percent in April. This compares with a 0.2 percent rise in March and an average monthly increase of 0.4 percent since the first quarter of 1983. An increase of 0.6 percent in the housing index, which was unchanged in March, accounted for about one-half of the April advance. In particular, a turnaround in prices for household fuels and utilities and a larger increase than in March for shelter costs were responsible for most of the acceleration in the overall CPI. The transportation component, led by advances in prices for used cars and gasoline, accounted for about 30 percent of the April increase in the CPI.

The food and beverage component showed little or no change for the second consecutive month as a sharp decline in fresh fruit and vegetable prices offset generally moderate increases in most other food and beverage prices.

The housing component, which was unchanged in March, increased 0.6 percent in April. The index for fuel and utilities registered a 0.8 percent increase, following a 1.0 percent decline in the preceding month. Prices for fuel oil, natural gas, and telephone services all increased in April after declining in March, and charges for electricity, which were unchanged in March, rose 1.5 percent. The cost of telephone services has increased 6.9 percent in the first 4 months of 1984. Larger increases in the indexes for shelter and household furnishings and operations also contributed to the April acceleration in housing costs. Within shelter, renters' costs and homeowners' costs rose 0.8 and 0.6 percent, respectively, following increases of 0.5 percent in March.

The transportation component rose 0.6 percent in April, following a 0.9 percent increase in March. Prices for automobiles and motor fuels advanced in April, but by less than in March. Gasoline prices rose 0.4 percent, but were still 12.0 percent below their peak level of March 1981. New and used car prices increased 0.1 and 1.9 percent, respectively. Automobile finance charges advanced 1.1 percent in April, following declines in each of the 2 preceding months. The index for public transportation declined 0.1 percent as a drop in airline

fares offset small increases in most public transportation fares.

Grocery store food prices declined for the second consecutive month—down 0.2 percent in April—due largely to a sharp drop in prices for fresh fruits and vegetables. Despite the declines in March and April, prices for fresh fruits have increased at an annual rate of more than 13 percent so far this year. Fresh vegetable prices, reflecting the impact of the 1983 summer drought and adverse early winter weather, have risen at a 16.5 percent annual rate in the 9-month period ended in April. The index for meats, poultry, fish, and eggs advanced 0.8 percent in April, after declining in March. Substantial price increases for pork—up 2.2 percent—and eggs—up 7.2 percent—more than offset small declines in beef and poultry prices. The other major grocery store food groups registered moderate increases in April. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.2 and 0.3 percent, respectively.

The medical care index rose 0.5 percent in April, the same as in March. The cost of medical care services also increased 0.5 percent as charges for professional services and hospital rooms advanced 0.4 and 0.6 percent, respectively. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—increased 0.6 percent.

The index for apparel continued its moderate behav-

ior in April, declining 0.1 percent. For the first 4 months of 1984, these costs were unchanged. Clothing prices declined slightly over this period, but were offset by a small increase in apparel services.

The entertainment index advanced 0.8 percent in April, following a 0.2 percent decline in March. A sharp turnaround in prices for reading materials and sporting goods and equipment was largely responsible for the acceleration. The other goods and services component rose 0.4 percent in April, about the same as in February and March.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in April, following no change in March. The 0.2 percent rise in the CPI-W compares with an increase of 0.5 percent in the CPI-U. In the CPI-U, the homeowners' cost index—which uses a rental equivalence approach—rose 0.6 percent in April. Homeownership in the CPI-W, which is based on house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs, declined 0.5 percent in April. Declines in house prices, mortgage interest rates, and maintenance and repairs more than offset the small increases in property taxes and property insurance.

Changes in Frequency of Publication for Local Area CPI's to Begin in 1987

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently.

The changes in publication frequency arise from the requirement to allocate the sample to reflect population shifts in the 1980 Census so as to provide the most accurate national CPI possible with the funds available. As a result, some areas will no longer have samples sufficient to permit more frequent publication.

The selection of the new sample of urban areas is one of the major early steps in the periodic revision of the CPI. The CPI is updated and refined about once every decade to take account of population shifts and changes in consumer buying habits and to introduce technical improvements. Since World War II, major revisions have been introduced in 1953, 1964, and 1978. The revision program now in progress will result in release of a revised CPI in 1987.

The new sample of urban areas will include the Nation's largest metropolitan areas, plus other urban areas chosen by a probability sampling method to represent scientifically all of the remaining urban areas in the United States. The new sample reflects the population shifts of the past decade and, thus, will more accurately measure consumer price movements in the years ahead.

In addition to the national index for all cities, the Bureau now publishes indexes for 28 urban areas. In 1987, it will continue to publish indexes for all but one of these areas—Northeast Pennsylvania (Scranton—Wilkes-Barre). Price data will continue to be gathered in that area, but on a smaller scale than currently and publication of a separate index will be discontinued. In this and 63 other urban areas where data are to be collected, samples will be insufficient for calculation of a local index.

The new publication plan for local area indexes, beginning with the index for January 1987, is listed below.

- Monthly indexes will continue to be published for the four largest metropolitan areas. Because of sample design considerations, the index for

the Detroit area, currently published monthly, will be published only every other month beginning in 1987. The areas to be published monthly are: New York-Northern New Jersey-Long Island, NY-NJ-CT; Philadelphia-Wilmington-Trenton, PA-DE-NJ-MD; Chicago-Gary-Lake County, IL-IN-WI; and Los Angeles-Anaheim-Riverside, CA.

- Bimonthly indexes will be published, as in the past, for the next 11 largest areas, including Detroit. These areas are: Boston-Lawrence-Salem, MA-NH; Pittsburgh-Beaver Valley, PA; Cleveland-Akron-Lorain, OH (will be published in odd-numbered months rather than in even-numbered months); Detroit-Ann Arbor, MI (will be published in even-numbered months, rather than monthly, as currently); St. Louis-East St. Louis, MO-IL; Baltimore, MD; Dallas-Fort Worth, TX; Houston-Galveston-Brazoria, TX; Miami-Fort Lauderdale, FL; Washington, DC-MD-VA; and San Francisco-Oakland-San Jose, CA.
- A semi-annual average index will be published twice a year for 12 areas now published bimonthly. These areas are: Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Kansas City, MO-Kansas City, KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Atlanta, GA; Anchorage, AK; Denver-Boulder, CO; Honolulu, HI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA.

The Bureau also will continue to publish separate indexes for four regions of the United States and for groups of cities within these regions, classified by size. Minor adjustments in the size groupings also are being planned, and separate indexes for nonmetropolitan urban places in the Northeast and West will be discontinued.

BLS news release USDL-84-89 provides further details on the sample change and publication plans.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes

A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar.

Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

West/D	-.2	-.6	.2	-.6	-1.9	1.0

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas on pricing schedule 1 (See table 13) will appear next month.

² For the following areas the 1957-59=100 base is not available; indexes are on the bases listed below:

Buffalo, N. Y. November 1963=100.

Dallas-Fort Worth, Tex. November 1963=100.

Honolulu, Hawaii. December 1963=100.

³ Indexes on a December 1982=100 base.

⁴ Indexes on a June 1978=100 base, except in Buffalo, N.Y. where 1967=100.

⁵ Indexes are on the bases listed below:

Atlanta, Ga. December 1977=100.

Buffalo, N. Y. February 1978=100.

Cleveland, Ohio. February 1978=100.

Dallas-Fort Worth, Tex. February 1978=100.

Honolulu, Hawaii. December 1977=100.

Houston, Tex. April 1978=100.

Kansas City, Mo.-Kans. December 1977=100.

Minneapolis-St. Paul, Minn.-Wis. April 1978=100.

Pittsburgh, Pa. April 1978=100.

San Francisco-Oakland, Calif. December 1977=100.

⁶ Indexes on a June 1978=100 base.

⁷ Excludes motor oil, coolant, and other products as of January 1983.

⁸ Indexes on a June 1978=100 base, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas on pricing schedule 1 (See table 18) will appear next month.

² For the following areas the 1957-59=100 base is not available; indexes are on the bases listed below:

Buffalo, N. Y. November 1963 = 100.

Dallas-Fort Worth, Tex. November 1963 = 100.

Honolulu, Hawaii. December 1963 = 100.

³ Indexes on a January 1981 = 100 base.

⁴ Indexes on a June 1978 = 100 base, except in Buffalo, N.Y. where 1967 = 100.

⁵ Indexes are on the bases listed below:

Atlanta, Ga. December 1977 = 100.

Buffalo, N. Y. February 1978 = 100.

Cleveland, Ohio. February 1978 = 100.

Dallas-Fort Worth, Tex. February 1978 = 100.

Honolulu, Hawaii. December 1977 = 100.

Houston, Tex. April 1978 = 100.

Kansas City, Mo.-Kans. December 1977 = 100.

Minneapolis-St. Paul, Minn.-Wis. April 1978 = 100.

Pittsburgh, Pa. April 1978 = 100.

San Francisco-Oakland, Calif. December 1977 = 100.

⁶ Indexes on a June 1978 = 100 base.

⁷ Excludes motor oil, coolant, and other products as of January 1983.

⁸ Indexes on a June 1978 = 100 base, except in Minneapolis-St. Paul, Minn.-Wis. where 1967 = 100.

¹ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.
² Indexes on a December 1982 = 100 base.
³ Indexes on a June 1978 = 100 base.
⁴ New series; includes direct pricing of new trucks and motorcycles as of September 1982.
⁵ Excludes motor oil, coolant, and other products as of January 1983.

¹ The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

² Indexes on a December 1982 = 100 base.

³ Indexes on a June 1978 = 100 base.

⁴ New series; includes direct pricing of new trucks and motorcycles as of September 1982.

⁵ Excludes motor oil, coolant, and other products as of January 1983.

¹ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population

size classes A-1 and A-2.
² Indexes on a December 1982 = 100 base.
³ Indexes on a June 1978 = 100 base.
⁴ Excludes motor oil, coolant, and other products as of January 1983.
^{NA} Data not adequate for publication.
^R See Table 29 of the March CPI Detailed Report for revised indexes in West/A.

¹ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.
² January 1981 = 100.
³ Indexes on a June 1978 = 100 base.
⁴ New series; includes direct pricing of new trucks and motorcycles as of September 1982.
⁵ Excludes motor oil, coolant, and other products as of January 1983.

¹ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population

size classes A-1 and A-2.
² January 1981 = 100.
³ Indexes on a June 1978 = 100 base.
⁴ Excludes motor oil, coolant, and other products as of January 1983.
^{NA} Data not adequate for publication.
^R See Table 29 of the March CPI Detailed Report for revised indexes in West/A.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area in-

dexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); "The Revision of the Consumer Price Index," by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), "Revisions in the Medical Care Service Component of the Consumer Price Index," by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals	0.014
Results multiplied by one hundred	0.014 x 100
Equals percent change	1.4

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Homeownership Changes

Effective with release of the index for January 1983, the Bureau of Labor Statistics changed the way homeowner costs are measured in the CPI-U to rental equivalence. The rental equivalence approach calculates homeowner costs of the shelter based on the implicit rent owners would have to pay to rent the homes they own. The old method calculated homeowner costs as home purchase, mortgage interest cost, property taxes, property insurance, and maintenance and repair.

As previously announced, the CPI-W will be changed to rental equivalence effective with data for January 1985. The CPI experimental measures, known as the CPI-U, X-1 through CPI-U, X-5 are no longer being published.

The new homeowners' cost component was introduced into the CPI-U in such a manner that the indexes using the old and new methodologies were equal in the so-called link month—December 1982. A similar technique will be employed for the CPI-W in December 1984. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, the BLS made available calculations for the CPI-U from January to June 1983 based on the old method of homeownership. A 6-month overlap period for the CPI-W will also be made available to users; it will run from January to June 1985. For further details see "Changing the Homeownership Component of the Consumer Price Index to Rental Equivalence," *CPI Detailed Report*, January 1983.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics

publishes seasonally adjusted as well as unadjusted changes each month.

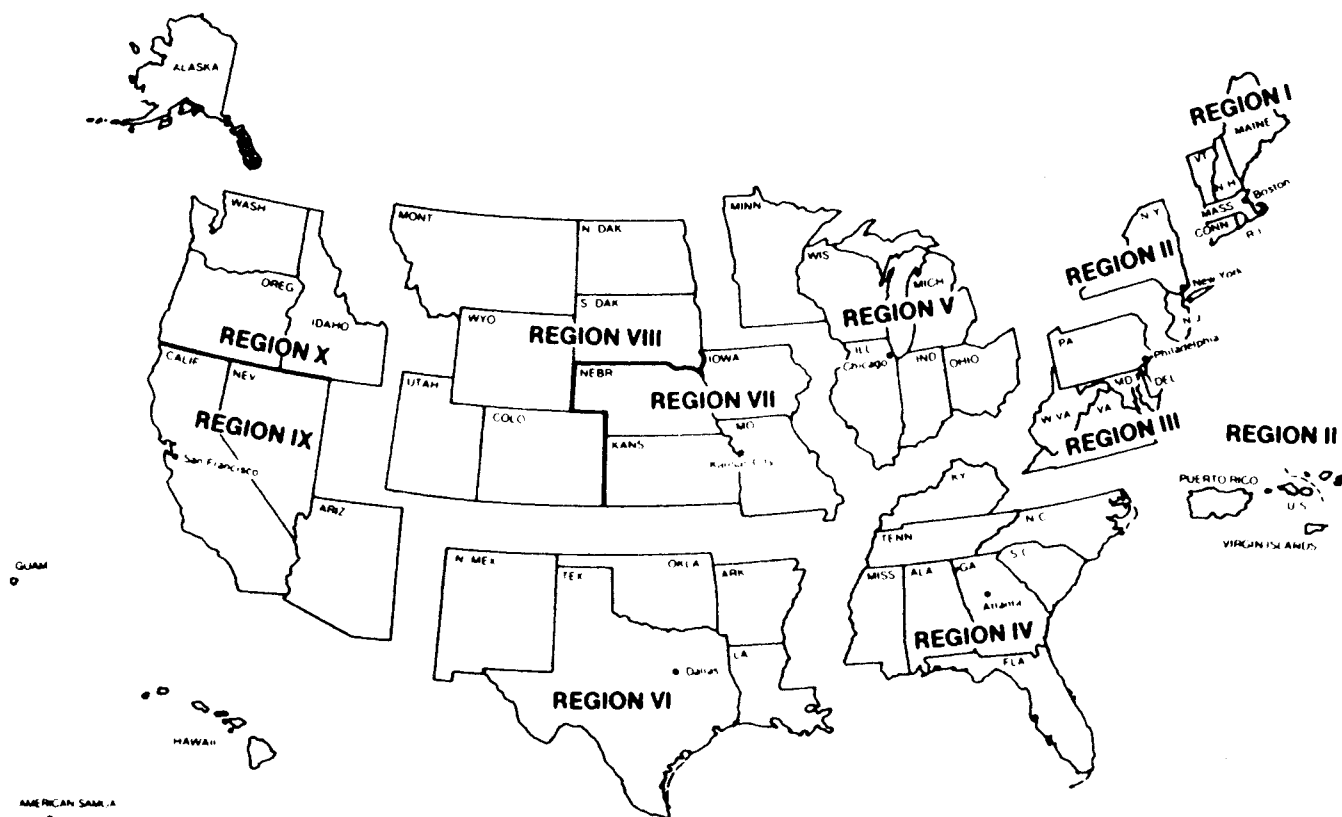

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1979 through 1983 were replaced at the end of 1983. The seasonal movement of all items and 44 other aggregations is derived by combining the seasonal movement of 51 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 51 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last five years, but the seasonally adjusted indexes will be used before that period. If any of the 51 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted data will be used for the last five years, but not seasonally adjusted indexes will be used before that period.
