W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $\$ 18$ domestic, and $\$ 22.50$ foreign. Single copy $\$ 3.00$. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: $\$ 95$ in contiguous U.S. and Hawaii; $\$ 110$ in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

## Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in June to 271.3 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in June to $271.4(1967=100)$. The CPI-U was 9.6 percent higher than in June 1980.

## CPI for All Urban Consumers (CPIU)-seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers increased 0.7 percent in June, the same as in May. The housing component, primarily reflecting higher house prices and mortgage interest rates, rose sharply for the second consecutive month and accounted for about three-fourths of the increase in the June CPI. The medical care index rose substantially for the sixth month in a row. The indexes for both food and beverages and apparel and upkeep advanced slightly in June, following small declines in May. Moderate increases were again registered by the transportation and entertainment components. The other goods and services component continued to increase but by much less than in May.

During the first 6 months of 1981, the CPI-U increased at a seasonally adjusted annual rate of 8.5 percent; during the first quarter, the annual rate of increase was 9.6 percent; and, for the 3-month period ended in June, it was 7.4 percent. A sharp deceleration in energy prices was largely responsible for the moderation in the second quarter.

The housing component increased 1.1 percent in June. Homeownership costs rose 1.5 percent, reflecting increases in both house prices and mortgage interest rates. The 0.4 percent in the rent component was the smallest in more than a year. Prices for fuels and other utilities advanced 0.9 percent as charges for electricity and water and sewage services rose substantially. Charges for natural gas rose slightly, while fuel oil prices declined for the third consecutive month.

The food and beverage component increased 0.2 percent in June, continuing the moderating trend evident throughout this year. Grocery store prices rose 0.1 percent, following declines in each of the 2 preceding months. All major food groups recorded either moderate increases or declines in June. The index for cereal and bakery products increased 0.6 percent,reflecting a 1.7 percent increase in cereal prices. The index for meats, poultry, fish, and eggs rose 0.4 percent as a sharp increase in egg and pork prices-up 6.2 and 1.8 percent, respectively-offset declines in prices for beef, poultry, and fish. Prices for dairy products rose 0.1 percent. The index for fruits and vegetables declined in June, following seasonal adjustment. Sugar prices continued to drop sharply, declining 5.7 percent in June. Prices of the other two components of the food and beverage index-restaurant meals and alcoholic beverages-rose 0.5 and 0.6 percent, respectively.

The transportation component increased 0.3 percent in June. The new car index, reflecting both domestic and foreign manufacturers' price increases, rose 1.1 percent, the third consecutive large monthly increase. Used

car prices also rose sharply, following a moderate increase in May. Automobile finance charges rose 3.2 percent. The index for public transportation increased 2.1 percent in June, as airline, intercity train, and intercity bus fares all increased substantially. Gasoline prices, on the other hand, declined 1.5 percent, about the same as in each of the 2 preceding months.

The medical care index increased 1.0 percent in June. The physicians' fees and hospital room components increased 0.7 and 1.4 percent, respectively. The index for medical care commodities, which includes prescription and non-prescription drugs and medical supplies, advanced 0.9 percent.

The index for apparel and upkeep rose 0.1 percent in June, following a decline of 0.2 percent in May. Increases in charges for apparel services more than offset the declines in clothing prices.

The index for entertainment and other goods and services rose 0.4 and 0.7 percent, respectively, in June, following increases of 0.5 and 1.2 percent in May.

## CPI.U Experimental Measures

BLS publishes in each release experimental CPI-U measures using alternative homeownership approaches. (See table $\mathbf{C}$ for monthly data on all alternative measures of homeownership.) June increases in these indexes ranged from 0.4 to 0.7 percent, after seasonal adjustment. The most closely watched experimental measures-the cPI-U All Items using rent substitution (X-1) and CPI-U All Items using outlays with average interest costs (X-5)-increased 0.6 and 0.7 percent, respectively, in June. The 12 -month changes in the CPIU All Items from June 1980 were 9.4 percent for X-1 and 10.1 percent for $\mathrm{X}-5$. The official CPI-U rose 9.6 percent over this period.

## CPI for Urban Wage Earners and Clerical Workers (CPI-W)-seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.7 percent.

The housing component rose 1.1 percent and accounted for about three-fourths of the June increase. Home financing costs advanced 2.4 percent, reflecting a 1.0 percent increase in mortgage interest rates and a 1.5 percent increase in house prices. The index for fuels and other utilities advanced 0.9 percent despite a decrease in fuel oil prices as charges for gas and electricity rose 1.7 percent. The food and beverage component increased 0.3 percent. Grocery store foods rose 0.1 percent, primarily due to sharp increases in egg, pork, and cereal prices. These increases were partially offset by declines in beef, fresh fruits and vegetables, and sugar prices. The transportation component rose 0.2 percent as increases in new and used car prices and automobile finance charges offset a 1.5 percent decline in gasoline prices. Apparel prices rose 0.1 percent in June, and the index for medical care rose 0.9 percent. The index for entertainment rose 0.3 percent, the same as in each of the preceding 3 months. The other goods and services component increased 0.6 percent.

## Consumer Price Indexes Will Shift to New Base Next Year

Beginning with the release of January 1982 data in February 1982, most Consumer Price Indexes will shift to a new base year. All indexes currently expressed on a base of $1967=100$, or any other base through December 1976 , will be rebased to $1977=100$. Only indexes with a base later than December 1976 will keep their current base. The new base was established by the Office of Federal Statistical Policy and Standards, for use by all Federal government statistical agencies in line with the longstanding policy that index bases be updated periodically. (See Technical Note, "Federal agencies updating base year of indexes to 1977," in the February 1981 issue of Monthly Labor Review.) The last previous rebasing of CPI data occurred in January 1971, when the current 1967 base was substituted for the former 1957-59 base. Historical data for each CPI series on the

${ }^{1}$ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

## M - Every month.

1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.
Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, III.Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.
${ }^{3}$ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to $1,250,000$.
$\begin{array}{ll}\mathrm{C} & -\quad 75,000 \text { to } 385,000 . \\ \mathrm{D} & \text { Less than } 75,000 \text {. }\end{array}$
Population size class $A$ is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

1 Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.
${ }^{2}$ Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y. Northeastern N.J. and Chicago, ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.
${ }^{3}$ Regions are defined as the four Census regions
The population size classes are aggregations of areas which have urban population as defined:

$$
\begin{array}{ll}
\text { A-1 } & \text { More than } 4,000,000 \text {. } \\
\text { A-2 } & 1,250,000 \text { t } 0,000,000 . \\
\text { B } & 385,000 \text { to } \\
\text { C } & \mathbf{1 , 2 5 0 , 0 0 0} \\
\text { D } & 75,000 \text { to } \\
\hline & \text { Less than } \\
\hline
\end{array}
$$

Population size class $A$ is the aggregation of population size classes A-1 and A-2.

1 Areas on pricing schedule 1 (See table 13) will appear next month.
2 For the following areas the $1957-59=100$ base is not available; indexes are on the bases listed:

Buffalo, N. Y..
Worth, Tex........................................... November 1963=100
Dallas-Fort Worth, Tex $\qquad$ November $1963=100$
Honolulu, Hawaii $\qquad$ December $1963=100$
indexes on a January 1981=100 base
4 Indexes on a June $1978=100$ base; formerly on the bases listed in footnote 5, except in Buffalo, N.Y. where $1967=100$.
5 Indexes are on the bases listed:
Atlanta, Ga.. $\qquad$ .December $1977=100$.
Buffalo, N. Y...................................February 1978=100.

Cleveland, Ohio............................February $1978=100$
Dallas-Fort Worth, Tex...........................................
Honolulu, Hawaii............................December 1977=100
Houston, Tex.................................April 1978=100.
Kansas City, Mo.-Kans.................December $1977=100$.
Minneapolis-St. Paul, Minn.-Wis..April 1978=100.
Pittsburgh, Pa................................April $1978=100$.
San Francisco-Oakland, Calif......December 1977=100.
6 Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 5

Indexes on a June $1978=100$ base; formerly on the bases listed in footnote 5, except in Minneapolis-St. Paul, Minn.-Wis. where 1967=100.

1 Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

## M - Every month.

1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.
Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, III.Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973. Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

1 Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim Calif. is a combination of two SMSA's, and N.Y., N.Y.Northeastern N.J. and Chicago, III.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.
${ }^{3}$ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - 1,250,000 to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000.
Population size class $A$ is the aggregation of population size classes A-1 and A-2.

1 Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to $1,250,000$.
C $\quad 75,000$ to 385,000 .

Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }^{2}$ Indexes on a January 1981 = 100 base.
${ }^{3}$ Indexes on a June 1978=100 base; formerly on a December $1977=100$ base.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C $\quad 75,000$ to 385,000 .

Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }^{2}$ indexes on a January 1981=100 base.
${ }^{3}$ Indexes on a June $1978=100$ base; formerly on a December $1977=100$ base .

1 Regions are defined as the four Census regions.
The population size classes are aggregations of areas
which have urban population as defined:
A-1 $-\quad$ More than $4,000,000$.
A-2 $-1,250,000$ to $4,000,000$.
B $-\quad 385,000$ to $1,250,000$.
C $\quad 75,000$ to 385,000 .

D - Less than 75,000
Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }_{2}$ Indexes on a January 1981=100 base.
${ }^{3}$ Indexes on a June $1978=100$ base; formerly on a December $1977=100$ base.

${ }^{1}$ The population size classes are aggregations of areas which have urban population as defined:
$\begin{array}{lr}\text { A-1 }- & \text { More than } 4,000,000 . \\ \text { A-2 }-1,250,000 \text { to } 4,000,000 . \\ \text { B }-\quad 385,000 \text { to } 1,250,000 . \\ \text { C } & 75,000 \text { to } 385,000 .\end{array}$

Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }^{2}$ Indexes on a January 1981=100 base.
${ }^{3}$ Indexes on a June $1978=100$ base; formerly on a December $1977=100$ base .

1 Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:

$$
\begin{array}{lr}
\text { A-1 } & \text { More than } 4,000,000 \text {. } \\
\text { A-2 }-1,250,000 \text { to } 4,000,000 . \\
\text { B }-385,000 \text { to } 1,250,000 \text {. } \\
\text { C } & 75,000 \text { to } 385,000 .
\end{array}
$$

D - Less than 75,000 .
Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }_{2}$ Indexes on a January 1981=100 base.
${ }^{3}$ Indexes on a June $1978=100$ base; formerly on a December $1977=100$ base.

NA Data not adequate for publication.

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-w) which represents about half the population covered by the CPIU . The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments-grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date-1967-which equals 100.0. An increase of 22 percent, for example, is shown as $\mathbf{1 2 2 . 0}$. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $\$ 10$ in 1967 to $\$ 12.20$.

For further details see the following: The Consumer Price Index: Concepts and Content Over the Years, Report 517, revised edition (Bureau of Labor Statistics, May 1978); The Revision of the Consumer Price Index, by W. John Layng, reprinted form the Statistical Reporter, February 1978, No. 78-5 (U.S. Dept. of Commerce), and Revisions in the Medical Care Service component of the Consumer Price Index, by Daniel H. Ginsburg, Monthly Labor Review, August 1978.

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12 -month period.

# Seasonally Adjusted and Unadjusted Data 

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year-such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

## Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure $X-1$ : (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing
units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5 -year moving average of the changes in appreciation rates.

Experimental Measure $X$-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount paid out by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5 -year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15 -year weighted moving average which reflects the base period age distribution of mortgage loans.

Experimental Measure $X$-4: (1) The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure $X$-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in $\mathrm{X}-4$, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15 -year moving average also used in the X-3.
