OFFICE OF PRICES AND LIVING CONDITIONS  
W. John Layng, Assistant Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year \$15 domestic, and \$18.75 foreign. Single copy \$2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

# Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.1 percent before seasonal adjustment in June to 247.6 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-U) also increased 1.1 percent before seasonal adjustment in June to 247.8 (1967 = 100). The CPI-U was 14.3 percent higher and the CPI-W was 14.2 percent higher than in June 1979.

## CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in June, following increases of 0.9 percent in each of the 2 preceding months. The housing component continued to advance sharply, rising 1.8 percent and accounting for over four-fifths of the June increase. On the other hand, the transportation index declined slightly in June, following 2 months of comparatively moderate increases. Food prices increased at a slightly faster rate in June. Other major categories of consumer spending, however, continued to show the more moderate rates of change evident since April.

During the 3 months ended in June, the CPI-U rose at a seasonally adjusted annual rate of 11.6 percent. This compares with an increase of 18.1 percent during the first quarter of 1980 and increases of about 13 percent

during each of the 4 quarters of 1979. Indexes for housing and food advanced at about the same rate in the second quarter as in the first. The other major expenditure groups showed substantially smaller price increases in the second quarter.

Rising shelter costs accounted for most of the 1.8-percent increase in the housing component in June. Home financing costs rose 4.6 percent, reflecting an increase of 3.8 percent in mortgage interest rates and 1.2 percent in house prices. Conventional mortgage interest rates continued to increase in the June index, partly because of the lag between the publicized rate changes and actual mortgage transaction. These rates are represented in the CPI by actual mortgage loan transactions and not by current commitment rates. Property insurance costs rose 1.7 percent in June, following a 1.6 percent increase in May. The index for rent increased 1.2 percent. Prices for fuels and other utilities continued to increase as charges for electricity, telephone services, and water and sewerage maintenance rose sharply in June. Fuel oil prices and charges for natural gas, however, registered moderate increases. (The 12-month percent changes for 5 experimental measures of housing costs can be found in tables C and D.)

The index for food and beverages rose 0.5 percent in June, continuing the moderate trend evident throughout most of 1980. Prices for grocery store foods increased

0.4 percent in June compared with 0.2 percent in May. Prices for sugar and sweets, soft drinks, and other prepared food rose substantially. Most other grocery store foods also rose but by less than in May. The index for meats, poultry, fish, and eggs declined in June, but not as much as in the 2 previous months. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.9 and 0.7 percent, respectively.

The transportation index declined 0.2 percent in June, following increases of 0.3 percent in May and 0.6 percent in April. Gasoline prices declined 1.0 percent, following seasonal adjustment, and were largely responsible for the decrease. Gasoline prices, which rose at a seasonally adjusted annual rate of 105.7 percent during the first quarter, declined at a 6.2 percent rate during the second quarter. In June, used car prices continued to decline while new car prices increased slightly. Automobile finance charges, which rose at a monthly rate of 4.0 percent during the first 5 months of 1980, declined 0.8 percent in June. The index for public transportation rose 1.1 percent, reflecting large increases in airline and intercity train fares.

The index for apparel and upkeep was unchanged in June. Price declines in men's and boys' and women's and girls' spring and summer clothing were offset by price increases in infants' and toddlers' clothing, other apparel commodities, and higher charges for apparel services.

The medical care index rose 0.5 percent in June, the same as in May. Charges for medical care services rose 0.4 percent. The physicians' fees and hospital room components rose 0.6 and 0.8 percent, respectively. The index for medical care commodities rose 0.9 percent in June, about the same as in recent months.

The indexes for entertainment and other goods and

services rose 0.6 and 0.8 percent, respectively, the same as in May.

#### CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.9 percent in June, about the same as in April and May and substantially less than increases of 1.4 percent in each of the first 3 months of 1980. The housing component continued to advance sharply and accounted for over four-fifths of the June increase. On the other hand, the transportation and apparel indexes declined slightly in June, following 2 months of comparatively moderate increases. Other major categories of consumer spending continued to show the more moderate trend which began in April.

Rising shelter costs accounted for most of the increase in the housing component in June. Home financing costs rose 4.7 percent, reflecting an increase of 3.9 percent in mortgage interest rates and 1.3 percent in house prices. Property insurance costs rose 1.6 percent in June, following a 1.7 percent increase in May. The index for rent increased 1.1 percent. Prices for fuels and other utilities continued to increase as charges for electricity, telephone services, and water and sewerage maintenance rose sharply in June.

The index for food and beverages rose 0.5 percent in June, continuing the moderate trend evident throughout most of 1980. Prices for grocery store foods increased 0.3 percent. Prices for sugar and sweets rose 4.5 percent in June. Most other grocery store foods, also rose, but by less than in May. The index for meats, poultry, fish, and eggs declined in June but not as much as in the two previous months.

The transportation index declined 0.3 percent in June, following increases of 0.2 percent in May and 0.6 percent in April. A 1.1 percent decline in gasoline prices, following seasonal adjustment, was largely responsible for the decrease. In June, used car prices continued to decline and new car prices rose 0.2 percent. Automobile finance charges, which rose at a monthly rate of 4.0 percent during the first 5 months of 1980, declined 0.2 percent in June. The index for public transportation rose 0.9 percent.

The index for apparel and upkeep declined 0.3 percent in June. Price declines in men's and boys' and

women's and girls' spring and summer clothing were partially offset by price increases in infants' and toddlers' clothing and other apparel commodities.

The medical care index rose 0.4 percent in June, compared with 0.6 percent in May. Charges for physicians' fees and hospital rooms rose 0.6 and 0.8 percent, respectively.

The entertainment index rose 0.7 percent in June, following an increase of 0.5 percent in May, primarily due to increases in prices for movie admissions. The index for other goods and services rose 0.8 percent, the same as in May.

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

<sup>2</sup> Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

<sup>3</sup> Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

<sup>1</sup> Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

<sup>2</sup> Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

<sup>3</sup> Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:  
A-1 - More than 4,000,000.  
A-2 - 1,250,000 to 4,000,000.  
B - 385,000 to 1,250,000.  
C - 75,000 to 385,000.  
D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>1</sup> Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

<sup>2</sup> Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

<sup>3</sup> Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

West/D .....	1.1	1.1	.3	1.3	.7	2.1

<sup>1</sup> Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

<sup>2</sup> Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

<sup>3</sup> Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:  
A-1 - More than 4,000,000.  
A-2 - 1,250,000 to 4,000,000.  
B - 385,000 to 1,250,000.  
C - 75,000 to 385,000.  
D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>1</sup> Regions are defined as the four Census regions.  
The population size classes are aggregations of areas which have urban population as defined:  
A-1 - More than 4,000,000.  
A-2 - 1,250,000 to 4,000,000.  
B - 385,000 to 1,250,000.

C - 75,000 to 385,000.  
D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.  
<sup>2</sup> Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

<sup>1</sup> The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.

D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>2</sup> Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

<sup>1</sup> Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>2</sup> Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

<sup>1</sup> Regions are defined as the four Census regions.  
The population size classes are aggregations of areas which have urban population as defined:  
A-1 - More than 4,000,000.  
A-2 - 1,250,000 to 4,000,000.  
B - 385,000 to 1,250,000.

C - 75,000 to 385,000.  
D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.  
<sup>2</sup> Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

<sup>1</sup> The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>2</sup> Indexes on a June 1978 = 100 base; formerly on a December 1977 = 100 base.

<sup>1</sup> Regions are defined as the four Census regions.  
The population size classes are aggregations of areas which have urban population as defined:  
A-1 - More than 4,000,000.  
A-2 - 1,250,000 to 4,000,000.  
B - 385,000 to 1,250,000.  
C - 75,000 to 385,000.

D - Less than 75,000.  
Population size class A is the aggregation of population size classes A-1 and A-2.

<sup>2</sup> Indexes on a June 1978=100 base; formerly on a December 1977=100 base.

# Technical Notes

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978.

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

## Explanation of Homeownership Measures

*Official CPI-U* includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

*Experimental Measure X-1:* (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing

units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

*Experimental Measure X-2:* (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owned and the equity component is the amount owed, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

*Experimental Measure X-3:* (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

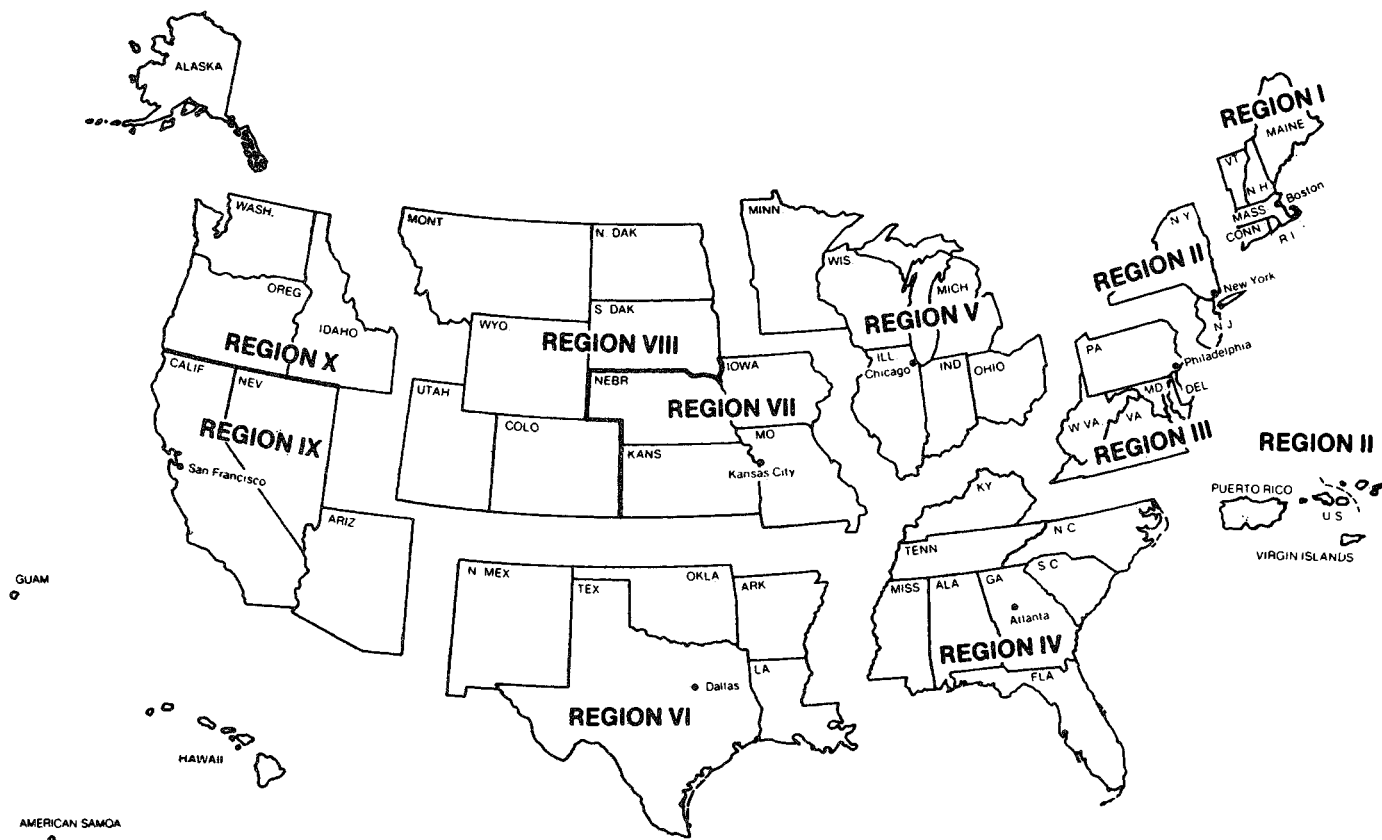

*Experimental Measure X-4:* The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

*Experimental Measure X-5:* (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.
